KITTERICK, a mountain overlooking the strea Palmure, and suddenly rising to the height of 1,0 or 1,200 feet, in the parish of Minnigaff, Kirkcu brightshire. At its base, on the bank of the strea shut out for six weeks in winter from the rays of t sun, stood the hut in which Dr. Alexander Murra the celebrated linguist, was born; and around is t wild and sterile, the rude and sublime scenery am which his early genius was cradled.

KITTOCK (The), a streamlet of the north-w border of Lanarkshire. It rises in a marsh cal

Kittock's Eye, about 2 miles south of the village of East Kilbride, and runs north-westward past that village, past the village of Kittockside, and across the parish of Carmunnock, to a junction with the White Cart, below the village of Busby.

KITTOCKSIDE, a village in the parish of East Kilbride, Lanarkshire. It stands on the northern border of that parish, about 4 miles south of Glasgow; and is a small but pleasant place.

KLETT, a small island, 2 miles south-south-west of Lochinvar, belonging to the parish of Assynt, on the west coast of Sutherlandshire.

KLOACHNABANE. See CLACHNABANE.

KNAIK (THE), a rivulet of the parish of Muthil, Perthshire. It rises in Glenlich-horn, and flows south-eastward past the steep banks on the west boundary of Ardoch camps, to the Allan, a mile below the bridge of Ardoch. Its length of course is 8 miles.

KNAPDALE, a district of Argyleshire. It is bounded on the north by Loch-Crinan, the Crinan Canal, and Loch-Gilp; on the east, by Loch-Fyne, which separates it from Cowal; on the south, by Kintyre and Loch-Tarbert; and on the west, by the narrow seas which separate the mainland from the islands of Islay, Jura, and Scarba. Its length southward is about 20 miles; and its greatest breadth is 16 miles. Except for the intersection of Loch-Tarbert, it is strictly a continuation northward of the peninsula of Kintyre; yet it is itself so deeply indented on the west side by Loch-Caolisport and Loch-Swin as to be in a great measure cut within its own limits into three peninsulas, the most southerly of which, between Loch-Tarbert and Loch-Caolisport, is the largest, and the most northerly, between Loch-Swin and the Sound of Jura, is the smallest. Its name is compounded of two Gaelic words, which signify a hill and a plain, and which, taken together, denote a country composed of hills and dales; and this is perfectly descriptive of the district. Its ancient name, however, was Kilvick-Charmaig, signifying the church or burying-ground of the son of Carmaig; and the Carmaig to whom that name alludes is said to have been an Irish missionary who first preached Christianity to its natives. It is not now a political division of Argyleshire, but lies partly in the district of Argyle proper, and partly in the district of Islay. It formed one parish previous to 1734, but was then divided into two parishes, called North Knapdale and South Knapdale. The whole district appears to have been anciently in the possession of two clans, the M'Millans and the M'Neills, whose descendants here have nearly disappeared.

KNAPDALE (NORTH), a parish, containing the post-office villages of Tayvallich and Bellanoch, in Argyleshire. Though lying on the mainland, it belongs politically to the district of Islay. It is bounded by Loch-Crinan, the Crinan Canal, the parish of South Knapdale, and the Sound of Jura. Its length south-westward is about 13½ miles; and its breadth is about 6 miles. It is divided into two nearly equal parts by the intersection of Loch-Swin. See the articles SWIN (LOCH), CASTLE-SWIN, and KEILLS. The extent of coast, along the Sound of Jura and within Loch-Swin, cannot be less than 50 miles. The interior is much diversified by lowland and upland, by wood and water, and both contains and commands very beautiful landscapes. Its highest ground is Cruach-Lussa, rising 2,004 feet above sea-level. See the article CRUACH-LUSSA. Other hills of conspicuous character are those of Dunardary, Duntaynish, Ervary, and Arichonan, the last of which has an elevation of about 1,200 feet above sea-level. A chain of heights, culminating in Cruach-Lussa, extends from north-east to south-west; the slopes or flanks of this chain decline seaward into gentle acclivities; and the ground thence to the east shore of Loch-Swin, a distance of nearly half-a-mile, is a gently inclined plain. The soil of the arable lands is variously sandy, gravelly, mossy, and loamy; and, at the south-west extremity of the parish, it is rich and fertile. There are about 21 freshwater lakes; but the largest of them is not more than 3 miles in circumference. Excellent springs are abundant; some of them strongly impregnated with lime. About 3,400 imperial acres of land are in tillage; about 22,126 are waste or pastoral; and about 2,181 are under wood. There are four landowners, and the most extensive of them is Malcolm of Poltalloch. The real rental in 1844 was £5,446; the value of assessed property in 1843, £5,891 1s. 10d.; the estimated yearly value of raw produce in 1844, £14,990. Five or six small decked vessels trade to Greenock, Liverpool, and Ireland. The fisheries are worth about £100 a-year. The principal antiquities, additional to Castle-Swin, are a mound on which the Lords of the Isles are said to have held courts of justice, remains of three old forts or watch towers, the ruin of the chapel of St. Carmaig, an ancient cross nine feet high, and the ruins of the religious house of Drimnacraig. The parish is traversed by the road from Lochgilphead to the Jura ferry, and has ready access to the steamers which pass through the Crinan Canal. Population in 1831, 2,583; in 1853, 1,666. Houses, 298.

This parish is in the presbytery of Inverary, and synod of Argyle. Patron, the Crown. Stipend, £164 6s. 10d.; glebe, £22. There are two parish-churches,—the one at Kilmichael-Inverlussay, seating 432; the other at Tayvallich, seating 896; the former built in 1819, the latter in 1827. They are on opposite sides of Loch-Swin, and the minister officiates in them alternately. There is a Free church, with an attendance of about 150; and the sum raised in connexion with it in 1855 was £84 11s. 9d. There are three parochial schools, with each a salary of £17 2s. 2d., and about £10 fees. There are likewise six private schools. Major-General Sir Archibald Campbell, who figured in the American war, acted for some time as governor of Jamaica, and died in 1791, was a native of North Knapdale.

KNAPDALE (SOUTH), a parish, containing the post-town of Ardrishaig, and part of the post-town of Tarbert, in the Argyle district of Argyleshire. It comprises all the district of Knapdale, excepting what is comprised in the parish of North Knapdale. Its length south-south-westward is 21 miles; and its greatest breadth is about 10 miles. Loch-Caolisport penetrates its west side in a north-eastward direction, to the extent of 5½ miles, with an average width of about 1½ mile. It has several fine bays, which afford safe anchorage; and is flanked by shores, which are partly bold and partly gradual, but all richly covered with copsewood. The general surface of the parish is roughly upland. One range extends 12 miles from Inverneill to Barnellan, and commands one of the most extensive, varied, and grandly picturesque views in Britain, from Islay to the Perthshire mountains, and from Mull to Ireland, with everywhere a crowded intervening space of mountain-heights and belts of the sea. Other elevations extend parallel to this principal range, and are separated from one another by deep well-sheltered dales. The extent of arable land bears but a small proportion to the extent of waste and pasture lands, and is very much intersected by hills and marshy grounds. The soil is chiefly of a mossy nature, lying upon a stratum of sand; but in the

low ground it is loamy. There is a considerable aggregate area under wood, both natural and planted. There are five or six lakes, and very many rills and torrents. A lead mine was wrought for some time on the estate of Inverneill. There are nine landowners. The mansions are Auchendarroch, Inverneill, Ormsary, Erines, Drimdrishaig, and Barmore. About fifty boats are employed in the herring-fishery on Loch-Fyne. Large facility of communication is enjoyed through Ardrishaig. Population of the parish in 1831, 2,137; in 1851, 2,178. Houses, 513. Assessed property in 1843, £5,776 19s. 4d.

This parish is in the presbytery of Inverary, and synod of Argyle. Patron, the Crown. Stipend, £158 18s. 6d.; glebe, £10. There are two parish-churches,—the one built at Inverneill, and the other at Achoish, both about the year 1775, and each containing 250 sittings. There is a Free church preaching station; and the sum raised in connexion with it in 1855 was £2 4s. 2d. There are four parochial schools, and they have divided amongst them the maximum salary. There are also an Assembly's school, and two or three winter private schools. There were formerly within the limits of South Knapdale seven ancient chapels; but the remains of only three of these are now to be seen.

KNEES, a headland, consisting of a bold mass of conglomerate, about 7 miles north-north-east of Stornoway, on the east coast of Lewis, in the Outer Hebrides.

KNIGHTSRIDGE, an estate in the parish of Livingstone, Linlithgowshire. A hill on this estate, in the north-east corner of the parish, called Knightsridge-hill or Dechmont-Law, has an elevation of 686 feet above the level of the sea, and commands a very extensive prospect.

KNIGHTSWOOD, a village in the Dumbartonshire section of East Kilpatrick. It stands on the south-eastern verge of Dumbartonshire, midway between Yoker and Maryhill, 5 miles north-west of Glasgow. Population, 178. Houses, 31.

KNIPE. See CUMNOCK (NEW).

KNOCK, a Gaelic word, signifying a hill. It is used by itself to designate many a hill in Scotland, and in a few instances to designate an estate or other locality characterized by a hill. It is also used in apposition with other names, particularly the names of parishes or towns, as in the cases of Knock of Alves, Knock of Bathgate, Knock of Crieff, Knock of Fordoun, Knock of Fordyce, Knock of Grange, Knock of Ordiquhil, and Knock of Renfrew. And it is used in many instances as a prefix.

KNOCK (THE). See EDENKILLIE, KILDALTON, and RENFREW.

KNOCK (TOWER OF). See GLENMUICK.

KNOCKANDO, a parish, containing the village of Archieston, and the post-office station of Knockando, in the south-east of Morayshire. It is bounded by Dallas, Birnie, Rothes, Inveraven, Aberlour, Cromdale, and Edenkillie. Its length north-eastward is about 15½ miles; and its breadth is from 2 to 6 miles. The river Spey traces the whole of its north-eastern boundary, from Cromdale to Rothes, a little beneath Craigellachie bridge; and in one part of that river's course here occurs the rock of Tomdow, which is the most dangerous point for the floats of timber from the forests of Rothiemurchus and Abernethy to the sea. The burn of Aldyoulie, the burn of Aldarder, the burn of Knockando, the burn of Ballintomb, and some other brooks drain the interior down rapid descents to the Spey, making some beautiful little waterfalls in their progress. There are two small lochs in the moorlands. The general surface of the parish is considerably diversified with haughs, rising grounds, hills, glens, and moorlands; ascending on the whole, from beautiful low ground on the Spey to tracts of wild heathy mountain o the interior border, with an extreme elevation ther which is commonly reckoned the highest ground i Morayshire, and which, in fine weather, command a very extensive prospect. There are many miner springs. The rocks are variously granitic, schistos and sedimentary. The soil near the Spey is sandy higher up, it is black gravelly mould; still highe it is a heavy clay; and toward the moors, it is mossy There are large expanses of moss, particularly a Milton, Monahoudie, and Mannoch. There ar considerable plantations at Archieston, Corgyle Easter Elchies, and other places. The great floo of 1829 worked terrible devastation in the tract of Aldarder burn, Knockando burn, and other part of the parish. The landowners are Grant of Weste Elchies, Grant of Ballindalloch, and the Earl of Sea field. The mansions are Wester Elchies-house Knockando-house, and Glengunnery-cottage. Th old valued rental was £1,987 Scotch. Assessed pro perty in 1843, £3,856 10s. 4d. There are four grain mills, a waulk-mill, a carding-mill, saw and thresh ing mills, and two distilleries. Population of th parish in 1831, 1,497; in 1851, 1,771. Houses, 363

This parish is in the presbytery of Aberlour, an synod of Moray. Patron, the Earl of Seafield. Sti pend, £158 6s. 7d.; glebe, £13. The parish churc was built in 1757, and repaired in 1832, and contain 477 sittings. There is a Free church of Knockando and the amount of its receipts in 1855 was £58 10s 4½d. There is an United Presbyterian church a Archieston, with an attendance of about 175. Ther is also an Independent chapel, built in 1818, an containing 200 sittings. There are two parochia schools, with each a salary of £25 13s. 3½d., abou £15 or £20 fees, and a share in the Dick bequest. There are also three Society schools and a private school. The present parish of Knockando compre hends the ancient parishes of Knockando and Mac allan, both of which were vicarages. A smal vestige of Macallan church still remains; and ther are two or three places in the parish where chapel or religious houses are supposed to have stood.

KNOCKBAIN, a parish, containing the post-offic village of Munlochy and the village of Charlestor in the south-east corner of Ross-shire. It is bounde by the Moray frith, and by the parishes of Avoc Urquhart, and Killearnan. Its length south-soutl westward is about 6½ miles; and its breadth about 5½ miles. It comprises the north side Kessock ferry, extends thence along the Moray frit toward Avoch, and is intersected westward by Mu lochy bay. Its surface is smooth, and rises gradual from the coast to the summit of the Mullbuy. S the articles KESSOCK, MUNLOCHY, and MULLBU The rocks belong to the old red sandstone form tion. The soil is very various, and lies upon a dive sity of subsoil, but, in general, is good. About 3,0 imperial acres are in tillage. The plantations are e tensive; and there is no undivided common. The are five landowners. The mansion of Belmadut is a princely abode, with a fine square of every ot suitable accommodation. The real rental is upwa of £6,000. Assessed property in 1843, £6,772 7d. A battle was fought in this parish, in the 1 century, between the Macdonalds and the inhabita of Inverness. General Mackenzie, who fell at battle of Talavera, was a native. Population of parish in 1831, 2,139; in 1851, 3,005. Houses, 6

This parish is in the presbytery of Chanonry, the synod of Ross. Patrons, the Crown and Marchioness of Stafford. Stipend, £232 18s. glebe, £22. Unappropriated teinds, £92 14s. Schoolmaster's salary, £34 4s. 4½d. The pa

church was repaired and enlarged about 35 years ago, and contains about 750 sittings. There is a Free church, with an attendance of about 1,200; and the amount of its receipts in 1855 was £223 18s. 4d. There is also an Episcopalian chapel, with an attendance of about 100. There are three non-parochial schools. The parish of Knockbain was constituted in 1756 by the union of the parishes of Kilmuir-Wester and Suddy; and it took the name of Knockbain from the spot on which the church was built. Kilmuir signifies "the church of Mary;" Suddy, "a good place to settle in;" and Knockbain, "the white hill."

KNOCKBIRNEY. See KINCARDINE, Ross-shire.

KNOCKBRECK, a hill and a stream in the island of Jura. There is a salmon fishery on the stream.

KNOCK-CASTLE. See LARGS and SKYE.

KNOCKDOLIAN. See COLMONELL.

KNOCKDOW. See INVERCHAOLAIN.

KNOCKELDERABOLL, a mountain on the mutual boundary of the parishes of Loth and Kildonan, in Sutherlandshire.

KNOCKENBAIRD, a hill in the parish of Insch, Aberdeenshire.

KNOCKFARRIL, a conical eminence, crowned with a vitrified fort, on the south side of the valley of Strathpeffer, in the parish of Fodderty, Ross-shire. This hill-fort is one of the most beautiful and strongly marked in Scotland. The ascent of it from the valley is very steep, almost vertical. The vitrified rampart on the top encloses an oval area of about 420 feet by 120; and is defended by breastworks, which proceed down the adjoining slopes. It commands a distinct view of Craigphadric, in the vicinity of Inverness, and of Dunskaith, on the northern Sutor of Cromarty. A regular chain of forts are in sight both toward the west along the Great Glen, and toward the east; so that, on the appearance of an enemy on either side of the island, an alarm could be given from Knockfarril to the whole country from coast to coast, perhaps within an hour.

KNOCKFIN. See KILTARLITY.

KNOCKGEORGAN. See ARDROSSAN.

KNOCKGERRAN, a barony belonging to the Marquis of Ailsa, in the parish of Dailly, and including the island of Ailsa, in Ayrshire.

KNOCKHALL. See DEERNESS and FOVERAN.

KNOCKHEAD, a point of land, extending into a reef of rocks, at the north-eastern extremity of the parish of Boindie, in Banffshire. It is situated about 2 miles west-north-west of the town of Banff.

KNOCKHILL. See FORDYCE, HODDAM, FORDOUN, and GRANGE.

KNOCK-HOUSE. See TOROSAY.

KNOCKINGLAW. See INVERURY.

KNOCKINHAGLISH, the site of an ancient church, on the lands of Finnich-Drummond, in the parish of Drymen, Stirlingshire.

KNOCKINTIBER, a village in the parish of Kilmaurs, Ayrshire.

KNOCKIRNY, a mountain on the mutual border of Kincardine in Ross-shire, and of Assynt in Sutherlandshire. It abounds in white and party-coloured marble.

KNOCKLAGAN, a picturesque hill, "the hill of hollows," on the west side of the parish of Edderton, Ross-shire.

KNOCKMADE, a barony belonging quoad sacra to the parish of Beith, Ayrshire, but formerly included in the parish of Neilston in Renfrewshire, and still belonging quoad civilia to the latter county.

KNOCKMAHAR, a hilly ridge, between the hill of Blair and the Lornty burn, in the parish of Blairgowrie, Perthshire. It rises higher than the hill of Blair, and is partly cultivated and partly covered with plantations of Scotch pine.

KNOCKMAN. See DALRY, Kirkcudbrightshire.

KNOCKMOY. See KINTYRE (MULL OF).

KNOCKNALLAIG. See KELLS.

KNOCKNABARYVICH, a considerably high hill in the parish of Reay, Caithness-shire.

KNOCKNAVIE, a wooded hill, crowned by a cairn, called the cairn of the gallows, in the parish of Rosskeen, Ross-shire.

KNOCKNOWTON, an eminence in the eastern part of the parish of Cambusnethan, Lanarkshire. It commands a gorgeous view of Strathclyde, together with distant backgrounds, — Edinburgh-castle on the east, Loudon-hill and the peaks of Arran on the south, and Dumbarton-castle, Benlomond, and the mountains of Argyleshire on the west.

KNOCKSHOGGLEHOLM, a village in the parish of Coylton, Ayrshire. Population, 102. Houses, 19.

KNOCKSIDE, a hill, rising to the altitude of 1,419 feet above the level of the sea, in the parish of Largs, Ayrshire.

KNOCKSLEITILL, a high hill in the parish of Reay, Caithness-shire.

KNOCKSTING. See DALRY, Kirkcudbrightshire.

KNOCK-WATER. See KNAIK (THE).

KNOCKWOOD. See KIRKMICHAEL, Dumfries-shire.

KNOWE, a post-office station subordinate to Newton-Stewart, in Galloway.

KNOWE OF SKAE, a headland on the south-west of the island of Westray, in Orkney.

KNOWHEAD. See DENNY.

KNOWS, a manufacturing locality, in the vicinity of the town of Beith, Ayrshire.

KNOX (JOHN). See ABERDEEN and EDINBURGH.

KNOYDART, a district on the west coast of the mainland of Inverness-shire. See GLENELG and INVERNESS-SHIRE.

KOLLIEBEN, a hill on the mutual boundary of the parishes of Clyne and Loth, Sutherlandshire.

KOOMB. See ELLAN-NA-COOMB.

KOR-STONE. See MONEDIE.

KYLE, a Celtic word, signifying a frith or a narrow belt of sea. It is used in Scottish topographical nomenclature, both as a prefix and in apposition, both in the singular number and in the plural. The name Kyle, however, as applied to a district in Ayrshire, is not this word, but a corruption of Coil or Coyle.

KYLE, the middle district, anciently the middle bailiewick, of Ayrshire. It is bounded on the north by the river Irvine, which divides it from Cunningham; on the north-east by Lanarkshire; on the east by Dumfries-shire; on the south by Kirkcudbrightshire; on the south-west by the river Doon, which divides it from Carrick; and on the west by the frith of Clyde. The river Ayr rising on its eastern boundary, and traversing it westward to the Clyde, divides it into Kyle-Stewart on the north, and King's-Kyle on the south. Its chief streams, additional to the Ayr, are the Coyl and the Luggar, tributaries of that river,—the Cessnock, a tributary of the Irvine,—and the Nith, which drains its south-east corner, and passes into Dumfries-shire. Its parishes are Dundonald, Riccarton, Galston, Craigie, Symington, Mauchline, Sorn, Muirkirk, Monkton, Tarbolton, Newton, St. Quivox, Stair, Auchinleck, Ayr, Coylton, Ochiltree, Old Cumnock, New Cumnock, Dalrymple, and Dalmellington,—all in the presbytery of Ayr. Population in 1831, 56,066; in 1851, 72,284. Houses, 9,455.

KYLE-AKIN, the strait at the north-western

extremity of the sound which separates the island of Skye from the Scottish mainland. It is very narrow, insomuch that a common fable represents the old method of passage over it to have been by leaping.

KYLE-AKIN, a post-office village in the parish of Strath, in the island of Skye. It stands on the shore of the strait of Kyle-Akin, 8¼ miles north-east of Broadford. It was founded by the late Lord Macdonald, on a grand plan, as an intended considerable sea-port, to consist chiefly of two-story houses with attics; but has never yet exceeded, and gives no near prospect of exceeding, the limits of a mere village. Yet it is one of the main thoroughfares between Skye and the mainland, has a good inn, and is the seat or meeting-place of the synod of Glenelg. Population, 231. Houses, 40.

KYLE-CASTLE. See Auchinleck.

KYLE-OF-DURNESS. See Durness.

KYLE-OF-KINCARDINE, the narrow upper part of the Dornoch frith. See Dornoch Frith (The).

KYLE-OF-LAXFORD, the long narrow bay, otherwise called Loch Laxford, which penetrates the middle part of the parish of Edderachyllis, on the west coast of Sutherlandshire.

KYLE-OF-SUTHERLAND, the upper part of the Dornoch frith.

KYLE-OF-TONGUE. See Tongue.

KYLE-RHEA, the strait at the north-east end of the sound of Sleat, between the island of Skye and the Scottish mainland. It is the thoroughfare from Skye to the Great Glen by way of Glenelg. Its width is about ½ of a mile, and the current of the tide through it is exceedingly rapid; but the ferry-boats upon it are substantial and well managed. On each side of it stands a solitary inn, affording pretty good accommodation.

KYLE-SCOW, the long narrow bay which forms the mutual boundary of Assynt and Edderachyllis, on the west coast of Sutherlandshire. See Assynt and Edderachyllis.

KYLES-HILL. See Polwarth.

KYLES-MURE. See Mauchline.

KYLES-OF-BUTE, a narrow and remarkably picturesque arm of the frith of Clyde, separating the northern part of the island of Bute from Argyleshire. It commences between Bogany-point in Bute and Toward-point in Cowal with a width of 2 miles. It suddenly expands, on the Bute side, into Rothesay bay, and soon after into Kaimes bay; and then, 2 miles farther on, sends off the picturesque Loch-Striven north-north-westward into Cowal. Its direction up to Strone-point, at the commencement of this loch, is north-westward, its length 4½ miles, and its average breadth about 2 miles or somewhat less. It has here all the character of a capacious and most beautiful bay, brilliantly diversified in the lands which flank it, and commanding a view outward of the Big Cumbrae Island, and of a long sweep of the coast of Ayrshire. At Strone-point it suddenly contracts to a width of less than half-a-mile; and thence it proceeds 5 miles north-westward to the mouth of Loch-Riddan. Everything, in this stretch, assumes a truly Highland aspect. The glen becomes narrow, the hills steep; and along their rugged acclivities, as artlessly situated as th rocks with which they are strewn, appears the rudel constructed shieling of the fisherman or shepherd while at wider intervals is seen the farmer's bette constructed cottage, surrounded with a few patche of cultivated soil, appropriated to the production potatoes, oats, and barley. About 1¼ mile befo arriving at the mouth of Loch-Riddan, the mo picturesque part of the Kyles is reached. Here th passage narrows into the size of a small river, an the eye in vain searches for an opening throug which to proceed—the hills being so closely joine as to appear like one immense barrier surrounding th extremity of an inland lake. A little onward li three small rocky islands, exhibiting the appearanc of having once been exposed to the action of fir from which cause they have received the name the Burnt Islands; and on one of them stand th remains of a vitrified fort. In the mouth of Loch Riddan appears the small but celebrated isle Ellan-Dheirrig, which was strongly fortified by th Earl of Argyle in his great military movement 1685. At this point, the Kyles make a sudden d flexion. They proceed hence 2¾ miles in the dire tion of south-west, retaining over that distance muc of the narrowness of their previous course; and the they deflect again, and proceed thence in a southerl direction 6 or 8 miles toward Ardlamont-point an Inch-Marnoch, gradually expanding in their pr gress, till they become lost in the wide expanse waters at the conjunction of Kilbrannan-sound an Loch-Fyne. From the point of their last deflexio they so gradually and gracefully evolve themselve from their previous narrowness, and so grandl open out toward a front view of Inch-Marnoch an the peaks of Arran, that the effect of the wide gra landscape upon the mind of a beholder, after hi passage through the previous long strait, is in th highest degree enrapturing. The Kyles are tr versed from end to end by the steamers which pl from Glasgow to Loch-Fyne; and in all their low parts, from Rothesay-bay up to Loch-Riddan, the are now traversed also by steamers of their ow which ply to various neat watering places on the shores, and to Loch-Striven and Loch-Riddan.

KYMAGH (The), a small affluent of the Livet, the upper part of the parish of Inveraven, Banffshir It rises near the boundary with Aberdeenshire, a runs about 7 miles south-westward, to the centre Glenlivet.

KYPE (The), a stream of the south-western bo der of Lanarkshire. It rises near the bounda with Ayrshire, and runs 5 miles north-eastward, the boundary between Lesmahago and Avonda and 3 miles north-westward, on the bounda between Avondale and Stonehouse; and th falls into the Avon within a mile of Strat aven. In its upper course it is a bleak moorla stream, capable of being suddenly swollen into mischievous torrent; but, as it approaches the Av it becomes comparatively ornate, and makes a fi waterfall, of about 50 feet in leap.

KYPE'S-RIGG, a ridge of hill, extending fr the left bank of the Kype 2½ miles south-westwa in the parish of Avondale, Lanarkshire.

KYTON. See Caledonian Canal.

L

LACHTALPINE. See DALMELLINGTON.

LACKSTA (THE), a stream abounding with trout and salmon, in the parish of Harris, in the Outer Hebrides.

LACOCK. See FOWLIS.

LADADDA. See FIFESHIRE.

LADDERS (THE). See KATRINE (LOCH).

LADHOPE, a quoad sacra parish on the north-west border of Roxburghshire. It was constituted by the Court of Teinds in 1855. It comprises part of the post-town of Galashiels, and the north-western part of the quoad civilia parish of Melrose. Its parish church was formerly a chapel of ease, has an attendance of about 340, and is under the patronage of such male seatholders as are communicants. There is a Free church, with an attendance of about 360; and the amount of its receipts in 1855 was £204 18s. 4d. See the articles GALASHIELS and MELROSE.

LADIES' HILL. See STIRLING.

LADY, a name in the topographical nomenclature of Scotland, referring to the Roman Catholic times, when the Virgin Mary, called by the Roman Catholics "Our Lady," was an object of the national worship. It is used in one or two instances alone, but is used more commonly as a prefix.

LADY, a parish, comprising the north-eastern portion of the island of Sanday, in Orkney. Its post-town is Kirkwall. It is bounded on the south-west by the parish of Cross, and on all other sides by the sea. Its length south-westward is about 9 miles; and its average breadth is about 1 mile. It is deeply indented on the north-west by Otterswick bay, and on the south by Stywick bay; and it sends out the promontorial headlands of Taftsness in the extreme north, Start in the extreme north-east, Tressness on the east side of Stywick bay, and Elsness on the west side of that bay. There is a lagoon on the estate of Elsness, 100 Scotch acres in extent, dry at low water, but capable of being easily converted into a fine harbour. There is a lagoon of similar character, and of at least twice the extent, at Tressness. About one-third of the land is waste and heathy, and the rest either forms good natural pasture or is under cultivation. The soil is very various, but for the most part is a fertile mixture of mould and sand. There are several of the ancient buildings called Picts' houses. The real rental in 1841 was £2,203. Population in 1831, 858; in 1851, 1,004. Houses, 183.

This parish is in the presbytery of North Isles, and synod of Orkney. Patron, the Earl of Zetland. Stipend, £158 6s. 8d.; glebe, £4 8s. The parish church was rebuilt about 24 years ago, and is amply commodious. There are in Sanday a Free church, and an United Presbyterian church; and the sum raised in connexion with the former in 1855 was £295 1s. 1d. There is one parochial school for the three parishes of Sanday; and the salary attached to it is £46 10s. There is a Society's school in the district of Sellibister in Lady parish. There is a lighthouse on Start-point. See START.

LADYBANK, a post-office village in the parish of Collessie, Fifeshire. It is situated about a mile north of Kingskettle, and 5 miles south-west of Cupar. It was formerly called Ladybog, and was a mere linen-weaving village on the allotment principle; but it has acquired importance from being the point at which the main trunk of the Edinburgh, Perth, and Dundee railway forks into the two branches toward respectively Perth and Dundee. Here is a depot of the railway for engines and carriages; and in the vicinity are a meal mill and a sandstone quarry. Population, 102. Houses, 17.

LADY-BAY, a small bay on the north coast of the parish of Kirkcolm, in Wigtonshire.

LADY-BURN, a brook which rises in the parish of Monimail, and flows 3 miles south-eastward to a junction with the Eden, at the east side of the town of Cupar, in Fifeshire. It traverses the northern suburbs of that town, and contributes materially to the town's cleanliness and cheerfulness.

LADY-CRAIG. See ANDREWS (ST.).

LADY-GLEN. See DAILLY.

LADY-ISLE, an uninhabited rocky islet, in the parish of Dundonald, Ayrshire. It lies in the bay of Ayr, 2 miles south-west of Troon-point, 5½ miles north-west by north of Ayr pier, and 5½ miles south-south-west of the mouth of Irvine-water. Its length southward is 3½ furlongs; and its breadth is ¼ of a mile. Importance attaches to it on account of its affording, in the large open bay in which it lies, and along a great extent of coast from Galloway to Fairley-roads unprovided with harbour or anchorage for large vessels, the only place of shelter from westerly winds. See LAPPOCH.

LADYKIRK, a parish, containing the post-office station of Ladykirk, the post-office village of Horndean, and the village of Upsetlington, on the south-eastern border of Berwickshire. It is bounded on the south-east by the Tweed, which divides it from England, and on other sides by the parishes of Coldstream, Swinton, Whitsome, and Hutton. Its length north-eastward is 4 miles; and its greatest breadth is 2¼ miles. The surface rises gently from the Tweed, and is diversified with a few swells, but, in general, is level and fertile. About one-fourth is disposed in perennial pasture, and devoted by a deed of entail to the grazing of a highly valued variety of short-horned cattle. About 50 or 60 acres are covered with trees. All the rest of the area is cropped in the most approved methods of husbandry. A white micaceous sandstone lies beneath a large part of the surface, and a reddish sandstone occurs in the west; but they are nowhere quarried. The Tweed rolls the full flood of its beauty in a thrice-repeated curve 3 miles along the boundary; and is stationed-off in several places for its salmon-fisheries. On its opposite bank stands Norham-castle. Previous to the erection of Berwick-bridge—built apparently in the reign of Elizabeth—a ford at this place often gave passage across the river to armies of invasion, and occasionally pointed out spots in the vicinity as convenient scenes of international conference and negociation. Holywell-haugh, an adjacent field, was the place of meeting between Edward I. and the Scottish nobles, to adjust the dispute respecting the succession to the crown of Scotland. The parish-church, situated near the river, was, in the reign of Mary, the scene of a treaty

concluded by commissioners, and supplementary to that of Chateau-Cambrensis. James IV., when crossing the ford at the head of his army, was in hazard of being swept away by the swollen current, and vowed, if he should be delivered, to build a church in honour of 'Our Lady.' The erection which sprang up in fulfilment of his vow, was called Ladykirk, and, usurping the place of the more ancient parochial church, imposed its name on the parish. Ladykirk-house, in the south-east corner, on the Tweed, is the only mansion; and the proprietor of it is the principal landowner. The estimated yearly value of raw produce in 1834 was £11,330. Assessed property in 1843, £4,430 9s. 1d. Population in 1831, 485; in 1851, 561. Houses, 111.

This parish is in the presbytery of Chirnside, and synod of Merse and Teviotdale. Patron, the Crown. Stipend £170 16s. 2d.; glebe £20. Schoolmaster's salary, £25 13s. 3½d., with about £13 fees. The parish church was built in 1500, and contains about 300 sittings. It was originally a handsome cruciform Gothic edifice, but has been utterly disfigured by modern alterations and additions. There is an United Presbyterian church at Horndean. The present parish of Ladykirk comprehends the ancient parishes of Upsetlington or Ladykirk on the south, and Horndean on the north. The former was anciently a rectory; and the latter belonged, till the Reformation, to the monks of Kelso. Robert Byset, who obtained, during the 12th century, the manor of Upsetlington, founded, in the reign of David I., an hospital at Horndean, dedicated it to St. Leonard, and gave it, with its pertinents, to the monks of Kelso, obliging them to maintain two paupers on the foundation, and to support an officiate in the hospital chapel. At a place still called Chapel-park, a little north of Upsetlington, are faint traces of an ancient building,—either the hospital, or some other ecclesiastical edifice. In the vicinity are three fountains, graced with modern pillars, inscribed respectively with the names of St. Mary's, the Monk's, and the Nun's well.

LADYKIRK, a parish in the island of Stronsay, in Orkney. It comprises the south-western limb of that island; and is washed on the north by Linga sound, and on the east by Rousholm bay. Its length north-north-eastward is 4 miles; and its greatest breadth is upwards of 1½ mile. Population in 1831, 274; in 1851, 356. Houses, 66.—This parish is now comprehended in the united parishes of Stronsay and Eday. See STRONSAY.

LADYKIRK, a locality adjacent to Duncansby, formerly the site of a chapel dedicated to the Virgin Mary, in the parish of Canisbay, Caithness-shire.

LADYKIRK, an estate on which stand the remains of a chapel dedicated to the Virgin Mary, in the parish of Monkton, in Ayrshire.

LADYKIRK, or NORTHKIRK, a parish, containing the village of Northkirk, or Pierwall, and comprising the northern part of the island of Westray, in Orkney. Its length south-south-westward is 6¼ miles; and its greatest breadth is 3½ miles. Population in 1831, 834; in 1851, 993. Houses, 193.—This parish now forms part of the united parish of Westray and Papa Westray. See WESTRAY.

LADYLAND. See KILBIRNIE.

LADYLOAN. See ARBROATH.

LADY'S-ROCK. See LISMORE.

LADY'S-WELL, or LADYWELL, any well which was formerly dedicated to the Virgin Mary, or any locality containing such well, and named from it. The name was very common in Roman Catholic times, and is still retained in a number of places, particularly Aboyne, Airth, Alloa, Avoch, Balmarino, Bedrule, Daviot in Aberdeenshire, Falkland, Glasgow, Glenisla, Grange in Banffshire, Kincardine in Ross-shire, Marnoch, Stow, Traquair, and Whitekirk.

LADY-YESTER'S. See EDINBURGH.

LAG, or LAGG, a Gaelic word, used both as a name and as a prefix in Scottish topographical nomenclature. It signifies a small round hollow plain. The plural of it is Laggan.

LAG, or LAGG. See DUNSCORE, KILMORIE, ARDNAMURCHAN, and KEILLS.

LAGAMHULIN, a small bay on the south-east coast of the Island of Islay, 4½ miles north-east of Port-Ellen, Argyleshire.

LAGANALLACHY. See DUNKELD (LITTLE).

LAGGAN, a highland parish, comprising the south-west of the district of Badenoch, in Inverness-shire. It has a post-office of its own name, 11 miles from Kingussie. It is bounded on the south by Perthshire, and on other sides by the parishes of Kilmanivaig, Boleskine, and Kingussie. Its extent from north to south, and also from east to west, is about 22 miles; but only a tract of about 3 miles in breadth contains nearly all the inhabitants. The general surface is wildly and confusedly mountainous, consisting of a congeries of lofty, heathy, barren heights, of gloomy aspect, looking as if huddled together, or heaped up summit on summit, yet plentifully intersected by corries, ravines, narrow glens, the beds of lakes, and the upper part of the valley of the Spey. The uplands, for the most part, are dismal to the eye, and of very small economical value; but the inhabited parts, together with the hill slopes adjacent to them, are pleasant and beautiful, comparatively fertile in soil, and affording some noble expanses of picturesque scenery. The central Grampians, overhanging Loch-Ericht, are on the southern border; the Monadhleadh mountains, in their alpine heights around the sources of the Spey, are on the northern border; and the mountains which flank Loch-Laggan, and form the watershed between Badenoch and Lochaber, are on the west. The interesting features of scenery and objects of locality are very numerous, but nearly all will be found noticed in our articles ARDVERIKIE, CLUNY, GARVIEMORE, MONADHLEADH, BENALDER, ERICHT (LOCH), LAGGAN (LOCH), GLENTRUIM, BADENOCH, SPEY, and INVERNESS-SHIRE. Thousands of springs rise among the uplands, forming considerable brooks; and these are ever liable to be suddenly swollen by heavy rain-falls, into voluminous torrents. Those in the south find their way through Loch-Ericht to the Tay; those in the central parts of the west run into Loch-Laggan, to form the efflux of the Spean; and all the rest are headstreams of the Spey, the remotest of them being the nascent Spey itself, coming in from the north-east corner of Lochaber. Metamorphic rocks of the gneiss kind predominate in the mountains; a bed of excellent limestone lies in the valley of the Spey, and slate of inferior quality is found. The soil in the lower valleys is alluvial, and in some places has a depth of ten or twelve feet. The landowners are Baillie of Kingussie, Macpherson of Cluny, and Macpherson of Glentruim. The mansions are Cluny-castle, Glentruim-house, Falls-of-Truim-house, Ardverikie, and Glenshirra-house. On a rock on the ridge which separates Glenshirra from Strathmashie, at an altitude of at least 600 feet above the level of the adjacent valley, are considerable remains of an ancient fortification, with walls upwards of nine feet thick, built of large flags or broad stones without mortar. The parish is touched by the great road from Inverness to Perth, and traversed by the roads thence from Fort-Augustus and Fort-William. Population in 1831, 1,196; in 1851, 1,223. Houses, 221. Assessed property in 1843, £6,951 4s. 1d.

This parish is in the presbytery of Abertarff, and synod of Glenelg. Patron, the Duke of Richmond. Stipend, £158 6s. 7d.; glebe, £14. Schoolmaster's salary, £34 4s. 4½d. The parish church was built in 1842, and contains about 500 sittings. It is situated on the Spey, in the lower part of the parish, within 2 miles of Cluny-castle. There is a Free church of Laggan, with an attendance of 220; and the amount of its receipts in 1855 was £128 17s. 0½d. There is a Roman Catholic chapel, on a prominent site in Glenshirra. The ancient church of Laggan is supposed to have been dedicated to St. Kenneth. The ruins of it are still to be seen at the head of Loch-Laggan, 7 miles west of the present church. Mrs. Grant, who lived many years in the manse of Laggan as the wife of the parish minister, and who died at Edinburgh in 1838, is far known to fame as the writer of several popular works on the Highlands and Highlanders.

LAGGAN-BAY, a bay on the east side of Loch-indaal, in the island of Islay. It measures nearly 5 miles across the mouth, but does not penetrate the land to a greater extent than about 2 miles. It is flanked on the south side by the Mull of Oa.

LAGGAN-HILL, a picturesque conical hill in the south-east of the parish of Monivaird, Perthshire. It serves, with some other similar hills, to flank the north side of Strathearn, as an advanced guard to the background Grampians.

LAGGAN (Loch), a lake on the south-west border of Badenoch, Inverness-shire. It extends south-westward, with a length of about 8 miles, and a breadth of from 1 to 1½ mile, and discharges itself, by giving origin to the river Spean, on the north-east verge of Lochaber. Although inferior in point of picturesque beauty to Loch-Arkeg, Loch-Laggan, among the Inverness-shire lakes, is a beautiful expanse of water; and the surrounding mountains are not deficient either in variety of outline, or in grandeur of form. Its shores are deeply indented, the hills in some places throwing out long narrow promontories, while in other places the loch dips in graceful bays over sandy flats. It is consequently impossible for the eye to catch more than a section of the loch at one view. The largest of numerous torrents flowing into Loch-Laggan is the Pattaig, which descends from the Benalder forest, and runs into the loch with an ample current confined for some short distance betwixt grey precipitous rocks, but making its escape from this gorge by sweeping over a ledge of rock, with a fall of 8 or 10 feet, in a broad and almost unbroken stream. Tradition has been busy with Loch-Laggan and its shores, as with almost every lake or mountain in the Highlands. In early ages its beauty, or the game with which its mountains abounded, attracted royalty. "Fergus, the first of our kings," long prior to the time when the castle of Inverlochy became a royal residence, made this lake and its mountains the scene of his amusements. Here, or in the near neighbourhood, Prince Charles Edward both made the first movements of his enterprise of 1745, and lay a-hiding after his discomfiture at Culloden. And here, in recent years, the present royal family of Great Britain made an autumnal sojourn. See Laggan, Pattaig (The), Ericht (Loch), and Ardverikie.

LAGGAN (Loch), a lake, about 1½ mile long, formed by the expansion of the rivulet Evlix, in the eastern part of the parish of Criech, in Sutherlandshire.

LAGGAN-POINT, a headland flanking Loch-Buy, near the middle of the south-east side of the island of Mull. Here is a cavern, called Odin's cave, 300 feet in length, from 20 to 45 feet in breadth, and, over great part of its extent, 120 feet in height. A narrow, difficult passage from one point of its interior descends to another cave, 150 feet long, 12 broad, and 24 high. In the vicinity of the headland are two small ancient chapels.

LAGGAN-ULVA, a landing place on the west coast of the island of Mull, serving as the most convenient point of communication with Staffa and Iona.

LAGGAVOULIN, a small post-office village, 4 miles north-east of Port-Ellen, on the south-east coast of the island of Islay.

LAGLEY. See Fergus (St.).

LAHICH (Loch). See Kilfinichen.

LAIGHTOWN. See Fenwick.

LAIGHWOOD, a barony, belonging to the Athole family, in the parish of Clunie, Perthshire.

LAINSHAW. See Stewarton.

LAIRDMANNOCH (Linn of), a waterfall, or rather series of waterfalls, in the middle of the course of the rivulet Tarf, in Kirkcudbrightshire. It can be all seen at one view, and, during a freshet, is very picturesque. See Tarf (The).

LAIRG, a parish, containing a small post-office village of its own name, in the centre of the south of Sutherlandshire. It is bounded by Farr, Rogart, Criech, Assynt, and Edderachyllis. Its length south-eastward is about 25 miles, and its greatest breadth is about 12 miles. It is intersected, through the greater part of its length, along its centre, by Loch-Shin, and by the upper part of the river Shin. See Shin (Loch), and Shin (The). A lofty line of watershed forms nearly all its boundary, except over small distances at its ends. The summit of Benclybric, the loftiest land in Sutherlandshire, having an altitude of about 3,200 feet above sea-level, is on its northern boundary. Its other heights have a great variety of altitude, and they decline generally to the central belt of water; yet those on the north side of that belt are intersected by two considerable glens, called Glen-Figach and Strath-Fyvie. There are about 20 small lakes. Granite and trap are the prevailing rocks; but a large bed of limestone occurs at the side of Loch-Shin. A mossy soil is very prevalent; yet the soil of some of the arable land is loamy and fertile. A large proportion of the surface formerly in tillage, is now sheep pasture. A number of tumuli at a place called Knock-a-chath, are said to be the memorials of a battle between the Sutherlands and the Mackays. The parish is traversed up the centre by the road from Inverness to Scourie and to Tongue. The village of Lairg stands on that road, near the foot of Loch-Shin, 11 miles north-north-west of Bonar-Bridge. Here is an excellent inn. Population of the village, 69. Houses, 16. Population of the parish in 1831, 1,045; in 1851, 1,162. Houses, 225. Assessed property in 1843, £1,912 12s. 2d.

This parish is in the presbytery of Dornoch, and synod of Sutherland and Caithness. Patron, the Duke of Sutherland. Stipend, £166 13s.; glebe, £13. Schoolmaster's salary, £34 4s. 4½d., with about £8 10s. fees. The parish church was built in 1846, and contains about 500 sittings. There is a Free church, with an attendance of about 330; and the amount of its receipts in 1855 was £78 0s. 7d. There is also a Free church school.

LAITHERS. See Turriff.

LAKEFIELD. See Glenurquhart.

LAMANCHA. See Newlands.

LAMBA, an island, about 3 miles in circumference, lying in Yell sound, about a mile from the east coast of the mainland part of the parish of Northmaven, in Shetland.

LAMBANESS, a headland at the north-east extremity of the island of Unst, in Shetland.

LAMBANESS, a small headland near the top of the west side of Otterswick bay, in the island of Sanday, in Orkney.

LAMBDENO. See GREENLAW.

LAMBERTON, a suppressed parish conterminous with the liberties of Berwick, and now annexed to Mordington, Berwickshire. The church stood on an eminence 3 miles north of Berwick, on the road to Eyemouth, and ¼ of a mile east of the road to Edinburgh. The site is still marked by part of the ruin of the outer walls, and is the burying-place of the family of Renton of Lamberton. The marriage-treaty of the Princess Margaret of England with James IV. of Scotland stipulated that she should, without any expense to the bridegroom, be delivered to the Scottish king's commissioners at Lamberton church; and she is said by tradition to have been married here, but really was espoused at Windsor, and carried to the King at Dalkeith. In 1517 she returned to Lamberton-kirk a widowed Queen. In 1573 a convention, which led to the siege of Edinburgh castle, was made at this church between Lord Ruthven and Sir William Durie, the marshal of Berwick. The parish of Lamberton was small, and anciently belonged to the monks of Coldingham. After the Reformation it was annexed to Ayton; and in 1650 it was disjoined, and united to Mordington. Lamberton toll-bar—which lies between the ruins of the church and the line of the North British railway, but is hid from passengers along the line—for some time vied with Gretna as a place of inglorious espousals between runaway couples from England.—A three-feet seam of coal was discovered here in 1841-2, which is now working. Limestone and fireclay also exist in the district.

LAMB-HEAD, a headland at the south-eastern extremity of the island of Stronsay, in Orkney.

LAMBHOLM, an island nearly in the centre of Holm Sound, in Orkney. It has a circular outline, and measures about 3 miles in circumference. Population in 1851, 13. Houses, 2.

LAMB-ISLE, an islet on the east side of the frith of Forth, about 1½ mile north-west of North Berwick, and belonging to the parish of Dirleton, in Haddingtonshire.

LAMGARROCH. See TYNRON.

LAMHOGGA. See SHETLAND.

LAMINGTON, a parish, containing a post-office village of its own name, in the upper ward of Lanarkshire. It is bounded by Wiston, Symington, Culter, Crawford, and Crawfordjohn. Its length north-eastward is nearly 9 miles, and its greatest breadth is about 4 miles. The river Clyde traces all the western and northern boundary, coming in at the point where it is joined on the opposite bank by the Glengonner, and taking leave within about a mile of the church of Symington. Wandell burn, Lamington burn, Culter water, and some smaller streams drain the interior, all toward the Clyde. There are some fertile holm-lands; but the general surface is hilly and bleak, and rises, at some points, to an altitude of about 1,400 feet above the level of the sea. About 2,280 imperial acres are in tillage, and about 9,010 are in pasture. The estimated yearly value of raw produce in 1840 was £10,853. Assessed property in 1843, £3,667 19s. The predominant rocks are greywacke and porphyry. The only landowners are Baillie of Lamington and Lord Douglas. Three Roman camps occur at Whitehill, on the north-east border; a number of British camps occur in other places; a moat or tumulus, about 20 yards in diameter, occurs at Cauldchapel; and a curious series of works, supposed by some to have been a British fortress, but by others to have been a Druidical temple, occurs on the top of Arbory hill. The castle or tower of Lamington—which was a splendid building of the olden time, and of unknown antiquity—remained entire till about 80 years since, when an ignorant factor demolished it for the purpose of erecting farm-houses, byres, and stables from the wreck of walls which had stood the storm and sunshine of 600 years. The Scottish patriot, Sir William Wallace, is said, by a common tradition, to have married the heiress of Lamington. The parish is traversed by the road from Edinburgh to Dumfries, and by the main trunk of the Caledonian railway; and it has a station on the latter, 5 miles from Abington, and 37 from Edinburgh. The village of Lamington stands on the Edinburgh and Dumfries road, near the influx of Lamington burn to the Clyde, 6¼ miles south-west of Biggar, and 12 south-east of Lanark. It was entitled by charter from Charles I. to hold a weekly market, and two annual fairs; but all these soon fell into decay. Population of the village, 122. Houses, 34. Population of the parish in 1831, 382; in 1851, 369. Houses, 73.

This parish is in the presbytery of Biggar, and synod of Lothian and Tweeddale. Patrons, Baillie of Lamington and Lord Douglas. Stipend, £120 10s. 8d.; glebe, £15 10s. Schoolmaster's salary, £25, with £24 fees. The parish church is an old building, repaired in 1828, and containing 300 sittings. The 'cutty stool,' or stool of repentance, remained in this kirk longer, perhaps, than in any other in Scotland, having been removed only in 1828. The 'Jouggs' also were but recently removed. The present parish of Lamington comprehends the ancient parishes of Lamington or Lambinstoun and Wandell or Hartside, which were united in the 17th century. The ancient church of Lamington was dedicated to St. Ninian.

LAMLASH, a district, a bay, and a post-office village, on the east side of the island of Arran. The whole have already been described in our article ARRAN. See also the articles HOLY ISLE, and KILBRIDE. Regular communication is maintained by steamers with Glasgow.

LAMLOCH, a lake in the parish of Cadder, Lanarkshire.

LAMMERLAW, a mountain on the mutual border of the parish of Gifford in Haddingtonshire, and the parish of Lauder in Berwickshire. It has an altitude of about 1,500 feet above sea-level, and gives name to the whole range of the Lammermoors.

LAMMERMOOR-HILLS, a broad range of moorish heights, stretching eastward from the vale of Gala-water, in the south-east extremity of Mid-Lothian, to the German ocean at the promontories of Fast-castle, Ernscleuch, and St. Abb's-head, in the parish of Coldingham, Berwickshire. From the middle of the lofty mountain-range which begins at Cheviot in Northumberland, and, passing into Scotland, extends quite across it to Lochryan,—from the most elevated part of it, called the Lowthers or the Hartfell heights, at the meeting point of the counties of Dumfries, Lanark, and Peebles, a less lofty and less remarkable range goes off north-eastward, and tumultuously rolls across Peebles-shire to the vale of the Gala, and, but for being cloven down by this vale, would join the Lammermoor-hills, so as to be continuous to the sea. The Lammermoors all lie within East-Lothian and Berwickshire; commencing at the extreme western limit of these counties forming, for two-thirds of their extent, a southern screen, to East-Lothian, and constituting—if the Lammermoor part of Lauderdale be included—nearly one-half of Berwickshire. The range forms, with the loftier and commanding chain of the Cheviot and the Lowthers, whence it diverges, the vast triangular basin of the Tweed,—shuts out from th

Ochil-hills a prospect of the Cheviot range,—and overlooks, stretching away from its north base, the grand expanse of the great body of the Scottish Lowlands, till they are pent up by the stupendous barrier of the far-extending and thousand-summited Grampians. The Lammermoors are, in themselves, an extensive curvature of, for the most part, wild, cheerless, unsightly heights,—nowhere bold and imposing in aspect, and often subsiding into low rolling table-lands of bleak moor. They were at one period clothed with forest, and must then have been bewildering to the traveller. They still have natural woods hanging on some of their steeps; but over their summits, and down their higher slopes, they are almost everywhere nakedly dressed in heath. Yet lovers of pastoral seclusion may find pleasure in gazing on the great flocks of sheep which tenant their higher grounds; while stirring agriculturists will look with glee on the considerable ascents which have been made by the plough on their lower declivities. The soil in nearly all the upper parts is a light peat mould; and even in some of the lower parts—as in the parish of Westruther—it is a swampy moss. But elsewhere the prevailing peat is mixed with sand and clay, or gives place to comparatively kindly soil; and in the vales and lower slopes, irrigated by the numerous streams which are collected on the broad ridge, and come cheerily to the plains, are belts of fertility and of scenic beauty. The predominant rock of the mountains is greywacke. The principal summits, additional to Lammerlaw, are Criblaw, which has an elevation of 1,615 feet above sea-level; Clint-hill, 1,544; Tippet-knowes, 1,323; Manslaughter-law, 1,273; Twinlaw-hill, 1,260; Earlston-hill, 1,200; Great Dirrington-law, 1,145; Ayrhouse-hill, 1,054; Bemerside-hill, 1,011; and Cockburn-law, 912.

LAMMERTON. See LAMBERTON.

LAMP-ACRE. See CORSTORPHINE.

LANARK, a parish in the upper ward, and nearly in the centre, of Lanarkshire. It contains the royal burgh of Lanark, and the villages of New Lanark and Cartland. It is bounded by Carluke, Carstairs, Pittenain, Carmichael, and Lesmahago. Its length north-westward is fully 6 miles; and its breadth varies from 3 to 5 miles. The river Clyde traces all its south-western and its north-western boundaries, over an aggregate distance of at least 10 miles; and it here performs all its celebrated falls, and otherwise luxuriates in scenery of surpassing beauty and romance. See CLYDE (THE). The river Mouse runs right across the parish, dividing it into two not very unequal parts; and it too is famous for its scenery, particularly through a tremendous ravine a brief way before it falls into the Clyde. See CARTLAND CRAGS. The general surface of the parish may be regarded as an elevated plateau, bisected by the deep irregular valley of the Mouse, and declining, sometimes in gentle slopes, sometimes in steep declivities, to the Clyde. The upper tracts, on both sides of the Mouse, are flat and moorish, and have an altitude of about 670 feet above the level of the sea. The predominant rock is the old red sandstone. The soil adjacent to the rivers is light and gravelly; in the west end of the parish, is generally a stiff clay; in the east, is also clayey and wet; on the moors, is a hard till; and in some localities, even in the same field, is a rapid alternation of different varieties. About 6,500 Scotch acres are in tillage; about 1,200 are waste or pastoral; about 600 are lands belonging to the town; about 600 are under wood; and about 36 are orchards. Carboniferous limestone occurs in one locality, accompanied by a small seam of coal, and has been extensively worked. The estimated yearly value of raw produce in 1834, inclusive of £700 for lime, was £24,287. Assessed property in 1843, £17,780 4s. 5d. There are ten principal landowners, and a very large number of small ones. The principal mansions are Sunnyside-lodge, Cleghorn-house, Smyllum-house, Bonnitonhouse, and Lee-castle,—the last a noble castellated pile, with lofty Gothic hall in the centre, the seat of Sir Norman M. Lockhart, Bart. The old bridge over the Clyde, about a mile below the town, is a poor structure, erected about the middle of the 17th century; but the new or Hyndford-bridge, about 2¼ miles south-east of the town, is a modern erection of great lightness and elegance. There are five bridges over the Mouse; and one of these, the Cartland bridge, which was constructed in 1822 by the celebrated Telford, is remarkable for its beauty and boldness of design. It has three arches, of 52 feet span each; the height from the channel of the stream to the parapet is 125 feet, and to the spring of the arch is 84. The upper part of the parish is traversed by the Caledonian railway; and has a station on it at Cleghorn road, 29 miles from Glasgow; and a branch, which was opened in 1855, deflects from the neighbourhood of that station, down the left side of the Mouse, to the vicinity of the town.

There are few historical details connected with the parish which do not more properly belong to the town. The old Roman road passes through it, and the remains of a Roman station are still visible in a park in the neighbourhood of Cleghorn-house. The ingenious General Roy conceives that this camp was the work of Agricola. It extended 600 yards in length, by 420 in breadth, and would afford accommodation for two legions on the Polybian establishment, or 10,500 men. On Lanark moor, on the side of the Mouse opposite to Cleghorn, another small exploratory camp of the Romans is situated. The great Roman road alluded to, and well-known by the name of Watling-street, traverses this moor; thence it passes the Mouse a little to the east of Cleghorn bridge; then through the enclosures at Cleghorn, leaving Agricola's camp on the right; and thence by Collylaw, Kilcadzow, Coldstream, and Zuilshields, to Balstane, near Carluke. About a mile north of the burgh, and perched upon the very brink of Cartland Craigs, 200 feet above the bed of the stream, are seen the remains of a curious old stronghold, called by some Castledykes, and by others the castle of the Quaw. Nothing is known of the date of its erection, or of its object. The picturesque ruins of a lofty tower occupy a prominent situation on the banks of the Mouse. It is called Castlehill, and the Lockharts of Cambusnethan take their title from it. The most ancient families in the parish are those of Lee and Cleghorn; but the names of many eminent and remarkable men have been associated with it. Sir William Wallace resided in it; and some interesting relics of him are preserved at Bonniton-house. Sir William Lockhart of Lee, a great statesman and general under the Protector Cromwell, and under Charles II., and who was at the same time Lord-justice-clerk, was born in the parish, and received the rudiments of his education at Lanark school. Dr. William Smellie, the author of the treatise on Midwifery, was born in the neighbouring parish of Lesmahago, but educated at Lanark; and the learned and ingenious General Roy, who was born in the neighbouring parish of Carluke, was also educated here. Dr. Smellie bequeathed to the school his valuable library, with £200 to provide a room for its accommodation William Lithgow, the noted traveller, was born in the parish, and set out from it in early life, returning to it after a lapse of many years, frightfully

maimed in body, and shattered in constitution; and he died here, and was buried in Lanark churchyard. Robert Macqueen, Lord-justice-clerk of Scotland, better remembered for heartlessness on the bench than for his ability, was born and received his early education in the parish. He took his senatorial title of Lord Braxfield from his estate of that name in the neighbourhood of Lanark. The estate of Jerviswood, the patrimonial inheritance of Baillie the martyr, is situated here; and he found concealment in a recess in the mansion-house from the ruthless soldiery who pursued him. Sir John Lockhart Ross, so distinguished for his naval exploits, was born in Carstairs, but became connected with this parish by his marriage with Lady Ross Baillie, by whom he acquired the property of Bonniton. He built the present mansion-house, and frequently resided in it. The pious David Dale deserves an honourable niche in the historical annals of the parish, from his having founded the village and cotton manufactory of New-Lanark; and his son-in-law, Robert Owen, the founder of the new code called the "Social System," is also well-known in the parish, from his having been the manager and part-proprietor of the New-Lanark works, where he made an abortive attempt to introduce the practice of his system. The famous talisman, called the Lee Penny, which was long in high superstitious repute for medicinal virtue, is preserved at Lee-castle. It is a small triangularly shaped stone, of what kind lapidaries are unable to determine, and is set in a silver coin which, from the appearance of a cross upon it, is supposed to be a shilling of Edward I. It has been in the possession of the Lockharts of Lee since the days of Robert the Bruce. It figures wondrously on some great occasions for alleged cures done by it; and it is finely introduced by Sir Walter Scott in his novel of The Talisman. Population of the parish in 1831, 7,672; in 1851, 8,243. Houses, 930.

This parish is the seat of a presbytery, in the synod of Glasgow and Ayr. Patron, the Crown. Stipend, £333 3s. 8d.; glebe, £15. Unappropriated teinds, £601 3s. 10d. The parish church was built in 1777, and repaired in 1834. There is a chapel of ease, called St. Leonard's, which is under the patronage of the male heads of families; and the number of sittings in this and in the parish church, is 1,800. There is a Free church, containing 520 sittings; and the amount of its receipts in 1855 was £206 3s. 5½d. There are two United Presbyterian churches, respectively in Broomgate and in Hope-street; and the number of sittings in them jointly is 1,750. There are also, in the town, an Episcopalian chapel and a Roman Catholic chapel, and in New Lanark, an Independent chapel. The principal school is the burgh or grammar school. This formerly enjoyed a high celebrity, and is still a most respectable seminary, conducted by a rector and an assistant. Salary of the rector, £40, with about £40 fees and £20 other emoluments; salary of the assistant, £20. Connected with this school are 28 bursaries, of various value, but most of them simply discharging school-fees, and leaving a surplus of £2 or £3. There are also Mrs. Wilson's charity school, for fifty poor children, a well-managed subscription school, the Lanark educational institution, a ragged school, St. Leonard's school, and a number of private schools.

The ancient parish church of Lanark was dedicated to St. Kentigern, the founder of the episcopate of Glasgow, and the patron saint; but it does not appear at what time, or by whom, it was erected, although it is known to have been in existence at the beginning of the 12th century. The large bell, which swung in it for centuries, and was afterwards removed to the present parochial church, had upon it three several dates, one of them so far back as 1110. This old church, the ruins of which, now sadly dilapidated, stand about a quarter of a mile south-east from the town, was an elegant Gothic building of hewn stone, divided in the middle from end to end, by a wall supported upon pillars, forming five or six fine arches. This church, with its tithes and pertinents, was granted by David I., in 1150, to the monastery which he had previously founded at Dryburgh; and it continued to belong to that monastery till the Reformation. At Cleghorn, in the upper part of the parish, there existed in the twelfth century a chapel, which also belonged to the canons of Dryburgh. On the lands of East Nemphlar a chapel, the ruins of which were recently extant, was erected by the Templars. Within the town a chapel was dedicated to St. Nicholas, which at one time contained four different altars. One of these was dedicated to the Virgin, and called 'Our Lady's altar;' another was consecrated to the holy blood of our Saviour, and called the 'Haly bluid altar;' a third was dedicated to St. Catherine; and a fourth to St. Michael. About half-a-mile east of the town stood St. Leonard's hospital, in connection with which a chapel was founded, which served not only the hospital, but the people upon the estates which supported it. Several of these chapels were well-endowed; and it may be mentioned, in particular, that Stephen Lockhart of Cleghorn granted in mortmain the place of Clydesholm, with the profits arising from the passage-boat upon the Clyde, for the support of a chaplain at the altar of St. Catherine, in St. Nicholas chapel, at Lanark; and this grant was confirmed by the King in 1491. The lands attached to St. Leonard's were, after the Reformation, formed into a parish of the same name; but by act of parliament in 1609, St. Leonard's kirk, with the greater portion of the territory belonging to it, was incorporated with the parish of Lanark, and the edifice fell into ruins. Almost all the chapels in the parish having been ruined by the ferment of the Reformation, and the lands and tithes having passed into various hands, the old parish-church of St. Kentigern remained the principal, if not the only place of worship in the parish. In February, 1589-90, the presbytery, taking this matter into consideration, resolved that "the kirk of Lanark should be removed from the auld place to a situation within the town;" yet this kirk, in the "auld place," though fast going to ruin, continued to be regarded as the parish church till the present edifice in the town was erected in 1777; and the inhabitants of the town were for some time obliged to attend public worship in the chapel of St. Nicholas, which had passed into the hands of the magistrates, at the time of the Reformation.

LANARK, a post and market town, a royal burgh, and the capital of the upper ward of Lanarkshire, is situated in 55° 34′ north latitude, and 3° 5′ west longitude, 25 miles south-east by east of Glasgow, 31 south-west of Edinburgh, 35 south by east of Stirling, and 47 north-east by east of Ayr. Its site is a beautiful slope of ground, about half a mile from the right bank of the Clyde, about 300 feet above the level of the nearest part of that river, and about 650 feet above the level of the sea. It is believed to have been originally a Roman station, and, at all events, is a town of great antiquity. It was, in early times, a place of high mark; and it continued, till last century, to be a town of much greater relative importance than at present. A parliament or assembly of the states was held in it, in 978, by Kenneth II.; and this is the first parliament mentioned in history. Lanark, both then, and pro-

bably at a much earlier period, was regarded as a royal town. Malcolm IV., in granting a toft in it, speaks of it as *in burgo meo;* and his successor, William, mentions the town in the same terms. The erection of Lanark into a royal burgh took place in the reign of Alexander I. The burgh has also a charter from Robert I., dated at Linlithgow in the fourth year of his reign; another, without date, from Alexander III.; a fourth from the same king, in the 13th year of his reign; a fifth and a sixth from James V.; and a final one, confirmatory of all the rest, from Charles I., bearing date 20th February 1632. In the reign of David II., Lanark had attained such importance that it was enacted by a parliament held at Perth in 1348, that while the burghs of Berwick and Roxburgh continued in the possession of the English, the burghs of Lanark and Linlithgow should be admitted in their place, as members of the court of four burghs. A royal castle also stood at Lanark, on a small artificially shaped hill, on the side of the town toward the river, at the foot of the street called Castle-gate, and still bearing the name of the Castle-hill. This edifice is ascribed by tradition to David I. It was the place from which William the Lion, in 1197, dated his charter in favour of the town of Ayr. It was also mortgaged as part of the security for the jointure of the niece of King Philip of France in the negotiation, in 1298, for the marriage between her and the son and heir of John Baliol. History records likewise that, in the 13th century, this castle was in the military possession of the English. In the neighbourhood, too, there are places which, even to this day, bear names which seem distinctly to indicate that this was once a residence of royalty,—such as King-son's-knowe, King-son's-moss, and King-son's-stane. All vestiges of the castle, however, have entirely disappeared.

The town of Lanark, in its present form, consists principally of one main line of street, bearing the names of High-street and Westport, with several smaller streets or lanes diverging on either side. It was long a place of rude, antique appearance, bearing the character of a "finished town," with a large proportion of its houses in the thatched cottage form, which so generally prevailed in the old Scottish towns in the last century. But, since about the year 1824, many of the houses have been rebuilt in a somewhat handsome fashion, insomuch as to give great part of the town a renovated and comparatively spruce appearance. The materials principally used are ragstone and sandstone, the former from quarries near the town, the latter from the parishes of Lesmahago and Carluke. The parish church occupies a prominent position, nearly in the centre of the town; and, in a niche, over its eastern door, stands a colossal statue of Sir William Wallace, cut by the sculptor Forrest. The other most noticeable buildings are the Clydesdale hotel, the principal inn, and the property of a company of shareholders; the beautiful building erected by the Commercial bank, for the accommodation of their branch here; and the county-buildings, containing the county-offices in front, and the jail for the upper ward behind. The last is a very chaste and graceful structure, built in the Grecian style, the foundation-stone of which was laid in March, 1834, and the erection completed in 1836. Previous to this, the old prison of Lanark excited the derision of every one, from its being such an exact representation of a small Scotch burghal prison of the olden time, where neither criminal nor debtor was found to remain longer within its walls than suited his own convenience. Many of the shops in the principal street have a tasteful and rich appearance. The town is lighted with gas prepared at a work erected in 1832, at a place called Steel's cross, in the western outskirts. It is also well supplied with water. And, altogether, it is a pleasant, quiet, healthful, rural town, agreeable as a place of residence, and attracting many summer tourists from its proximity to the falls of Clyde.

A principal industrial occupation is handloom weaving. This employs about 900 persons, but affords them a very inadequate subsistence. Shoemaking employs about 100 persons, and is in a comparatively flourishing condition. Handicrafts, of all the kinds usual in towns, employ a full complement of persons, both for the town itself, and for the surrounding country. There are three breweries, in which business is done to some extent; and three mills for grinding flour, chiefly for the supply of the town and neighbourhood. Upwards of 100 females are employed in flowering or embroidering lace. Weekly markets are held on Tuesday and Saturday; and there are seven annual fairs,—one of which, on the last Wednesday of May, old style, is for black cattle,—one, on the last Wednesday of July, for horses and lambs,—and one in October, on the Friday after the Falkirk tryst, is for horses and black cattle. There are offices of the Commercial Bank, the Royal Bank, and the City of Glasgow bank. There are also a savings' bank, eight insurance agencies, a mechanics' institution, a subscription library, a horticultural society, and several religious and benevolent institutions. A newspaper, called the Lanarkshire Advertiser, is published monthly. Besides the principal inn, the Clydesdale, which has an elegant assembly room connected with it, there are the Commercial hotel, the Meal Market hotel, and the Black Bull. Omnibuses run from the Clydesdale hotel to the Lanark branch railway, which connects it with the Caledonian at the Cleghorn junction. The day after Whitsunday fair is held as a grand gala day, in the old custom of riding the marches of the burgh, and in horse and foot races, with other sports, on the burgh moor. Till about 45 years ago, another great annual festivity, which had been observed from time immemorial, was a Candlemas public procession of the scholars of the grammar school.

The ruling charter of the burgh, that of Charles I., has been lost; but the instrument of sasine is among the records of the town. From the precept of sasine the charter appears to have conveyed or confirmed to the burgh large landed property, which is particularly described. A considerable portion of this property is alienated, but a large portion still remains. By the charter—besides the usual privileges of a royal burgh in regard to fairs and customs—there is granted a right of sheriffship within the territory of the burgh. There is also specially renewed a grant of Queen Mary made to the royal burghs, and each of them, "*Pro auxilio suorum burgorum et sustentatione eorum ministrorum, et pauperum,*" of the rents, altarages, and chapels within the liberties of the burghs. Further, there are granted to the provost, bailies, councillors, and community of the burgh certain lands, gardens, houses, tofts, &c. within the burgh, which had belonged to the preaching friars, and certain altarages, named and described, with the right and patronage and presentation of the hospital of St. Leonard, for the benefit of the poor within the burgh. In 1831, the gross yearly value of the burgh property was £25,784, and the amount of debt was £8,027. Almost all this debt had been contracted subsequently to the beginning of the present century; but since 1831 the affairs of the burgh have been under better management, so that they have yielded

an improving revenue. In 1831, the revenue was £927 18s. 8½d.; in 1839, it was £1,158; in 1855, it was £1,951 14s. 4d. The burgh is governed by a provost, three bailies, and nine councillors. A burgh court is held by the magistrates for the town; and sheriff courts, commissary courts, and justice-of-peace courts, are held by the county authorities for the upper ward of the county. For more than two centuries, the keeping of the weights and measures for Scotland was committed to the care of the town of Lanark. The old act of the 20th June, 1617, bears, "in respect that the keeping and outgiving of the weights of old to the burrows and others, &c. was committed to the burgh of Lanark," the "care of the weights" should be again intrusted to it. These olden national standards are still preserved, and bear the arms of the burgh, viz. a spread eagle with two heads. Lanark unites with Airdrie, Hamilton, Falkirk, and Linlithgow, in returning a member to parliament. Municipal constituency in 1855, 306; parliamentary constituency, 307. Population of the royal burgh in 1831, 4,266; in 1851, 5,304. Houses, 651. Population of the parliamentary burgh in 1851, 5,008. Houses, 601.

Lanark is celebrated in Scottish history, especially in the chronicles of Fordun and Blind Harry, as the scene of the first exploits of Sir William Wallace. The accounts of these are somewhat obscure; but the popular tradition is, that the insolence and oppression of the English sheriff of Lanarkshire, William de Hesliope, having become insupportable, Wallace joined or instigated a rising of his countrymen, and put the obnoxious sheriff to death in the town of Lanark. The time of this occurrence is laid in 1297. Blind Harry relates that Wallace, having married a lady of the name of Braidfoot, the heiress of Lamington, lived with her privately at Lanark, and that while there he and his friends raised a scuffle in the street with a body of Englishmen. The patriot, having been overpowered, fled first to his own house and then to Cartland Craigs, upon which the sheriff, Hesliope or Hesilrig, seized his wife, and put her to death. In revenge, Wallace gathered a party of his friends, attacked Hesliope in the night, and killed him and 240 of his band. Tradition says that the house in which Wallace resided was at the head of the Castlegate, opposite the church; and that a private vaulted archway led from this house to Cartland Craigs; but the latter part of this statement is manifestly wild fiction. The English continued to hold the castle and the town till 1310, but then surrendered them to King Robert Bruce. Lanark is next noticed in history in connection with the Covenanters, who, on 12th January, 1682, entered the town, and affixed a declaration to the market-cross, denouncing Charles II., as perjured, excommunicating him, and renouncing their allegiance. For this bold deed the privy council fined the town in 6,000 merks, and issued processes against the landed proprietors, for not having seized the insurgents, or prevented the indignity which they had offered to the King. William Hervie and some other persons were soon after executed for their participation in publishing the Lanark declaration, or for having been present at the battle of Bothwell Bridge. Hervie's grave is still pointed out in the churchyard. Lanark gives the title of Earl to the ducal house of Hamilton. William, the second Duke, who died of the wounds he received at the battle of Worcester, was created Earl of Lanark in 1639.

LANARK (New), a large manufacturing village in the parish of Lanark. It stands on the right bank of the Clyde, about a mile south-south-west of the town of Lanark. Its site is low ground, contiguous to the river, about ½ a mile below Corra-linn, within view of that romantic waterfall, and of the fall of Dundaff, and is completely surrounded by steep and beautifully wooded hills. It is a handsome place in itself, as well as most superbly environed, and at the same time is one of the healthiest seats of manufacture in Scotland, clean, airy, and of rural aspect. Its chief features are cotton-spinning factories, which either directly or indirectly employ all its inhabitants. It was founded in 1784, by the well-known David Dale, who feued a piece of ground for it from the Lord Justice-Clerk, Braxfield. Its site, at that time, was little else than a morass in a shelving dell; but it appeared to Mr. Dale very eligible for his purpose, by diverting the waters of the Clyde into a power for the moving of machinery. The first mill was begun in 1785, and a subterraneous passage of about 300 feet in length was hewn through a rocky mount for the purpose of an aqueduct. The height of the fall of water is 28 feet. In 1788 a second mill was built, and was nearly roofed in, when the first was totally consumed by an accidental fire; but it speedily rose from its ashes, and was rebuilt and ready for the machinery in 1789. After that time various extensions were made till the village assumed the bulk and bustle of a small town. Mr. Dale, as part-proprietor and manager, was succeeded by his son-in-law, Mr. Robert Owen, whose visionary notions and projects for the regeneration of the social system of mankind have made his name too notorious in the kingdom. He made vigorous trials of his social schemes here for a number of years, and was well seconded by a kindly appreciation on the part of the people; but, though winning from many of them permanent respect and attachment to his person, he eventually drew general ridicule and scorn upon his schemes; and, in 1827, he ceased to have any connection with the village. The factories then passed into other hands and under a superior management. Connected with them is a large school, called the institution. Population of the village, 1,642. Houses, 337.

LANARKSHIRE, a large, wealthy, and important county in the Scottish Lowlands,—the most populous county in Scotland. It is bounded on the north, by the counties of Dumbarton and Stirling; on the east, by the counties of Linlithgow, Edinburgh, and Peebles; on the south, by the county of Dumfries; and on the west, by the counties of Ayr and Renfrew. It lies in north latitude between 55° 18′ 40″ and 55° 56′, and in west longitude between 3° 24′ and 4° 22′ 51″. Its extreme length, from south-east to north-west, is about 54 miles; its breadth at the extremities is little more than 10 miles; its greatest breadth, near the centre, is 38 miles; and its superficial area is 926 square miles, or 471,278 Scotch acres, equal to 584,800 imperial acres. Hamilton of Wishaw says, "The shyre of Lanark was anciently of greater extent than now it is; for there was comprehended in it the whole sheriffdome of Ranfrew, lying laigher upon Clyde, called of old the Baronie of Ranfrew, (and is yett so designed when the Prince's titles are enumerate,) untill it was disjoyned therefra by King Robert the Third, in anno 1402, at such time as he erected what had been his father's patrimonie before his accession to the Crown, in ane principalitie in favour of his sone Prince James. And then, because of the largeness of its extent, it was divyded into two wairds, called the Upper and the Nether waird; and the burgh of Lanark declared to be the head-burgh of the Upper waird, and Rutherglen of the Nether waird: and since the dissolving of the shire of Ranfrew from the sheriffdome of Lanark, the burgh of Lan-

A. Fullarton & C° London & Edinburgh

rk is the head-burgh of the sheriffdome of Lanark, nd Rutherglen the head-burgh of the Nether waird hereof." Other accounts affirm that the disjunc-on of Renfrew from Lanarkshire did not take place ll the reign of James II. But whatever was the nte of that disjunction, Lanarkshire, in its dimin-hed extent, continued to form two wards till the iddle of the last century; and then, in consequence f the increase of its population, it was divided into ree wards, Upper, Middle, and Lower. Lanark ntinued to be the political capital of the upper ard; Hamilton was constituted the political capi-l of the middle ward; and Glasgow was substituted r Rutherglen as the political capital of the lower ard. The superficial area of the upper ward is 77,246 Scotch acres; of the middle ward, 153,954 cotch acres; of the lower ward, 40,078 Scotch res.

The boundary lines of the upper half of the county e very nearly coincident with the mountain-rim the basin of the Clyde, and of all that river's early ibutaries. The lower half of the county also is aversed nearly through its centre by the Clyde, nd is bounded, to a considerable aggregate extent, y the watersheds at the sources of its tributaries; t it both receives some trivial streams from the ntiguous counties, and discharges some others into ese counties; and, around its lower extremity, mprising most of the lower ward, it contains but small breadth of the Clyde's basin, and has no reat aggregate extent of natural boundary. Its rface, in a general view, might be topographically stributed into the two districts of upland and low-nd. The upland district, however, at least in the ountainous sense, is nearly all comprised in the acts drained by the head-streams of the Clyde, con-ituting about one-half or two-thirds of the upper ard. The principal summits are the Lowthers on near the boundary with Dumfries-shire, which ave altitudes of from 2,450 feet to 3,100 feet above e level of the sea. And among the other most ticeable summits are Culterfell, which has an alti-de of 2,330 feet; Tinto, 2,236 feet; Cairntable, on e boundary with Ayrshire, 1,630 feet; Dolphinton ill, 1,550 feet; and Dunsyre hill, 1,230 feet. The wland district has much diversity of hill and dale; t, in a general view, down to nearly the lower tremity of the middle ward, it comprises a grand llow or trough traversed by the Clyde, and aduated flanks which rise upward with diversified ntour, and spread finally away into moorland. nd, along its south-western side it is so free from evated features, and lies so open in its view toward yrshire and the frith of Clyde, that from almost y piece of vantage ground 150 feet or more above e level of the sea, a spectator may descry, on a ear day, the serrated peaks of the island of Arran, a distance of 50 miles. Nearly all the character-ic scenery of the county will be found incidentally ticed in our articles CLYDE, AVON, and DOUGLAS.

The upper ward, though so much more extensive an either of the other wards, is comparatively far s valuable. Its uplands occupy a very large oportion of its area, and are in a main degree tle else than poor pasture or waste moorland, with ills on hills confusedly hurled.' Yet, though by the larger portion of this ward is uncultivated, d cannot be deemed capable of much agricultural provement, there are sunny and fertile spots be-een, which are at once pleasing to the eye, and ofitable to the agriculturist. Even in the wildest rts of the upper ward, those verdant holms retch to a considerable extent along both banks of e Clyde and its tributaries; and where they are orned with new plantation, or dotted with old timber, the landscape is one of surpassing loveliness. Many of the hills are covered with verdure to the summit; and the quality of the sheep, which are reared upon them, speaks intelligibly of the richness of the pastures. Nevertheless, the general aspect of the district is sterile and uninviting; and the loftiness and stern grandeur which characterize even the bleakest of the Highland mountains are unknown to the hills of Lanarkshire. Mr. Naismith, describing this part of the county in 1794, says, "The mountains are so huddled together, that their grandeur is lost to the eye of a beholder. When he traverses a hollow, only the sides of the nearest mountain are presented to his view; and when he climbs an eminence, he sees nothing but a confused group of rugged tops, with the naked rock frequently appearing among the herbage." But as the hills undulate towards the lower part of the ward, their aspect is much softened, and the country presents every alternation of sylvan sweetness, with hill and dale, wood and wold, meadow and streamlet. The scenery of various localities, in the upper ward, is well known from this cause to tourists; of which the Falls of Clyde, near the town of Lanark, is not the least interesting portion. There is no part of Scotland in which industry, perseverance, and the lights of science, as applicable to agriculture, have more successfully developed themselves than in the upper ward; where native sterility has been overcome by the improved practice and increased knowledge of the husbandman. Along the great line of road from Glasgow to Carlisle, in particular, smiling arable farms have risen up, where 45 years ago, there was nothing but stinted herbage, unproductive moss, or luxuriant furze or heather.

The middle ward, though predominantly lowland, has a remarkable variety of contour. High hills occupy its south-west border; lofty moors occupy much of its north-east flank; and bold undulations, steep banks, and deep ravines, as well as the trough of the Clyde itself, diversify its centre. Very little of its surface is level, excepting belts of alluvial ground along the sides of the streams. Most of its arable land lies at an elevation of from 250 to 300 feet, or upward, above the level of the sea. Its soil is as various as its heights and undulations; but, in a general view, it is moss, more or less reclaimed, on the grounds farthest from the Clyde,—clay intermixed with sand, on the slopes and undulations of the central parts,—and a rich alluvium, incumbent on gravel, on the low level tracts contiguous to the Clyde. The most fertile district is the central one, along both banks of the Clyde, from end to end of the ward, measuring upwards of 12 miles in length, and nearly 6 miles in average breadth. The landscape here is peculiarly soft and inviting. For all the elements of rural sweetness, the drive between Lanark and Bothwell is not equalled by any other in the kingdom, if we except perhaps that along the banks of the Esk between Langholm and Langtown, on the Scotch and English border. The hills swell gently to a considerable elevation on either bank of the river, and generally are covered with either luxuriant pasture or thriving copsewood to the summit. The glades, too, generally present the bold front of some olden mansion, with its beautiful policy, studded by timber of ancient growth, or the elegant modern dwelling of a proprietor, who has replaced it for the keep or tower which served as a dwelling-place to his fathers. Here, too, are the orchards which, in spring time and summer, are well designated the pride of Clydesdale. In the end of April, or beginning of May, when the gorgeous flush of blossom decks the trees, and the per-

fume scents the gale, the traveller feels as if he were in reality in the land of the Faëry, where "apple-blossom is strewn upon the wind."

The lower ward, while much smaller in extent than either of the other wards, is, at the same time, less interesting in its natural features. Its only considerable height is the ridge of Dechmont and Cathkin, along the upper part of its south-west border; and even this is remarkable only for its contrast to the adjacent plains, and for sake of a grandly extensive view which it commands. Some other parts of the ward might be called hilly, and many are diversified by breaks and undulations; but others are quite level, and most, when regarded in the aggregate, are little else than outspread undulated valley. The soil, too, is exceedingly diversified, comprises a good deal of moss or moor, and was, originally, in many of its arable tracts, either churlish or barren. Yet this ward, in consequence of enormous improvements upon its lands, and in consequence of the presence within it of the enterprise, industry, and wealth of the city and environs of Glasgow, exhibits generally a munificent appearance, great in fertility, high in ornament, and rich in the results of art. Market-gardens, however, do not press round the city here, to enrich the landscape, as they do in the case of many comparatively smaller towns; for Glasgow depends, for its supply of vegetables, very largely upon its immense steamboat traffic with the coasts of Scotland and of Ireland.

The river Clyde is so characteristically the chief stream of Lanarkshire as to give it popularly the names of Clydesdale and Strathclyde. This stream is not only the great drain of the country, but also, by the vast improvements which have been made upon its navigation, gives the lower ward all the same advantages of commerce as if it lay upon the coast, and had safe, deep, sea harbours. Into this river, likewise, with some very trivial exceptions, flow all the other streams of the county, the whole coming down to it either as head-streams or as affluents. Highest up are the Little Clyde, the Daer, the Elvan, the Midlock, the Camps, and the Glengonner, which may all be regarded as head-streams. Next is the Duneaton, which rises near the highest point of the boundary with Ayrshire, and runs through the parish of Crawfordjohn to the Clyde, 2 miles below Abington. The Culter rises near the highest point of the boundary with Peebles-shire, and runs through the parish of Culter to the Clyde opposite Symington. The North Medwin rises near the boundary with Edinburghshire, runs through the parish of Carnwath, and is joined by the South Medwin a little before falling into the Clyde. The Douglas rises near the sources of the Duneaton, adjacent to the boundary with Ayrshire, and pursues a grand course, through a district to which it gives the name of Douglasdale, to a confluence with the Clyde a little above the falls of Bonniton. The Mouse, rising in Carnwath, flows through Carstairs into the parish of Lanark, winds through the romantic glen of Cartland-craigs, and falls into the Clyde opposite Kirkfieldbank. The Nethan rises in Lesmahago, and after flowing through a most beautiful district of country, studded with gentlemen's seats, joins the Clyde at Clydesgrove. The Avon rises on the borders of Ayrshire, intersects the parish of Avondale, enters Stonehouse, divides that parish from Glassford and from Dalserf, traverses a most romantic glen within the parish of Hamilton, and falls into the Clyde at Hamilton-bridge. The South Calder comes in from the moors of Linlithgowshire, runs between the parishes of Cambusnethan and Shotts, and proceeds thence to the Clyde, at a point about a mile below the influx of the Avon. The North Calder rises at the boundary with Stirlingshire, and runs between the parishes of Shotts and Bothwell on its left bank, and those of New Monkland and Old Monkland on its right bank, to the Clyde at Daldowie. The Rotten Calder rises within 3 miles of the common boundary with Ayrshire and Renfrewshire, and runs through the parish of East Kilbride, and between the parishes of Blantyre and Cambuslang, to the Clyde at Turnwheel. The Kelvin, so far as connected with Lanarkshire, runs chiefly along its north-western boundary, but also traverses a small wing of the county, between Govan parish and the Barony parish of Glasgow, to a junction with the Clyde opposite the town of Govan.

Lanarkshire is little celebrated for its lakes. The Crane-loch, about a mile in circumference, is situated in a wild bleak district in the parish of Dunsyre, at an elevation of 800 feet above the level of the adjacent streams. The White-loch, also about a mile in circumference, is situated in Carnwath, and is fringed on two sides by some fine timber. Lang-loch, situated between the town of Lanark and Hyndford-bridge, is a sheet of water of considerable length, though remarkably narrow. Bishop's-loch covers between 80 and 90 acres in the parish of Old Monkland; Woodend-loch, 50 acres; and Lochend-loch, 40 acres. Lam-loch is a large sheet of water in the parish of Cadder; here is also Loch-Grog, of smaller extent, and gradually becoming less, from the process of draining. There are also Robroyston-loch, which is rapidly undergoing the same process; Johnston-loch, nearly a mile in circumference; and Gastinqueen-loch, of less extent. There are the Hogganfield and Frankfield lochs in the Barony-parish, the water from which turns the wheels of the town mills; and there is an artificial lake, or reservoir, with an area of upwards of 300 acres, in the parishes of Shotts and New Monkland, formed for giving supply to the Monkland canal and the Forth and Clyde canal. These canals themselves are much more interesting than all the lakes together, and figure almost as prominently as the Clyde in the hydrography of the county. The Monkland canal connects Glasgow with the great mineral field of the Monklands, and was of vast moment to that city, for heavy traffic, previous to the formation of the railways. The Forth and Clyde canal, besides traversing the north-east wing of the county, sends a branch into junction with the Monkland canal at Glasgow, and thus affords, both to Glasgow itself and to the Monkland mineral-field, a direct navigation across the kingdom to the frith of Forth and the German ocean.

The rocks of Lanarkshire present a wide range to the observation of the geologist, and comprise every thing desirable in almost every department of mineral economy. Greywacke is the predominant rock among the uplands. Some varieties of trap rock also abound there. The old red sandstone prevails in the lower part of the upper ward, particularly in the tract around the falls of Clyde. Rocks of the carboniferous formation predominate throughout the middle ward and the lower ward; and they very extensively present to the quarrier and the miner, the most useful members of that formation, in the most desirable proportions, and in excellent positions. The strata, on both sides of the valley of the Clyde, all incline toward the river; or, in other words, they ascend from the axis of the river's course, with a variety of gradient, till they reach the surface, or as the miners express it, crop out one after the other. Hence it often happens that the first seam of coal found in one mine is the

second, or third, or fourth in another mine. The coal strata extend through all the low or plain parts of the region, and ramify thence up the vales of the principal streams; so that the general area occupied by them is both very large and exceedingly convenient.

The rocks of the uplands are largely metalliferous. The tract around the sources of Glengonner water contains such rich veins of lead ore as to have long taken from it the name of Leadhills. Lead ores have been successfully worked here for several centuries, and still yield annually about 700 tons of lead. The principal ores are common and compact galena; but there are also green lead ore, black lead ore, yellow lead ore, white and black carbonates of lead, sulphate of lead, sulphato-carbonate of lead, and phosphate of lead. There are likewise, in the same rocks, silver ore, copper-pyrites, azure copper ore, malachite, iron-pyrites, grey manganese, calamine, calcareous spar, brown spar, heavy spar, sparry ironstone, and some other spars. The silver does not exist in sufficient quantity to repay the expense of extracting it. Gold occurs in minute particles in the till or clay nearest the rocks, and occasionally also in quartz. Extensive search for it was made in the reign of James V., but did not prove to be compensating, and was abandoned. Veins of lead occur in the parish of Crawfordjohn, in circumstances which might probably afford remunerative mining. Attempts have been made to discover compensating lead veins in the parishes of Lesmahago, Carmichael, and Dolphinton, but without success.

Ironstone, in great plenty, and of valuable quality, exists in many parts of Lanarkshire. It began to be worked at Wilsontown in Carnwath, in 1781; and it is now worked in nine parishes to so great an extent as to afford large employment to the inhabitants, and to be a very prominent article of export. The enormous iron-trade of Scotland, which will be found noticed on pages 757 and 758 of our article on Glasgow, is mainly the produce of Lanarkshire; and the rapid increase of that trade in recent years, is an index of the correspondingly rapid increase of this county's mining industry. The blast furnaces for the production of pig iron are so numerous in some parts, particularly around Coatbridge, as to give a characteristic feature to the country. Even the malleable iron-works are now prominent; and large engineering establishments, for the construction of steam-engines and of other large iron machinery, challenge attention. The ironstone is particularly abundant and specially valuable in the parish of New Monkland. It occurs there partly in balls and partly in seams; and the most common seams are the mussel-band and the black-band. The black-band, both in that parish and in the parish of Old Monkland, is particularly valuable on account of its occurring in connexion with large quantities of suitable coal. In the parish of Govan also, a seam of excellent black-band ironstone, from 10 to 15 inches thick, is found above gas-coal; and farther down are several seams of clay-band, varying from 5 to 12 inches in thickness, and yielding from 30 to 33 per cent. of iron.

The coal of Lanarkshire is still more important than the ironstone, and even gives the latter the main part of its value. The coal field of this county extends from Douglasdale to the north-west boundary, having a length of about 30 miles, an average breadth of nearly 4 miles, and an area of about 110 square miles. A considerable variety of kinds of coal are contained in it; and these, together with their geological position, are well described as follows by Mr. Naismith in his Agricultural Survey of Clydesdale;—"A number of these strata or seams lie above that which is generally called, around the city of Glasgow, the upper coal, because it is the first that is found worth digging to any extent. This stratum is composed entirely of what is called rough coal in Scotland, except a small part near the middle of it of a kind called splint. 2. About 16 or 17 fathoms under that lies the ell coal, so called because it was first found of this thickness. but it is frequently from 4 to 6 feet thick. It is composed of two kinds, called yolk and cherry coal, with sometimes a parting of splint, and sometimes not. This is a fine caking coal, or what is called in England a close-burning coal, and is much esteemed for the blacksmith's forge. 3. At from 10 to 17 fathoms below the last, lies the seam called the main coal, from its possessing all the good qualities found in any of the other strata. It contains rough coal, splint, and parrot, or jet coal, and is preferred to all the others as the most profitable. Its thickness is from 3½ to 9 feet. Sometimes a thin bed of stone is found about the middle of the seam, and the thickness is 10 feet. 4. About 13 or 14 fathoms lower lies the humph coal. It consists of yolk and rough coal, with a thin parting of splint. In some places it is without the splint, and unworkable, being much interlaced with these laminæ of stone, and a kind of petrified black clay called blaise, black bituminous shale, and slate clay. 5. Below the humph coal lies the hard coal, sometimes at 14 fathoms distant. It consists solely of splint and parrot coal, and is found to be the best in the county for the smelting of iron. It is also very good for family use. 6. At a fathom and a half lower is found the soft coal, from 30 inches to 6 feet thick. It is composed of the rough, yolk, and cherry coals, cakes much in burning, and is esteemed a good coal for the blacksmith's forge. 7. About 13 or 14 fathoms below this lies a coal, called about Glasgow the sour-milk coal. As it burns slowly and affords but a weak heat, it is what the miners call a lean coal, and has therefore been but little wrought. There are a number of these seams under the sour-milk coal, all of a lean quality, and generally much interlaced with laminæ of stone, blaise, or shiver. Under the last mentioned have been found several strata of excellent lime; and more of these thin seams of coal again have been discovered under the lime, but all of them which have yet been tried are of a lean quality. "The above is the order of the coal strata everywhere along the Clyde, where they are entire. These are distinguished by the name of the Clyde strata, or seams of coal, and not only lie along the sides of that river, through all the plain country, but branch out less or more along the principal streams, on some of them to a great extent. Besides these there are other seams of coal in the county, of a somewhat different nature. In the parish of Shotts a fine yolk coal is wrought, resembling the coal found upon the sides of the Forth, and supposed to be a continuation of one of the same strata. Upon the sides of the Douglas river are extensive collieries, which supply some of the southern provinces where that fuel is wanting. The coal here is also similar to that of the Forth. On the south-west boundary of the county, is coal of the same quality with that wrought on the coast of Ayrshire. It crops out at the surface about the middle of Avondale parish. There are still some other variations in the coal strata which merit attention. Near the northern boundary of the county a species is found distinguished by the name of the blind coal, from its burning with intense heat without flame. This must no doubt have been deprived of the fixed air by means of subterraneous fire. It is used for the

same purposes as coke, and even preferred to coke artificially made, its effluvia being still less offensive. The blind coal is always found under a covering of horizontal whin; and where the same seam is traced till it comes under the freestone rock, its qualities are entirely changed, and it becomes in every respect the common pit-coal. Another species of coal, the qualities of which are directly opposite to those of the last, is found in different parts of the county. It is here called the cannel or light coal, and is said to be the parrot or jet coal of the third seam in the above enumeration, divested of the other kinds which accompany it when the seam is complete. But when this is found alone, it seems to be still more exquisitely inflammable; it takes flame the moment it is brought in contact with the fire, and a small fragment of it may be carried about in the hand like a flambeau, and will continue for a long time to give a vivid light." If the medium thickness of the entire coal field of the county be estimated at 15 feet, the contents of the entire field will be 1,703,680,000 cubic yards of coal.

Limestone abounds in every part of the coal district. It occurs generally beneath the seventh seam of coal, about 73 fathoms below the upper coal. It is found near the surface only in places of considerable elevation, after the strata which lie naturally above it have all cropped out, and are no longer to be found. It occurs in the parishes of Carnwath and Carluke, but more frequently on the other side of the Clyde, particularly in the parishes of Douglas, Lesmahago, Avondale, Stonehouse, Glassford, Hamilton, Blantyre, and East Kilbride. Sandstone also, of excellent quality for building, and of very diversified appearance, abounds in all the coal districts. It is found in distinct strata of red and white, and sometimes of a mixed colour, and so beautifully blended as to resemble marble. The colour of the houses, however, will generally denote the description of stone which prevails in the vicinity; but it is generally found that on the east side of the Clyde the red sandstone predominates, while on the west and south the white stone is the standard. Organic remains are so abundant in many parts, particularly in the carboniferous strata, as to render Lanarkshire more interesting to the palæontologist than any other county in Scotland. Mineral wells also occur in almost every parish, and have a great variety of character.

The westerly and south-westerly winds prevail in Lanarkshire during about two-thirds of the year; and, as they come up from the Atlantic very little modified by any intervening land, they have all the mildness of the ocean temperature, and at the same time are heavily charged with vapour. In the lower ward, during these winds, the rain falls in frequent showers, or for series of days, between short intervals of fair weather; but, in the low country farther up the Clyde, the rain is less frequent; and, in the hollow immediately contiguous to the river, sometimes no rain falls even while there are showers on the flanking braes. The winds from the east are sharper than those from the west or the south-west, blow less frequently, and their force is somewhat broken by the high land on the east side of the country; so that the cold damps, so prevalent on the east coast, do not often arrive here. Wind from the north-east is next in frequency to that from the south-west, and is generally attended by fair weather. Rains from the north-west, north, and north-east, are neither frequent nor heavy, but are little conducive to vegetation. Intense frost is seldom of long continuance, and deep, long-lying snow is rare, But in the uplands of the county, heavy rains often fall, fogs often envelope the hills, the winters are severe and tedious, and the heats of summer are often interrupted by chilling blasts. In every part of the county also, the seed-time of any year is liable to be severely damaged by wetness of weather; for, when there does not happen to be a sufficient duration of drought, either the seed must be committed to an uncongenial state of the soil, or not sown at all till an unduly late period.

The agriculture of Lanarkshire, notwithstanding all the drawbacks of climate, is in a high condition. The progress of improvement has been broad, steady, and rapid. The energy of mining industry in the mineral field, and that of manufacturing industry in the towns, has been vied with, and perhaps in some degree imitated, by that of rural industry on the soil. Agriculturists here have been as enterprising as agriculturists anywhere; and, though confronted by much stiffer obstacles than those in the way of the Lothian agriculturists, they have as completely overcome them. The reclamation of waste lands, the fertilization of naturally good lands, and all the arts and processes of agricultural amelioration, have been very largely and triumphantly plied. Even ancient families, whose large estates lie under the incubus of entail, have, in some instances, done great things in the way of improvement; while many modern proprietors, whose wealth has been transferred from commerce to landed proprietorship, have infused into the affairs of rural economy all the animation and impulse which are characteristic of city industry. The whole agriculture of Lanarkshire, in fact, has been "at once stimulated and assisted by the means and facilities which the commercial resources afford; and the streams of wealth which are ever issuing from Glasgow, as a grand reservoir, spread riches and beauty, not only over the adjacent portions of the county, but over its remotest extremities."

In the statistics of agriculture, obtained in 1854 for the Board of Trade, by the Highland and Agricultural Society of Scotland, 190,160¾ imperial acres were returned as in tillage, 6,440¾ under wheat, 2,290¼ under barley, 56,116¾ under oats, 164 under rye, 252½ under bere, 3,735¾ under beans, 430 under pease, 1,581 under vetches, 10,885¾ under turnips, 8,016¾ under potatoes, 58 under mangel-wurzel, 28½ under carrots, 239½ under cabbages, 1,275¾ under flax, 10 under turnip seed, and 1,519¾ in bare fallow. The estimated gross produce was 209,324 bushels of wheat, 80,158 bushels of barley, 1,936,027 bushels of oats, 8,837 bushels of bere, 108,336 bushels of beans, 160,564 tons of turnips, and 34,872 tons of potatoes. The estimated average produce per imperial acre was 32½ bushels of wheat, 35 bushels of barley, 34½ bushels of oats, 35 bushels of bere, 29 bushels of beans, 14¾ tons of turnips, and 4 tons 7 cwt. of potatoes. The number of acres not in tillage comprised 97,120¾ under grass in the rotation of the farm, 68,155¾ in permanent pasture, 5,441 in irrigated meadows, 163,826½ in sheep walks, 19,446 under wood, 33,066½ in a state of waste, and 10,231½ in house-steads, roads, fences, &c. The numbers of live stock comprised 7,241 horses, 30,528 milch cows, 9,938 calves, 18,488 other bovine cattle, 108,000 ewes, gimmers, and ewe-hoggs, 19,916 tups, wethers, and wether-hoggs, and 8,891 swine. The number of agricultural occupants in the county, in 1855, paying a yearly rent of £10 or upwards, exclusive of tenants of woods, owners of villas, feuars, householders, and the like, was 3,133. The number of occupants paying an annual rent of less than £10 was 338. The number of heritors of £100 Scots of valued rent in 1852 was 312; and the number of commissioners of supply was 462. The valued rental of the county in 1674 was £162,131 Scots. The annual value o

real property, as assessed in 1815, was £686,531; in 1849, £2,140,839. The average of the fiar prices from 1848 to 1854, both inclusive, was, best wheat, 48s. 2½d.; second wheat, 44s. 1½d.; best barley, 27s. 3½d.; second barley, 24s. 5$\frac{5}{12}$d.; best bere, 25s. 6$\frac{8}{12}$d.; best oats, 20s. 7½d.; second oats, 18s. 2$\frac{1}{12}$d.; best beans, 39s.; best malt, 52s. 2½d.; best oatmeal, 16s. 0½d.

The rise and progress of the manufactures of Lanarkshire belong so intimately to the history of Glasgow, that it is not necessary to treat of them at length here. Previous to the beginning of the last century, manufactures either did not exist in Scotland, or were of the most contemptible kind. Hence, for 20 years after its establishment in 1695, the bank of Scotland could not employ £30,000 annually in the business of the whole kingdom. Branches of the bank were established in several of the Scottish towns, and Glasgow amongst the rest; but after a trial, the bank directors found themselves compelled to give up their provincial offices, and bring their books, notes, and specie to Edinburgh "by horse carriage." Even so late as 1727, the counties of Perth and Forfar possessed more extensive manufactures than Lanarkshire. About 1750, however, the beneficial effects of the Union had begun to be felt, and the industry and resources of the county to be fully developed. Two banks were then started in the city of Glasgow—the one by Dunlop, Houston, and company, and the other by Cochran, Murdoch, and company. The trade with Virginia sprang up and flourished; and the various new trades and manufactures which this called into existence and fostered, extended their benefits over the whole county. But the main commercial prosperity of Lanarkshire may be dated from 1784, when the cotton trade was introduced, after Arkwright's magnificent invention had become fully understood, and its practice was open to the whole country from the expiry of the patent. Lanarkshire was particularly qualified for embracing this new trade—first, from its possession of an exhaustless supply of coal, and next, from possessing the sea-ports on the Clyde, by means of which the merchants of Glasgow could hold communication with almost all the markets of the world. Wealth flowed into the county; old coal mines were worked on improved principles with renewed spirit, and new ones opened; the iron trade was called into existence; crowds of population thronged not only into Glasgow, but to those localities in the county where the mineral treasures most abounded; the superficies of the land, from the near presence of a wealthy commercial and manufacturing capital, grew in fertility and beauty; and thus Lanarkshire received an impetus which has long since accorded her the first rank for population, wealth, and importance among the counties of Scotland.

Although a commercial and manufacturing aristocracy have now grown up in the county, there still remain many ancient families of note, the ancestors of some of whom are not unworthily known to Scottish history. A few may be named. Foremost is the ducal family of Hamilton, whose head is the premier peer of Scotland. To this family also belong the noble houses of Belhaven and Dalziel, and many others of the same name of honourable status in the county. The old Douglases of the Angus line are lineally represented on the female side by Baron Douglas, and collaterally by other families in the county. There are still, too, the Lockharts of Lee, with many offshoots from the parent branch; the Baillies of Lamington, the Rosses of Bonnington, the Colebrookes of Crawford, the Veres of Stonyres, and many more. The mansions of the county, even those of first class character for magnificence and extent, are very numerous; and elegant residences, of the villa kind, equal in most respects to the manor-houses of other counties, can be counted by the hundred. Our space will admit of our noticing only a few of the mansions, merely by name, and with reference rather to their distribution over the county, than to any other principle of selection. Some of the chief are Hamilton-palace, Douglas-castle, Bothwell-castle, Carstairs-house, Wishaw-house, Mauldslie-castle, Core-house, Bonnington-house, Lee-castle, Allanton-house, Airdrie-house, Monkland-house, Carstairs-house, Stonebyres-house, Milton-Lockhart, Dalziel-house, Cambusnethan-priory, Coltness-house, Woodhall, Cleland-house, Rosehall, Newton-house, and Castlemilk.

The burghs in Lanarkshire, possessing a parliamentary representation, are Glasgow, Airdrie, Hamilton, Lanark, and Rutherglen. Glasgow sends two members for itself; Airdrie, Hamilton, and Lanark unite with Falkirk and Linlithgow to send a member; and Rutherglen unites with Renfrew, Port-Glasgow, Dumbarton, and Kilmarnock to send a member. The other towns in Lanarkshire having each a population of upwards of 2,000, are Calderbank, Carluke, Coatbridge, Govan, Stonehouse, Strathaven, and Wishawton. The burghs of barony are Biggar, Strathaven, and East Kilbride. The other small towns and the principal villages are Douglas, Uddington, Abbeygreen, Turfholm, Boghead, Crossford, Hazelbank, Kirkfieldbank, Kirkmuirhill, Newtrows, Crawfordjohn, Abington, Crawford, Leadhills, Culter, Lamington, Wiston, Roberton, Newton-Roberton, Symington, Walston, Ellsrickle, Libberton, Quothquan, Thankerton, New-Lanark, Cartland, Braidwood, Kilcadzow, Yellshields, Carstairs, Ravenstruther, Pettinain, Dunsyre, Carnwath, Newbigging, Braehead, Forth, Wilsontown, Kirknow, Overtown, Stewarton, Stane, Bonkle, Omoa, Harthill, Newton-Shotts, Sallysburgh, Shotts-Ironworks, Motherwell, Windmillhill, Newarthill, Holytown, Chapelhall, Bellshill, Uddingstone, Bothwell, Arden, Ballochney, Greengairs, Riggend, Watt's-Town, Braes, Carmyle, Canseyside, Dundyvan, New-Dundyvan, Langloan, Faskine, Greenend, Baillieston, Barachine, Craigend, Merrystone, West-Merrystone, Swinton, Coatdyke, Gartcloss, Gartsherrie, Summerlee, Fernigair, Dalserf, Rosebank, Millheugh, Larkhall, Sandyford, Chapelton, Westquarter, Blantyre-Works, Kirkton of Blantyre, Barnhill, Auchintiber, Auchinraith, Hunthill, Stonefield, Kittockside, Busby (part of), Cambuslang (the connected villages of), Dalton, Lightburn, Silverbanks, Carmunnock, Partick, Auchinairn, Chryston, Mollensburn, Moodiesburn, Muirhead, Bishopbriggs, Springburn, Maryhill, Shettleston, Tollcross, Parkhead, Camlachie, Millerston, Kippochhill, and Finnieston.

Lanarkshire, exclusive of its burghs, sends one member to parliament. Its parliamentary constituency in 1855 was 3,225. Its facilities of communication, by canal, by river, by road, and especially by railway, are so exceedingly great as not to admit of any complete enumeration. Those of the lower ward may be understood by a reference to our article on Glasgow; and the best of those in the other wards, are noticed in our articles on the Caledonian railway and the Monkland railways. The sheriff ordinary court is held at Glasgow on every Tuesday, Wednesday, and Friday; the appeal court on every Monday, Wednesday, and Thursday during session; and the small debt court on every Monday and Thursday. Sheriff courts are held at Hamilton, Airdrie, and Lanark on every Tuesday and Friday during session; and circuit courts, under the sheriff

small debt act, are held at Biggar on the second Thursday of March, June, September, and December, and at Douglas on the first Friday of April, August, and December. The number of committals for crime, in the year, within the county, was 508 in the average of 1836—1840, 620 in the average of 1841—1845, 782 in the average of 1846—1850, 749 in 1852, 456 in 1853, and 795 in 1854. The sums paid for expenses of criminal prosecutions in the years 1846—1852 ranged from £7,614 to £11,244. The total number of persons confined in the jails of Glasgow within the year ending 30th June 1854, was 4,193,—in the jail at Airdrie, 726,—in the jail at Hamilton, 350,—in the jail at Lanark, 125; the average duration of the confinement of each, at Glasgow, was 50 days,—at Airdrie, 14 days,—at Hamilton, 35 days,—at Lanark, 37 days; and the net cost of their confinement per head, after deducting earnings, was, at Glasgow, £14 6s. 5d.,—at Airdrie, £15 19s. 6d.,—at Hamilton, £16 17s. 4d.,—at Lanark, £26 14s. 1d. There are six poorhouses in Lanarkshire, namely, one in Glasgow, with accommodation for 1,500 persons; one in Barony of Glasgow, with accommodation for 1,319 persons; one in Govan, with accommodation for 750 persons; one in New Monkland, with accommodation for 300 persons; one in Lanark, with accommodation for 58 persons; and one in Douglas, for a combination of ten parishes. The number of parishes or quasi-parishes assessed for the poor is 37; unassessed, 4. The number of registered poor in the year 1852–3 was 22,261; in the year 1853–4, 24,956. The number of casual poor in 1852–3 was 5,954; in 1853–4, 5,471. The sum expended on the registered poor in 1852–3 was £70,610; in 1853–4, £76,442. The sum expended on the casual poor in 1852–3 was £3,991; in 1853–4, £4,817. The assessment for prisons and rogue money is 1½d. per pound of real rent. Population of the county in 1801, 147,692; in 1811, 191,291; in 1821, 244,387; in 1831, 316,819; in 1841, 426,972; in 1851, 530,169. Males in 1851, 257,060; females, 273,109. Inhabited houses in 1851, 37,504; uninhabited, 1,279; building, 328.

There are in Lanarkshire 49 entire quoad civilia parishes, parts of 4 other quoad civilia parishes, 10 quoad sacra parishes, and 34 chapels of ease. One of the part quoad civilia parishes is in the presbytery of Lochmaben, and synod of Dumfries; 9 of the quoad civilia parishes are in the presbytery of Biggar, and synod of Lothian and Tweeddale; 11 of the quoad civilia parishes, and 2 of the chapels of ease, are in the presbytery of Lanark, and synod of Glasgow and Ayr; 15 of the quoad civilia parishes, and 8 of the chapels of ease, are in the presbytery of Hamilton, and synod of Glasgow and Ayr; and 14 of the quoad civilia parishes, 3 of the part quoad civilia parishes, the 10 quoad sacra parishes, and 24 of the chapels of ease, are in the presbytery of Glasgow, and synod of Glasgow and Ayr. In 1851, the number of places of worship within Lanarkshire was 327; of which 82 belonged to the Established church, 63 to the Free church, 59 to the United Presbyterian church, 5 to the Reformed Presbyterian church, 4 to the Original Secession church, 12 to the Episcopalians, 29 to the Independents, 12 to the Baptists, 2 to the Society of Friends, 1 to the Unitarians, 3 to the Moravians, 9 to the Wesleyan Methodists, 4 to the Primitive Methodists, 1 to the Glassites, 1 to the New Church, 1 to the Campbellites, 4 to the Evangelical Union, 14 to the Roman Catholics, 1 to the Catholic and Apostolic church, 6 to the Mormonites, and 17 to isolated congregations. The number of sittings in 50 of the Established places of worship was 44,135; in 54 of the Free church places of worship, 40,805; in 48 of the United Presbyterian places of worship, 43,361; in the 5 Reformed Presbyterian places of worship, 3,080; in 3 of the Original Secession churches, 2,020; in 8 of the Episcopalian chapels, 4,149; in 25 of the Independent chapels, 11,462; in 7 of the Baptist chapels, 2,070; in 1 of the chapels of the Society of Friends, 400; in the Unitarian chapel, 850; in 1 of the Moravian chapels, 200; in 6 of the Wesleyan Methodist chapels, 2,762; in the 4 Primitive Methodist chapels, 570; in the Glassite chapel, 250; in the New Church chapel, 250; in 2 of the Evangelical Union chapels, 1,650; in 13 of the Roman Catholic chapels, 12,834; in the Catholic and Apostolic church chapel, 150; in 3 of the Mormonite chapels, 681; and in 11 of the chapels of isolated congregations, 3,610. The maximum attendance on the Census Sabbath at 50 of the Established places of worship was 24,539; at 58 of the Free church places of worship, 26,097; at 51 of the United Presbyterian places of worship, 28,214; at the 5 Reformed Presbyterian places of worship, 2,237; at 3 of the Original Secession places of worship, 950; at 10 of the Episcopalian chapels, 2,980; at 27 of the Independent chapels, 5,026; at 9 of the Baptist chapels, 1,238; at the 2 chapels of the Society of Friends, 60; at the Unitarian chapel, 400; at 1 of the Moravian chapels, 55; at 7 of the Wesleyan Methodist chapels, 1,772; at the 4 Primitive Methodist chapels, 408; at the Glassite chapel, 96; at the New Church chapel, 107; at 3 of the chapels of the Evangelical Union, 1,600; at 12 of the Roman Catholic chapels, 13,908; at the Catholic and Apostolic church chapel, 100; at the 6 Mormonite chapels, 659; and at the 17 chapels of isolated congregations, 1,476. There were in 1851, in Lanarkshire, 281 public day schools, attended by 20,10 males, and 16,281 females,—250 private day schools attended by 8,776 males, and 8,110 females,—17 evening schools for adults, attended by 4,217 males and 2,594 females,—and 622 Sabbath schools, attended by 28,007 males, and 32,112 females.

The tract of country now constituting Lanarkshire was anciently peopled by the Caledonian tribe called the Damnii; whose language may still be traced in the names of some of the localities and streams. The Romans not only overran all the district, but held it for some time in complete possession. Hence the Roman camps and Roman roads which occur in many parts of it; also the Roman tombs, utensils, and weapons of warfare, which have often been turned up by the ploughshare or the spade in the process of excavating and embanking. In subduing the original inhabitants the Romans did much to civilize them, and introduce the arts of industry and peace: and they were the first to beautify and enrich the face of the country by the planting of those orchards for which Clydesdale has in ages been so famous. The inroad, however, of the Scandinavian and other savage tribes, pressing upon the heart of the Roman empire, induced them to withdraw their legions, artificers, and husbandmen from the extremities of their dominions; and the Clydesdale was again left in the possession of the semi-barbarous Damnii. By them was founded the kingdom of Strathclyde, which gradually extended until it included within its ample limits Liddesdale, Teviotdale, Dumfries-shire, Galloway, Ayrshire, Lanarkshire, Renfrewshire, part of Peebles-shire, the western part of Stirlingshire, and the greater portion of Dumbartonshire, forming, indeed, a kingdom which embraced the greater part of Scotland south of the Forth, excepting the Lothians and the Merse. Sometimes they were united under a valorous chief; and at others the leaders of subordinate tribes in the general confederacy contented

for the mastery. Meantime these Strathcludensians were often assailed by the Picts, from the northern side of the Forth, by the Scoto-Irish from Kintyre, or by the Saxons from the north of England, who envied them their fair domains on the Clyde. Their capital was taken, their dominion circumscribed, yet were they never formally conquered, though it is believed, that after the union of the Scots and Picts, they were amalgamated with the other rude materials which formed the Scottish dynasty under Kenneth. Many of the Strathcludensians preferred expatriation to acknowledging any other sovereign but one of their own choosing; and with heavy hearts they left the warm vales of Clydesdale, and wending their path southward, found an abiding-place among the hills and dales of Wales.

After the formation of the Scottish kingdom, Lanarkshire suffered more or less from the domestic conflicts between the kings and Gallovidian chiefs, or from the wars of England. The history of this period is uninteresting, however, although Lanarkshire continued to progress in wealth, and its civilization was accelerated by the foundation of the bishopric of Glasgow, and the settlement, in the district, of several distinguished Flemings. The death of Alexander III., without male issue, left the kingdom a prey to intrigue, contest, and competition, which only ended after years of domestic strife by the consolidation of the independence of the kingdom, which was achieved by Bruce at Bannockburn. But the precursor to this was the patriotic career of the celebrated Sir William Wallace, whose first exploit was that of driving the English out of the town of Lanark. The 'good Sir James Douglas,' perhaps, contributed more than any other man to the eventful triumph of Bruce; and, in consequence, that part of the county in which his estates and castles were situated was more than once subjected to the fire and sword of the English. After this, however, Lanarkshire enjoyed a long period of domestic peace, until power and prosperity had changed this celebrated family from being the best and first subjects of the Crown into its most turbulent and dangerous rival. See Douglas. In the reign of James II. the ambition of the Douglases, added to the intrigues of the first Lord Hamilton, plunged Lanarkshire into the horrors of civil war; so that, as is recorded in Grey's Manuscript Chronicle, "In March, 1455, James the Second cast doune the castel of Inveravyne; and syne incontinent past to Glasgu, and gaderit the westland men, with part of the Areschery [Irishery], and passed to Lanerik, and to Douglas, and syne brynt all Douglasdale, and all Avendale, and all the Lord Hamiltoune's lands, and heriit them clerlye; and syne passit to Edinburgh, and fra their till the forest, with one host of Lawland men. And all that wald nocht cum till him furthewith, he tuke their guids and brynt their places, and took faitle of all the gentilles clerlie. And all this time the Lord Hamiltoun was in England till have gottyn suplie, and couth get name bot gif the Douglas and he would have bene Englismen, and maid the aith."

The county remained in a state of peace, with little noticeable incident, from the time of James II. till the escape of Queen Mary from Lochleven-castle, the assembling of her army at Hamilton, and its defeat by the Regent Murray at Langside, near Glasgow. Again the county was peaceful till the 30 years war of the persecution, caused by the resistance of the Scottish Presbyterians to submit to 'black prelacy,' which was sought to be imposed on them by the royal Charleses. The western counties were the chief scene of this devoted resistance to oppression; and the punishment inflicted by the 'Highland host,' the battles of Drumclog and Bothwell, and the sufferings of the Covenanters unto the death, by famine, ill-usage, and military persecution, are too well-known to require a minute detail here. In all these Lanarkshire had her full share. But the revolution of 1688 brought more peaceful times; and the declaration of the Prince of Orange was published at Glasgow before its publication in any other part of Scotland. In proportion, however, as Lanarkshire ardently favoured and supported the Revolution, it bitterly opposed the Union of 1707. The Duke of Hamilton and several of the barons were also loud and sincere in their opposition; and there was scarcely a town or village in the county which did not make a demonstration against this then obnoxious national measure. The Glasgow rabblers are spoken of in terms the reverse of courteous by the historians of the Union; but no outbreak of moment took place, and it is no stigma cast upon the reflection of our forefathers to assume, that while they regarded that great measure as one which cut up their nationality by the roots, they could not foresee the vast advantages which would result to this part of Scotland by participating in the trade of England, and having free access to her colonies. The only remarkable events which have occurred in Lanarkshire since that time belong rather to Glasgow than to the county at large, and will be found noticed in our article on Glasgow.

The sheriffdom of Lanark was formed at a very early date, and is believed to have been in existence so early as the reign of the lawgiving David I. In these early and troublous times, it was held by various persons; and it finally fell into the grasping hands of the Douglas family, who held it as a hereditary source of honour and power. After their downfall, it was granted in fee to the Hamiltons, who held it as a hereditary appendage to their titles and possessions for many generations. Occasionally, but rarely, it was held by other noblemen, and among others by the Earl of Selkirk, upon whom the office was conferred in 1716, the heir of Hamilton being then under age, and held by him till his death in 1739. Upon the death of the Earl, James the sixth Duke of Hamilton took possession of the office, as hereditary sheriff, without any formal grant; and upon a change of system being about to take place, he claimed in 1747, the sum of £10,000, as compensation for the sheriffdom. This claim was disallowed by the judges; but they allowed him £3,000 for the lordship and jurisdiction of the regality of Hamilton. At this time, Mr. William Cross, advocate, was appointed the first sheriff of Lanarkshire under the new system, the salary being then £200 per annum.

LANGAVAT. See Uig.

LANGBANK, a station on the Glasgow and Greenock railway, 4¼ miles east-south-east of Port-Glasgow, and 9 miles west-north-west of Paisley, Renfrewshire.

LANGBURN (The), a head-stream of Slitrig water in Roxburghshire. It rises contiguous to the watershed between Teviotdale and Liddesdale, and runs north-westward across the upper part of the parish of Hobkirk.

LANGFAULDS. See Kilpatrick (East).

LANGHAUGH. See Hamilton.

LANGHOLM, a parish, containing a post-town of its own name, in the district of Eskdale, Dumfries-shire. It is bounded by Westerkirk, Ewes, Canonbie, Half-Morton, Middlebie, and Tundergarth. Its length eastward is 8 miles; and its greatest breadth is 6¼ miles. The river Esk runs southward through the interior, dividing about one-

third of the parish on its left bank from the remaining two-thirds on its right. Ewes-water runs through the north-east district to a confluence with the Esk at the town. Wauchope-water rises in several head-streams on the western border, and runs eastward through the interior to the Esk at the town, a few poles below the point where that river is entered on the opposite bank by the Ewes. Tarras-water runs along all the eastern and south-eastern boundary to the Esk. Three medicinal springs, one of them sulphureous, and the other two chalybeate, occur in the western district. The ground along the Esk and the Ewes is flat, and well-sheltered by plantations and thriving hedges; and having a light loamy soil, cultivated with care, it yields most luxuriant crops. Other parts of the parish, comprehending most of its area, consist chiefly of smooth hills, verdant to their summits, and parcelled out into sheep-farms. The proportions of arable land and of pasture over the whole area, are to each other very nearly as 2 to 13. Upwards of 400 acres are under plantation. The scenery in many parts, particularly along the Esk, is exceedingly beautiful. The rocks of the upper part of the parish belong to the transition series; and those of the lower part, from the town downward, belong to the coal formation. Greywacke slate is worked. Lead ore occurs on the farm of Westwater, and on the estate of Broomholm. The principal landowner is the Duke of Buccleuch, and others are Maxwell of Broomholm and Little of Arkinholm. The principal mansions are Langholm-lodge and Broomholm-house, the former belonging to the Duke of Buccleuch. Over the Ewes, between Langholm-lodge and the town, stands an old stone bridge of two arches. Over the Esk, uniting the old and the new parts of the town, and forming the commencement of the road into Upper Eskdale, is another bridge of three arches. The two bridges stand nearly parallel, and are not above a gun-shot from each other, the two rivers uniting immediately below them. About half-a-mile south of the town is a third bridge of three arches. The road from Hawick to Carlisle traverses the parish down the vale of the Ewes to the town, and thence down the vale of the Esk. The Roman road of communication between Netherbie and Overbie can still be traced to have entered the parish at its south-east corner, crossed the Esk a little above Broomholm, and run thence north-westward till it passed into Westerkirk. Langholm-castle, a plain square tower or peel-house, now in a state of ruin, was anciently the property of the Armstrongs, the powerful family of Border freebooters. On Langholm-holm, "Johnie Armstrong of Gilnockie, and his gallant companie of thirty-six men," when going to meet King James V., "ran their horse and brak their spears," when—

> "The ladies lookit frae their loft windows,
> Saying, God send our men well back again!"

At the confluence of the Esk and the Ewes is a small fragment of a castle, formerly the property of the Nithsdale family, lords of regality of Eskdale. Wauchope-castle, romantically situated on the brow of a precipice, overlooking the rush of Wauchope-water among pointed rocks, and the pendant oaks and underwood of a picturesque bank on the opposite side, was the first residence of the Lindsays in Scotland, but only its grass-covered foundations now remain. Pennant, when visiting the house of Broomholm,—in the vicinity of which an old tower was taken down about 120 years ago,—was of opinion that it stands in the centre of the site of an old British town, and corresponds to Cæsar's description, "Oppidum sylvis paludibusque munitum quo," &c. The castle of Barntalloch, near Staplegorton, which surmounted a rocky precipice on the Esk, and around which was a burgh-of-barony, with an annual great fair, has utterly disappeared. The towers of Irvine, Nease, Hill, and Cawfield, also are among the things which were. About 75 years ago were found in the parish Roman coins, chiefly denarii aurei, of the reigns of Nero, Vespasian, Otho, and Domitian. Population in 1831, 2,676; in 1851, 2,990. Houses, 554. Assessed property in 1843, £6,026. Real rental in 1855, £8,269.

This parish is the seat of a presbytery in the synod of Dumfries. Patrons, the Crown and the Duke of Buccleuch. Stipend, £289 3s.; glebe, £25. Unappropriated teinds, £556 2s. 9d. Schoolmaster's salary, £34, with £40 fees, and £20 other emoluments. The parish church is an elegant Gothic edifice, built in 1846, and containing nearly 1,400 sittings. There is a Free church; and the amount of its receipts in 1855 was £206 18s. 3d. There are two United Presbyterian churches; the one of them formerly United Secession, built in 1822, and containing about 500 sittings, — the other formerly Relief, built in 1807. There is an endowed school at Broomholm; and there are seven other schools in the parish, besides the parochial school. The present parish of Langholm comprehends the ancient parishes of Staplegorton and Wauchope. Staplegorton includes all the district east of the Esk, and some territory on its west bank. The church stood on the east side of the Esk, above Patholm, and is still commemorated by its burying-ground. The parish, as to its ecclesiastical property, was given, in the 12th century, by William de Cunigburo, to the monks of Kelso; and it passed at the Reformation to the Earl of Roxburgh, but was purchased back by the Crown, and enjoyed, for a brief period, by the bishop of Galloway. The old parish of Wauchope consisted of the district now called Wauchopedale. The church was given, in the 13th century, or earlier, to the priory of Canonbie, a cell of the abbey of Jedburgh; and after the Reformation it passed to the Earl of Buccleuch. The church stood near the old castle of Wauchope; and its burying-ground yet remains. The present united parish was erected in 1703. The presbytery of Langholm was formed in 1743, at the demolition of the presbytery of Middlebie, by uniting to the five parishes of Eskdale, the parish of Castletown, formerly in the presbytery of Jedburgh.—Among eminent natives of Langholm are Admiral Sir Thomas Pasley, who played a conspicuous part under Earl Howe, in the sea-fight of 1st June, 1794; Colonels John Little and Matthew Murray, who made a figure in the wars against Tippoo Saib; William Julius Meikle, the translator of 'Camoens Lusiad;' Thomas Telford, Esq., the celebrated civil engineer; Admiral Sir Pulteney Malcolm; General Sir John Malcolm; and the litterateur, Dr. David Irvine.

The Town of Langholm stands on the Esk, at the confluence with it of the Ewes and the Wauchope, 12 miles north of Longtown, 18 north-east of Annan, 21 north of Carlisle, 23 south-south-west of Hawick, and 30 east-north-east of Dumfries. It is embosomed in one of the sweetest landscapes in Scotland,—neither extensive, romantic, nor grand, but in the strictest sense, beautiful. The old part of it, or what is called Old Langholm, stands on the east bank of the Esk, immediately below the influx of the Ewes, and stretches south-eastward along the Hawick and Carlisle road. It consists of one principal street, with a market-place near its middle. Many of the houses are in a superior style for

place of its size; and all are roofed with blue slate quarried in the vicinity. At the market-place stand the town-hall and jail, built in 1811, ornamented with a spire, and handsome in appearance. In the market-place is a handsome marble statue of Admiral Sir Pulteney Malcolm; and on Langholm-hill, in the vicinity of the town, is a stately obelisk, in honour of General Sir John Malcolm. Both of these monuments were erected within these few years, amid enthusiastic expressions of public feeling. The new part of the town, or New Langholm, stands on the west bank of the Esk, immediately above the influx of Wauchope-water, and bestrides the road leading to Upper Eskdale. It consists of nearly 150 houses, built in regular street arrangement, in the form of a triangle. The inhabitants are mostly tradespeople, and pay a small quit-rent for their house and garden. New Langholm was founded in 1778; and a cotton factory was built at it in 1788. A considerable employment both here and in the old town is the weaving of serges, checks, and shepherd's plaids, and the manufacture of woollen yarns and hose. There are also a distillery, a brewery, and some dye-houses. The town has branch-offices of the British Linen Co.'s Bank, and of the National Bank of Scotland; a large subscription library, aided by a bequest; a farming society; a friendly society; and a savings' bank. A weekly market is held on Wednesday; and four annual fairs are held,—one of them on the 26th of July for lambs, and a principal fair in the South of Scotland,—and the others on the 16th of April, the last Tuesday of May, old style, and the 4th Tuesday of September, for the hiring of farm-servants and the sale of stock. The principal inn is the Crown inn. A newspaper, called the Eskdale Advertiser, is published once a-month. Langholm was erected into a burgh-of-barony, by a charter from the Crown, dated 7th April, 1643. The Duke of Buccleuch is the superior, and appoints a baron-bailie, who again appoints a depute. Baron courts are held for trial of petty offences, and circulating sheriff courts for the recovery of small debts. The town figures grotesquely in history for the taming of shrews, and for the pretended pranks of witches. Population in 1841, 1,305; in 1851, 1,406. Houses, 244. But these statistics appear to be exclusive of New Langholm.

LANGHOPE. See LANGTON.

LANGLANDSDEAN. See DEAN and WILTON.

LANGLEE. See JEDBURGH.

LANGLEE-PARK. See DUN.

LANGLEY. See FERGUS (ST.).

LANGLOAN, a large mining and manufacturing village, in the parish of Old Monkland, Lanarkshire. It is situated in the vicinity of Coatbridge, has six smelting furnaces, and partakes generally in the character of the crowded iron-working district which has Coatbridge for its centre. Population, 1,111. Houses, 215.

LANG-LOCH. See LANARKSHIRE.

LANGNEWTON. See ANCRUM.

LANGSHAW. See KIRKPATRICK-FLEMING.

LANGSIDE, a village in the parish of Cathcart, Renfrewshire. It stands in a healthy situation in the north-east corner of the county, 2 miles south-south-west of Glasgow, and 7¼ east of Paisley. Here, on 13th May, 1568, the adherents of Queen Mary were completely defeated by the Regent Murray. At the field of battle, on the summit of a height called Camphill, there is a circular or elliptical enclosure, about 360 feet in circumference, to which the name of 'Queen Mary's camp' is commonly attached. This is manifestly a popular perversion of fact, for neither the Queen nor her army ever reached that hill; and as to the Regent, he only took possession of it at the beginning of the engagement. Indeed, the scene of the conflict was so unpremeditated, that neither party had time to form any intrenchment. That in question is probably of Roman formation. It commanded an extensive view of the surrounding country, and communicated easily with the Roman station at Paisley. The battle of Langside forms the subject of some stirring passages in Scott's historical romance of the Abbot. See the articles CATHCART and CROOKSTONE. The poet Struthers also alludes to the battle in the following lines of his "Dychmont,"—

> "Now, as I scan the landscape wide,
> Mine eye hath caught the fair Langside.
> A rushing sound is in my ears;
> I see the serried ranks of spears,
> For law and liberty uprearing—
> I mark Kirkcaldy's noble bearing;
> I see the Regent's army good,
> Burst o'er the hill like thunder-cloud;
> While to the crash the rocks reply,
> With echoing shouts of victory."

LANGTON, a parish, containing the post-office village of Gavinton, nearly in the centre of Berwickshire. It lies partly in the Lammermoors and partly in the Merse, and approaches within 1¼ mile of the town of Dunse. It is bounded by the parishes of Longformacus, Dunse, Edrom, and Polwarth. It has a somewhat triangular outline, measuring 6 miles on its north-east side, 4½ on its south side, and 3¼ on its west side. About four-sevenths of its area, from its northern angle downward, is pastoral upland, commanding a view of the whole luxuriant expanse of the Merse and of Northumberland, as far as Wooler. The heights are called Langton-Edge, and have an extreme altitude of about 900 feet. The lowland division has, in general, a reddish loam soil, and is all finely enclosed with stone or hedge fences, and beautifully chequered with plantation. The proportions of arable ground, and of ground covered with wood, are as 10 to 3. Four rills rise in the interior, and run eastward as tributaries of Blackadder water; and two of them run for a considerable way respectively on the southern and on the north-eastern boundary, while one—Langton-burn, a strong, clear stream—drains a large part of the parish, flows, for some time, between steep banks richly clothed in copsewood, and afterwards meanders among the fine scenery of Langton wood. On a hill in the farm of Raecleugh-head are distinct traces of two military stations, supposed to have been Danish. On Camp-muir, in the farm of Langhope-birks, are traces of an encampment made by a party of troops, both foot and horse, stationed there, in the reign of William and Mary, to overawe the Jacobites. In the vicinity of a place called Battle-moor, several urns and stone-coffins have been found. The ancient little town of Langton straggled over a length of about half a mile, and during the unsettled period of the international wars, was a place of some consequence. Like other border towns, it suffered at different times from incursions, and, in particular, was burned in 1558 by Sir Henry Percy and Sir George Bowes. But, in 1760, it was peacefully rased to the ground, and substituted, at about half a mile from its site, by the pleasant modern village of Gavinton. The estate of Langton, including very nearly all the parish, as well as part of Dunse and Longformacus, was purchased, in 1758, by David Gavin, Esq., and immediately made the scene of georgical and planting operations, which raised it to opulence and mantled it in beauty. Through his daughter, who became first Marchioness

of Breadalbane, it passed into the possession of the present Marquis; and now—with the fine mansion and ornate grounds of Langton-house in its centre—is one of the loveliest spots in the Merse. The parish is traversed by the road from Dunse to Lauder. Population in 1831, 443; in 1851, 484. Houses, 99.

This parish is in the presbytery of Dunse, and synod of Merse and Teviotdale. Patron, the Marquis of Breadalbane. Stipend, £214 19s. 11d.; glebe, £24 2s. Schoolmaster's salary, £34 4s. 4½d., with about £15 fees. The parish church stands at the west end of Gavinton, and was built in 1798. There is a Free church; and the amount of its receipts in 1855 was £200 3s. 11½d. There is a parochial library. During the reign of David I., the manor of Langton, with the advowson of the church, belonged to Roger de Ow, a follower of Earl Henry, the heir-apparent of the throne. De Ow gave the church, with its pertinents, to the monks of Kelso; and was succeeded in the possession of the manor, first by the family of Vetereponte or Vipont, one of whom fell in the battle of Bannockburn, and next by the family of Cockburn, one of whom was created a baronet by Charles I., and the last of whom sold it to Mr. Gavin.

LANGWALL (The), an alpine stream of the parish of Latheron, in Caithness-shire. It rises within 2 miles of the boundary with Sutherlandshire, and runs eastward to a confluence with the Berriedale, immediately above the latter's influx to the sea. Its length of course is about 12 miles.

LANRICK. See Kilmadock.

LANRIG. See Longridge.

LANTON, a village in the parish of Jedburgh, Roxburghshire. It stands a little east of the Hawick and Kelso road, 2½ miles west-north-west of the town of Jedburgh, and 9 miles north-east of Hawick. The road from it to Jedburgh passes over the Dunian. The village has a parochial school. Population, 175. Houses, 49.

LANY, an ancient parish in the Monteith district of Perthshire. Its church belonged to the priory of Inchmahome, and was granted, at the Reformation, to the Earl of Mar. The parish was dismembered in 1615, and part of it annexed to Port-of-Monteith.

LAOGHAL (Loch), a lake on the mutual boundary of the parishes of Tongue and Farr in Sutherlandshire. It is the largest of a chain of lakes, whose superfluence forms the river Borgie. Its length is 5 miles, extending northward; and its breadth is upwards of one mile. Its appearance is picturesque, with two islets on its bosom, frequented by wild fowl, and with rich verdure on its banks and flanking hills, besides a beautiful fringing of wood.

LAOIDEAN (Loch), a lake, about 8 miles west of the head of Loch-Rannoch, in the parish of Fortingal, Perthshire. Its length is about 6 miles, extending westward, and its breadth is about ½ a mile. It has many little bosky creeks and headlands, and is gemmed with several finely wooded islets.

LAPPOCH, a dangerous rock, about 100 yards long, and dry at low water, in the bay of Ayr. It lies about 1½ mile south-south-west of the bar of Irvine; and is in a line with Irvine steeple, the half-tide rock, and Lady-Isle: See Lady-Isle. Between it and the coast is a broad channel from 7 to 8 fathoms deep.

LARAN-BURN, a rivulet, rising on Shannan-hill, and running southward along the mutual boundary of the parishes of Row and Luss to the Fruin at Inverlaran, in Dumbartonshire.

LARBERT, a parish in the east of Stirlingshire. It contains the Carron ironworks, the villages of Larbert, West Carron, Kinnaird, and Stenhousemuir, the post-office stations of Carron and Larbert, and part of the post-office village of Carronshore. It is bounded by St. Ninians, Airth, Bothkennar, Falkirk, and Dunipace. Its length east-north-eastward is nearly 3 miles; and its greatest breadth is about 2½ miles. The river Carron traces all the southern boundary; and the streamlet called the Pow runs a short distance on the northern boundary. The general surface of the parish slopes gradually from south-west to north-east; but its highest ground has an altitude of only about 100 feet above the level of the sea, and occurs at the site of Larbert mansion-house, whence there is an abrupt descent to the Carron. Nearly all parts command a brilliant and extensive prospect athwart the carses of Stirling and Falkirk, and along the north flank of the Forth from the Ochil hills to Queensferry. The soil is alluvial, partly light and dry, but more generally argillaceous. Rocks of the coal formation, comprising sandstone, several seams of coal, and some strata of balls of clay ironstone, underlie the alluvium. About 200 acres of the surface are occupied by plantations and pleasure grounds; and all the rest of the land is arable. The coals and the ironstone are extensively worked. The appearance of the parish underwent a total change, comprising immense improvement in almost everything affecting its interests, immediately after the establishment of the Carron ironworks. There are eight landowners, additional to the Carron Company. The principal residences are Larbert-house, Glenbervie, Kinnaird, Carronhall, and Carron-park. A famous extinct antiquity was Arthur's Oven: which see. A Roman causeway, communicating from Carmuirs in Falkirk to Stirling castle, traversed the parish, and has left some vestiges. Some Roman millstones and fragments of Roman pottery have been dug up. An interesting object is the residence of the Abyssinian traveller, Bruce. See the article Kinnaird. The chief manufactures and commerce are noticed in the article Carron-Works. Within this parish are held the Falkirk great cattle fairs. See Falkirk. The parish is traversed by the road from Edinburgh to Stirling, and contains the junction of the Scottish Central railway with the branches thence to the Edinburgh and Glasgow railway. The village of Larbert stands along the Edinburgh and Stirling road, at a point 2 miles north-west of Falkirk, and 9 miles south-south-east of Stirling, and is delightfully situated. Population of the village, 487. Houses, 127. Population of the parish in 1831, 4,248; in 1851, 4,606. Houses, 655. Assessed property in 1843, £26,246 5s. 4d.

This parish is in the presbytery of Stirling, and synod of Perth and Stirling; and it is united to the parish of Dunipace,—which see. Patron, the Crown. Stipend, £322 10s. 1d.; glebe, £25. Unappropriated teinds, £1,174 15s. 1d. Schoolmaster's salary, £34 4s. 4½d., with about £120 fees. The parish church was built in 1820, and is a beautiful structure, in the Elizabethan style, after a design by Hamilton of Glasgow. There is a Free church of Larbert; and the amount of its receipts in 1855 was £161 2s. 3d. There are an endowed non-parochial school, five unendowed schools, a parochial library, and a friendly society. The ancient church of Larbert was a chapel subordinate to the church of St. Ninians, and was given, along with the church, by one of the bishops of St. Andrews, to the monks of Cambuskenneth.

LARG. See Inch, Wigtonshire.

LARGIEBEG, a small headland, 3½ miles south of the south entrance of Lamlash-bay, on the east coast of the island of Arran.

LARGO, a parish on the south coast of Fifeshire. It contains the post-office station of Largo, and the villages of Upper Largo or Kirkton, Lundinmill, Woodside, New Gilston or Backmuir of Gilston, and Lower Largo, comprising Temple and Drumochy. It is bounded by Largo bay on the frith of Forth, and by the parishes of Scoonie, Ceres, Kilconquhar, and Newburn. Its length southward is nearly 6 miles; and its average breadth is about 3 miles; but its extent of coast-line is only about 2¾ miles. The shore is in general low and sandy; but the ground soon begins to rise towards the north. The general surface of the parish is exceedingly diversified by rising grounds and valleys, and beautifully ornamented with wood of various kinds. On the east side, at the distance of about 2 miles from the shore, Largo-law rises to the height of about 950 feet above the level of the sea. It is of a beautiful conical form, green to the summit, where it is cleft in two, and exhibits a series of basaltic columns. From this hill, a splendid and extensive view of the whole surrounding country, the frith of Forth and its islands, and the opposite shore of the Lothians, is obtained. West of Largo-law a deep ravine, called Keil's den, through which flows a small burn, intersects the parish from north to south, for about 2 miles. It is finely wooded, is exceedingly picturesque, and forms a favourite walk for persons residing at Largo during the summer for the benefit of sea-bathing. About 5,935 acres of the total area are in tillage; about 290 are in pasture; and about 595 are under wood. The rocks are partly crystalline of the eruptive kind, and partly stratified, belonging to the coal formation. Coal of poor quality is worked; excellent sandstone is quarried; and grey limestone occurs in some places 15 feet thick. The soil in the north is generally thick black mould on a wet bottom; in the south, partly of a light character, but more commonly a black loam, incumbent variously on a wet and on a dry subsoil. The most extensive landowners are Durham of Largo and the Standard Assurance Company; there are seven other chief landowners; and five have mansions within the parish, and two have mansions in its vicinity. The most conspicuous residence is that of Largo, an elegant and very spacious edifice, built in 1750, situated on a pleasant slope with a southern exposure, a little west of Upper Largo, amid richly ornamented pleasure-grounds, and commanding an extensive and most brilliant prospect. The barony of Largo was conferred by James III., in 1482, by charter under the great seal, on Sir Andrew Wood, his naval commander, in acknowledgment for his brilliant achievements against the English. The real rental of the parish in 1837 was about £8,500. Assessed property in 1843, £10,814 18s. 8d. The village of Lower Largo stands at the mouth of Keil-burn, at the top of Largo bay, and middle of the coast-line of the parish, 2½ miles east-north-east of Leven, and 3½ west by south of Colinsburgh. Its harbour is not in good order, but might, without much expense, be rendered one of the best on the south coast of Fifeshire. A trade was carried on here, in old times, with Holland in coal, salt, iron, sandstone, and other heavy articles, and more recently with Norway in timber; but all this has, for a considerable time, been at an end. Much facility of communication landward, and to the ferries of the Forth and the Tay, is enjoyed by vicinity to the Leven railway. The population of Lower Largo is 265; of whom 156 are in Drumochy, and 109 are in Temple. The village of Upper Largo, or Kirkton of Largo, stands about ¾ of a mile to the east-north-east of Lower Largo, on the road to Colinsburgh and St. Andrews. Its population is 423, and its houses 77. There are in the parish two factories, the one of small extent for cleaning flax, and the other for spinning it. Population of the parish in 1831, 2,567; in 1851, 2,800. Houses, 431.

This parish contains some interesting antiquities. Within the grounds of Largo-house is a circular tower, which formed part of the old castle inhabited by Sir Andrew Wood, and which, it is alleged, once formed a jointure house of the queens of Scotland. On the banks of Keil burn, to the north of Largo-house, is an old square tower, part of the castle of Balcruvie, anciently also called Piteruvie. In all probability this castle was erected by Sir John Lindsay, as a separate residence during his father's lifetime. The tradition is, that Balcruvie belonged to the family of Crawford; but this is a mistake originating in the fact that the family of Lindsay, at a subsequent period, succeeded to the estates and titles of the Earl of Crawford. In the centre of the present house of Lundin, which is of modern erection, there is a square tower of great antiquity, which formed part of the ancient castle of Lundin, the residence of a family of the name of Lundin, who held property here of great extent so early as the reign of David II. South-east of Lundin-house, between it and the high road, are three upright stones, of red sandstone, commonly called "the standing stones of Lundin." These are of great size, and bear no trace of any sculpture or inscription. Some persons have thought them to be of Roman origin; others have thought them to be memorial stones of Danish chiefs who fell here in battle in the time of Macbeth; but others, with much more probability, suppose them to be part of a Druidical temple. Ancient sepulchres are found near them. A Runic stone stands on a pedestal in the lawn in front of Largo house. It consists of two pieces, which were found, a considerable number of years ago, at places a mile asunder, and were put into their present position by General Durham. This singular monument presents on the one side a Maltese cross, something like that on the cross at Crail; the upper part of the stone presenting a circle, ornamented in the style of a part of Crail cross, and one of the side slabs of the St. Andrews sarcophagus. On the right side of the body of the cross, below the transepts, are two fishes or serpents entwined, having heads like horses; and on the left, something like a figure sitting having an elephant's head, of which the trunk is apparent. The body of the cross has been ornamented with a variety of carving, some of which would appear to have been serpents intertwined. The reverse side of the monument represents the usual hunting-scene which this class of remains almost invariably represents. On an artificial rising-ground or tumulus to the north of Largo-house, called Norrie's law, there were found, about the year 1819, some pieces of silver defensive armour, together with a number of small silver Roman coins of the earlier emperors. Two remarkable natives of this parish were Alexander Selkirk, the prototype of Robinson Crusoe, and Sir John Leslie, the distinguished natural philosopher.

This parish is in the presbytery of St. Andrews, and synod of Fife. Patron, Durham of Largo. Stipend, £268 16s. 4d.; glebe, £31. Unappropriated teinds, £135 10s. 10d. Schoolmaster's salary, £34 4s. 4½d., with about £20 fees. The parish church comprises part of an old building with a spire erected in 1623, and a new building erected in 1817; and it contains upwards of 800 sittings. There is a Free church; and the amount of its receipts in 1855 was £161 5s. 2d. There are in Lower Largo an United Presbyterian church and a

Baptist chapel. There are within the parish four schools, a subscription library, a weekly corn-market, an office of the National bank, a savings' bank, and an institution called Wood's-hospital for the maintenance of indigent persons. This last originated in a bequest of £68,418 Scots, by John Wood in 1659; and, in its present form, was built in 1830, at the cost of £2,000. It is an elegant and ornamental edifice, in the Elizabethan style, containing accommodation for 16 inmates.

LARGO-BAY, an indentation of the frith of Forth on the south coast of Fifeshire. It has a somewhat semicircular outline; is flanked on the east side by Kincraig-point, in the parish of Elie, and on the west side by Methill-point, in the parish of Wemyss; and it measures about 6 miles in width between these points, and penetrates the land to the extent of about 2¼ miles. In some parts of it, especially in the east, are very distinct vestiges of a submarine forest.

LARGOWARD. See KILCONQUHAR.

LARGS, a parish, containing the post-town of Largs and the post-office village of Fairley, in the extreme north-west of Cunningham, Ayrshire. It is bounded by the frith of Clyde, by Renfrewshire, and by the parishes of Kilbirnie, Dalry, and West Kilbride. Its length southward is about 9 miles; and its greatest breadth is 3¾ miles. The hills which begin to rise in the parishes of Greenock, Kilmalcolm, Lochwinnoch, Kilbirnie, and Dalry, meet in a kind of general summit at the eastern boundary of Largs, and hem it in so curiously from all the cultivated country to the north, east, and south-east, as to have occasioned the proverbial expression, "Out of the world, and into the Largs." The uplands gradually descend as they approach the shore; and they terminate in abrupt declivities, some of which are almost perpendicular, as if part of their base had been forcefully dissevered. Yet, though the hills are high, they have generally a coat of prime pastoral verdure, and, in most instances, exhibit undoubted marks of having once been cropped with grain. For a mile from the northern boundary, the uplands form at their base a bulwark of rock, rising in some places 50 or 60 feet above the road, and seeming to overhang it. South of the point where this terminates, a conical mountain, green to the top, contributes a feature alike bold and beautiful to the landscape. Farther south, the grounds fall off in gentle gradients, and yield in fine slopes to the course of a large indigenous brook, called Noddle or Noddesdale water. Beyond this, and behind the town of Largs, the country opens into a beautiful plain of nearly a mile in breadth from the foot of the mountains to the sea-beach. All this sea-board both exhibits in its flanking hills and commands outwards over the frith a series of beautiful and romantic landscapes. Its coast-line is almost parallel with that of Bute, and looks right across to that beautiful island, to the entrance of the Kyles of Bute, to Toward-Point in Cowal, to a profusion of fine headlands, wooded slopes, and broken surfaces coming down thence, and from the Larger Cumbrae, to kiss the waters of the Clyde, and to the magnificent alpine scenery which rises up in the distance, and makes acquaintance with the clouds. Great improvements have, in recent years, been made in the reclaiming and fertilizing of lands. About 1,145 acres, at present, are in tillage, 3,300 in grass-land and meadow, 5,500 in hill pasture, 600 in woodlands and gardens, and 8,598 in moorish and heathy upland. The predominant rocks are old red sandstone and trap. Sandstone, of good quality for local building, has been extensively quarried. Two burns run on the boundary with Renfrewshire, one of them westward into the frith of Clyde, the other northward into Renfrewshire; and two other and larger burns, the Noddle and the Gogo, rise on the eastern border and run through the interior into the frith of Clyde, the former a little north of the town of Largs, the latter at the south end of that town. The fisheries along the coast are of considerable value.

The most extensive landowners are the Earl of Glasgow and General Sir T. M. Brisbane, Bart.; the landowners next in extent are the Earl of Eglinton and Scott of Hawkhill; and there are 15 other landowners. Kelburn-house, a seat of the Earl of Glasgow, 1½ mile south-east of the town of Largs, and ½ a mile from the shore, was originally a square tower, and was modernised by enlargement. Immediately behind it, in the grounds connected with it, is a glen ¼ of a mile long, of remarkably romantic character. At the head of the glen is an abrupt, rough, lofty precipice, over which leaps a brook into a path just wide enough to permit the flow of its waters. From the sides of the path, the ground rapidly ascends, mountain high, forming a chasm which, if naked, would be tremendous, but which is so clothed with trees, and otherwise decorated by art, as to be beautiful. Near the house, the brook leaps over another precipice, 50 feet sheer down, into a vast basin which seems scooped out of both sides of the glen. Brisbane-house, the seat of General Sir T. M. Brisbane, Bart., 1¾ mile north of the town, is a fine mansion, surrounded with picturesque grounds. Skelmorly-castle, 2 miles farther north, the property of the Earl of Eglinton, was built partly in 1502, and partly in 1636, and is at present being greatly improved and enlarged. Knock-castle, built about 360 years ago by a family of the Frasers, was lately acquired by Robert Steele, Esq., who has repaired it, and has built at a little distance from it a magnificent edifice with a tower. The castle of Fairley, built in 1521, and now belonging to the Earl of Glasgow, was the property of the ancient family of Fairley, said to be descended from a natural son of Robert II., and will be remembered as the scene of the ballad 'Hardiknute.' See FAIRLEY. A small hill called Margaret's-Law, having been opened in 1772, in search of materials for enclosures, was found to be an artificial accumulation of stones, amounting to 15,000 cart-loads, and having in its centre five stone-coffins with human skulls and bones, and earthen urns, which were believed to have been there since the battle of Largs. This battle was fought on the 2d October, 1263, between Haco of Norway, and Alexander III. of Scotland. Haco, to enforce his claims on the sovereignty of the Hebrides, sailed up the frith of Clyde with a numerous fleet and army, and anchored in the sound between the coast and the Cumbraes. Alexander had used every stratagem to gain time, and at length lay encamped with about 1,500 well-appointed cavalry, and a numerous host of inferior soldiery, on the heights behind Largs overlooking the sea. On the night preceding the 2d October, Haco suffered vast damage from a storm blowing right up the frith upon his fleet; and, in the morning, he was obliged, while most of his forces were either drowned or struggling for the preservation of his remaining ships, to effect an embarrassed landing with a dispirited band only about 900 in number. Instantly confronted with the fresh and strong force of Alexander, part of the Norwegian little army was driven back into the sea and part retired sword in hand, fighting all the way to a place a little below Kelburn. A few more of the Norwegians having landed, the apparently overpowering force of Alexander was resisted in a com-

tinuous fight, till the cloud of night sheltered Haco's little shattered remnant, and allowed them to withdraw to their ships. Haco got leave from the Scottish king peacefully to inter his numerous followers who had fallen; and, in a few days afterwards, he collected the relics of his fleet, and sailed away to Orkney, there to die in December under the pressure of his sorrow. The chief scene of the contest was a plain to the south of the town, immediately below Haylee, still retaining some small memorials of the fight. Within the parish of Dalry, immediately beyond the south-east boundary of Largs, is a farm called Camphill, where the Scottish army are said to have encamped previous to the engagement. Between that place and the town of Largs, is Routdon-burn, having on its bank a cairn in which a stone-coffin was found, and supposed to have received its name of Routdon or Routdane, from having been the place where a detachment of Haco's army were routed. Some way down the burn is Burlygate; nearer the sea, in the Earl of Glasgow's plantations, is Killing-craig; and farther to the south is Kepping-burn, where, it is said, a number of the fleeing Norwegians were met by Sir Robert Boyd, ancestor of the Earls of Kilmarnock, afterwards the tried friend of Robert Bruce, and put to the sword. The parish is traversed by the road from Greenock to Ardrossan, and enjoys ample facilities of communication by steamboat. Population in 1831, 2,848; in 1851, 3,715. Houses, 532. Real rental in 1842, £7,500. Assessed property in 1843, £13,742 19s. 2d.

This parish is in the presbytery of Greenock, and synod of Glasgow and Ayr. Patron, the Earl of Eglinton. Stipend, £296 15s. 7d.; glebe, £36 8s. Unappropriated teinds, £625 9s. 7d. Schoolmaster's salary, £30. The parish church was built in 1812, and enlarged in 1833, and contains 1,268 sittings. There is a chapel of ease at Fairley, built in 1833, and containing 300 sittings. There is also a chapel of ease at Skelmorly. There are two Free churches, the one at Largs, with an attendance of 490, the other at Fairley, with an attendance of 150; and the sum raised in connexion with the former in 1855 was £872 1s. 5d.,—in connexion with the latter, £253 16s. 2d. There is an United Presbyterian church, which was built in 1826, and contains 690 sittings. There is also an Episcopalian chapel, called St. Columba's. There are an endowed school, called the Brisbane school, a school of industry for females, a Free church school, a Free church school of industry for females, a Free church infant school, and two private schools. The district of Cunningham appears to have anciently formed two distinct territories,—the southern and larger one called Cunningham, and the northern and smaller one called Largs. On the death of Alan, lord of Galloway, in 1234, the lordship of Largs was inherited by his daughter Devorgilla; from her it passed to her son John Baliol, the competitor for the Scottish crown; and on his forfeiture, it was conferred by Robert Bruce on his son-in-law, Walter, the steward of Scotland. Hitherto the church had been a rectory; but now it was given by Walter to the monks of Paisley, and it continued with them till the Reformation. In 1587, the tithes and patronage, in common with the other property of the monks, were erected into a temporal lordship, with the title of Lord Paisley, in favour of Lord Claud Hamilton. In 1621, they were inherited by James, Earl of Abercorn; and in the reign of Charles I., they passed to Sir Robert Montgomery of Skelmorly. The church was dedicated to St. Columba.

The Town of Largs stands on the coast of the parish of Largs, and on the road from Greenock to Ardrossan, 1¾ mile north-east of the north end of the Big Cumbrae, 8 miles by water east-south-east of Rothesay, 8¼ south of Innerkip, 9 north-west of Kilbirnie, and 30 north-north-west of Ayr. Its site is a large deposit of gravel, which must at one time have formed part of the bottom of the frith. The view from it seaward is that extensive, diversified, and very brilliant one which we have noticed in our account of the parish. Its environs inland are first a rich tract of corn land, in a high state of cultivation and beautifully ornamented, and next a series of glades, glens, and grassy slopes, among the skirts of the enclosing hills. Its atmosphere is comparatively pure and dry; and its general salubrity enables it to compete stoutly with Rothesay, the fame of being the Montpellier of the west of Scotland. The beach in its neighbourhood is broad, gravelly, and good for sea-bathing. A quay in front of the town has sufficient accommodation for the safe and speedy landing of passengers and goods. An esplanade of considerable breadth extends between the quay and the town. A terrace or single-sided street, pleasingly edificed, overlooks the esplanade. A main street, of fair character for both airiness and architecture, extends inland thence, and forms the backbone of the town. Villas and other houses of a superior kind stand on the outskirts or look toward the shore. House accommodation of great aggregate extent, and of much variety of character, but generally comfortable or elegant, exists for hire. And altogether the town is well worthy of a repute which it obtained at the very commencement of the era of steamboat navigation, and has continued to possess to the present day, as a favourite summer resort of families from Glasgow and other seats of manufacture on the Clyde.

Largs ranks as a creek of the port of Greenock. Its quay was built in 1834, at the cost of £4,275; and the average revenue from it yields a return of about 6 per cent. The affairs of the harbour are managed by a committee. Six steamers touch daily in summer, and two daily in winter, on their way between Glasgow and intermediate places on the one side, and Millport, Ardrossan, or Arran on the other; and they have access to the pier at all states of the tide, the depth of water almost at the very shore being several fathoms. A large part of the inhabitants depend mainly on rents and profits drawn from summer visitors; a few are maintained by the fisheries; and a considerable number are handloom weavers, in the employment of the Glasgow manufacturers. A weekly market is held on Thursday; and annual fairs are held on the first Tuesday of February, the Tuesday after the 12th day of June, the third Tuesday of July, and the fourth Tuesday of October. The June fair falls on St. Columba's day, vulgarly called Colm's day; and, though now of very diminished importance, it was anciently a grand rendezvous of Highlanders and Lowlanders for the mutual exchange of their commodities, and probably exhibited more grotesque scenes of manners and traffic than any which can now be witnessed in Scotland. The town has offices of the National Bank, the City of Glasgow Bank, and the Royal Bank, eight insurance agencies, a gas-light company, a reading-room, two circulating libraries, and some other institutions. An elegant suite of baths was built in 1816 by public subscription. The parish church is a handsome as well as conspicuous edifice, and has a tower and spire of much more than ordinary pretensions to beauty. In the grave-yard in the town is the burying-place of the Montgomerys of Skelmorly, an aisle of singular character, belonging to the former church, and built in 1636 by Sir Robert Montgomery. It is richly

and tastefully carved, and forms an arch and two compartments, supported by 18 pillars of the Corinthian order, surmounted with cherubim. Above the arch is a small pyramid, finished at top with a globe. On the roof are painted the twelve signs of the zodiac, several views of the mansion of Skelmorly, and the figure of a lady, a member of the Skelmorly family, receiving a mortal kick from a horse. In various parts are also texts of Scripture and escutcheons. Below is a vault, to which Sir Robert usually repaired at night for devotion and meditation,—in a sense burying himself alive. At each end of the town is a moat, supposed to have been the seat of feudal courts of justice. On a small holm at Outterwards, on Noddle-burn, were discovered the foundations of several huts or cottages, said to have been the retreat of numbers of the inhabitants from a visit of the plague which, in 1644, desolated the town. Largs has no charter of any kind to regulate its government, and is under little other control than that of the county authorities. A justice of peace court for small debts is held on the first Monday of every month. Three men of the coast guard are stationed in the town. Population in 1851, 2,824. Houses, 392.

LARKHALL, a post-office village in the parish of Dalserf, Lanarkshire. It stands close to the boundary with Hamilton parish, and on the road leading from Glasgow to Carlisle, midway between the Avon and the Clyde, 3½ miles south-east of the town of Hamilton. It stands chiefly on the Raploch property, but partly also on the Hamilton property. The Lesmahago branch of the Caledonian railway passes adjacent to it. The inhabitants are principally handloom-weavers and miners, the former employed for the manufacturers of Glasgow, and the latter in the collieries, which have been rapidly extending in the neighbourhood. The village was commenced, with slight exceptions, about the year 1776. It did not undergo any great increase for 15 or 20 years; and it afterwards was rapidly enlarged, principally by means of building societies. It has a salubrious air, good water, and abundance of fuel and sandstone. Its neighbourhood is largely studded with hamlets, rows of houses, and separate dwellings, which may be regarded as coalescing with it to form a considerable town. A chapel-of-ease was built here in 1835 as an extension church, at the cost of about £900, and contains 720 sittings. It has recently been endowed by the Duke of Hamilton, and erected into a quoad sacra parish church. An United Presbyterian church, then a Relief church, was built about the same time as the chapel of ease, and contains 700 sittings. There are in the village a side parish school, two other schools, a subscription library, a branch of the City of Glasgow bank, a savings' bank, a mason lodge, and one or two benefit societies. Population of the village in 1841, inclusive of territory which was then conjoined with it in a temporary quoad sacra parish, 2,453. Population of the village itself in 1831, 963; in 1851, 1,839. Houses, 304.

LARKHALLBURN. See JEDBURGH.

LARO (LOCH), a small lake in the parish of Criech, Sutherlandshire.

LAROCH. See BALLACHULISH.

LARRISTON, an estate in the parish of Castleton, Roxburghshire. It is situated upon the Liddle, about 6 miles above Newcastleton. It comprises about 5,000 acres, and contains excellent sheep-walk. It was at one time the seat of a chief of the Elliots, whose fame has been commemorated in Hogg's spirited ballad,—

"Lock the door, Larriston, lion of Liddesdale;
Lock the door, Larriston, Lowther comes on;
The Armstrongs are flying,
The widows are crying,
The Castletown's burning, and Oliver's gone!"

LASSWADE, a parish, containing the post-office villages of Lasswade, Loanhead, Roslin, and Rosewell, in Edinburghshire. It is bounded by Colinton, Liberton, Dalkeith, Newbattle, Cockpen, Carrington, Penicuick, and Glencross. Its length north-north-eastward is 8 miles; its greatest breadth is 6 miles; but nowhere, except over a very brief distance at its north end, is it broader than 3 miles. A projecting wing at its north-west extremity is occupied by the eastern termination of the Pentland hills, covered partly with heath, and partly with fine pasture. An extensive tract, from the southern boundary to about 2 miles into the interior, is moorish and mossy upland, bleak and unsheltered. The rest of the surface, comprising much the greater part, is a rich and beautiful plain, generally fertile in its soil, primely managed in its husbandry, opulently shaded and adorned with wood, and very picturesquely featured and diversified in its scenery. About 1,000 acres are covered with wood. The North Esk comes down upon a point about a mile from the south-west extremity, runs 1½ mile along the western boundary, and then, assuming a north-north-easterly direction, cuts the rest of the parish into nearly equal parts. Its bed, while traversing the plain, is a deep, romantic, sinuous, bold ravine; paved in many places, at the bottom, with ledging and variform rocks; often steep, perpendicular, and even overhanging on its sides; and almost everywhere, in tiny plain, or slope, or swell, or precipice, profusely adorned with shrubs and trees. Recesses, contractions, angularities, rapid and circling sinuosities, combine with the remarkably varied surface of its sides to render its scenery equal in mingled picturesqueness and romance to any in Scotland. The river seems all the way to be merrily frolicsome; now rushing along a shelving gradient, now hiding itself behind rocks and weeping wood, and making sudden but always mirthful transitions in its course. The rocks of most of the lowland tracts of the parish belong to the coal formation, and comprise very abundant supplies of coal, limestone, and sandstone. The coal is worked principally in the vicinity of Loanhead and of Rosewell. The estate of Dryden alone was recently computed to contain not less than 30,000,000 tons. A coal-mine on the boundary with Liberton was accidentally set on fire about the year 1770; and it burned upwards of 20 years in spite of every effort to extinguish its fire. The principal landowners are Lord Melville, Sir James W. Drummond, Bart., Sir George Clerk, Bart., Gibson of Pentland, Ramsay of Whitehill, Sir Norman M. Lockhart, Bart., Arbuthnot of Mavisbank, Mercer of Dryden, the Earl of Rosslyn, the Earl of Roseberry, and several others.

Along the vale of the North Esk, crowning its precipices, or sitting ensconced in its fairy nooks are various interesting ancient edifices, and a series of modern mansions and villas. The most remarkable of the former are the castle and the chapel of ROSLIN, and the old mansion and the caves of HAWTHORNDEN: which see. Among the numerous gentlemen's seats which line both sides of the river Mavisbank, resembling an Italian villa, Dryden and Rosebank, on the left bank, and Springfield, Auchindinny, Polton, Glenesk, Goston, and Eldin, on the right bank, are the chief. Eldin, the last of these was the seat of John Clerk, Esq., the author of the celebrated work on naval tactics. Many villas and cottages straggle along at intervals, or hang on the outskirts of Lasswade and Roslin; and are occupied chiefly as summer-houses, as scenes of ruralizing

or as places of convalescence, by the citizens of Edinburgh. One of the cottages near the village of Lasswade was the residence, during some of the happiest years of his life, of Sir Walter Scott. But the grandest modern structure is Melville-castle, situated nearly a mile below the village of Lasswade, on a secluded but charming piece of low ground, on the left margin of the Esk, surrounded by high banks, picturesque, wooded, and adorned. This fine castellated edifice, with circular towers, the seat of Viscount Melville, was built near the end of last century on the site of an ancient edifice of the same name, which tradition incorrectly says belonged to David Rizzio, and was occasionally inhabited by Mary. Melville-castle was visited in 1822, and much admired, by George IV. Near the house of Mavisbank is a supposed Roman station, pointed out in General Roy's maps as the place where the Romans passed the North Esk on their way to Cramond. The chief object is a circular earthen mound of considerable height, begirt with ramparts, now cut into terraces; where have been found antique weapons, bridle bits, surgical instruments, and other relics. In a neighbouring farm is a tumulus, whence have been dug urns filled with burnt bones. Near Roslin is the scene of a battle, or rather of three battles in one day, fought, on the 24th of February, 1303, between the Scotch and the English, conflictingly narrated by the historians of the two nations, but painted by those of Scotland in colours not a little flattering to Scottish bravery. During a truce, Ralph Confrey, treasurer to Edward I., invaded Scotland at the head of 30,000 men, well-armed, and mostly horsemen. With a view to plunder, he divided them into three bodies, and, on reaching the neighbourhood of Roslin, encamped them in three stations. Hearing of his invasion, Sir Simon Fraser and Sir John Comyn drew together at Biggar as many men as they could hastily muster, amounting to 8,000, or at most to 10,000; and with these they expeditiously marched in search of the enemy. Falling unexpectedly on the first division of the English, the Scottish forces totally overthrew and routed them, driving those who escaped the sword and capture confusedly back on the second camp. While the Scotch were dividing the spoil, the second English division, suddenly alarmed, and in motion, precipitated themselves to the conflict, and met the same fate as the first division. Scarcely had the Scotch begun to take a refreshment, when a third army appeared in view; and the Scotch, though thinned in numbers and exhausted by fatigue, rushed impetuously on this third army, and overthrew it also. Blundering tactics on the English side, and skill and animation on the side of the Scotch, thus worked out for the latter the boast of conquering in one day three armies, each of which was fully equal to them in numbers, and probably superior in appointments.

Within the parish, chiefly in its central parts along the Esk, are a bleachfield, four paper-mills, two corn-mills, a very extensive gunpowder manufactory, and a manufactory of fine carpets and damasks. The carpet manufactory was established in 1834; and it soon rose into extensive notice, and became famous for its produce. The parish has long been celebrated for its oatmeal. Through the recommendation, as is believed, of the first Lord Melville, its produce in this article, drew the notice of George III., became the breakfast material of his numerous family during their years of childhood, and was regularly furnished to the royal residence by a millar of the village of Lasswade. The parish is traversed by the Peebles railway, and has stations on it for Hawthornden, Roslin, and Penicuick. Its limits also lie near the railway stations of Bonnyrigg and Eskbank. It is also traversed crosswise by the road from Edinburgh to Peebles, and lengthwise by that from Edinburgh to Dumfries, by way of Howgate. The village of Lasswade stands on the Edinburgh and Peebles road, and on the left bank of the North Esk, 2 miles west-south-west of Dalkeith, and 6 miles south-south-east of Edinburgh. Its site comprises the slopes and bottom of a very romantic part of the dell of the Esk; and is united by a good stone bridge to the village of Westmill, on the right bank of the Esk, and politically comprehended in the parish of Cockpen. The two villages practically coalesce to form one little town, and they can challenge comparison with any other little town in the kingdom for picturesqueness of both interior and environs; but they stand on such exceeding irregularity of ground, as to want most of the ordinary conveniences of street arrangement. The stated population of Lasswade proper is about 300; but, owing to the influx of summer lodgers from Edinburgh and elsewhere, the population in the summer months is much greater. Population of the parish in 1831, 4,252; in 1851, 5,821. Houses, 1,060. Assessed property in 1843, £21,832 11s. 11d.

This parish is in the presbytery of Dalkeith, and synod of Lothian and Tweeddale. Patron, Sir George Clerk, Baronet. Stipend, £180 4s. 1d.; glebe, £35. Unappropriated teinds, £15 11s. 1d. Schoolmaster's salary, £34 4s. 4½d., with £48 fees. The parish church was built in 1793, and contains upwards of 1,000 sittings. It is a handsome edifice, most beautifully situated on a height overlooking the village of Lasswade. There is a chapel of ease at Roslin, built in 1827, and containing 444 sittings; and it is under the patronage of the male communicants. There is a Free church at Roslin; and the amount of its receipts in 1855 was £152 17s. 6d. There is also a Free church preaching station at Loanhead; and the amount of its receipts in 1855 was £70 18s. 8½d. There is an United Presbyterian church at Lasswade, built in 1830, and containing 655 sittings. There is also an United Presbyterian church at Bridgend, on the south-west border of the parish, popularly, but incorrectly, designated ot Penicuick. There is a Reformed Presbyterian church at Loanhead, built about 68 years ago, and containing 400 sittings. There are in the parish 12 non-parochial schools, and several benefit societies; and there are subscription libraries at Lasswade and Loanhead, and a congregational library at Roslin. The present parish of Lasswade comprehends all the ancient parish of Lasswade, the chief part of the ancient parish of Melville, and a considerable part of the ancient parish of Pentland. Lasswade was anciently the richest parish in Mid-Lothian except St. Cuthberts. The church, with its pertinents, became, in the 12th century, a mensal church of the bishop of St. Andrews; it afterwards was a prebend of St. Salvator's college, St. Andrews; and, in the reign of James III., it was, by the Pope's authority, transferred to the dean of the collegiate church of Restalrig. Long after the large accessions from Pentland on the west, and Melville on the north, were made to the territory, the old parochial place of worship, which had witnessed every change from before the Reformation till the final settlement of the Church of Scotland in her present form, continued to be in use; and it now exists not far from its conspicuous modern successor, in the form of a frail ruin, timidly ensconced from the public gaze amidst a cluster of trees. One of its aisles is the burying-place of the noble family of Melville, and contains the ashes of the first Lord Mellville, the distinguished figurant in the ministry of Mr. Pitt.

The name Lasswade is derived by Chalmers from two words, *laeswe* and *weyde*, which signify 'a well watered pasture of common use;' and this may be taken as a good description of the site of the village of Lasswade at the time when the original church was built.

LATHALLAN. See KILCONQUHAR.

LATHALMOND. See DUNFERMLINE.

LATHERON, a parish on the south-eastern and southern border of Caithness-shire. It contains the post-office stations of Latheron and Berriedale, the post-office village of Lybster, and the villages of Swiney and Dalbeath. It is bounded by the German ocean, by Sutherlandshire, and by the parishes of Halkirk, Watten, and Wick. Its length north-westward is 27 miles, and its general breadth varies from 6½ to 14 miles. The coast has an extent nearly co-equal with the extreme length of the parish. It everywhere presents to the sea a bold vertical face of rock, from 100 to 300 feet high, but is much indented by inlets at the mouth of streams, forming very convenient, well-sheltered harbours for fishing boats; and it is pierced, at the line of watermark, with numerous caves, some of them from 300 to 360 feet long, and frequented at all seasons by great numbers of seals. The interior surface of the parish is remarkably diversified, presenting a continued succession of hill and valley, sometimes in rapid alternation, and with bold features, strikingly contrasted to the tame flat appearance of most other parts of the county. The boundary-line everywhere with Sutherlandshire, and partly also with Halkirk, amounting altogether to not less than 20 miles, is a lofty mountain watershed; and the interior thence, to the aggregate amount of one-third or so of the entire area of the parish, is lofty upland. The summits in these parts have an altitude of from 1,500 to 3,000 feet above the level of the sea; and some of them command a most magnificent prospect, comprising great part of twelve counties, together with a large extent of the Atlantic and the German oceans. The height on the coast part of the boundary projects in so alpine a manner to the sea, that the public road over it, connecting Caithness-shire with the rest of Scotland, passes over it at an altitude of 1,200 feet above sea-level. See ORD OF CAITHNESS. The loftiest interior summit is MORVEN,—which also see. The glens in some parts of the upland district, particularly along the course of Langwell-water and Berriedale-water, exhibit as romantic and picturesque scenery as any in the Highlands. The principal stream, besides the Langwell and the Berriedale, is the Dunbeath; and all the three rise on the western border and run eastward to the German ocean. But a head-stream of Thurso water, running northward to the North sea, drains the north-west district of the parish, and carries off thence the superfluence of three or four small lakes. The predominant rocks are variously clay flag-stone, the old red sandstone, the red sandstone conglomerate, and granite. The soil of the arable lands is of various quality, but in general shallow, sharp, and gravelly, and in many parts encumbered with detached rocks and large boulders. About 9,000 imperial acres are in tillage; about 9,000 are capable of being cheaply reclaimed; about 720 are under wood, chiefly copsewood; and about 121,000 are pastoral or waste. The principal landowners are Sir George Sinclair, Bart., Sinclair of Freswick, Horne of Langwell, Sutherland of Forse, Gordon of Swiney, Lord Duffus, Sir Ralph A. Anstruther, Bart., Munro of Latheron, and Sinclair of Lybster. No fewer than eight old castles—Berriedale, Achastle, Dunbeath, Knockinnan, Latheron, Forse, Swiney, and Clyth—stand on the coast, chiefly on the brink of rocky cliffs overhanging the sea, and capable originally of being cut off from connexion with the land by means of fosse and drawbridge. Most of them are now in ruins, but that of Dunbeath is still inhabited. Seal-catching, in the caves of the coast, is a considerable employment. Sea-fishing, particularly in the herring department, but also in the cod, the salmon, and the lobster departments, is a very extensive employment, engaging the main attention of a large proportion of the inhabitants, but conducted in an exciting manner, and not a little precarious. See the article CAITHNESS. The estimated yearly value of raw produce in 1840 was £46,870; of which £19,260 was for herring, £250 for cod, and £302 for salmon. Assessed property in 1843, £10,976 18s. 6d. Population in 1831, 7,020; in 1851, 8,224. Houses, 1,568.

This parish is in the presbytery of Caithness, and synod of Sutherland and Caithness. Patron, Sir James Colquhoun, Bart. Stipend, £253 2s. 11d.; glebe, £15. Unappropriated teinds, £191 15s. 8d. Schoolmaster's salary, £34 4s. 4½d., with from £20 to £30 fees. The parish church was built in 1734, and enlarged and repaired in 1822, and contains about 900 sittings. There is a government church at Berriedale, built in 1826, and containing 312 sittings. There is a chapel of ease at Lybster, built in 1836, containing 805 sittings, and under the patronage of such male heads of families as are communicants. There are four Free churches, respectively at Latheron, at Berriedale, at Lybster, and at Bruan; and the receipts of the first in 1855 were £121 17s. 6d.,—of the second, £69 13s. 7d.,—of the third, £473 14s. 4½d.,—of the fourth, £136 5s. 1d. There are 17 non-parochial schools, some of them supported by public bodies, and the rest conducted by private adventure. The distinguished Sir John Sinclair, so famous in the agricultural and statistical annals of Scotland, was an extensive landowner in Latheron, and resided much on his estate here, and commenced on it some of his earliest georgical improvements. The name Latheron may have been derived either from *Lathair roin* signifying the resort of seals, or from *Lathair shonn* signifying the place of heroes.

LATHONES, a post-office hamlet, in the parish of Cameron, Fifeshire. It stands on the road from St. Andrews to Largo, nearly midway between these towns, and about 3½ miles east by south of Ceres. Here is an United Presbyterian church.

LATHOCKAR. See FIFESHIRE.

LATHRISK. See KETTLE.

LATRICK. See CAMBUSLANG.

LATTERACH-BURN, a small stream, running along the mutual boundary of the parishes of Birnie and Dallas to the Lossie in Morayshire. See GLENLATTERACH.

LAUCHOPE. See BOTHWELL.

LAUDER, a parish, consisting of a main body and a small detached section, in the district of Lauderdale, Berwickshire. The main body contains the post-town and royal burgh of Lauder; and is bounded on the north by Haddingtonshire,—on the east by the parishes of Longformacus, Cranshaw, Westruther, and Legerwood,—on the south by Roxburghshire,—and on the west by Edinburghshire, and by the parish of Channelkirk. Its length southward is 11 miles; and its greatest breadth is 7 miles. The detached section lies 1½ mile south of the nearest part of the main body, is bounded partly by the parishes of Legerwood and Earlston, but principally by Roxburghshire; and measures about 1¾ mile in length eastward, and about 1½ mile in breadth. Leader water rises in the extreme north-west corner of the main body, flows 5½ miles along

the boundary with Channelkirk, runs 4½ miles south-eastward through the interior, forms for ¾ of a mile the boundary with Legerwood, and after traversing the intermediate space, traces the whole eastern boundary of the detached section, and then passes away from the parish. Whaplaw-burn, 5¾ miles long, Earnscleuch-water, 6½ or 7 miles long, and Blythe-water, 7½ or 8 miles long, all rise in various head-waters very near the north-east boundary, and flow south-westward to the Leader. The last of these streams—Blythe-water—jointly with its main tributary, traces for 6¼ miles the south-east boundary. Perennial springs, both many and copious, well up from sand or gravel, or from whinstone rock, and give an abundant supply of prime water. The boundary line along the north and the north-east, to the extent of 8 miles, is the water-shed of the Lammermoor hills, and includes the summit of Lammerlaw, which gives name to the whole range. The border for some distance from that boundary is bleak, moorish, and highly upland; but the surface afterwards yields to the water courses, becomes verdant and even beautiful, moderates in height, and eventually yields to the dominion of the plough. The vale of the Leader, about third way from the northern boundary, acquires a low open bottom, and retains this to the southern extremity, with a width varying from 1 mile to 2 miles; and all this vale, as well as much of the slopes which form its screens, is beautifully cultivated, and has a fine appearance. Depressions in the hilly ranges form openings from its side, and pleasingly diversify the landscape. The soil of the arable lands is, in general, light and dry,—in many instances clayey,—and over a considerable extent richly loamy, and superincumbent on sand or gravel. The uplands are, for the most part, excellent sheep-walks, and maintain numerous flocks of Cheviots. About 12,060 imperial acres are in tillage; about 25,043 are pastoral or waste; and about 650 are under wood. Rock of excellent kind, both for masonry and for road metal, is abundant. The principal landowners are the Earl of Lauderdale, the Marquis of Tweeddale, Aurholm of Chapel, Scott of Harden, and Allan of Quircleugh. The estimated yearly value of raw produce in 1833 was £29,270. Assessed property in 1843, £12,595 17s. Many Pictish and Scottish encampments, either round or oval, are in the parish and its neighbourhood; and many tumuli exist on Lauder-moor, on the old road to Melrose. Fragments of swords, bows, and arrows, found on the moor—the arrows pointed with flint-stone—indicate the place to have been the scene of ancient though unrecorded and forgotten battles. Between the burgh and the Leader stands, on a beautiful lawn, Lauder fort, now called THIRLESTANE CASTLE: which see. Lauder was the birth-place of Sir John Maitland, Lord Thirlestane, who, in the reign of James VI., filled the offices successively of lord-privy-seal, secretary-of-state, and chancellor of Scotland; and enjoyed, for a brief period, the ministry of the Rev. James Guthrie, the first of the Scottish martyrs after the Restoration. The parish is traversed by the road from Edinburgh to Kelso, but has not access to any nearer railway stations than those of the Edinburgh and Hawick railway in the valley of the Gala. Population in 1831, 2,063; in 1851, 2,354. Houses, 368.

This parish is the seat of a presbytery in the synod of Merse and Teviotdale. Patron, the Earl of Lauderdale. Stipend, £272 1s. 7d.; glebe, £18. Unappropriated teinds, £181 2s. 2d. Schoolmaster's salary, £30, with £70 fees, and £7 15s. other emoluments. The parish church was built in 1673, and repaired in 1820, and contains 773 sittings. There is a Free church; and the amount of its receipts in 1855 was £189 13s. 6½d. There is also an United Presbyterian church, containing 432 sittings. There are a Free church school, a voluntary school, and two or three ladies' schools. The ancient parish church appears to have been of considerable value, having been rated in the ancient Taxatio at ninety marks, while that of Channelkirk was rated at only forty. In the reign of David I., the advowson, along with almost the whole of Lauderdale, was given to Sir Hugh Morville, constable of Scotland; and through many a changeful age it continued an appurtenant of the manor, till it passed into the possession of Devorgillar, the wife of the first John Baliol. By this lady, the church, with its pertinents, was given to the monks of Dryburgh; and it continued to be a vicarage under them till the Reformation. The parish church, which preceded the present structure, stood on the north side of the town opposite Thirlestane-castle, and was, in July, 1482, the scene of the meeting of the Scottish nobles which issued in the murder of James III.'s menials on Lauder bridge, and in the capture and imprisonment of the King. Subordinate to the parish church were anciently two chapels. One stood at Redslie in the detached part of the parish, and is commemorated in the name Chapel, borne by a farm in its vicinity; and the other stood on the right bank of the Leader, at the southern extremity of the main body of the parish, and dedicated to St. Leonard's. The former was confirmed by Malcolm IV., and the latter given by Sir Richard Morville, who died in 1189, to the monks of Dryburgh. Contiguous to St. Leonard's chapel stood an hospital, dedicated to the same saint, and founded, during the Scoto-Saxon period, probably by Sir Hugh Morville. Both structures are commemorated in the name St. Leonard's, borne by a mansion near their site. 'St. Leonard's banks' are celebrated in Scottish song.

LAUDER, a post-town, a royal burgh, the capital of Lauderdale, stands in the southern part of the main body of the parish of Lauder, on the west side of the valley of the Leader, along the road from Edinburgh to Kelso, 5 miles east-north-east of Stow, 7 north-north-west of Earlston, 12 west by north of Greenlaw, 17 north-west of Kelso, 18 west by south of Dunse, and 25 south-east of Edinburgh. The main part of it is a single street, 700 yards long, of very various width, and not quite straight, stretching from north-west to south-east along the highway. Upwards of 400 yards from its north-west end, the street attains its greatest width, and begins to be split over the distance of about 110 yards into two thoroughfares, by a line of buildings running along its middle. The north-west end of the bisecting line is the town-house. The parish-church stands a little off the street-line, immediately south-west of the town-house; and, though cruciform and pretentious, is a poor unimposing edifice. The site of an ancient cross in front of the town-house is marked by a radiated pavement. Diagonally across the north-west end of the main street, stretching nearly east and west, is another street, partly one-sided, and altogether 350 yards long. Describing the segment of a circle on the south-west side of the main street, and running nearly parallel to it on the north-east side, are two thoroughfares, almost altogether unedificed, and bearing the names of the Upper and the Under Backsides. The park wall of Thirlestane-castle screens the whole of the north-eastern side of these thoroughfares, and forms on that side the boundary of the burgh; and the lawn and other grounds of the noble residence occupy all the space thence to the Leader. The whole town is plain and irregular in its houses, and has a dull,

stagnant, desolate appearance. It has been altogether stationary for very many years, and gives no promise of future extension. Yet it is the seat of some local trade, and serves in various ways as a centre of business to the surrounding country. There are two principal inns, the Black Bull, and the Eagle. Communication, both for travelling and for goods, is maintained chiefly through the Stow station of the Edinburgh and Hawick railway. There are in the town an office of the Bank of Scotland, an office of the City of Glasgow bank, eight insurance agencies, a subscription library, a mechanics' library, a news room, a free masons' lodge, a gas company, and a water company. There are likewise connected with it an agricultural society, a horticultural society, a curling club, a clothing society, and a total abstinence society.

Lauder is said to have been erected into a royal burgh in the reign of William the Lion. The early charters having been lost amid the anarchy of the Border wars, a charter of *novo damus* was given by James IV. in 1502, and ratified next year by parliament. As defined under the reform act, the burgh excludes the town's common, and a considerable landward district, comprehended in the old royalty, but includes a small portion of formerly uncomprehended kirk-lands to the south-west of the town. The burgh property is of very considerable value, and consists mainly of a common of upwards of 1,700 acres. The common is said to have been possessed for a long period by the burgesses as their private property, and the rights of possession are also said to have been anciently regulated by certain rules, varying as the burgesses were resident or non-resident within the town. The debt of the town having accumulated to an inconvenient amount, the magistrates, about the year 1814, enclosed a part of the common with the view of letting it as an arable farm to the best bidder, and disposing of the rents for the purposes of the burgh. This enclosure was resisted by some of the burgesses, who, in virtue of a clause in the charter of James IV., claimed a feudal title to the common. A long and keen litigation now ensued before the court of session, and in 1825 ended in favour of the magistrates and town-council. In 1833, the revenue of the burgh was £307 7s. 9d.; its expenditure £326, 18s. 11½d.; the revenue from its property included in the total revenue, £264 15s. 3d.; debts due to it, £341 19s. 9¾d.; debts due by it, £2,913 19s. 7¾d. In 1854–5, the revenue was £318 12s. 9½d. The government of the burgh is vested in two bailies and seven councillors. Justice of peace courts are held as often as required. Sheriff small debt courts are held on the third Wednesday of February, the fourth Wednesday of July, and the third Wednesday of October. Lauder unites with Jedburgh, Dunbar, North Berwick, and Haddington, in sending a member to parliament. Municipal constituency in 1855, 55; parliamentary constituency, 58. Population in 1831, 1,075; in 1851, 1,105. Houses, 194.

LAUDER-BURN, a brook of Roxburghshire and Berwickshire. It rises in the parish of Melrose, runs a mile northward to the boundary with Berwickshire, traces that boundary 1¼ mile north-westward, and then runs 3 miles across the parish of Lauder, north-eastward and eastward, and past the south end of the burgh of Lauder, to the Leader.

LAUDERDALE, the western one of the three districts of Berwickshire. In geographical distribution and agricultural properties, Berwickshire is all strictly divisible into simply the Lammermoors and the Merse; the upper and the lower parts of Lauderdale belonging respectively to these just as distinctly as any other part of the county. The limits of Lauderdale, as regards the usage of calling it a distinct district, cannot be defined, and must probably be understood as including simply the basin of the Leader and its tributaries, so far as the basin is in Berwickshire. Even anciently the limits appear to have been very different in successive periods, and to have marked fluctuations both in the kind and in the extent of the civil jurisdiction within them. Maps of Lauderdale, Merse, and Lammermoor, were made by Timothy Pont in the reign of Charles I., and inserted in Blaeu's Atlas Scotiæ. The author of Caledonia—guided apparently by these maps—states the area of Lauderdale to be 105 square miles,—that of Lammermoor to be 138½,—and that of the Merse to be 202½. At the abolition of hereditary jurisdictions, the Earl of Lauderdale received the same compensation for the regality of Thirlestane as for the bailiary of Lauderdale,—£500. See THIRLESTANE-CASTLE.

LAURANCE (ST.). See SLAMANNAN.

LAURENCE (ST.). See GREENOCK.

LAURENCE-HOUSE (ST.), a hamlet about mile west of the town of Haddington, in East Lothian.

LAURENCEKIRK, a parish, containing a post town of its own name, in the How district of Kincardineshire. It is bounded by Fordoun, Garvock and Marykirk. Its length west-south-westward is 4 miles; and its breadth varies from less than mile near its east end to about 3 miles near its west end. The rivulet Luther comes in upon it from Fordoun, and runs, west-south-westward, nearly through its centre. A small tract at its east end is drained into the Bervie. The general surface consists of flat ground along the Luther, and of gentle acclivities rising thence to the northern and the southern boundaries. The elevation of the bed of the Luther here is about 180 feet above sea-level; the highest ground in the northern section has an elevation of about 220 feet above sea-level; and the highest ground in the southern section, on the boundary with Garvock, being on the northern slope of Garvock hill, has an elevation of about 450 feet above sea-level. The soil on the flat ground contiguous to the Luther is a fertile alluvium; that in the northern tracts is generally cold and moorish; and that in the southern tracts is all a deep clayey loam, incumbent on sandstone or on clay, and generally very productive. About 5,000 imperial acres within the parish are arable; about 120 are pastoral or waste, and about 220 are under wood. The principal landowners are the Earl of Kintore and Gibbon of Johnstone. The real rental in 1838 was £5,775; the value of assessed property in 1855, was £7,512 0s. 4d.; and the estimated yearly value of raw produce in 1838 was £20,046. The only mansion is Johnston lodge, a neat modern structure, commanding a fine view of Strathmore and the Grampians. There was till only a few years ago, a flax spinning mill at Blackiemuir. The weaving of linen is an extensive employment. The parish is traversed by the road from Forfar to Stonehaven, and by the Aberdeen railway; and it has a station on the latter, 26¾ miles from Forfar, and 31 miles from Aberdeen. Population in 1831, 1,886; in 1851, 2,125. Houses, 416.

This parish is in the presbytery of Fordoun, and synod of Angus and Mearns. Patron, St. Mary's College, St. Andrews. Stipend, £241 3s. 7d.; glebe £20. Unappropriated teinds, £34 19s. 5d. School-master's salary, £20, with about £30 fees, and a considerable amount of other emoluments. The parish church was built in 1804, and enlarged in 1819, and contains about 766 sittings. There is a Free church, with an attendance of 220; and the amount of its receipts in 1855 was £138 17s. The

is an Episcopalian chapel, built in 1793, and containing 205 sittings. There is also an Independent chapel. There are two Free church schools, an Episcopal school, a parochial library, a "public library of Laurencekirk," and a library deposited in the Episcopalian chapel, and belonging to the Episcopalian clergy of the diocese of Brechin. Dr. Beattie, the poet and moral philosopher, and his nephew James Beattie, professor of natural history in Aberdeen, were natives of Laurencekirk. The celebrated Thomas Ruddiman, the grammarian, was parish schoolmaster of Laurencekirk from 1695 to 1700. Dr. George Cooke, the historian of the Church of Scotland, was minister of Laurencekirk from 1795 till 1828. The original church was dedicated to St. Lawrence; and when the predecessor of the present church, built in 1626, was taken down in 1804, there were found in its walls some stones which appeared to have belonged to a prior church, sculptured with the figure of a man on a gridiron, supposed to represent the martyrdom of St. Lawrence. The name Laurencekirk was applied, till some time in last century, only to the Kirktown; and the name of the parish, before that time, was Conveth.

The Town of Laurencekirk stands on the road from Stonehaven to Forfar, in the south-west part of the parish of Laurencekirk, 7 miles west of Bervie, 10 north by west of Montrose, and 14 south-west of Stonehaven. It consists principally of one street, about a mile in length, extending south-westward along the public road. In 1730, the population did not exceed 80 persons; and, in 1762, it had even decreased to 54. At this period the estate of Johnstone was purchased by the talented and eccentric Lord Gardenstone, a judge of the court-of-session, distinguished for his speculative turn of mind, and his successful cultivation of the belles lettres. His lordship having determined on creating a town here, in 1765 laid out a part of his property in building-ground, began to build, and soon attracted settlers. In 1779, he obtained for his new village the status and privileges of a free burgh-of-barony, the Crown charter empowering the inhabitants triennially to choose a bailie and four councillors, and to hold a weekly market and an annual fair, collect dues and customs, &c. The extent and nature of the jurisdiction granted to the magistrates, however, has been a subject of uncertainty. The public-spirited proprietor also built an elegant inn, with a select library and museum adjoining it, chiefly for the amusement of travellers; and he encouraged, and contributed liberally to, the establishment of a bleachfield, and the introduction of the linen manufacture. At the present time a principal employment of the inhabitants is handloom linen weaving; and another employment, which has given the town a rivalry in fame with Cumnock and Mauchline in Ayrshire, is the making of ornamental wooden snuff-boxes. The town has an office of the Aberdeen town and county bank, a branch of the Montrose savings' bank, a news room, a gas-light company, a horticultural society, and a farmers' club. Population in 1841, 1,365; in 1851, 1,611. Houses, 324.

LAURIESTON, a small post-town in the parish of Falkirk, Stirlingshire. It stands on the eastern verge of the parish, on the road from Falkirk to Edinburgh, about 1½ mile east of the town of Falkirk. It is laid out on a regular plan along the sides of the road, having a square in the centre, with lanes in the same direction on the south and north, and intersected by cross streets. It occupies a comparatively elevated site, and commands a very brilliant view of the carse of Falkirk and the Ochils. It was feued out in 1756, by Francis Lord Napier, and took from him the name of New Merchiston; but it afterwards became the property of Sir Lawrence Dundas, the ancestor of the Earl of Zetland, and took from him the name of Lawrencetown, which soon became abbreviated into Lauriston. Here is a Reformed Presbyterian church, which was built in 1788, and contains 250 sittings. Here also are two schools. Most of the inhabitants are employed in weaving, nail-making, agriculture, and ordinary handicrafts. Population, 1,198. Houses, 311.

LAURIESTON, a post-office village in the parish of Balmaghie, Kirkcudbrightshire. It stands on the road from Kirkcudbright to New Galloway, 6 miles west-north-west of Castle-Douglas. Here is a parochial school. Population, 275. Houses, 80.

LAURIESTON, Lanarkshire. See Glasgow.

LAURIESTON, Kincardineshire. See Cyrus (St.) and Kincardineshire.

LAURIN. See Glenkens.

LAVEN. See Innerkip.

LAVEROCK. See Coldingham.

LAW, an Anglo-Saxon prefix or suffix, signifying an isolated hill or mount, generally of a conical form.

LAW-CASTLE. See Kilbride (West).

LAWERS. See Kenmore and Monivaird.

LAWHEAD. See Whitekirk.

LAWHILL, any isolated hill or mount of a conical form, or any locality designated from such hill or mount. The name is tautological, seeing the word law itself signifies hill; but it is nevertheless in considerable use. It is applied, in particular, to localities in Blantyre, in Craigie, in Deskford, in Dundee, in West Kilbride, in Kirkurd, in Maryton, in Rayne, in Symington, in Tannadice, and in Tarbolton. The name Lawknow, which is quite similar to Lawhill, is applied also to localities in Carnock, in Errol, and in East Kilbride.

LAWMUIR. See Kilbride (East) and Kilpatrick (East).

LAWRENCE (St.). See Laurence (St.).

LAWTING. See Tingwall.

LAWTON. See Inverkeillor.

LAXAY, a rivulet and a small island in the parish of Lochs, in the island of Lewis. The rivulet is formed by the superfluence of Loch-Trialivall, on the boundary with Uig, and runs eastward across the parish of Lochs, with a breadth of about 30 feet, and an ordinary depth of about 15 inches.

LAXDALE, a village and a rivulet in the parish of Stornoway, in the island of Lewis. The village is contiguous to the town of Stornoway; and the rivulet runs eastward to Broad bay, a little north of that town.

LAXFIRTH, a bay, about a mile in average width, and penetrating the east side of the parish of Tingwall, 2½ miles west-south-westward, at a point about 7 miles north of Lerwick, in the mainland of Shetland.

LAXFORD (Loch), a sea-loch, penetrating the parish of Edderachyllis, 5 miles east-south-eastward, with an average breadth of about a mile, on the west coast of Sutherlandshire. The name is a corruption of Lax-fiord, and signifies the Salmon frith The loch affords excellent anchorage.

LAXFORD (The), a stream, issuing from Loch-Stack, and flowing north-westward to the head of Loch-Laxford, in the parish of Edderachyllis, in Sutherlandshire. It is proverbially an excellent salmon stream, and perhaps affords better angling than any other stream of its size and breadth in Great Britain.

LAY-POINT. See Glasserton.

LEACHT (Hill of). See Kirkmichael, Banffshire.

LEACHTON (The), a rivulet running along the boundary between the parish of Inverary and the parish of Glassary, to Loch-Fyne, in Argyleshire.

LEADBURN, a post-office hamlet on the southern verge of the parish of Penicuick and of Edinburghshire. It stands on a head-stream of the North Esk, and on the road from Edinburgh to Peebles, 3½ miles south of Penicuick. Contiguous to it is a station of the Peebles railway.

LEADER (The), a small river traversing the district of Lauderdale, Berwickshire, and, for some distance, dividing that county from Roxburghshire. After leaving the main body of the parish of Lauder [which see], it pursues a course of 6 miles almost uniformly due south to the Tweed, at Drygrange, 2 miles above Dryburgh. For 1¼ mile it divides Legerwood in Berwickshire from Melrose in Roxburghshire; for 1½ mile it divides Legerwood and Earlston from the detached part of Lauder; for ¼ of a mile it runs across a small projection of Earlston; and thence to the Tweed, it divides Earlston from Melrose. It runs with considerable rapidity, is a good trouting stream, and boasts some fine scenery on its banks, particularly as it approaches the Tweed. Some of the localities which overlook it are celebrated in the old song of 'Leader haughs and Yarrow.'

LEADHILLS, a small post-town, and the seat of a mining population in the parish of Crawford, Lanarkshire. It stands on the southern verge of the county, adjacent to the sources of Glengonner water, on a mountain road from Upper Nithsdale to Upper Strathclyde, 1 mile north-east of Wanlockhead, 15 miles south-south-east of Douglas-mill, 16 north-north-east of Thornhill, 44 south-east by south of Glasgow, and 46 south-west by south of Edinburgh. Its site has an elevation of about 1,300 feet above the level of the sea, and is perhaps the highest inhabited land in Scotland. The aspect of the country around is of the most sterile description, consisting of hills above hills of scanty herbage or heather; and elevated though it be, the village occupies a position in a valley, from one side of which a bleak lofty ridge ascends to the height of 2,450 feet. The view from this point is truly magnificent, embracing on the north the Pentland hills; on the south, the Solway frith, the Isle of Man, and the mountains of Cumberland; and on the west, Ailsa Craig, the peaks of Arran, Benlomond, and the Paps of Jura. Lead was probably worked here in the time of the Roman domination. The Romans, at all events, are known to have worked lead mines in Britain; and they had camps and stations in the neighbourhood of Leadhills, while one of their principal military roads traversed the parish of Crawford. One of the recent lead veins, however, was not discovered till 1517, and the records of the mining operations do not reach farther back than to about the year 1600. The mineral field of the place extends across the watershed into Dumfries-shire, and is perhaps the richest lead-mining district in the kingdom. See Lanarkshire and Wanlockhead. In the zenith of the trade, in 1810, Leadhills produced about 1,400 tons annually, valued, according to the then current price, at more than £45,000; but of late years both the price and the quantity produced have materially fallen off, the mines only yielding from 700 to 800 tons annually; and, in consequence, the circumstances of the inhabitants are not so comfortable as they were wont to be. The works are managed by the Scots Mining company, who have at all times a responsible agent resident upon the spot; and the rent of the Earl of Hopetoun, the proprietor, is said to be every sixth bar of lead produced. The town has a chapel of ease, under the patronage of the Earl of Hopetoun; a preaching station of the Free church, in connexion with Wanlockhead; an endowed school, with a salary of £30 and a house; and a good public library, established so early as 1741, and now containing about 2,000 volumes. Fairs are held on the second Friday of June, and on the last Friday of October. Population, 950. Houses, 230.

LEADLAW. See Linton, Peebles-shire.

LEADLOCK-BURN, a headstream of Briechwater, in the east end of the parish of Cambusnethan, in Lanarkshire.

LEAP-HILL, an isolated, pyramidal-looking hill, in the parish of Teviothead, Roxburghshire.

LEARNY-HILL. See Kincardine O'Neil.

LEASTON. See Humbie.

LEATHEN-LOCH. See Portree.

LEBANON. See Cupar-Fife.

LECKIE. See Gargunnock.

LECROPT, a parish on the mutual border of Perthshire and Stirlingshire. It contains part of the post-office village of Bridge of Allan, and approaches within 1½ mile of the town of Stirling. It is bounded by Dunblane, Logie, St. Ninians, Kincardine, and Kilmadock. Its length eastward is about 3 miles; and its breadth is about 2¾ miles. The Allan traces its eastern boundary to the Forth; the Teith traces part of the southern boundary; and the Forth, after receiving the Teith, traces the rest of that boundary to the influx of the Allan. Through the middle of the parish, almost from end to end, extends a beautiful bank. All the surface south of this is rich carse ground, without a single stone or pebble, tastefully enclosed, and in the most luxuriant cultivation. From the bank northward, the surface rises with a gentle ascent, partakes the character of what, in the vicinity of carse lands, is called dryfield, is all enclosed either with stone walls or with hedge and ditch, and exhibits many opulent results of agricultural improvement. A great variety of thriving planted trees shelter and adorn the dryfield. From the bisecting bank, and from points of upland beyond it, magnificent prospects are obtained of the rich flat basin of the Teith and the Forth, and of the zone now of low heights, now of bold hills, and now of grand mountain-summits, which encinctures it. The principal landowners are Stirling of Keir, the Earl of Moray, and Foggo of Rowspeirs. The old valued rental is £1,536. Assessed property in 1843, £2,226 15s. Near the mansion of Keir, ¾ of a mile north-west of the church, is one of the chain of rude forts, all called Keirs, which run along the north face of the strath of the Teith, and were built by the Caledonians to watch the motions of the troops stationed on the great Roman wall. In the immediate vicinity of the church are those very marked monuments of feudal times and jurisprudence, a Court-hill and a Gallow-hill. The parish is traversed by the road from Stirling to Callander, and has ready access to the Scottish central railway. Population of the Perthshire section in 1831, 189; in 1851, 171. Houses, 30. Population of the entire parish in 1831, 443; in 1851, 442. Houses, 72.

This parish is in the presbytery of Dunblane, and synod of Perth and Stirling. Patron, Stirling of Keir. Stipend, £147 13s. 8d.; glebe, £16 10s. Schoolmaster's salary, £34 4s. 4½d., with about £1 fees, and £3 other emoluments. The parish church is a handsome modern Gothic edifice. The ancient church belonged to the monks of Cambuskenneth. The name Lecropt signifies "the half of the hill," and alludes to the configuration of the parochial surface.

LEDAIG, a post-office station subordinate to Bonaw, in Lorn, Argyleshire.

LEDBEG. See Assynt.

LEDNATHY (The), a rivulet of the upper district of the parish of Kirriemuir, Forfarshire. It rises near the boundary with Lintrathen, and runs south-eastward to the Prosen, a little above where that stream first touches the boundary with Kingoldrum.

LEDNOCK (The), a rivulet of the parish of Comrie, Perthshire. It rises in the north-west extremity of the parish, and flows south-eastward to the Earn at the village of Comrie, forming, over the last 2½ miles of its course, the boundary with Monivaird. See Glenlednock.

LEE (The). See Esk (The North), Forfarshire.

LEE-CASTLE. See Lanark.

LEEDS (New), a village in the parish of Strichen, Aberdeenshire. It stands on the east border of that parish, on the road from Fraserburgh to Aberdeen, 4½ miles north of Mintlaw. Here is an United Presbyterian church.

LEEPEN. See Innerleithen.

LEES. See Eccles.

LEET (The), a rivulet of the Merse, Berwickshire. It rises near the extreme north of the parish of Whitsome; flows 5 miles south-westward through that parish and Swinton,—divides, for 2 miles southward, Swinton and Coldstream on the east, from Eccles on the west,—and runs sinuously 5 miles south-eastward through Coldstream parish to the Tweed at the town of Coldstream.

LEETOWN, a village in the parish of Errol, Perthshire. Population, 112. Houses, 24.

LEGERWOOD, a parish on the west border of Berwickshire. Its post-town is Earlston, 4 miles south-south-west of its kirktown. It is bounded by Roxburghshire, and by the parishes of Lauder, Westruther, Gordon, and Earlston. Its length southward is 5½ miles; and its average breadth is between 2½ and 3 miles. Its southern division is wholly occupied by a very broad-based height, called Legerwood-hill, whose summit is geographically from ½ to 1½ mile within the interior of the parish, and whose sides slope gently to the southern, eastern, and western boundaries. The north corner sends up an imposing elevation, called Boon-hill, 1,090 feet above sea-level. From this height a hilly ridge runs southward near the western boundary till not far from the north base of Legerwood-hill; and thence it sends off a ridge north-eastward to the most easterly point of the parish. The glens or vales among the hills are of considerable width; and, together with the soft slopes of the uplands, surrender very nearly one-half of the entire area, covered generally with a deep dark-coloured mould, to the stated or occasional dominion of the plough. About 300 acres are under wood. The predominant rocks are sandstone conglomerate and greywacke. Blythe-water, or Boon-dreigh, traces all the north-western boundary, a distance of 2½ miles; and Leader-water, into which the Blythe falls, traces all the western boundary, a distance of 2¾ miles. Several brooks drain the interior, and run along the glens. The chief landed proprietors are the Marquis of Tweeddale and Kerr-Seymour of Morriston; and there are five others. Birkhillside, the seat of one of the landowners, is the principal mansion, and stands on the Leader. The kirktown of Legerwood is situated nearly in the centre of the parish, about 1¾ mile from the Leader, but is only a small hamlet. Towers or peel-houses are at Corsbie and Whitslaid. Two ancient British camps could, not long ago, be traced on the hill of Birkenside. The estimated value of the raw produce of the parish in 1835 was £11,792. Assessed property in 1843, £8,855 8s. There is no access to railway communication nearer than Melrose or Stow. Population in 1831, 565; in 1851, 587. Houses, 97.

This parish is in the presbytery of Lauder, and synod of Merse and Teviotdale. Patron, Kerr-Seymour of Morriston. Stipend, £228 4s. 10d.; glebe, £12. Unappropriated teinds, £66 17s. 4d. Schoolmaster's salary, £28, with £20 fees, and £5 10s. other emoluments. There is a parochial library. The parish church is an old building, repaired in 1717 and in 1804, and contains 203 sittings. Walter Steward of Scotland obtained from Malcolm IV. the lands of Legerwood and Birkenside, and gave the church, with its pertinents, to the monks of Paisley.

LEINZIE. See Cumbernauld.

LEITH, a district suburban to Edinburgh, lying between it and the frith of Forth, and comprising its principal port, some outskirts of its streets, part of its parliamentary burgh territory, and a considerable portion of its environs. Yet Leith is distinct from Edinburgh both parochially and municipally. In the former capacity, it comprises the two quoad civilia parishes of North Leith and South Leith; and in the latter capacity, exclusive of environs or open tracts, it is a large town of itself, and a parliamentary burgh, with all the ordinary appurtenances of a municipality and a seaport.

The parish of North Leith is bounded on the north by the frith of Forth; on the east and south-east by the water of Leith, which divides it from the parish of South Leith; and on the south and west by the parish of St. Cuthbert's. It is of an oblong form, lying east and west; measures about 1½ mile in length by ½ a mile of extreme breadth; and has an area of only about 270 acres. Its surface is level, or very slightly variegated; and, with the exception of some garden grounds, and a few fields, is all covered by villas, by the villages of Newhaven and Trinity, and by the town of North Leith. Much of the coast has, to a considerable breadth, been washed away by the frith, and has received the aid of a very powerful bulwark of stone to protect it from further loss. In the year 1595, the links of North Leith, lying along the coast, were let at an annual rent of 6 merks, while those of South Leith were let at a rent of 30; so that they must then have been one-fifth of the extent of the latter, or nearly ¼ of a mile long, and from 200 to 300 yards in breadth. For many years, however, they have entirely disappeared; and what must formerly have been an expansive and beautiful plain, is now an irreclaimable waste, regularly flooded by the tide, and consisting entirely of sand and boulders. Population in 1831, 7,416; in 1851, 8,863. Houses, 525. There were also, in 1851, 136 military persons in Leith fort.

This parish is in the presbytery of Edinburgh, and synod of Lothian and Tweeddale. Patrons, the heads of families. Stipend, £285 9s.; glebe, including sums derived from fees and rents, £394 16s. 4d. The parish church was built in 1816, and contains 1,768 sittings. There is a chapel of ease at Newhaven, which was built in 1838, and is in the presentation of trustees and of male seat-holders above 18 years of age. There are three Free churches,—the North Leith, the Newhaven, and the Mariners'; and the receipts of the first in 1855 were £817 1s. 8d.,—of the second, £497 17s. 7d.,—of the third, £117 5s. 1d. There is an United Presbyterian church, which was built in 1819, and contains 1,100 sittings. There is also a small Baptist place of worship. There are a parochial school, conducted by a master and an assistant, and 15 non-parochial schools; and one of the most remarkable of the latter is Leith

nautical school, in connexion with the Board of Trade, which was opened in September 1855. Parochial schoolmaster's salary, £21, with about £8 fees, and £40 other emoluments.

North Leith, previous to the Reformation, belonged partly to the parish of Holyrood-house, and partly to that of St. Cuthbert's. The port of Inverleith, as it was then called, the village of Newhaven and the adjacent fields, which jointly constituted the St. Cuthbert's portion, were, along with one-half of the fishery, given by David I. to the monks of Holyrood. A chapel, in the reign of James IV., was built in North Leith by Robert Bellenden, abbot of Holyrood, endowed by him, and dedicated to St. Ninian. This chapel continued subordinate to the abbey till the Reformation; but, along with the chaplain's house, the tithes, and other pertinents, it was, after that event, purchased by the inhabitants from John Bothwell, the commendator of Holyrood. The spirited purchasers immediately rebuilt both the place of worship and the parsonage; and, in 1606, obtained an act of parliament erecting the district into a parish. In 1630, the commissioners for teinds and plantation of kirks added Newhaven and the rest of the area which had belonged to St. Cuthbert's. In 1633, the parish, thus enlarged, was annexed to the episcopate of Edinburgh. Anciently an hospital and a chapel, dedicated to St. Nicholas, stood on the site of the Citadel; and they are commemorated in the name of the alley called St. Nicholas'-wynd.

The parish of South Leith is bounded on the north-east by the frith of Forth; on the south by Duddingston and Canongate; and on the west by some parishes of the royalty of Edinburgh, and by St. Cuthbert's and North Leith. It is nearly triangular in form; measures 2½ miles on the north-east side, 2¾ on the south side, and 1¾ on the west side; and has an area of about 1,200 acres. The boundary is traced for some way with Duddingston by the Fishwives'-causeway; it then passes nearly along the road between Edinburgh and Portobello, till past Jock's Lodge; it next makes a projecting sweep so as to include Parson's-green; and after skirting Arthur's-seat and the Queen's-park, it runs along the north back of Canongate, debouches through Low Calton, goes down Leith-walk till nearly opposite the mansion of Pilrig, and then moves due westward in a zigzag line to the Water of Leith, and follows that stream to the sea. The parish thus includes, besides its landward districts, Calton-hill, parts of Calton and Canongate, Abbey-hill, Norton-place, the east side of Leith-walk, Jock's Lodge, Restalrig, and the whole town of South Leith. Except on Calton-hill, the soil, not occupied by buildings, is all susceptible of high cultivation, and has been worked into a state of utility and ornament in keeping with its close vicinity to the metropolis. Irrigated and very fertile meadows, green and beautiful promenading-grounds, neat and extensive nurseries, and elegant fruit and vegetable gardens, combine, with a few corn-fields, with the little lake of Lochend, and with a profusion of fine enclosures, and a rich sprinkling of villas and parterres, to render the open area eminently attractive. The east corner is part of the lands formerly called the Figgate Whins, notable alike for having been abandoned to barrenness, disposed of for almost a nominal price, and georgically worked into fertility. The built districts, which are compact with the metropolis, have been noticed in the description of Edinburgh. Separate articles are devoted also to Calton-hill, Jock's Lodge, Lochend, and Restalrig. The mansions and villas are so numerous that to notice all would be tedious, and to notice a few would be invidious. The beach, all the way from South Leith to the eastern boundary, is not a little attractive to sea-bathers; a fine clean sandy bottom, an inclination or slope quite gentle enough to assure the most timid,—and a limpid roll, or ripple, or burnished face of water, the very look of which is luxury on a summer's day. Population in 1831, 18,439; in 1851, 24,126. Houses, 1,723. There were also, in 1851, 293 military persons in Jock's Lodge barracks.

This parish is in the presbytery of Edinburgh, and synod of Lothian and Tweeddale. The charge is collegiate. Patron of the first charge, the Crown; of the second charge, the kirk-session and the incorporations. Stipend of the first minister, £395 19s. 11d., with a glebe worth £80, and an allowance of £80 for a manse; of the second minister, £247 1s. 2d. Unappropriated teinds, £636 2s. 4d. The parish church, situated in Kirkgate, is an ancient building, in a high state of repair, and contains 1,347 sittings. St. Thomas' church, situated on Sheriff-brae, contiguous to the water of Leith, is a modern structure, gifted to the Establishment by John Gladstone, Esq., of Fasque; and was accepted by the General Assembly on the stipulation that the election of its ministers should be patronial; and the patronage of it at present is in the hand of Sir Thomas Gladstone, Bart. It was constituted a quoad sacra parish church, first by the General Assembly in 1840, and next by the Court of Teinds in 1847. There is also a place of worship in connection with the Establishment at Restalrig. There are three Free churches, called respectively South Leith, St. John's, and Junction-street churches; and the receipts of the first in 1855 were £399 18s. 1d.,—of the second, £688 14s. 9½d.,—of the third, £462 19s. 3½d. There are three United Presbyterian churches,—one in Kirkgate, built in 1775, and containing 1,025 sittings,—one in St. Andrew's Place at the Links, built in 1826, and containing 1,254 sittings,—and one in Junction-street, built in 1825, and containing 1,230 sittings. There is an Independent chapel in Constitution-street, built in 1826, at the cost of £2,000, and containing 520 sittings. There is also an Episcopalian chapel in Constitution-street, called St. James', built in 1805, at the cost of about £1,600 and containing 380 sittings. There is a Wesleyan Methodist chapel at the foot of Leith Walk, part of a group of houses erected in 1818, at the cost of £5,000, and containing 400 sittings. There is a Morrisonian chapel in St. Andrews-street. And there is a large Roman Catholic chapel, of recent erection, in a court between Kirkgate and Constitution-street. The principal schools are the High school, comprising departments for English, for writing, arithmetic, and mathematics, for classics and French, for dancing and calisthenics, for drawing and painting, for music, and for music and needlework; Dr. Bell's school, for about 700 scholars on the Madras system of mutual instruction, under a superintendent and assistants; the Leith boys' charity school; the Free church schools; and the Episcopalian school. The total number of schools is about 34; and the maximum attendance of scholars is about 2,370.

The ancient name of the parish of South Leith was Restalrig. In 1214 Thomas de Restalric, of Restalrig, made a grant of some tenements which he describes as situated "southward of the High street," probably the present Leith-walk, "between Edinburgh and Leith;" and, in conformity with the usage of the period, he probably had a church on the manor, from which he took his name. A church with parochial jurisdiction, existed at Restalrig, at all events, in 1296; for, in that year, Adam of

Edmunds, "pastor of Restalric," swore fealty to Edward I., and had a precept for the delivery of all his rights. During the reign of Robert I., the Logans obtained possession of the manor and the advowson; and they continued to exercise the power of both barons and patrons till the commencement of the 17th century, when they suffered forfeiture for participation in Gowrie's conspiracy. A collegiate establishment was organized in the church; but it does not seem to have interfered with the patronage. The establishment was set up by James III., and at first included only a dean and canon, supported by the revenue of the parish church of Lasswade; in 1512 it received from James IV. the addition of six prebendaries, supported by the revenues of the parsonage of St. Mary of Rothesay, by a rent of £20 from the King's new works in Leith, and by the chapelry of St. Trednan's isle, which had been erected in Restalrig church; and in 1515 it got from James V., the accession of two singing boys, and the grant of the ten pound lands of the parish of Kirkhill, and some rents and tenements in Canongate. A chapel, dedicated to the Virgin Mary, and situated in the town of South Leith, preceded, for probably a century, the origin of the collegiate establishment; and was enriched with many donations and annuities for the support, within it, of altars or chaplainries dedicated to St. Peter, St. Barbara, and probably other saints. To this chapel—the choir of which was destroyed in 1544 by the English invaders under the Earl of Hertford—the General Assembly of 1560 drove the parishioners, by dooming the parish and collegiate church to destruction as a monument of idolatry. The revenues of the chaplainries or altarages were now appropriated for the support of the reformed ministers; and half-a-century later, or in 1609, the chapel of St. Mary was constituted by act of parliament the parish-church, and invested with all the revenues and pertinents of Restalrig. A canonry or preceptory of religious knights, called canons of St. Anthony, and the only establishment of its class in Scotland, was, in 1435, founded in the town by Robert Logan of Restalrig. The canons were brought from St. Anthony of Vienne in France, the seat of their order; and they followed the rule of St. Augustine. They had, on the south-west corner of the alley which was named from them St. Anthony's-wynd, a church, a cemetery, a monastery, and gardens; they possessed various lands, tenements, and rents about Edinburgh and Leith; they got a grant of the church of Hales, in East Lothian; and they obtained a right to a Scottish quart of every tun of wine which was imported into Leith. In 1614, the preceptory was suppressed; its right of wine was transferred to the magistrates for the uses of the town; and all its other rights and possessions were given to the kirk-session for endowing a benevolent establishment under the name of King James' hospital. Not a vestige of the buildings now remains, except some old vaults. But the seal of the convent—exhibiting St. Anthony habited in a hermit's mantle, with a book in one hand, a staff in the other, a belled sow at his foot, and a cross over his head, and bearing the legend, "S. Commune Preceptoriæ Sancti Anthonii Prope Leicht,"—is preserved in the Advocates' library.

The Town of Leith is intimately related to Edinburgh, both in position and in interests; and might be variously defined. If viewed with reference to parochial limits, it might be regarded as comprising not only its own proper mass of streets, but likewise all those parts of Edinburgh which stand within the parish of South Leith; or if viewed with reference simply to continuance of street-line, it might be regarded as connected with Edinburgh by the long street called Leith-walk, and as forming a twin-town with the metropolis. Previous to 1827, its limits, as a town, were not legally defined. What popularly bore the name, comprehended the barony of South Leith, part of North Leith connected with the burgh of Canongate, the regality of citadel belonging to the corporation of Edinburgh, and the bailiary of St. Anthony's belonging to the kirk-session of South Leith. In 1827, the boundaries were adjusted by a statute providing for the municipal government of the town and suburbs; and, generally speaking, were, Seafield toll-bar on the east, the frith of Forth on the north, the stone-bridge at Leith-mills on the west, and the foot of Leith-walk on the south. This territory was to be called 'The Town of Leith.' More extensive boundaries were assigned by the 2d and 3d Will. IV., cap. 65; and, in a general view, these are the frith on the north, a line from the frith to Lochend on the east, the middle of Leith-walk on the south, and Wardie-burn on the west. The burgh, if it filled this territory strictly as a town, would vie with the metropolis in extent; for, in that case, it would be a town of 7 furlongs in breadth from north to south, and of 2¼ miles or upwards in length from east to west. The limits include all the parish of North Leith, with, of course, the large suburb and separate harbour of Newhaven,—a portion of St. Cuthbert's, about equal in extent to North Leith parish,—and very nearly one-third of the parish of South Leith. Viewed apart from arbitrary allocations, and regarded simply as a compact field of streets and houses, Leith, with the addition of its portion of Leith-walk and of some small suburban and straggling extensions, measures about ¾ of a mile in length, and, at its broadest part, half-a-mile in breadth,—the length being parallel with the frith.

The site of the town is disadvantageous for the purposes at once of the port, the police, and the artist,—affording indifferent accommodations and capacities for a harbour, poor facilities for the drainage and cleaning of the streets, and little scope for the imposing or agreeable intersectioning of thoroughfares, or location of public buildings. An expanse of low ground, generally as level as a bowling-green, receding from a flat sandy beach, which is left dry by the ebbing tide over a mile's breadth from high-water mark, could not, by even surpassing skill, be made the arena of either a picturesque town, or a very prosperous and facile port. The water of Leith, indeed, bisects the dreary level, or the insensibly descending slope; but it is here a sluggish stream, generally of small volume, having scarcely power enough to carry its own freight of alluvium into the sea, and no capacity for sweeping well away the drainings of a large town, or of bringing boldly up into its recess a deep flood, or a sufficient sea-room of ship-bearing tide. The town, like its cognominal parochial territory, is cut by this rivulet into the divisions of North Leith and South Leith. A stone-bridge, built by Robert Ballendean, abbot of Holyrood, to afford the inhabitants on the east side access to the chapel which he erected in North Leith, was, for a long period, the only medium of connexion between the two divisions. This venerable bridge having been at length removed, its place was supplied by two wooden drawbridges, which, besides doubling the facility of communication, admit the entrance and the egress of vessels on the bosom of the tide. On the southern outskirts of the town, too, a handsome stone-bridge was, a number of years ago, ere ted over the river, to carry a thoroughfare from the foot of Leith-walk direct into North Leith.

Seen from any of the high grounds of Edinburgh, or even closely examined in a walk round its own immediate environs, the town appears to be, if not picturesque, at least neat, showy, in some places beautiful, and in others eminently elegant. A large portion of it, however, particularly of South Leith, is really a confused arena of filthy alleys, squalid lanes, and dingy streets,—encinctured with a broad belt of pleasant buildings. North Leith, which contains the docks, and anciently comprehended the citadel and the chief seat of traffic, was of old a congeries of low houses, huddled into groups or irregular lines, and straddling their way among nuisance in front and in rear, very much in the style of a Portuguese or Spanish town of the present day. But within the last fifty years, particularly since about 1818, it has undergone great changes; and now, besides being disencumbered of the ungainly citadel and a crowd of pauper tenements in the vicinity, it presents toward the south and the west some entirely new streets, which vie in elegance with those of the second-rate parts of the New Town of Edinburgh; and altogether it may be pronounced at once airy, modern, and comparatively well edificed and regular. Leith-walk, which, in consequence of its connecting thoroughfare along the new bridge with North Leith, may be viewed as common to the two divisions of the town, though in its own direct northward course it leads right into the principal thoroughfares of South Leith,—this spacious and beautiful street, so far as it belongs to Leith, is well lined on both sides with good houses, rises with regular and almost imperceptible ascent, and commands over all its length a good view of some of the most characteristic parts of the Calton-hill. Diverging a little eastward from the foot of Leith-walk, a brief thoroughfare leads the way into Leith-links. This is a beautiful grassy plain of nearly a mile in length from west to east, and of very considerable breadth, used as a place for athletic sports, and as a bleaching-ground and public promenade. On its north side, it is partly closed up by a wing of the town, and partly looks across the beach to the sea; on its east side, it is skirted by some fine fields, villas, and pleasure-grounds; and on its south and west sides, it is edificed with rows of private houses, and in two or three instances mottled with public edifices, which would be as harmonious with the immediate outskirts of Edinburgh, as they are highly ornamental to those of Leith. Immediately behind the west side of the Links, but with the intervention of some brief streets and places, modern in structure, and of fair appearance, Constitution-street leads down northward from Leith-walk to the sea; and from its west side, near the foot, Bernard-street goes off westward to communicate with the quay at the lower drawbridge. Both of these streets are modern and spacious, generally well-edificed, and in some places handsome. Somewhat parallel with Constitution-street, going off, like it, in continuation of Leith-walk, and forming with it at the point of plunging into the town a very acute angle, is Kirkgate,—a street containing many modern houses, and displaying much wealth, but, in general, orientally narrow, and presenting curious mixtures of the ancient and the modern. From the foot of Kirkgate, a thoroughfare, narrower and more disagreeable still, bearing the dismal but not unsuitable name of Tolbooth-wynd, goes off westward to the quay at the upper drawbridge. This wynd and Kirkgate are noticeable chiefly from their having anciently formed the outlet from the quay to the country, and the path of communication between the harbour and the metropolis. The quay is the most ancient part of the town; and, apart from its accommodation for vessels, consists of a terrace or one-sided street, curiously varied in the appearance of its houses, and winding parallel with the river for about half-a-mile to the commencement of the pier. From this terrace, alleys and lanes diverge eastward, to be crossed and chequered with narrow thoroughfares connecting them, and to form with these the great body of the town, or at least the seat of by far the greater part of its population. But one broad daub with the brush will give a picture of them all,—"they are, for the most part, irregularly and confusedly built,"—and are "extremely filthy, crowded, and inelegant."

The public buildings of Leith are both numerous and interesting. The custom-house, situated at the North Leith or west end of the lower drawbridge, was built in 1812, at the cost of £12,000. It is a large, massive, Grecian edifice, adorned in the centre of its chief front with pillars and pediment, and having in the tympanum of its pediment a showy sculpture of the royal arms.—Leith-fort stands adjacent to the shore, on ground abruptly overlooking the beach, about ¼ a mile west of the custom-house. Originally it was merely a battery of nine guns, hastily constructed in an emergency for defending the harbour toward the close of the American war; but it was afterwards converted into a spacious artillery barrack, which became the head-quarters of the royal artillery in Scotland, and is kept in excellent order.—The Exchange buildings, situated on the east side of Constitution-street, opposite Bernard-street, were erected at the cost of £16,000. They exhibit an elegant façade, three stories high, with rusticated basement, surmounted in the centre by a massive, attached, Ionic portico; and they contain a hotel, a spacious assembly-room, and a commodious public news-room.—The court-house or town-hall, situated in the angle of Constitution-street and Charlotte-street, was built in 1827, at the cost of £3,300. It displays an elegant Ionic front, on the side of Constitution-street, and has a Doric porch on the side of Charlotte-street. It is far superior, in both size and ornament, to what might have been expected from its cost; and it contains accommodation both for the sheriff-court and for the police establishment.—The jail, situated on the south side of Tolbooth-wynd, was built in 1822, and is a plain castellated edifice, in the Saxon style, now converted into dwelling-houses. It occupies the site of a previous jail which was built in 1565.—The office of the National bank, formerly the office of the Leith bank, was built in 1806. It stands on the south side of Bernard-street, and is ornamental to that locality, having a semicircular projecting front, ribbed with Ionic columns, and crowned with a dome.—The markets of Leith, occupying the site of the old custom-house and excise-office, a little east of the jail in Tolbooth-wynd, were erected in 1818, partly by voluntary subscription, and partly by a loan of £2,000 from the Merchant Company of Leith. They are commodious, and of creditable appearance; and their areas are surrounded with neat stalls.—The premises of the Edinburgh and Leith gas company, situated near the shore, a little east of the foot of Constitution-street, are a huge unsightly mass of building, with a series of square ventilators along the ridge of the roof, so lofty, in spite of the lowness of the situation, as to form a droll feature in some exterior views of the town.

The Seafield baths, situated at the eastern extremity of the Links, overlooking one of the finest parts of the beach, were built in 1813, at the cost of £8,000, raised in shares of £50. The edifice

large and handsome. Its lower floors contain 17 hot, cold, and tepid baths, besides a large plunge-bath; and the rest of it is occupied as a hotel and lodgings, for the accommodation of visitors to the baths.—The Trinity-house, erected in 1817, at the cost of £2,500, and occupying a confined site on the west side of Kirkgate, is a handsome Grecian edifice, the successor of a venerable building which stood on the same spot, and was erected in 1555. It contains several remarkable pictures, particularly a curious old view of Leith, a portrait of Mary of Lorraine by Mytens, a fine portrait of Admiral Lord Duncan, and David Scott's grand painting of Vasco de Gama passing the Cape of Good Hope. From time immemorial the shipmasters and mariners of Leith received from all the vessels of the port, and all Scottish vessels visiting it, certain duties called 'prime gilt,' which were expended in aiding poor sailors; and near the middle of the 16th century, they acquired a legal right to levy the prime gilt dues, and apply them in maintaining an hospital, and sustaining 'poor, old, infirm, and weak mariners.' Previous to 1797, the association, though calling itself 'The Corporation of Shipmasters of the Trinity-house of Leith,' were a corporation only by the courtesy of popular language, and possessed the powers of only a charitable body; but in that year they were regularly erected by charter into a corporate body, whose office-bearers were to be a master, an assistant-master, a deputy-master, a manager, a treasurer, and a clerk, and were vested with powers to examine and under their common seal to license persons to be pilots, and to exact admission fees from the licentiates. Their income, from all sources, inclusive of the proceeds of realized property, amounts to about £2,200 a-year.—The grammar-school, or High-school, stands on the south-west corner of the Links, and was built in 1806. It is a spacious, oblong edifice, of two stories, with neat front, consisting of one of its longer sides, surmounted in the centre by a small cupola-covered square lanthern, with public clock. The predecessor of it was an old building opposite Trinity-house, in Kirkgate, originally used for other purposes than tuition, and called King James' Hospital.—Dr. Bell's school, situated on the south side of Junction-street, was built in 1839. It is a large oblong edifice, extending backwards from the street, with handsome gable façade in the collegiate style of architecture, flanked by low, small, battlemented towers, and having in its centre a beautiful canopied niche, with full-length statue.—The Episcopal school, on the north side of Junction-street, is a large, double-roofed, high-ridged, plain, Gothic edifice, erected in 1856.—The Poor-house, also on the north side of Junction street, is a long, three-storied building, with dormer windows and cruciform centre, airily situated within a high stone enclosure. It was erected in 1850, and contains accommodation for 280 persons.—The Leith hospital and Gladstone's female asylum are good recent buildings on the Sheriff-brae, adjacent to St. Thomas' church. The former is under the management of a committee, with a full staff of medical officers; and the latter contains means for the residence and support of ten females labouring under incurable diseases.

The parish church of North Leith, situated at the western extremity of the town, not far from Leith-port, was built in 1816, at the cost of £12,000. It is of an oblong form, having one of the ends as its front, adorned with a tetrastyle Ionic portico, surmounted by a tower of three stages, and an octangular spire. The first and second stages of the tower are quadrangular, the third is octangular, and all the three have columns at the angles,—the first Doric columns, the second Ionic, and the third Corinthian. The top of the spire is only 158 feet from the ground; but, in consequence of the site being comparatively elevated, the whole steeple figures conspicuously in most exterior views of the town. The predecessor of this church, re-erected immediately after the Reformation, still stands in a by-street near the end of the upper drawbridge, abandoned to secular purposes, and represented by a miserable spire.—The parish church of South Leith, situated in an open space occupied as a cemetery between Kirkgate and Constitution-street, is the representative of the ancient chapel of St. Mary. It was formerly cruciform, in cathedral Gothic fashion, but underwent several great additions and dilapidations; and it consists at present of central and side aisles, which are very ancient, and of western front and tower, which were erected within the last few years. The edifice, as a whole, is harmonious and substantial; and the new parts of it display a tasteful mixture of Gothic and Saxon, while the tower terminates in a very elegant Gothic balustrade. David Lindsay, who baptized Charles I., and became bishop of Ross, was a minister of this church; Logan the poet also was a minister of it; and John Home, the author of 'Douglas,' was interred in the surrounding cemetery.—St. Thomas' church, on the Sheriff-brae, was erected, after a design by Henderson of Edinburgh, at a cost of £10,000. It is built in the Norman style, with chevrons round the doorway, and is surmounted by a heavy square tower and octangular spire.—The North Leith Free church and the Junction-street Free church make some slight pretension to architectural character, but would have looked better if they had been quite plain. The Free mariners' church, situated in an angle of streets near the docks, is a conspicuous building, in the early Gothic style, with handsome doorway and main window, flanked by two small octagonal towers and spires. The South Leith Free church presents to the Links a treble-gabled Saxon façade. St. John's Free church is an imposing edifice, in early Gothic, with a massive tower of two stages, the first stage quadrangular, and surmounted by pinnacles at the angles, the second stage octangular, and surmounted by balustrade and numerous pinnacles. Adjoining the façade, in the form of wings to it, and in a style harmonious with it, are suites of schoolrooms.—The North Leith United Presbyterian church has a Gothic front, with central pediment and balustrade, and with flanking embrasured turrets. The Junction-street United Presbyterian church has a Roman front, with Doric pilasters. The St. Andrew's Place United Presbyterian church has a tetrastyle Ionic portico. The Kirkgate United Presbyterian church is a plain building.—St. James' Episcopalian chapel has a recessed porch, with two Corinthian columns.—The Independent chapel has a Roman front with Ionic pilasters.—The Roman Catholic chapel is a cruciform high-roofed building, in coarse early Gothic.

The extinct public edifices of Leith, and its remarkable localities, compete in interest with its modern public structures. Not the least noticeable were its fortifications. Those which rendered it a walled town were raised in 1549, amid the hurricane which swept over Scotland during the infancy of Mary. They were built by d'Essé, the French general, to give Mary of Lorraine's party a footing against Edinburgh castle, which held out for the Protestants; and were strong enough to offer successful defiance to all the besieging efforts of the Protestant forces. The rampart was octagonal.

with a bastion at each of the eight angles. The first bastion, called Ramsay's fort, was situated on the east side of the river between the beach and the west end of the present Bernard-street, and was designed to protect the harbour. The wall ran from this in a south-east direction; and the second bastion stood on the site of the present Exchange buildings, and long survived in some remains which were ascended by a flight of stone steps, and used as a promenade under the name of the Ladies'-walk. The site of the third bastion was opposite the point where Coatfield-lane now joins Constitution-street; that of the fourth was at the top of Kirkgate; that of the fifth is not accurately known. The wall came down on the river exactly 115 yards below the site of the new stone bridge at the saw-mills, and was connected with its continuation on the west side of the stream by means of a wooden bridge. The sixth bastion, though its site, like that of the fifth, is not precisely ascertained, must have stood on the west side of the river, and in its immediate vicinity; the seventh stood near the site of the citadel; and the eighth stood at the Sandport, overlooking the harbour, and corresponding with Ramsay's fort on the opposite side of the stream. Of the various forts, one was called St. Anthony's, from the vicinity to it of St. Anthony's preceptory; and another, and the chief, was called the Block-house, and formed the grand outlet for sallies upon besiegers. The wall was constructed wholly of stone, and seems to have been a line of stout masonry; and the bastions were of great strength. The fortifications, after the triumph of the Protestant party in 1560, were so far destroyed as to be rendered useless; they were temporarily re-edified in 1571, by the Earl of Morton, during the regency of the Earl of Lennox; but they have long since been so entirely razed as to betray an occasional and small vestige only during the yawn of some ephemeral excavation.—On the Links are still some moundish, though inconsiderable, memorials of works thrown up by the besieging Protestant forces, either to cover their advance toward the rampart, or to mount their artillery for playing upon it and its defenders.—The citadel of Leith was greatly enlarged, and, in fact, chiefly constructed, by the army of Oliver Cromwell. It stood on the North Leith side of the river, and covered a considerable area. It was pentagonal in outline, or in its exterior defence, with a bastion at each of the five angles; and it had a principal gate opening to the east. In the interior it had a ledgy ascent of fortification, excellent magazines, stores, and houses for the garrison, a suitable place of worship, and a spacious court-yard. After the Restoration, these erections were in a great measure destroyed, and the site of them granted to the Duke of Lauderdale, then prime minister for Scotland to Charles II. No vestige of the defence now remains, except a Saxon archway, and a few yards of the wall, the archway now surmounted by a modern house.

Lord Balmerino's house, a stately old mansion, stood a little off the line of Kirkgate, between Charlotte-street and Coatfield-lane, and was entered by a low arched close from Kirkgate, and through a garden from Constitution-street. Charles II., when invited, in 1650, to Scotland by the Scottish parliament, slept in this house on the night after his arrival at the port. The house was taken down about 20 years ago.—Various fabrics compete for the notoriety of having been the residence, during the period of her military quarrel with the Protestants, of Mary of Lorraine, the Queen-regent, and the mother of Queen Mary. What seems to have been the real house, and that also which received for a season Oliver Cromwell, was a building of rather elegant exterior, situated in Queen-street, formerly called the Paunch-market. The house was taken down about 18 years ago. Its window-frames were all formed of oak, richly carved; and the panellings of the doors were of the same wood, and beautifully embellished.—A fine old mansion, spacious, of imposing aspect, sculptured with crowns, sceptres, and other decorations, and said to have been the residence of the Regent Lennox, stands between the end of Tolbooth-wynd and St. Andrew's-street, in a filthy court pompously called Parliament-square, and entered by a small lane leading off from the north side of St. Andrew's-street, nearly opposite the end of the Sheep's-head-wynd. The King's-work, a cluster of very ancient buildings, occupying a large area, and occasionally graced with the presence of majesty, stood between Bernard-street and the Broad-wynd.—The house inhabited by the parents of John Home, the author of 'The Tragedy of Douglas,' and in which he was born in 1722, stood at the corner of Quality-street, and was pulled down 30 or 35 years ago, to make room for new buildings.—The locality formerly called Little London is between Bernard-street and Quality-street.—The Timber-bourse is in the vicinity, and though entirely changed in appearance, it retains its ancient name, slightly disguised in the corrupted form of Timber-bush.—The spot on which George IV. landed, on occasion of his visit to Scotland in 1822, is in front of the Ship-tavern, and is indicated by an iron plate with an inscription.

The original harbour of Leith was nothing more than the mere gut formed by the discharge of the water of Leith. It was narrow and curved, and entirely tidal. Except for the gut being traversed by the small shallow stream, it was quite dry at low water, or at least contained nothing but mud and nuisance. And as the stream had to make its way to the sea across the very broad flat beach called Leith sands, and alternately flooded by the tide and left entirely dry, the channel there was subject to much fluctuation, according to the different direction of the wind and set of the tides. A bar, too—such as is naturally throw up at the entrance of every river harbour—lay across its mouth, at the point where the antagonist currents of the river and the tide balanced each other, so as to let down in deposit whatever silt they contained. The river also being the main drain of a tract of hill country which is much subject to droughts and to heavy rains, constantly altered both the depth of the harbour and the height and position of the bar, according to the fluctuations which occurred in the volume of its water, or in the rapidity of its discharge; for, in season of drought, it made no resistance to a filling up of the channel and the harbour by sediment from the tides, and in a season of rain, it scoured the harbour, diminished the bar and drove it seaward and deepened the channel toward the side-stream of the frith. All attempts, therefore, to obtain good or practicable harbour at Leith, were necessarily limited to the erection of broad piers far seaward at points not touched by the river, or the construction of long pier-lines fitted to divert the current of the tides and give the river a mastery over them, and enable it to sweep away or diminish the bar, and to the cutting of docks for the reception of vessels on the bosom of high water, and the maintaining of accommodation for them beyond the ruthless mercy of the receding tide.

A wooden pier was constructed, or a previous existing one renovated, by the Earl of Hertford when he visited the port in 1544; but it was destroyed on his departure, and has left no relic to

ficate its exact site. Another wooden pier was erected early in the 17th century, resting on strong pillars in a compact bed of whinstone and clay, and, till only about 17 years ago, when it disappeared before the progress of extensive improvement, it firmly withstood the rough contacts of shipping and the weather. Between the years 1720 and 1730 a stone-pier, in continuation of this wooden one, which very trivially assisted the poor natural facilities of the harbour, was carried 100 yards seaward, constructed partly of stones from the ruins of a curious coal-pit at Culross; and this, in some degree, remedied the difficulty and hazardousness of the navigation inward, but still left the entrance of the harbour encumbered with a bar, shifting and unsafe. Contemporaneous in origin with this improvement was the oldest dock, commenced in 1720, and situated on the west side of the river, behind a house not far from Bridge-street, and bearing the date 1622. During the remainder of the 18th century, various surveys and reports were made with a view to further improvement; but they led to nothing except the construction in 1777 of a short pier, afterwards known as the custom-house quay. The accommodation for shipping was insufficient and unendurable, the common quays being the chief landing-places, and the channel of the river offering to vessels only a seat of uncovered and adhesive mud at the recess of the tides; and as the trade of the port rapidly increased toward the close of the century, the accommodation loudly demanded both enlargement and amelioration.

The distinguished John Rennie, civil engineer, was now employed, in 1799, to examine the ground, and to form designs of docks and extended piers on a scale somewhat proportioned to the amount of the emergency. The gravamen of his report was, that no permanent and uniform depth of water along the harbour or gut of the river could be obtained, and no achievement toward the extinction of a shifting bar could be effected, except by carrying a pier or weir on the east side of the channel quite across the sands into low water, but that by this means 3 or possibly 4 feet of additional depth of water might be obtained; yet, though the soundness of his principle has been vindicated by the result of subsequent operations which were undertaken by its guidance, little or nothing was done at his suggestion, nor for many years afterwards, with regard to the piers or entrance. An immediate result, however, was the construction of a splendid suite of docks, at the cost of about £285,000. Two wet docks, each 250 yards long and 100 wide, were, with three graving docks on their north side, commenced in 1800 and completed in 1817, and were protected from the sea by a strong retaining wall. A third and larger dock on the west, designed to reach nearly to Newhaven, was projected; but this and all kindred matters which accorded with the magnificence of Mr. Rennie's designs and of the intentions of his employers, the town-council of Edinburgh, were thrown into abeyance during that eminent engineer's life by a total failure of funds. In 1824, in response to renewed and aroused demand, Mr. W. Chapman of Newcastle was employed to make surveys and plans; and as the fine result of his report, and of subsequent voluminous correspondence with government on the subject of a naval and store-yard, the eastern pier was extended about 1,500 feet so as to have an entire length of 1,550 feet, or more than half-a-mile, a western pier and breakwater was erected to the extent of 1,500 feet, terminating within 200 feet of the other, and a part of the western end of the western dock was set apart as a store-yard for the naval service. After many and agitating movements to find some remedy for the great existing evils, Mr. Walker and Mr. Cubbitt, two eminent engineers in London, were sent down in the winter of 1838–9, by the Lords of the Treasury, to undertake jointly the duty of providing their lordships "with such a plan as will secure to the port of Leith the additional accommodation required by its shipping and commercial interests, including the provision of a low-water pier," the cost being limited to £125,000. These gentlemen, after inspecting the ground, and considering the previous plans of various engineers, differed from each other in opinion, and formed and recommended three different designs. Renewed perplexity and indecision followed; and though one of the designs, by Mr. Walker, which adopted all the previous works as parts or bases of its whole scheme, seemed to recommend itself to the special approbation of the Lords of the Treasury, yet not till after another survey and plan were made by another engineer, Mr. Kindell, with the effect of a further delay of several years, could anything effective be commenced toward the remedying of the existing evils.

"It is fully admitted," said the Tidal Harbours Commission, in 1848, "that a long, flat, foreshore, half-a-mile in extent, drifting sand, and other difficulties which had to be encountered in improving the harbour, were great, but not such that unanimity on the part of those who had the management, skilful engineering, and perseverance in carrying out the plan recommended, might not have overcome. The great principle of improvement at Leith, namely, to get a deep-water entrance to the harbour channel, whether to the westward or to the eastward, has been recognised by all the eminent engineers who have been consulted; yet, although more than a quarter of a million of public money has been laid out in its docks and other works (an advantage not enjoyed by any other harbour in Scotland), and its income latterly has exceeded £25,000 a-year, still there is so great a want of accommodation that vessels are obliged to lie four and five a-breast alongside the quays; there is no patent-slip nor graving-dock that can take in steamers, so that they have to be sent to Dundee or to London for repair; no low-water jetty for landing passengers and light goods; and the entrance to the harbour at low tides is all but dry. Indecision or half-measures seem to have been the bane of the port. It was obvious some twelve years since that nothing but a good low-water landing-place, to accommodate the passenger traffic between London and Edinburgh, could retain the large steamers at Leith. Instead of boldly grappling with the difficulty, taking the best advice, and at once deciding upon carrying out a wide substantial pier to the westward or to the eastward, as might have been found expedient, into 10 feet depth of water, an eastern pier, too slight and narrow, and too exposed to bear the traffic, or to lay a line of rails upon, has taken 16 years to complete, and has just reached low-water mark. The consequence is, as might have been anticipated, that most of the steam-boat traffic has been transferred to a neighbouring pier, and the loss to the harbour revenue is stated at £5,000 a-year. Complaints are made that the table of shore-dues has not been revised for the last 60 years; that it is full of anomalies; that the dues are levied in Scottish money; and that dock dues are exacted of vessels that cannot possibly pass the dock gates; that rubbish and filth, without check or control, is thrown into the water of Leith and washed down into the harbour; and that the fine steamers that trade between London, Hull, and Leith, are daily subjected to lie a-ground, with the

risk of strain to their hulls and to their machinery, in a dry harbour."

In 1848, a bill passed parliament both for revising the schedule of rates, and for empowering the execution of Mr. Rendall's plan of improvements. The principal features of that plan were, that the eastern pier be extended 1,000 feet, to a point where there would be 8 feet of depth at low water of spring tides; that the western breakwater be converted into a pier, and extended 1,750 feet in a direction north by west, and be made substantial enough to bear a railway; that a low-water landing-place be formed at the extremity of the west pier, 350 feet in length, well-sheltered, provided with every accommodation, having around it 9 feet of depth at low water of spring tides; that the channel or fairway be so deepened by dredging as to have 20 feet of depth at high water of neap tides, and 25 feet at high water of spring tides; that a new dock be formed contiguous to the existing east dock, 700 feet in length, 300 feet in width, thus comprising an area of 4¾ acres, with 1,900 feet of lineal wharfage, averaging 100 feet in width; that this dock be so excavated as to have fully 21 feet of water at the lowest neap tides,—that its gates be 60 feet wide so as to afford ample scope for the passage of the largest sea-going steamers,—and that its walls be formed of substantial masonry, except on the outside to the north and the west, to admit of the construction of graving docks at a future period. The estimated cost, for the piers and the channel, was £79,000; and for the new dock, £56,000,—altogether, £135,000. The works were begun and carried forward with all possible expedition; and they became fully available in the course of 1855. Some minor works also have been executed; and the accommodations of the harbour as a whole are now ample and satisfactory. The quays have an aggregate length of 8,400 feet, and are well furnished with cranes and sheds. The quay of the new or Victoria dock has a 30-ton crane, with every modern improvement. Lines of railway communicate from the low-water landing-place, and from the sides of the docks, to the terminus of the Leith branch of the Edinburgh, Perth, and Dundee railway, in Commercial-street. There are five graving-docks; and the construction of another on so great a scale as to accommodate vessels of the largest class, with a commodious building-slip alongside, is in contemplation. There is a sufficient number of pilots and steam-tugs. The rates of pilotage are moderate; the charges formerly complained of for beaconage, anchorage, berthage, and other matters, have been abolished; and all the present dues, regulations, and bye-laws, have been adjusted with a prudent regard to the prosperity of the port's commerce, and to the general safety of its shipping. Altogether, it is believed that, as regards access, security, facilities for loading and discharging, convenience of railway connexion, and other internal accommodation, the harbour of Leith is not now surpassed by any seaport in the United Kingdom.

The general anchoring-ground of vessels is two miles from land; and, in the case of large steamers, is westward of Leith, or nearly opposite Newhaven. During the European war, the roadstead was the station of an Admiral's guard-ship and several cruizers; and during the recent war with Russia, it was the winter station of some ships of the Baltic fleet. A round martello tower was constructed adjacent to the entrance of the harbour, during the European war, by the government, at a cost of nearly £17,000. A lighthouse, for the guidance of vessels entering the harbour, was constructed on the end of the old cast pier, having a stationary light, for exhibition during the period of there being not less than 9 feet of water on the bar; and some distance landward of it, on the pier, was erected a signal-tower for displaying during the day a series of signals indicative of the progress or retrogress of the tide. After the pier was extended to the length of 2,500 feet, and while doubts still existed whether the grand recent improvements would be undertaken, a second lighthouse was erected at a distance of 1,500 feet from the former one, exhibiting a brilliant red gas light, and serving, with the inner light, to guide vessels safely from the frith to the channel of the harbour fair-way. Since the execution of the recent improvements, the guiding-lights into the fair-way are that of the outer lighthouse on the east pier, and that of a new lighthouse erected at the extremity of the west pier. In the early years of the present century, there was erected contiguous to the new wet docks, and parallel with them, a long line of lofty spacious warehouses, to serve for the bonding of goods and for other purposes connected with the general business of a great harbour. This line of edifices is on an uniform plan and of great extent, forming nearly the whole of the north side of Commercial-street. The aggregate extent of warehouses in other parts of the town, particularly in the vicinity of the harbour, is also great. Some years ago, the whole line of the wet docks was lighted with gas, and a chain of water-pipes was laid down in such a manner as to enable all vessels to take in their supplies of water at their berths. The terminus of the Leith branch of the Edinburgh, Perth, and Dundee railway, besides being conveniently near the docks in position, is well furnished with suitable interior conveniences, and also presents to the street a frontage of building pleasingly ornamental; and the connexions of that railway at the Edinburgh station are so ample and facilely arranged as to afford the readiest possible communication with all the great trunk lines, radiating thence as a centre to every part of Great Britain.

The right of property over the harbour of Leith formerly belonged to the city of Edinburgh. The deeds in which that right originated, and by which it was modified and confirmed, will be afterwards mentioned. The district comprehended by the right included the whole shore, beach, sands, and links, between Seafield toll-bar on the east and Wardie-burn on the west. All the shore-dues levied within these limits went into the city general coffers, excepting a merk per ton which was appropriated toward the stipends of the city clergy. In 1788, the magistrates and council of Edinburgh obtained an act of parliament authorising them to borrow £30,000 for the purpose of improving the harbour, and of opening up the streets in its vicinity; and at subsequent periods, they obtained several other acts of kindred character, with extended powers of borrowing. Previous to 182- exclusive of sums borrowed and repaid, they owed £25,000 to government, and £240,000 to other parties, for loans obtained for harbour improvement; and in that year they received from government an advance of £240,000 out of the consolidated fund to enable them to take up the bonds which they had issued. Three per cent. of interest was to be paid to government for this advance, and two per cent. was to go to a sinking fund; but for twelve years one per cent. of the interest was to be abated, in consideration of an agreement to extend the cast pier, and to improve its works. The consideration given to government, in lieu of the entire debt to them, were the cession of part of the west dock and shore-ground for the uses of the Admiralty, a p

erable claim over the whole of the dock and harbour property, and a concurrent claim with other creditors over the entire property of the city of Edinburgh. At the bankruptcy of the city in 1833, the harbour of Leith shared largely in the city's embarrassments. The operation of the sinking-fund, against that time, had cleared off the £25,000 due to the government previous to 1825; so that the amount of debt then due to the government was £240,000. Various and protracted negotiations were carried on with the government and with the other city creditors, before any satisfactory arrangement could be reached. But at length, in 1838, an act of parliament was passed, providing that the management of Leith harbour should be committed to eleven commissioners, appointed variously by the town of Leith, the city of Edinburgh, and the Lords of the Treasury; that the interest on the debt to government should be postponed; that a sum of £7,680 a-year, from the proceeds of the harbour-dues, should be paid to the city of Edinburgh; and that power should be possessed by the commissioners to borrow additional sums on the security of the dues, not exceeding £125,000, to be expended in effecting additional harbour improvements.

Both the coasting trade and the foreign and colonial trade of Leith are of great extent. The whole Baltic trade with the east of Scotland was at one time concentrated here; but this has been mainly drawn off to Kirkcaldy, Arbroath, Montrose, Aberdeen, and especially Dundee. In connexion with the naval station in the roads, the port enjoyed much prosperity during the war as a place for the condemnation and sale of prize-vessels; and, in consequence of Buonaparte's notable continental scheme of prevention, it was the seat of an extensive traffic for smuggling British goods into the continent by way of Heligoland, which employed many vessels, crowded its harbour, and greatly enriched not a few of its inhabitants. The Greenland whale-trade also, for a considerable time, engaged a large tonnage of the Leith shipping. The present foreign trade of the port is very discursive, being carried on variously with Russia, Sweden, Denmark, Germany, Holland, the south-western countries of Europe, the Levant, America, the West Indies, the East Indies, Australia, and China. The shipping belonging to the port in 1692, comprised 29 vessels, of aggregately 1,702 tons; in 1740, it comprised 47 vessels, of aggregately 2,628 tons; and in 1752, it comprised 68 vessels, of aggregately 6,935 tons. It steadily and rapidly increased in tonnage, from the last of these dates till the close of the century; it increased slowly from the beginning of the present century till 1826; and it decreased, to the amount of 73,601 tons, between 1826 and 1835. Its average amount in the years 1840–1844 was 26,600 tons; and in the years 1845–1849, 24,536 tons; but these last figures are exclusive of steam-vessels. In 1854, the number of sailing vessels was 181, of aggregately 24,357 tons,—of steam vessels, 28, of aggregately 3,946 tons; in 1855, the number of sailing vessels was 168, of aggregately 19,067 tons, and of steam vessels, 25, of aggregately 6,326 tons. In 1830, the gross receipt of the customs was £144,411; in the average of the years 1840–1844, £106,625; in the average of the years 1845–1849, £52,036; in the year 1851, £499,204. The port, in its custom-house relations, extends from the west side of Cramond-water, eastward to St. Abb's Head, and comprehends the creeks of Cramond, Granton, Cockenzie, Aberlady, North Berwick, and Dunbar. But, of the total of £4,534 reported for shore and harbour dues in the year 1852, so much as £23,991 was levied at the harbour-proper or town of Leith; three of the creeks, however, Granton, Cockenzie, and North Berwick not having made any report.

The principal imports at Leith are grain, hemp, hides, tallow, timber, wine, and tobacco; and the principal exports are linens, cottons, silks, woollens, haberdashery, iron, hardware, machinery, fish, coals, and miscellaneous goods. The declared value of exports in 1831, was £197,040; in 1836, £200,496; in 1841, £153,371; in 1846, £92,474; in 1851, £389,293; in 1852, £491,293; in 1853, £575,067; in 1854, £527,697. The maximum in any year between 1831 and 1850, was £273,488, which was in 1833; and the minimum was £88,349, which was in 1845. The items, as reported for 1851, were coals, £5,128; cottons, by the yard, £47,746; cottons, by value, £2,528; cotton yarn, £25,232; fish, £7,145; haberdashery and millinery, £7,921; hardwares and cutlery, £197; iron and steel, £49,249; linens, by the yard, £67,090; linens, by value, £770; linen yarn, £68,960; machinery and millwork, £5,319; silk manufactures, £3,561; woollens, by the piece, £4,471; woollens, by the yard, £8,278; woollens, by value, £151; woollen yarn, £25,177; all other articles, £60,370. In the average of the years 1840–1844, the shipping trade of the port comprised a tonnage of 71,401 in the foreign trade in British vessels, 53,316 in the foreign trade in foreign vessels, and 537,523 in the coasting-trade; and in the average of the years 1845–1849 it comprised a tonnage of 93,703 in the foreign trade in British vessels, 64,814 in the foreign trade in foreign vessels, and 567,084 in the coasting trade. In 1853 it comprised a tonnage of 59,683 inwards in the foreign and colonial trade in British vessels, 87,869 inwards in the foreign and colonial trade in foreign vessels, 249,427 inwards in the coasting trade, 42,959 outwards in the foreign and colonial trade in British vessels, 28,929 outwards in the foreign and colonial trade in foreign vessels, and 239,446 outwards in the coasting trade; and in 1854, it comprised a tonnage of 64,739 inwards in the foreign and colonial trade in British vessels, 70,847 inwards in the foreign and colonial trade in foreign vessels, 258,114 inwards in the coasting trade in British vessels, 502 inwards in the coasting trade in foreign vessels, 49,730 outwards in the foreign and colonial trade in British vessels, 21,815 outwards in the foreign and colonial trade in foreign vessels, 247,497 outwards in the coasting trade in British vessels, and 1,042 outwards in the coasting trade in foreign vessels.

Steam vessels, either from Leith or from Granton, ply to Hamburgh and Rotterdam every Saturday; to London every Tuesday, Wednesday, Thursday, and Saturday; to Newcastle every Wednesday and Saturday; to Hull every Wednesday; to Arbroath, Montrose, and Aberdeen, three times a-week in summer, and twice a-week in winter; to Banff, Cullen, Lossiemouth, Burghead, Findhorn, Nairn, Fort George, Inverness, Invergordon, and Cromarty, every Tuesday; to Wick and Thurso every Monday and Friday in summer, and every Friday in winter; to Kirkwall and Lerwick every Friday; to Elie, Pittenween, and Anstruther, every Monday, Wednesday, and Friday; to Alloa and Stirling, once or twice every day; and to Burntisland, in communication with the railway trains of the Edinburgh, Perth, and Dundee railway, several times a-day. Packet vessels sail from Leith to London every Saturday and Wednesday; to Liverpool, once in three weeks; to Peterhead, once a-week; to Fraserburgh, once a-fortnight; to Kirkwall, every Thursday; to Lerwick, every three weeks; to Greenock and Glasgow, twice a-week; to Stirling, every

Wednesday and Saturday; to Charleston, the port of Dunfermline, every Thursday; to Burntisland, every two days; to Elie, every Friday; to Kirkcaldy, daily; and to Leven, every Friday. Railway trains run from Commercial-street in North Leith, to the general terminus in Edinburgh, every thirty minutes; and omnibuses run from the head of Bernard-street, opposite the Exchange buildings, to the middle of the High-street of Edinburgh, every six minutes during the greater part of each day. A branch railway for goods traffic commences at the foot of Constitution-street, and extends along the shore into communication with the old Dalkeith railway, now amalgamated with the North British.

Leith, though not in a strict sense a manufacturing town, or the seat of any staple produce, possesses a great variety of productive establishments,—some of them of considerable or even great magnitude. Ship-building is carried on in several yards, and has produced many large steamers and bulky sailing-vessels. The Fury, the first line-of-battle ship constructed in Scotland after the Union, was built on the site of the present custom-house. A government steamer, larger than any steam-ship ever previously built in Leith, and a merchant-ship larger than any sailing-vessel ever previously constructed in the place, were both commenced in 1840.—The manufacture of glass has long been conspicuous in Leith, and is supposed to have been introduced by English settlers in the time of Cromwell. Seven huge brick conical chimneys, situated along the shore of South Leith, and forming a marked feature of the burghal landscape, are devoted to this manufacture. One of these cones was built, immediately after the rebellion of 1745, by the soldiers then stationed in Edinburgh castle, who were the only brick-builders that could be found.—An extensive suite of saw-mills is situated on the right bank of the water of Leith, immediately above the stone bridge. A very extensive engineering establishment occupies the same bank of the river, immediately below that bridge. A very large establishment for the refining of sugar, employing upwards of 80 persons, and consuming nearly 4,000 tons of coals in the year, is situated a little further down, on the opposite side of the river. A large establishment for the preservation of all kinds of fresh meat and vegetables, for consumption at sea, was established in 1838. The making of sail-cloth and ropes is carried on to a great extent, in eight establishments. A paint and colour work on a more extensive scale than any other in Britain, was commenced about 1833; and now there are in the town five colour-manufacturers. There are also 5 master-coopers, 4 iron-founders, 3 machine-makers, 2 ship-carvers, 2 candle-makers, 2 soap-makers, 5 skinners and wool dealers, 3 tanners, 6 tobacconists, 3 basket-makers, 1 pipe-maker, and a large variety and full complement of masters and men in all the ordinary departments of handicraft, as well as in such as have any special connexion with the wants of a great port.—A very large unsightly mass of building, in the southern environs of the town, in the vicinity of Bonnington, was long known as Leith distillery, but has been recently converted into a grain mill. A chemical work stands adjacent to it. A very large corn mill, propelled by steam, was commenced in 1830, in the centre of the town; but it suffered severe damage by fire, and was converted to other purposes. A large grain mill was erected about eight years ago at Swanfield, opposite Silverfield, and is still in operation. Another very large one, looking to the eye like an extensive factory, situated between the foot of Leith-walk and the Easter-road, was finished in 1856.

The banking offices in Leith are those of th Bank of Scotland, the Royal Bank, the Britis Linen Company's Bank, the Commercial Bank the National Bank, the Union Bank, and th Clydesdale Bank. There is also a National Securit savings' bank. The institutions of the town additional to some which have already been inci dentally mentioned, and exclusive of those connect ed with municipal affairs, are the incorporation o traffickers or merchant company, the Leith chambe of commerce, the Leith mercantile marine board the Exchange buildings association, the Exchang reading-room, the Leith public library, the Leit mechanics' subscription library, the shipwrecke fishermen and mariners' royal benevolent society the Edinburgh and Leith humane society, the Leit society for relief of the destitute sick, the Leit auxiliary to the British and Foreign Bible society the Leith religious tract society, the Leith loca Sabbath school society, the parochial board o managers of the poor, and various other mino institutions. Two newspapers are published in th town,—the Leith Commercial List on every Tuesday and Friday, and the Leith Herald on every Saturday The Leith races, commenced in the time of Charle II., and annually held on Leith sands in July o August, were long the occasion of a carnival-week of dissipation and folly to the inhabitants of Leit and Edinburgh, deplored by all the reflecting classe of the community, and severely satirized by som public writers.

The ancient government of Leith was very an omalous, inefficient, and changeful, comprising variety of jurisdictions, separate from one anothe or in some degree conflicting, but all enthralled t Edinburgh. In 1832, the parliamentary reform bill bestowed on Leith, within limits of perfec separation from Edinburgh, the privileges of parliamentary burgh, empowering it, along wit Portobello and Musselburgh, to send a member t parliament; in 1833, the burgh reform act furthe conferred upon it a separate and independent magis tracy, consisting of a provost, four bailies, a tres surer, and councillors; and in 1838, the act, sepa rating the property-relations of Edinburgh fro those of Leith, transferred to the provost an magistrates of Leith, and vested in them, the com mon good of the burgh, comprising all custom rates, imposts, and market-dues, together with th jail buildings. The amount of the corporatio revenue in 1855 was £638 10s. 10d. The provo bears also the title of admiral of Leith; and th courts held by the magistrates are called th admiral and bailie courts of Leith. There is society of solicitors for practising in these court A sheriff's small debt court is held every Tuesd in the court room. Matters of police are manag by a commission, consisting of the provost, t bailies, the town clerk, and a superintendent. assessment, for police purposes, not exceeding 6d. per pound, is imposed on the occupiers of houses of upwards of £3 yearly rent. The suppl of water are from the same works as Edinburg The constituency of the burgh in 1855, both mu cipal and parliamentary, was 1,850. Real prope in 1855, £128,655 12s. Population in 1841, 26,8 in 1851, 30,919. Houses, 2,084.

On the 20th of May, 1329, the city of Edinbur obtained from Robert I. a grant by charter of " harbour and mills of Leith with their appurten ces, for the payment of fifty-two merks yearl The town-council of the city, not content with t privilege, took possession of the ground adjacen the harbour, along the banks of the river. Tow the close of the century, Sir Robert Logan of L

talrig, the baronial superior of the grounds, and a man of rapacious character, contested their assumed claims, and obliged them to take a concession of them from him by purchase and charter. On the 31st May, 1398, he granted them by charter a right to waste lands in the vicinity of the harbour for the erection of quays and wharfs, and a liberty to have shops and granaries on these lands, and to break the grounds of his barony with roads for the service of navigation. Sir Robert afterwards teased the town-council with points of litigation, and eventually roused them to adopt a strong measure for satiating at once his avarice and their own ambition. Bought over by them with a large sum of money, the unprincipled baron, in February 1413, granted them an extraordinary charter, "an exclusive, ruinous, and enslaving bond," restraining the inhabitants of Leith from carrying on any sort of trade, from possessing warehouses or shops, and from keeping houses of entertainment for strangers, and thus flinging the place, in the guise of a manacled slave, at the feet of the metropolitan purchasers. But the town-council of Edinburgh, not even yet content with the power accorded them over Leith, ordained, in the year 1485, that no merchant of Edinburgh should become partner in business with an inhabitant of Leith, under penalty of 40 shillings, and of a year's deprivation of the freedom of the city; and on future occasions, they enacted that no revenue of the city should be farmed by an inhabitant of Leith, or by any person in partnership with a Leithian,—and that no staple goods should, except under a severe penalty, be either sold in Leith, or deposited in any of its warehouses.

Edinburgh's extraordinary rights thus acquired over Leith, were confirmed by royal charters. James I., by a charter dated 4th November, 1454, granted to Edinburgh "the haven-silver, customs, and duty of ships, vessels, and merchandize coming to the road and harbour of Leith." And James III., on 16th November, 1482, granted to them a charter, containing a detail of the customs, profits, exactions, commodities, and revenues of the port and road of Leith. By a grant of James IV., dated 9th March, 1510, a right was given to the city of Edinburgh to the new port, denominated Newhaven, lately made by the said King on the sea-coast, with the lands thereunto belonging, lying between the chapel of St. Nicholas and the lands of Wardie brae, with certain faculties and privileges. By a charter bearing the same date, James IV. confirmed the charter by Logan of Restalrig, formerly mentioned. On 8th October, 1550, Mary ratified an act and decreet of the Lords-of-session against the inhabitants of North Leith, "adjudging the provost and bailiffs of our said town of Edinburgh to be proper judges for the said inhabitants in the petty customs of Leith, belonging to our foresaid town of Edinburgh." The Queen-regent, Mary of Lorraine, indeed, in 1555, granted the inhabitants of Leith a contract to erect the town into a burgh-of-barony, to continue valid till she should erect it into a royal burgh; and as a preparatory measure, she purchased, overt- for their use and with money which they themselves furnished, the superiority of the town from Logan of Restalrig. But she did not fulfil her engagements, and is generally alleged to have been bribed with 20,000 merks from the city of Edinburgh to break them. Mary, her daughter, among her shifts to raise money in her difficulties, mortgaged, in 1565, to Edinburgh the superiority of Leith, redeemable for 1,000 merks; she requested the town-council by letter, in 1566, to delay the assumption of the superiority; but she obtained short indulgence, and could not prevent the consequences of her hasty act from falling on the devoted town. On the 2d of July, 1567, the citizens of Edinburgh marched in military order to Leith, went through some evolutions designed to represent a capture or conquest, and formally trampled the independence of the town in the dust. Many severe laws, in years succeeding this epoch, were enacted relative to the public and the private trade of Leith. James VI. was plied by the inhabitants with appeals and efforts designed to draw from him some deliverance from their thraldom; but he accepted some private arrangement with the town-council of Edinburgh, and placed the powers and supremacy of that body on higher vantage-ground than before. On the 25th March, 1596, he empowered, by a letter of gift under the privy-seal, the corporation of Edinburgh to levy a certain tax during a certain period, towards supporting, erecting, and repairing the bulwark, pier, and port of Leith; and on the 15th March, 1603, he, by a charter of confirmation and *novo damus*, confirmed all the grants which had been made to them from the commencement of their ascendency. In 1636 also, another charter of confirmation and *novo damus*, rivetting firmly on Leith all the chains of bondage which had been forged for it, was granted by Charles I.

The earliest mention of Leith which has been traced occurs in the charter of the abbey of Holyrood, founded by David I., in which it is called Inverleith. In 1313, and again in 1410, all the vessels in the harbour were burnt by the English. In 1488, it was seized by the insurgent nobles who rose against James III., and was the scene of an interview between James IV. and the celebrated Sir Andrew Wood, who kept the mastery of the frith of Forth. In 1511, either in Leith or at Newhaven, "ane varie monstrous great schip called the Michael," was built, and, according to Pitscottie, required such a mass of timber for her construction, "that she waisted all the woodis in Fyfe, except Falkland wood, besides the timber that came out of Norway." In 1544, the Earl of Hertford, at the head of 10,000 men, took possession of Leith, seized all the vessels in the harbour, left the place in keeping of 1,500 soldiers till he burned Edinburgh and wasted the circumjacent country, and then, on taking leave with his army and booty, committed the whole port to the flames. Three years afterwards, the same general, who had now become Duke of Somerset, and was fresh from the fatal battle of Pinkie, again set Leith on fire, though not with such an amount of injurious effect as before; and, on this occasion, carried off 35 vessels from the harbour. From 1548 to 1560, Leith, by becoming the fortified seat of the court and head-quarters of the Queen-regent's army and of her French auxiliaries, figured prominently in the greater part of the stirring events which occurred during the civil war between Mary of Lorraine and the Lords of the congregation. Its port received the shipping and the supplies which were designed for the Queen-regent's service; its fortifications enclosed alternately a garrison and an army, whose accoutrements had no opportunity of becoming rusted; and its gates poured forth detachments and sallying parties, who fought many a skirmish with portions of the Protestant forces on the plain between Leith and Edinburgh. In October 1559, the Lords of the congregation regularly invested the town with an army, and attempted to enter it by means of scaling-ladders; but they could make no impression, and were eventually, and with great slaughter, driven back by a desperate sally of the besieged. In April of the next year, the forces of the congregation, now aided by an army of 6,000 men under Lord Grey of

Wilton, despatched to their assistance by Elizabeth, again invested the town, and, on this occasion, inflicted upon it a protracted, disastrous, and sanguinary contest. Leith, though suffering dreadfully from famine, kept the besiegers, during two months, fully at bay, yet without acquiring any advantage. Both parties being at length heartily tired of the contest, and willingly entering into a treaty which stipulated that the French forces in the town should leave the kingdom, and be allowed to retire unmolested, Leith was immediately dismantled and restored to tranquillity. In August, 1561, Queen Mary landed at Leith to take possession of the throne of her ancestors, and was welcomed by the inhabitants with great demonstrations of joy. No vestige now remains of the pier which received her, and which must have been constructed subsequently to the destruction of the original one by the Earl of Hertford. During the minority of James VI., Leith figured in various transactions which belong strictly to the general history of the kingdom. From November 1571 till August of next year, and again in 1596-7, the town was the seat of the High Court of Justiciary; and in 1572, it was the meeting-place of a General Assembly which made some important enactments. In 1578, an act of parliament was passed to prevent "the taking away great quantities of victual-flesh, from Leith, under the pretence of victualling ships." A reconciliation having, in the same year, been effected between the Earl of Morton and the Scottish nobles opposed to him, the Earls of Morton, Argyle, Montrose, Athole, and Buchan, Lord Boyd, and several other persons of distinction, dined together in an hostelry of Leith. In 1584, the town was appointed the chief fish-market for herrings and the other produce of the Forth. On the 6th May, 1590, James VI., after lying six days in the roads, landed at the pier with his queen, Anne of Denmark. In 1610, thirty-eight English sailors were hanged within high-water mark on the sands for piracies in the Western Islands,—thirty of them in July, and eight in December. In October, 1643, the Solemn League and Covenant was sworn and subscribed with great solemnity, and with many grave demonstrations of thorough zeal by the inhabitants. Four years afterwards 2,430 persons, constituting about one-half of the entire population, were, in the course of six or eight months, swept away by the plague. The churchyards being utterly deficient in accommodation for their bodies, many of them were buried in the Links, near the site of Wellington-street, and on the north side of the road leading to Hermitage-hill. So fearful were the ravages of the plague and of an accompanying famine, that parliament, believing the number of the dead to exceed that of the living, empowered the magistrates to seize, for the use of survivors, whatever grain they could find in warehouses and cellars, and allowed them to make payment at their leisure, and to find means of making it by appeals to the humanity of their landward countrymen.

In 1650, after Cromwell's defeat of the Scottish forces at Dunbar, Lambert, his major-general, while he himself proceeded to Edinburgh, took possession of Leith. A monthly assessment of about £22 sterling was now imposed on the town, and, after so very recent and terrible devastations from pestilence and famine, was felt to be a grievous exaction. On General Monk's appointment to be commander-in-chief, he adopted Leith as his head-quarters and his home; and, while residing in the town, he induced many English families of considerable wealth and of great mercantile enterprise to become settlers. The incomers gave a grand impulse to the mercantile spirit of the port, and established some manufactures. In 1691, Viscount Tarbet, afterwards second Earl of Cromarty, and two other persons, raised a tavern brawl of great notoriety in an hostelry in Kirkgate, and were concerned, while the brawl lasted, in the murder of a French Protestant refugee and military officer. In 1705, Captain Green of the Worcester, and three of his crew, were hanged within flood-mark on the sands, for a very curiously discovered piracy and murder, committed in 1703 on the crew of a Scottish vessel off the coast of Malabar. During the rebellion of 1715, Brigadier Macintosh of Borlam, and a party of Highlanders who followed his banner, briefly occupied the citadel, and, being menaced by the Duke of Argyle who was at the time in Edinburgh, hastily plundered the custom-house, flung open the doors of the prison, and made a night retreat over the sands at low water. In 1778 the revolted Seaforth regiment of Highlanders [see EDINBURGH], made Leith the scene of some of their movements. Next year, 50 Highlanders, who had been recruited for the 42d and 71st regiments, mutinied at Leith, whither they were brought for embarkation, and firmly refused to go on board the transports. A party of fencibles having been sent from Edinburgh-castle to apprehend them, a conflict occurred on the quay, which was fatal to two of the fencibles and twelve of the Highlanders, as well as severely damaging to many more. In 1779, the noted Paul Jones appeared in the frith, and struck such a panic into the inhabitants that a battery, the embryo of the present fort, was hastily constructed to dispute his entering the harbour; but he was driven away by a storm, and providentially hindered from inflicting damage on the town. In 1822, Leith had all the eclat of being the scene of George IV.'s arrival to visit his Scottish metropolis; and in 1842, it was visited by Queen Victoria and Prince Albert.

LEITH (WATER OF), a small river of Edinburghshire, entering the frith of Forth at Leith harbour. It rises at the south-east extremity of the parish of Mid-Calder, from three springs, at a place called Leith-head, within a mile of one of the sources of a tributary of the Tweed. It runs 3 miles northward through Mid-Calder; 3 miles between Kirknewton on its left bank, and Mid-Calder and Currie on its right; 4¾ miles through Currie, receiving on the right the waters of Bevilaw burn; 2½ miles through Colinton; 1 mile circuitously, partly across a tiny wing of Colinton, and partly between that parish and Corstorphine on its left bank, and St. Cuthbert's on its right; 4 miles through St. Cuthbert's; and ¾ of a mile between North and South Leith. Its general direction, after leaving Mid-Calder, is north-east; and its entire length of course in a straight line is about 19 miles, and including windings about 25 or 26. During a drought, or even in weather but moderately dry, the Water of Leith is a trivial stream, not greater than many a short-coursed brook; but, in a season of rain, it becomes swollen and impetuous, and combines the characteristics of a river and a mountain torrent. It, in general, has a large share of the picturesqueness and romance which distinguish so many of the rivers of Scotland. At one time it runs along deep narrow glens, amid rocks and hanging woods; and at another it glides among beautiful haughs, fertile in corn and grass. On its banks are extensive plantations, many elegant mansions, several fine rural villages, one of the most superb suburban districts of Edinburgh and the most densely peopled portion of the town of Leith. Its bed through the suburbs of Edinburgh and thence toward Leith, was formerly, in dry

reather, little better than a large, open, common-ewer; but, by means of skilful artificial improve-ent, this nuisance has recently been, in a great egree, abated. The Water of Leith is probably he most useful stream of its size in Scotland; for ven a good number of years ago, it drove, in the ourse of 10 miles, 14 corn-mills, 12 barley-mills, flour-mills, 7 saw-mills, 5 fulling-mills, 5 snuff-ills, 4 paper-mills, 2 lint-mills, and 2 leather-mills, the rent of some of which, in the vicinity of the etropolis, was then upwards of £20 sterling per ot of waterfall.

LEITH (WATER OF), an old large village, now a burb of Edinburgh. It stands on the water of ith stream, on the old road by the Dean from linburgh to Queensferry, and immediately above e stupendous Dean-bridge which carries along new road. Its site is partly the bottom of a vine, and partly rapid slopes descending thither. e village is irregularly built, and has an appear-ce which contrasts very disadvantageously with superb urban architecture in its vicinity; but it tains some extensive flour-mills and granaries, would look well enough in another situation. e upper end of its west side is nearly adjacent to village of Dean and the Dean cemetery. Popu-ion, 1,024.

LEITHEN (THE), a rivulet of Peebles-shire, ing in the extreme north-west angle of the parish Innerleithen, and falling into the Tweed a mile er passing Innerleithen church. See INNER-ITHEN.

LEITH-HEAD. See LEITH (WATER OF).

LEITH-LUMSDEN, a post-office village in the rish of Auchindoir, Aberdeenshire. It stands in upper part of Strathbogie, 12 miles south by st of Huntly. It is of modern origin, and con-ns a few traders and handicraftsmen. Here is United Presbyterian church, which was built in 3, and contains 203 sittings. Population, 233.

LEITHOLM, a post-office village in the parish Eccles, Berwickshire. It stands on the north d from Kelso to Berwick, 5½ miles east by south Greenlaw, and 7½ north-north-east of Kelso. e is an United Presbyterian church; and here iently was a Roman Catholic chapel, the site of ich still bears the name of Chapelknowe. Popu-on, 365.

LEMNO. See ABERLEMNO.

LEMPITLAW, a village in the parish of Sprous-, Roxburghshire. It stands on the south-east ler of the parish, 4 miles east-south-east of Kelso. onsists of cottages and three small farm-steads. ulation, 119. Houses, 28. An elevated ground ending along the southern extremity of the parish Sprouston, also bears the name of Lempitlaw, probably gave that name to the village. There likewise an ancient parish of Lempitlaw, which w annexed to Sprouston.

LENDAL-BURN. See GIRVAN.

LENEY. See LENY.

LENNEL, the ancient name of the parish of stream, also an existing village in that parish, wickshire. See COLDSTREAM. The ancient vil-, or kirktown, stood on the steep bank of the ed, a mile below Coldstream, and was destroyed redatory incursion during the Border wars. ruins of the church still exist; but great part e cemetery has been swept away by the Tweed. modern village bears the name of New Lennel, is inconsiderable in size. The mansion-house ennel is in the vicinity.

LENNOCK (THE), a small stream tributary to Lossie, in the parish of Birnie, Morayshire.

LENNOX, the ancient county of Dumbarton, comprehending the whole of the modern county of Dumbarton, a large part of Stirlingshire, and part of the counties of Perth and Renfrew. The original name was *Leven-ach*, 'the field of the Leven,' and very appropriately designated the basin, not only of the river Leven, but also of Loch-Lomond, anciently called Loch-Leven. Levenachs, in the plural number, came to be the name of all the extensive and contiguous possessions of the powerful Earls of the soil; and, being spelt and written Levenax, was easily and naturally corrupted into Lennox. In the 13th century, Lennox and the sheriffdom of Dumbarton appear to have been co-extensive; but afterwards, in consequence of great alterations and considerable curtailments upon the sheriffdom, they ceased to be identical.

The origin of the earldom of Lennox is obscure. Arkil, a Saxon, and a baron of Northumbria, who took refuge from the vengeance of the Norman William, under the protection of Malcolm Canmore, appears to have been the founder of the original Lennox family. His son Alwyn seems to have been the first Earl. But dying, when his son and heir was a minor, early in the reign of William the Lion, David, Earl of Huntingdon, received from the King the earldom in ward, and appears to have held it during a considerable period. Alwyn, the second Earl, recovered possession some time before 1199. Maldwen, the third Earl, obtained from Alexander II., in 1238, a confirmatory charter of the earldom as held by his father; but was not allowed the castle of Dumbarton, nor the lands, port, and fisheries of Murrach. In 1284, Earl Malcolm concurred with the 'Magnates Scotiæ,' in swearing to acknowledge Margaret of Norway as heir-apparent to Alexander III.'s throne; and, in 1290, he appeared in the assembly of the states at Birgham, and consented to the marriage of Margaret with the son of Edward I. Next year, when Margaret's death opened the competition for the Crown, Malcolm was one of the nominees of Robert Bruce; and resistance to England becoming necessary, he, in 1296, assembled his followers, and, with other Scottish leaders, invaded Cumberland and assaulted Carlisle. While Sir John Menteith, the inglorious betrayer of the patriot Wallace, prostituted his power as governor of Dumbarton-castle, and sheriff of Dumbartonshire, in favour of Edward I., Malcolm went boldly out, and achieved feats as a supporter of Robert Bruce; and he continued, after Bruce's death, to maintain the independence of the kingdom, till, in 1333, he fell with hoary locks, but fighting like a youthful warrior, at Halidon-hill.

In 1424, after the restoration of James I., Earl Duncan became involved in the fate of his son-in-law, Murdoch, Duke of Albany, the Regent; and for some real or merely imputed crime, which no known history specifies, he was, in May next year, along with the Duke and two of the Duke's sons, beheaded at Stirling. Though Duncan left, by his second marriage, a legitimate son, called Donald of Lennox; yet his daughter Isabella, Duchess of Albany, while obtaining no regular entry to the earldom as heiress, appears to have enjoyed it during the reign of James II.; and she resided in the castle of Inchmurrin in Loch-Lomond, the chief messuage of the earldom, and there granted charters to vassals, as Countess of Lennox, and made gifts of portions of the property to religious establishments. After this lady's death in 1459, a long contest took place for the earldom between the heirs of her sisters, Elizabeth and Margaret, the second and third daughters of Duncan, whose priority of age was not ascertained by evidence, or admitted of keen and plausible dispute. The vast landed property of

Lennox was dismembered between the disputants; but the honours, the superiority, and the principal messuage of the earldom—the grand object of dispute—could be awarded to only one party, and were not finally adjudged till 1493. Sir John Stewart of Darnley had married Elizabeth; and their grandson, besides being declared heir to half the Lennox estate, became Lord Darnley and Earl of Lennox. Sir Robert Menteith of Rusky had married Margaret; and their moiety of the Lennox estate, came, with the estate of Rusky, to be divided, in the persons of their great-granddaughters, the co-heiresses, between Sir John Haldane of Gleneagles, who had married the elder, and Sir John Napier of Merchiston, who had married the younger. In 1471, the earldom being in the King's hands by the non-entry of any heir, was given, during his life, to Andrew, Lord Avondale, the chancellor. After the fall of James III., John Lord Darnley appears to have been awarded the Lennox honours by the new government; and, in 1488, he sat as Earl of Lennox in the first parliament, and received for himself and his son Matthew Stewart, the ward and revenues of Dumbarton-castle, which had been held by Lord Avondale. But only next year he took arms against the young King, drew besieging forces upon his fortresses both of Crookston and Dumbarton, suffered a defeat or rather a night surprise and rout at Tilly-moss, on the south side of the Forth above Stirling, saw the castle of Dumbarton, which was maintained by four of his sons, yield to a vigorous siege of six weeks, headed by the King and the ministers of state, and, after all, succeeded in making his peace with government, and obtaining a full pardon for himself and his followers.

Matthew, the next Earl, whose accession took place in 1494, led the men of Lennox to the fatal field of Flodden, where he and the Earl of Argyle commanded the right wing of the Scottish army, and, with many of their followers, were hewn down amid vain efforts of valour. John, the son and successor of Matthew, played an active part during the turbulent minority of James V. In 1514, he, along with the Earl of Glencairn, assailed the castle of Dumbarton during a tempestuous night, and, breaking open the lower gate, succeeded in taking it; in 1516, he was imprisoned by the Regent Albany, to compel him to surrender the fortress as the key of the west, and was obliged to comply; and, in 1526, he assembled a force of 10,000 men, and marched toward Edinburgh to the rescue of the young King from the power of the Douglases. Matthew, the next Earl, a very conspicuous figurant in history, obtained, in 1531, for 19 years, the tenure of the governorship and revenues of Dumbarton-castle. Early in the reign of Mary, some French ships arriving in the Clyde with supplies for the Queen, he, by artful persuasion, got the captains to land 30,000 crowns of silver and a quantity of arms and ammunition in the castle; and he immediately joined with other malcontents in an abortive but pardoned attempt to overthrow the government. In May and June 1544, he secretly entered the service of Henry VIII., engaging every effort to seize and deliver to England the Scottish Queen, the isle of Bute, and the castle and territories of Dumbarton, and obtaining from the King the Lady Margaret Douglas in marriage, and lands in England to the annual value of 6,800 marks Scots. Sent soon afterwards to the Clyde with 18 English ships and 600 soldiers, he was civilly received by George Stirling of Glorat, whom he had left in charge of Dumbarton-castle as his deputy; but he no sooner hinted to that official his design, and offered him a pension from Henry, than he and his Englishmen were turned out of the fortress and compelled to return to their ships. The Earl and his party now ravaged and wasted, with fire and sword, the islands of Arran and Bute, and other places in the west; and in October, 1545, he was declared by parliament to have incurred forfeiture. He continued an active partizan in the hostilities against Scotland of Henry VIII. and his successor, received from the former a grant of the manor of Temple-Newsom in Yorkshire. and during 20 years remained in England an exile from his native land. Father of the ill-fated Lord Darnley the husband of Mary, and grandfather of James VI. he eventually rose in the revolving politics of the period to the uppermost side of the wheel, and for a period filled the office of Regent, and vice-regally swayed the sceptre of his grandson. Holding at Stirling-castle, in September 1571, what the opposite party in politics called 'the black parliament,' he was mortally wounded in an attack made upon the town by a small force who designed to take the fortress by surprise.

The earldom of Lennox now devolved on James VI. as the next heir; and in April, 1572, it and the lordship of Darnley, with the whole of the family property and heritable jurisdictions, were given to Lord Charles Stewart, the King's uncle, and Lord Darnley's younger brother. But he dying in 157[illegible] without male issue, they again devolved to the King and were given, in 1578, to the King's grand-uncle Lord Robert Stewart, bishop of Caithness,—resigned by him in 1579, in exchange for the earldom of March,—and given, in 1579–80, to Esme Stewart Lord D'Aubigny. In August, 1581, Esme, this last favourite among the royal kinsmen, and the holder of the office of chamberlain of Scotland, was raised to the dignity of the Duke of Lennox and Earl of Darnley; and his son Ludovic, the second Duke received from the King additional offices and grants of property, and, among other preferments, was made custodier of Dumbarton-castle, and the owner of its pertinents and revenues. In 1672, Charles the sixth Duke, dying without issue, the peerage with all its accumulated honours and possessions went once more to the Crown, devolving on Charles II., as the nearest collateral heir-male; and the revenues of the estates were settled for life on the dowager-Duchess. In 1680, Charles II. granted to his illegitimate son, Charles, born of Louise Renée de Penancoet de Keranalle, Duchess of Portsmouth and D'Aubigny, the dukedom of Lennox and earldom of Darnley in Scotland, and the dukedom of Richmond and earldom of March in the peerage of England. After the death of the dowager Duchess in 1702, the Duke of Richmond and Lennox sold the whole of his property in Scotland, the Marquis of Montrose purchasing most of it, as well as many of its jurisdictions. In 1836, Charles, fifth Duke of Richmond and Lennox, succeeded to the Gordon estates.

In the reign of James IV. the sheriffdom of Dumbartonshire was made hereditary in the family of Lennox, Earl Matthew obtaining, in 1503, a grant which united the office to the earldom. The office continued a pertinent of the Earls and Dukes of Lennox two centuries, and was usually executed by deputy sheriffs of their appointment. The Marquis of Montrose, who was created Duke in 1707, purchased at once the sheriffdom of the county, the custodiership of Dumbarton castle, and the jurisdiction of the regality of Lennox, along with a large part of the Lennox property bought from the first Duke of Richmond and Lennox. The Earls and Dukes of Lennox had a very ample jurisdiction over all their estates, both in and beyond Dumbartonshire, comprehended in the regality of Lennox

and their vassals also had powers of jurisdiction within the lands held by them, subject to the remarkable condition that all the criminals condemned in their court should be executed on the Earl's gallows. At the abolition of heritable jurisdictions in 1748, the Duke of Montrose claimed for the regality of Lennox £4,000, but was allowed only £578 18s. 4d.

LENNOX-CASTLE. See CAMPSIE and LENNOX-TOWN.

LENNOX-HILLS, a range of heights extending east-north-eastward from Dumbarton to Stirling, along the middle of the ancient district of Lennox. The range is interrupted by the valley of the Blane, and, from Dumbarton thither, is called the Kilpatrick hills. The name Lennox-hills is more strictly applied to the heights between the valley of the Blane and Stirling, which, in their various parts are called the Killearn, the Campsie, the Kilsyth, the Dundaff, the Fintry, and the Gargunnock hills. A continuation of the range commencing immediately north of the Forth, passes on, under the name of the Ochil-hills, to the vicinity of the Tay. Throughout the whole of the strictly Lennox-hills, and in a less degree in the Kilpatrick-hills, are grand colonnades and precipices of basalt. In the parishes of Killearn, Strathblane, and Fintry, in particular, the ways of basaltic columns are magnificent. The hills are composed chiefly of various kinds of trap, and offer many features of interest to the mineralogist; nor do they less challenge the attention of the agriculturist and the grazier. In the Dundaff section, indeed, a stunted heath occupies a considerable space, though not to the exclusion of excellent pasturage; but everywhere else, the hills, with very trivial exceptions, are carpeted with fine grass, unsurpassed for pasturage in Scotland. The summits rise in Campsie to the height of 1,500 feet, and in Kilsyth to the height of 1,300; but in many places they ascend no higher than to be inconsiderable hills. See article CAMPSIE-FELLS.

LENNOX-LOVE. See HADDINGTON and HADDINGTONSHIRE.

LENNOX-TOWER. See CURRIE and EDINBURGHSHIRE.

LENNOXTOWN, a small post-town in the parish of Campsie, Stirlingshire. It stands on Glazert water, at the terminus of the Campsie branch of the Edinburgh and Glasgow railway, about a mile from the south base of the Campsie fells, 3¾ miles north-north-west of Kirkintilloch, 6½ west of Kilsyth, and 9 by road, but 11¾ by railway, north by east of Glasgow. It stands on the grounds, and is under the superiority, of Lennox of Woodhead, who claims to be the direct descendant, and nearest heir of the male line, of the original noble family of Lennox. A mile west of it, on a conspicuous site, stands that gentleman's seat of Lennox-castle, one of the most spacious and superb mansions in Scotland. The town contains some of the manufacturing establishments of the parish, and is the centre of traffic for them all. The Campsie alum-work is at the east end of it; contributing, in its group of tall brick chimney stacks, and in its great red mounds of burnt alum schist, a grotesque feature to the surrounding landscape. The town contains the parish church, an United Presbyterian church, a Roman Catholic chapel, a mechanics' institute, and a savings' bank. Several trains run daily to Glasgow, and a coach to Balfron. Sheriff small debt courts are held on the fourth Thursday of the months of February, May, August, and November. Population in 1841, 2,821; in 1851, 3,108. Houses, 531. See CAMPSIE.

LENTRAM. See KIRKHILL.

LENTRATHEN. See LINTRATHEN.

LENTRON. See HIGHLANDS (THE).

LENTURK. See LEOCHEL-CUSHNIE.

LENY (THE PASS OF), a romantic mountain-gorge, in the parish of Callendar, Perthshire. Its bottom is partly occupied by Loch-Lubnaig, and partly traversed by the impetuous stream which rushes thence as a head-water of the Teith. The gorge commences 2 miles north-west of the village of Callendar, and carries up a road, now much frequented by tourists, to Balquhidder and Loch-Earnhead. It is described as follows by Sir Walter Scott, in the opening scene of the Legend of Montrose: "Their course had been, for some time, along the banks of a lake, whose deep waters reflected the crimson beams of the western sun. The broken path, which they pursued with some difficulty, was in some places shaded by ancient birches and oak-trees, and in others overhung by fragments of huge rock. Elsewhere the hill which formed the northern side of this beautiful sheet of water, arose in steep but less precipitous acclivity, and was arrayed in heath of the darkest purple." Its beauties have also been immortalized in the poem of 'The Lady of the Lake.'

LENY-HILL, a low hill, of trap-rock formation, on the west side of the parish of Cramond, Edinburghshire.

LENZIE. See KIRKINTILLOCH and CUMBERNAULD.

LEOCHDAN. See GLASSARY.

LEOCHEL (THE), an affluent of the river Don, in Aberdeenshire. It rises in a cleft of the hill of Cushnie, at the south-west angle of the parish of Leochel-Cushnie, runs 3 miles eastward through that parish, 3 miles northward partly through the same parish, and partly on its boundary, then 4 miles north-westward and northward, through the parish of Alford, to the Don.

LEOCHEL-CUSHNIE, an united parish in the Alford district of Aberdeenshire. Its post-town is Alford, 6 miles to the north; but other post-office stations equally accessible are Whitehouse on the east, and Tarland on the south. The parish is bounded by Kildrummie, Alford, Tough, Lumphanan, Coull, Tarland, and Towie. Its length eastward is about 6 miles; and its breadth is from 3 to 6 miles. Soccoch, or the Hill of Cushnie, rises on the western boundary to an altitude of about 2,000 feet above the level of the sea, and commands a very brilliant panoramic prospect. Four mountainous ridges extend from the base of Soccoch eastward, through the whole length of the parish, and are separated from one another by valleys, each of which is watered by a brook of its own. The crests of the ridges are barren; but the slopes of the hills and the bottoms of the valleys are cultivated. The lowest parts of the valleys have an elevation of about 500 feet above the level of the sea; and the highest parts of the cultivated acclivities have an elevation of about 500 feet above the bed of the streams. The predominant rock is granite. The soil in general is clayey; in some parts, on the hill slopes, a rich loam; and, in some of the lower parts of the valleys, a fine alluvium. The principal stream is the Leochel, and most of the others are tributaries to it. All are liable to sudden freshets, and have at times done great damage to the haugh lands along their banks. About 5,455 imperial acres are in tillage; about 963 are in green pasture; about 3,790 are moorish or waste; and about 1,000 are under wood. Upwards of one-half of the parish belongs to Sir William Forbes of Cragievar, Bart.; and the rest belongs principally to Lumsden of Cushnie, M'Combie of Lenturk, and Ferguson of Hallhead. The yearly value of raw produce was

estimated in 1843 at £12,000. Assessed property in 1843, £3,298. The most conspicuous edifice is Craigievar-castle. See Craigievar. The mansion of Cushnie was built in 1707; and that of Hallhead, in 1688. The castle of Corse was built in 1581, but has long been a ruin. There was formerly a castle of Lenturk; but its site is now occupied by a farm-house. There were formerly numerous cairns; but only one of them, a large one, now remains. Several Picts houses occur on the farm of Cairncoullie. Some military entrenchments, which tradition associates with the closing scenes in the career of Macbeth, occur on the hill of Corse. See Corse. The principal manufactures are the making of some woollen goods at a small carding-mill, and the knitting of worsted stockings. The parish is traversed by the government road from Donside to Deeside. Population in 1831, 1,077; in 1851, 1,068. Houses, 189.

This parish is in the presbytery of Alford, and synod of Aberdeen. Patrons, Sir William Forbes, Bart., and Lumsden of Cushnie. Stipend, £196 10s. 5d.; glebe, £18. The parish church was built in 1798, and contains 500 sittings. There is a Free church preaching station of Leochel-Cushnie; and the sum raised in connexion with it in 1855, jointly with another station in the conterminous parish of Towie, was £51 11s. 6d. There is an United Presbyterian church on the eastern border of Leochel-Cushnie, which is usually designated as if it were within Tough. There are two parochial schools; and the salary attached to each is £25 13s. 3½d., together with a share of the Dick bequest, and about £12 or £15 fees. There are three other schools, one of them supported by the General Assembly, and the other two endowed. There are two small parochial libraries. The present parish of Leochel-Cushnie comprehends the ancient parish of Leochel, the ancient parish of Cushnie, and quoad sacra the lands of Corse, which belong quoad civilia to the parish of Coull. The parishes of Leochel and Cushnie were united temporarily in 1618, and permanently in 1795. The ancient church of Leochel was dedicated to St. Marnan, and that of Cushnie to St. Bride. Portions of the walls of both are still standing. There were anciently chapels at Lenturk, at Corbanchory, and at Newton of Corse. Among distinguished natives of the parish may be mentioned Patrick Forbes, who was bishop of Aberdeen, several other members of the Forbes family, who were celebrated in various ways, Andrew Irving of Lenturk, who was an eminent lawyer and law writer of the 17th century, Andrew Lumsden, who was private secretary to Prince Charles Edward, and author of a work on the antiquities of Rome, and Dr. Matthew Lumsden, a famous oriental scholar, who died in 1835.

LEOGH, a hamlet on Fair-Isle between Orkney and Shetland.

LEONARDS (St.). See Andrews (St.), Lanark, Lauder, and Edinburgh.

LERWICK, a parish, containing a post-town of its own name, in the mainland of Shetland. It is bounded on the north by Tingwall; on the east by the sea; and on the south by Cunningsburgh. Its length southward is about 6 miles; but its breadth is nowhere more than one mile. The portion of the sea washing the greater part of its coast is Bressay sound, comprising the harbour of Lerwick, and one of the finest anchoring grounds in the kingdom. See Bressay. The interior of the parish is predominantly rocky and hilly, yet does not anywhere rise to a higher altitude than about 300 feet above the level of the sea. Peat or moss generally covers the hills, and is deep to their very summit. The arable land consists of patches on the sea-board, and has a light, sandy, fertile soil. The principal landowners are Sir Arthur Nicolson, Bart., the Earl of Zetland, Hay of Laxfirth, Greig of Sandsound, Ogilvie of Seafield, and Heddle of Helerness. Sir A. Nicolson is the most extensive of the landowners, and has a mansion at Gremista. There are several fine villas in the neighbourhood of the town. There are remains of a Pictish castle on an islet in a lake adjacent to the town. There lately were remains of several chapels at Gulberwick. The predominant rocks are the old red sandstone and its conglomerate. The sandstone is quarried. The real rental in 1841 was £4,200. Population in 1831, 3,194; in 1851, 3,390. Houses, 424.

This parish is the seat of a presbytery in the synod of Shetland. Patron, Earl of Zetland. Stipend, £158 5s. 9½d., with £50 in lieu of manse and glebe. Schoolmaster's salary, £34 4s. 4½d., with about £34 fees. The places of worship are the parish church, the Free church, an United Presbyterian church, an Independent chapel, and a Methodist chapel. There are four non-parochial schools.

The Town of Lerwick is situated about the middle of the coast of Bressay sound, 21 miles north by east of Sumburgh-head. It is the capital of Shetland, and the seat of the custom-house for all the Shetland isles. It derives consequence from being the focus of trade for Shetland, the seat of the courts of law, the resort of whaling ships on their way to Greenland, the rendezvous of busses employed in the herring fishery, and the residence of a considerable number of respectable families. It consists of one principal street ranged along the shore, and of several lanes branching off. The principal street is exceedingly irregular, having been formed with an utter disregard of every convenience, except that of being as near as possible to the shore. Its houses individually are good structures, mostly two or three stories high, and roofed with a blue, rough, schistose sandstone; but they stand in every imaginable kind of dislocation from one another, and some of them projecting almost quite across the street. The Messrs. Anderson remark, in reference to them,—"The salient and re-entering angles of fortification may be studied by observing the houses in Lerwick or, in the more peaceful thoughts of Gray's description of Kendal, we may say—'They seem as if they had been dancing a country dance, and were out. There they stand back to back, corner to corner, some up-hill, some down.'" The street is laid with flags, but knows nothing of cart or carriage, and is seldom trodden by anything heavier than a shelt laden with turf. The number of shops is comparatively large; and the bustle of traffic is sometimes great. The only public building, except the churches and the schools, is one which serves the various purposes of town-house, court-house, prison and masonic lodge. The town was founded about the beginning of the 17th century, but has a much older appearance than many towns of thrice its age yet it has, of late years, been much modernized and smartened; and, at the same time, its environs have been reclaimed from a dull waste condition to a state of pleasantness and beauty.

The principal manufactures are the making of herring nets and the knitting of articles of hosiery. The fishery district of Lerwick comprehends eleven creeks; and, in the year 1854, the number of herring-boats employed in it was 665,—the number of barrels of herring cured, 9,009,—the number of persons employed in its fisheries, 4,268,—and the value of boats, nets, and lines employed in its fisheries £15,305. In 1855, the number of sailing vessels registered at the port of Lerwick was 58, with a

aggregate tonnage of 1,683. The trade of the port in 1854 comprised a tonnage of 633 inwards in the foreign and colonial trade in British vessels, 518 inwards in the foreign and colonial trade in foreign vessels, 26,268 inwards in the coasting trade in British vessels, 148 inwards in the coasting trade in foreign vessels, 768 outwards in the foreign and colonial trade in British vessels, 727 outwards in the foreign and colonial trade in foreign vessels, and 25,937 outwards in the coasting trade in British vessels. The customs revenue, in the average of 1845–1849 was £233; and in 1850, £365. A steamer communicates weekly with Kirkwall, Aberdeen, and Leith. The sheriff, commissary, and admiralty courts for Shetland are held at Lerwick on every Thursday during session. A justice of peace small debt court is held on the first Tuesday of May, and on the first Wednesday of every other month. The town is a burgh of barony. Population in 1831, 2,750; in 1851, 2,904. Houses, 331.

LESLIE, a parish, containing a small post-town of its own name, at the middle of the western border of Fifeshire. It is bounded by the county of Kinross, and by the parishes of Falkland, Markinch, and Kinglassie. Its length eastward is between 4 and 5 miles; and its breadth is between 3 and 4 miles. The river Leven traces all the southern boundary; and two brooks drain the interior, the one southward and the other eastward to the Leven, a short way below Leslie-house. The north-western and the northern borders are on the declivities of the Lomond hills; the surface thence to the Leven is generally an undulating descent; and the whole landscape is pleasingly diversified and very beautiful. About 4,324 imperial acres are in tillage; about 992 are pastoral or uncultivated; and about 50 are under wood. Coal occurs in the eastern district, but is not extensively worked. Limestone also occurs there, and is quarried. Trap, of a very hard kind, abounds in the west and north, and has been quarried to a considerable extent for building. The principal landowners are the Earl of Rothes, Douglas of Strathendry, and Balfour of Balbirnie. Leslie-house, the seat of the Earl of Rothes, stands amid magnificently wooded grounds, in the southeast of the parish. This house was built, and great additions made to the plantations, by the celebrated Duke of Rothes, Lord-chancellor of Scotland during the reign of Charles II. It originally formed a quadrangle, enclosing in the centre an extensive court-yard, but three of the sides were burnt down in December 1763. The fourth side was repaired, and forms the present house. The picture-gallery in this part of the building, which is hung with portraits of connections of the family, is three feet longer than the gallery at Holyroodhouse. Strathendry-house is a handsome edifice in the Elizabethan style. The yearly value of raw produce was estimated in 1836 at £7,750. Assessed property in 1862-3, £5,488 9s. 1d. There are in the parish six mills for spinning flax; the largest of them at Prinlaws, moved partly by steam-power, and partly by the water-power of the Leven. There are also three bleachfields, and a paper-mill. And nearly 300 persons are employed in hand-loom weaving, chiefly for the manufacturers of Glasgow. Population in 1841, 3,749; in 1851, 3,800. Houses, 466.

This parish is in the presbytery of Kirkcaldy, and synod of Fife. Patron, the Earl of Rothes. Stipend, £247 8s. 6d.; glebe, £18. Schoolmaster's salary, £34 4s. 4½d., with about £18 fees, and £7 other emoluments. The parish church was built in 1820, and is a handsome structure, containing 850 sittings. There is a Free church, with an attendance of about 390; and the amount of its receipts in 1855 was £187 16s. 7½d. There are two United Presbyterian churches; the First, with an attendance of about 330,—and the West, with an attendance of about 400. There is also a small Baptist place of worship. There are five non-parochial schools, a circulating library, and a total abstinence society. The parish took its name of Leslie from the family name of the Earls of Rothes; but it was previously called Fetkill. The celebrated Dr. Pitcairn was a native of it. The Rev. E. Erskine, one of the fathers of the Secession church, was for some time tutor or chaplain at Leslie-house. Lord Reston, one of the senators of the college of justice, belonged to the family of the Douglases of Strathendry.

The Town of Leslie stands on the south-east border of the parish of Leslie, on the road from Markinch to Kinross, and on one from Cupar to Dunfermline, 3 miles west of Markinch, 9 north by west of Kirkcaldy, and 12 south-west of Cupar. Its site is a ridge or small tableau of sand and gravel, adjacent to the Leven, and rising about 100 feet above that stream's level. At the east end of it is a fine triangular common called the Green; and there also are the plantations of Leslie-house pleasure-grounds. The town is ancient and irregularly built; and the gables of many of its houses are toward the street. Its records extend back about 300 years, but do not contain anything remarkable. It contests with various places the claim of being the locality of King James' poem of Christ's Kirk on the Green; and is supposed to have been anciently a periodical scene of royal and noble games, a place of pastimes much frequented by the princes and nobles of Scotland. Packmen always in great numbers attended such assemblies; and packmen on horseback kept up the relics of the ancient games on the Green till quite recent times. A society of packmen also treated Leslie as their headquarters, and held here their annual meeting. The town is a burgh of barony under the Earl of Rothes. It is governed by two bailies and sixteen councillors, and is a station of the county police. Fairs are held on the first Thursday of April, old style, and on the 10th day of October. Population in 1841, 1,207; in 1851, 1,342. Houses, 188.

LESLIE, a parish, containing a post-office station of its own name, in the Garioch district of Aberdeenshire. It is bounded by Kinnethmont, Insch, Bremnay, Keig, Tullynessle, and Clatt. Its greatest length southward is about 3½ miles; and its greatest breadth is about 2½ miles. A ridge of hills, part of the range extending westward from Benochie to Cabrach, lifts its watershed along the southern boundary. An elevated ground, rising in some parts into hills, and extending from east to west, divides the rest of the parish into two nearly equal parts. Round the base of this elevated ground, north, east, south, and west, lie the arable grounds of the parish; and the parts of these on the south, intervening between the central elevated ground, and the southern ridge of hills, form part of the valley of the Gadie, whose beauties have been celebrated in song. See Gadie (The). Serpentine, of a greenish tinge, variegated with grey streaks, abounds in the southern district, and has been extensively used by the country people for making snuff-boxes and trinkets. Steatite, manganese, abestus, schorl, albite, and beryl, as well as more common minerals, also are found. About 2,000 acres are in tillage. About two-thirds of the land belong to Hay of Rannes; and the other third belongs to Leith of Whitehall. The estimated value of raw produce in 1842 was £7,070. Assessed property in 1843, £2,472. Leslie-house, formerly the seat of the barons of Leslie, and afterwards the residence of the Forbeses of Mony-

musk, is a ruinous castellated mansion, built about the middle of the 17th century. The remains of a Druidical temple were removed a few years ago as materials for building a stone fence. The centre of the parish is nearly equidistant from Inverury and Huntly. Population in 1831, 473; in 1851, 559. Houses, 112.

This parish is in the presbytery of Garioch, and synod of Aberdeen. Patron, Hay of Rannes. Stipend, £158 14s. 6d.; glebe, £11 5s. Schoolmaster's salary, £25 13s. 4d., with about £13 fees, and a share of the Dick bequest. The parish church was built in 1815, and contains nearly 300 sittings. There is a Free church with an attendance of 140; and the amount of its receipts in 1855 was £108 18s. 9½d. There is an Independent chapel at the north-west extremity of the parish, built in 1818. There was anciently a Roman Catholic chapel, at a place still called Chapelton, south-west of the parish church. Part of the lands of the parish anciently belonged to the abbey of Lindores. A few cairns and some vestiges of an encampment occur at a place which tradition asserts to have been the scene of a battle.

LESMAHAGO, a parish in the north-west of the upper ward of Lanarkshire. It contains the post-office station of Lesmahago, at the village of Abbeygreen, the post-office village of Crossford, and the villages of Turfholm, Boghead, Hazelbank, Kirkfieldbank, Kirkmuirhill, and New Trows. It is bounded on the south-west by Ayrshire, and on other sides by the parishes of Avondale, Stonehouse, Dalserf, Carluke, Lanark, Carmichael, and Douglas. Its length north-eastward is about 14 miles; and its greatest breadth is about 12 miles. Upwards of three-fourths of the surface have an average elevation of probably about 500 feet above the level of the sea; and the remainder, in the upper part of the parish toward Ayrshire and Avondale, rises into considerable hills, some of which have an altitude of about 1,200 feet. The landscape, in general, is picturesquely diversified. The beautiful little river Nethan rises near the boundary with Ayrshire, and runs in a northerly direction through the centre of the parish to the Clyde. The Logan and some other streamlets rise also within the limits, and serve as feeders to the Nethan. The Kype runs on the boundary with Avondale. The Peniel traces most of the boundary with Douglas, falling into Douglas-water; Douglas-water thence traces all the boundary with Carmichael, falling into the Clyde; and the Clyde thence traces all the boundary with Lanark and Carluke, performing there the whole of its celebrated falls. "The banks of the Clyde within Lesmahago are very bold, rising in many places abruptly into hills of considerable height, everywhere divided into deep gullets, formed by the numerous brooks and torrents which fall into the river. The intermixture of coppice-woods, plantations of forest trees, and sloping open glades, of swelling eminences, deep ravines, and towering hills on both sides of the river, added to the windings of its copious stream, and the magnificent falls above-mentioned, exhibit to the eye of the passenger, at every change of situation, new landscapes strikingly sublime and beautiful." On the south side of the parish is a fissure in the rocks called Wallace's Cave. The predominant rocks are either upbursts of trap or members of the carboniferous formation. Pit-coal is plentiful; and a fine kind of cannel-coal is extensively worked. Sandstone abounds, of various qualities, inclining in some places to slate. Limestone is worked. Ironstone occurs both in balls and in strata; and lead has been frequently sought for, but vainly, in sufficient quantities for mining. The soil, for the mo part, is either moss, or a sandy gravel, or a lig friable mould, resting on trap, or a yellow cla resting in some places on white sandstone. Abo 21,300 Scotch acres are regularly or occasionally tillage; about 1,650 are under wood; about 50 a disposed in village gardens and orchards; and abo 11,000 are pastoral or waste. The most extensiv landowners are the Duke of Hamilton, Lord Dou las, and W. E. Hope Vere, Esq. of Blackwood; b there are a number of other landowners, several whom are resident, and whose mansions have bee erected within the last fifty years. The yearl value of raw produce, exclusive of pasture lan and of mines and quarries, was estimated in 183 at £38,950. Assessed property in 1843, £27,05 15s. 5d. The parish is traversed by the great ro from Glasgow to Lanark and Carlisle, and has branch-railway communicating with the Caledonia railway at Motherwell. Population in 1831, 6,40 in 1851, 7,746. Houses, 1,234.

This parish is in the presbytery of Lanark, a synod of Glasgow and Ayr. The charge is coll giate. The Duke of Hamilton is patron of bo charges. Each of the ministers has a stipend £324 8s. 2½d.; and the first has a glebe worth £ a-year,—the second, a garden worth £5. Unappr priated teinds, £999 3s. 3d. The parish church situated at Abbeygreen, and was built in 1804, a contains 1,500 sittings. There is a Free chur with an attendance of from 800 to 1,000; and th sum raised in connexion with it, in 1855, was £4 14s. 4d. There are two United Presbyteria churches, the one bearing the designation of Le mahago, the other at the village of Crossfor There is also a Reformed Presbyterian church. T salary of the parochial schoolmaster is £34 4s. 4 with about £45 fees, and £22 other emolument A few other schools receive some small assistan from the heritors. There is a subscription sch for girls at Abbeygreen. There is also a subscri tion library.—The ancient parish church was de cated to a Saint Machute or Mahago, who is said have settled here in the sixth century. The wo Les or Lis, in the old British language, signifies green or garden; and this, with the name of t Saint, forms the name Lesmachute, which was t ancient designation of the parish, or Lesmaha its more modern designation. In the reign of Da I. the church and lands of Lesmahago, with their pertinents, were granted to the abbot a monks of Kelso, that they might hold the chu as a cell of Kelso. At the same time, the Ki granted to the church of Lesmahago the privil of a sanctuary, to which all persons might flee protection, with the exception of those who w guilty of murder or dismembering. The abbot monks of Kelso accordingly erected buildings h and transferred to them a number of their o order, dedicating the new monastery to the Vir Mary and St. Machute. Being less liable t Kelso to be annoyed by the invasions of the E lish, Lesmahago frequently formed a safe retrea the monks of the former place; but still it was altogether exempt from the effects of these hos incursions. About 1336, John of Eltham, Ear Cornwall, and brother of Edward III., rava Clydesdale with a body of English troops, and t up his residence for a time at the abbey of Les hago; and before leaving it, he burned the m astery and church, and sacrificed a number people who had taken shelter within the w The monks of Lesmahago were enriched by quests or donations, or by the purchase of la and at various times they received charters of

ection and immunity from the Scottish kings, by whom also their territory was erected into a barony, with the usual jurisdiction. At the Reformation, their rental was as follows:—£1,214 4s. 6d. Scots; 3 chalders, 8 bolls, 1 firlot, and 2 pecks of bear; 1 chalders, 8 bolls, and 3 firlots of meal; and 4 halders, 3 bolls of oats. The property of the monastery passed in succession into the hands of several great families until it was finally purchased, in the early part of the 17th century, from the Earl of Roxburgh, by James, Marquis of Hamilton. During the ferment of the Reformation, the fine monastic buildings fell a sacrifice to the fury of the reformers, with the exception of the tower which supported the spire of the church. The precincts of the monastery were long celebrated for their beautiful gardens; and the present village of Abbeygreen is built upon a part of the olden lawn. The parish retains, from the old charters of the monastery, the privilege of holding a weekly market, and several annual fairs. The weekly market is gone into disuse; and, though fairs are still held in March, August, and December, they are not regarded as of much importance. The most interesting ancient secular object in the parish is the ruin of Craignethan-castle, situated on a bold, jagged spot, overhanging the Nethan, a short way above its influx to the Clyde. Queen Mary, after her escape from Loch-Leven, lodged a few days in this castle; and the room in which she slept, before she passed on to the fatal field of Langside, is still pointed out amongst the ruins. This was anciently the residence of Sir James Hamilton, a bastard son of the Earl of Hamilton, who in the reign of James V. acquired an unenviable notoriety from his fierce disposition and cruel actions. In recent times, the ruins of Craignethan have become still more famous, from their identification with the Tillietudlem of 'Old Mortality.' See CRAIGNETHAN. The inhabitants of Lesmahago acted a prominent part in the struggle against the imposition of 'black prelacy' in the reigns of Charles II. and James II. Many of the Covenanters who fell at Bothwell bridge were natives of it; and several of the pious heroes of that time were buried in its churchyard, where their monuments still exist. It was in Lesmahago that Colonel Rumbold, one of the chief movers in the Ryehouse plot, was apprehended by Hamilton of Kaploch in 1685, after the dispersion of the army of Argyle. At a later period, Macdonald of Kinsail-Moydart, aide-de-camp to Charles Edward Stuart, was apprehended here, while on his way to join the Prince during his march in England, by a Presbyterian clergyman named Linning, and a joiner named Meikle. For this service, Linning was afterwards rewarded by being appointed one of the ministers of the parish; but the Highlanders, on their return north, burned Meikle's house in revenge. The unfortunate Macdonald was conveyed from Lesmahago to Edinburgh castle, and thence to Carlisle, where he was tried and executed. A Roman road is known to have passed through a part of the parish; but it has long since been obliterated by the operations of husbandry. A Roman vase, some Roman coins, and an old British stone battle-axe have been dug up. There were formerly many large sepulchral cairns; but all have been used up as materials for roads and fences.

LESMAHAGO RAILWAY, a branch railway, proceeding southward from the Caledonian railway at Motherwell-bank, in the parish of Dalziel, to its extend, in the parish of Lesmahago, Lanarkshire. It was commenced in 1853, and completed in 1856. It traverses a district rich in minerals, and will give a valuable traffic to the Caledonian. The funds with which it was constructed were a distinct stock from the Caledonian funds. A very fine viaduct takes it across the river Clyde; and one very remarkable for both height and beauty, visible at a considerable distance to the north-east, takes it across the ravine of the Nethan.

LESMURDIE. See CABRACH.

LESSUDDEN. See BOSWELL'S (ST.).

LESUNDRUL. See DRUMBLADE.

LESWALT, a parish in the Rhinns of Galloway, Wigtonshire. It contains part of the post-town of Stranraer; also a post-office station of its own name, 3¼ miles north-west of that town. It is bounded on the north by Kirkholm; on the east by Loch-Ryan; on the south-east by Stranraer and Inch; on the south by Port-Patrick; and on the west by the Irish channel. Its greatest length southward is 8 miles; and its greatest breadth is 7 miles. Its surface, except along Loch-Ryan, where it becomes level, is very hillocky and broken. Large tracts of moss in some quarters compete for prominence with fine meadows, pasture grounds, and arable lands. The soil, over a great part of the eastern division, is rich and fertile; but, toward the Irish channel and along the south, it is, in general, sandy, gravelly, or otherwise thin and poor. A considerable part of the land is devoted to the rearing of sheep and cattle. The coast line, on the west, about 8 miles in extent, is bold, rocky, broken, and contorted, abounding in awful cliffs, cavernous openings, and precipitous chasms. Except in a creek, called Saltpan, where salt used to be manufactured, and where a small harbour might be constructed, about midway between the two extremes of the parish, access is nowhere possible to a vessel on the west. But in Soleburn-bay in Loch-Ryan, 3 miles north of Stranraer, vessels lie in great safety, and discharge manurial cargoes for the use of the farmer. A number of brooks rise in the interior, some running to the Irish channel, and some to Loch-Ryan, while one is the head-stream of Piltanton-burn, which has a comparatively long course to the head of Luce bay. Red sandstone and greywacke—the latter often of a very fine appearance—are quarried as building material. The principal landowners are Sir Andrew Agnew, Bart., the Earl of Stair, and Agnew of Sheuchan; and there are five others. Lochnaw-castle, the seat of Sir Andrew Agnew, the only considerable mansion, stands on an eminence 5½ miles north-west of Stranraer, is a very ancient edifice, and bears marks, in the remains of a very deep fosse, and in other particulars, of having once been strongly fortified. On its west side is a very beautiful lake, nearly half a mile long, once drained, and its bed turned into meadow-land, but reinstated in its watery honours and decorations by the father of the present proprietor. The estate of Lochnaw, especially in the vicinity of the castle, has been richly improved and tastefully decorated. A monument, 70 feet high, has been erected, by public subscription, on a conspicuous site, to the memory of the late Sir Andrew Agnew, and is visible at a great distance. Good roads run along Loch-Ryan, past Lochnaw, and along the Irish channel. Population in 1831, 2,636; in 1851, 3,021. Houses, 494. Assessed property in 1843, £5,835 15s. 8d.

This parish is in the presbytery of Stranraer and synod of Galloway. Patron, the Crown. Stipend, £142 13s. 7d.; glebe, £15. Schoolmaster's salary, £25 13s. 3d., with from £10 to £20 fees, and from £5 to £10 other emoluments. The parish church was built in 1828, and contains 550 sittings. There is a chapel of ease, built in 1841, in Sheuchan, within the burgh boundaries of Stranraer; and

is under the patronage of Agnew of Sheuchan. There are two Free churches, the one of Leswalt, the other of Sheuchan; and the receipts of the former in 1855 were £195 15s. 0½d.,—of the latter, £187 10s. 4½d. There are three non-parochial schools, and a parochial library. The ancient parish church was a vicarage under the monks of Tongueland.

LETHAM, a post-office village in the parish of Monimail, Fifeshire. It stands on the west border of the parish, 4 miles west by north of Cupar, and 5 east-north-east of Auchtermuchty. A fair is held here on the second Wednesday of May. Population, 383. Houses, 84.

LETHAM, a post-office village in the parish of Dunnichen, Forfarshire. It stands on the swell or summit of a table-land, 5 miles east-south-east of Forfar, and 11 west-north-west of Arbroath, and commands a somewhat extensive prospect. Attached to it, in a hollow on the south, traversed by Vinney-water, is a minor village called the Den of Letham; and to the north is the long straggling village of Drummietermon. Letham is a place of modern date, founded by the late Mr. Dempster of Dunnichen, on a plan of such fine regularity and great extent as indicated alike refined taste and overheated expectation. The earliest settlers delighted in their old age to chaperone a stranger through corn-fields, and along rugged paths, pointing out to him, far away from the village, street lines and sites of city greatness, which his most heated fancy failed to see either in the rough spots before him, or in the visions of futurity. Yet the place, viewed simply as a village, has not wanted prosperity. A spinning-mill, in the Den of Letham, employs a number of persons; but a large proportion of the inhabitants, women and youths as well as men, are weavers in the employ of the manufacturers of Dundee. Fairs are held on the Thursday after the 22d day of January, on the 15th day of May, on the Monday after the 21st day of July, and on the 23d day of November. The village is a station of the county police, and it has a town hall, a public school taught in that hall, a Free church school, a public library, a chapel of ease, an Independent chapel, an United Presbyterian church, and a Free church. Population, 745. Houses, 184.

LETHAM-HILL, a hill of greenstone rock, crowned by a few loose blocks of greenstone, which have been regarded by some observers as the remains of a Druidical temple, in the parish of Inverkeithing, Fifeshire.

LETHAM-HOUSE. See HADDINGTONSHIRE.

LETHAN. See DUNFERMLINE.

LETHEN BURN, a rivulet of Nairnshire and Morayshire. It rises in the south-west of the parish of Ardclach, and runs about 12 miles north-eastward to a confluence with the Findhorn at the south-west extremity of Findhorn-loch, in the parish of Dyke and Moy.

LETHENDY, a parish in the Stormont district of Perthshire. It is bounded by Clunie, Blairgowrie, and Caputh. Its post-town is Blairgowrie, situated to the east. Its length from east to west is 5 miles; and its greatest breadth is 1½ mile. Its eastern boundary is traced by Lunan water. Its surface rises gently westward through all its length till within half-a-mile of the western boundary, and then it falls suddenly. The soil, in the western half, is a black mould inclining to reddish clay, exceedingly rich, and adapted to every kind of crop; but, towards the east, it becomes blacker, wetter, and less productive. About 1,486 imperial acres are in tillage; about 16 are pastoral or waste; and about 128 are under wood. There are three landowners. The real rental in 1842 was £1,797. Assessed property in 1843, £1,815 4s. 6d. Lethendy tower, the property of Mr. Gemmel of Lethendy, is a very old building, supposed to have been a fortalic in times preceding the invention of gunpowder. A pot, about 3½ feet in circumference, supposed to have been a Roman camp pot, was dug up a few years ago in the peat-moss of Blackloch. Population of Lethendy in 1831, 306. Houses, 68. Population of Lethendy and Kinloch in 1831, 708; in 1851, 556. Houses, 108.

This parish is in the presbytery of Dunkeld, and synod of Perth and Stirling; and it is united to KINLOCH: which see. Patron, the Crown. Stipend £211 1s. 1d.; glebe, £4 10s. There is one parish church jointly for Lethendy and Kinloch. There is also a Free church: attendance, 150; sum raised in 1855, £55 9s. 1½d. There is likewise an United Presbyterian church. There is a parochial school for each parish. Salary of the Lethendy schoolmaster £25, with about £12 fees, and about £3 other emoluments; of the Kinloch schoolmaster £35, with about the same fees and other emoluments as the other master. The united parish acquired notoriety inferior only to that of Auchterarder and that of Marnoch, from the working of the General Assembly's Veto Act. See AUCHTERARDER.

LETHINGTON. See HADDINGTON.

LETHNOT, a parish in the Grampian district of Forfarshire. It contains the village of Balfield, but its post-town is Brechin, 6 miles south-east of its nearest limit. It is bounded by Lochlee, Edzell, Strickathrow, Menmuir, Fearn, Tannadyce, and Cortachie. Its length south-eastward is 13 miles, and its greatest breadth is 5¾ miles. Except over 5½ miles in the east, the boundaries are all lofty watersheds, comprising some of the loftiest summits of the Forfarshire Grampians, and enclosing the basin of all the upper streams of West-water. The stream, under the name of the water of Saugh, rises close on the western extremity, and flowing generally south-eastward, but making one large detour cuts the parish lengthways into two nearly equal parts; and it then, suddenly debouching, runs 2 miles north-eastward along its south-east boundary. About a dozen considerable brooks, besides small ones, cleave down the congeries of hill and mountain which occupies the main area of the parish, and run slantingly to West-water. Pelphrie-burn, approaching from the south-west, runs 2½ miles along the south-east boundary, till it meets West-water, and falls into it. Inward from this water boundary-line—altogether 5 miles in length—is a belt of arable ground, averaging, even up to the ploughable limit of the hills, not more than ¾ of a mile in breadth. Nearly all the rest of the parish, except some haugh ground in the glen of West-water, is either strictly pastoral or wildly waste. The soil of the arable land is, in some places, clayey, and, in others, a rich loam on a till bottom. There are a few mineral springs. The predominant rocks are clay slate and mica slate. A vein of roofing slate was for a short time worked. Some limestone occurs, but is of no practical use. There are two landowners. The real rental, according to the new valuation in 1855, is £2,762. Assessed property in 1843, £1,399. There are remains of two or three small Druidical temples. There are also several small cairns said by tradition to be memorials of a skirmish between the Bruce's forces and the English. Population in 1831, 414; in 1851, 408. Houses, 86.

This parish is in the presbytery of Brechin, and synod of Angus and Mearns. Patron, the Crown. Stipend, £158 6s. 11d.; glebe, £5. Schoolmaster's salary, £34, with £10 fees. The parish church

built in 1827, and contains about 250 sittings. A non-parochial school, 5 miles from the church, aided by endowment and subscription, is taught in winter. The present parish comprehends the ancient parishes of Lethnot and Navar, lying respectively on the left and the right sides of West-water, and united in 1723. Lethnot, previous to that date, formed one charge with the very spacious adjacent parish of Lochlee. Navar gave the title of Baron to the Earls of Panmure.

LEUCHAR-BURN, a tributary of the Dee in Aberdeenshire. It rises in the parish of Midmar, and runs 3 miles northward to the boundary with Cluny. It then runs 7 miles eastward and southeastward, between Midmar and Echt on its right bank, and Cluny and Skene on its left bank, expanding in one part into the loch of Skene. And it then runs 3½ miles south-eastward, through the parish of Peterculter, to the Dee, cutting that parish into nearly equal parts. It has considerable waterpower, and drives some mills. The part of it below Loch Skene also bears the name of the Culter.

LEUCHARS, a parish, containing the post-office village of Leuchars and the village of Balmullo, on the north-east border of Fifeshire. It is bounded by the German ocean, by the estuary of the Eden, and by the parishes of St. Andrews, Kemback, Fairsie, Logie, Forgan, and Ferry-Port-on-Craig. Its length north-eastward is 9 miles; and its greatest breadth is 5 miles. The river Eden and its estuary form all the southern boundary. The rivulet Mouly flows southward through the interior, to the head of the Eden's estuary, dividing the parish into two not very unequal parts; and is joined near its south by the Monzie burn, flowing to it from the west. The tide retires from the shore about half-a-mile at low water. The shore itself is flat and muddy; and a considerable breadth of seaboard called Tentsmoor is a flat sandy tract, abandoned at some comparatively recent period by the ocean, and long a swarming ground for rabbits, but now reclaimed and under culture, though even yet of a poor arenaceous soil. The general aspect of the parish, not only over the Tentsmoor, but over an aggregate extent of many square miles, is that of an extensive flat, rather bare of wood, and not having an average elevation of more than 15 feet above the level of the sea. But to the west of this tract, the ground rises gradually till it reaches the summit line of a range of hills, on the boundary with Logie, at an elevation of about 250 or 300 feet above the level of the sea. Various points on these heights command a magnificent view of the whole sea-board of the bay of St. Andrews. The soil of the flat parts of the parish comprises every variety from the poorest sand to the richest clayey loam; and that of the higher grounds in the west is variously gravel, soft loam, and clay. About 6,310 Scotch acres are in constant cultivation, about 3,060 are either pastoral or lint occasionally in tillage, and about 360 are under wood. A sandstone, of the new red formation, occurs near the Eden, but is little suited for building. Trap rocks prevail on the high grounds, and are extensively quarried. There are ten landowners; and four of them are resident. The old valued rental is £10.541 Scotch. The value of assessed property in 1843 was £15,527 3s. 9d. The estimated value of raw produce in 1836 was £37,300. There are in the parish a saw-mill, a lint-mill, and several grain-mills. An extensive distillery was erected about 46 years ago, at Seggie on the Eden. An extensive employment is the handloom weaving of coarse linens. Sea-borne communication is enjoyed through the small harbour of Guard-bridge on the Eden. The parish is traversed by the road from St. Andrews to Newport, and by the Dundee fork of the Edinburgh, Perth, and Dundee railway. The village of Leuchars stands on the St. Andrews and Newport road, nearly midway between these places, and about a mile north of the head of the estuary of the Eden. Two fairs for cattle and small wares were formerly held here, but have almost gone into disuse. There is a railway station for Leuchars, 5 miles south of Tayport and 9 north-east of Cupar; and in the vicinity of this is the junction of the St. Andrews railway. Population of the village, 592. Houses, 162. Population of the parish in 1831, 1,869; in 1851, 1,991. Houses, 417.

An interesting object in the parish is EARLSHALL; which see. North of Earlshall, and north-east of the village of Leuchars, is the mansion of Pitlethie. Here, it is said, there was anciently a royal hunting seat frequented by one or more of the Kings of Scotland for the old sport of hawking. Pitcullo and Airdit are old castellated mansions, kept in partial repair. The ancient castle of Leuchars was situated a short way north of the village of Leuchars, but has entirely disappeared. It stood upon a bank of earth, on the edge of a swamp, and was surrounded by a deep broad ditch, which enclosed about three acres of ground, and must have been a place of great strength. It was the residence of the Celtic chief, Ness, the son of William, whose daughter was married to Robert de Quinci; and appears to have been the principal residence also of their son, Seyer de Quinci, Earl of Winchester, where he held his baronial court, as many of his charters are dated thence; and in a dispute with Duncan, the son of Hamelin, about the lands of Duglin, in the Ochils, he brought Duncan to acknowledge a release of his claims, in his court, "in plena curia mea apud Locres." In 1327, the castle was taken and demolished by the English, under the Earl of Pembroke; but no doubt it was afterwards rebuilt. On Craigie hill there was found, in 1808, an earthen vase containing nearly an hundred Roman coins in excellent preservation, stamped with the heads of Severus, Antoninus, and other Roman emperors.

The parish church, situated in the village of Leuchars, is a very interesting object. The eastern portion of it, which is supposed to have formed the original church, is obviously of great antiquity, and is a beautiful specimen of Norman architecture. It consists of two parts, a rectangular portion which formed the chancel, and a semicircular apse at the east end, of less breadth and height, in which the altar was placed. Its extreme length within the walls, from what had formed the western entrance to the east end of the apse is 33 feet; the breadth of the chancel about 18 feet, and of the apse 12 feet. The height of the walls of the chancel is 22 feet, and of those of the apse about 18 feet. The thickness of the walls is about 3 feet. The walls of the chancel on the outside, both on the south and north, present two stages or stories. The lower stage is ornamented with four double columns, and two single columns at each end, with ornamented capitals, from which spring semicircular arches, which interlace each other, forming pointed arches at their intersection. Above these arches there is a band or fillet forming the base of the second story, and supporting four double and two single columns as on the lower stage. From these spring five

semicircular arches, ornamented with a double moulding, the inner being a zigzag or chevron moulding, and the outer a billet moulding. Above these arches is a range of corbels carved into grotesque heads, supporting the upper part of the wall which slightly projects, and from which springs the roof. The wall of the chancel is pierced in the second story with two windows on the south side and one on the north; they are narrow and semicircular at top, and are ornamented on the inside with pillars, and rich mouldings from the soffets of the arches. The apse also presents two stories. They are both decorated with pillars and arches with chevron and billet mouldings, and surmounted by a range of grotesque corbel heads, as on the chancel; but the arches of the lower stage do not interlace each other as in the lower stage of the chancel. The upper stage of the apse is also pierced with three windows similar to the chancel, and similarly ornamented in the inside; one of these fronts the east, one the south-east, and the other the north-east. A lofty arch opened from the apse into the chancel, and another appears to have formed the western entrance, both of which are ornamented with three slender pillars. The portion of the church immediately west of this seems to have been erected at a subsequent period, and to have formed a nave, whilst the chancel then formed the choir of the church. This nave, together with an addition erected about the time of the Reformation, and another addition erected some time in last century, forms the present place of worship. These additions and other alterations have greatly damaged the appearance of the original pile. The windows on the south side of the chancel, and one in the apse, have been built up, and square windows inserted, divided by a single stone mullion. The roof of the apse, too, has been destroyed by the erection of an ugly belfry over it; and the other two windows are partially blocked up by a rude arch thrown across the building to support it. Nothing is known as to the exact period when this portion of the church was built; but from the style of the architecture, it must have been in the 12th, or early in the 13th century. Robert de Quinci obtained the lordship of Leuchars by marriage with the daughter of Ness during the reign of William the Lion; and his son Seyer de Quinci, Earl of Winchester, succeeded him in 1190, and died in 1219. As he resided at Leuchars-castle, and had his principal court there, it seems extremely probable that it was erected by him, some time between these two periods, as a place of worship for himself and his family.

This parish is in the presbytery of St. Andrews, and synod of Fife. Patron, the Crown. Stipend, £253 3s. 4d.; glebe, £30. Unappropriated teinds, £452 5s. 2d. Schoolmaster's salary, £34 4s. 4½d. with about £20 fees, and some other emoluments. The parish church contains 850 sittings. There are two Free churches, the one at Leuchars, the other at Balmullo; and the receipts of the former in 1855 were £159 14s. 11½d.,—of the latter, £61. There are three private schools, and a parochial library. There were anciently three chapels in the parish, one of them at Easter Tron, another near the house of Airdit, and the third on the spot now occupied by the parochial school. The famous Alexander Henderson was minister of Leuchars for more than twenty years.

LEUTHER. See LUTHER.

LEVEN, a post-town and sea-port in the parish of Scoonie, Fifeshire. It stands at the mouth of the river Leven, on the west side of Largo-bay, 2 miles east-south-east of Kennoway, 2½ west-south-west of Lower Largo, and 9 north-east of Kirkcaldy. It is a burgh of barony, under the family of Durie, and includes the hamlet of Scoonie burn. It lies on the shore, on the left side of the mouth of the river, and is connected with Dubbieside or Inverleven, on the right bank, by a handsome suspension bridge, which was erected at the cost of about £530. The town consists principally of two streets extending parallel to each other, and of a number of bye-lanes. A chief employment of its inhabitants is hand-loom linen weaving; but there are other considerable employments both in the town itself and in its near neighbourhood. At Kirkland, on the right bank of the river, about ½ a mile above the town, are extensive works for the preparing and spinning of flax; and on the left bank of the river, in the town and its vicinity, are five flax-mills, an iron foundry, a saw-mill and wood-yard, a brick and tile work, and a bone-mill. Fairs are held on the second Wednesday of April, old style, on the second Wednesday of June, on the first and last Wednesday of July, and on the third Wednesday of August, of September, and of October. There are two principal inns, Crawford's hotel and the Star inn. The town has offices of the Commercial, the Royal, and the City of Glasgow banks, a savings' bank, a gas company, a golf club, and a curling club. Its harbour is entirely a natural one, formed by a creek at the mouth of the river; and, at spring tides, it admits vessels of about 300 tons burden, but is rather difficult of access. A small quay was built about 23 years ago. The harbour ranks as a creek of the port of Kirkcaldy; and the amount of dues levied at it in the year 1822 was £185. Several vessels belong to it, and nearly 300 enter it in the year. The principal imports are flax, timber, ashes, pig-iron, bones, and malt; and the principal exports are linen yarn, linen cloth, whisky, bone-dust, cast-iron, and potatoes. A packet sails every Tuesday to Leith; and ample communication is enjoyed landward by means of the Leven railway. In the town are a Free church, an United Presbyterian church, and an Independent chapel; and in the near neighbourhood is the parish church of Scoonie. Sheriff small debt courts are held on the second Friday of March, on the first Friday of June, and on the last Friday of August and of November. A board of police was established above 20 years ago. The town gives the title of Earl to the noble family of Melville, created Barons of Balgonie and Earls of Leven in 1641, whose seat of Melville-house is in the parish of Monimail. Population in 1841, 1,827; in 1851, 2,083. Houses, 338.

LEVENFIELD. See BONHILL.

LEVEN (LOCH), a beautiful sheet of water in Kinross-shire. It lies in the south-eastern part of that small county, receiving all its drainage on the north, the west, and the south, and discharging its superfluence by the river Leven on the east. It has an elevation of about 360 feet above the level of the sea; and its annual average fluctuation in height is about 3 feet. Its outline is somewhat oval, with the longer axis extending east-south-eastward; its circumference is between 8 and 9 miles; and its area is about 4,000 acres. A partial drainage of it was effected about 20 years ago, under an act of parliament, at the cost of about £40,000; and this reduced its area to the amount of about 1,000 acres, chiefly on the eastern side, yielding up land which was mostly all of a whitish, arenaceous kind, and of small value. The surrounding scenery is predominantly soft and gentle, yet has bold feature

on the east and south, and is altogether a piece of fine landscape. See KINROSS-SHIRE. The medium depth of the lake, since the draining took place, is about 14 feet. Its trout have always been famed for fine flavour and a peculiar high colour; but they have decreased both in number and in quality since the draining.

There are several islets in the lake; but only two of them challenge notice,—the one called St. Serf's island, in the south-east, belonging to the parish of Portmoak; and the other called Castle island, containing the famous castle of Loch-Leven, once the prison of Queen Mary, within a short distance of the town of Kinross on the west. The island of St. Serf has an area of about 80 acres, and lies 5 furlongs from Portmoak-proper on the eastern shore. On this island anciently stood a priory, dedicated to St. Serf or St. Servanus; and at Portmoak were the site of its church, and the landing-place of its monks. The first superior of the priory, or of a Culdee establishment which preceded it, is said to have borne the name of Moak or St. Moak; and, from him, the landing-place, and afterwards the kirktown and the parish, are supposed to have been called Portmoak. The parish, however, appears to have originally borne the same name as the islet. Some small ruins of the priory still exist. The establishment is said to have been founded by a Pictish king, and given to the Culdees; and it afterwards became a dependency of the Augustinian abbey of St. Andrews. Its revenues in 1561 were £111 13s. 4d. in money, 1 chalder and 12 bolls of bear, and 4 chalders and 8 bolls of oats. Andrew Wyntoun, the famous old chronicler, was one of its priors. The islet is now inhabited by only a few sheep and cattle, which feed upon its sward; but, at a recent period, its appearance was improved by the transporting of soil to it, and the planting of a few trees.

The Castle island has an area of about 5 acres. It was much increased in size, and looked to the eye to rise much from the water, by the draining. An apprehension was even entertained, at that time, that, by the subsiding of the water, it would become joined to the mainland, and lose its classic associations. This seemed the more likely to happen that an ancient causeway extends from it, under water, to the shore. When, or for what purpose, the causeway was formed, is not known; but so continuous and high is it that, in a dry season, when the depth of the lake is at the lowest, a man can wade along it from end to end. The original castle on this island, or a fortalice out of which the castle sprang, is said to have been built by Congal, the son of Dongart, king of the Picts. "In the wars which harassed Scotland, during the minority of David II., the castle of Loch-Leven was held in the patriotic interest by Allen de Vipont, against the troops of Edward III., who acted in behalf of Edward Baliol. John de Strivilin blockaded it, erected a fortress in the churchyard of Kinross, which occupies the point of a neighbouring promontory; and, at the lower end of the lake, where the water of Leven issues out of it, it is said, that he raised a strong and lofty bulwark, by means of which he hoped to lay the castle under water, and constrain Vipont to surrender. The water continued to rise daily, and the besiegers thought themselves certain of success, when, the English general and most of his troops having left the camp to celebrate the festival of St. Margaret at Dunfermline, the besieged, seizing the favourable opportunity, (June 19, 1335,) after much labour and perseverance, broke through the barrier, when the water rushed out with such impetuosity, as to overwhelm the English encamped on that side." But Loch-Leven castle derives its chief historical interest from having been the prison of Queen Mary, after her surrender to the confederated Lords at Carberry hill. In the reign of Robert III., a branch of the family of Douglas had obtained a grant of the castle, with lands on the shore of the lake. In the middle of the 16th century, Sir Robert Douglas of Loch-Leven, the near kinsman of the famous James Earl of Morton, and stepfather to the equally well-known James Earl of Moray, natural brother to the Queen, was, in consequence of his connexion with the leaders of her disaffected subjects, selected as her jailer; so that she was imprisoned here on the 16th June, 1567. Here, on the 4th July following, she was visited by Lord Ruthven, Lord Lindsay of the Byres, and Sir Robert Melville, in name of the confederated lords, by whom she was forced to sign an instrument, resigning the crown to her infant son, who, a few days thereafter, was inaugurated at Stirling under the title of James VI. The scene which then occurred, as well as the subsequent escape of the Queen, were made leading incidents, by Sir Walter Scott, in his novel of 'The Abbot;' and few descriptions in fictitious narrative can be compared, for graphic delineation and intense pathos, with his account of the unhappy lady's resignation of the crown of her fathers. On the 2d of May, 1568, after an imprisonment of about eleven months, Mary effected her escape from the castle, by the aid of a young relation of the family. A previous attempt, made on the 25th of April preceding, had been discovered, and George Douglas, the younger son of Sir Robert, was expelled the castle for being concerned in it. Nothing daunted, however, she still meditated her escape; and George Douglas, continuing to hover in the neighbourhood, was enabled to keep up a correspondence with her. There was in the castle, a lad, named William Douglas, some relation probably of the baron, and about eighteen years old, who stole the keys of the castle from the table where they lay, while his lord was at supper. "He let the Queen and a waiting-woman out of the apartment where they were secured, and out of the door itself, embarked with them in a small skiff, and rowed them to the shore. To prevent instant pursuit, he, for precaution's sake, locked the iron grated door of the tower, and threw the keys into the lake. They found George Douglas and the Queen's servant, Beaton, waiting for them, and Lord Seyton and James Hamilton of Orbieston in attendance, at the head of a party of faithful followers, with whom they fled to Niddrie castle, and from thence to Hamilton." The Earl of Northumberland also, after his rebellion in England and capture in Scotland, was confined in Loch-Leven castle from 1569 to 1572, when he was delivered up to Elizabeth, who condemned him to death.

The castle of Loch-Leven, with its court-yard, occupied a considerable portion of the old area of the island; and the garden occupied most of the remainder. In 1840, the court-yard was cleared from a rank growth of weeds, and the different parts of the building swept clean of rubbish. The great tower, or keep, of the castle, stood in the north-west corner of the court-yard, on the side of the island next Kinross. It is of a square form, four stories in height, the walls being upwards of six feet thick. The entrance is in the second story, and must have been ascended to by an outside stair, having probably a drawbridge at top; but all vestiges of this stair have disappeared. The door opened at once into the great hall of the castle, which occupied the whole of the second flat of the building. Imme-

diately within the door-way, and at the entrance to the hall, is a square opening into the vaults below, which must have been covered with wood. The intention of this seems obviously to have been an additional means of defence; because, though after all the outworks had been gained by the enemy, and the defences to the door of the keep forced, the garrison, occupying the hall, could have thrown down this opening any of the assailants who might attempt to cross it. The two upper stories of the keep appear to have been occupied as bedchambers. The court-yard, which was of considerable extent, and surrounded by high walls flanked at the corners by towers, contained a variety of buildings for the accommodation of the family and the garrison. Among these, not the least important was the chapel, which stood west of the great tower, and on the west side of the court-yard. At the south-east corner is a round tower which flanks and must have defended the south and east walls, in which it is said Queen Mary was confined. The entire appearance of the castle, as seen from the shore, is gloomily picturesque.

> "No more its arches echo to the noise
> Of joy and festive mirth; no more the glance
> Of blazing taper through its windows beams,
> And quivers on the undulating wave;
> But naked stand the melancholy walls,
> Lash'd by the wintry tempests, cold and bleak,
> That whistle mournfully through the empty hall,
> And piecemeal crumble down the tower to dust."

LEVEN (Loch), an arm of the sea projecting eastward from the head of Loch-Linnhe, and extending in a straight line between Argyleshire and Inverness-shire. It has a length of 12 miles, but is comparatively narrow, and contracts at two points to a strait, the one at Ballachulish-ferry in its lower part, the other at Dogs-ferry, about 3 miles from its head. A glen in continuation of it eastward is occupied by the rivulet Leven and a chain of small fresh-water lakes. The whole glen, both in this part of it and in the Loch-Leven part, is grandly picturesque. Macculloch says—"It is with justice that Glencoe is celebrated as one of the wildest and most romantic specimens of Scottish scenery; but those who have written about Glencoe, forget to write about Loch-Leven, and those who occupy a day in wandering from the inns at Ballachulish through its strange and rocky valley, forget to open their eyes upon those beautiful landscapes which surround them on all sides, and which render Loch-Leven a spot that Scotland does not often exceed, either in its interior lakes or its maritime inlets. From its mouth to its further extremity this loch is one continued succession of landscapes on both sides, the northern shore being accessible by the ancient road which crosses the Devil's Staircase, but the southern one turning away from the water near to the quarries. The chief beauties, however, lie at the lower half; the interest of the scenes diminishing after passing the contraction which takes place near the entrance of Glencoe, and the furthest extremity being rather wild than beautiful."

LEVEN RAILWAY, a railway in Fifeshire, forming a junction with the Edinburgh, Perth, and Dundee railway. Its junction is at Thornton, in the parish of Markinch; and it extends thence eastward to Burnmill, in the parish of Scoonie, with branches to Kirkland works and Leven harbour. Its length is about 6 miles. It was completed in 1854. The authorized capital for it was £28,000. It has a station at Cameron-bridge, a little south of Kennoway.

LEVEN (The), a river of Kinross-shire and Fifeshire. It issues from the southern part of the east side of Loch-Leven, in the parish of Portmoak, and runs 12 miles eastward to the west side of Largo-bay, at the town of Leven. It traverses or bounds the parishes of Portmoak, Leslie, Kinglassie, Markinch, Kennoway, and Scoonie. Its principal tributaries are the Lothry on its left bank, and the Orr on its right. The Leven has a rapid current, falling 360 feet between the loch and the sea. Its waters are pure and limpid, and peculiarly well adapted to the purposes of bleaching and paper-making.

LEVEN (The), a river of Dumbartonshire. It issues from the foot of Loch-Lomond at Balloch, and runs southward, through the parish of Bonhill, and between the parish of Dumbarton and the parish of Cardross, to the Clyde at Dumbarton-castle. Its length of course, measured in a straight line, is little more than 5 miles; but, measured along the windings, is about 10 miles. It is still the "transparent" stream so beautifully sung by Smollett; and its banks, though no longer possessing the Arcadian character which he so sweetly celebrates, but dotted with manufactories, and teeming with population, continue to be pleasingly picturesque. Its vale is nearly 2 miles broad, with luxuriant bottom, and well-featured hill-flanks. The river is remarkably limpid, pure, and soft, admirably suited for bleachfields and printfields. Its fall from the loch to the Clyde is only 22 feet; and its discharge, at times when it is rather below its average height, has been computed at 59,939 cubic feet per minute. It is stemmed by the tide for 3 miles; and even the upper part of it, for nearly half of the year, is navigable in the manner of a boat-canal.

LEVEN (The), a rivulet, rising near the point where the counties of Perth, Argyle, and Inverness meet, and running 13 miles westward, along the boundary between Argyleshire and Inverness-shire, to the head of the marine Loch-Leven. See Leven (Loch).

LEVEN (The), a rivulet having in its course the picturesque cascade of Esscumhan, in the parish of Kilmorie, in the island of Arran.

LEVEN VALLEY RAILWAY. See Dumbartonshire Railway.

LEVERN (The), a stream of Renfrewshire. It issues from Long-Loch, on the boundary between the parish of Neilston and the parish of Mearns, near the boundary with Ayrshire, and runs through the parish of Neilston, and along the boundary between the Abbey parish of Paisley and the parish of Eastwood, to a junction with the White Cart, near Crookston-castle, about 3 miles east of Paisley. Its course for the first 2 miles is north-westerly, but afterwards is, for the most part, north-easterly. Its length of run, exclusive of windings, is about 10 miles. Its principal affluents are the Kirkton and the Brock burns. It exhibits various scenes of sequestered and even romantic beauty. Before reaching the level ground, its velocity is very considerable, and there are several waterfalls which may justify the derivation of the name from the Celtic words *laver-an*, signifying 'the noisy stream.' The cascades in Killock-glen form a miniature resemblance of the three celebrated falls on the Clyde. The greater part of its valley is thickly inhabited by a manufacturing population, with centres at the villages of Neilston, Barrhead, and Hurlet; and is greatly aided in its communication by the Glasgow and Neilston railway. A chapel of ease within the Abbey of Paisley part of it bears the name of Levern church.

LEWES OF FYVIE. See Fyvie.

LEWIS, the northern part of the Long-Island or

Outer Hebrides. It comprises one large island and a great number of isles or islets. The large island consists of two parts, Lewis-proper on the north and Harris on the south, which are united to each other by an isthmus of about 9 miles in breadth. Harris and the isles connected with it belong to Inverness-shire, and have been fully described in our article HARRIS. Lewis-proper and the islets connected with it belong to Ross-shire. The islets, excepting only the small group called the Shiant isles, lie quite close to the coast, and are all very small, and for the most part uninhabited, so that they do not need to be separately noticed. The main body of Lewis-proper, in all its statistics, and in many of its principal features, as well as in most of its minor ones, will be found described in our articles on its four parishes of BARRAS, LOCHS, STORNOWAY, and UIG. We require in the present article, therefore, to make only a few general statements.

Lewis-proper has somewhat the outline of an equilateral triangle, its base 30 miles broad, each of its sides 50 miles long, and its apex pointing to the north-east. But the angles at the base are rounded off, and the apex makes a twist to the north, terminating there in a promontory called the Butt of Lewis. The general surface of Lewis-proper is not so mountainous and rugged as that of Harris; but its low grounds are very extensively mottled with lakes, swamps, and bogs. About one-fourth of the whole is mountainous; and the rest is predominantly moorish or mossy, with here and there an undulating tract of blue clay upon a rocky bottom. On some parts of the coast the soil is of a sandy nature, tolerably fertile. The rocky cliffs which form the Butt, rise to the height of 60 or 80 feet, and are broken into very rugged and picturesque forms. The loftiest mountain is that of Suaneval, which Dr. Macculloch supposes to be nearly equal in height to Clisseval in Harris, or about 2,700 feet. A group of hills, on the north side of Loch Bernera, attain a height of about 800 feet. Gneiss is the predominant rock. Numerous sea-lochs or elongated bays project far into the interior on both sides of the southern district, and in some instances are much ramified, insomuch that they, and the fresh-water lakes, produce, in many parts, a watery labyrinth with the land. But these sea-lochs afford great quantities of shell-fish; and the whole coast is very favourable for the white fish and herring-fisheries. The streams also abound with trout and salmon. Large roots of trees have been abundantly dug up in the bogs, indicating the ancient existence of an extensive forest; but in later times, excepting a small patch in the neighbourhood of Stornoway, the whole country became utterly destitute of wood, exhibiting as bleak and almost as hyperborean an appearance as the most desolate inhabited tract in the Arctic seas. Its agriculture and its arts also, till only a few years ago, were in a very rude state. It belonged then to the Mackenzies of Seaforth; but it was purchased for £190,000 by Sir James Matheson of Achany, Bart.; and, immediately after coming into that gentleman's possession, it began to undergo a series of sweeping improvements, which have greatly changed its character. Within seven years a sum as great as the amount of the purchase-money was spent on these improvements, all in a judicious way, and with admirable effect. No instance of improvement, in recent times, within the united kingdom, has been more striking to the eye of an observer, more compensating to the proprietor, or more beneficial to the population. Its details have comprised draining, planting, road-making, the reforming of husbandry, the improving of live stock, the introduction of manufactures, and the encouraging of fisheries, all on a great scale and with good results. The focus of the improvements has been Stornoway and its neighbourhood; so that a fuller account of them will fall to be given in our article on Stornoway. Population in 1831, 14,541; in 1851, 19,711. Houses, 3,346.

LEWIS-RONA. See RONA-LEWIS.

LEWISTON (EAST and WEST), two villages in the parish of Glenmoriston, Inverness-shire. Population, 183. Houses, 38.

LEY OF HALLYBURTON, a hamlet in the parish of Kettins, Forfarshire. Population, 48. Houses, 11.

LEYS. See BANCHORY-TERNAN, and ERROL.

LEYS-CASTLE. See CROY.

LEYSMILL, a village in the parish of Inverkeillor, Forfarshire. It has a station on the Aberdeen railway, 1¾ mile south-east of Friockheim, and 5¼ miles north-north-west of Arbroath. Adjacent to it is a quarry for paving flags, which are dressed here by steam-propelled machinery. Population, 173.

LHANBRIDE, or ST. ANDREWS LHANBRIDE, a parish, containing a post-office village of its own name, and a small part of the parliamentary burgh of Elgin, in Morayshire. It is bounded by the Moray frith, and by the parishes of Urquhart, Elgin, and Drainie. Its length northward is upwards of 4 miles, and its breadth is about 3 miles. Its western boundary is traced by the Lossie. Its surface is a plain, diversified with low hills. The soil is sandy, but in general fertile. About 4,000 acres are in tillage, and about 700 are under wood. A fine druidical monument was destroyed a number of years ago for the purpose of road making; but another, nearly entire, remains. There are a distillery at Linkwood, a cast-iron foundery at Newmill, and two woollen manufactories on the Lossie adjacent to the town of Elgin. The parish is traversed by the road from Inverness to Aberdeen; and the village of Lhanbride stands on that road, 4 miles east-south-east of Elgin. Population in 1831, 1,087; in 1851, 1,263. Houses, 228. Assessed property in 1843, £4,104 2s. 8d.

This parish is in the presbytery of Elgin, and synod of Moray. Patrons, the Crown and the Earl of Moray. Stipend, £257 13s. 4d. Unappropriated teinds, £418 7s. 7d. Schoolmaster's salary, £34, with about £10 fees, and a share of the Dick bequest. The parish church is sufficiently commodious. The present parish comprehends the two ancient parishes of Lhanbride on the south, and St. Andrews on the north, which were united in 1782. The name Lhanbride is Gaelic, and signifies the church of St. Bridget.

LIBBERTON, a parish, comprehending the ancient parishes of Libberton and Quothquan, in the upper ward of Lanarkshire. Its post-town is Carnwath. It is bounded by the parishes of Carnwath, Walston, Biggar, Symington, Covington, and Pettinain. Its length northward is about 7 miles; and its greatest breadth is about 4½ miles. The Clyde traces the whole of its western boundary; and the South Medwin traces the whole of its northern boundary, into junction with the Clyde. The parish is thus a peninsula between the Clyde and the South Medwin; and it ascends on the south-east to a line of watershed between the river-system of the Clyde and the river-system of the Tweed, along the boundary with Biggar. A large extent of haughland, with a strong clay soil, extends along the Clyde; the tract inward thence rises in some places gently, in other places suddenly, to the height of 50 or 60 feet above the level of the stream, and extends, with a fine, early, fertile soil, to the distance of ½

a-mile or more; and the land further back becomes more elevated, later, and less productive in its arable parts, till it includes also a large extent of uncultivated surface. The banks of the Medwin comprise some early fertile spots, but, in general, are poor and moorish. About 5,703 imperial acres in the parish are arable; about 2,500 are pastoral or waste; and about 500 are under wood. The principal hill is Quothquan-law. See QUOTHQUAN. The estimated value of raw produce in 1834 was £13,004. Assessed property in 1843, £4,730 8s. 7d. The most extensive landowner is Sir N. M'D. Lockhart, Bart.; and the next most extensive is Chancellor of Quothquan and Shieldhill. This portion of the Lockhart estates was sold by the fourth Earl of Carnwath, in 1676, to Sir George Lockhart, afterwards President of the Court-of-session, who was assassinated in March 1689; and they have remained in the family ever since. The lands of Quothquan and Shieldhill have, however, been in possession of the Chancellor family for more than 400 years, a charter being still extant, containing a grant of them by Lord Sommerville to the ancestor of the Chancellor family. The proprietor of the estate in the time of Queen Mary took part with that princess, and was engaged at the battle of Langside; in consequence of which his mansion at Quothquan was soon afterwards burnt down by the adherents of the victorious Regent Moray. The residence was then removed to Shieldhill, its present site. A short distance south of it is Huntfield, the mansion of another landowner. The parish is traversed by the road from Glasgow to Peebles, and has ready access to the Thankerton and Carnwath stations of the Caledonian railway. There are two small villages of the same names as the two ancient parishes,—Libberton on the Glasgow and Peebles road, 2½ miles south-east of Carnwath; and Quothquan in the south-west, 1½ mile east of Thankerton. Population of the parish in 1831, 773; in 1851, 800. Houses, 151.

This parish is in the presbytery of Biggar, and synod of Lothian and Tweeddale. Patron, Sir N. M'D. Lockhart, Bart. Stipend, £226 3s. 1d.; glebe, £16. Schoolmaster's salary, £30, with about £20 fees. There is also a school at Quothquan. The parish church was built in 1812, and contains 450 sittings. The parishes of Libberton and Quothquan were united in 1669.

LIBERTON, a parish in Edinburghshire. It extends from near the eastern termination of the Pentland hills to within a few yards of the frith of Forth at Magdalene bridge, and from the immediate vicinity of Edinburgh to within a mile of Dalkeith. It contains the post-office station of Liberton, the villages of Gilmerton, Greenend, Niddry, and Kirk-Liberton, part of the village of New Craighall, the hamlets of Burdiehouse and Nether-Liberton, and about fifteen other hamlets. It is bounded by the parishes of St. Cuthbert's, Duddingstone, Inveresk, Newton, Dalkeith, Lasswade, and Colinton. Its length north-eastward is nearly 7 miles; and its greatest breadth is about 4 miles; but its north-eastern extremity, to the extent of about 2 miles, has an average breadth of considerably less than 1 mile. It is one of the richest and most beautiful parishes in the Lothians. Its surface is exquisitely diversified, with low broad ridges, gentle rising grounds, undulating swells, and intermediate plains, nowhere attaining sufficient elevation to be called a hill, nor anywhere subsiding long from the constant and ever-varying curve of beauty. The Braid hills and the Blackford hills send down their cultivated eastern slopes within the western limits. Numerous vantage-grounds command splendid views of the profile of Edinburgh, the basin of the Forth, and the distant hills of Fifeshire and the Ochils. Two brooks, Burdiehouse-burn and the Braid-burn, run north-eastward through the interior, and drive a number of mills. The soil, in some parts, is a wet clay or a dry gravel, but, in general, is a very fertile loam. Hardly an acre of waste ground exists; and where the soil continues to be inferior, skill and labour are rapidly enriching it. Nearly six-sevenths of the whole area are constantly subjected to the plough, and the rest is disposed in gardens, shrubberies, wood, and grass. Mines of great value, of various produce, and of considerable antiquity, exist at GILMERTON and BURDIEHOUSE: See these articles. Quarries of prime sandstone for building exist at Straiton, Craigmillar, and Niddry. The yearly value of raw produce, including minerals, was estimated in 1839 at £56,181. Assessed property in 1843, £23,715 0s. 11d. There are fourteen principal landowners. At St. Catherine's, a mile south of Kirk-Liberton village, is a bituminous spring, anciently called the Balm well, which partly holds mineral oil or petroleum in solution, and partly throws it up in numerous little masses to the surface. This well was held in great superstitious repute in the Roman Catholic times. Close on the western extremity of the parish, is the hill of Galachlaw, famous as the site of Oliver Cromwell's encampment, in 1650, with a force of 16,000, previous to the battle of Dunbar. A little east of it, at Mortonhall, are some tumuli, supposed to have been of Roman origin. Large part of the Borough-moor, a tract repeatedly made prominent in the warlike history of Scotland and its metropolis, is within the parish. In the park of Drum, the ancient residence of the family of Somerville, stands part of the old market-cross of Edinburgh, removed thither in 1756. But the grand civil antiquity of the parish is CRAIGMILLAR CASTLE: which see. Besides Mortonhall and Drum, there are the mansions of Inch House, built in 1617,—Brunstane, built by Lord Lauderdale in 1639,—Niddry, an ancient baronial edifice, modernized and extended by a recent addition,—Southfield,—Moredun,—St. Catherine's,—Mount Vernon,—Sunnyside,—and several villas. The village of Kirk-Liberton is a neat, small place, on the summit of a low, broad-based ridge, 2¾ miles south-south-east of the centre of Edinburgh, on the road thence to Lasswade. Nether-Liberton, ¾ of a mile nearer Edinburgh, is only a small hamlet. The broad part of the parish is traversed by three lines of road diverging from Edinburgh; and its north-eastern wing is crossed by the North British railway. Population in 1831, 4,063; in 1851, 3,528. Houses, 703.

This parish is in the presbytery of Edinburgh, and synod of Lothian and Tweeddale. Patron, the Crown. Stipend, £326 14s. 7d.; glebe, £20. Unappropriated teinds, £306 0s. 9d. Schoolmaster's salary, £34 4s. 4½d. There are nine non-parochial schools,—four of them partially endowed. The parish church is situated at Kirk-Liberton, was built in 1815, and contains 1,430 sittings. It is a very handsome building, with a beautiful tower in the Gothic style, and forms a fine object in the landscape. There is a chapel of ease at Gilmerton, built in 1837, and containing about 300 sittings. The Free church for Liberton is also that for Newington, in the parish of St. Cuthbert's, and stands in the southern part of Edinburgh. There is also a Free church at Gilmerton, whose receipts in 1855 amounted to £75 15s. 6d.

An hospital anciently stood at Upper Liberton, a little west of Kirk-Liberton; and may have occasioned the name Leper-town, supposed to be the original form of the modern appellation Liberton. At the same place stood, till within the last 24

years, a tall peel-house or tower, which made some pretensions to have belonged to a baron called Macbeth, who held a considerable part of the lands of Liberton during the reign of David I., and witnessed some of David's charters. In connexion with this barony, Liberton comes first ecclesiastically into notice, as a chapelry erected by him, and subordinated to the church of St. Cuthbert. The chapel, situated at Kirk-Liberton, was probably dedicated to the Virgin, there having been a spring near it called Our Lady's well; and it had attached to it a glebe of two oxgates of land. With St. Cuthbert's church, David I. granted the chapel to the canons of Holyrood; and he gave to them also brushwood of his woodlands of Liberton, and the tithes of a mill at Nether-Liberton. In 1240, the chapelry, at the request of the abbot of Holyrood, was disjoined by the bishop of St. Andrews from the parish of St. Cuthbert's, and constituted a rectory belonging to the abbey; and thence till the Reformation, it was served by a vicar. For a brief period succeeding the year 1633, it was a prebend of the short-lived bishopric of Edinburgh; and, at the final abolition of episcopacy, it reverted to the disposal of the Crown. Subordinate to the parish church, there were in popish times two chapels. St. Catherine's, the more ancient, stood in the vicinity of the existing cognominal mansion and bituminous well. The chapel was surrounded by a burying-ground, but, along with that accompaniment, was completely demolished after the Reformation. The other chapel stood at Niddry, close to the site of the present mansion, and is commemorated by its burying-ground, which continues to be in use, and by some faint vestiges of its walls. Its was founded in 1389 by Wauchope of Niddry, dedicated to the Virgin Mary; and was afterwards re-endowed by a descendant with a manse and glebe. At the Reformation, both the chapelry and its revenues were attached to Liberton church. A chapel built by James V. at Bridgend, and a Presbyterian chapel, built at Craigmillar during the indulgence given by James VII., still exist, and are used as stables.

Among distinguished natives of the parish of Liberton have been Mr. Clement Little of Upper Liberton, who founded the college library of Edinburgh,—Sir Symon de Preston of Craigmillar, in whose house as provost in Edinburgh Queen Mary was lodged on the night after the affair of Carberry-hill,—Sir John Gilmour of Craigmillar, who was Lord-president of the Court-of-session about the period of the Restoration,—Gilbert Wauchope and Sir John Wauchope of Niddry, the former a member of the celebrated Reformation parliament of 1560, and the latter a distinguished Covenanter, and a member of the General Assembly of 1648,—and Sir James Stewart of Goodtrees, who, from 1692 till 1713, filled the office of Lord-advocate of Scotland. The Wauchopes of Niddry have had a seat in the parish for nearly 500 years, and are probably the oldest family in Mid-Lothian. In the Transactions of the Society of Scottish Antiquaries is a paper on Liberton, containing minute and learned notices of its families and localities.

LIBERTY, a village in the parish of Kilconquhar, Fifeshire.

LIBO (Loch). See Neilston.

LICHART. See Luichart.

LIDDEL (The), a river of the parish of Castleton, Roxburghshire, and of the western part of the boundary with England. It rises in the extreme north corner of Castleton, in a great bog called Dead Water, the source also at some miles' distance of the English Tyne; receives, in the early part of its course, many considerable feeders, which all approach it at considerably acute angles; and runs 16 miles south-westward, swollen at different stages by the Hermitage, the Tweeden, the Blackburn, and the Tinnis, when it is joined, on its left bank, by Kershope-water, the boundary, for 7½ miles, with England. For 10 miles from its source its banks are bleak and naked,—in most places, a mountain gorge or glen; but afterwards they are spread out in a beautiful though not broad valley, carpeted with fine verdure, adorned with beautiful plantations, and screened by picturesque heights. After its confluence with the Kershope, it continues its south-westerly direction, becomes beautifully sinuous, and runs 7½ miles to the Esk, dividing Castleton 2½ miles, and Canobie in Dumfries-shire 5 miles, from England. Its additional tributaries are numerous, but all individually small. In all the lower part of its course, its banks are sylvan, picturesque, and, at intervals, romantic; and, at a cataract called Penton-linns, 3 miles from the confluence with the Esk, they are wildly yet beautifully grand. Stupendous rocky precipices fall sheer down to the bed of the stream, and wall up the water within a narrow broken channel; they have, along their face on the Scottish side, a terrace-walk carried along a ledge, and affording a view of the vexed and foaming stream, torn into shreds and lashed into foam among the obstructing rocks of the cataract; and they are richly fringed and patched in their crevices with copsewood. In the middle of the cataract rises from the river's bed a solitary large rock crowned with shrubs, whose broken and wood-adorned summit figures majestically in a conflict with the roaring waters during a high flood. At the Liddel's confluence with the Esk a sort of promontory is formed, on which stand the ruins of a fort called in the district the Strength of Liddel. The Liddel is an excellent trouting-stream.

LIDDESDALE, a district of Roxburghshire, drained by the Liddel, taking its name from that stream, and identical, as to both limits and history, with the parish of Castleton: which see. The lordship of Liddesdale seems to have been early the property of remarkable men. It was forfeited, in 1320, by William Soulis, when he plotted against Robert Bruce; it was granted by Robert Bruce to his son Robert, who soon after died; it was transferred, in 1342, by David II., to William, Earl of Douglas; and, after various forfeitures, it went finally into the possession of the prosperous and potent family of Scott. In 1747, the Duke of Buccleuch received £600 as compensation for its hereditary jurisdiction, which was then abolished.

LIECHESTOWN. See Deskford.

LIFF and BENVIE, an united maritime parish, partly in Perthshire, but chiefly in Forfarshire. It contains the villages of Liff, Benvie, Invergowrie, Dargie, Muirhead, and Backmuir, the small post-town of Lochee, and part of the burgh of Dundee. It is bounded by the frith of Tay, and by the parishes of Longforgan, Fowlis-Easter, Auchterhouse, Strathmartin, Mains, and Dundee. Its length westward is about 6 miles; and its breadth is about 4 miles. Dighty water, and a small tributary of that stream, trace the northern boundary. Invergowrie burn, together with the head-streams which form it, drains most of the interior. The surface of the parish rises gently from the Tay for nearly 3 miles, till it attains an elevation of about 400 feet above the level of the sea; and then it declines northward to the Dighty. The soil of the lower grounds is either clayey or a black mould inclining to loam; and that of the higher grounds is light and sandy, upon a subsoil of rock or mortar. About 4,400 imperial acres are in tillage; about 60 are in pasture;

and about 6,700 are under wood, chiefly in extensive plantations in the north. Excellent sandstone is extensively quarried. The principal landowners are Lord Gray, the Earl of Camperdown, and Clayhills of Invergowrie, Edward of Balruddery, and Wedderburn of Wedderburn. The real rental in 1855 was £11,383. Assessed property in 1843, £10,502 19s. 4d. Estimated yearly value of raw produce in 1842, £31,330.

Near the centre of the parish stands Camperdown-house,—so named from Admiral Lord Duncan's victory of 1797. The edifice, now used as the family-mansion in place of Lundie-house, is constructed of white sandstone, has a massive octostyle Ionic portico, and is now the property of Admiral Lord Duncan's son, the Earl of Camperdown, raised to the earldom in 1831. Lundie, the paternal property of the Earl, lies in the neighbouring parish of Lundie. Half-a-mile south of the village of Liff stands Gray-house, the family mansion of Lord Gray, finely situated on a gentle ascent amid large old trees. Upwards of 2 miles west of Gray-house, near the extremity of a western projecting stripe of the parish, stands the spacious mansion of Balruddery, erected by the keen, skilful agriculturist, Mr. Webster. Close on the western boundary of the main body of the parish, 6 miles from Dundee, stands the village of Liff; and, a mile south of this, stands the hamlet of Benvie. Both are ancient, and were for some time prosperous, but have suffered grievous decay and desertion. In the villages, in some hamlets, and in detached houses, reside a large population strictly suburban in position, employment, and character to Dundee. The weaving of linen fabrics for the Dundee manufacturers is extensively conducted. There are several spinning-mills at Lochee, and one at Denmiln; and there is an extensive paper-work, belonging to an Edinburgh house, at Bullion, near Invergowrie. In an enclosure opposite the churchyard of Liff may be traced the site of a castle, said to have been built by Alexander I. of Scotland, and called Hurly-Hawkin. In the neighbourhood of Camperdown-house was discovered, toward the close of last century, a subterranean building of several apartments, rude in structure, and uncemented by mortar. Close on the boundary with Dundee is a place called Pitalpie, or Pit of Alpin, from having been the scene of that memorable engagement, in the 9th century, between the Scots and the Picts, when the former lost victory, many nobles, and their king. The parish is traversed by the roads and railways from Dundee to Perth and Newtyle, and has stations on the railways. Population of the Perthshire section in 1831, 30; in 1851, 22. Houses, 6. Population of the entire parish in 1831, 4,247; in 1851, 18,940. Houses, 1,768. The great apparent increase in the population is explained by the fact, that the parts of the parish nearest Dundee, and containing the great bulk of the inhabitants, were formerly returned with the burgh of Dundee only, and erroneously substracted from Liff and Benvie. The return for 1841 was made in the same manner as that for 1831; and it gave a population of 3,948, showing a decrease of 299.

This parish is in the presbytery of Dundee, and synod of Angus and Mearns. Patron, Lord Gray. Stipend, £297 12s. 3d.; glebe, £18 18s. Unappropriated teinds, £946 9s. 11d. Schoolmaster's salary, £34 4s. 4½d., with £37 fees. The parish church was built in 1831, and contains 750 sittings. It is an elegant edifice, in the early Gothic style, with an ornamental tower and spire, 108 feet high. There is a chapel of ease at Lochee, built in 1830, and containing nearly 1,200 sittings; and it is in the presentation of the male communicants. There are two Free churches, designated of Liff and of Lochee: attendance at the former, 300,—at the latter, 460; receipts of the former in 1855, £123 17s. 8d.,—of the latter, £215 4s. 10d. There is an United Presbyterian church at Lochee, with an attendance of 540. There are a subscription school at Backmuir, a quasi-parochial school at Lochee, a school of industry under the patronage of the Countess of Camperdown, and several other schools. The original parish of Liff comprehended the space on which the greater part of the town of Lochee now stands. The old parish of Logie, together with the lands of Balgay and Blackness, was annexed to Liff before the middle of the 17th century: and this is the part of the present united parish which is comprised in the burgh of Dundee. The old parish of Invergowrie was annexed to Liff as early as Logie was, or earlier. The parish of Benvie was united to the extended parish of Liff in 1758. The present united parish, therefore, comprehends the four ancient parishes of Liff, Logie, Invergowrie, and Benvie. The lands of Liff belonged in the Roman Catholic times to the monastery of Scone.

LIGHTBURN, a village in the east end of the parish of Cambuslang, Lanarkshire. Population, 163. Houses, 25.

LIGHTWATER-BURN, a streamlet in the parish of Falkirk, falling into the Carron, near the village of Camelon, Stirlingshire.

LILLIEHILL. See DUNFERMLINE.

LILLIESLEAF, a parish, containing a post-office village of its own name, in the north-west of Roxburghshire. It is bounded by the parishes of Selkirk, Bowden, Ancrum, Minto, and Ashkirk. Its length eastward is 5 miles; and its greatest breadth is about 2¾ miles. Ale-water runs 3 miles north-eastward through the interior, and 3 miles eastward and south-eastward along the boundary. Several broad low ridges, and waving alternations of slope and valley, diversify the surface of the parish; and though all capable of cultivation, and at one time subjected to the plough, are distributed in nearly equal proportions into arable lands and pasture. About 600 acres are planted, and about 50 are mossy and waste. The soil is partly a light sand, partly clay, and partly a rich loam. The principal landowners are Sprot of Riddell, and Currie of Linthill. The mansion of Riddell stands on the left bank of Ale-water, ¾ of a mile west of the village. This, till about the year 1823, was the seat of a family of its own name, whose history possesses a strong antiquarian interest. "The family of Riddell," says Sir Walter Scott, in his Notes to the 'Lay of the Last Minstrel,' "have been very long in possession of the barony called Riddell or Ryedale, part of which still bears the latter name. Tradition carries their antiquity to a point extremely remote, and is in some degree sanctioned by the discovery of two stone-coffins,—one containing an earthen pot filled with ashes and arms, bearing a legible date, A.D. 727,—the other dated 936, and filled with the bones of a man of gigantic size. These coffins were discovered in the foundations of what was, but has long ceased to be, the chapel of Riddell; and, as it was argued with plausibility that they contained the remains of some ancestors of the family, they were deposited in the modern place of sepulture, comparatively so termed, though built in 1110." A well-informed and elegant historian supposes the family to have settled at Riddell in the 7th or the 8th century. Grants of land, or confirmation charters and bulls, were given to them before the close of the 12th century, by David I. and Malcolm II., and by Popes Adrian V. and Alexander III. From the earliest traceable ancestor of

the family down to Sir John B. Riddell, Bart., who died in 1821, the lands of Riddell and the Whittunes descended, through a long train of ancestors, without once diverging from direct lineal succession. Mr. Archibald Riddell, brother to the laird of Riddell, was a devout, zealous, distinguished covenanting minister, a little after the middle of the 17th century, took part with the celebrated Blackadder in conducting field-preachings in the south, and, about the year 1679, suffered imprisonment for his opinions. Lilliesleaf moor, or as it is popularly called Lilsly-moor, was the scene of many meetings of the Covenanters; and both that place and other localities in the parish witnessed attacks upon them, or skirmishes with them, by parties of the royal troops. The village of Lilliesleaf stands a little north of the centre of the parish, 6 miles south-west of St. Boswells, 6 east-south-east of Selkirk, and 10 west by north of Jedburgh. It is a pleasant thriving place, rather irregularly built, and of quite a rural character; but it anciently was a centre of strength during the period of the Border forays, possessing no fewer than at least fourteen peel houses or fortalices. It is the seat of nearly one-half of the population of the parish. There is much taste in it for floriculture. The yearly value of the raw produce of the parish was estimated in 1834 at £10,030. Assessed property in 1843, £5,684 1s. 2d. The eastern boundary is near the Belses station of the Edinburgh and Hawick railway. Population in 1831, 781; in 1851, 798. Houses, 153.

This parish is in the presbytery of Selkirk, and synod of Merse and Teviotdale. Patron, the Duke of Roxburgh. Stipend, £243 8s. 5d.; glebe, £17. Unappropriated teinds, £80 19s. 3d. Schoolmaster's salary, £34 4s. 4½d., with about £40 fees, and £22 other emoluments. The parish church was built in 1771, and is sufficiently commodious. There is an United Presbyterian church, which was built about the year 1808, and has an attendance of 250. There are a non-parochial school and a public library. In 1128, David I. granted to the monks of Kelso the tithes of the mill of Lilliesleaf, and 30 acres of land lying between the Ale and the village. The ancient church of Lilliesleaf was of high but unascertained date, and belonged, before the year 1116, to the church of Glasgow, and was early confirmed to the bishopric of that city by several papal bulls. At Hermiston, in the western extremity of the parish, there was anciently a church, which also belonged to Glasgow. At a place still called Chapel, half-a-mile north-east of the village, formerly stood a chapel, around which was a cemetery called Chapel-park.

LILYBURN. See Campsie.

LIMEKILNS, a sea-port village, with a post-office, in the parish of Dunfermline, Fifeshire. It stands contiguous to the east end of Charleston, 3 miles south-south-west of Dunfermline, 3½ west of Inverkeithing, and 4 east-south-east of Torryburn. Its statistics of commerce and trade are mixed up with those of Charleston,—which see. Its harbour is good, and easily admits, at stream tides, vessels of 300 tons burden. Here is an United Presbyterian church, which was built in 1825, at the cost of £2,000, and contains 1,056 sittings. There also are a school, a mariner's benevolent society, and a marine assurance association. Population, 949. Houses, 256.

LIMEKILNS, Lanarkshire. See Kilbride (East).

LIN, or Linn, a topographical name, of Celtic origin, used both singly and as a prefix. It signifies a deep pool, a lake, or any piece of water; but is commonly used in Scotland to designate a cascade falling into a pool, and is often associated in the Scottish mind, not with the pool but with the cascade.

LINBURN. See Kirknewton.

LINCLUDEN, an ancient and ruined religious house, 1½ mile north of Dumfries, but situated on the right bank of the Cluden or Cairn, at its confluence with the Nith, in the parish of Terregles, Kirkcudbrightshire. The house was originally a convent for Benedictine or Black nuns, and was founded by Uchred, son to Fergus, and father to Roland, lords of Galloway. But about the end of the 14th century, Archibald, Earl of Douglas, and Lord of Galloway, called the Grim, expelled the nuns on account of debauched conduct, and converted the establishment into a college or provostry, for a provost and 12 canons,—afterwards so altered as to admit a provost, 8 prebendaries, 24 beadsmen, and a chaplain. The Earls of Douglas, when in the zenith of their power, expended considerable sums in ornamenting the place, and, when wardens of the West marches, adopted it as their favourite residence. From what remains of the ancient building, which is part of the provost's house, the chancel, and some of the south wall of the church, an idea may easily be attained of its former splendour. The choir, in particular, was finished in the finest style of the florid Gothic; the roof was treble, in the manner of that of King's college, Cambridge; and the trusses, whence sprung the ribbed arch-work, are covered with armorial bearings. Over the door of the vestry are the arms of the Grim Earl, the founder of the provostry, and those of his lady, who was heiress of Bothwell. Both he and Uchred, the founder of the nunnery, were buried in the place. In the chancel is the elegant tomb of Margaret, daughter of Robert III., and wife of Archibald, Earl of Douglas, first Duke of Teronan, and son of Archibald the Grim. Along the walls of the ruin are a profusion of ivy and a few dwarfish bushes; around are a few trees which form an interrupted and romantic shade; on the north is a meadow, sleepily traversed by the Cluden; on the east is a lovely little plain, spread out like an esplanade, half its circle edged with the Cluden and the Nith; on the south-east were, not long ago, distinct vestiges of a bowling-green, flower-garden, and parterres; and beyond is a huge artificial mound, cut round to its summit by a spiral walk, and commanding a brilliant view of the 'meeting of the waters' immediately below, and of the joyous landscape which environs Dumfries. The place is much cherished by the inhabitants of that polished burgh, and was a favourite haunt of the poet Burns.

The provosts of Lincluden were in general men of considerable eminence; and several of them held important offices in the state. The first was Elese; the second was Alexander Cairns, chamberlain to the Earl of Douglas; the third was John Cameron, who became secretary, lord-privy-seal, and chancellor of the kingdom, archbishop of Glasgow, and one of the delegates of the church of Scotland to the council of Basil; the fourth was John Macgilhauck, rector of Parton, and secretary to the Countess-dowager of Douglas; the fifth was Halyburton, whose arms were carved on the south wall of the church; the sixth, John Winchester, who afterwards became bishop of Moray; the seventh, John Methven, who became secretary-of-state and an ambassador of the court; the eighth, James Lindsay, in 1449, who was made keeper of the privy-seal, and an ambassador to England; the ninth, tenth, and eleventh, were persons of the name of Livingstone, Herries, and Anderson, men of family

and note; the twelfth was Andrew Stewart, third son of Sir James Stewart, the Black knight of Lorn, and he was, at the same time, dean of faculty of the university of Glasgow, and afterwards became bishop of Moray; the thirteenth was George Hepburn, uncle to the first Earl of Bothwell, and, while he held several benefices, he was also lord-treasurer of Scotland, and eventually fell at the side of his monarch on the field of Flodden; the fourteenth was William Stewart, son of Sir Thomas Stewart of Minto, and he became, in 1530, lord-treasurer of Scotland, and afterwards bishop of Aberdeen; and those who followed were a Maxwell and three Douglases. The last was Mr. Robert Douglas, a bastard son of Sir James Douglas of Drumlanrig. He was appointed provost in 1547, obtained an act of legitimation in 1559, and was allowed to enjoy the benefice during about 40 years after the Reformation. His grand-nephew, William Douglas, the heir of Drumlanrig, obtained a reversion of the provostry, and after Robert's death, enjoyed its property and revenues during his own life. Succeeding to the family estates of Drumlanrig, and created first Viscount Drumlanrig, and next Earl of Queensberry, he got vested in himself and his heirs the patronage and tithes of the churches of Terregles, Lochrutton, Colvend, Kirkbean, and Caerlaverock, belonging to the college, and also a small part of its lands. But the major part of the property of the establishment was, in 1611, granted, in different shares, to Sir Robert Gordon of Lochinvar, and to John Murray.

LINDEAN, an ancient parish on the north-west border of Roxburghshire, now united to Galashiels. It has a post-office station of its own name. See GALASHIELS.

LINDORES, a post-office village in the parish of Abdie, Fifeshire. See ABDIE and NEWBURGH.

LINDORES (GRANGE OF). See GRANGE OF LINDORES.

LINDSTON. See DALRYMPLE.

LINE LAKE. See KILNINVER.

LINEN APRON (THE). See MORTLACH.

LINGA, an islet belonging to the parish of Stronsay and Eday, in Orkney. It lies off the north-west coast of the island of Stronsay. A strait enlarging itself on the south into a bay, and called in both parts Linga sound, separates Linga from Stronsay, and forms an excellent natural harbour. Linga is an island of the kind provincially called a holm; and sometimes bears the name of Lingholm. It is inhabited by only one family; and a small portion of it is under cultivation.

LINGA, an islet belonging to the parish of Tingwall in Shetland. It lies about 2½ miles north-west of Scalloway-castle, and about midway between the mainland and the island of Hildasay. It is inhabited by only one family.

LINGA, an isle about 2 miles long, extending north and south about a mile from the mainland of Shetland, and 3 miles south of the southern extremity of Yell.

LINGA, one of the Treshinish isles, belonging to the parish of Kilninian and Kilmore, in Argyleshire. Its coast is a low plain, and its interior rises, by a succession of terraces, to an altitude of about 300 feet. See TRESHINISH ISLES.

LINGAY, an islet belonging to the parish of Barra, in the Outer Hebrides. It lies 3½ miles south of Vatersay. It has excellent pasture, but is uninhabited by man.

LINGHOLM. See LINGA in Orkney.

LINGORE-LINN, an affluent of Breich-water, at the east end of the parish of Cambusnethan, in Lanarkshire.

LINHOPE-GRAINS. See FROSTLY WATER.

LINHOUSE-WATER, a rivulet of the west side of Edinburghshire. It rises among the Pentlands, near the point where the counties of Edinburgh, Peebles, and Lanark meet; and runs southward, along the upper part of West Calder, across the upper part of Mid Calder, and along the boundary between Mid Calder and Kirknewton, to a confluence with the Almond, a little below the village of Mid Calder. The tract which it traverses is diversified and picturesque. Muirhouseton-water joins it on its left side, contiguous to the village of Mid Calder. The length of the Linhouse-water's course is about 10 miles.

LINKET BAY, a small open bay, on the east side of the island of North Ronaldshay, in Orkney.

LINKS, any unenclosed tract, with light soil and stunted herbage, of the character called in England downs. The name is applied chiefly to tracts on the east coast of Scotland, contiguous to towns, and in a state of commonage. See ANDREWS (ST.), DUNBAR, MUSSELBURGH, LEITH, MONTROSE, and other articles.

LINKSHOUSE, a post-office station subordinate to Lerwick, in Shetland.

LINKSNESS, a headland in the north of the island of Stronsay, in Orkney.

LINKTOWN, a burgh of regality in the parish of Abbotshall, Fifeshire. It forms part of the parliamentary burgh of Kirkcaldy, is a prolongation westward of Kirkcaldy-proper, and figures practically, in all respects, as a component part of "the lang toon o' Kirkcaldy." Population in 1841, 4,100; in 1851, 4,342. Houses, 360. See ABBOTSHALL and KIRKCALDY.

LINKWOOD. See LHANBRIDE.

LINLITHGOW, a parish, containing the royal burgh of Linlithgow, and part of the village of Linlithgow-bridge, in Linlithgowshire. It is bounded on the west by Stirlingshire, and on other sides by the parishes of Borrowstownness, Carriden, Abercorn, Ecclesmachan, Uphall, Bathgate, and Torphichen. Its length westward is 6 miles; and its greatest breadth is 5½ miles. The river Avon traces all the boundary with Stirlingshire. Nethermill-burn and Main-burn rise in the south-west corner, and flow east-north-eastward through the interior into the neighbouring parishes. Linlithgow-loch, lying immediately north of the burgh, and measuring nearly a mile in length by about ½ of a mile in breadth, is a beautiful sheet of water, skirted on the south side by the town gardens, on other sides by verdant or wooded rising grounds, and overlooked, at a peninsular point, by the noble ruins of the ancient palace. The superfluence of the lake, under the name of the Loch burn, runs north-westward to the Avon. The southern division of the parish is gently uplane sending up what, in a champaign country like Wes Lothian, are noticeable summits. These are thre in number, all on a line, each two at an interval 1¾ mile. The eastern one, called Binny-craig, wa once fabled by superstition to be a favourite haun of the fairies; the middle one is properly a congeri of heights, called Riccarton-hills; and the wester one, which is the highest and bears the name Cocklerue, or Cuckold le Roi, rises about 500 fe above sea-level. The northern division, thoug diversified in surface, may be regarded as nearly plain. The soil in the south and south-east is pretty strong clay, stiff, and upon a retentive subsoi more suited to pasturage than to the plough; an in all other parts, is generally light and free, easil cultivated, and rich in its returns. Coal occurs i thin seams in the southern district, but is not present worked. Excellent limestone abounds the parish, and is worked in three places. San

stone and whinstone are sufficiently abundant; and the former is worked in two quarries,—one of which, at East Binny, is remarkable for a bitumen, which is sometimes melted and made into bright flaming candles. A silver-mine was anciently worked in the southern extremity of the parish, and is said to have yielded much wealth to the Haddington family. Groat pieces, coined from its produce during the time of Linlithgow being a royal residence, are still in the repositories of the curious. The place where the metal was smelted, lies westward of the town, and is still called Silver-mill; but the ore is either exhausted, or hitherto has eluded modern search. A mineral well at Carrubber, of similar properties to the spa of Moffat, was formerly resorted to, but is now totally neglected. The parish abounds with copious springs of the purest water; a fact which was long ago commemorated in a popular rhyme, which speaks of "Glasgow for bells," and "Linlithgow for wells." The principal landowners are Mr. Stewart of Physgill, Mr. Seton of Preston, the Earl of Roseberry, the Earl of Hopetoun, the Earl of Selkirk, and the Duke of Hamilton. The principal residences in the rural districts are Woodcockdale and Champfleurie. There is a large aggregate and good distribution of wood; and, with the exception of the planted ground, and of a few acres upon hill tops inaccessible to the plough, the entire land of the parish is in tillage. The average rental is about 21s. per Scots acre. Assessed property in 1843, £21,384 5s. 9d. The parish is traversed by the road from Edinburgh to Falkirk, by the Union canal, by the Slamannan railway, and by the Edinburgh and Glasgow railway; and it has a station on the last of these at the burgh. There are on the Avon a paper mill, several grain mills, and a large calico printing establishment; and in the burgh and elsewhere, a distillery, a brewery, two glue works, five tanneries, and an extensive trade in boot and shoe making, besides a considerable amount of handweaving for the Glasgow manufacturers. Population in 1831, 4,874; in 1851, 6,115. Houses, 636.

On the tract of ground east of the town, still called Boroughmoor, though a moor no longer, but finely cultivated, Edward I. encamped on the night previous to his defeating the troops of Wallace in the battle of Falkirk. On the same ground, upwards of 50 years ago, were found in an earthen urn about 100 Roman coins, probably the collection of a virtuoso. Nearly a mile north-west of the town is the scene of a sanguinary conflict, begun opposite the victory of Manuel, but fought out here, between the Earl of Arran and the Earl of Lennox, during the minority of James V. Though the precise spot cannot now be identified, it was long distinguished by one of those rude memorials to which every passenger contributed a stone, and which was called "Lennox's cairn." Near this spot, or possibly identical with it, is a field anciently used for military exercises and feats, and still called the joisting-haugh. Immediately west of the town are two rising grounds, one of which is traditionally said to have been the seat of feudal courts of justice. The plain below it still bears the name of Doomsdale. On the hill of Cuckold le Roi are vestiges of a military station. At the bottom also is the appearance of the ditch; and on the summit is a cavity, called Wallace's cradle, which is reported to have given frequent shelter to the Scottish patriot. On an eminence in the south-east of the parish are more distinct traces of a camp. But the grand antiquities occur to be noticed in our account of the town. Among noted persons, natives of the parish, or connected with it, may be mentioned Stewart of Purdovan, Ninian Winzet, James Kirkwood, Binnoch, and Rob Gib. Purdovan possessed considerable property in the parish, was repeatedly provost of the burgh, represented it in the last Scottish parliament, and wrote the remarkable statutory book as to the proceedings of Presbyterian church courts, which has long been the vade mecum of every sciolist in the intricacies of Presbyterial law. Ninian Winzet was rector of the burgh school at the Reformation, and is said to have been preceptor to some of the royal family, but figures chiefly as the elected champion of Popery in logical tiltings with John Knox, and as a sort of confessor for the church of Rome,—having been banished from the kingdom, and made abbot of the Scottish convent at Ratisbon. James Kirkwood was rector of the same school at the Revolution, and made himself remarkable by satirizing the pragmatic town-council in a piece entitled 'The History of the Twenty-seven Gods of Linlithgow,' by offering valuable suggestions to the parliamentary commissioners on colleges, and by composing, at the commissioners' request, a Latin grammar, which held the place of universal textbook in Scotland till displaced by Ruddiman's Rudiments. Binnoch figures in a story—afterwards to be told—which ascribes to him a singularly clever capture of the castle, ranks him high as a patriot in the stirring period of Bruce's struggle with Edward I., and reminds one of the stratagem ascribed to Ulysses in the Trojan war. Some lands in the south of the parish were given to Binnoch as a reward, and still bear his name softened into Binny. The Binnings of Wallyford were said to be descended from him; and, in allusion to the transaction which brought him fame and wealth, had for their arms a hay wain, with this motto, "Virtute doloque." Rob Gib, of facetious memory, acted as buffoon to James V.; and gave, on one occasion, a severe reproof to the obsequious courtiers, saying that he had always served his master "for stark love and kindness;" and received from the King the property of West Carubber on the Avon, which his descendants continued to enjoy till some time during last century.

This parish is the seat of a presbytery in the synod of Lothian and Tweeddale. Patron, the Crown. Stipend, £361 14s. 11d.; glebe, £11. Unappropriated teinds, £1,002 13s. 7d. The parish church is a very fine ancient building, repaired in 1813, and containing 1,100 sittings, and will be noticed in our account of the town. There is a Free church, with 450 sittings; and the amount of its receipts in 1856 was £175 4s. 3d. There are two United Presbyterian churches; the one built in 1806, and containing 480 sittings; the other built in 1834, and containing 546 sittings. There is also an Independent chapel, with 390 sittings. The principal school is the burgh school, affording tuition in the ordinary departments, and in Greek, Latin, French, and mathematics. The salary of the rectory is £30, with fees. There is a charity school for girls; and there are seven private schools.—The present parish comprehends the ancient parishes of Linlithgow and Binning, which were united after the Reformation. Binning parish is the eastern district. See article Binning. The church of Linlithgow was dedicated to St. Michael, and, along with its pertinents, was given by David I. to the prior of St. Andrews. A perpetual vicar afterwards served it, and incidentally acted as the King's chaplain. John Laing, one of its vicars, rose, in 1474, to be bishop of Glasgow; and George Crichton, another of them, became, in 1500, abbot of Holyrood, and, in 1522, bishop of Dunkeld. Crichton's attachment to his old vicarage induced him to erect on the chancel of the church a durable roof, adorned with the arms

of the see of Dunkeld, and with the initials of his name. Within the parish church were erected several chaplainries; at the west part of the town anciently stood a chapel dedicated to St. Ninian; and at East Binning, in the southern extremity of the parish, stood another chapel. In 1606 and 1608, general synods were held at Linlithgow. In 1633, the minister of the parish was made one of the prebendaries of the diocese of Edinburgh; and in 1635, the advowson of the church, in common with other property which had belonged to the prior of St. Andrews, was given to the archbishop of St. Andrews as compensation for the loss of that part of his diocese which was erected into the see of the metropolis.—On the south side of the town, on an eminence still called Friars' brae, in the vicinity of a well also still called the Friars', anciently stood a convent of Carmelites or White Friars, founded by the inhabitants in 1290, and dedicated to the Virgin Mary. In the east part of the town were not long ago some remains of a religious house,—probably those of a monastery of Dominican or Black Friars, which is said to have existed in the town. East of the town, there was of old an establishment of Lazarites; and on their extinction or secularization, it was converted by James I. into an hospitium, or place of entertainment for pilgrims, and dedicated to Mary Magdalene, and placed under the government of a preceptor. The eminence at the base of which it stood, still bears the name of Pilgrim's-hill; and one of the anciently instituted fairs of the town is still called Mary Magdalene's fair. Sir James Hamilton of Finard obtained, in 1528, all the lands belonging to the hospitium; but he afterwards plotted against the life of his sovereign, and was executed as a traitor.

LINLITHGOW, a post and market town, a royal burgh, the capital of Linlithgowshire, and formerly the residence of kings, stands 3 miles south of Borrowstounness, 7 north by east of Bathgate, 8 east of Falkirk, and 16 by road, but 17¾ by railway, west of Edinburgh. It is pleasantly situated in a hollow along the south side of Linlithgow-loch, sheltered by ridges of rising ground along both the north and the south. A single street, running due west 650 yards from the toll to the site of the ancient cross, afterwards making two bends, and ending in a south-westerly direction at the West Port, and measuring altogether ¾ of a mile in length, constitutes the great body of the town. Very brief lanes and narrow alleys wing both its sides, running off from it at right angles; and a number of detached or straggling houses stand on the eastern and southern outskirts. The High-street is broad and airy toward the east, becomes contracted for some distance westward of its middle, and again expands toward its south-western termination. Many of the houses belonged of old to the knights of St. John, who had their preceptory at Torphichen; and some were the property of grandees who nestled under the warm wing of the royal court. Nearly all these buildings have a mean, decayed, yet substantial appearance. A slow process of rebuilding has been going on during upwards of sixty years, and has, to a considerable extent, modernized the street. But for a long period after ceasing to be the home of kings and grandees —particularly after the union of the crowns, and again after the union of the kingdoms—the town declined in opulence, in trade, and in every attribute of importance; and even in more recent times, notwithstanding a large amount of re-edification, it has undergone very little enlargement. Yet it continues to bear many marks of ancient grandeur, and is grouped with objects which make it a fine subject for the pencil. The magnificent ruins of its royal palace,—the venerable fabric used as the parish church, and situated so near the palace as to form almost a part of it,—the grand terrace which bears both aloft, and is sheeted on three sides with water —the lofty trees which look as if they were coeval with the sacred and royal piles which they adorn,—the beautiful expanse of the lake half-encincturing these objects, and spread from end to end of the town like a mirror, to reflect a silvered copy of its features,—the plantations alternated with pasture ground, and waving fields all round the environs,—and even the motley architecture of the town, the mixture of dingy old houses with sprightly new ones, and the spruce erections at and near the railway station,—form altogether an agreeable and uncommon picture.

The town-hall, situated in the High-street, at the foot of the thoroughfare leading up to the church and the palace, is an edifice of not unpleasing appearance, built in 1668, with spire and clock, and containing the town-hall, the sheriff court-room, and the jail. The county buildings, situated at the rear of the town-house, have a plain exterior; but the hall is a fine apartment, adorned with beautiful portraits of the great Earl of Hopetoun and Sir Alexander Hope of Rankeilour. Beside the town-house, on the site of the ancient market cross, in a small open area, stands the Cross-well, an object of great architectural elegance and local celebrity. The present structure was erected in 1805, and is believed to be an exact fac-simile of a previous structure which had gone to decay, except that the carvings are more finished, the proportions of the figures more symmetrical, and the general grouping more harmonious. It is of a fantastic and whimsical appearance, hexagonal in form, profusely adorned with grotesque sculpturings, constantly emitting jets of water from the mouths of curious figures of animals, and surmounted by a lion rampant supporting the royal arms of Scotland. In its renovated form it was planned, and its richest sculpturing executed, by Robert Gray, an Edinburgh artist, who had only one hand, and wielded his mallet by a fixture upon the stump of his handless arm.

About 120 yards north of the well, or of the line of High-street, stands the parish church, a venerable and impressive pile, an exhibition of mingled elegance and strength, and one of the most entire and beautiful specimens of old Gothic architecture in Scotland. It is 182 feet in length from east to west, 100 feet in breadth, including the aisles, and about 90 feet in height; and it sends up from its centre a lofty tower, formerly terminating in an imperial crown, and contributing a highly ornamental feature to the burghal landscape. The crown, however, no longer exists. Its weight being thought injurious to the structure beneath, it was removed about twenty years ago. Some of the windows are extremely elegant. A number of statues anciently figured on the exterior, but, with one exception, were demolished at the Reformation. The statue which escaped was that of St. Michael, the adopted patron of the town; and it too might probably have shared the fate of its fellows, had it not stood higher both in popular estimation and in physical altitude,—occupying a place not easy of assault. The original edifice is of uncertain date, but very probably was erected by David I., the founder of so many rich and grand ecclesiastical structures. Its nave was, in 1424, destroyed by fire, and, in its present form, has a more modern appearance than the rest of the pile. The roof of the chancel, erected by George Crichton, and ornamented with his armorial bearings as bishop of Dunkeld, is both elegant and durable. A plan was formed by James V. to erect in the

rior a throne and twelve stalls, for himself and the nights of the Thistle; but, in consequence of his dden death, it was not carried into execution. he west end was of old used as a burying-place of e great, a sort of mimic Westminster abbey; but was stripped of its tomb-stones, and converted to a stable for the horses of his dragoons, by Oliver romwell. Only the east end is now used as a place worship, separated from the other end; and when t repaired, it was put, at the expense of nearly ,000, into a condition corresponding with the ndeur of the fabric. Of the various chaplainries d altars which anciently existed in the church, Catherine's is the only one whose name survives. e aisle in which the altar stood is a recess on the th side, covering the burying vault of the family he attainted Earl of Linlithgow. While sitting "evensong" in the aisle, says tradition—and cerly in the church, says history—James IV. saw strange masquerade, passed off upon him as an arition, which warned him against his fatal exition to England, terminating in the battle of dden. Sir Walter Scott has fitly introduced vision into his Marmion, making Sir David dsay the narrator, and depicting the affair exactly it is described by the historians of the time:—

"The wondering Monarch seemed to seek
For answer, and found none:
And when he raised his head to speak,
The monitor was gone.
The Marshal and myself had cast
To stop him as he outward past:
But lighter than the whirlwind's blast,
He vanished from our eyes,
Like sunbeam on the billow cast,
That glances but, and dies."

mmediately north of the church stands the magnicent ruin of the palace, the most remarkable ject in Linlithgow. Its site is a peninsula proing almost into the middle of the loch, and, when wed from the north, has the appearance of an phitheatre, with a descent on the three sides, and race-walks on the west. The palace occupies out an acre of ground, and though heavy in appearance from its almost total want of windows, and e-worn and haggard in aspect from the ruinousss of its condition, is still a picturesque and beautiful object; and, within these few years, it has ergone extensive repairs, with the view, both of serving it from dilapidation, and of making a r disclosure of its beauties, under the sanction at the expense of the government. At the head the avenue leading up to it from the street is a ified gateway, formerly ornamented with now the arcely traceable insignia of the knightly orders of Garter and the Golden fleece, St. Michael and St. drew, the last founded by James V., and the others sented to him respectively by Henry VIII. of England, Charles V. of Germany, and Francis I. of France. the east side, at the head of a sweeping avenue lined with trees, stands the grand gateway, with place for the portcullis, but in an obsolete conct. Over the interior is a niche in which formerly stood an elegant statue of Pope Julius II., who sented James V. with the sword of state which forms part of the Scottish regalia, and bought up by flattery to oppose the progress of the formation. East of the grand gate lay the gar-. The palace consists all of polished stone, and large hollow quadrangle, generally five stories h, with towers at the corners. In the centre of interior square was a fine well, adorned with eral statues, and so constructed as occasionally orm high and beautiful jets d'eau, but now a s of confused ruin. On the east side above the d entrance was the Parliament hall, believed to have been commenced by James IV., and finished and decorated by his successor. Originally it was a splendid apartment, with a beautifully ornamented chimney at one end, and surmounting a magnificent piazza; but it is now a roofless, ragged ruin. On the south side was the chapel, supposed to have been built by James V. At the north-west angle is a small department, called the King's dressing-closet, curiously ornamented, and looking out upon the lake. In one of the sides is a room 90 feet long, 30½ feet wide, and 33 feet high; having at one end a gallery with three arches. Many of the windows, and some of the doors, on the north or most modern and magnificent side, have, with accompanying ornaments, the initials of the name of James VI., by whom it was erected shortly after his visit to Scotland in 1617, the pediments over the windows bearing the date of 1619. On the west or oldest side, where a tower or peel-house formed the nucleus of the whole palace, is shown the apartment in which Queen Mary was born. Narrow galleries run quite round this side, to preserve the communication with the apartments. In one of the vaults below James III. found shelter from an attempt at assassination on the part of some of his rebellious subjects.

The site of the palace was, at the dawn of authentic history, a Roman fort or station, and sent off a communication, intended apparently to serve both as a road and as a line of defence, to Antoninus' wall, at a point in the parish of Falkirk nearly opposite Callendar-house. Edward I., according to Fordoun, built a peel or castle on the spot in 1300, and spent there the Christmas of next year. On settling the kingdom, and retiring to England in 1305, he left it garrisoned under the charge of Peter Lubard. Two years afterwards it was taken and demolished by Bruce, aided by the curious device and successful stratagem of the peasant Binny or Binnoch, the William Tell of Scotland. "Binny, who was known to the garrison, and had been employed in leading hay into the fort, communicated his design to a party of Scottish soldiers, whom he stationed in ambush near the gate. In his large wain he contrived to conceal eight armed men, covered with a load of hay; a servant drove the oxen, and Binny himself walked carelessly at his side. When the portcullis was raised, and the wain stood in the middle of the gateway, interposing a complete barrier to its descent, the driver cut the ropes which harnessed the oxen; upon which signal the armed men suddenly leapt from the cart, the soldiers in ambush rushed in, and so complete was the surprise, that with little resistance, the garrison were put to the sword, and the place taken." The castle was doomed to ruin by Bruce, who relied chiefly on the moral energy of his followers' courage, and little on the appliances of physical strengths and fortifications; but it appears to have been rebuilt by the English during their brief possession of Scotland under the minority of David II., and seems afterwards to have been improved or renovated by David himself. A precept of David granted the "peel of Linlithgow" to John Cairns, and enjoined him to "build it for the King's coming." The place was now occasionally, but in a very subordinate manner, a royal residence. Though James I. but seldom occupied it, several of his coins bear the legend, "Villa de Linlithe." In 1424, in common with the town and with the nave of the church, it was set on fire; but whether it was slightly or ruinously injured, and who was its renovator or re-edificer, are matters not known. It was now called a palace, but may have been only a tower, having vaults below and comfortable apartments above, and but a degree stronger or more commodious than a peel-

house. James IV. built the eastern side of the present quadrangle, and preferred it to all his other residences. In the time of James V., who also made large additions to it, his consort, Mary of Guise, on being conducted to it, said "she had never seen a more princely palace;" and she afterwards proved the sincerity of her compliment, as far at least as the palaces of Scotland were concerned, by preferring it to any other of the King's residences, and spending in it a large part of her time. The pile in its final form, was completed by James VI. Though, after the union of the crowns, it suffered from desertion, it continued to be habitable till January 1746. When the royal army were on their march in pursuit of the Pretender's forces, Hawley's dragoons occupied the hall on the north side of the quandrangle, and, in the hurry of their departure, left some fires in a condition to ignite the building. Before the danger was discovered, the roof was mantled in flame; and, being covered with lead, it sent down such a shower of melted metal as entirely precluded any attempt to arrest the conflagration. Its vestiges of splendour and the beauty of its site, aided a little by imagination, still bring before the visitor's view the princely pile so cheerily sung in the 'Lay of the Last Minstrel:'

> "Of all the palaces so fair
> Built for the royal dwelling,
> In Scotland, far beyond compare
> Linlithgow is excelling:
> And in its park in jovial June
> How sweet the merry linnet's tune,
> How blythe the blackbird's lay!
> The wild buck bells from ferny brake,
> The coot dives merry on the lake,—
> The saddest heart might pleasure take
> To see a scene so gay."

No other edifices of Linlithgow demand notice. Nor even as to trade is there much to say. The Union canal passes along the rising ground on the south of the town, at the distance of from 70 to 450 yards from the High-street, and has a small basin there which used to be the scene of some traffic. The Edinburgh and Glasgow railway passes between the canal and the town, and commands a good view of the church, the palace, and the lake; and its station there, besides serving for the town itself, is a considerable focus of communication for the surrounding country. The principal inns are the Star and Garter and the Red Lion. The town, in a general view, is more or less interested in all the manufactures which we noticed in our account of the parish; but its chief trade, for generations, has been the making of leather and shoes. The art of preparing leather is said to have been introduced by the soldiers of Cromwell; but, though still carried on with a degree of vigour, seems to be prosecuted with diminishing success. In 1793, there were 17 tanners, 18 curriers, and 13 skinners; and, in 1826, there were only 12 of the first class, 6 of the second, and 5 of the third. Shoemaking has moved parallel with the sister art, and shared its vicissitudes. During the continental war, the town supplied very large quantities of shoes to the army, besides sending supplies to Edinburgh and other markets; and it still, though in a noiseless and declining way, competes in the art with the brisker and more productive towns of Ayrshire. Trade in lint and linen yarn was at one time carried on to a great extent, and brought several persons handsome fortunes; but it long ago became extinct. Manufactures in the departments of beautiful damask linen, of diaper, of muslin, of carpets, and of stockings, have all been sanguinely introduced, flourishingly commenced, and carried on to extinction. A weekly market is held on Friday; and annual fairs are held on the Friday after the second Tuesday of January, on the 25th of Februar on the third Friday of April, on the second Thursd of June, on the second day of August, and on t first Friday of November. The town has an offi of the Commercial Bank, an office of the City Glasgow Bank, a news-room, a public libra several friendly societies, a total abstinence socie and some other institutions.

Linlithgow's earliest charter as a royal burgh, dated in the reign of Robert II.; but it must ha been a royal burgh at an earlier date, for in 1348 and Lanark were made members of the court of fo burghs in lieu of Roxburgh and Berwick, which h been seized by the English. Its council compris 27 members, including provost, 4 bailies, dean guild, and treasurer. The magistrates have pow of jurisdiction over a mile in every direction beyo the royalty, but practically exercise it only with burgh. The village of Blackness [see that artic stands on the territory of the burgh, and is nomina under the jurisdiction of the council, receiving a nually from their nomination a delegate or baili Except in the most trifling police offences, the m gistrates are relieved from all judicial care, wheth criminal or civil, by the residence within the burg of the sheriff-substitute. The corporation reven arises chiefly from property, from the burgh mil and from the market and bridge customs; and amounted in 1832 to £710 17s. 6d.,—in 1855 £731 8s. 1d. Water abounds from public wells, b is not distributed into the houses. The town is wel lighted at night with gas, the streets are kept tole ably clean, and the public peace is, in general, suf ciently preserved, all at a very small expense a from the burgh funds. The incorporated trade eight in number, were early of opinion that the exclusive privileges did no good to themselves, a were mischievous to society. As at Hawick, La ark, and some other places, the old practice of ridi the marches is still observed, and takes place June. The town's seal has on one side the figu of Michael the archangel,—his wings expanded, h foot treading on the belly of a serpent, and his spe piercing the reptile's head. The arms proper allu to some obscure legend respecting a dog fou chained to a tree on the islet of the lake, and co sist of the figure of a dog tied to a tree with t motto—'My fruit is fidelity to God and the Kin By act of parliament in 1621, Linlithgow was ma custodier of the standard firlot measure, and intrust with the distribution of copies of it among oth burghs; while Stirling was the appointed place the jug for liquids, Edinburgh of the ell, Perth of t reel, and Lanark of the pound. The firlot for o and barley contained 31 Scotch pints, or 3,205½ cu inches,—and for wheat and pease 21¼ pints, or 2,1 cubic inches; but, since the introduction of the i perial measures, it is a matter merely of antiquar curiosity. Linlithgow had once an exclusive ri of trade on the coast from the water of Cramond the mouth of the Avon. Blackness was its p and there it had warehouses and a custom-ho establishment, and carried on a considerable co merce. Partly through its own decay, and pa through the influence of the family of Hamil Borrowstounness carried away its custom-ho honours; and altogether, by successful riva Queensferry took possession of its influence on coast. So strenuous an opposition did Linlith make to the erection of Queensferry into a bur that it wrung by compromise, the hard terms f its rival, of the latter paying annually the sum 10 merks Scotch, admitting the freemen of Lin gow to all its immunities without reciprocation, giving the Linlithgow burgesses through their de

f-guild the option of purchasing, before it was unaded, half the cargo of every foreign ship which rrived. Linlithgow unites with Falkirk, Airdrie, amilton, and Lanark, in sending a member to parment. Municipal constituency in 1840, 77; in 355, 92. Parliamentary constituency in 1840, 80; 1855, 97. Population of the municipal burgh in 31, 3,187; in 1851, 4,071. Houses, 328. Popuion of the parliamentary burgh in 1851, 4,213. ouses, 348.

Linlithgow probably received its name from the itons. King Achaius, according to fable and bald, was the founder of the town, and erected its site a cross which vulgar antiquaries have lled King Cay's cross. From the similarity of me, but without any other evidence, the town has en identified with the Lindum of the Romans; d chiefly, if not altogether, on the vague testiny of tradition, it is thought to date as high as y existing town in Scotland. Before David I.'s session, a chapel appears to have been erected on promontory now occupied by the church and lace; and during that monarch's reign, he had a stle in the place to overlook a grange which beged to him, and to receive his person in the course his ranging from manor to manor for consumption the stock. But whether the castle occupied the e of the peel afterwards built and rebuilt by the glish, and made the nucleus of the palace, is a int on which no document or monument seems to row any light. David granted to the abbot and nons of Holyrood all the skins of the rams, sheep, d lambs of his demesne of Linlithgow. The ce was then the King's town in demesne; and rents and profits, or 'firms,' were let by the ng to the community. At the demise of Alexder III., before it had yet obtained a charter, the n was governed by two bailies, John Raebuck d John de Mar, who, along with ten of the burses or principal inhabitants, were compelled, in 6, to swear fealty to Edward I. The 'firms' had n mortgaged by Alexander III. to the King of way, and after the former's death, were allowed un in arrear; and at two different dates writs of ward I. were addressed "prepositis de Linlithw," requiring the payment respectively of £59 2s. and of £7 4s. 10d., as arrears to the Norwegian g. In 1334, Edward Baliol transferred to Edd III. the constabulary, the town, and the castle Linlithgow, as part of the price paid for the asnce given him to his short-lived usurpation. In , Robert II. granted to his son-in-law, Sir Wil Douglas, £300 sterling out of the great customs Linlithgow, Edinburgh, Dundee, and Aberdeen; to other persons he granted various pensions of the burgh-mails or great customs of Linlith. These grants are evidence that, in an age so mmercial, the town possessed some trade, and risen to considerable importance. Under the ent Albany and James I., Linlithgow appears ave been unfortunate, and was twice burnt, in 1411, and next in 1424. James II., at his riage in 1449, settled on his bride, Mary of dres, as her dower, the lordship of Linlithgow other lands, amounting in value to 10,000 ns; James III., at his marriage in 1468, to garet of Denmark, settled on her, as her dower e event of his demise, the palace of Linlithgow its circumjacent territory; and James IV., at marriage in 1503, with Margaret of England, her, in dower, the whole lordship of Linlithgow, the palace and its jurisdiction and privileges. 517, Stirling and his followers, who had atted to assassinate Meldrum on the road to Leith, d the palace, at a moment probably when it was very slenderly guarded; but they were speedily pursued by De la Bastie, the regent's lieutenant, and were beleagured and captured. In 1526 occurred the battle of Linlithgow, which was designed to rescue James V. from the domination of the Earl of Angus, and which led to the slaughter of the Earl of Lennox by Sir James Hamilton, after quarter had been given. Hamilton was rewarded by Angus for his truculent deed with the captaincy of the palace; and afterwards becoming a favourite of James V., he showed the faithlessness and atrocity of his nature by attempts, both in the palace of Linlithgow and in that of Holyrood, to assassinate the King.

In 1540, James V., by a special charter, empowered the town, for the first time, to add a provost to their magistracy; and in the same year, while Mary of Guise, after her marriage festivities had been celebrated in Fife and at Stirling, was delighting herself with the beauty and luxuries of Linlithgow palace, Sir David Lindsay's Satire of the three Estates was represented before the King, the Queen, the ladies of the court, and the authorities and common inhabitants of the town, and appeared, in spite of its utter grossness, to please all parties. On the 7th December, 1542, Mary, afterwards Queen of Scotland, was born in the palace; and as the infant remained many months there with her mother, under exciting public circumstances, the place became the frequent scene of political intrigue. In 1545, a parliament met at Linlithgow on the 1st of October, and again on the 1st and the 19th of December. In 1552, a provincial council of the clergy was held in it. In 1559, the Earl of Argyle, Lord James Stewart and John Knox came to Linlithgow on their celebrated march from Perth to Edinburgh, and demolished the monastic houses. About this period some houses in the town were the property and occasionally the residence of the Duke of Chatelherault and other highly distinguished courtiers. On the 23d of January, 1569–70, the Regent Moray, in passing through the town, was shot, in revenge of a private injury, by Hamilton of Bothwellhaugh. The house from which the assassin took his aim belonged to Archbishop Hamilton of St. Andrews, and stood on a site now occupied by a plain lumpish tenement; and it had a projecting balcony overlooking a narrow part of the street, and affording full command of the Regent's person while he moved slowly and on horseback. The murder is the subject of Sir Walter Scott's ballad of 'Cadzow-castle:' and the carbine with which it was perpetrated is preserved at Hamilton-palace. The assassin escaped, fled to France, and remained in voluntary exile. Some months after the murder, the English army which entered Scotland to revenge the Regent's death, or readjust the arrangements which it had unsettled, burnt the Duke of Chatelherault's house in Linlithgow, and threatened to destroy the whole town. The parliament, during that distracted year, was proposed to be held in Linlithgow; but the Regent Lennox, marching thither in October, prevented the intended meeting. In 1584, the rents both of money and victual of the lordship of Linlithgow were appropriated for supporting Blackness-castle. In 1585, a parliament was held in the town for establishing the Protestant councillors who had recently placed themselves at the head of James VI.'s government. At the King's marriage in 1592, the barony, lands, and palace were, according to former usage, given in dowry to his bride, the Princess Anne of Denmark. In 1596, Linlithgow afforded refuge to the King from the tumult of Edinburgh; and seven years later, it shared the grief and degradation of the metropolis, resulting from James's accession to the

English crown, and his consequent abandonment of his native palaces. In 1617, the King, in the course of his visit to Scotland, made a progress to Linlithgow; and at his entrance to the town, was met by James Wiseman, the burgh pedagogue, enclosed in a plaster figure resembling a lion, and was addressed by him in the following doggerel speech:—

"Thrice royal sir, here do I you beseech,
Who art a lion, to hear a lion's speech;
A miracle! for since the days of Æsop,
No lion, till those days, a voice dared raise up
To such a majesty! Then, king of men,
The king of beasts speaks to thee from his den,
Who, though he now enclosed be in plaister,
When he was free, was Lithgow's wise schoolmaster."

In 1633, Charles I., when at Edinburgh, intended to visit Linlithgow, and had the palace put in order for his reception, but did not accomplish his object. In 1646, when Edinburgh was scourged by the plague, Linlithgow afforded refuge to the senatus of the university, and flung open her palace for the session of parliament. In 1662, on the anniversary of the Restoration, the town signalized itself by so strange an act of succumbency to the Stuarts as was without a parallel even in the excited and tumultuous times in which it occurred,—the burning of the Solemn League and Covenant. The deed must be regarded, however, rather as a wanton expression of zeal to which the many were impelled by a few, than as an act authorized by the magistrates, or approved by the sober portion of the community. The chief actors were Mr. Milne, one of the bailies, and Mr. Ramsay, then minister of the parish, a renegade from the cause of the Covenant, trimming in the most servile manner for ecclesiastical promotion. The town gave a sumptuous entertainment to James VII. when in Scotland before his accession to the throne; and it is said to have long felt the pressure of the debt incurred by getting up, on the occasion, a magnificent display. During the rebellion of 1745–6, Linlithgow suffered severely, being then, as we have seen, denuded of the physical attractions, as formerly of the political importance, of its palace. In 1842, amidst an universal turn-out of the inhabitants, as well as a great gathering from the surrounding country, Queen Victoria and Prince Albert, on their way from Perthshire to Edinburgh, passed slowly through Linlithgow, when, it is said, "they looked long and anxiously at what was once one of the noblest of Scotland's royal palaces, and now only a picturesque ruin." Linlithgow gave the title of Earl to the family of Livingstone, also Earls of Callendar, attainted in 1716 in consequence of James, the fifth Earl, taking part in the first rebellion, in favour of the dethroned Stuarts.

LINLITHGOW-BRIDGE, a village partly in the parish of Muiravonside, Stirlingshire, but chiefly in the parish of Linlithgow, Linlithgowshire. It stands at both ends of the bridge over the Avon, on the road from Linlithgow to Falkirk, about a mile west of Linlithgow. The bridge was built about 1650, by Alexander, Earl of Linlithgow; and the customs of it were granted by Charles II., in 1677, to George, Earl of Linlithgow. A little above it is the viaduct of the Edinburgh and Glasgow railway over the Avon, with 20 arches of beautiful masonry, some of them upwards of 90 feet high. Adjacent to the village is a large calico-printing establishment, which affords employment to a good number of the inhabitants. Population of the Stirlingshire portion, 186; of the Linlithgowshire portion, 447. Houses in the Stirlingshire portion, 36; in the Linlithgowshire portion, 87.

LINLITHGOWSHIRE, or West Lothian, county lying along the south side of the frith Forth, nearly midway between the German oce and the frith of Clyde. Its outline, in a gene view, is triangular, with sides facing the north, t south-east, and the west. The northern side nearly straight in outline, but suffers intrusio each about 1½ mile deep, upon both its angles; t south-west side is indented by the parish of Mi Calder 2 miles by 1½; and the west side has an i dentation of a square, 1½ mile deep, along the nor side of Blairmuckhill-burn,—a projection, imm diately north of this, 3½ miles long and 2½ broad, and again an indentation nearly semicircular, miles along the chord, and 2½ miles deep. T county is bounded on the north by the frith Forth, which divides it from the detached part Perthshire and from Fifeshire; on the south-ea except at the indentation from Mid-Calder, by t river Almond and its tributary Briech-water, whi divide it from Edinburghshire; and on the we by Blairmuckhill-burn, Barbachlaw-burn, Calde water, and artificial lines which divide it from La arkshire, and mainly by Avon-water, and its trib tary Polness-burn, which divide it from Stirlin shire. Measuring in straight lines, it extends the north side 15 miles; on the south-east side 20 and on the west side 14¼. But, in consequence the peculiar outline of the west side, the south-we half of the county is nearly a parallelogram 1 miles by 7½, while the other half is very nearly regular isosceles triangle, the longest side lyi along the Forth. The area, according to Ar strong's map of the Lothians, is only 112 squa miles, or 71,680 statute acres; but, according Arrowsmith's map of Scotland, it is 121 squa miles, or 77,440 statute acres.

The surface, though almost all champaign, waving and beautifully diversified, nowhere subsi ing over more than a very small space into flatne Its eminences, with a few gentle exceptions, a rising grounds, knolls, elongated hillocks, and i considerable hills; and all, while they impart riety and picturesqueness to the landscape, we trivially subtract from the value of the grou either bearing aloft arrays of thriving plantation, affording verdant and good pasturage, or yieldi their sides and their summits to the dominion the plough. The most remarkable of them form range or rather line of summits from Bowden, the march of Torphichen and Linlithgow parish obliquely south-eastward through the middle of t county. Cairn-maple, the most prominent sum of the line, rising up on the march between parishes of Torphichen and Bathgate, has an a tude of 1,498 feet above the level of the sea. T Kipps-hills, the Knock-hills, and the Drumere hills, all form conspicuous parts of this range, do not rise to any great elevation. Cocklerue, Cuckold le Roi, near its west end, is one of its pr cipal summits, yet attains a height of only 500 f More noticeable eminences, because delightfu picturesque, are variously distributed through the northern parts of the county along the Fo The most conspicuous are Mons-hill, Craigie-h and Dundas-hill in Dalmeny, Craigton-hill Binns-hill in Abercorn, and Irongarth in the pa of Linlithgow. All the heights of the county c mand uncommonly varied and pleasing views of Lothians,—of Stirlingshire,—of the fine expans the Forth, with its shores receding in gentle undulating slopes, sprinkled with the seats of nobility and gentry, and richly ornamented w wood,—of the varied and fine southern exposur Fifeshire,—and of dimly-seen mountain-ra

A. Fullarton & Co. London & Edinburgh

forming a serrated sky-line in the far perspective. The middle and western districts of the county are the most hilly; the northern are the most beautiful, and become at intervals nearly luscious in their sweetness; the southern are the most tame and least valuable, containing much moorland and moorass, and swelling into few considerable or pleasant rising grounds.

The principal streams of the county are the Almond, across its southern division and along its south-eastern boundary, and the Avon 12 miles along its western boundary. Logie-water, a tributary of the Avon in Torphichen parish, drains much of the western division, through its head-waters, Barbauchlaw-burn and Ballencrieff-water. Broxburn, and several smaller streamlets, drain the eastern division, and run into the Almond. Nethermill-burn, Dolphinston-burn, and some tiny brooks, run northward to the Forth. The streams are sufficient for the purposes of draining and irrigation, and enrich the county with much water-power for the driving of machinery; but they are wholly uninteresting to the angler, the operations of agriculture and manufacture having forced the finny tribes from their haunts. The only lakes are one on the boundary between Dalmeny and Kirkliston, Lochcote in Torphichen, and Linlithgow-loch in the parish of Linlithgow. The Forth, both as an object of ornament and as a contributor of profit, is of great importance to the county, cheering the inhabitants by its changeful phases of beauty, and supplying fish for food, sites for manufactories, and harbours for traffic. On the beach at the western extremity, 2,000 acres are left dry at every reflux of the tide; but except at this point, the coast, for the most part, rises suddenly into a ridge adorned by culture and plantations. The Forth, along the whole, displays a singular variety of aspects; and, flashing or forming hills and promontories, winding bays and mimic estuaries, lofty shores, cultivated fields, and brilliant mansions and parks, takes the appearance of a great lake, a noble river, or a broad sea, according to the points of view in which it is seen. Medicinal springs exist near the village of Torphichen, on the estate of Kipps in the same parish, near Carubber-house in the parish of Linlithgow, near the church of Ecclesmachan, and in the vicinity of Borrowstounness.

Linlithgowshire abounds with the most useful minerals. Coal, in a workable state, exists in almost every district, and was well-known, and generally worked, so early as during the reign of Alexander III. A coal mine at Borrowstounness was worked beneath the sea half-way across the frith, and had a principal outlet or shaft half-a-mile from the shore at a moat or quay in 12 feet depth of water. The average annual coal-produce of the county, about 35 years ago, was 44,000 tons; but it has since then been greatly increased. Limestone everywhere abounds, and is manufactured at great profit, and distributed to general advantage. Freestone seems to stretch beneath the whole county; and, for the most part, but especially toward the east, it is of excellent quality. Several kinds of trap-rock abound in the hills. A basaltic rock, with many of its pillars in the form of well-defined regular prisms, and the rest columnar masses separated by grooves, forms an almost perpendicular breastwork 60 or 70 feet high, and 750 feet long, on the south side of Dundas-hill in the parish of Dalmeny. Shell-marl lies athwart a bog of about 30 acres near the foot of the basaltic colonnade, and occurs also in Linlithgow-loch, and in the parishes of Abercorn and Uphall. Ironstone abounds in Borrowstounness, Torphichen, Bathgate, Abercorn, and probably other parishes. Veins of silver were formerly worked in the parishes of Bathgate and Linlithgow, but eventually became either uncompensating, or exhausted. Fuller's earth, potter's clay, brick clay, and red chalk are found in the parish of Uphall.

The county, though aggregately rich in its agricultural capabilities, has nearly all varieties of soil, from bad to the best. Of the whole area, according to proximate calculation, 19,900 acres are clay, either of prime carse kind, or otherwise of good quality; 22,700 are clay, on a cold bottom; 9,500 are loam; 9,500 are light gravel and sand; 14,000 are moorland and high rocky ground; 1,500 are moss; and the remaining 460 are occupied by lakes and rivers. Owing to the general lowness of the county, its nearness to the Forth, and the prevalence of south-west winds, its climate is, in general, temperate as to heat, and moderately dry, neither very cold nor very sultry, characterized rather by gentle showers than by violent rains, and is altogether, if not prime, at least of the second-rate character enjoyed in the kingdom. During the Scoto-Saxon period, a profusion of natural wood seems everywhere to have waved over the surface; and this, in an age when pasturage formed the prime object of attention to the exclusion or depreciation of tillage, must have been quite congenial to the interests of husbandry. An expanse of natural wood, 70 acres in extent, still exists near Kinneil house on the Forth. During very many years past, the landowners have paid great attention to planting, and, besides richly embellishing the lower grounds, have spread out expanses of thriving wood on the moorland heights. All the area, too, is, with fractional exceptions, enclosed by almost all the variety of stone and hedge fences which ingenuity has contrived.

David I. was, in his day, the greatest farmer in West as well as in Mid-Lothian; was probably the introducer, or at least the improver, of horticulture; and certainly, on his grange at Linlithgow, practised husbandry with a skill and success which his barons could not excel, and which, however incognizant of the true principles of agriculture, must have had benign results at the midnight hour of the dark ages. Yet, while the cultivators were almost all villeyns who laboured, not for their own profit, but for the benefit of others, agriculture could not be carried on with much amelioration to its art. Throughout the Scoto-Saxon period, and for ages afterwards, every manor had its village, its mill, its kiln, its malthouse, and its common for the general use of the villagers. The husbandmen used oxen in their ploughs and waggons; they cultivated the same grain; they pastured the same beasts; they aimed at the same profits. Yet, throughout the Scoto-Saxon period, especially during the peaceful reign of Alexander III., there was a slow progress of melioration, similar in its causes and character to that experienced in Berwickshire, Haddingtonshire, and Edinburghshire. But the rancorous war of 70 years which followed the demise of Alexander III. plunged the whole county into ruin. The charters of the period are crowded with records of devastation. Domestic feuds were to the full as destructive as foreign inroads. During the feud between Earl Douglas and Crichton, the Chancellor, for example, Crichton, in 1445, ravaged the Earl's manor of Abercorn, and, among other waste, drove away a race of mares, which he had brought from Flanders. All the intercourses of life were oppressive, the strong constantly overpowering the weak. The art of cultivating the ground, with the exception that gardening became general in the reign of

James VI., appears to have helplessly weltered under the blows inflicted on it till about the close of the first quarter of last century. The formation of the society of improvers in 1723 probably gave the first impulse to Linlithgowshire, as to other counties. A sale of manure, at one shilling a bushel, by one Higgins and his copartners at Cuffabouts, near Borrowstounness, in 1725, seems an indication of returning enterprize. John, Earl of Stair, began, in 1728, to introduce, from his residence in the parish of Kirkliston, new maxims of husbandry, and new modes of cultivation; he was the first who practised the horse-hoeing husbandry; he sowed artificial grasses; and he cultivated turnips, cabbages, and carrots by the plough. Charles, first Earl of Hopetoun, imitated and even excelled the illustrious Earl of Stair; but they both died in the decade of 1740, before their plans were matured, or their principles duly appreciated. About 25 years before the close of the century, a race of projectors arose who went beyond the noblemen in usefulness, —some practical farmers, who, with clear heads, enterprising hearts, and sufficient capital, professionally undertook to rent farms and estates with design to improve them, and then, for an adequate profit, relinquished them to farmers who had less skill but were willing to learn. The system of agriculture now pursued is, in all respects, similar to that of the other Lothians.

In 1854, the number of landowners in Linlithgowshire was 164; and the old valued rental, in Scotch money, of each of 54 of them, was not above £50,—of 24, not above £100,—of 35, not above £200, —of 22, not above £500,—of 13, not above £1,000, —of 10 not above £2,000,—of 3, not above £5,000, —of 1, not above £10,000,—and of 1, upwards of £10,000. The number of occupiers of land paying each a rent of less than £10 sterling is 34. Most farms have an extent of from 70 to 200 acres; but some rise to 300 acres, while others comprehend only 50 acres or less. The farm-steads, generally, are in a creditable and neat condition. In 1854, according to the statistics obtained for the Board of Trade, by the Highland and Agricultural Society, the number of imperial acres under wheat was 2,850; under barley, 4,653½; under oats, 12,883¾; under rye, 35½; under bere, 5½; under beans, 1,763¾; under pease, 22¾; under vetches, 402½; under turnips, 4,856¾; under potatoes, 1,627¼; under mangel-wurzel, 33¾; under carrots, 6½; under cabbage, 10¾; under flax, 187¾; under turnip-seed, 57; in bare fallow, 670; in grass in the rotation of the farm, 20,358; in permanent pasture, 8,567¼; in irrigated meadow, 304; in sheep-walks, 3,163; under wood, 3,321¾; in a waste condition, 2,594; and in house-steads, roads, fences, &c., 1,587. The live stock comprised 2,223 horses, 3,489 milch cows, 1,932 calves, 5,563 other bovine cattle, 8,056 ewes, gimmers, and ewe-hoggs, 6,183 tups, wethers, and wether-hoggs, and 2,093 swine. The estimated gross produce of the chief crops in 1854, was 89,775 bushels of wheat, 180,323 bushels of barley, 470,256 bushels of oats, 168 bushels of bere, 50,707 bushels of beans, 73,336 tons of turnips, and 5,532 tons of potatoes; and the estimated average produce per imperial acre was 31½ bushels of wheat, 38¾ bushels of barley, 36½ bushels of oats, 32 bushels of bere, 28¾ bushels of beans, 15 tons and 2 cwt. of turnips, and 3 tons 8 cwt. of potatoes. The average fiar prices in the years 1848–1854 were 47s. 5¾d. for wheat, 28s. 5d. for barley, 20s. 9¼d. for oats, 34s. 3d. for pease, 51s. 5¾d. for malt, and 16s. 6¾d. for oatmeal.

Considering its rich facilities as to coal, useful minerals, central position, and ample means of communication by both land and sea, Linlithgowshire is poor in manufactures. A cotton-mill and a flax mill at Blackburn, some tanneries and shoe-making establishments at Linlithgow, a bleachfield and paper-mill on the Avon, the ironworks and pottery of Borrowstounness, a soap-making establishment at Queensferry, about 540 hand-looms at Bathgate and Whitburn, kept in motion by the manufacturers of Glasgow, small ship-building yards, and two or three distilleries and breweries, constitute nearly the whole amount of outward manufacturing display. The traffic in coal is very extensive, and employs more persons than any thing else except agriculture; the traffic in freestone and iron is also of some importance; but traffic in all other departments combined is very inconsiderable. The county is traversed by all the three great roads from Edinburgh to Glasgow, by a great number of subordinate roads, by the Union canal, by the Edinburgh and Glasgow railway, by the Bathgate branch railway, and by the Slamannan and Borrowstounness portions of the Monkland system of railway.

The royal burghs of the county are Linlithgow and Queensferry. Its seaports are Borrowstounness, Queensferry, and Blackness. Its other towns and principal villages are Bathgate, Whitburn, Blackburn, Broxburn, Kirkliston, Linlithgow-Bridge, Bridgeness, Cuffabouts, Grangepans, Muirhouses, Newton of Abercorn, Philipston, Dalmeny, Winchburgh, Uphall, Ecclesmachan, Blackridge, Torphichen, Armadale, Longridge, and Livingstone. Among the principal mansions are Kinnel-house, the Duke of Hamilton; Hopetoun-house, the Earl of Hopetoun; Dalmeny-park, the Earl of Roseberry; Kirkhill and Amondell, the Earl of Buchan; Binns-house, Sir W. C. C. Dalzell, Bart.; Polkemmet, Sir William Baillie, Bart.; Wall-house, Andrew Gillon, Esq.; Grange-house, James John Cadell, Esq.; Carriden-house, James Hope, Esq.; Houston-house, Norman Shairp, Esq.; and Craigie-hall, W. H. Hope Vere, Esq.

Linlithgowshire sends one member to parliament. Constituency in 1839, 702; in 1855, 436. The sheriff and commissary courts are held at Linlithgow every Tuesday and Friday during session. The sheriff small debt ordinary court is held at Linlithgow every Friday. The sheriff small debt circuit court is held at Bathgate on the third Wednesday of January, April, July, and October. The justices of peace small debt court is held on the first and third Tuesday of every month. The court of quarter-sessions is held on the first Tuesday of March, May, and August, and on the last Tuesday of August. The number of committals for crime, in the year, within the county, was 37 in the average of 1836—1840, 83 in the average of 1841—1845, 82 in the average of 1846—1850, 60 in 1852, 67 in 1853, and 83 in 1854. The sums paid for expenses of criminal prosecutions in the years 1846—1852 varied from £811 to £1,487 in the year. The total number of persons confined in the jail of Linlithgow within the year ending 30th June 1854, was 257; the average duration of the confinement of each was days; and the net cost of their confinement per head, after deducting earnings, was £20 15s. 6d. All the parishes of the county, except one, are assessed for the poor; and a combination poor-house for 8 of the parishes was built in 1855. The number of registered poor in the year 1852–3 was 1,061; in the year 1853–4, 995. The number of casual poor in 1852–3 was 726; in 1853–4, 7[illegible]. The sum expended on the registered poor in 1852–3 was £4,684; in 1853–4, £4,860. The sum expended on the casual poor in 1852–3 was £59[illegible] in 1853–4, £583. The assessment for prisons

1855 was £540 11s. 10d., and for rogue-money, £750. The valued rental in 1674 was £75,018 Scots; the annual value of real property, as assessed in 1849, was £122,242; and the real rental, as ascertained under the valuation act in 1855, was £128,841 8s. 6d. Population in 1801, 17,844; in 1811, 19,451; in 1821, 22,635; in 1831, 23,291; in 1841, 26 872; in 1851, 30,135. Males in 1851, 15,194; females, 14,941. Inhabited houses in 1851, 4,059; uninhabited, 116; building, 10.

There are in Linlithgowshire 12 entire parishes, and part of 2 other parishes. One of the parts is in the presbytery of Edinburgh; but the other part, and all the entire parishes, are in the presbytery of Linlithgow, which also comprises 2 parishes of Edinburghshire, and 5 parishes of Stirlingshire; and the whole are in the synod of Lothian and Tweeddale. In 1851, the number of places of worship within the county was 37; of which 12 belonged to the Established church, 11 to the Free church, 6 to the United Presbyterian church, 2 to the Original Session church, 2 to the Independents, 2 to the Evangelical Union, 1 to the Mormonites, and 1 to an isolated congregation. The number of sittings in 8 of the Established places of worship was 4,690; in 8 of the Free church places of worship, 2,675; in 5 of the United Presbyterian places of worship, 2,653; in the 2 Original Secession meeting-houses, 775; in the 2 Independent chapels, 590; in the 2 Evangelical Union chapels, 560; in the Mormonite place of worship, 100. The maximum attendance on the census Sabbath, at 6 of the Established places of worship, was 1,639; at 9 of the Free church places of worship, 1,950; at 5 of the United Presbyterian places of worship, 1,830; at the 2 Original Secession meeting-houses, 195; at 1 of the Independent chapels, 100; at the 2 Evangelical Union chapels, 182; at the Mormonite place of worship, 35; and at the isolated congregation's place of worship, 11. There were in 1851, in Linlithgowshire, 34 public day-schools, attended by 731 males and 1,392 females,—16 private day-schools, attended by 376 males and 438 females.—10 evening-schools for adults, attended by 183 males and 61 females.—and 51 Sabbath-schools, attended by 1,142 males and 1,423 females.

A Culdee establishment was organized at Abernorn about the year 650; and this, in 684, became the seat of the short-lived bishopric of the Picts. Linlithgowshire was for several generations part of the diocese of Lindisfarne, and was afterwards comprehended in that of St. Andrews. The ancient deaconry of Linlithgow had probably the same limits as the modern presbytery, and, at all events, included not only the whole county itself, but several parishes in Stirlingshire and Edinburghshire. At Kirkliston the bishop of St. Andrews had a sort of sovereignty under the King's grant, extending to all the lands of the see south of the Forth. During the short-lived Protestant bishopric of Edinburgh, Linlithgowshire was included in its territory. Though the knights of St. John had their seat at Torphichen, there were anciently in the county few religious houses. Two monasteries and a hospitium at Linlithgow, and a Carmelite convent near Queensferry, were the chief. See TORPHICHEN. The seal of the presbytery of Linlithgow, composed of brass, and larger than a crown-piece, was discovered about 70 years ago in an old repository. Engraved round it are the words, 'Sigillum presbyterii Linlithquo;' and in the centre of it are a legend, some decorations, and the date 1583.

At the Christian epoch, Linlithgowshire was inhabited by the British tribe of the Gadeni. But its civil history, so far as peculiar to itself, has almost all been rapidly sketched in our articles on Linlithgow and Blackness. Cairns and sepulchral tumuli, the monuments of the more ancient inhabitants, exist on the Loch-coat hills, on the Forth near Barnbougle-castle, in the vicinity of the village of Kirkliston, and on the south bank of the Almond at Livingstone. Remarkable standing-stones, Druidical or monumental, occur in the wood of Abercorn, in the vicinity of Bathgate, and in the parish of Torphichen. Vestiges of British forts exist on Cuckold le Roi hill in Linlithgow, on Bowden-hill in Torphichen, and on Cairnpaple-hill and Binnshill, south-eastward in the Bowden range. Agricola, after conquering the Lothians, passed, in the year 83, from Carriden to the opposite shore of the Forth in search of the Horestii. Twenty years later was constructed from Carriden to the Clyde, ANTONINUS' WALL: which see. From the Roman station at Cramond, a Roman road proceeded by Barnbougle-hill, and across Ecklin moor, where its remains continue distinct, westward to the end of the wall at Carriden. Roman towers were reared along the Forth, but cannot now be traced. Vestiges of a small Roman camp occur a little east of Abercorn. Edwin, who assumed the Northumbrian sceptre in the year 617, stretched his jurisdiction from the Humber to the Avon, and laid the foundation of a power over even the northern extremity of this kingdom which occasioned Linlithgowshire, in common with the other Lothians, to be known to Kenneth, the son of Alpin, and the leader of the Scots to the conquest of the country, by the name of Saxonia. The chief strengths of the ages succeeding the Scottish conquests, are the peel, afterwards enlarged or re-edified into the palace, of Linlithgow, the peel of Livingstone, the square tower of Newyearfield, the castles of Blackness, Barnbougle, Kinneil, Abercorn, Niddrie, Mannerston, and Bridge-house, vestiges of a castle which gave a retreat to Walter Steward of Scotland, in a morass near Bathgate, the tower-house of Meidhope, Castlelyon below Kinneil-castle, and now overflowed by the frith, the tower of Torphichen, and a ruined baronial residence at West Binny. Existing peerages of the county are Hopetoun, Torphichen, and Abercorn, and extinct ones are Livingstone and Linlithgow.

West Lothian first appears on record as a sheriffdom or shire, in the reign of Malcolm IV.; it continued to be so in full power during the long reign of William the Lion, and nominally, though the sheriffs passed away, till the accession of Robert Bruce. The district now became a constabulary, and remained under this subordinate form till probably the reign of James I. or James II. West Lothian was again in undoubted possession of the honours of a sheriffdom in the reign of James III., though when or how it reacquired them are points not known. In the progress of weakness and distraction, the office of sheriff became hereditary. In 1600, it was granted to James Hamilton, the eldest son of Claude, Lord Paisley, and to his heirs; and soon after the Restoration, it was given hereditarily to John Hope of Hopetoun, the ancestor of the Earls of Hopetoun. At the abolition of here litary jurisdictions in 1747, the Earl of Hopetoun claimed as compensation £3,000 for the sheriffdom of Linlithgow, and for the sheriffwick of Bathgate, the regality of St. Andrews at Kirkliston, the bailiary of Crawfordmuir, and the regality of Kirkheugh, sums which made a total of £7,500, and was allowed £4,569. Kirkliston and other lands were a regality with an attached bailiary. Bathgate was long a barony, and afterwards became a separate sheriffwick. Torphichen was a regality first of the knights of St. John, and next of the Lords Torphichen.

Other regalities were Kinneil under the Duke of Hamilton, Philipston first under the monks of Culross, and afterwards under the Earl of Stair, and Brighouse and Ogleface under the Earl of Linlithgow. Linlithgow was a hereditary royal bailiary belonging, like the last-named regality, to the Linlithgow family. Baronial jurisdictions were Abercorn, Livingstone, Carubber, Dalmeny, Barnbougle, and Strathbrock. These various jurisdictions, solicited by the ambition, and granted by the impolicy, of former times, confounded rather than promoted the justice of Linlithgowshire, and were long prostituted to the interests of individuals rather than dedicated to general convenience.

LINN. See Lin.

LINN OF DESKFORD. See Deskford.

LINNDEAN. See Lindean.

LINNHE (Loch), an arm of the sea, deflecting from the Sound of Mull, opposite the eastern extremity of the island of Mull, and projecting north-eastward between the district of Appin on the right, and the districts of Morvern and Ardgour on the left, in Argyleshire. It is about 22 miles in length, and about 5 miles in average breadth. It contains the island of Lismore, the island of Shuna, and some smaller islands. It extends nearly on a line with the southern or broader part of the Sound of Mull. Its junction with that part of the sound sends off the narrow part of the sound to the north-west, and Loch-Etive to the east-north-east. Its south-east side, opposite the upper part of Lismore, sends off Loch-Creran. Its head washes the south-western extremity of Lochaber, in Inverness-shire, and forks into Loch-Eil toward the north-east, and Loch-Leven toward the east, both of which lie on the boundary between Argyleshire and Inverness-shire. But the part of Loch-Eil, so long as on that boundary, or before suddenly deflecting westward in the neighbourhood of Fort William, is often regarded as part of Loch-Linnhe, so as to share its name.

LINNHE-WATER, a mountain streamlet, of brief course, but brilliant current, flowing into the head of Loch-Long, on the boundary between Argyleshire and Dumbartonshire.

LINNHOUSE. See Linhouse.

LINNMILL-BURN, a streamlet running on the boundary between Dalmeny and Abercorn, to the frith of Forth, in Linlithgowshire. It makes a waterfall of 75 feet in leap over a whin-rock precipice, in the neighbourhood of Springfield.

LINTALEE. See Jedburgh.

LINTHILL. See Eyemouth and Lilliesleaf.

LINTON, a parish, containing the post-office village of West Linton and the village of Carlops, in the north-west of Peebles-shire. It is bounded by the counties of Lanark and Edinburgh, and by the parishes of Newlands and Kirkurd. Its length southward is 10¼ miles, and its greatest breadth is 7½ miles. The North Esk rises at its northern extremity, runs 4 miles south-eastward along its north-eastern boundary, receives from within it the pretty little tribute of Carlops burn, and, just when entering Edinburghshire, partly washes, partly forms the classic scenery of Habbie's Howe: see that article. Medwin-water flows 3¾ miles along the western boundary to Garvaldfoot, there very curiously splits itself into two streams, the larger one, which retains the name of the Medwin, debouching into Lanarkshire to fall eventually into the Clyde, and the smaller one running 4½ miles farther along the boundary, to assume the name of the Tarth, and to join the Lyne in a progress to the Tweed. Lyne-water rises on the west side of Weather-law, within half-a-mile of the source of the North-Esk, and flows 5¾ miles south-eastward through the interior of the parish, and 2 miles southward along its eastern boundary. Numerous tributaries of the Lyne drain the sides of the parish; but the most considerable of them is West-water, a streamlet 4½ miles long, running obliquely through the interior to the Lyne's right bank. Slipperfield-loch, 1¼ mile west of the mouth of West-water, measures about 1½ mile in circumference. Around it on all sides stretches an expanse of heathy moor, 2,000 or 2,500 acres in extent, some small parts of which have been reclaimed. Three-fourths of the entire area of the parish are hilly or mountainous, —either heathy upland of little value, or good hill-pasture. In the north-east corner is a moor similar to that around Slipperfield-loch, but smaller in extent. Beautiful stripes of arable land stretch along the Lyne, and the lower part of the North Esk. The soil on the low grounds of the Esk is clay superincumbent on limestone, and on other ploughed grounds is either a sandy loam upon a gravelly bottom, remarkably well suited to the turnip and the potato, or a reclaimed and progressively improving moss. The aggregate of ploughed land is about 4,000 acres, and of land under wood about 400 acres. The parish is famous for its variety of the Cheviot breed of sheep. Excellent white freestone is worked at Deepsykehead and at Spittlehaugh, and is carried from the former place to every part of Peebles-shire. Coal is mined at Carlops, at Coalyburn, and at Harlamuir. Limestone is burnt at Carlops, and at Whitefield, and occurs also, of excellent quality, at Spittlehaugh and at Badensgill. Lead has been repeatedly but vainly searched for in the hill called Leadlaw. Fuller's earth occurs in a small seam below Bridgehouse on the Lyne. Blue marl lies in a stratum two feet thick above the lime-rocks of Carlops and Spittlehaugh. Many pebbles are found of great beauty, and similar in kind to the Cairngorm stone. A mineral spring, called Heaven-aqua well, somewhat resembling the spa of Tunbridge, bubbles up to the north of Linton village. There are 22 landowners with a rental of upwards of £100; and two of them are resident. Assessed property in 1843, £7,695 12s. 10d. Estimated value of raw produce in 1834, £14,000. The road from Edinburgh to Biggar traverses the parish south-westward, nearly through its middle; and a branch road strikes off thence, down the Lyne toward Moffat and Peebles. The village of Linton, or West Linton, stands on the latter road, on the Lyne, 11 miles north-north-east of Biggar, and 16½ south-south-west of Edinburgh. It is irregularly built, and has an antique and curious appearance, a considerable proportion of the houses presenting their gables to the street. Most of its inhabitants are weavers, or traders dependent on its market. Though finely situated for a woollen manufacture lying in the vicinity of coal, on a stream of much water-power, and in the midst of a sheep country its manufacturing connexion is solely the weaving of cotton fabrics for houses in Glasgow. It has been celebrated from time immemorial for its sheep markets, four of which used to be held in the year but now all the business, though very great, is done on the last Tuesday of June. The village is a burgh-of-regality under the Earl of Wemyss. Pennicuick, in his Poetical Address, in 1689, to the Prince of Orange, calls it "the submetropolitan of Tweeddale." The village gives the title of Baron to the Earl of Traquair. Population of the village 550. Houses, 131. Population of the parish in 1831, 1,577; in 1851, 1,630. Houses, 280.

This parish is in the presbytery of Peebles, and synod of Lothian and Tweeddale. Patron, the Earl

of Wemyss. Stipend, £232 14s. 11d.; glebe, £20. Unappropriated teinds, £115 7s. Schoolmaster's salary, £34 4s. 4½d., with £35 10s. fees, and £10 other emoluments. The parish church was built in 1781. There is a Free church preaching-station at Carlops, whose receipts in 1856 amounted to £50 15s. 1d. There is an United Presbyterian church at the village of Linton. The parish, or kirk-town, has its name from a linn or the Lyne, and anciently had the adjunct to that name of Roderick. The church of Linton-Roderick, from the reign of David I. till the Reformation, was a vicarage under the monks of Kelso. In the 13th century, a chaplainry, dedicated to the Virgin Mary, was established at Ingliston, in the south-west corner of the parish. A chapel, attached to an hospital, anciently stood on the Lyne, at a place to which it gave the name of Chapel-hill.

LINTON, a parish on the north-east border of Roxburghshire. It is bounded on the north-north-east by England, and on other sides by the parishes of Yetholm, Morebattle, Eckford, and Sprouston. Its length south-south-westward is 6¼ miles; and its breadth varies from 1½ to 2½ miles. Its post-town is Kelso, 6 miles to the north-west; though Yetholm to the east, and especially Morebattle to the south, are much nearer. Kail-water forms the boundary-line for a mile on the south, and a small tributary of that stream for 3¼ miles on the west. The south-west corner is a beautiful level, 300 acres in extent, rising only a few inches above the Kail, subject to inundations, and forming part of a lovely plain of 12,000 or 15,000 acres, surrounded on all sides by green and arable ascents, and by mansions and parks which delight, not less by their local associations with Allan Ramsay, Thomson, and other names, than by their fine landscape features. In the Linton part of the valley lay Linton-loch, nearly circular, and about 30 acres in area, now so drained as to exhibit the appearance of a green morass. Near the other end of the parish is Hoselaw-loch, a beautiful oblong sheet of water, about 30 acres in area, sending off a little streamlet into England to become tributary there to Bowmont-water. About 1,750 acres are moss or otherwise waste land. The highest ground is Linton-hill, on the south-east boundary; and the surface thence to the valley of the Kail is an undulating descent. Along the north-west verge is an interrupted line of low heights, the principal of which are Blakelaw, Hoselaw, and Kiplaw; and parallel to it along the north-east boundary, runs a low ridge called the Graden-hills. Swells and rising-grounds also diversify the surface of the interior. All the eminences, excepting the summit of Linton-hill, are wholly arable; and the level and low grounds, excepting 70 or 80 acres under plantation, and the large expanses of moss, are in a state of rich cultivation. The soil, on the plain of the south-west corner, is partly a strong retentive clay, and partly a deep loam superincumbent on sand or gravel; and in other districts it consists variously or mixedly of clay, loam, sand, and gravel. Whinstone abounds, and occasionally encloses seams of rock-crystal. Sandstone is quarried at Frogden. Coal exists in thin seams, but does not compensate mining. The principal landowners are Elliot of Clifton, Wauchope of Niddry-Marshall, and Oliver of Blakelaw. Assessed property in 1843, £5,586 8s. 6d. Estimated value of raw produce in 1834, £14,375.

The ancient fortalice or tower of Linton, the residence of the ancestors of the noble family of Somerville till near the end of the 14th century, stood on an eminence, now covered with trees, near the church. It is almost entirely obliterated, but appears, from the features of its site, to have been a place of considerable strength. It bore the brunt of much of the border conflict during the wars of the succession; and, in the reign of Henry VIII., it was first dilapidated by the warden of the English marches, and next utterly destroyed by the Earl of Surrey. The parish, both from lying immediately on the Border, and from its being part of what were anciently called 'the dry marches,' and one of the most facile thoroughfares between the kingdoms, was peculiarly exposed to the rough contacts of the Border wars. Graden-place, ¾ of a mile south-west of Hoselaw-loch, shows traces of a fortalice surrounded by a moat, and was the seat of the Kerrs of Graden, little inferior in the coarse fame of Border warfare to their namesakes of Fernihirst. On the summits of various rising grounds are remains of circular encampments. On the farm of Frogden is a spot called the 'tryst,' marked by several upright stones, anciently the place of rendezvous for parties about to make a foray into England. A narrow opening between two heights, along the side of Linton-loch, bears marks of having been fortified, was defended by the rising-ground of artificial formation which now bears aloft the parish church, and seems to have been viewed as a pass or as a favourable point for standing at bay against a pursuing foe. In various localities tumuli abound, enclosing earthen urns with human bones; and, in one place, they are so numerous as to identify the spot with the scene of some extensively murderous onslaught. Linton and Hoselaw, once villages of note, have become extinct. The parish is traversed by the road from Kelso to Yetholm, and lies within easy distance of the Kelso and Sprouston stations of the North-Eastern railway. Population in 1831, 462; in 1851, 630. Houses, 98.

This parish is in the presbytery of Kelso, and synod of Merse and Teviotdale. Patron, Elliot of Clifton. Stipend, £257 11s. 6d.; glebe, £20. Unappropriated teinds, £290 13s. 7d. Schoolmaster's salary, £34 4s. 4½d., with £13 fees, and £7 other emoluments. The parish church is an old building, repaired about 67 years ago, and containing 120 sittings. There was anciently a chapel at Hoselaw. Mr. Dawson, the celebrated agricultural improver, was a farmer at Frogden; and Mr. Thomas Pringle, the poet, was a native.

LINTON (East), a post-office village in the parish of Prestonkirk, Haddingtonshire. It stands on the river Tyne, on the road from Edinburgh to London, adjacent to a station of the North British railway, 5½ miles east-north-east of Haddington, 5¾ west of Dunbar, 6½ south-south-east of North Berwick, and 23¼ by railway east by north of Edinburgh. The river Tyne, while sweeping past it, falls into a large, deep linn, whence arose the name of Linton; and that name, without the prefix of East, was given to the parish of Prestonkirk from the earliest record till the Reformation. A grand viaduct of the North British railway crosses the Tyne here, and is the finest work on the line excepting only the viaduct of Dunglas. The village of Linton is a prosperous place, the seat of a considerable amount of provincial, rural trade, and has a corn-market, recently established, and of rising character. Here are an office of the National bank, a subscription library, several schools, an United Presbyterian church, and a Free church; and in the neighbourhood is the parish church of Prestonkirk. The village was anciently a burgh of barony. Population, 775. Houses, 177.

LINTON (New), a village in the parish of Prestonkirk, Haddingtonshire.

LINTON (West). See Linton, Peebles-shire.

LINTRATHEN, a parish, containing a post-office station of its own name, also the hamlets of Bridgend and Pitmudie, in the Grampian district of Forfarshire. It is bounded by Kirriemuir, Kingoldrum, Airlie, Alyth, and Glenisla. Its length southward is 12 miles; and its greatest breadth is 5½ miles. It lies in the outskirts of the Grampians, and is, for the most part, a sea of heights from 500 to 1,000 feet above the level of Strathmore, of bleak, barren, and chilly aspect. Along the southern boundary, and some way up the middle of the interior on the banks of the principal streams, are sloping belts of arable ground, considerable in area, and not deficient in fertility. But most of the lands in tillage are thinly carpeted with a moorish soil, and produce corn of inferior quality. Among the hills in the interior are several valleys fit only for pasturage. The heights are, for the most part, heathy; and, in the north corner, are wild and desolate. About 3,000 acres of the entire area are in tillage, and about 1,200 are under wood. The river Isla flows 5½ miles along the western and south-western boundaries, and achieves there its fine falls of the Reeky linn and the Slug of Achrannie, from the former of which arose the name of Lintrathen. The rivulets Back-water and Melgam-water rise in the northern extremity, and run southward through the interior, making a junction a little above the parish church, whence their united stream proceeds to the Isla. Lintrathen-loch, nearly circular in outline, about 2½ miles in circumference, and of picturesque appearance, lies ¼ of a mile west of the parish church, and sends off its superfluence to Back-water. The principal landowners are the Earl of Airlie and Sir Charles Lyell. The real rental in 1855 was £4,438. Assessed property in 1843, £5,586 8s. 6d. Estimated yearly value of raw produce in 1842, £12,480. The nearest point of market traffic is Kirriemuir, 7 miles east of the southern border. Population in 1831, 998; in 1851, 926. Houses, 205.

This parish is in the presbytery of Meigle, and synod of Angus and Mearns. Patron, the Earl of Airlie. Stipend, £159 2s.; glebe, £12. Schoolmaster's salary, £29 18s. 9¾d., with £26 fees, and £5 other emoluments. The parish church was built in 1802, and contains 450 sittings. The ancient church belonged to the priory of Inchmahome. There are two private schools.

LINTROSE. See KETTINS.

LINVILLE. See KIRKFIELDBANK.

LINWOOD, a manufacturing village on the north-east border of the parish of Kilbarchan, Renfrewshire. It stands on the left bank of the Black Cart, 1¾ mile north-east of Johnstone, and 2½ miles west by north of Paisley. The river is spanned here by a bridge of one arch, erected about the year 1762. The Glasgow and Greenock railway also passes in the vicinity. The village stands mostly on the estate of Blackstone, and was built on a regular plan. It is of modern origin, having arisen from a large mill for the spinning of cotton, which was established at this place in 1792, burnt down in 1802, and rebuilt in 1805. This factory and the iron minings in the neighbourhood employ most of the inhabitants. Population, 1,126.

LISMORE, an island in the Lorn district of Argyleshire. It contains the post-office station of Lismore, and the villages of Clachan and Portramsay. It lies along the middle of the south-west end of Loch-Linnhe, at the distance of 7 miles from Oban. It consists of an uneven rocky ridge, about 9 miles long, extending from south-west to north-east, and averaging about 1½ mile in breadth. Its basis is entirely limestone; and its surface is rugged and sprinkled with abrupt projecting rocks, but its soil is a rich black loam, formed from limestone, and extremely fertile. Deer and ox horns of uncommonly large size have been frequently dug up in the bogs. The name Lismore signifies 'the great garden,' and probably alludes to the comparative productiveness of the island, lying like a garden amidst a great extent of sterile country, which it considerably supplies with the necessaries of life. It was anciently the seat of the bishop of Argyle, who was frequently named 'Episcopus Lismoriensis;' and a great part of the cathedral remains, the chancel of which is used as the parish church. The walls of the bishop's castle remain pretty entire at Achinduin, 4 miles west of the cathedral. There was formerly a Roman Catholic college on the island; but it was removed in 1831, and has left no trace. There are vestiges of several fortified camps, and of an old castle with a fosse and drawbridge, said to have been erected by the Danes. A lighthouse stands on the south-west end of the island, exhibiting a fixed light, which is visible at the distance of 15 nautical miles. This lighthouse and a number of neat houses among trees in its neighbourhood, are sparkling objects in the extensive scenery at the junction of Loch-Linnhe with the sound of Mull, and looked particularly fine on the occasion of Queen Victoria's voyage to Fort-William in the autumn of 1847. A fair is held in Lismore on the last Tuesday of October, but is not much frequented. Population in 1831, 1,790. Houses, 303. Assessed property in 1815, £1,250.

LISMORE AND APPIN, an united parish in the north of Argyleshire. It is bounded by the counties of Inverness and Perth, and by the parishes of Glenorchy, Ardchattan, Kilmore, Torosay, Morven, and Ardnamurchan. It comprises the three great districts of Lismore, Kingairloch, and Appin, the first within Loch-Linnhe, the second on the north-west side of that loch, the third on the south-east side of that loch; and it has Loch-Leven, Loch-Creran, and the Sound of Mull, on its boundaries. Its length from north-east to south-west is not less than 48 miles; and its average breadth is about 10 miles. Its principal parts will be found described in our articles LISMORE, KINGAIRLOCH, GLENSANDA, APPIN, AIRDS, DUROR, GLENCRERAN, GLENCOE, LEVEN (LOCH), and BALLACHULISH. Its extent of sea coast is not less than 90 miles. Its land-surface comprises about 4,000 acres of arable land, about 4,000 acres of woodland, and about 345,760 of hill pasture, moss, moor, and barren mountain. There are sixteen landowners having each a rental of upwards of £50. Good communication is enjoyed by means of steamers passing through Loch-Linnhe and the Sound of Mull to and from the Clyde. Population in 1831, 4,365; in 1851, 4,097. Houses, 782. Assessed property in 1843, £15,707 12s. 4d.

This parish is in the presbytery of Lorn, and synod of Argyle. Stipend, £274 13s. 10d.; glebe, £17. Unappropriated teinds, £58 7s. 3d. There are two parish churches,—the one of Lismore repaired in 1749, the other of Appin built in that year; and the number of sittings in the former is 550, in the latter, 400. There is a government church at Duror, built in 1826, containing 323 sittings, and having the status of a quoad sacra parish church. There are three missions of the royal bounty; one of them wholly for Kingairloch, one shared between Lismore and Morven, and one shared between Glencoe and Ardchattan. There is a Free church at Appin; whose receipts in 1856 amounted to £69 9s. 2d. There is an United Presbyterian church of Lismore, with an attendance of 120. There is an Independent chapel in Appin. There are Episcopalian chapels at Portnacroish, Duror, and Glen

creran, all under the care of one clergyman; and there is another, constituting a separate charge, at Ballachulish. There is also a Roman Catholic chapel at Glencoe. There are two parochial schools of Lismore, and four parochial schools of Appin; the salary varying from £30 to £6, and the fees from £12 to £5. There are also two private schools. The united parish of Lismore and Appin was anciently called the parish of Kilmaluag; and the upper parts of Appin belonged, in some remote period, to the ancient parish of Ellanmunde.

LISTON-SHIELS, a district among the Pentland hills, belonging quoad civilia to the parish of Kirkliston, and quoad sacra to that of Kirknewton, Edinburghshire. It lies south-east of both parishes, distant, at the nearest point, ¾ of a mile from the latter, and 4½ from the former. The district is nearly a square 1¾ mile deep; bounded by Currie, Penicuick, Peebles-shire, and Mid-Calder. It sends its tiny streams northward from near its southern limits, and is one of the most bleak parts of the Pentlands.

LITTLE BRECHIN. See BRECHIN (LITTLE).

LITTLE COLONSAY. See COLONSAY (LITTLE).

LITTLE CUMBRAE. See CUMBRAE (LITTLE).

LITTLEDEAN. See MAXTON.

LITTLE DUNKELD. See DUNKELD (LITTLE).

LITTLE FERRY. See DORNOCH.

LITTLE FRANCE, a hamlet at the foot of Craigmillar-hill, in the parish of Liberton, Edinburghshire. The French servants of Queen Mary resided here, when in attendance upon her at Craigmillar-castle.

LITTLEMILL, a village in the parish of West Kilpatrick, Dumbartonshire. It is situated on the Clyde, a little below Bowling. Ship-building is carried on in it. Population, 136. Houses, 28.

LITTLEMILL. See FORFARSHIRE.

LITTLEROE, a small island in the parish of Delting, and lying off the west coast of the central part of the mainland of Shetland. It is inhabited by one family.

LITTLE-ROSS, a small island at the mouth of the estuary of the Dee, in Kirkcudbrightshire. It lies within ¼ a mile of the headland which separates the entrance of the estuary of the Dee from the entrance of Wigton bay; and is situated sufficiently seaward to command a view both across the whole breadth of the entrance of Wigton bay westward, and the whole length of the Solway frith on to its emergence into the Irish sea eastward. It also commands a gorgeous close view of the estuary of the Dee, up to the town of Kirkcudbright northward. A lighthouse and two towers were erected on it a few years ago; the lighthouse showing a light which flashes once in every 5 seconds, and is visible at the distance of 18 nautical miles, so as to guide the navigation of the Solway; and the two towers standing on a line with the lighthouse, bearing south-west, in such manner as to lead a vessel over the bar at the mouth of the Dee, into the deepest water of the harbour.

LITTLE RYSAY, a small pastoral island, to the north of Pharay, in the parish of Flotta, Orkney.

LIVER (THE), a streamlet of the parish of Ardchattan, Argyleshire. It has a westerly course of about 6 miles in length, and falls into Loch-Etive at Inverliver.

LIVET (THE), a rivulet of the parish of Inveraven, Banffshire. It rises on the confines of Mortlach and Cabrach, runs 3¾ miles southward, 3¼ miles westward, and 4¼ miles south-westward, and falls into the Aven near Drummin-castle, on the boundary with Kirkmichael. Its principal affluents are the Kyma-burn on the left, in the upper part of its course, and Tervie-water on the right, 1½ mile above its mouth. Its basin bears the name of GLENLIVET: see that article.

LIVINGSTONE, a parish, containing the village of Livingstone, and the greater part of the post-office village of Blackburn, on the southern border of Linlithgowshire. It is bounded by Edinburghshire, and by the parishes of Whitburn, Bathgate, Ecclesmachan, and Uphall. Its greatest length north-eastward is 6¼ miles; and its greatest breadth is 2¾ miles. Almond-water runs across the western part of its interior, and along the eastern part of its southern boundary. Briech-water runs along the western part of the southern border, into confluence with the Almond. The surface of the parish is much diversified, yet does not rise into any hill except at Dechmont-law in the north-east corner, which has an altitude of 686 feet above the level of the sea, and commands a very extensive prospect. Limestone, coal, and whinstone abound, but have not been very successfully worked. An excellent sandstone has been extensively quarried. About 200 acres in the parish are moss; about 300 are under wood; and all the rest are in tillage. There are ten principal landowners. An ancient hunting-seat of the kings of Scotland stood at Newyearfield. An ancient fortalice, called the peel of Livingstone, surrounded by a high earthen rampart, and by a very wide, deep fosse, stood a little east of the parish church. The parish is traversed by the south road from Edinburgh to Glasgow; and it has a station on the Edinburgh and Bathgate railway, 15¾ miles from Edinburgh. The village of Livingstone stands on the Edinburgh and Glasgow road, and on the left bank of the Almond, 2½ miles west of Mid-Calder, and 6 east of Whitburn. It is ancient, and figures a little in history, but has now a decayed appearance. 'The bonnie lass of Livingstone,' so well-known to Scottish song, is said to have kept a drinking-house a mile west of the village. Population of the village, 111. Houses, 28. Population of the parish in 1831, 1,035; in 1851, 1,289. Houses, 202. Assessed property in 1843, £4,556 6s. 7d.

This parish is in the presbytery of Linlithgow, and synod of Lothian and Tweeddale. Patron, the Earl of Roseberry. Stipend, £188 12s.; glebe, £12. Schoolmaster's salary, £34 4s. 4½d., with £25 fees, and some other emoluments. The parish church stands at the village of Livingstone, was built in 1732 and repaired in 1837, and contains 263 sittings. There is a Free church at Livingstone, with an attendance of about 200; and the amount of its receipts in 1856 was £127 6s. 0½d. There is an Independent chapel at Blackburn, built in 1826, and containing 200 sittings. There are two non-parochial schools and a parochial library. A person of the name of Leving resided here probably as early as the reign of Alexander I., and gave name to the manor and parish. 'Thurstanus filius Levingi,' Thurstan the son of Leving, witnessed a charter of Robert the bishop of St. Andrews, confirming a grant of the church by David I. to the monks of Holyrood. Under these monks the church was anciently a vicarage. Previous to 1730, the parish of Livingstone comprehended, not only all its present area, but likewise all that which now forms the parish of Whitburn.

LIX, a post-office station subordinate to Crieff, in Perthshire.

LOAK. See GAREY (THE), Auchtergaven.

LOAN, a post-office station subordinate to Linlithgow, and 3 miles distant from that town.

LOANHEAD, a post-office village in the parish of Lasswade, Edinburghshire. It stands 1½ mile west-south-west of the village of Lasswade, on the road thence to Roslin, and 5 miles south by east of

Edinburgh. The country around it is sweetly beautiful, and comprehends, on the south side, a very romantic part of the glen of the North Esk. The village itself has a comparatively great length, extending in lines of cottages along the road to Edinburgh; and, though inhabited partly by colliers and by persons connected with the paper mills, it contains a number of good houses, suitable for the accommodation of genteel families, and serves as a fine summer retreat for some of the inhabitants of the metropolis. It is supplied with water by pipes, and has a subscription library, a Free church preaching station, and a Reformed Presbyterian church. Population in 1856, 1,400. Houses, 280.

LOANHEAD-BY-DENNY. See DENNY-LOANHEAD.

LOANS, a post-office village in the parish of Dundonald, Ayrshire. It stands on the road from Ayr to Irvine, 2½ miles east-north-east of Troon. Population, 205.

LOCH, a Celtic name, signifying either a fresh-water lake or an arm of the sea.

LOCHABER, a district in the south of the mainland of Inverness-shire. It is bounded by Perthshire and Argyleshire, and by the Great Glen and Badenoch. Its length south-westward is 33 miles; and its greatest breadth is 21 miles. Loch-Lochy, the river Lochy, Loch-Eil, Loch-Linnhe, Loch-Leven, and the river Leven, form the greater part of its boundary. The foot of Loch-Laggan, also, is on its boundary. The word 'aber' elsewhere in Scotland applies to the confluence of streams; but here it seems to apply to the confluence of lochs. Hence the name Lochaber. This district is one of the most characteristically highland in the kingdom, for at once the altitude of its mountains, the depth of its glens, the wildness of its surface, and the sublimity of its scenery. The greater part of it is identical with either the south-east flank of the Great Glen, Glenroy, Glenspean, Glentreig, Ben-Nevis, Glen-Nevis, or the glen of Loch-Leven. The district belongs parochially to Kilmanivaig and Kilmalie; and the details of it have already been noticed in our articles on these parishes. The last wolf in Great Britain was slain in Lochaber, in 1680, by Sir E. Cameron of Lochiel.

LOCH-A-BHEALICH, a lake, abounding with fine trout, in the parish of Kintail, Ross-shire.

LOCH-ACHALL. See ACHALL.

LOCH-ACHILTY. See CONTIN.

LOCH-ACHRAY. See ACHRAY.

LOCH-AFFRICK. See AFFRICK.

LOCH-AINORT. See EYNORT.

LOCH-ALINE. See ALINE.

LOCH-ALLAN. See UIST (SOUTH).

LOCH-ALSH, an arm of the sea at the south-western extremity of Ross-shire. It extends from Kyleakin, between the mainland and Skye, 8 miles eastward, past Skye and into the interior of Ross-shire, to the vicinity of Castle-Donnan, where it forks into Loch-Long toward the north-east, and Loch-Duich toward the south-east. Its breadth is very variable, but does not anywhere exceed 3 miles.

LOCHALSH, a parish, containing the post-office villages of Lochalsh and Plocton, in the south-west of the mainland of Ross-shire. It is bounded by Loch-Carron, Loch-Alsh, Loch-Long, the streams running into the heads of Loch-Carron and Loch-Long, and the mountain-line of water-shed near the sources of these streams. Its length south-westward is about 28 miles; and its greatest breadth is 8 miles. But its inhabited part, which is at the south-west end, measures only about 10 miles by 5. The general surface of the parish is mountainous, but not so much so as that of neighbouring parishes. Its uplands are neither rocky nor heathy, but afford excellent pasture; and the declivities of its smaller hills, as well as the hollows at their base, have a good arable soil. Its coasts contain several good fishing harbours; and four or five sailing-vessels belong to it. About 1,478 acres of its surface are in tillage; about 2,889 are green pasture; about 44,730 are hill pasture; about 778 are moss; and about 2,148 are under wood. The only landowner is Lillingstone of Lochalsh, whose mansion of Balmacara, a bow-windowed structure, with long, irregular wings, stands at the head of a fine semicircular bay of Loch-Alsh. The estimated value of raw produce in 1838 was £5,841. Assessed property in 1843, £3,097 2s. The village of Lochalsh stands near the mansion of Balmacara, 1½ mile west of Bundalloch, and 5 miles south-south-east of Plocton. It comprises only the parish church, a Free church, the parish school-house, a farm-house, and a few huts. Population of the parish in 1831, 2,433; in 1851, 2,299. Houses, 477.

This parish is in the presbytery of Lochcarron, and synod of Glenelg. Patron, the Crown. Stipend, £160 17s. 10d.; glebe, £48. Schoolmaster's salary, £25 13s. 6d., with about £25 fees, and £5 other emoluments. The parish church was built in 1806, and contains 650 sittings. There is a government church at Plocton, with the status of a quoad sacra parish church. There are two Free churches, respectively at Lochalsh and at Plocton, both under the care of one minister; and the amount of their receipts in 1856 was £160 15s. 2d. There are five non-parochial schools.

LOCH-ALVIE. See ALVIE.

LOCHAN-BURN. See KINNEL (THE).

LOCHANDOW, a chain of lakes, about 2 miles in length, very reedy, but abounding with trouts, in the west of the parish of Muckairn, Argyleshire.

LOCHANDUNTY, a lake in the parish of Pettie, Inverness-shire. It is situated on the ridge towards Croy; and its name signifies 'the loch of the black hillock.'

LOCH-AN-EILEAN, a lake along the south base of the hill of Ord-ban, in the parish of Rothiemurchus, Inverness-shire. It is upwards of a mile in length, and varies from a ¼ to ½ mile in breadth. Its banks are fringed with weeping birches and noble tall pines,—remains of the old forest of Rothiemurchus. On an island in it are the ruins of a castle which is said to have been one of the strongholds of the Wolf of Badenoch.

LOCH-AN-FALLOCH. See MONTEITH (PORT OF).

LOCH-AN-LEAMHAN. See GLASSARY.

LOCH-AN-MUAN. See MONIVAIRD.

LOCHANS, a post-office village in the parishes of Inch and Portpatrick, Wigtonshire. It stands on the road from Stranraer to Portpatrick, 1¼ mile from the former town, and 5 miles from the latter. Population, 103. Houses, 20.

LOCHARBRIGGS, a village in the east side of the parish of Dumfries, contiguous to Lochar-moss, Dumfries-shire. Population, 213. Houses, 44.

LOCHAR-BURN, a small tributary of the Avon, in the parish of Avondale, Lanarkshire.

LOCH-ARD. See ARD AND DOWALLY.

LOCH-ARKEG. See ARCHAIG.

LOCHAR-MOSS, a morass in the parishes of Dumfries, Caerlaverock, Tinwald, Torthorwald, Mousewald, and Ruthwell, Dumfries-shire. It extends northward from the Solway frith in a stripe 10 miles long, and from 2 to 3 miles broad; and over its whole extent, it is nearly a dead level. Tradition asserts it to have been first covered with wood, next overflowed by the sea, and made so deep as to be navigable to nearly its head, and next

choked up with silt, mud, and aquatic vegetation, till it became successively a marsh and a bog. The peasantry around it preserve the tradition in the following couplet:—

"First a wood, and then a sea,
Now a moss, and e'er will be."

Beneath the moss is a thick stratum of sea-sand, occasionally mixed with shells and other marine deposits. From this stratum have been dug many large fragments of ancient vessels, some antique canoes, formed from the trunk of single trees, and several iron grapples, small anchors, and other relics of local navigation. One of the excavated canoes was of large size, formed of the trunk of a venerable oak, and hollowed out apparently by fire. Antiquarian investigation has suggested curious probabilities as to the ancient existence of a sea-port near the north-east extremity of the morass. Above the stratum of sea-sand are found many large and seemingly aged trees. These are chiefly fir, but also include oak, birch, and hazel—the last with their nuts and husks; and they all lie with their tops towards the north-east, seemingly indicating by their position that they were eradicated and thrown prostrate by the rush of the impetuous tide, aided probably by the south-western blast. The river Nith, some persons contend, anciently flowed along this tract; but some swells in the ground between the head of the morass and the present bed of the river, seem unfavourable to the theory. Robert Bruce—if tradition may be credited—could not pass the moss in his progress from Torthorwald castle to meet Comyn at Dumfries, but pursued the very circuitous route of skirting it round by the Tinwald hills. The moss, even so late as his time, seems thus to have been impassable; but it is now traversed by four lines of road, and by the Glasgow and South-Western railway.

The morass is far from being useless or of generally repulsive aspect. Portions of it abound with grouse and other game, and have their own attractions to the sportsman; other portions are regularly cut into excellent peats, and furnish supplies of fuel, large in quantity, and of great value to a county dependent on marine importation and inland carriage for coal; and other portions, of very considerable aggregate extent, are converted into pastures and arable grounds, and are tufted or frilled with plantation. Much of it is green and pleasant, resembling more a pastoral valley than a morass. Near its north end is the spacious racing-ground of Tinwald-downs, once surpassed in Scotland, as to the kind of celebrity which such an object possesses, only by the racing-ground of Kelso. On one of the roads which traverse it stands the pleasant little village of Trench; and close on its margin, in various directions, are the villages of Roucan, Collin, Lochbriggs, Blackshaws, Bankend, and Greenmill. In 1785, after a very dry summer, the moss accidentally caught fire, and burnt to a great extent till the fire was extinguished by a heavy fall of rain; and the dry summer of 1826, it became once more ignited, burnt with rapidly-extended progress, and before the destructive flames could be subdued, carried them beneath and around the sites of several cottages.

LOCH-ARNIZORT, a ramification of Loch-Snizort, on the west side of Skye, Inverness-shire.

LOCHAR-WATER, a small river of Dumfries-shire, cutting Lochar-moss lengthways into nearly equal parts. It rises in the parish of Kirkmahoe, and after running a mile eastward to the boundary, assumes a southerly direction, and flows 11 miles between the parishes of Kirkmahoe, Dumfries, and Caerlaverock on the west, and those of Tinwald, Torthorwald, and Mousewald on the east. It now, over a distance of 4 miles, describes a demi-semicircle between Caerlaverock and Ruthwell; and, before losing itself in the Solway, it forms an estuary, 1½ mile in length, and half-a-mile in mean breadth. Between Dumfries and Tinwald it so splits its waters as to enclose an islet, ¾ of a mile long, and ¼ of a mile broad, called Tinwald Isle. The stream is, in the last degree, sluggish, and wears, in most places, the appearance of a mossy, stagnant, vegetating pool. From head to foot of Lochar-moss—a course, including windings, of at least 12 miles—it has a fall of only 11 feet.

LOCH-ASSYNT. See ASSYNT.

LOCH-AVEN. See AVEN.

LOCH-AVICH. See AVICH.

LOCH-AWE. See AWE.

LOCHAY. See LOCHY.

LOCH-BADANLOCH, a lake about 3½ miles long, in the upper part of the parish of Kildonan, Sutherlandshire. Its superfluence is a chief headstream of Helmsdale-water.

LOCH-BAY, a ramification of Loch-Dunvegan, on the west side of the island of Skye. It projects from the north side of Loch-Dunvegan into the peninsula of Vaternish, has a length of about 2 miles, and affords good anchorage in ordinary weather.

LOCH-BEAULY. See BEAULY.

LOCH-BEE. See BEE.

LOCH-BEG, a ramification of Loch-Bracadale, on the south-west coast of the island of Skye.

LOCH-BENEVAN, a lake about 3½ miles long in Strathaffrick, Inverness-shire. Its scenery is sublime; and the mountain Maum-Soule, on the north side of it, is sheeted with the largest known mass of perennial snow in Britain.

LOCH-BOARLAN. See ALTAN-NAN-CEALGACH.

LOCH-BRACK. See BALMACLELLAN.

LOCH-BRALLAIG. See BRALLAIG.

LOCH-BROLUM. See BROLUM.

LOCH-BROOM AND LOCH-BROOM (LITTLE). See BROOM.

LOCHBROOM, a parish on the north-west of Ross-shire and Cromartyshire. It contains the post-office station of Lochbroom, and the post-office village of Ullapool. It is bounded by the Minch, by Sutherlandshire, and by the parishes of Kincardine, Contin, and Gairloch. Its length westward is about 36 miles; and its greatest breadth is about 20 miles. Along its coast, and belonging to it, are the Summer-isles, Horse-isle, Martin-isle, Priest-isle, Greinord-island, and some smaller islands. Its coast is indented by Loch-Enard, Big Loch-Broom, Little Loch-Broom, Loch-Greinord, and a number of bays; and, though not more than 20 miles in extent in a straight line, it measures at least 100 miles along its windings. The boundary-line along the interior is scarcely less irregular and intricate. The general surface of the parish is a wild, heathy, alpine labyrinth. "To a spectator placed on an eminence in the inland part of it, the appearance is that of a wide and dreary waste of bleak and barren heath, as if a segment of the great ocean, agitated and tossed and tumbled, not by an ordinary storm, however violent, but by some frightful convulsion of nature, with here and there a rude and lofty peak of rugged rock towering to the skies, had been suddenly condensed, and formed into a solid shapeless mass of unproductive desert, without one spot of green on which to rest the eye. On descending from the heights, however, and advancing toward the sea, the ground assumes a very differen-

and more pleasing aspect. Here, along the shores of the ocean, on the sides of the great arms of the sea by which the parish is intersected, and the rich valleys which extend far among the hills, the eye is refreshed by the sight of fertile fields and populous hamlets, with numerous flocks and herds, and woods and waters." The arable soil is shallow, but tolerably fertile. The parish is divided into four districts: namely, the Aird of Coigach, Lochbroom-proper, the Little strath, and the Laigh. There is a mountain-lake called Loch-Broom, about 3 miles in length, and 1 in breadth; from which a rapid river, called the Broom, descends into the Big-loch below the parish church. The Laigh is watered by the Meikle river, which descends from Loch-na-Sealgh, a beautiful sheet of water about 6 miles in length. The parish contains many of the ancient drystone circular buildings, of the kind called duns. There are five landowners, all except one non-resident. Population in 1831, 4,615; in 1851, 4,813. Houses, 919. Assessed property in 1843, £6,343 14s. 8d.

This parish is in the presbytery of Lochcarron, and synod of Glenelg. Patron, the Marchioness of Stafford. Stipend, £298 10s. 9d. Schoolmaster's salary, £34 4s. 4½d., with about £6 fees. The parish church was built in 1844, and contains 650 sittings. There is a government church at Ullapool, with the status of a quoad sacra parish church. There are two Free churches, one at Ullapool with an attendance of 1,240, the other at Coigach with an attendance of about 600; and the amount of their receipts in 1856 was £183 19s. There are 7 non-parochial schools.—Lochbroom is a rendezvous of herring-boats, and gives name to a district of fisheries comprising 43 creeks. The produce of that district in 1854 included 1,328 barrels of herrings, and 117,194 cod and ling fish; the number of persons employed in it was 2,414; the number of boats was 570; and the value of these boats, together with nets and lines, was £23,370.

LOCH-BRORA. See Brora.

LOCH-BROWN. See Mauchline.

LOCH-BRUIACH. See Bruiach.

LOCH-BUILG, a mountain lake, upwards of a mile long and about ½ a mile broad, abounding in trout, in the upper part of the parish of Kirkmichael, Banffshire, contiguous to the boundary with Aberdeenshire.

LOCH-BURN. See Linlithgow.

LOCH-BUY, a bay on the south coast of the island of Mull, Argyleshire. It enters about 7½ miles west-north-west of Easdale, and has a length of about 3 miles, with a breadth of about 1 mile.

LOCH-CAILM. See Reay.

LOCH-CALVA, a bay on the coast of the parish of Edderachyllis, Sutherlandshire.

LOCH-CAOLISPORT. See Caolisport and Knapdale.

LOCH-CARNABATTAN, a lake, attractive to anglers, in the parish of Kiltarlity, Inverness-shire.

LOCH-CARRON, the estuary of the rivulet Carron, in the south-west of Ross-shire. It extends about 15 miles south-westward, from the influx of the rivulet till it becomes lost in the sea off the north-east of Skye. Its breadth for about 8 miles nowhere exceeds 1 mile; but it then suddenly expands to about 3 miles; and it thence maintains that breadth on the average to the sea. A ramification of it goes north-north-eastward, under the name of Loch-Kishorn, from the north side of the part where it obtains its sudden expansion. The loch is crossed, about 3 miles above its expansion, by Strome-ferry, which is on the line of the great west-coast road of Scotland. A noble view of the loch's basin is obtained from an eminence on its south-east side above the ferry. The loch, as seen thence, presents the appearance of a fresh-water lake, about 20 miles in circumference, embosomed in hills, the flanking ones of which project their bases into it in the manner of promontories, while those at its head rise to a considerable altitude. Loch-Carron is a rendezvous of herring-boats, and gives name, jointly with Skye, to a district of the herring fishery. The produce of that district in 1854, was 2,056 barrels of herrings cured, and 6,500 caught but not cured; the number of persons employed in its fisheries was 5,513; the number of boats was 751; and the value of these boats, together with nets and lines, was £24,400. See Carron (The).

LOCHCARRON, a parish, containing the post-office station of Lochcarron, and the village of Janetown, in the south-west of Ross-shire. It extends from the mountain water-shed near the sources of the rivulet Carron south-westward to the peninsula at the forking of Loch-Carron into Loch-Kishorn, and is bounded elsewhere by the parishes of Applecross, Gairloch, and Lochalsh. Its length is 2[illegible] miles, and its greatest breadth is upwards of 1[illegible] miles. Its surface consists principally of the glen and hill-screens of the rivulet Carron, and those of the upper part of Loch-Carron. The glen of the stream widens as it approaches the loch, expanding into a valley of equal extent to any on the west coast, and furnishing a fine subject for georgical improvement. The peninsula at the south end of the parish also presents a series of gentle and irregular hillocks, diversified with wood. About 1,240 acres of the entire area are in tillage, and about 1,500 are under wood. The yearly value of raw produce, including £3,000 for fisheries, was estimated in 1836 at £10,090. Assessed property in 1843, £2,889 5s. 11d. There are two landowners. A fair for cattle used to be held at New Kelso on the first Monday of June, but it has completely fallen away. The only antiquities are an old circular fort behind Janetown, and the remains of Strome-castle, anciently the property of the Macdonalds of Glengarry. The Gaelic poets William Mackenzie and Alexander Mackenzie were natives of Lochcarron. Population in 1831, 2,136; in 1851, 1,612. Houses, 337.

This parish is the seat of a presbytery, in the synod of Glenelg. Patron, the Crown. Stipend £158 6s. 8d.; glebe, £17 10s. Schoolmaster's salary £34 4s. 4½d., with about £15 fees. The parish church was built in 1751, and contains upwards of 300 sittings. There is a Free church, with an attendance of about 800; and the sum raised in connexion with it in 1856 was £42.

LOCH-EARN. See EARN.

LOCHEARNHEAD, a post-office village in the rish of Balquhidder, Perthshire. It stands at the d of Loch-Earn, on the road from Killin to Cal- dar, at the junction of the road to Crieff, 8 miles th of Killin, 14 north of Callendar, and 19 west Crieff. A mail-coach runs daily between it and eff. A gold mine was recently opened in its ghbourhood. Population, 46. Houses, 10.

LOCH-ECK. See ECK.

LOCHEE, a small post-town on the east border the parish of Liff and Benvie, Forfarshire. It nds 1½ mile north-west of Dundee, but is included hin the parliamentary boundaries of that burgh, may be regarded as, in all respects, a suburb. ccupies a comparatively large space, being un- tinuous and dispersed, and presents the appear- e of being a busy seat of manufacture. It has e spinning-mills; and a great number of its in- itants are hand-loom weavers, in the employment he manufacturers of Dundee. Several quarries xcellent sandstone have been wrought here for a period; and the stones from one of these were ief material in the construction of Dundee har- r. Lochee has a chapel of ease, a Free church, United Presbyterian church, and their respective ools. The principal manufactory of the place is of Cox Brothers, who employ about 2,000 per- s in spinning, dyeing, bleaching, power and d loom, linen and carpet weaving, and who are at ent erecting another mill which will employ 500 e hands. Population of the town in 1851, 5,332.

LOCH-EIL. See EIL.

LOCH-EISHART. See EISHART.

LOCHENBRECK, a powerful chalybeate spring, in the parish of Balmaghie, Kirkcudbrightshire. The water is strongly impregnated with sulphate of iron and carbonic acid, flows copiously, is transparent, and not unpleasant to the taste, and acts as a powerful tonic and diuretic. In cases of dyspepsy and debility, patients given up by the faculty have found it a restorative; in cases of ague, patients have been relieved by it; and even in obstinate intermittents, they have found it a cure when other remedies have failed. Improved lodgings were erected 30 years ago in its vicinity, and an excellent road to it made from the town of Gatehouse-of-Fleet, 7 miles distant. See BALMAGHIE.

LOCHEND, a small lake, a mile north-east of Edinburgh, and ¼ of a mile west of Restalrig, in the parish of South Leith, Edinburghshire. On the top of a rock overhanging it, and close to the modern farm-stead, are the ruins of the castle of Logan of Restalrig. Lochend, at one time, supplied the town of Leith with water.

LOCHEND, a small lake, attractive to anglers, and containing a small, wooded, artificial islet, at the foot of Lowtis, in the parish of Newabbey, Kirkcudbrightshire.

LOCHEND, a post-office station, in the west of the parish of Colvend, Kirkcudbrightshire. Loch-end is also a Free church preaching-station, whose receipts in 1856 were £21 6s.

LOCHEND, a lake of 40 acres in area, in the parish of Old Monkland, Lanarkshire. Very large pike are sometimes caught in it.

LOCH-GARRY. See Garry.

LOCHGELLY, a lake and a post-office village, in the parish of Auchterderran, Fifeshire. The lake is on the boundary with Auchtertool, measures nearly 3 miles in circumference, and sends off its superfluence by a small stream north-eastward to the Orr. Its north bank is wooded and finely enclosed, and forms a pleasant piece of scenery; but its other banks are bleak and tame. The village stands ¾ of a mile north of the lake, on the road from Dunfermline to Kennoway, 6 miles east-north-east of Dunfermline, and 8 west-north-west of Kirkcaldy; and it has a station on the Dunfermline branch of the Edinburgh, Perth, and Dundee railway. It is a thriving place, having risen rapidly in population, yet is inhabited principally by weavers and miners. Coal is extensively worked in its neighbourhood, and an iron-work was recently erected. Fairs are held on the first Thursday of April, old style, on the third Wednesday of July, and on the third Wednesday of September. The village has a chapel of ease, a Free church, and an United Presbyterian church, and is a station of the county police. The foundation of the chapel of ease was laid in June, 1855. Population, 770. Houses, 154.

LOCH-GILP. See Gilp.

LOCHGILPHEAD, a small sea-port and post-town, in the parish of Glassary, Argyleshire. It stands at the head of Loch-Gilp, on the road from Campbelton to Oban, 2 miles north of Ardrishaig, 13 north by west of Tarbert, and 40 north-west of Rothesay. It has risen rapidly from the condition of a poor village to that of a thriving small town. It is linked with Ardrishaig, and with the south end of the Crinan canal, as if these were strictly contiguous to it. Its trade is a kind of focus of the communications between the Clyde and the Western Highlands, and at the same time comprises a considerable amount of local interchange with the immediately surrounding country. It has horse markets on the third Thursday of March, and on the second Thursday after the fourth Thursday of November; and cattle markets on the Tuesday and Wednesday before the first Wednesday of June, on the second Wednesday of June, on the Thursday before the first Tuesday of October, on the Tuesday and Wednesday before the first Thursday of November, and on the Wednesday fortnight after that Wednesday. There are in the town an office of the Union Bank, an office of the Clydesdale Bank, and four insurance agencies. Steamboats ply daily to Glasgow, and either once a-week or oftener to almost every considerable port in the Western Highlands and Islands. A sheriff court is held once a-quarter, and a justice of peace court on the first Tuesday of every month. The bishop of Argyle and the Isles, in the Scottish Episcopal communion, has his diocesan chapel in Lochgilphead, and his residence in the neighbourhood. There are also in the town a quoad sacra parish church, a Free church, a Reformed Presbyterian church, and a Baptist chapel. The quoad sacra parish church is a government one, under the patronage of the Crown, and contains 480 sittings. The sum raised in connection with the Free church in 1856 was £132 2s. 4d. Population of the town in 1851, 1,703

LOCH-GOIL. See Goil.

LOCHGOILHEAD, a parish, containing a post-office village of its own name, in the north of Cowal, Argyleshire. It is bounded by Perthshire and Dumbartonshire, by Loch-Long and Loch-Fyne, and by the parishes of Kilmun, Strachur, Inverary, and Glenorchy. Its length southward is about 35 miles; and its breadth varies from 6 to 20 miles. Its southern division lies between the upper part of Loch-Long and the upper part of Loch-Fyne, to the extent of 12 miles along the former, but to a much smaller extent along the latter, and is intersected on the east side by Loch-Goil; and its northern division extends along the border of the county to the vicinity of Ben-Loy. The surface in general is very rugged, consisting of wild mountains, interspersed with huge rocks and precipices, which till of late, were covered with heath; but, since the introduction of sheep, they have begun to exhibit the appearance of verdure. Upon the west side of Loch-Long, and upon both sides of Loch-Goil, the coast is bold and steep, and the hills high and craggy. The shore, upon both sides of Loch-Fyne, as far as this parish extends, is more flat and accessible; the land is high, but not so rocky or steep. The barrenness of the ground along the coasts of Loch-Goil and Loch-Long is partly concealed, and the wildness of the scene agreeably diversified, by extensive natural woods which cover the land near the coast, and rise to a considerable distance from the shore. Some of the mountains, which form the western extremity of the Grampian range, are situated in this parish: as Benuna, so called from the richness of its grass; Benanlochan, from the fresh-water lake which washes its base; Benluibhain, abounding in herbs; Benthiolaire, remarkable for its springs and water-cresses; and Bendonich, called after a saint of that name. These, and some other hills, rise to a great height. There are two small lakes, well-stored with trout. The coast is well-cultivated, and its produce repays the farmer for the labour he bestows on it. Limestone is worked in several quarries. A vein of lead ore, said to be very rich in silver, occurs at the head of Loch-Fyne. Jasper, a variety of spars, and some other interesting minerals are found. The fisheries in Loch-Goil, Loch-Long, and Loch-Fyne are valuable. The old valued rental is £4,392 Scots. Assessed property in 1843, £5,601 13s. 9d. The village of Lochgoilhead stands at the head of Loch-Goil, on the shortest route of communication between Glasgow and Inverary, and is distant from the latter place about 8 miles. A steam-boat plies daily between it and Glasgow, and a stage-coach communicates between the steamer and St. Catherine's ferry on Loch-Fyne, opposite Inverary. The village has a good inn, and a number of neat new villas; and in its vicinity is Drumsainy-house, surrounded by fine woods. Population of the parish in 1831, 1,196; in 1851, 834. Houses, 150.

There are in this parish three old castles, called Dunduramh, Ardkinlass, and Carrick. The castle of Dunduramh is a large and strong tower, of an irregular figure, with small turrets above the angles in the wall. It stands in a low situation, close

he sea; and, as the access to it by land must have een very bad, the most frequent communication ould probably be by boats. The castle of Ardkinss has nearly disappeared; but it formerly comrised three separate towers. The space between e towers was defended by a strong wall about 15 et high. In the course of this wall was the great ate, which was defended by small round turrets in nk, with apertures, through which those who asiled the gate might be annoyed with arrows, or ith fire-arms. The gate was defended by a small wer, rising immediately above it. Around the a, and within the walls, were smaller buildings, lodging servants, for holding arms, and for storeuses and cellars. The period when this castle was ilt is not known; but there is evidence of its ving been repaired in the year 1586. The old idence of the family of Ardkinlass—of which the ins can now scarcely be traced—was at a small stance from this strong castle, but in a more comnding situation. The castle of Carrick stands on a rock, which was formerly surrounded by the by means of a deep ditch. The entry to the stle from the land was by a drawbridge, which was ended by a strong wall and two small towers. e castle itself is of an oblong figure, but not perdly regular, as the architects, in laying the foun tion, kept in some places by the very edge of the k. It is 66 feet long, and 38 broad, over walls; side-wall is 64 feet high, and 7 feet thick. Beeen the castle and the sea, there is a part of the k which was surrounded by a high and strong ll built round the edge of the rock; within this ace 100 men might conveniently stand, for the dence of the castle, if it was attacked by sea. fore the invention of gunpowder, the castle of rick could be taken only by surprise; it was rcely possible to storm it, nor could it be taken blockade, as it had always a free communication h the sea, for a vessel of any burden may swim g the side of the rock. The time in which this tle was built is not ascertained. It can be traced as far as the end of the 15th century; but it is bably much older. The tradition of the country is that it was built by the Danes. Nothing now ains but the walls; and these are not entire.

his parish is in the presbytery of Dunoon, and d of Argyle. Patron, Callander of Ardkinlass. and, £167 9s. 9d.; glebe, £37 10s. Schoolmasr's salary, £30, with about £5 fees. The ancient sh of Lochgoilhead was an archdeanery, and w dismembered, about the middle of the 17th ury, into the three parishes of Lochgoilhead, morich and Strachur; and the first and second of the parishes were afterwards re-united, and are now comprised in the present parish. There are two parish churches,—the one at Lochgoilhead, containing 305 sittings,—the other at Cairndow, in Kilmorich, on Loch-Fyne-side, containing 258 sittings; and the parish minister officiates two Sabaths in the former, and the third Sabbath in the latter. There are 5 non-parochial schools.

LOCH-IN-DAAL, an arm of the sea, deeply indenting the south side of Islay, in Argyleshire. It enters between the Point of Rhinns and the Mull of Islay, with a width of about 11 miles, and penetrates the land north-north-eastward, to the extent of about 12 miles, narrowing its upper part to a width of not more than 2 miles. The middle of its east side forms the considerable expansion called Laggan-bay. The whole loch is comparatively shallow, but abounds in fish, and is much frequented by shipping. See Islay.

LOCH-IN-DAAL, a bay projecting from the north-west side of the Sound of Sleat into the island of Skye, and separated from the head of Loch-Eishart by an isthmus of only ½ a mile in breadth.

LOCHLEE, a parish, containing the post-office hamlet of Tarfside, in the extreme north of the Grampian district of Forfarshire. It is bounded by Aberdeenshire, and by the parishes of Edzell, Lethnot, Cortachie, and Clova. Its length eastward is 13 miles; and its greatest breadth is 8 miles. Everywhere, except over 6½ miles on the east, it is hemmed in by a water-shedding line of mountains. Its whole surface is ruggedly highland, consisting of wild and high mountain-ranges, partially and narrowly cloven by glens. Mount Keen and Mount Battock, both on the boundary, the former on the north, and the latter on the north-east, rise respectively 3,465 and 3,010 feet above sea-level. Other summits along the boundary and in the interior attain altitudes of from 2,000 to 3,000 feet. The heights are, for the most part, steep, rocky, and covered with heath, bent, or moss; and even the lower slopes and the valleys are, to a considerable extent, dressed in russet. Only a trifle more than one-fourth of the area is inhabited; all the rest being triumphant mountain-wilderness, or the free walk of the wandering flock. Not more than 1,400 acres have ever been tilled; and but small additions could be advantageously reclaimed. The soil of the arable grounds is thin and light, generally superincumbent on gravel. Natural woods are small in extent, and plantations are unknown. Limestone abounds; and a vein of lead ore has been traced for several miles, but, after a trial, was found to be uncompensating to the miner. All the headstreams of East-water, or the North Esk, rise in the parish, and swell the stream to considerable bulk, before it passes into Edzell. See Esk (The North). Three-fourths of a mile west of the church, a little south of the centre of the parish, and in the course of the river Lee, is a very beautiful little lake 1¼

mile long, and 3 furlongs broad, at the east end of which stood the ancient church, and which imposed its own name of Lochlee on the whole parish. Opposite the manse are the ruined walls of the castle of Invermark, built in the early part of the 16th century, and inhabited by the family of Lindsay of Edzell, the ancient lords of the soil. Lord Panmure is now the sole heritor. Several roads penetrate far into the interior, and one leads across the bold mountain-boundary into Aberdeenshire. The value of raw produce was estimated in 1833 at £4,580. Assessed property in 1843, £1,331. Real rental in 1855, £1,469. Population in 1831, 553; in 1851, 615. Houses, 129.

This parish is in the presbytery of Brechin, and synod of Angus and Mearns. Patron, the Crown. Stipend, £158 6s. 7d.; glebe, £20. Schoolmaster's salary, £34 4s. 4½d., with some other emoluments. The parish church was built in 1803, and contains 270 sittings. There is a Free church, with an attendance of 150; and the amount of its receipts in 1856 was £111 2s. 4½d. There is also an Episcopalian chapel. There are two public non-parochial schools, and a parochial library.

LOCHLEE, a locality, taking name from the small lake, Lochlee, the source of the rivulet Fail, in the upper part of the parish of Tarbolton, Ayrshire. The poet Burns spent his most joyous days, and wrote his most admired poems, in this locality; and he makes allusion in his writings to many places around it. Coilfield-house, in the vicinity, is the "Castle of Montgomery," in his song of "Highland Mary," and was one of his most favourite resorts. A thatched cottage, about a mile from Lochlee, was the birthplace of his great illustrator, Thom, whose sculptures of Tam o' Shanter and Souter Johnny are so famous.

LOCHLEE, a small lake in the parish of Auldearn, Nairnshire, lying somewhat below the level of the sea.

LOCH-LEGGAN, a lake about a mile in circumference, and mostly surrounded with wood, in the moor of Kippen. It gives rise to the burn of Broich.

LOCHMABBERY, a lake partly in Ayrshire, but chiefly in Wigtonshire. It lies on the mutual border of the parishes of Colmonell, Penningham, and Kirkcowan. It is 1½ mile in length, and ½ a mile in breadth. It has several islets; and on one of these are remains of a large castellated building. The lake discharges itself by the river Bladenoch. There is adjacent to it a post-office station of its own name, subordinate to Girvan.

LOCHMABEN, a parish near the centre of Annandale, Dumfries-shire. It contains the royal burgh of Lochmaben, the post-office villages of Hightae and Templand, and the three villages which, jointly with Hightae, are called the Fourtowns. It is bounded by Johnstone, Applegarth, Dryfesdale, Dalton, Mousewald, Torthorwald, Tinwald, and Kirkmichael. Its length southward is 8¾ miles; and its greatest breadth is 3¼ miles. The highest ground is along the western boundary but it is the summit merely of a long waving swell and all acknowledges the dominion of the plough The surface descends in a very gentle and finely diversified gradient, till nearly mid-breadth of the parish; and thence, excepting some easy rising grounds toward the north, it everywhere subsides into a rich and beautiful plain. Excepting three small mosses, which are of great value to the inhabitants for fuel, the whole parish is arable, though a considerable proportion of it is disposed in meadow-land and pasture. The soil toward the west is light and gravelly, but, in other parts, is uncommonly rich, consisting over a large area of the finest alluvial loam, occasionally nine feet deep, and everywhere abundantly fructiferous in every description of crop. The land is too valuable to admit of much plantation; but it has fine enclosures, is sheltered by wide files of trees, and comprises about 90 acres of plantation. Red sandstone is quarried at Corncockle-moor, in thin slabs for roofing, and in blocks for building. The river Annan, in many folds, runs along most of the eastern boundary. The Kinnel runs diagonally across the north end, south-eastward to the Annan, over a distance of 2¾ miles in a straight line, but at least 5 miles along its pebbly channel. The Ae runs a mile on the north-west boundary, and one-fourth of a mile into the interior to the Kinnel. Eight lakes lie in the interior,—most of them so surrounding the burgh as to make it appear, from some vantage grounds in the neighbourhood, to be situated on an island, in the midst of a curiously-outlined large lake. Five of them are of considerable extent. The Castle-loch, immediately south of the burgh, measures 200 acres; Halleath-loch, east of the burgh, 80; the Mill-loch, north-west of the burgh, 70; the Kirk-loch, west of the burgh, 60; and Hightae-loch, south-west of Castle-loch, 52. Two kinds of loch-trout, one usually weighing from 2 to 5 pounds, and the other from 12 to 14 pounds,—pike, occasionally weighing from 25 to 35 pounds,—perch, loach, roach, skelly, banstickle, and eel, are taken in all the lakes; and green back, bream, and vendace or vendise, are taken in addition, in the Castle-loch. The last of these—the vendace—is believed to be peculiar to this lake, and has drawn great attention both from naturalists and from epicures. The number of landowners, in consequence of the singular distribution of the lands of Fourtowns, and the minute parcelling out of the burgh roods, is about 270; but the principal are Johnstone of Halleaths, Dickson of Elshieshields, the Marquis of Queensberry, Sir W. Jardine of Applegarth, Lord Murray of Henderland, and Flint of Broadchapel. The chief residences are Halleaths, Elshieshields, Broadchapel, and Todhillmuir. The parish has good roads, and lies within 2 miles of the Nethercleugh and Lockerby stations of the Caledonian railway, but is not traversed by any great line of communication. The real rental in 18 was £11,263. Assessed property in 1843, £7,7(Population in 1831, 2,795; in 1851, 3,127. Hous 618.

A curious antiquity is Spedlin's tower, noticed our article on Jardine-Hall. But the gr attraction of the parish is the paternal residence the Bruce, Lochmaben-castle. This stands a m from the burgh, on the extreme point of a be shaped peninsula which juts a considerable w into the south side of the Castle-loch. Across isthmus at the entrance of the peninsula are ve ges of a deep fosse, which admitted at both ends waters of the lake, and converted the site of castle into an island, and over which a well-guar

awbridge gave ingress, or refused it to the interior. Within this outer fosse, at brief intervals, are a ond, a third, and a fourth, of similar character. he last stretched from side to side of the peninsula mediately at the entrance of the castle; it was otected in front by a strong arched wall or ledge, hind which a besieged force could shield themves while they galled, at a distance, an approachg foe; and it had at the centre a drawbridge ich led into the interior building, and which was obably the last post an enemy required to force order to be master of the fortress. Two archys at the north-eastern and south-western angles the building, through which the water of the se was received or emptied, remain entire. But idea can now be formed of the original beauty or ish either of this outwork or of the magnificent which it assisted to defend. Gothic hands be- generations ago to treat the castle of the Bruce merely a convenient quarry; and, for the sake of stones, they have peeled away every foot of the ler work which lined the exterior and the inor of its walls. So far has barbarian rapacity carried, that now only the heart or packing of e of the walls is left, exhibiting giant masses of ll stones and lime, irregularly huddled together, nodding to their fall. Many portions of the have been precipitated from aloft, and lie ewed in heaps upon the ground; the stone and lime so firmly cemented, that scarcely any effort human power can disunite them. The castle, th its out-works, covered about 16 acres, and was strongest fortress in the Border, and, till the invention of gunpowder, all but impregnable. But et remains can hardly suggest, even to fancy lf, the greatness of what the Goths have stolen. ly one or two small apartments can be traced, they stand in the remoter part of the castle, and ite but little interest. The enclosed spot around aturally barren, fitted only for the raising of od; and its present growth of trees harmonizes l with the ruin. The view of the loch and of circumjacent scenery, from all points in the nity, is calmly beautiful. The date of the cas- is uncertain, but probably was the latter part of 13th century,—the period of the competition of Crowns.

adition, though unsupported by documentary idence, asserts this castle to have been not the inal Lochmaben residence of the Bruces, but only cessor of enlarged dimensions, and augmented ength. At a brief distance south of the town, e north-west side of the loch, is a large rising und called Castle-hill, which is pointed out as site of the original castle, and even as the ed birthplace of the first royal Bruce. That a ing of some description anciently crowned the ence, is evident from the remains of an old still dug up an inch or two beneath the surface e summit, and from the vestiges of a strong deep intrenchment carried completely round base. Tradition says that the stones of this e were transferred from the Castle-hill across tervening part of the lake, to the point of the -shaped peninsula on the southern shore, as rials for the more modern erection; and it , that a causeway was constructed, and still s, across the bed of the lake, to facilitate the nience. But here monuments, documents, physical probabilities, concur in refusing corroive evidence. The Castle-hill commands a view of the burgh, of the adjacent lakes, and of siderable expanse of the How of Annandale. it is a lower hill or mount, called the Gallowson which, in ancient times, a formidable gallows constantly stood, and was seldom seen during the Border wars without the dangling appendage of one or two reivers. The baronial courts of Lochmaben, and even occasional warden courts, were probably held on the summit of the Castle-hill, whence the judges beheld their sentences promptly and rigidly carried into execution.

Robert de Brus, the son of that noble knight of Normandy, who came into England with William the Conqueror, and first possessed the manor of Skelton, being in a state of friendship with our David I., while prince, received from him, when he came to the throne, the lordship of Annandale, with a right to enjoy his castle there, with all the customs appertaining to it. This grant was made A.D. 1124. A charter, granted by William the Lion to Robert, third Lord of Annandale, confirming to him the property possessed by his father in that district, is dated at Lochmaben. This is supposed to have been granted between the years 1165 and 1174. The church of Lochmaben was one of those which Robert Bruce, Lord of Annandale, gave to the monks of Gisburn, in Yorkshire, about the year 1183. Bruce, the competitor for the throne, and the grandfather of Robert I., died at his castle of Lochmaben, in 1295, or, according to Leland, in 1296. In the year preceding his death, he granted a charter, dated at this fortress, confirming a convention between the monks of Melrose and those of Holmcultram. "This old castle of Lochmaben," says Chalmers in his 'Caledonia,' "continued the chief residence of this respectable family, during the 12th and 13th centuries. Robert de Bruce, the first Earl of Carrick, of this dynasty, probably repaired the castle at Annan." As a stone, taken from the ruins of Annan-castle, bears his name, with the date 1300, the conjecture seems to be formed, with great probability, that the family had continued previously to reside at Lochmaben.

After the death of John Bohun, Earl of Hereford, Lochmaben-castle was given to Edward, of the same name. In 1335, it was in the keeping of William Bohun, whom Randolph, Earl of Moray, "found in his own castle of Lochmaben, and bearing sway over all his own lands of Annandale, when he returned from his captivity in France." In 1366 it is spoken of as the property of Humphrey de Bohun, who is authorized to victual and repair it. In July 1298, Edward I. took possession of it; and in 1300, he strengthened it, and the castle of Dumfries, placing adequate garrisons in them, with ample supplies, and appointing a governor for each. To this fortress Bruce fled in 1304, on his way from London, before erecting his royal standard. Having met, near the west marches, a traveller on foot, whose appearance was suspicious, he found, on examination, that he was the bearer of letters from Comyn to the English King, urging the death or the immediate imprisonment of Bruce. He beheaded the messenger, and pressed forward to his castle of Lochmaben, where he arrived on the seventh day after his departure from London. Hence he proceeded to Dumfries, where the fatal interview between him and Comyn took place.

At the accession of the Bruce to the Scottish throne, he conferred his paternal inheritance, with its chief seat, the castle of Lochmaben, on Randolph, Earl of Moray. When Edward III. obtained from Edward Baliol the county of Dumfries as part of the price for helping him to a dependent throne, he appointed a variety of officers over Lochmaben-castle, and garrisoned the fortress in defence of the cause of England. In 1342 the Scots made a strenuous attempt to capture the castle, but were repulsed; and next year David II.'s particular

forces whom he was imprudently leading into England, were stoutly resisted and severely harassed by its garrison. David, exasperated by the repeated disasters inflicted on him, in 1346 vigorously assaulted the fortress, took it, and executed Selby its governor. But after the battle of Durham, which speedily followed, the castle changed both its proprietor and its tenants. John, Earl of Moray, falling in that battle, the castle passed by inheritance to his sister, Agnes, the Countess of March, and from her was transmitted, through the reigns of Robert II. and Robert III., to her son, Earl George; and David II. becoming the English king's prisoner, the castle once more opened its gates to an English garrison. Even after David II.'s restoration, Edward III. retained the district of Annandale, and kept the fortress well-garrisoned to defend it; but though connived at by the pusillanimity of the Scottish king, his dominion was pent up, by the bravery of the people, within the castle's own narrow limits. Sallies and forages of the garrison provoked frequent retaliations, occasioned incursions into England, and led, in particular, to a hostile race, in 1380, into Westmoreland, and the carrying away of great booty from the fair of Penrith. In 1384 the Earl of Douglas, and Archibald Douglas, Lord of Galloway, whose territories had been infested by the garrison, marched in strong force against the castle, besieged and captured it, and, by effecting its reduction, drove the English from Annandale. In 1409 the castle was resigned by the Earl of March to the Regent Albany, and conferred, along with the lordship of Annandale, upon the Earl of Douglas. In 1450, when the Earl of Orkney was sent to quell some fierce outrages of the dependents of the Douglas, and, though acting by the King's authority, was opposed and defied, James II. marched an army into Annandale, and took and garrisoned Lochmaben-castle. In 1455 the castle, in common with the lordships of Annandale and Eskdale, became the property of the Crown by the attainder of the Earl of Douglas. Till the union of the Crowns it was preserved as a Border strength, and belonged either to the kings personally or to their sons; and it was maintained and managed by a special governor.

From 1503 to 1506, James IV. made great repairs and improvements on the castle, and built within it a large hall. In 1504, during a public progress in the southern parts of his kingdom, he made it a personal visit. In 1511 he committed the keeping of it for seven years, with many perquisites, to Robert Lauder of the Bass. During the minority of James V., Robert, Lord Maxwell, being a favoured counsellor of the queen-mother, was by her intrusted with the keeping of the castles of Lochmaben and Thrieve for nineteen years, with the usual privileges. In 1565, when Queen Mary pursued, into Dumfriesshire, those who had broken into rebellion on account of her marriage with Darnley, she, accompanied by him, visited Lochmaben-castle, which was then in the keeping of Sir John Maxwell. In 1588, when James VI., in the prosecuting of his quarrel with Lord Maxwell, summoned his various castles to surrender, Lochmaben-castle made resistance, but, after two days' firing, was given up. In 1612, the governorship of this castle, together with the barony of Lochmaben, was granted to John Murray, 'grome of his Maiesties bedchalmer,' who was created Viscount of Annan and Lord Murray of Lochmaben, and afterwards Earl of Annandale. From him descended the noble family of Stormont, now merged in that of Mansfield. The title of constable and hereditary keeper of the palace of Lochmaben is claimed both by the Earl of Mansfield and by the representative of the Marquis of Annandale. T governor of the castle had a salary of £300 Sco and the fishing of the lochs. He had also, for t maintenance of the garrison, from every parish Annandale, what was called *laird a mairt*, or, lairdner mart cow, which, it was required, should one of the fattest that could be produced, besid thirty-nine meadow geese, and 'Fasten's e'en' he Little more than a century has elapsed since th tax was exacted. Although the right of fishing all the lochs was granted, by a charter of Jam VI., to the burgh of Lochmaben, yet the proprieto of the castle always enjoyed the exclusive privile of fishing in the castle and mill-lochs with boa nets, &c. About the year 1730 the inhabitants Annandale, galled with the exactions made up them by the Marquis of Annandale, the governo resisted payment of his wonted claims, stout litigated his rights, and obtained from the court- session a decree forbidding the future levying of h usual receipts. At the abolition of hereditary juri dictions, in 1747, the Marquis claimed £1,000 compensation for his governorship; but was n allowed a farthing.

The dilapidation of the castle was probably co menced not long after the place was abandoned useless; but it must have been mainly incited the triumph of the people over pretensions based the ludicrously sinecure office of its noble governo Our good old Bellenden, in his translation of Boec has given a very curious picture of the character the ancient inhabitants of this district, and of t original reason of the erection of the castle. " Annandail is ane loch namit Lochmaben, fyue myl of lenth, and foure of breid, full of uncouth fisch Besyde this loch is ane castell, vnder the san name, maid to dant the incursion of theuis. F nocht allanerlie in Annandail, bot in all the dal afore rehersit ar mony strang and wekit theni inuading the cuntré with perpetuall thift, reif, slauchter, quhen thay sé ony trublus tyme. T theuis (becaus thay haue Inglismen thair perpetu ennymes lyand dry marche upon thair nixt bordo inuadis Ingland with continewal weris, or ellis wi quiet thift; and leiffis ay ane pure and miserai lyfe. In the tyme of peace, thay are so accusto with thift, that thay can nocht desist, bot inua the cuntre—with ithand heirschippis. This vail Annand wes sum tyme namit Ordouitia, and t pepill namit Ordouices, quhais crueltéis wes gret, that thay abhorrit nocht to eit the flesche yolding prisoneris. The wyuis vsit to slay th husbandis, quhen thay wer found cowartis, or comfist be thair ennymes, to give occasioun otheris to be more bald & hardy quhen danger currit." Whatever might be their character in t early period, they have in later ages showed, least, a good deal of humour in their depredatic Of this we have an amusing proof in the balla the 'Lochmaben Harper,' who, having been so with a strong attachment to the Lord Ward 'Wanton Brown,' made his way to Carlisle-cas although blind, and so enchanted the whole c pany, and even the minions, by the charms of music, that he found means, not only to send off warden's charger, but to persuade him, that w he was exérting himself to the utmost to gratify company, some one had stole his own 'gude g mare,' and thus to secure far more than the v of all his pretended loss.

"'Allace! allace!' quo the cunning auld harper,
'And ever allace that I cam here!
In Scotland I lost a braw cowt foal;
In England they've stown my gude gray mare!'

"Then aye he harped, and aye he carped;
Sae sweet were the harpings he let them hear:
He was paid for the foal he had never lost,
And three times ower for his 'gude gray mare.'"

Additional to the castles there are, in the landward part of the parish, two or three other civil antiquities. Half-a-mile north-west of the town, overlooking the Mill-loch, is a rising ground called Woody or Dinwoody-castle. The summit, though possessing no vestige of building, is surrounded with a trench very distinctly marked. In a field south-west of the town is the circular trace of a tower, which anciently possessed a wild fame. It is called Cockie's-field, from one John Cock, or O'Cock, who resided in it, and was one of the most renowned freebooters of Annandale. An old ballad, still extant, details his feats of arms, dilates on his great personal strength, and narrates the manner of his death. A party of the King's foresters, to whom he had been an intolerable pest, and whom he had relieved of the care of many deer, chanced one day to find him asleep in the forest, cautiously beset him, and were determined upon his destruction. John, suddenly awaking, and perceiving at once the snare into which he had fallen, and the hopelessness of escape, resolved to make his captors pay dearly for his life; and before they could overpower him, he laid seven of their number dead at his feet. In the south-west corner of the parish is a large and very beautiful artificial mound of earth, perfectly circular, quite entire, and terminating in a sharp tower. It is called both Rockhall-moat and the Beacon-hill; and possibly served both as a moat or seat of feudal justice, and as a beacon-post for descrying the movements of the Border marauders, and giving alarm in the event of predatory incursions. Its position is on the summit of a low but conspicuous ridge which divides Nithsdale, or rather the district of Lochar-moss, from Annandale, and commands a map-like and very brilliant view of a very large part of the champaign country of Dumfries-shire, a portion of Galloway, and all the Solway Firth. The parish has remains of several Roman encampments; and must have been traversed, along a path easily pointed out, by Agricola on his march from Brunswark hill to Glota and Bodotria.

This parish is the seat of a presbytery in the synod of Dumfries. Patron, the Earl of Mansfield. Stipend, £289 0s. 6d.; glebe, £10. Unappropriated teinds, £333 7s. 3d. Schoolmaster's salary, £34 4s. 4d., with £25 fees, and £10 other emoluments. The parish church was built in 1819, and contains 1,200 sittings. There is a Free church of Lochmaben, with an attendance of 450; and the sum raised in connexion with it in 1856, was £358 2s. 6d. There is an United Presbyterian church in the suburb of Barrows, built in 1818, and containing 800 sittings. There is a Reformed Presbyterian church at Hightae, built about 1797, and containing 325 sittings. There are six non-parochial schools, one of them an endowed school at Hightae. The ancient church of Lochmaben was given by Robert de Bruce, the ancestor of the royal Robert, and the husband of Isabel, the natural daughter of William the Lion, to the monks of Gisburn; but it afterwards, with reservation of some of the pertinents to the monks, resumed its status as a rectory, immediately suspected by the Bishop of Glasgow. In the 15th century the magistrates of the burgh endowed in the church an altarage or chaplainry dedicated to the Virgin Mary. On the lands of Rokele, now called Rockhall, in the south-west corner of the parish, anciently stood an endowed chapel; the pertinents of which, though seized by lay hands after the Reformation, now yield some proceeds to the parochial incumbent. Some other chapels existed in the parish, but cannot now be very distinctly traced.

The Town of Lochmaben, a very ancient seat of population, a royal burgh, and a post-town, stands nearly in the centre of the parish of Lochmaben, encinctured by lakes, 4 miles west-north-west of Lockerby, 8 north-east of Dumfries, 15 south of Moffat, and 65 south by west of Edinburgh. The town is 3½ furlongs in length, and, in its principal street-line, stretches due north and south. Over 1½ furlongs from the south end there is but one street, overlooked by the parish-church on the south, and the cross and town-house on the north. This street is spacious, and has several genteel houses, most of them small and neat. The rest of the town consists of a narrowed continuation of the principal street on a straight line with it; a street contracting into an alley, running 250 yards north-west from the cross; a street longer than this, going off from it near the cross, and running due west along the road to Dumfries; and, a street of 400 yards, branching off from the last, and running north-eastward to the northern extremity of the town. All these thoroughfares are of mean appearance, relieved at long intervals by a large or good house, but predominantly lined with one story buildings. The parish church is a handsome edifice in the pointed style, with an elegant square tower, and cost upwards of £3,000. Its predecessor stood at the west side of the town, on the margin of the Kirk-loch; and was a Gothic edifice, with a large choir, dedicated to Mary Magdalene. The Maxwells, after their defeat, in 1593, by the Johnstones, in the fight of Dryfe sands, having taken refuge in this church, the Johnstones fired it, and compelled them to surrender. Near the site of it is St. Magdalene's well, enclosed with a stone and lime wall, and a roof of freestone. The town-house is a small unimposing structure, built in 1723, with a steeple added in 1743. Before it is the public cross,—a tall stone fixed in a freestone socket, and presenting a very time-worn appearance.

A considerable manufacture of coarse linen cloth, for sale unbleached in the English market, was at one time carried on in Lochmaben, but has totally disappeared. The chief manufacture now is the making of flannel shirts and socks. A large trade—if trade it can be called—is driven both in the town and throughout the parish, in the feeding of pigs, to aid supply for the smart demand of England for Dumfries-shire pork. A good number of the inhabitants farm small crofts. A fortnightly market, for pork and grain, is held during winter and spring. There are also two hiring fairs. The town has an office of the National bank, three inns, and a subscription library. The municipal authorities are a provost, one bailie, and seven councillors, including a dean of guild and a treasurer. The burgh property, at one time, was very considerable, but was so squandered and alienated that the burgh became bankrupt; and its corporation revenue in 1855 amounted to only £21 1s. 1d. The town, in many respects, is now nothing better than many a village, and has less prospects of prosperity than some hamlets; yet it looms largely and magnificently to the view when seen through the haze of antiquity. Under the fosterage of the Bruces, it must have sprung into energy before the close of the 12th century, and speedily acquired probably more importance than any other town in the south-west of Scotland. Like other border-towns, it suffered severely and lost its records from the incursions of the English; but it is traditionally asserted to have been erected into a royal burgh soon after Bruce's accession to the throne. Its last charter

was granted, in 1612, by James VI., and confirms all the early charters. The town was twice burnt by the English,—first, in 1463, by the Earl of Warwick, and next, immediately before the granting of its last charter. In 1484 the recreant Earl of Douglas and the treacherous Duke of Albany attempted to plunder the town on St. Magdalene's fair day: but they were repelled by the inhabitants. Lochmaben unites with Dumfries, Annan, Sanquhar, and Kirkcudbright, in sending a member to parliament. Constituency, in 1855, 35. The parliamentary burgh is less extensive than the royal burgh. Population of the parliamentary burgh in 1831, 966; in 1851, 1,092. Houses, 222. Population of the royal burgh in 1831, 1,100; in 1851, 1,498. Houses, 288.

LOCHMABERY. See LOCHMABBERY.

LOCHMADDY, an inlet of the sea, a post-office village, and a considerably-frequented harbour, on the east side of the island of North Uist, in the Outer Hebrides. The marine inlet stretches into a low, flat country, consisting of brown, peaty land; and cuts it into innumerable islets and little peninsulas, which afford a scanty summer herbage for cattle. The waters of the inlet do not cover an area of more than 9 square miles; and yet its coast-line has been found by measurement to have an aggregate extent of 200 miles. The interior of the inlet contains not one harbour but many harbours, safe, capacious, and wanting nothing but sufficient trade to make them one of the finest groups of natural harbours in the world. About ¼ mile inward from the sea are two remarkable detached rocks, about 100 feet high, consisting of columnar basalt, and called Maddy-More and Maddy-Grisioch, which serve as marks to mariners. Regular communication is maintained with Skye and the Scottish mainland by mail-packet. The village has a jail, and is a seat of justice-of-peace courts.

LOCHNAGAR, a lofty mountain of the Grampian ridge, in the united parish of Crathie and Braemar, Aberdeenshire. Its elevation is 3,777 feet above sea-level. On the top there is snow all the year round. The 'dark Loch-na-gar' has been celebrated by Lord Byron in a well-known ballad of great beauty. In the 'Edinburgh New Philosophical Journal' for 1830, the view from the summit of the mountain is thus described: "In one direction our view extended to the sea at Aberdeen; in another the vast granite group of Cairngorm, with its well-known summits, viz., Ben-na-muick-dhu, Cairngorm, Benabourd, Ben-Aven, rose before us in massive magnificence; to the south, in the distance, rose the trap-hill named Dundee-law, the trap cones of the Lomonds in Fifeshire, and the beautiful porphyry range of the Pentlands near Edinburgh; and, towards the west, the wild and rugged alpine country of Athole and Badenoch added to the interest of this varied scene. Around the mountain we observed several frightful corries, bounded by dreadfully rugged precipices. We descended into one of them in order to examine the snow which it contained,—snow which remains all the year round. The mass of snow was thirty yards square, several feet thick; at the surface its texture was loose, but below was hard and composed of granular concretions, and had much of the glacier character. We met with parties of topaz-diggers in search of the topaz, beryl, and rock-crystal, which occur in this and other granite mountains of the district, in the granite, either in drusy cavities or as disseminated crystals. The topaz-diggers find the gems only in the alluvium, or broken granite, and generally in that covering the bottoms of corries, or spread round the foot of the higher granite summits.

LOCHNAGAUL, a bay, about 3 miles long, and less than a mile broad, penetrating the coast of Arisaig, in Inverness-shire. A parliamentary road leads from the north side of it, 37 miles, to Fort William.

LOCHNAKEAL. See LOCHNANGAUL.

LOCHNAMHOON. See AVIEMORE.

LOCHNANEAN, a small mountain lake, in a lofty situation, abounding with excellent trout, in the parish of Kirkmichael, Perthshire.

LOCHNANGAUL, or LOCHNAKEAL, a sea-loch, penetrating the middle of the west side of the island of Mull, in Argyleshire. It has a width of about 8 miles across the entrance, and penetrates the land eastward to the extent of about 8 miles, diminishing gradually to a width of only about 1 mile; so that its general outline is not much different from that of an equilateral triangle. But its area is much occupied with islands, including those of Inchkenneth, Eorsa, Little Colonsay, Ulva, and Gometra; and the part of it to the north of the last of these two islands has but slender communication with the rest, and bears the separate name of Loch-Tua. The island of Staffa also, and the Treshnish isles, lie off its mouth.

LOCHRUTTON, a parish, containing the post-office village of Lochfoot, in the eastern division of Kirkcudbrightshire. Its centre is about 6½ miles west-south-west of Dumfries. It is bounded by Kirkpatrick-Irongray, Terregles, Troqueer, New-abbey, Kirkgunzeon, and Urr. Its length eastward is 5½ miles; and its greatest breadth is about 4½ miles. The surface, toward the south, the west, and the north-west, is hilly; but elsewhere it is an arable valley, interspersed with knolls, mosses, and meadows. The soil, in general, is a light shallow loam. About 5,165 Scotch acres are in tillage or in meadow; about 278 are moss; about 209 are under wood; and about 400 are pastoral or waste. The principal landowners are Maxwell of Terregles and M'Culloch of Ardwall; and there are fourteen others. The value of raw produce in 1841 was estimated at

8,146. Assessed property in 1843, £3,836. A ake called Lochrutton, from which the parish has s name, lies a little east of the centre of the parish, nd covers an area of 123 Scotch acres. In the iddle of it is a circular islet, about ½ a rood in ex- nt, partly artificial, and everywhere covered with rge stones, resting on a frame of oak planks. he superfluence of the lake is the head-stream of argen water. Merkland-well, within the parish, a strong chalybeate, serviceable in agues, and in yspeptic and nervous disorders, and is exceedingly ght and very diuretic. It formerly was very cele- rated, and still is resorted to by persons of the iddle and lower classes. On a hill in the extreme ast there is a Druidical circle of 9 stones and about 70 feet in diameter. The spot commands one of he richest and most extensive prospects in the east Galloway. Vestiges exist of several peel-houses, me of which appear to have been surrounded with fosse. One of them very ancient, and called Cas- e-of-hills in a Scottish Chronicle of the reign of ames VI., is still entire. On the corner-stone of a rter's lodge attached to it, as a modern excres- nce, is the date 1598. The parish is traversed by e roads from Dumfries to New-Galloway and astle-Douglas. Population in 1831, 650; in 1851, 6. Houses. 119.

This parish is in the presbytery and synod of umfries. Patron, the Duke of Buccleuch. Stipend, 182 6s. 4d.; glebe, £10. Schoolmaster's salary, 30, with £15 10s. fees, and £5 10s. other emolu- ents. There is a private school. The parish hurch was built in 1819, and contains upwards of 00 sittings. The ancient church was a vicarage f Lincluden, belonging first to the nunnery of that lace, and next to its collegiate church.

LOCH-RYAN. See Ryan.

LOCHS, the northern district of the parish of pplecross, on the west coast of the mainland of oss-shire.

LOCHS, a parish in the south-east of Lewis, ss-shire. Its post-town is Stornoway, about 10 iles north-north-east of its parish church. It mprehends a district of the mainland of Lewis, d a number of islets, the chief of which are the iant isles. The mainland district is bounded by arris, Uig, Stornoway, and the Minch. Its length rth-north-eastward is about 18 miles; and its erage breadth is about 9 miles. Its coast is nerally very bold and rocky, especially about the adlands. Its surface is, in a large degree, cut to a labyrinth by intersections of the sea and by sh-water lakes. Hence its name of Lochs. The ief sea-intersections are Loch-Seaforth on the uth, Loch-Clay and Loch-Brolum on the south- st, and Loch-Shell, Loch-Dungeon, Loch-Erisort, d Loch-Grimshader on the east. A large part of surface is a peninsula called Park or the Forest Lewis, lying between Loch-Seaforth and Loch- risort, and connected with the rest of the parish an isthmus of ⅔ of a mile in breadth. Part of Park, particularly in the south, is mountainous d pastoral; but almost all the rest of the parish, ecially the interior, is flat, and yields nothing but coarsest heath. About 3,000 imperial acres are gularly or occasionally in tillage; and probably out 120,000 are either pastoral or waste. Loch- ell and part of Loch-Seaforth and Loch-Erisort good natural harbours. The population reside groups of forty families or less, each group form- a sort of village. The improvements noticed in article on Lewis strongly concern the parish of chs. Population in 1831, 3,067; in 1851, 4,256. ouses, 801. Assessed property in 1843, £2,514 . 3d.

This parish is in the presbytery of Lewis, and synod of Glenelg. Patron, the Crown. Stipend, £158 6s. 7d.; glebe, £20. Schoolmaster's salary, £28. The parish church was built about 30 years ago, and contains about 700 sittings. There is a Free church, with an attendance of about 800, and the amount of its receipts in 1856 was £118 9s. 1⅝d. There are four non-parochial schools, all supported by public bodies.

LOCHWESTER, a lake and a post-office station in the parish of Bower, Caithness-shire.

LOCHWINNOCH, a parish, containing the post-town of Lochwinnoch, the post-office village of Hollow-wood, and the village of Newton-of-Beltrees, on the south border of Renfrewshire. It is bounded by Ayrshire, and by the parishes of Kilmalcolm, Kilbarchan, Abbey-Paisley, and Neilston. Its length east-south-eastward is about 12 miles; and its greatest breadth is about 6 miles. The surface is greatly diversified. The end parts consist of high hills; and the central part is a low winding valley of great fertility and beauty. This valley, with the shelving country towards it on both sides, contains nearly the whole population. In its centre is a fine

lake; and it is also ornamented with plantations, whilst the houses of its numerous small proprietors are each set down under the shade of a few old trees in the midst of well-cultivated spots of ground. The whole strath has a warm and cheerful appearance, insomuch that worthy George Robertson, in his description of 1818, waxing poetical for once, justly pronounced it "the very Vale of Tempe of Renfrewshire." The highest hills in the county are situated in the western extremity of this parish. One of these heights—appropriately called Misty-law—is about 1,240 feet above the level of the sea; and another, the hill of Staik, is a few feet higher. The prospect from Misty-law extends over twelve counties, including the frith of Clyde and its islands. This hill is surrounded by moorlands, which abound with game, and afford tolerable pasture for sheep. The range of high land in the east end of the parish is mostly arable. The soil of the lower grounds is clay and loam; and that of the higher grounds, exclusive of the moors, is of a light, dry quality, on rotten rock or whinstone. About 9,000 English acres are either cultivated or capable of cultivation; about 100 are disposed in gardens and orchards; about 700 are under wood; about 300 are under water; and about 9,120 are variously pastoral or waste. Coal is worked at Halhill; limestone at Hollow-wood; and sandstone and whinstone in several quarries. The lake in the centre of the parish ought properly to be called Loch-Winnoch, but is commonly called Castle-Semple-loch. See the article CASTLE-SEMPLE. In the north-west of the parish is a sheet of water called Queenside-loch, containing about 21 acres; and in the opposite extremity is one much less, called Wa's-loch, which is remarkable for the quantity of water-lilies it produces. The river Calder runs wholly within the parish. It rises on the north-west, on the borders of Ayrshire, and pursues a winding course towards Castle-Semple-loch, which it enters near the town of Lochwinnoch. On this river are some romantic waterfalls; and its banks, which are overhung with wood, both natural and planted, are exceedingly picturesque. Their beauties were first pointed out by Alexander Wilson, the ornithologist of America, who, although not a native of this parish, resided in it for some years before his emigration, and founded several of his poems on its scenery and incidents. He thus lamented the neglect to which, all his time, the banks of the Calder had been doomed:—

> "Say, ye blest scenes of solitude and peace,
> Strayed e'er a bard along this hermit shore?
> Did e'er his pencil your perfections trace?
> Or did his muse to sing your beauties soar?
> Alas! methinks the weeping rocks around,
> And the lone stream, that murmurs far below,
> And trees, and caves, with solemn hollow sound
> Breathe out one mournful melancholy 'No!'"

A principal estate in the parish is that of Castle-Semple, which has been noticed in our article on Castle-Semple. Another principal estate is Barr, which anciently belonged to a family of the name of Glen, and was purchased in the latter part of last century by the family of Macdowall, who greatly improved it, and rebuilt its mansion. The ancient castle of Barr is agreeably situated on an eminence on the south side of the road leading from Lochwinnoch to Kilbirnie. It is a high oblong tower, of four stories, the walls of which are entire, but without a roof. From the walls having both slits for arrows and ports for guns, the building may be referred to the 15th century, when the people of this country were passing from the one mode of warfare to the other. In the south-eastern extremity of the parish is a barony called Auchenbathie-Wallace, to distinguish it from another called Auchenbathie-Blair, which belonged to a different family. The former belonged to the Wallaces of Elderslie, and is mentioned by Blind Harry as one of the places that Malcolm Wallace, father of the hero, "had in heritage." On this property there are the remains of a small castle called the tower of Auchenbathie. The lands of Beltrees belonged to a distinguished family, the founder of which was John Sempill, youngest son of the third Lord Sempill, and husband of Mary Livingston, sister of Lord Livingston, and one of the maids of honour to Queen Mary. His son, Sir James Sempill, enjoyed the confidence of James VI., and was the author of several works in prose and verse. Robert Sempill, the son, and Francis, the grandson, of Sir James, inherited his poetical talent. The only noticeable antiquities additional to those already mentioned, are the remains of two hill-forts, the one on the farm of Castlewa's and the other on Knockmade. On 18th June, 1685, a skirmish took place at Muirdykes, in the eastern part of the parish, between the Government troops commanded by Lord Ross of Hawkhead, and a remnant, to the number of 75, of those who had joined in the rising under the Earl of Argyle. The latter, under the command of Sir John Cochran, having taken up a position within some enclosures, bravely repelled the enemy, and kept their ground till nightfall, after which both parties withdrew from the field. Sir John's men then dispersed, and the Earl himself having been previously taken prisoner near Inchinnan, the unfortunate enterprise came to an end. The number of principal landowners of the parish is seven,—three of them resident; and the number of small landowners is about 130. The estimated value of raw produce in 1836, exclusive of minerals, was £14,067. Assessed property in 1843, £17,887 16s. The parish is traversed by the roads from Paisley to Irvine and Ardrossan, and by the Glasgow and South-western railway; and it has a station on the railway, 15¾ miles from Glasgow. Population in 1831, 4,515; in 1851, 4,153. Houses, 515.

This parish is in the presbytery of Paisley, and synod of Glasgow and Ayr. Patrons, the Heritors. Stipend, about £330; glebe, £19 10s. Unappropriated teinds, £998 2s. 6d. Schoolmaster's salary, £34 4s., with fees, and £25 other emoluments. The parish church was built in 1806, and contains about 1,150 sittings. There is a Free church; and the amount of its receipts in 1856 was £282 12s. 10d. There is an United Presbyterian church, built in 1792, and containing 503 sittings. There are several non-parochial schools and a public library. The name of the parish was spelled in nearly forty different ways before its present spelling was finally adopted; and while the first part of it is universally believed to refer to the lake in the middle of the parish, the latter part is supposed by some antiquaries to be *innich*, the genitive of the Celtic word *innis*, referring to an islet in the lake,—and by others to be *Winnoc*, the name of an ancient saint to whom some old chapel here was dedicated.

The TOWN of LOCHWINNOCH stands on the road from Paisley to Kilbirnie, 3½ miles north by west of Beith, and 9¾ south-west of Paisley. Its situation is very pleasant, on Calder-water, in the neighbourhood of Castle-Semple-loch, sheltered on all sides except the south-east, by rising-grounds or thick plantations. The old part of it is comparatively mean, irregular, and small; but the new town comprises a main street ½ a mile long, with some streets crossing it at right angles, and was built on a regular plan. Most of the houses are two stories in height and covered with slates; but a few are of superior character, inhabited by wealthy persons or pr

fessional men. There are two large cotton mills and a wool mill. Most of the inhabitants are employed in these mills, but some are hand-loom weavers, and others are employed in bleaching. There formerly were manufactures of linen, of thread, of leather, and of candles; but they all proved failures. The town has an office of the City of Glasgow Bank, a total abstinence society, and several religious institutions. Fairs are held on the second Tuesday of May, and on the first Tuesday of November, both old style. Population in 1851, 2,271. Houses, 213.

LOCHWOOD-CASTLE. See JOHNSTONE, Dumfries-shire.

LOCHY (LOCH), the south-westernmost of the chain of fresh-water lakes in the Great Glen, Inverness-shire. It is about 14 miles long, and not more than a mile broad. Its boundaries on either side, throughout its whole extent, are lofty mountains, which rise up sudden and unbroken. Their outline is without variety; and after passing the mouth of the water of Archaig, there is neither bay, promontory, nor turning of the lake, of size sufficient to break the disagreeable uniformity. Near the western end of the lake, however, where the water of Archaig enters, there is some relief to the scenery. The fine bay which here sweeps on towards the glens of Achnacary,—the broken rocks and rich woods which ornament these little valleys,—the wooded and heathery knolls which are scattered about,—the mansion-house of Lochiel, and the pleasant farm-house of Clunes,—afforded an agreeable relief to the tourist.

LOCHY (THE), a river of the Great Glen, Inverness-shire. It issues from the south-west end of Loch-Lochy by a new channel artificially cut for it, about 600 yards south-east of the point at which the lake receives the Caledonian canal. Continuing for some time to run in its new channel, it is conveyed at Mucomre-bridge, a mile below Loch-Lochy, into the course of its former tributary, the Spean, and it becomes lost in that stream for ¼ of a mile, but resumes its name when the united current falls into the old channel of the parent stream at Garelochy. Its length of run is about 10 miles, generally parallel to the line of the canal, and it falls into Loch-Eil at Fort-William, within a few yards of the embouchure of the Nevis, precipitating itself with such force and rapidity into the marine lake, as to preserve, for a considerable distance, both distinctness of current and freshness of water. An excellent ferry is maintained on the river, about 2 miles above Fort-William, and is provided on each side with a good quay; yet it forms for all classes, but especially for cattle-dealers, a poor succedaneum for a substantial and commodious bridge.

LOCHY (THE), a small river of Breadalbane, Perthshire. It rises on the north side of Benchallin, in the extreme south of the most westerly detached part of Kenmore, and runs 3¾ miles northward, and 2¾ north-eastward, to the eastern limit of that district. It now, for 3 miles eastward, bisects a part of Weem, but has on its north bank a small section of Killin; it next, for 4½ miles south-eastward, runs across parts of Kenmore, of Weem, and of Killin; and it finally flows 1½ mile through Killin to the Dochart, into which it gently flows, a little above the entrance of that river into Loch-Tay. The Lochy is a stream of very varied and high attractions; and, in the lower part of its course, contributes its quota to the superb scenery round Loch-Tay-head. It is about 15 miles in length of course, and gives the name of Glenlochy to the vale which it traverses.

LOCHY (THE), a small tributary of the Aven, in the parish of Kirkmichael, Banffshire. It traverses a small, inhabited glen, descending to the left side of the Aven.

LOCKERBY, a post-town in the parish of Dryfesdale, Annandale. It stands on the road from Glasgow to Carlisle, and on the line of the Caledonian railway, mid-way between the Annan and the Milk, 4 miles east-south-east of Lochmaben, 6 north-west of Ecclefechan, 10 north-north-west of Annan, 12 east-north-east of Dumfries, 17½ west by south of Langholm, and 74 by railway south by west of Edinburgh. The country around it is one of the most pleasant tracts in Annandale. The town stretches north and south, and is flanked on the east by a pleasant rising-ground, called Lockerby-hill. Like most towns on the Borders, as well as some in other localities, it originated in the protection and influence of a castle or fortalice. On a ridgy rising ground, nearly surrounded by two lochlets, now drained, and one of them anciently traversed by the great Roman road up Annandale, stands an ancient quadrangular tower, the seat, in old times, of the Johnstones of Lockerby, a branch of the family of Johnstone of Lochwood, the ancestor of the late Marquis of Annandale, and of the present Marquis of Queensberry. Around this tower grew up a hamlet, which gradually swelled into a village, and eventually, by the liberal policy of granting feus and long tacks, increased to the bulk of a small provincial town. But though the place is of remote origin, and is the scene of some curious traditionary tales, it comes mainly into notice as the seat of a vast lamb-fair, and of considerable pastoral traffic. After the union of the Crowns, and the commencement of international friendly intercourse, English dealers annually met here the sheep-farmers of Dumfries-shire, to buy their surplus stock for the southern markets. The 'tryst,' as the meeting was called, was held on the skirt of Lockerby-hill; but it increased in extent, with the augmentation of intercourse between the nations, till it could no longer be held within the limits of its original arena. Some person—though no document or tradition gives the name of the public-spirited individual—now granted for the holding of the tryst, the whole hill in perpetuity as 'a common' to the town. This common—above 100 acres in extent—was once, in some way or other, dependent on the city of Glasgow; but the right of superiority having been bought up by the ancient and now noble family of Douglas of Lockerby-house, it is let out by auction to a person who exacts a small sum per score for the lambs shown on it, and who, in some good years, pays £30 to the proprietor for one day's collection.

The lamb-fair of Lockerby is the largest in Scotland, no fewer than from 30,000 to 50,000 lambs being usually on the ground; and the day for it is late in the season, being the second day of August, old style, unless that be a Saturday, a Sunday, or a Monday, and in that case the following Tuesday. Besides the lamb-fair, and a market for wool on the hill, there is on the same day a general gathering for fun and frolic in the town, at which the whole country, for 10 or 12 miles round, is generally assembled. Another fair, but much less notable than the former, is held on the second day of October, old style, with the same exception as to date as the other. Hiring-markets for servants, attended by great concourses of people, are held on the second Thursday of April, and on the 16th day of October, both old style. Free markets, chiefly for the sale of pork, and in some instances of cattle and horses, are held on the second Thursday of January, February, March, April, and May; on the third Thursday of

June, called the Midsummer market; on the 16th day of October, if a Thursday, and if not, on the Thursday following; on a Thursday in November, three weeks after that of October, and called the Martinmas market; on a Thursday, a fortnight after this Martinmas one; and, lastly, on the Thursday preceding Yule or Christmas. All are calculated in old style. During winter also, there are, chiefly for the sale of pork, weekly markets; and so great is the traffic in pork, that sometimes £1,000 is paid down for it by bacon-curers in one day. Lockerby is likewise a retail-depot of every sort of goods for all central and much of northern Annandale. The town has offices of the Royal Bank, the Commercial Bank, the Clydesdale Bank, two principal inns, a reading-room, a public library, a parish church with 640 sittings, a Free church with 800 sittings, an United Presbyterian church with 570 sittings, and several schools and other institutions. A station of the Caledonian railway is situated within its east side, and affords the readiest possible facilities of communication. Population in 1841, 1,315; in 1851, 1,569.

LOGAN, or Logie, a Celtic name, used in Scottish topography both singly and as a prefix, and signifying a hollow place, or plain, or meadow, surrounded by rising-grounds.

LOGAN, Wigtonshire. See Port-Logan.

LOGAN, Ayrshire. See Cumnock (Old).

LOGAN-BANK. See Glencross.

LOGAN-WATER, a rivulet of the parish of Lesmahago, Lanarkshire. It rises on the confines of Ayrshire, and runs about 6 miles north-eastward to the Nethan.

LOGAN-WATER, or Loganhouse-Water, a pastoral rivulet, associated with various interesting antiquities and reminiscences, and traversing to the North Esk a sequestered vale which diagonally cleaves the Pentland-hills in the parishes of Penicuick and Glencross, Edinburghshire. The stream is known as the Logan, only or chiefly in history and song; and is now popularly called Glencross-burn. See Penicuick and Glencross.

LOGGANLEE. See Edinburgh.

LOGGIE. See Dunfermline.

LOGGIE (The). See Luggie.

LOGIE, Morayshire. See Edenkillie.

LOGIE, a quondam parish in the south of Forfarshire. See Liff and Benvie.

LOGIE, a parish in the north-east of Fifeshire. It contains the villages of Logie and Lucklawhill-Feus; but its post-town is Cupar, 5 miles south-west of its parish church. It is bounded by Kilmany, Forgan, Leuchars, and Dairsie. Its length north-eastward is nearly 4 miles; and its greatest breadth is about 1½ mile. Occupying a portion of the south-eastern extremity of the Ochil-hills, which are here broken into several parallel ridges, its general surface is irregular and hilly, and considerably elevated above the valley of the Eden. The highest eminence is Lucklaw-hill, near the eastern extremity, which rises about 600 feet above the level of the sea, and commands an extensive view, particularly towards the north, where it commands the whole of the east coast as far as Arbroath. This hill consists of a yellow coloured felspar porphyry, very hard, and susceptible of a fine polish; the summit is compact flesh-red felspar. Tradition says that the Kings of Scotland, when residing at Falkland, or St. Andrews, used to follow the chase on this hill; in consequence of which it is called the King's-park. About 2,770 imperial acres in the parish are arable; about 307 are pastoral or waste; and about 266 are under wood. The landed property is at present much divided. The old valued rental is £2,916 6s. 8d. Assessed property in 1843, £4,012 13s. 8d. On the south side of the parish, and not far from the church, are the place and lands of Logie, which belonged, in the reign of Robert III., to Sir John Wemyss of Reres and Kincaldrum, ancestor of the Earls of Wemyss. In the reign of James VI., the lands of Logie were possessed by a younger branch of this noble family. In the Minstrelsy of the Scottish Border, Sir Walter Scott has published a ballad called 'the Laird of Logie,' founded on an incident which occurred to Wemyss of Logie, who appears to have been a young gallant at the court of the Scottish Solomon. The only noticeable antiquity in the parish is the ruin of a square tower, called the castle of Cruivie, on the lands of Straiton. The parish lies near the line of turnpike from Cupar to Dundee, and has easy access to the Dairsie station of the Edinburgh, Perth, and Dundee railway. The village of Logie is a small place, inhabited by feuars, near the middle of the south side of the parish. Population of the parish in 1831, 430; in 1851, 467. Houses, 109.

This parish is in the presbytery of Cupar, and synod of Fife. Patron, the Crown. Stipend, £205 2s. 5d.; glebe, £12. Schoolmaster's salary, £34 4s. 4½d., with about £18 fees, and some other emoluments. The parish church was built in 1826, and contains 280 sittings. There is a Free church for Logie and Gauldry; and the amount of its receipts in 1856 was £132 11s. 2½d. The ancient name of this parish was Logie-Murdoch; but the latter part of the name has long been in disuse. The ancient parish church was a vicarage of the abbey of Balmerino. At the Reformation, Balmerino and Logie were united into one charge; but about 1571, Logie was supplied with a reader, and soon after was constituted a separate parochial charge.

LOGIE, a parish in the counties of Perth, Stirling, and Clackmannan. Its Perthshire portion contains the post-office village of Blairlogie; its Stirlingshire portion contains part of the post-office village of Bridge-of-Allan, and also adjoins the burgh of Stirling; and its Clackmannanshire portion contains the village of Craigmill, the post-office village of Menstrie, and part of the post-office village of Causewayhead. The parish, as a whole, is compact; yet the portion of it which belongs to Stirlingshire is in two sections, one of them quite detached from the county; and the portion of it which belongs to Clackmannanshire is cut off from the body of that county by the portion which belongs to Perthshire. About one-fifth of it, on the south, is the Clackmannan part; and the other four-fifths are nearly equally divided between Perth and Stirling. It is bounded by Dunblane, Alva, Alloa, St. Ninian's, Stirling, and Lecropt. Its length southward is 6½ miles; and its greatest breadth is about 6 miles. The river Allan traces its western boundary; the river Devon traces its eastern boundary; and the river Forth, from the mouth of the Allan to the mouth of the Devon, traces all the southern boundary. In the north and the north-east the parish runs up among the Ochil-hills; it thence descends in a hanging plain of dryfield to about its middle; and then, over nearly one-half of its whole area, it stretches away towards the rivers in strong and beautiful carse-ground, unsurpassed in its opulence by any in the kingdom. The whole surface is beautiful,—richly cultivated and adorned in its low grounds, and finely picturesque in its pastoral uplands. Its southern boundary has the far-folding sinuosities which distinguish the most capricious part of the links of the Forth. One of the peninsulas within the links is graced with the venerable ruins of Cambuskenneth Abbey: which see. The

centre of the parish is ornamented with the mansion and the wooded pleasure-grounds of Airthrie castle, a seat of Lord Abercromby. One of the Ochils, a high conical hill called Dunmyat, lifts the eye over parts of 12 counties, and feasts it with one of the most magnificent, as well as extensive prospects in Scotland. See DUNMYAT. Another grandly picturesque feature is ABBEY-CRAIG,—which also see. Half-a-mile north of the base of Dunmyat, a very fine well issues from more than 60 springs, bears the name of the Holy well, and is said to have been anciently an object of superstitious veneration and crowded resort on the part of the Roman Catholics. Toward the west are the mineral wells of AIRTHREY: which see. Silver and copper ores occur among the Ochils. A mine of copper was for some time flattered in its operations by the appearance of a very rich vein; but it became uncompensating, and was abandoned. The yearly value of the raw produce of the parish, exclusive of wood and minerals, was estimated in 1841 at £23,088. Assessed property in 1843, £14,837. The principal manufactories are a woollen mill at Menstrie, a distillery near Menstrie, and a paper-mill and a spinning-mill near the Bridge-of-Allan. The parish enjoys the communications of the Stirling and Perth turnpike, the Stirling and Granton steamers, the Scottish Central railway, and the Stirling and Dunfermline railway. Population of the Stirlingshire section, in 1831, 640; in 1851, 1,059. Houses, 171. Population of the Perthshire section, in 1831, 354; in 1851, 270. Houses, 62. Population of the entire parish in 1831, 1,945; in 1851, 2,551. Houses, 450.

This parish is in the presbytery of Dunblane, and synod of Perth and Stirling. Patron, the Earl of Dunmore. Stipend, £263 10s. 2d.; glebe, £19. Unappropriated teinds, £680 3s. 2d. Schoolmaster's salary, £30, with £33 fees. The parish church was built in 1805, and contains 644 sittings. There is a Free church at Bridge-of-Allan, with about 800 sittings; and its receipts in 1856 amounted to £601 10s. 11d. There is an United Presbyterian church at Blairlogie, containing about 400 sittings. There is also an United Presbyterian church at Bridge-of-Allan. There are three non-parochial schools in the parish, a parochial library at Blairlogie, and a public library at Bridge-of-Allan. The Clackmannanshire part of the parish includes the sites of the ancient chapels and hermitages of Lupno, northwest of Menstrie, on the western bank of the stream which flows into the Devon.

LOGIE, an estate in the upper part of the parish of Crimond, on the east coast of Buchan, Aberdeenshire. See LOGIE-BUCHAN and LOGIE-LOCH.

LOGIE, a manufacturing village in the north of Forfarshire. See LOGIE-PERT.

LOGIE, a district of the parish of Kirriemuir, which was assigned, by the ecclesiastical authorities, as a quoad sacra parish to the South church of Kirriemuir, but which ceased to be a parish at the Disruption. Its population in 1841 was 2,691. See KIRRIEMUIR.

LOGIE-ALMOND, a district on the north bank of the river Almond, opposite the parish of Methven, and immediately west of that of Monedie, Perthshire. About 100 years ago, it was, by authority of the court of teinds, disjoined from the parish of Monzie, to which it originally belonged, and annexed quoad sacra to that of Monedie. The district measures 3 miles by 2¼. The soil adjacent to the river is partly of light loam and partly gravelly; and, on rising grounds and hills in the interior and on the north, it is a deep till mixed with moss. The uplands are divided into sheep-walks, and abound with all kinds of game. Near the Almond are some ruinous castles; and elsewhere are two Druidical circles. The district anciently formed the meeting point of the three dioceses of St. Andrews, Dunkeld, and Dunblane; and is traditionally said to have been a place of conference on the part of the three bishops. About 23 years ago, Logie-Almond, and small portions of the parishes of Redgorton, Auchtergaven, Fowlis-Wester, and Methven, were erected into a chaplainry, or formally connected with a chapel, without being made a quoad sacra parish; and within the last 4 years, the united district, which measures 6 miles by 2½, was constituted by the court of teinds, a quoad sacra parish. The patron of it is the Earl of Mansfield. The parish church was formerly a chapel of ease of the parish of Monzie, and contains 285 sittings. There is a Free church of Logie-Almond, whose receipts in 1856 amounted to £130 8s. 5d. There is also an United Presbyterian church in Logie-Almond, built in 1811, and containing 450 sittings. There are three schools in the district. The post-town is Perth, 10 miles to the east-south-east.

LOGIE-BRIDE. See AUCHTERGAVEN.

LOGIE-BUCHAN, a parish in Buchan and Formartine, Aberdeenshire. Its post-town is Ellon, 2 miles to the west. It is bounded by Cruden, Slains, Foveran, Udny, and Ellon. Its length, in a demi-semi-circular curve, from north-east to south-west, is about 9 miles; and its average breadth is about 1½ mile. The river Ythan, here navigable at full tide for small sloops, crosses it from west to east, dividing it into nearly equal proportions. Precipices of gneiss rock flank the stream at the part where it enters the parish, and give a very distinct echo to short sentences in a calm evening. The surface of the parish is rather flat, but has occasional eminences; and Tarty, one of its highest hills, has an altitude of only 135 feet above the level of the sea. About 5,759 imperial acres are in tillage; about 316 are improveable pasture; about 337 are unimproveable; and about 66, included in the above, are under wood. The arable soil, in general, is fertile, but less so on the banks of the river than elsewhere. The average rent of the arable land is about 15s. Assessed property in 1843, £3,178. Estimated value of raw produce in 1842, £13,200. The "Boat of Logie" is a well-known tune, having reference to this parish, but the still better known song of "Logie o' Buchan," refers to a gardener, about the middle of last century, at Logie in the parish of Crimond. Logie-Buchan is traversed by the road from Peterhead to Aberdeen. Population in 1831, 684; in 1851, 724. Houses, 124.

This parish is in the presbytery of Ellon, and synod of Aberdeen. Patron, Buchan of Auchmacoy. Stipend, £191 16s. 8d.; glebe, £12 10s. Unappropriated teinds, £11 11s. 9d. Schoolmaster's salary, £25 13s. 4d., with about £20 fees, and a share in the Dick bequest. The parish church was built in 1787, and contains 400 sittings. During the civil wars of the 17th century, a party of royalists met and defeated a Covenanter force on the lands of Tarty; and though the action was only a skirmish, it caused great alarm in Aberdeen, and occasioned that hasty rising of the Gordons, whose failure compelled the Marquis of Huntly to flee the country, and brought Sir John Gordon to the block.

LOGIE-BURN, a rivulet running several miles westward on the boundary between Banffshire and Aberdeenshire, and then proceeding south-westward, within the parish of King-Edward, to fall into the Deveron.

LOGIE-COLDSTONE, a parish in the Kincardine O'Neil district of Aberdeenshire. Its post-town is Tarland, 4 miles to the east. It is bounded

by Strathdon, Towie, Tarland, Coull, Aboyne, and Glenmuick. Its length south-eastward is 7 miles; and its greatest breadth is upwards of 5 miles. Its north-west end lies on Deskry-side, within the basin of the Don; but all the rest of it is in the district of Cromar, within the basin of the Dee. A great part of this Cromar section seems anciently to have been the site of a large lake or chain of lakes, and is now a valley, diversified by swells, and watered by three rivulets forming the Loch of Daven. See DAVEN (LOCH). A range of steep high hills flanks the upper half of the south-western side of this valley, terminating on the summit of Morven, at the boundary with Glenmuick and Strathdon, which commands a view down Deeside as far as the eye can reach. A range of heights flanks also a great part of the north-east side of the valley; but this is more gradual and less elevated. About 3,000 acres are in tillage, and about 900 are under wood. The soil on the hill slopes is generally deep and fertile; but that on the low grounds is mostly shallow, and either sandy or peaty. The predominant rock is granite. The average rent of the arable land is 25s. per acre. Assessed property in 1843, £3,080. The landowners are Farquharson of Invercauld, the Earl of Aberdeen, the Marquis of Huntly, Forbes of Blelack, and Farquharson of Corrachree. The mansions are Blelack and Corrachree. There are 3 meal mills and a saw-mill. Two farms bear the name of Cairnmore, from large cairns which existed till recently on their lands. The lower part of the parish is traversed by the road from Ballater to Tarland. Population in 1831, 910; in 1851, 889. Houses, 179.

This parish is in the presbytery of Kincardine-O'Neil, and synod of Aberdeen. Patrons, the Crown and Farquharson of Invercauld. Stipend, £217 9s. 3d.; glebe, £16. Unappropriated teinds, £91 11s. 7d. Schoolmaster's salary, £34 4s. 4½d., with £25 fees, and a share in the Dick bequest. The parish church was built in 1780. There is a Free church in Glenmuick for Cromar; and the amount of its receipts in 1856 was £45 8s. 9d. The present parish of Logie-Coldstone comprehends the ancient parishes of Logie-Mar and Coldstone, which were united in 1618.

LOGIE-DURNO. See CHAPEL-OF-GARIOCH.

LOGIE-EAST. See CAPUTH.

LOGIE-EASTER, a parish in the north-east of Ross-shire and Cromartyshire. Its postal communication is through Parkhill, 2 miles south of the parish church, but within Kilmuir-Easter. It is bounded by Tain, Fearn, Nigg, Kilmuir-Easter, and Eddertoun. Its length south-eastward is 7 miles; and its breadth is about 3 miles. Its surface descends from the north-west and the north to the sea-board of the northern extremity of Cromarty frith; and is uneven, but by no means rugged. The soil is, in some places, a strong deep clay; in others, a rich black mould; in others, a light earth on a sandy irretentive subsoil. Sands have been extensively reclaimed, and are in a very improved state of cultivation. Wheat is more plentifully produced than any other grain, and is excellent in quality. The prevailing rock is the old red sandstone. Thriving plantations are somewhat extensive; and some natural wood flourishes on the grounds of Ulladale. The largest stream bisects the parish east-south-eastward; and one of three other burns, after heavy rains, overflows its banks, and sometimes considerably damages the adjacent fields, washing away the soil, and spoiling the grass. The water of one of several very fine springs was once superstitiously thought to have a predictive power; and, when carried, in any quantity, into the presence of a sick person, was alleged to change colour if he would die, and to retain its limpidness if he would recover. The mansions are Calrossie and Shandwick. Several cairns stand on both sides of one of the burns, and are traditionally said to indicate an ancient battle in which some Scottish forces worsted an army of Danes. A gallows hill in the centre of the parish, and a deep small pond in its vicinity, called *Poll a bhaidh*, or 'the Pool for drowning,' were noted, in the days of hereditary jurisdiction, as places of capital punishment. There are four landowners. The old valued rental was £1,514 Scots. Assessed property in 1843, £3,297 6s. The parish is traversed by the great road from Inverness to Wick. Population in 1831, 934; in 1851, 965. Houses, 217.

This parish is in the presbytery of Tain, and synod of Ross. Patron, the Marchioness of Stafford. Stipend, £236 19s. 1d.; glebe, £7. Unappropriated teinds, £55 17s. 10d. Schoolmaster's salary, £34 4s. 4½d. The parish church is a neat, modern structure, on a commanding site, and contains 700 sittings. There is a Free church, with an attendance of about 500; and the amount of its receipts in 1856 was £171 7s. 10d. There is an Assembly's school at Scotsburn.

LOGIE-ELPHINSTONE, the estate and mansion of Sir James D. H. Elphinstone, Bart., on the north bank of the Ury, in the parish of Chapel-of-Garioch, Aberdeenshire.

LOGIE-FORFAR. See LOGIE-PERT.

LOGIE-HEAD, a promontory at the western extremity of the parish of Fordyce, and flanking the east side of the bay of Cullen, Banffshire.

LOGIE-LOCH, a lake on the estate of Logie, in the upper part of the parish of Crimond, Aberdeenshire. It is also called the Loch of Kinninmonth.

LOGIE-MAR. See LOGIE-COLDSTONE.

LOGIE-MONTROSE. See LOGIE-PERT.

LOGIE-MURDOCH. See LOGIE, Fifeshire.

LOGIE-NEWTON, a farm in the parish of Auchterless, Aberdeenshire,—on which are a Roman camp, and a very large tri-concentric Druidical circle.

LOGIE-PERT, a parish, containing the villages of Logie, Craigo, and Muirside, on the north-east border of Forfarshire. Its post-town is Montrose. It is bounded by Kincardineshire, and by the parishes of Montrose, Dun, and Strickathrow. Its length eastward is nearly 5 miles; and its breadth is about 3 miles. The North Esk traces all the boundary with Kincardineshire. The surface of the parish rises from that river, at first gently, and afterwards more rapidly, so as to attain a commanding though not strictly a hilly elevation; and, in a minor section, it slopes to the south. The high ground commands a noble view of the Grampians, of the intervening plain, and of a considerable part of Kincardineshire. The soil, in the northern division, is a deep, fertile clay; and in the other districts, it is partly a light loam, and partly blackish moorland, superincumbent on clay. About 300 acres are waste; and all the rest of the area is disposed in arable grounds and plantations, in the proportion to each other of 3½ to 1. Abundance of wood, and the achievements of husbandry, impress on the parish a peculiarly snug and cheerful aspect. Of various springs of excellent water which refresh the inhabitants, a copious one near the site of the old manse of Pert is reputed to be antiscorbutic, and one in Martin's den produces so plentifully that its stream would fill a pipe of a foot in interior circumference. Freestone, of good quality, abounds; but is not much worked. Limestone was formerly mined and burnt to a great extent; but eventually proved uncompensating. On the North Esk are two seats o

considerable manufacture. The Logie works, of the parish of Logie-Pert, a mile from the eastern extremity, connected with Logie village, and 4¼ miles from the town of Montrose, consist of a flax-spinning mill, which employs about 130 persons, and a bleachfield for linen-yarns, which employs nearly 50. The population of the village of Logie is about 340. The Craigo works, nearly a mile farther up the river, consist of a flax-spinning mill, machinery for finishing cloth, a bleachfield, and a soda work, which jointly employ about 300 persons. The chief mansions are Craigo in the south-east corner, and Gallery on the North Esk. Nearly a mile west of Craigo-house are three remarkable tumuli, called the Laws of Logie, two of which have been opened, and found to contain unusually large human skeletons, and some kindred relics. The parish is traversed by the west road between Dundee and Aberdeen, by the road from Montrose to Fettercairn, and by the Aberdeen railway; and it has a station on the railway at Craigo, 36 miles from Aberdeen. There are five principal landowners. Real rental in 1855, £6,262. Assessed property in 1843, £6,206. Estimated value of raw produce in 1835, £14,521. Population in 1831, 1,359; in 1851, 1,609. Houses, 350.

This parish is in the presbytery of Brechin, and synod of Angus and Mearns. Patrons, the Crown and St. Mary's College of St. Andrews. Stipend, £261 8s.; glebe, £18. Unappropriated teinds, £24 5s. 3d. Schoolmaster's salary, £34 4s. 4½d., with £10 7s. 6d. fees, and £10 6s. other emoluments. The parish church was built in 1840, and contains 500 sittings. There is a Free church, with an attendance of 380; and the amount of its receipts in 1856 was £241 11s. 5d. There are three non-parochial schools, and a parochial library. The present parish of Logie-Pert comprehends the ancient parishes of Logie-Montrose, composing its eastern division, and of Pert, composing its western division. The parishes were united by act of parliament between 1610 and 1615. The ruins of the old church of Logie stand in a romantic hollow or low ground on the North Esk, half a-mile from the eastern extremity; and those of the old church of Pert stand also on the river 4½ miles further west. The united parish is sometimes called in documents Logie-Orfar.

LOGIERAIT, a large, dispersed parish, containing the post-office village of Logierait, the village of Ballenluig, and part of the post-town of Aberfeldy, in the north of Perthshire. Part of it is surrounded on all sides, to a depth of many miles, by the parish of Fortingall in Breadalbane. This part has a length from north to south of 4½ miles, and a mean breadth of 3⅝ miles; it lies on the south side of Loch-Rannoch, from 1¼ to 5 miles from the east end of the lake; it has a belt of plantation a mile broad from the lake southward; and it thence toweringly recedes to a water-shedding line of alpine summits along its southern boundary. The nearest other part of the parish to this is a detached section, 11½ miles to the east, surrounded on all sides by the parish of Dull, and parts of the curiously scattered parish of Weem, and extending in a stripe of irregular but generally narrow breadth, 4½ miles from north-west to south-east, where it strikes the Tay. This district is cut asunder across its narrow middle by the loch of Glassy; it has a lochlet near its north-west extremity; and it is softened into amenity and beauty toward the Tay; but elsewhere, it is wildly pastoral. The next part of the parish is surrounded on all sides by Dull, runs parallel to the former part at generally a mile's distance, and is a stripe of 3½ miles in length, and ¾ of a mile in mean breadth stretching south-eastward to the Tay. This part has on its north-eastern boundary the loch of Derculich, ⅔ of a mile in length, and possesses over a large proportion of its area, especially toward the Tay, a cultivated and ornamental aspect, foiled by lofty grounds at its centre and in the north-west. The fourth and chief part of the parish, or its main body, lies at the nearest point half a-mile east of the part just noticed, and 14 miles in a straight line east of the part in Rannoch. It consists of an irregular triangle, and an attached parallelogram. The triangle lies between the rivers Tay and Tummel, from their point of confluence upward; it measures 6 miles along the Tummel in a straight line on the north-east, and is there bounded by Moulin, by part of Dowally, and by its own attached parallelogram, —5½ miles along the Tay on the south, and is there bounded by Little Dunkeld and Dull,—and 4½ miles from the Tummel to the Tay on the west, but sends westward a projection of 4 or 4½ square miles in area, and is there bounded wholly by Dull. The parallelogram rests one end for 2 miles on the Tummel, and for one mile on the Tay, subsequent to the confluence of the rivers; it recedes north-eastward 5½ miles by 3; and it is bounded on the north-west by part of Dowally,—on the north-east by Strathardle in Kirkmichael,—on the south-east by Dunkeld,—and on the south-west by Little Dunkeld, and by its own attached triangle. Two-thirds of the parallelogram, from the north-east boundary downward, are occupied by the Braes of Tullimet, which give name to a favourite Scottish air. Among the Braes are three lakes, — the largest, Loch-Hoishne, circular in outline, and about 1½ mile in circumference. A broad belt of the parallelogram upon the Tummel is arable ground. The triangle has an area singularly varied and beautiful. Along the Tummel, or the north-east side of the triangle, stretches Slesbeg, or 'the narrow country,' having woodlands which, in several places, go down to the very brink of the river, and, in one place, are very extensive. Slesbeg is flanked over its whole length by a bold abrupt ridge of heights which terminates, at the south-east, in precipitous rocks. Parallel to this ridge, and close on the south-west boundary, runs another ridge of similar character, enclosing several lochlets, and sending down mountain-brooks to drain the diversified surface intervening between it and the other ridge. The hills here and elsewhere, are, in their summits and higher acclivities, partly covered with heath, and partly a wild exhibition of naked rock. Along the Tay is a beautiful broad belt of arable ground, forming part of Strathtay, and finely adorned with wood. The area here, and along the two sides of the Tummel, and up the lower slopes of the hills which acknowledges the dominion of the plough, and displays the attractions of full cultivation, aggregates nearly 3,000 acres. So far back as the date of the Old Statistical Account, the country had advanced singularly far in georgical achievement, and in acquaintance with the best tools and appliances of husbandry.

Among the rocks of the parish is a variety of talc; in one part of Strathtay are several strata of limestone; and in some mosses fossil wood is occasionally found. Fruit-trees and garden-shrubs agree well with the soil, and are plentifully reared. The rivers frequently overflow their banks, convert the low grounds into temporary lakes, break down barriers, sweep away land to the enlargement of their channels, and fling a dash of wildness and sublimity over the landscape. The country, in its ordinary state, ranks high in scenic attraction. "A rock, not above a mile from the church," says the statist, "commands a prospect of a great part of the parish.

The windings of the rivers, the rich vales, the sloping corn-fields and pastures, the hanging woodlands, and the awful mountains which rise at a distance to confine the view, form, all together, one of the noblest landscapes, for extent, variety, beauty, and grandeur, that the eye can behold." Along the Tay, as well in the detached sections as in the main body, are some fine mansions. The most extensive landowners are the Duke of Athole, and Stewart of Ballechin; and there are sixteen others, with each a rental of upwards of £50. The total real rental is upwards of £10,000. Assessed property in 1843, £10,290 9s. 5d. There are in the parish six distilleries, eight meal-mills, two flax-mills, two saw-mills, and a potato starch-mill. Druidical stones and ruins of ancient Romish chapels occur in various quarters. Cairns formerly existed in several places, but have been removed. A Roman urn and a medal of Trajan were found in the parish. The ruins of a beacon-house stand on a rock 2 miles from the manse. The ruins of a castle, said to have been the residence of Robert III. after he resigned the government to his brother, the Duke of Albany, surmount a high bank near the Tummel ferry. The area of the castle is elliptical, and the fosse is in tolerable preservation. Good roads run along the Tay and the Tummel. Across the Tay ¼ of a mile below the influx of the Tummel, and across the Tummel 1 mile above its confluence with the Tay, are chain ferry-boats for the conveyance of passengers, cattle, carts, and carriages. The village of Logierait is beautifully situated on the banks of the Tay, near the influx of the Tummel, 8 miles east by north of Aberfeldy, and 8½ north-north-west of Dunkeld. It was formerly a place of considerable importance, but is now in an almost ruinous condition. Here Rob Roy made his escape after being apprehended by the Duke of Athole in 1717; and here Charles Edward located the prisoners whom he carried off from the field of Prestonpans. An annual fair is held here on the 22d of August. Population of the village, 168. Houses, 46. Population of the parish in 1831, 3,138; in 1851, 2,875. Houses, 578.

This parish is in the presbytery of Weem, and synod of Perth and Stirling. Patron, the Duke of Athole. Stipend, £250 11s.; glebe, £10. Unappropriated teinds, £256 1s. 3d. Schoolmaster's salary, £34 4s. 4½d., with £5 15s. 9d. fees. The parish church was built in 1806, and contains 1,000 sittings. The westernmost section of Logierait is included in the quoad sacra parish of Rannoch. There is a Free church of Logierait, with an attendance of 300; and the sum raised in connexion with it in 1856 was £101 5s. 11½d. There is also a Free church at Aberfeldy. There are within Logierait an Episcopalian chapel and a Baptist chapel; and there is at Aberfeldy an Independent chapel. There are a Free school in the Strathtay district, eight other non-parochial schools in the parish, and two benefit societies. Among distinguished natives of the parish may be mentioned Dr. Adam Fergusson and Dr. Robert Bissett, the latter the biographer of Edmund Burke.

LOGIE-WEST. See CAPUTH.

LOGIE-WESTER, a parish in Ross-shire united to URQUHART: which see.

LOING (THE), a rivulet of the south-west of Ross-shire. It divides Kintail on its left bank from Lochalsh on its right; uniformly pursues a south-westerly course; falls into the head of Loch-Long conjointly with the Elchaig coming from the east-south-east; and, though having an entire run of only about 9 miles, is fed by so many mountain-streams as to be subject to very sudden and great freshets. Salmon once abounded in the rivulet, bu is now comparatively scarce.

LOIRSTON LOCH. See NIGG, Kincardineshire

LOMOND HILLS (THE), two beautiful conica trap hills, situated in the shires of Fife and Kinross and visible to a considerable distance. The Eas Lomond, which is in the parish of Falkland in Fife shire, and is the most regular and beautiful, is gen erally stated to be about 1,260 feet above sea-level and 900 feet above the valley which separates i from the Ochils; but Mr. Cunningham, in hi 'Geology of the Lothians,' estimates its altitude a 1,466 feet. This hill contains limestone and coal The West Lomond, which is in the parish of Port moak in Kinross-shire, is usually stated to be abou 40 feet higher, but Mr. Cunningham estimates it a 1,721 feet. At its base lies the beautiful and placid Loch-Leven. Between the two principal Lomonds there arises another point which is sometimes distinguished as the Mid-Lomond, and composed o sandstone and trap strata, surmounted by a greyish black basalt. In some parts the Lomonds present a face of regular columnar trap. See FALKLAND and FIFESHIRE.

LOMOND (LOCH), a magnificent fresh-water lake in Stirlingshire and Dumbartonshire. Its head commences at the foot of Glen-Falloch within 1½ mile of the boundary with Perthshire; its upper part, to the extent of 3 miles, lies wholly within the parish of Arrochar, Dumbartonshire; the whole of its east side thence belongs to Stirlingshire; and the whole of its south side and its west side belong to Dumbartonshire. It extends in the direction of south-south-east, with a total length of about 23 miles; and its breadth, for 14 miles from its head, nowhere exceeds 1½ mile, but afterwards expands to 5½ miles. Its depth in some parts of its upper half is from 200 to 600 feet, but, in its lower half, seldom exceeds 60 feet. Thirty islands, of different sizes, are scattered over the surface of its lower or wider part; some of them of considerable height, most of them finely wooded, and all contributing, with its shores and screens, to form a rich variety of picturesque scenery. The chief of these islands are Inch-Murrin, Inch-Cailliach, Inch-Clair, Inch-Conachan, Inch-Cruin, Inch-Galbraith, Inch-Fad, Inch-Lonaig, Inch-Tavanach, Inch-Moan, Inch Friechlan, Inch-Croin, and Inch-Torr; and wil be found described in their own alphabetical places The lake lies completely imbedded amidst differen ranges of hills. At the south end the Kilpatrick hills terminate near Kilmaronock; on the western shore are the mountains of Luss and Arrochar; at the upper extremity tower the mountains o Glenfalloch; and on the eastern shore the grea chain of the Grampians terminates in Benlomond These ranges of hills are intersected by deep glens and by numerous mountain-streams which pou their waters into the lake. The rivulets Fruin Luss, Finlas, Douglas, with many smaller streams drain the highlands of Dumbartonshire into Loch Lomond; the rivulet Falloch brings a considerabl drainage into its head from Perthshire; and th river Endrick enters its south-east corner with very large drainage from Stirlingshire. The whol of the lake's superfluence is carried off from a south erly prolongation of its south-west corner, by th river Leven; and the cognomen of that river wa anciently the cognomen of the lake itself. Se LEVEN (THE).

It is said that the waters of Loch-Lomond hav increased considerably during the lapse of ages; an in Camstradden-bay, more than 100 yards from th shore, the ruins of houses are alleged still to l visible beneath the water. These traditionary re

ports have the sanction of the learned Camden, who, in his 'Atlas Britannica,' speaks of an island existing in his time, called Camstradden, situated between the lands of that name and Inch-Tavanach, on which, he adds, were a house and an orchard. This island has now disappeared. Such an accident may have occurred, however, without any increase of the waters of the lake. Indeed, the supposition of such an increase is inconsistent with the appearances presented by the river Leven, which would rather lead to the supposition that the waters of Loch-Lomond had become lower than they once were. Loch-Lomond was at one time famed for three wonders—"waves without wind, fish without fin, and a floating island." The swell in the widest part, particularly after a storm, has no doubt given rise to the belief in the first of these marvels. Vipers are said occasionally to swim from island to island, and this may account for the second. In Bleau's Atlas, 1653, it is said, "Les poissons qu'ils disent n'avoir pas de nageoires, qu'ils apéllent vulgairement Paones, sont un espece d'anguilles, c'est pourquoy il ne faut pas s'en estonner." Various accounts have been given of the floating island—one, that it was constructed of large square beams of oak, firmly mortised into one another, by a Keith Macindoill, or Keith the son of Dollius, who is said to have been contemporary with the famous Finmacoull or Fingal, and consequently to have lived in the 5th century. Camden appears to have heard of the floating island, and he adds a fourth wonder. "As for the floating island," says he, "I shall not call the truth of it in question, for what could hinder a body from swimming that is dry and hollow, like a pinnace, and very light? And so Pliny tells us that certain green sands covered with rushes, float up and down on the lake of Vundimon. But I leave it to the neighbours, who know the nature of this place, to be judges whether this old distich of our Neckham be true:—

"Ditatur fluvius Albania, saxea ligna
Dat Lomund multa frigiditate potens.

Scotland's enriched with rivers, timber thrown
Into cold Lomund's waters turns to stone.

Loch-Lomond has, with great justice, been styled the Queen of Scottish lakes. The beauty of some portions, and the splendid magnificence of other parts of its scenery, are nowhere else to be equalled. Custom cannot stale its infinite variety. At the south end its ample bosom is agreeably and picturesquely diversified by the numerous islands with which it is gemmed. The hills indeed have not here the true Highland aspect, but they are softly swelling, and have a green and pastoral appearance; and the open valleys smiling in the sunshine, everywhere present scenes of calm and quiet beauty. Numerous splendid mansions, with their richly wooded grounds, are studded around the shores, at the bases of the hills, or the openings of the valleys, adding the beauties of cultivation and art to those of nature. But it is the inconceivable variety afforded by numberless projecting headlands and receding bays, and by all the crowd of fairy islands which lie scattered over the surface of the lake,

"As quietly as spots of sky
Among the evening clouds,"

which forms the distinguishing charm of the whole, and presents an inexhaustible source of pleasure and delight to the cultivated tourist. Towards the north end of the lake the scene becomes very different, and acquires a really Highland character. Here the lake is narrowed to the appearance of a river, winding amidst bold and rugged mountains, which, in some places, seem as if they were about to close over it. The hills rise to a greater height and their bare and serrated tops present a bold and broken outline, often enveloped in mist and clouds, and for a great part of the year covered with snow. The valleys are deep and narrow, and their sides are everywhere marked by the rough and rugged beds of mountain-torrents.

A great poet has said, that, "In some lakes, the proportion of diffused water is often too great, as at the lake of Geneva, for instance, and in most of the Scottish lakes. No doubt," he continues, "it sounds magnificent, and flatters the imagination, to hear at a distance of masses of water so many leagues in length, and miles in width; and such ample room may be delightful to the fresh-water sailor, scudding with a lively breeze amid the rapidly shifting scenery. But who ever travelled along the banks of Loch-Lomond, variegated, as the lower part is, by islands, without feeling that a speedier termination of the long vista of blank water would be acceptable, and without wishing for an interposition of green meadows, trees, and cottages, and a sparkling stream to run by his side? In fact, a notion of grandeur as connected with magnitude, has seduced persons of taste into a general mistake upon this subject. It is much more desirable for the purposes of pleasure, that lakes should be numerous and small or middle-sized, than large, not only for communication by walks and rides, but for variety, and for recurrence of similar appearances. To illustrate this by one instance: how pleasing is it to have a ready and frequent opportunity of watching, at the outlet of a lake, the stream, pushing its way among the rocks, in lively contrast with the stillness from which it has escaped; and how amusing to compare its noisy and turbulent motions with the gentle playfulness of the breezes that may be starting up, or wandering here and there over the faintly-rippled surface of the broad water! I may add, as a general remark, that in lakes of great width, the shores cannot be distinctly seen at the same time; and therefore contribute little to mutual illustration and ornament; and if the opposite shores are out of sight of each other, like those of the American and Asiatic lakes, then unfortunately the traveller is reminded of a nobler object; he has the blankness of a sea-prospect without the grandeur and accompanying sense of power." Thus far the sentiments of one, whose opinion on such points is not to be lightly gainsayed or controverted. But we think the following remarks on the passage just quoted, by Professor Wilson, will carry along with them the suffrages of most of our readers:

"We shall not be suspected," says the Professor, "of an inclination to dissent, on light grounds, from any sentiments of Wordsworth. But finely felt and expressed as all this is, we do not hesitate to say that it is not applicable to Loch-Lomond. Far be it from us to criticise this passage sentence by sentence; for we have quoted it not in a captious, but a reverent spirit, as we have ever done with the works of this illustrious man. He has studied nature more widely and profoundly than we have; but it is out of our power to look on Loch-Lomond without a feeling of perfection. The 'diffusion of water' is indeed great; but in what a world it floats! At first sight of it, how our soul expands! The sudden revelation of such majestic beauty, wide as it is and extending afar, inspires us with a power of comprehending it all. Sea-like indeed it is,—a Mediterranean sea,—enclosed with lofty hills and as lofty mountains,—and these indeed are the Fortunate Isles! We shall not dwell on the feeling which all must have experienced on the first sight of such a vision—the feeling of a lovely and a

mighty calm; it is manifest that the spacious 'diffusion of water' more than conspires with the other components of such a scene to produce the feeling; that to it belongs the spell that makes our spirit serene, still, and bright, as its own. Nor when such feeling ceases so entirely to possess, and so deeply to affect us, does the softened and subdued charm of the scene before us depend less on the expanse of the 'diffusion of water.' The islands, that before had lain we knew not how—or we had only felt that they were all most lovely—begin to show themselves in the order of their relation to one another and to the shores. The eye rests on the largest, and with them the lesser combine; or we look at one or two of the least, away by themselves, or remote from all a tufted rock; and many as they are, they break not the breadth of the liquid plain, for it is ample as the sky. They show its amplitude; as masses and sprinklings of clouds, and single clouds, show the amplitude of the cerulean vault. And then the long promontories—stretching out from opposite mainlands, and enclosing bays that in themselves are lakes—they too magnify the empire of water; for long as they are, they seem so only as our eye attends them with their cliffs and woods from the retiring shores, and far distant are their shadows from the central light. Then what shores! On one side where the lake is widest, low-lying they seem and therefore lovelier —undulating with fields and groves, where many a pleasant dwelling is embowered, into lines of hills that gradually soften away into another land. On the other side, sloping back, or overhanging, mounts beautiful in their bareness, for they are green as emerald; others, scarcely more beautiful, studded with fair trees—some altogether woods. They soon form into mountains—and the mountains become more and more majestical, yet beauty never deserts them, and her spirit continues to tame that of the frowning cliffs. Far off as they are, Benlomond and Benvoirlich are seen to be giants; magnificent is their retinue, but they two are supreme, each in his own dominion; and clear as the day is here, they are diademed with clouds. It cannot be that the 'proportion of diffused water is here too great;' and is it then true that no one 'ever travelled along the banks of Loch-Lomond, variegated as the lower part is by islands, without feeling that a speedier termination to the long vista of blank water would be acceptable, and without wishing for an interposition of green meadows, trees, and cottages, and a sparkling stream to run by his side?' We have travelled along them in all weathers and never felt such a wish. For there they all are—all but the 'sparkling stream to run by our side,' and we see not how that well could be in nature. 'Streams that sparkle as they run,' cross our path on their own; and brighter never issued from the woods. Along the margin of the water, as far as Luss—ay, and much farther—the variations of the foreground are incessant. 'Had it no other beauties,' it has been truly said, 'but those of its shores, it would still be an object of prime attraction; whether from the bright green meadows sprinkled with luxuriant ash trees, that sometimes skirt its margin, or its white pebbled shores on which its gentle billows murmur, like a miniature ocean, or its bold rocky promontories rising from the dark water rich in wild flowers and ferns, and tangled with wild roses and honeysuckles, or its retired bays where the waves dash, reflecting, like a mirror, the trees which hang over them, an inverted landscape.'

"The islands are for ever arranging themselves into new forms, every one more and more beautiful; at least so they seem to be, perpetually occurring, yet always unexpected, and there is a pleasure even in such a series of slight surprises that enhances the delight of admiration. And alongside, or behind us, all the while, are the sylvan mountains, 'laden with beauty;' and ever and anon open glens widen down upon us from chasms; or forest glades lead our hearts away into the inner gloom—perhaps our feet; and there, in a field that looks not as if it had been cleared by his own hands, but left clear by nature, a woodman's hut. Half-way between Luss and Tarbet the water narrows, but it is still wide; the new road, we believe, winds round the point of Firkin, the old road boldly scaled the height, as all old roads loved to do; ascend it, and bid the many-isled vision, in all its greatest glory, farewell. Thence upwards prevails the spirit of the mountains. The lake is felt to belong to them—to be subjected to their will—and that is capricious; for sometimes they suddenly blacken it when at its brightest, and sometimes when its gloom is like that of the grave, as if at their bidding, all is light. We cannot help attributing the 'skiey influences' which occasion such wonderful effects on the water, to prodigious mountains; for we cannot look on them without feeling that they reign over the solitude they compose; the lights and shadows flung by the sun and the clouds imagination assuredly regards as put forth by the vast objects which they colour; and we are inclined to think some such belief is essential in the profound awe, often amounting to dread, with which we are inspired by the presences of mere material forms. But be this as it may, the upper portion of Loch-Lomond is felt by all to be most sublime. Near the head, all the manifold impressions of the beautiful which for hours our mind had been receiving begin to fade; if some gloomy change has taken place in the air, there is a total obliteration, and the mighty scene before us is felt to possess not the hour merely, but the day. Yet should sunshine come, and abide a while, beauty will glimpse upon us even here, for green pastures will smile vividly, high up among the rocks; the sylvan spirit is serene the moment it is touched with light, and here there is not only many a fair tree by the water-side, but yon old oak wood will look joyful on the mountain, and the gloom become glimmer in the profound abyss. Wordsworth says that 'it must be more desirable, for the purposes of pleasure, that lakes should be numerous, and small or middle-sized, than large, not only for communication by walks and rides, but for variety, and for recurrence of similar appearances.' The Highlands have them of all sizes—and that surely is best. But here is one which, it has been truly said, is not only 'incomparable in its beauty as in its dimensions, exceeding all others in variety as it does in extent and splendour, but unites in itself every style of scenery which is found in the other lakes of the Highlands.' He who has studied and understood and felt all Loch-Lomond, will be prepared at once to enjoy any other fine lake he looks on; nor will he admire nor love it the less, though its chief character should consist in what forms but one part of that of the Wonder in which all kinds of beauty and sublimity are combined."

A project for forming a canal from the foot of Loch Lomond near Balloch to the Clyde at Bowling-ha was long entertained, and, after being for some tim abandoned, was revived and re-entertained, bu was eventually thrown altogether aside. A muc better project was that of a railway between near the same points; and this project was completed 1850. Another project, of similar character, w the constructing of a railway from Balloch to St ling, to open direct communication with the cent

and the east of Scotland; and this project was completed in 1856. Trains run on these railways, in connexion with steamers on the lake, affording to the citizens of Glasgow and to those of Edinburgh the remarkable facility of making a trip from their own houses to the head of the lake and back again in one day. Other steam-boat trips, also, are made on the lake; and regular communications are maintained on the one side with Helensburgh, on the other side with Loch-Katrine, and at the head with the Central Highlands. But from any single excursion, or series of excursions, by steam-boat on the bosom of the lake, only a very faint and limited idea of its splendid scenery can be formed. To obtain anything like an adequate conception of its many beauties, it is necessary to spend days upon its banks, to wander over the hills and amid the silent glens, and to visit its numerous islands, many of which are of themselves sufficient to form a day's excursion. A trip in the steam-boat, however, to obtain a general survey of the whole, will concentrate the recollections of the tourist, and impress his memory more distinctly.

LONACH, a mountain, 1,200 feet high, in the parish of Strathdon, Aberdeenshire. In 1823, a large cairn was erected on its summit in honour of Sir Charles Forbes' elevation to a baronetcy.

LONAIG. See Inch-Lonaig.

LONAN (The), a rivulet, of about 6 miles length of course, running westward, through the parishes of Muckairn and Kilmore, to Loch-Nell, in Lorn, Argyleshire.

LONCARTY. See Luncarty.

LONEHEAD. See Loanhead.

LONG (Loch), a belt of marine water, a long northward ramification of the frith of Clyde, extending between the district of Cowal in Argyleshire, and the parishes of Roseneath, Row, and Arrochar, in Dumbartonshire. Over the whole of its length, it prevailingly looks almost right along all the lower parts of the frith; and if it were but the inlet of a considerable river, would, as to both extent and direction, possess far the highest claim to be regarded as the upper frith. It opens from the Clyde nearly opposite Gourock, and, with a breadth of from 2 miles to 6 furlongs, stretches away about 22 miles into the interior. At quarter distance from its entrance it opens, on the west side, into the fine small bay of Ardintenny; and, at half-distance, it sends off, on the same side, and in a north-westerly direction, Loch-Goil: which see. At two points on the Dumbartonshire side, it is distant respectively from the head of the Gair-loch only 1½ mile, and from Tarbet on Loch-Lomond only 1¾ mile. Its general depth is from 15 to 20 fathoms, and its tidal current runs at the rate of about 2 miles in the hour. It is occasionally lined by a sandy beach, or pressed by hanging plains and banks of verdure, but in general is hemmed in by declivitous or mural rocks. Seen from the entrance, or from ground on the opposite shore of the frith which commands a view of it, it preserves, for some distance on the east, a beautiful loftiness of feature which is almost lowland; but on the west it is skirted by alpine heights, which are jutted, stern, and heathy, over side and summit, and begin to smile in verdure, or wood or cultivation, only in belts along the margin of the water; and it then becomes lost amid a dense crowd of rolled and broken mountain masses,—that wildly tempestuated line of alps on which a facetious taste has imposed the quizzing name of Argyle's Bowling-green. It is best seen from a singularly wild glen which wends round its head, or from almost any point in the vicinity of Arrochar inn, the loch possesses much distinctiveness and great grandeur of scenery: See articles Arrochar and Glencroe. During summer steam-boats ply every lawful day from Glasgow up Loch-Long to Arrochar and the head of Loch-Goil; and during winter they ply three times a-week.

LONG (Loch), a marine projection from the head of Loch-Alsh in Ross-shire. It has the form of the segment of a circle; and bending from a northerly to an easterly direction, separates the district of Loch-Alsh from that of Kintail. Its extreme length is about 4 miles; and its mean breadth nearly half-a-mile. Loch-Duich and it go off in such a manner in opposite directions from the head of Loch-Alsh, as to present on the map very nearly the outline of a pair of antlers. Loch-Long, though injected among wild mountains, is not without attractions; and, in consequence of the value of its fisheries, has, on its Kintail bank, the two considerable fishing villages of Dornie and Bundalloch.

LONG (Loch), a fresh-water lake, about ½ a mile long and ¼ of a mile broad, in the parish of Lundie, Forfarshire.

LONG (Loch), a fresh-water lake, about 1 mile long and ½ a mile broad, with a depth of from 16 to 18 feet, in the south-east border of the parish of Neilston, Renfrewshire. Its superfluence forms the head-stream of the rivulet Levern.

LONGA, a small island in the Skye group of the Hebrides. It lies 1½ mile north-east of Scalpa, and 2 miles north-north-west of Pabba, and measures about 1½ mile in circumference. It is, as to geognostic character, entirely composed of red sandstone; it forms an uneven table-land, everywhere abrupt on the coast, and about 200 feet high; and it is merely a pasture for sheep and a resort of sea-fowl.

LONGANNAT, a small village on the Forth, in the parish of Tulliallan, in the detached part of Perthshire. A freestone quarry, in its vicinity, and bearing its name, has, from time immemorial, been in great reputation. The stone is durable, quite white, and of small grain, and admits a fine smooth polish. The demand for it was long greater than the quarriers could supply. The quarry has not only furnished materials for many houses of the first architecture in the circumjacent territory, but has contributed to public buildings in Edinburgh, in Aberdeen, and even, it is said, in Amsterdam. At the village are some slight vestiges of a pier, reported to have been built by a Dutch company, to facilitate the exportation of the stone.

LONGCASTLE. See Kirkinner.

LONGCASTLE-LOCH. See Dowalton.

LONGCALDERWOOD. See Kilbride (East).

LONG-CAUSEWAY. See Causewayhead.

LONG-CRAIG-ISLAND, an islet in the frith of Forth, west of North Queensferry, Fifeshire.

LONGFAUGH. See Crichton.

LONGFORGAN, a parish, containing the post-office village of Longforgan, and the villages of Kingoodie and Balbunno, on the eastern border of Perthshire. It is bounded by Forfarshire, by the frith of Tay, and by the parishes of Inchture, Abernyte, and Fowlis-Easter. Its length south-south-eastward is 7 miles, and its greatest breadth is 3 miles; but it contracts so much in some places as to have an aggregate area of only about 8,990 imperial acres. All the streams are small, yet the largest of them is powerful enough to drive three corn-mills and a saw-mill. This stream rises in the north-west extremity, runs 2½ miles in the interior, wends 3¼ miles along the south-western boundary and then runs 2 miles eastward to the frith at Burnside park. The coast-line is 3¾ miles in extent; and ¾ of a mile from its east end, it is bold and steep, and terminates in the rocky promontory of

Kingoodie. At that point a beautiful and gently inclined bank commences; thence it sweeps away in a receding direction and in the form of a crescent from the Tay; and at the distance of 3 miles, it abruptly ends in a bluff point called the Snabs of Drimmie. This elongated rising ground is from 120 to 150 feet high, bears aloft on its crest, 1¾ mile from its south-east end, the village of Longfo gan, and commands, from every point, but especially from the Snabs of Drimmie and the site of the village, a noble and uninterrupted view of the Carse of Gowrie, the frith of Tay, and the north coast of Fife. The land of the bank is carpeted, for the most part, with a deep black loam, and, under the skilful and ornamental husbandry with which it is plied, is alike beautiful and fertile. Southward and westward of it, to the Tay and the lower part of the south-western boundary, the surface is as level as a bowling-green, covered with rich carse clay, crowned with the happiest fruits of cultivation, and forming part of the Carse of Gowrie. In a parallel, half-a-mile north of the village of Longforgan, a valley runs quite across the parish, flanked on the one side by the bank which has been noticed, and on the other by a slow ascent or hanging plain, which towards the north shoots up hilly elevations, and becomes identified with the far-stretching range of the Sidlaws. Three summits, Dron, Ballo, and Lochton, all at the north-west end of the parish, are conspicuous, and have altitudes respectively of 667, 992, and 1,172 feet above sea-level. Somewhat less than 200 acres of the whole area is disposed in hill-pasture; and all the rest is distributed into arable grounds and woodlands in the proportion to each other of 9 to 2. Such a profusion of wood as 1,600 acres, clustered in groves and drawn out in belts and in hedge-rows, combines with the luscious beauty of the ploughed lands, to give the district a snugly comfortable and very opulent appearance. About one-half of the wood is old, and comprises upwards of 13 species, including all of the most beautiful and majestic. Of five orchards, one at Monorgan is reckoned the best in the Carse of Gowrie, and has been long famous for its fruit. Magnificent gardens, extensive and richly furnished, adorn the estate of Castle-Huntly. The houses of the parish, and those of many a spot far distant from it, owe much to its quarries of peculiarly excellent freestone. Besides the noted one of KINGOODIE [which see], there is one in the upland district whose stone is so white, compact, and smooth as to compete with the best building sandstone in Scotland. Shell-marl, very pure and white, and occasionally embedding uncommonly large red deer's horns, was dug up and sold to a vast amount after the epoch of agricultural improvement. Coal was long believed to exist, but eluded expensive and frequent search. The chief landowners are Paterson of Castle-Huntly and Lord Kinnaird; and there are six others. The estimated value of raw produce in 1838 was £36,126. Assessed property in 1843, £13,588 1s.

The most remarkable artificial object in the parish is Castle-Huntly. This stands on the summit of a lofty rock, which, on its south-west side, rises sheer up from the dead level of the carse, and on the east subsides gradually into the plain. The castle, though of unascertained date, is believed to have been built by Andrew, the second Lord Gray of Fowlis, and named after his lady, a daughter of the Earl of Huntly; and so massive and strong is it in its masonry that, though it has braved the blasts of four centuries, it defies the corrosions of time more lustily than most piles of the present century. In 1615, it passed by purchase, along with the circumjacent estate, into the possession of the Strathmore family, then Earls of Kinghorn; and becoming a favourite residence of Earl Patrick, it received the name of Castle-Lyon, and the estate, by charter of Charles II., in 1672, was erected into a lordship, called the Lordship of Lyon. In 1777 it was purchased by the son-in-law of John, Lord Gray, Mr. Paterson, who renovated it, restored its original name, modernized its interior, and enhanced its exterior with the addition of wings, embattled walls, round tower, and corner turrets. The other mansions are Mylnefield-house and Lochton-house; and a fine feature is part of the noble park of Rossie-priory,—the other part of which, together with the mansion, being within Inchture. A considerable employment among the parishioners of Longforgan is the weaving of coarse linens for the manufacturers of Dundee. The parish is traversed by the road from Dundee to Perth, and by the Dundee and Perth railway; and it has a station on the latter. The village of Longforgan stands on the Dundee and Perth road, 1½ mile from the nearest part of the frith of Tay, 6 miles west of Dundee, and 16 east-north-east of Perth. It straggles along the road, covering an area of about 30 acres, and consists of a principal street and several lanes. It probably originated in the erection of accommodation for the retainers of the Baron of Huntly-castle; but it has long been stationary or retrogressive. In 1672 it was erected into a free burgh-of-barony by charter of Charles II., in favour of Patrick, Earl of Strathmore, and endowed with a pompous array of privilege. Fairs, chiefly for cattle, are still held on the fourth Saturday of April, on the third Saturday of June, and on the third Saturday of October. The hiring of servants used to be done at the June fair, but has ceased. Population of the village in 1841, 458; in 1851, 463. Houses, 113. Population of the parish in 1831, 1,638; in 1851, 1,787. Houses, 347.

This parish is in the presbytery of Dundee, and synod of Angus and Mearns. Patron, the Crown. Stipend, £268 3s. 4d.; glebe, £13. Unappropriated teinds, £207 13s. 11d. Schoolmaster's salary, £34 4s. 4d., with about £16 fees, and £20 other emoluments. The parish church was built in 1795, and contains upwards of 1,000 sittings. There is a Free church, with an attendance of 220; and the sum raised in connexion with it in 1856 was £133 18s. 9½d. There are four non-parochial schools and a small public library. In a dell on the high grounds of Dron are the ruins of a chapel which belonged to the monks of Cupar-Angus, and of its attendant cemetery. Only the gables remain, one of them perforated with a large window, whose top is a pointed arch springing from pilasters. On the grounds of Monorgan are vestiges of a cemetery which also had, most probably, its presiding chapel. On the eastern boundary, but now in the parish of Benvie united to Liff, are vestiges of a Roman camp; and on the summit of the hill of Dron are faint traces of an oval fortification two Scottish acres in area. In the midst of a plantation of firs, on what was anciently the moor of Forgan, is a tumulus 15 or 16 feet high, and 84 feet in diameter, called the Market-knowe, from having been the scene of ancient traffic, but proved to have been originally a barrow, by its yielding up to research coffins and human skeletons. In various parts of the parish many ancient coins, chiefly Scottish and English, have been found.

LONGFORMACUS, a parish, consisting of a main body and a detached section, in the north of Berwickshire. Its post-town is Dunse. Its main body is bounded by Haddingtonshire, and the parishes of Cranshaws, Abbey St. Bathans, Duns, Langton, and Lauder; and measures about 8 miles in length eastward, and from 1 mile to 7¾ miles

breadth. The detached section lies 2 miles east of the nearest point of the main body: is bounded by Abbey St. Bathans, Buncle, and Dunse; and measures 1½ mile by 1½. The area of the parish is about 3¾ square miles. The whole district lies among the Lammermoor-hills, and partakes, for the most part, their characteristic properties. Meikle-Cess-law, on the boundary with Haddingtonshire, and near the western extremity, is one of the highest of the Lammermoors. Dirrington-Great-law and Dirrington-Little-law, the former 1,145 feet high, are fine conical hills, visible at a great distance. The statist in the New Account calls attention to the fact, that a farm in the parish bears the name of Otterburn, and hints the possibility of this, and not the famous locality in Northumberland, having been the scene of the noted fight between Douglas and Hotspur. About 2,200 imperial acres in the parish are in tillage; about 350 are under wood; and about 18,800 are pastoral or waste. Copper ore is somewhat abundant, and has been subjected to several attempts at mining, but does not seem to be rich enough to compensate working. The most extensive landowner is Brown of Longformacus. The value of assessed property in 1843 was £3,787 11s. 9d. The small village of Longformacus stands on the Dye, where that stream crosses the eastern part of the parish, 6½ miles west-north-west of Dunse, and 7½ north of Greenlaw. In the vicinity of the village is the mansion of Longformacus. Population of the parish in 1831, 425; in 1851, 411. Houses, 78.

This parish is in the presbytery of Dunse, and synod of Merse and Teviotdale. Patron, Brown of Longformacus. Stipend, £230 10s. 1d.; glebe, £33. Unappropriated teinds, £67 14s. 3d. Schoolmaster's salary, £34 4s. 4½d., with £10 fees. The parish church was built about 130 years ago, and repaired about 1830, and contains 200 sittings. The present parish comprehends the ancient parishes of Longformacus and Ellam, which were united before the year 1750. The barony of Longformacus belonged, in old times, successively to the Earls of Moray, the Earls of Dunbar, and the Sinclairs of Roslin, and seems always to have had attached to it the advowson of the church. Ellam also belonged to the Earls of Dunbar. See ELLAM.

LONGHOPE, an arm of the sea and a post-office station, in the southern part of the island of Hoy, in Orkney. See HOY.

LONG-ISLAND, the largest group of the Western Islands, separated from the continent by the broad sound called the Minch, and from the Skye group by the considerable sound called the Little Minch. This group, owing both to its extent and the distinctness of its position, has occasionally monopolized the whole Hebridean name, and, by general consent, is called the Outer Hebrides. Its popular and prevailing name of Long-Island seems to have arisen from observation of the closely continuous contiguity of the numerous islands which compose it; or probably from a consentaneous belief that they were all formerly united, and have undergone disinvolvement by the erosion of the weather and the sea. The principal islands, reckoning from the north southward, are Lewis, Harris, North Uist, Benbecula, South Uist, and Barra; and the secondary and minor islands—diminishing from considerable islets to mere rocks—are too numerous to bear separate mention. From the Butt of Lewis on the north, to Barra-head on the south, they extend south-south-westward about 120 miles; and they have, probably, a mean breadth of about 8 miles. Many of them are separated only by channels which are dry at low-water, or by very narrow belts of sea which are navigable only by yawls and wherries. Their largest marine bisection is the sound of Harris, between the cognominal island and North Uist, remarkable for the number of its islets, and the great variation of its currents. The Lewis part of the group, about 40 miles in length, belongs to Rossshire; and all the remainder belongs to Invernessshire. Excepting a peninsula of conglomerate east of Stornoway, a hard variety of gneiss, frequently traversed by veins of granite and of trap, composes the whole of the Long-Island group; and is so nearly uniform both in its own character and in the surface which it produces, as to admit of little variety in description. A dead level prevails in Benbecula and some islets, and allows access to the rock only from some pool of water or accidental breach; mountainousness pervades the district of Harris, and sends summits aloft to an altitude of between 2,000 and 3,000 feet; and a moderate, generally an inconsiderable hilliness, reigns over most part of the other districts. South of the sound of Harris the tumulated ground occurs principally along the east coast, and gives place, along the centre, to an extensive tract of peat-moss, and, in the west, to broad bands of arable sandy soil, and downs of shell sand. The general aspect of the country, owing to the total absence of wood, and the prevalence of heath and peat-bogs, is cheerless and desolate. Yet the population is so great, so positively redundant, that, in spite of the appliances of fisheries, a remedy against an altogether undue pressure in the means of subsistence has, within the last 50 years, been found chiefly in emigration. A large proportion of the inhabitants, especially in the southern half of the group, are Roman Catholics, who, in the style which prevails in Ireland, very numerously sanction early marriages, and form a surprisingly low estimate of what constitutes the comforts or the necessaries of life. See HEBRIDES.

LONGLEYS, a village in the parish of Meigle, Perthshire. Population, 56. Houses, 14.

LONGLOAN. See LANGLOAN.

LONGMAN, a village in the parish of Gamrie, Banffshire. It is situated on the top of a hill of its own name, and on the Banff and Peterhead turnpike, about 1½ mile from the coast. It was commenced about the year 1822 by the Earl of Fife, who feued out the surrounding waste land in small portions to its inhabitants; so that it has the appearance more of a regular assemblage of houses of small crofters than of a village.

LONGNEWTON. See ANCRUM.

LONGNIDDRY, a post-office village in the parish of Gladsmuir, Haddingtonshire. It stands contiguous to a station on the North British railway, and a little south of the road from Edinburgh to North Berwick, ½ a mile from the nearest part of the frith of Forth, 2½ miles east of Port-Seton, 3½ north-east of Tranent, and 30½ by railway east of Edinburgh. It is straggling and irregular, and but the wreck of a formerly important little town. Several streets have wholly disappeared, the houses having been razed by the score to give place to the operations of the plough. A baronial mansion-house, which once presided over the village, is now let out to a tenant, and wears a desolate appearance. Longniddry suggests some pleasing reminiscences of John KNOX. See GLADSMUIR. Population, 216. Houses, 46.

LONGO, a small island in the mouth of the Gair-loch, and belonging to the parish of Gairloch, on the west coast of Ross-shire. Population, 35 Houses, 6.

LONGRIDGE, or LANRIGG, a village in the parish of Whitburn, Linlithgowshire. It stands on the road from Linlithgow to Wilsontown, 1¾ mile south

of the village of Whitburn. Here are a quarry, a public library, and a Free church. Population, 225. Houses, 46.

LONGRIGHILL. See Ken (The).

LONGSIDE, a parish, containing the post-office villages of Longside and Mintlaw, in the district of Buchan, Aberdeenshire. It is bounded by Lonmay, St. Fergus, Peterhead, Cruden, and Old Deer. Its length northward is about 6 miles; and its breadth is about 5 miles. The surface, though gently undulated, is generally so low that, till embankments were resorted to, the Ugie—which runs along the northern boundary to the parish, while the principal tributary to that river intersects it from west to east—was wont to overflow its banks, and lay a large portion of the land under water. Amongst the remedial projects suggested, previous to the embankments, was the idea of a canal, along the banks of the river, from the village of Old Deer to its mouth, near Peterhead, a distance of about 10 miles. The soil of this parish is light, easily improved, and in a good state of cultivation. The predominant rock is granite,—some of it very beautiful when highly polished; and it is extensively quarried. About 12,550 imperial acres in the parish are in tillage; about 370 are under wood; and about 3,540 are peat-moss, pastoral land, or waste ground. The average rent of the arable land is 20s. per acre. The estimated value of raw produce in 1842 was £56,800. The value of assessed property in 1856 was £11,087. There are eight principal landowners; but only two of them are resident. A woollen factory was formerly carried on at Millbank; but it ceased in 1828. There are in the parish a saw-mill and six meal-mills. The parish is traversed westward by the road from Peterhead to Banff, and southward by the road from Fraserburgh to Aberdeen. The village of Longside stands on the Peterhead and Banff road, 2½ miles east-south-east of Mintlaw, and 6 miles west by north of Peterhead. Fairs are held here on the Wednesday after the 12th day of May, and on the Tuesday after the 7th day of November. Population of the parish in 1831, 2,479; in 1851, 2,952. Houses, 610.

This parish is in the presbytery of Deer, and synod of Aberdeen. Patron, the Crown. Stipend, £217 9s. 4d.; glebe, £17. Unappropriated teinds, £213 11s. 5d. The parish church was built in 1836, and contains about 1,000 sittings. There is a Free church of Longside, with an attendance of 200; and the amount of its receipts in 1856 was £98 10s. 1½d. There is also an Episcopalian chapel, built in 1853, and containing 600 sittings. There are three parochial schools, respectively at Longside, Mintlaw, and Rora. The salary connected with the first is £31 6s. 7d.,—with each of the others £10; and the fees of the three, about £70. There are also two female schools aided by endowment, and several unendowed schools. There are small public libraries at Longside and Rora. A savings' bank was established in Longside in 1815, and was either the earliest, or at least one of the earliest, in the north of Scotland. The parish of Longside was disjoined from that of Peterhead in 1620, and was for some little time called Peterugie. The Rev. John Skinner, the correspondent of Burns, the author of an ecclesiastical history and some theological dissertations, and the writer of 'Tullochgorum,' 'John o' Badenyon,' 'Ewie wi' the crooked horn,' and some other popular songs, was for 64 years minister of the Episcopalian chapel of Longside. He resided in a small cottage at Linshart; and a handsome monument has been erected to his memory in the parish churchyard.

LONG-SPROUSTON. See Sprouston.

LONGSTONE, a village in the parish of Colinton, Edinburghshire. Population, 86.

LONG-YESTER. See Yester.

LONMAY, a parish, containing the post-office station of Lonmay, and the fishing-village of St. Combs, on the north-east coast of Buchan, Aberdeenshire. It is bounded by the North sea, and by the parishes of Crimond, St. Fergus, Longside, Old Deer, Strichen, and Rathen. Its length north-north-eastward is about 9½ miles; and its breadth varies from ½ a mile to 3½ miles. Strathbeg-loch, covering an area of 550 Scotch acres, lies on the mutual border with Crimond. The river Ugie and one of its tributaries run on the boundary with Longside and Old Deer; and a small streamlet traces the boundary with Rathen. The surface of Lonmay is chiefly disposed in two extensive plains, running north and south, divided by two or three small ridges running from west to east. The land near the shore is flat, and the beach low and sandy. The soil is various, but chiefly light, dry, and sandy, resting on the red sandstone formation in the north plain. In other parts the soil is clay. The mosses are still extensive, but much land has been reclaimed. There is a line of benty sand-hillocks on the east; and to the north a fine expanse of grassy links or downs, affording excellent pasture for cattle and sheep. Limestone is found in the north-eastern part of the parish, but sienite and greenstone are the predominant rocks. About 6,488 Scotch acres are in tillage or in pasture; about 222 are under wood; and about 2,056 are moss, moor, or waste ground. There are seven principal landowners, and the most extensive of them is Gordon of Buthlaw. The estimated value of raw produce in 1835 was £20,752. The value of assessed property in 1843 was £5,443. The chief mansions are Cairness-house, an elegant residence, designed by Playfair, and tastefully adorned with pleasure-grounds and plantations, and Crimond-mogate mansion, another handsome edifice, recently erected. The only antiquity is a Druidical circle at Newark, Crimond-mogate. A castle named the Castle of Lonmay once existed on the links near the sea. The parish is traversed by the road from Fraserburgh to Peterhead, and lies, at the nearest point, 4 miles from the former of these towns. Population in 1831, 1,798; in 1851, 1,964. Houses, 403.

This parish is in the presbytery of Deer, and synod of Aberdeen. Patron, Gordon of Buthlaw. Stipend, £225 13s. 3d.; glebe, £18 15s. Unappropriated teinds, £224 7s. 4d. The parish church was built in 1787, and contains 649 sittings. There is at Kinninmonth a chapel of ease, containing 360 sittings. There is an Episcopalian chapel, with 342 sittings. There are three parish schools respectively at Lonmay, at Kinninmonth, and at St. Combs, with aggregate salary of £51 6s. 7d., a share in the Dick bequest, and £58 fees. There is also a non-parochial school. Fairs are held at Lonmay on the day in June before Mintlaw, and on the day in November after Longside.

LORETTO. See Musselburgh.

LORGIE. See Kilcalmonel.

LORN, a district of Argyleshire. It is bounded on the north-west by Linnhe-Loch, which divides it from Morvern; on the north by Loch-Leven, the river Leven, and the chain of lochlets drained by the Leven, which divide it from Inverness-shire; on the east by an arbitrary line across the Moor of Rannoch, and by the great central southward ridge of Grampians, which divide it from Breadalbane in Perthshire; on the south by brief arbitrary lines and chiefly by Lochs Awe, Avich, and Melfort, which divide it from Cowal and Argyle; and on the

west by Lower Loch-Linnhe, which divides it from Mull. It includes also the islands belonging to the parish of Lismore and Appin, and the islands of Kerrera, Easdale, and Shuna. Its length from north to south varies from 22 miles to 33 miles; and its breadth from east to west varies from 15 to 32 miles. The parishes comprised in it are Glenorchy, Ardchattan, Muckairn, Duror, Kilmore, Kilbride, Kilchrenan and Dalavich, Kilninver and Kilmelford, Kilbrandon and Kilchattan, and Lismore and Appin. The district of it which extends along the coast opposite to Mull and Morvern, and possesses the extreme length of 33 miles by a mean breadth of about 9, bears more emphatically, or by more uniform usage, the name of Lorn; and is divided into Upper Lorn, lying north of Loch-Etive, and including Appin and Airds,—Middle Lorn, lying immediately south of Loch-Etive, and including Muckairn,—and Nether Lorn, lying immediately north of Lochs Melfort and Avich, but separated from Middle Lorn by no natural boundary. The remaining district nearly all lies north of the north end of Loch-Awe, and is chiefly distributed into Glenorchy, Glencoe, and the minor part of the Moor of Rannoch. The coast district, watered by many lakes and rivulets, and possessing along their banks much arable land, a considerable aggregate of wood, and extensive results of assiduous and skilful cultivation, is the most fertile and pleasant district of Argyleshire. It anciently formed the focus of the Dalriadan Scottish kingdom, and possessed both its capital town and its royal castle, the chief residence of its kings. See Beregonium, Dunstaffnage, and Dalriada. Its name seems to have been given it from Labhrin or Loarn, one of the three brothers, sons of Erc, who, in 503, immigrated from the Irish Dalriada, and founded the Scottish monarchy; Loarn having adopted this district as the seat of his ascent tribe, while his brothers Fergus and Angus adopted respectively Kintyre and Islay. The district is rife in remains of religious structures, both Druidical and Christian, and of ancient towers, and fortified places. Lorn gives the title of Marquis to the Duke of Argyle's eldest son. In 1470, one Earl of Argyle was created Baron of Lorn; and, in 1701, another was created Duke of Argyle, and Marquis of Lorn and Kintyre. Lorn also gives name to a presbytery comprising the same parishes as the district, and belonging to the synod of Argyle. Population of the district in 1831, 15,963; in 1851, 14,137. Houses, 2,628.

LORNTY (The). See Clunie and Kinloch.

LORRISK. See Kettle.

LORSTOWN. See Nigg, Kincardineshire.

LOSKENTIR. See Harris.

LOSSIE (The), a small river of Morayshire. It issues from Loch-Lossie, near the centre of the county, in the parish of Edenkillie, and runs northwards and north-eastwards through Dallas, and by the royal burgh of Elgin, to the Moray frith, at Lossiemouth, in the parish of Drainie,—a course upwards of 26 miles in length. This river is too small for navigation beyond its mouth. Since the great floods of 1829, which swelled the Lossie to inundation, with serious damage to the vicinity, large embankments of earth have been raised at great expense along the margins of the river to prevent a recurrence of similar calamities.

LOSSIEMOUTH, a small post-town and sea-port in the parish of Drainie, Morayshire. It stands at the mouth of the river Lossie, 5 miles north-north-east of Elgin, 7½ west-north-west of Garmouth, and 7 east of Burgh-head. It is the port of Elgin, and the shipping-place for a large part of Morayshire. Its harbour was naturally small and without sufficient depth of water; but a new harbour has been formed on a grand scale, by a company who were incorporated by act of parliament in 1834. The work was opened in the end of 1829, and has, since that time, undergone much enlargement and improvement. The depth of water in it is 12 feet at neap-tides and 16 feet at spring-tides; and there is an inner harbour, completely protected, and provided with many conveniences. This work immediately began to prove itself of vast advantage to the trading and agricultural interests of Elgin and the surrounding country; and its effects have been greatly enhanced by the construction of the Morayshire railway, which extends from Lossiemouth to Elgin. Lossiemouth harbour ranks as a creek of the port of Inverness. The harbour dues levied at it amounted, 18 years ago, to only about £70 a-year, but they now rise so high as £2,100 a-year. A ship-building-yard was recently commenced, under favourable auspices. Direct communication is enjoyed by steam-vessels with Inverness, Leith, and other ports. The town of Lossiemouth has recently undergone great increase; but connected with it also are the considerable village of Stotfield, a little to the west, and the new village of Branderburgh, situated close by the harbour. The latter had only 145 inhabitants in 1851, but now has so many as about 600. It is partly a fishing village, but shares in other respects with the town of Lossiemouth. A neat plan for it was designed before a feu was let; and that plan has been strictly followed out. The fishermen's houses are tidy, and all in one quarter; and some beautiful marine villas stand on the outskirts. Population of Lossiemouth-proper, 902.

LOTH, a parish on the east coast of Sutherlandshire. It contains the village of Port-Gower, and its north-east end adjoins the post-town of Helmsdale; but its postal communication is through Golspie, 11 miles south-west of its church. It is bounded by the Moray frith, and by the parishes of Clyne and Kildonan. Its length south-westward is 7 miles; and its greatest breadth is nearly 4 miles. A range of steep hills, whose loftiest summits attain altitudes of about 1,900 feet above sea-level, extends along the inner frontier of the parish in a line nearly parallel with the sea-coast, and forms over all its extent a water-shedding boundary. The surface, from the summit-line of this ridge sea-ward, is first a very rapid declivity, and next either a hanging plain, or a level expanse of alluvial land, all fertile, cultivated, and embellished. The ravines cut down by streamlets along the descending surface are very marked and full of character, and contain some striking and highly romantic touches of landscape. The largest has, in a sense, the capacity of a glen, and is called, par excellence, the glen of Loth; it is flanked by the most mountainous heights of the parish; and it wends its way amongst them with a Highland wildness which occasioned it to be peopled by the superstition of former times with many an imp and terrific worker of wonders. The streamlet Loth, which traverses this glen, though almost dry in summer, used formerly to be at times very formidable to travellers; and, as seen from the bridge by which it is now rendered always passable, it still exhibits the sudden, impetuous, and fearful speats which once caused it to be viewed with terror. Not only this streamlet, but some utterly tiny rills in the parish, possess the fame of having, in some brief but tremendous onsets from the hills, tripped up travellers and careered away with them to the sea; and they ceased to be terrible only at the very modern epoch of piercing the extreme north of Scotland with parliamentary roads. The Loth enters

the sea in an artificial channel cut through a rock 20 feet high, by the late Lady Jane Gordon, Countess of Sutherland; and it was, in consequence, diverted from swamping many acres of excellent low land which lay upon the banks of its former channel. The sea-coast is co-extensive with the extreme length of the parish, and is chiefly a low and level beach of sand. The rocks along the coast are oolitic, —consisting of limestone, conglomerate, various-coloured shales, and white and red sandstone; but the prevailing rock of the hills is a species of large-grained porphyry, unusually frangible, and yielding with comparative facility to the erosion of running water. The soil is in general good, and quite equal to the best in the county. There were formerly some noticeable antiquities, chiefly Pictish-towers and ancient hunting-houses, but they have disappeared. The parish is traversed by the great road from Inverness to Wick. The lands between the north-east end of the parish and the Ord of Caithness, including the town of Helmsdale, were disjoined from Loth and annexed to Kildonan since 1841; so that, in the Census returns, there is a great apparent decrease in the population, attributable entirely to that disjunction. Population in 1831, 2,214; in 1851, 640. Houses, 129. Assessed property in 1843, £2,379 13s. 6d.

This parish is in the presbytery of Dornoch, and synod of Sutherland and Caithness. Patron, the Duke of Sutherland. Stipend, £162 8s. 7d. Schoolmaster's salary, £34 4s. 4½d. The parish church is a modern, handsome, and commodious edifice. The territory constituting the present parish of Loth and the recent disjunction from it belonged, in the Roman Catholic times, partly to Clyne and partly to Kildonan. It had in those times, indeed, three chapels at respectively Helmsdale, Navidale, and Easter Garty,—at the first and the second of which places there are still burying-grounds which were connected with the chapels; but it had not a parish church till after the Reformation, and it was temporarily re-conjoined to Clyne during the period of the Scottish Episcopacy.

LOTHIAN, a district on the south side of the frith of Forth, anciently of larger limits than those assigned to it by modern usage, but still regarded as commensurate with the three shires of Haddington, Edinburgh, and Linlithgow, which are called respectively East, Mid, and West Lothian. Lothian gives the name of Marquis to the noble family of Kerr of Fernihirst. The Kerrs figured much in the Border wars; they were made Earls of Lothian in 1606, and advanced to the dignity of a marquisate in 1701.

LOTHRY (The), a small river in Fifeshire, which rising in the Balla moss, and running south-east for 6 or 7 miles, falls into the Leven, below Leslie-house.

LOUDOUN, a parish, containing the post-towns of Newmilns and Darvel, and the village of Alton, in the south-east corner of Cunningham, Ayrshire. It is bounded by the counties of Renfrew and Lanark, and by the parishes of Galston, Kilmarnock, and Fenwick. Its length eastward is 9 miles; and its breadth is 3 miles at the west end, and about 7 at the east. The river Irvine rises near its north-east corner, and runs about 9 miles along its eastern and its southern boundary. A conspicuous, conical hill, formed of columnar trap, is situated in the south-east corner of the parish, and figures as a remarkable feature in a very extensive landscape. This hill is of the class which the Scoto-Irish called 'dun,' and the Scoto-Saxon 'law,' and by a singular triplicate of honours, it wears as its designation not only both these words, but also the modern 'hill,'—Law-dun-hill, or Loudoun-hill,—the hill, the hill, the hill. The rest of the surface of the parish, notwithstanding its being so near the watershed with Lanarkshire, has neither an elevated nor a rough appearance, but is champaign, and only gently sloping. A large part of it near the centre, and especially along the east, is moor and moss. The soil of the arable grounds is, in a few places, light and gravelly, but, in most, a rich deep loam, greatly improved by lime. John, Earl of Loudoun, who succeeded to the earldom in 1731, was the first agricultural improver in the district. He commenced his operations in 1733, by making roads through the parish; he procured an excellent bridge to be made across Irvine water; and he got made thence, and from his own house to Newmilns, a road, which was the first constructed by statute-work in the county. These measures, as commencing ones to his becoming the father of agriculture in the district, he adopted apparently from his recollecting a time when carts or waggons belonging to his father and his father's factor were the only ones in the parish; but he also plied vigorously the work of planting and enclosing; he is said to have planted upwards of a million trees, chiefly elm, ash, and oak; and, in general, he bequeathed to his estate a pervading character of rich cultivation and of tidy, sylvan beauty. The only rocks are those of the coal formation, and very disturbing protrusions of trap. Limestone of excellent quality is very abundant, and is extensively worked. Coal in some parts is so much broken up by trap as to be unworkable, but in other parts forms rich, extensive, workable fields, with an aggregate thickness of 27 feet in the seams. Clay ironstone, also, is abundant. About 10,720 imperial acres in the parish are in tillage; about 4,414 are moss; about 3,153 are moorish and benty pasture; and about 882 are under wood. The Marquis of Hastings is proprietor of fully four-fifths of the parish; and there are several other considerable proprietors, and upwards of one hundred small ones. Great facility of communication is enjoyed by means of the Newmilns branch of the Glasgow and South-western railway. The old valued rental was £5,696 Scots. Assessed property in 1843, £9,678 10s. 4d. Population in 1831, 3,959; in 1851, 4,720. Houses, 573.

Loudoun-hill is famous for two battles. One of these was fought near it in 1679, and took name from the neighbouring farm of Drumclog in Avondale [see Avondale]; and the other was fought in 1307, between Bruce and some English troops under the Earl of Pembroke, and is called the battle of Loudoun-hill. Not far distant a skirmish occurred between Wallace and a party of English, whom he surprised carrying provisions to Ayr; and is commemorated by a heap of stones called Wallace's cairn. In several other parts are cairns and tumuli. Out of a moss on the farm of Braidlee have been dug some Roman vessels; and on the Galston side of the Irvine, at the base of Loudoun-hill, are distinct marks of a Roman camp. In Alton, and near Darvel, are ruins still called castles, and resembling Danish forts. The Knights-Templars had lands in the parish: see Darvel. In the village of Newmilns is a very small and very old castle belonging to the family of Campbells of Loudoun. On the summit of a rising ground, by the side of a brook, about half a-mile east of the present sumptuous mansion, are the ruins of an ancient castle which belonged to the same family, and was destroyed about 350 years ago by the clan Kennedy, headed by the Earl of Cassilis. The modern magnificent pile stands embowered among wood, in the south-west part of the parish, 5 miles east of Kilmarnock, and less than a mile north of Galston, on the bank of the Irvine. The structure singularly combines the attractions of massive antiquity with the light gracefulness of

odern architecture. A square battlemented tower hich formerly belonged to it, and was of unknown ntiquity, was destroyed in a siege by General louk. The castle, on that occasion, was defended Lady Loudoun, who obtained honourable terms capitulation. The old part of the house now nsists of one large square tower, battlemented and rreted, built probably in the fifteenth century, and ts its solemn and imposing form above a surround- g mass of modern building. The modern part of e house, sufficient in itself to constitute it one of the rgest and noblest edifices in the west of Scotland, s completed only in the year 1811. The library ntains about 8,000 volumes. In the garden were nd, 70 or 80 years ago, 10 entire brass-swivels, 6-pounders, marked with the Campbell's arms, t unmentioned by any document or tradition. e noble proprietors of the castle, whose title of rl is taken from the parish, are a branch of the at family of Campbell, and obtained the dignity Lord Loudoun in 1601, and that of Earl of Lou- un in 1633. The first Earl was a staunch Cove- nter, became Chancellor of Scotland in 1641, and ed a conspicuous part in the stirring events of times. The Earl of Moira married, in 1804, ra, Countess of Loudoun, only child of James the th Earl; and in 1816 was raised to the dignity of rquis of Hastings. 'Loudon's bonny woods and es' are the subject of one of Tannahill's most ckneyed songs.

This parish is in the presbytery of Irvine, and nod of Glasgow and Ayr. Patron, the Marquis Hastings. Stipend, £190 11s. 3d.; glebe, £35. hoolmaster's salary, £34 4s. 4½d., with about £40 s, and about £20 other emoluments. The parish urch was built in 1845, and contains 1,200 sittings. is situated at Newmilns. There is a Free church, th an attendance of about 370; and the amount its receipts in 1856 was £342 4s. 5d. There is United Presbyterian church at Newmilns, built 1833, and containing 780 sittings. There is a formed Presbyterian church at Darvel, built in 5. The parish school is at Newmilns; and there endowed or assisted schools at Newmilns, Darvel, Alton, and unendowed schools at Newmilns and rkowsike. There are subscription libraries and er institutions at Newmilns and Darvel. James, son of Lambin, obtained from Richard Morville, died in 1189, the constable and minister of illiam the Lion, the lands of "Laudon," and took m them the name of James de Laudon. His ughter and heiress carried the property to Regi- ld Crawford, the sheriff of Ayr; and another heir- , in the reign of Robert I., transferred it and that tevenston, by marriage, to Duncan Campbell, the genitor of its subsequent noble owners. The rch, previous to the Reformation, was a vicarage der the monks of Kilwinning.

LOUISBURGH, a suburb of the town of Wick, thness-shire. It extends along the north side of burgh, lies quite contiguously, and is all included the parliamentary boundaries. It was commenced the latter part of last century, and is built on the ailed estate of Lord Duffus, on leases of 99 years.

LOUP. See Kilfinan.

LOUTHER. See Lowther.

LOVAT, a hamlet in the parish of Kirkhill, ¼ a e south-east of Beauly, Inverness-shire. Here d the tower and fort of Lovat, founded in 1230, ently the seat of the Bissets, near the eastern k of the Beauly, in a rich and fertile country. gave the title of Baron, attainted in 1745, and ored in 1837 in the person of Thomas Alexander ser of Lovat.

LOVAT-BRIDGE. See Beauly (The).

LOVAT-WESTER. See Kirkhill.

LOW-BRIDGE. See Inverness-shire.

LOWER. See Forfar and Forfarshire.

LOWER-BANTON. See Auchinmully.

LOWER-LARGO. See Largo.

LOWES (Loch of the), a lake in the northern extremity of the parish of Ettrick, Selkirkshire. Its name, rendered into English, assumes the form,—either pleonastic, or not a little ambitious—of 'the Lake of the Lakes.' It extends from south to north; measures about a mile in length, ¼ of a mile in breadth, and 11 or 12 fathoms in depth; and is traversed by the drain-like stream of the nascent Yarrow. Only a narrow neck of land divides it from the celebrated St. Mary's-Loch. See Mary's (St.). The two lakes seem, beyond a doubt, to have been originally one, and to have diffused their waters, and maintained control, a considerable way to the north-east. The Loch of the Lowes has at present a level of only 15 inches above St. Mary's; and, at its north end, it is entered from opposite sides by the burns of Oxcleugh and Corseeleugh, which seem to have gradually dammed it up by their depositions into a separate lake.

LOWLANDMAN'S BAY. See Jura.

LOWLANDS (The), the popular name of all the area of Scotland not included in the Celtic district of the Highlands: which see. As the Lowlands constitute Scotland Proper, and occupy the chief place in our introductory article on the whole kingdom, and are minutely exhibited, part by part, in our articles on their several counties, they need not be the subject of separate description. The use of the Scottish dialect of the English language, or of that language north of the Tweed in any dialect except the guttural brogue of a Highlander, is the grand characteristic. Large plains, such as those of the Merse, of East Lothian, of the Howe of Annandale, of Lower Nithsdale, of Kyle, of Strathclyde, of the Howe of Fife, and of Strathearn and Strathmore,—and extensive undulating tracts, or gently hilly districts, such as those of the hanging plain of Mid-Lothian, of West-Lothian, of Wigtonshire, of Cunningham, and of large parts of the shires of Renfrew, Kirkcudbright, Stirling, Fife, Forfar, and Aberdeen,—present physical aspects of velvet softness, silken beauty, and golden opulence, totally contrasted to the rugged, hardy, sterile features of the chief or characteristic portions of the Highlands. But, on the other hand, the very broad belt of mountain-heights which runs from the Cheviots of Northumberland quite across Scotland to the western waters on the coast of Galloway, which sends off through all Peebles-shire and Selkirkshire a broad and far extending spur in the Lammermoor range along the frontiers of Berwickshire and East-Lothian to the German ocean, and which itself occupies large portions of the counties of Roxburgh, Dumfries, Kirkcudbright, Lanark, Ayr, and Wigton, is far excelled in literally 'low-land' characteristics by many a district in the Highlands, and, in some instances, vies in bold outline, in alpine altitude, and in heathy or rocky wildness, with all the parts of the Highlands except the most savagely or sublimely grand. Manners, also,—at least such as relate to dress, amusements, and civil life,—have for a considerable time been ceasing to mark any very material difference between the Lowlanders and the Highlanders.

LOWNIE. See Cotton of Lownie.

LOWS (Loch of the), a beautiful small lake in the parish of Caputh, Perthshire, 1½ mile east of Dunkeld, on the road from that town to Blairgowrie. It is a principal one of the fine chain of small sylvan lakes which stretches along and beautifies the district of Stormont.

LOWTHER-HILL, a mountain on the mutual border of the parish of Crawford in Lanarkshire, and of the parishes of Sanquhar and Durrisdeer in Dumfries-shire. It has an altitude of 3,130 feet above the level of the sea; and, being one of the chief summits in the central part of the great mountain-range of the southern Highlands, it gives the name of Lowthers to the wild, massive group of that range which lies on the mutual boundary of Lanarkshire and Dumfries-shire, from Wanlockhead round to the vicinity of Moffat. See the articles LANARKSHIRE and HARTFELL.

LOWTHERTOWN, a village in the parish of Dornoch, Dumfries-shire. Population, 195. Houses, 33.

LOWTIS, a lofty hill at the northern extremity of the parish of Newabbey, Kirkcudbrightshire. It is the northernmost of the range which terminates in Criffel.

LOWVALLEYFIELD, a village in the parish of Culross, Perthshire. Population, 260. Houses, 53.

LOYAL (LOCH). See LAOGHAL (LOCH).

LOYALL. See ALYTH.

LUACHRAGAN (THE), a streamlet running northward to the sea, in the parish of Muckairn, Argyleshire.

LUAG (LOCH), a small lake in a narrow glen on the western boundary of the parish of Fowlis Wester, Perthshire. Around it is a sublime view, comprising the romantic scenery of Monzie and Ochtertyre, and the stupendous mountain-group of Benvoirlich.

LUBNAIG (LOCH), a picturesque lake in the parishes of Balquhidder and Callendar, Perthshire. It is formed by expansion of the Balvaig or northern head-stream of the Teath, and extends from north to south to within 3 miles of the town of Callendar. It is nearly 5½ miles in length, but is scarcely half-a-mile in breadth at any part. Going from Callender, the traveller approaches the lake through the celebrated pass of Leney. A road has now been formed along the banks of the Balvaig; but such is the nature of the ground, that even yet a few men might maintain the pass against an army. The splendid scenery, however, arrests the attention of the traveller; and his taste is gratified with all the variety that mountain, rock, wood, river, and waterfall, can combine and present to form the picturesque. After he issues from the pass, Loch-Lubnaig comes into sight; and here his best view of it is obtained. From the great height and the bold and rugged appearance of the mountains amidst which this narrow winding lake lies imbedded, the scenery which surrounds it is exceedingly striking. Benledi is a most prominent object,—and that portion of it which overhangs and darkens the waters of the lake exhibits a grand but very singular appearance. At some remote period, the mountain seems to have been broken over at the top, and the enormous fragments scattered down its side, like the debris or ruins of a former world. Armandave, Ardchullerie-Beg, and Ardchullerie-More, at different distances, raise their giant-forms in frowning majesty above the lake, and throw their broad dark shadows over it. Stern grandeur is the characteristic of the scenery around Loch-Lubnaig,—imposing silence reigns around,—and a sense of utter loneliness enters into the very soul of the beholder. The genius of solitude seems here to have taken up his abode. About half-way up the east side of the lake stands Ardchullerie-house, rendered peculiarly interesting, as having been many years the residence of Bruce of Kinnaird, the celebrated traveller. In this retired spot, amid the stern, majestic features of nature which it presents, he wrote the account of his travels; and here he found an asylum from the abuse and persecution which their publication brought upon him.

At Loch-Lubnaig the tourist is again among t scenery of the 'Lady of the Lake.' It was up t pass of Leney that the cross of fire was carri by young Angus of Dun-Craggan, who had ju been obliged to leave the funeral of his father order to speed forth the signal.

> "Benledi saw the cross of fire;
> It glanced like lightning up Strath-Ire;
> O'er dale and hill the summons flew,
> Nor rest, nor peace, young Angus knew;
> The tear that gathered on his eye,
> He left the mountain-breeze to dry;
> Until where Teath's young waters roll,
> Betwixt him and a wooded knoll,
> That graced the sable strath with green,
> The chapel of Saint Bride was seen."

Here the messenger delivers up the signal to N man of Armandave, who was about to pledge troth at the altar to Mary of Tombea; and t bridegroom, leaving his unwedded bride, starts with the cross along the shores of Loch-Lubnai and away towards the distant district of Balquhidd The chapel of Saint Bride stood on a small roman knoll between the opening of the pass of Leney a Loch-Lubnaig; and Strath-Ire, along which t cross is said to have glanced like lightning, situated at the south end and along the eastern si of Loch-Lubnaig. Armandave is on the west s of the loch, and Tombea, the residence of Norma bride, is also in the neighbourhood.

LUCE, Dumfries-shire. See HODDAM.

LUCE (THE), a river partly of Ayrshire, b chiefly of Wigtonshire. Till within 6¼ miles of t sea it consists of two streams, called the Main-wa of Luce and the Cross-water of Luce. Main-wat the more westerly of these, rises in the parish Ballantrae, on the south side of Benerard, a h 1,430 feet high; and it runs southward 3¼ miles the frontier-line, and 2⅞ miles south-westward alo the boundary of Ballantrae and New Luce, in t counties respectively of Ayr and Wigton, wear the aspect of a bleak mountain-stream, and au mented by many cold brawling feeders. The stre now runs 5 miles in a direction east of south, tween the Wigtonshire parishes of New Luce a Inch, to its confluence with Cross-water; and, sides smaller brooks, receives in its progress Dru orawhorn-burn, a streamlet 6 miles long. Cro water rises between Craignahurrie and Benea hi in Ballantrae, and flows 3¼ miles deviously to W tonshire, and 1½ along the boundary; and it th runs south-westward, south-eastward, and westwa 8 miles, through New Luce, to the confluence w Main-water. The united stream, or the Luce p per, divides, for 1½ mile, New Luce from Inch,— tersects, for ¾ of a mile, a wing of New Luce divides, for a mile, New Luce from Old Luce,—s then runs through Old Luce to the head of L bay; and, over its whole course, it has a southe direction, is, on the average, 30 feet wide, and, cept in floods, can be passed on foot. The ri once abounded in salmon and sea-trout; but it been ruinously overfished. For 1¼ mile before coming lost in the bay, it expands into a sm estuary, which is dry at low-water; and within t estuary, between the water-marks of ebb and flood, it makes a confluence with Pooltanton-wa

LUCE-BAY, a gulf or very large bay, broa and deeply indenting the most southerly land Scotland, and converting the southern half of W tonshire into two peninsulas, a long and narrow between this bay and the North channel, an broad one between it and Wigton bay. The trance of the gulf is between the Mull of Gallo on the west, and Burrowhead on the east. M sured in a straight line, direct from point to po

is entrance is 18¾ miles wide; and the length of e bay measured in a line at right angles with the rmer to the commencement of the little estuary Luce-river, is 16½ miles. Its whole area is pro-bly about 160 square miles. Over a distance of miles from the commencement of the estuary at head, it expands, chiefly on the west side, to width of 6¾ miles; and thence to the entrance, its ast-line, on the west, runs, in general, due south, a little east of south, and that on the opposite le trends almost regularly due south-east. At its d the sea-board is low, and, at the efflux of the le, displays a sandy beach of half-a-mile in mean adth; but elsewhere it is all, with some small ceptions, bluff, bold, rocky, and occasionally torn h fissures and perforated with caverns. The bay tains various little recesses and tiny embay-nts, some of which are capable of being converted o convenient harbours. It also offers to a sea-n, who is acquainted with it, some anchoring-unds, in which he may safely let his vessel ride almost any wind. In hazy weather vessels some-es mistake the bay for the Irish channel, and, on steering a north-westerly course, suddenly e the ground on its west coast. The mistake, en it happens, is almost certain destruction; for tide no sooner leaves a struck ship than she tles so adhesively down upon quicksands that bsequent tides serve only to dash her to pieces. t since the erection of the light-house on the ull of Galloway, errors have become comparatively frequent, and navigation proportionally safe. Two ks, called the Big and the Little Scare, lie re-pectively 1¼ mile and 2¼ miles within the strait tween the Mull of Galloway and Burrowhead, the mer 5¾ north-east by east of the Mull, and the ter at ¾ of a mile's further distance.

LUCE (New), a parish, containing the post-office lage of New Luce, in Wigtonshire. It is bounded Ayrshire, and by Kirkcowan, Old Luce, and Inch. length southward is 9½ miles; and its greatest adth is 5¼ miles. Luce-water and its head-eams drain the west side of the parish, and the f runs along the eastern border. The general face of the parish is moorish, irregular, generally oken, and abruptly undulated; but on the banks he streams, and in a few hollows, are some little s or patches of level ground. Draining and ting have, in recent years, been extensively ied on, giving the parish quite a new face. The f attention of the inhabitants is given to the ing of sheep and black cattle. The rocks are of transition class. Two lead mines were worked ut a century ago, but proved uncompensating. Earl of Stair is the principal landowner, and e are three others. The value of assessed pro-ty in 1843 was £3,050 3s. 11d. The village of w Luce stands at the confluence of Cross-water Main-water, 5 miles north by west of Glenluce. ulation of the village, 384. Population of the sh in 1831, 628; in 1851, 791. Houses, 126.

This parish is in the presbytery of Stranraer, and od of Galloway. Patron, the Crown. Stipend, 6s. 8d.; glebe, £12. Schoolmaster's salary, 13s. 4d., with £5 fees, and £1 13s. other emolu-nts. The parish church was built about 1821, and ains 400 sittings. New Luce and Old Luce ontly formed one parish, called Glenluce, and e separated and made distinct erections in 1647. a short time succeeding 1661, under the rule of Episcopacy, they were reunited; but in 1689, at the dition of Episcopacy, they were permanently arated. The monks of Glenluce abbey were ciently proprietors of the original extensive parish, had over it a regality jurisdiction. Within its limits were two chapels, also claimed by the monks. The one was dedicated to the Virgin Mary, and called Our Lady's chapel; and the other was dedicated to the Saviour, and called Christ's chapel or Kirk-Christ. A small bay or creek on the coast of Old Luce still bears the name of Kirk-Christ bay, from the latter of the chapels having stood in its vicinity. The church of New Luce, for some time after its erection, was popularly called the Moor-kirk of Luce. The famous Alexander Peden, the covenanter, was minister of New Luce during the three years preceding the ejection in 1662.

LUCE (Old), a parish, containing the post-office village of Glenluce, in Wigtonshire. It is bounded by the parishes of Stoneykirk, Inch, New Luce, Kirkcowan, and Mochrum, and by the head of Luce-bay. Its length eastward is 10½ miles; and its breadth varies from 1¾ mile to 7¼ miles. Luce-water and Pooltanton-burn run through it to the bay. There is a quay at Stairhaven, which see. The sea-board is variously sand, gravel, and clay, and subsides into a fine, sandy beach ½ a mile broad, and dry at low water. Along the coast and up the banks of the Luce are some level lands, richly cultivated, well-adorned with plantation, fully enclosed, and of warm appearance. The surface everywhere else is hilly and irregular, but nowhere mountainous. The arable grounds are, to those which are waste and pastoral, in the proportion of 3 to 1. The prime object of interest in the parish is Glenluce abbey; but that and the village have been noticed in the article Glenluce: which see. The chief heritors are the Earl of Stair and Sir James Dalrymple Hay, Bart. The house of Balkail above Glenluce, Park-place, an ancient castle on the right bank of the Luce, and Genoch on the Pooltanton, are fine mansions surrounded with wood. Carscreuch, 2 miles north-east of Glenluce, is an ancient but ruined seat of the Earls of Stair. The ruins of the castle of Synniness stand on the coast south-east of the mouth of the Luce. The parish contains several small mills of various kinds, and is traversed by the roads from Stranraer to Wigton and Newton-Stewart. Population in 1831, 2,180; in 1851, 2,841. Houses, 445. Assessed property in 1843, £10,231 11s. 9d.

This parish is in the presbytery of Stranraer and synod of Galloway. Patron, the Crown. Stipend, £158 6s. 8d.; glebe, £30. Schoolmaster's salary, £25 13s. 3d., with from £30 to £40 fees, and about £5 other emoluments. The parish church was built in 1814, and contains 800 sittings. There is a Free church, with an attendance of about 200; and the amount of its receipts in 1856 was £103 16s. 0½d. There is an United Presbyterian church, with an attendance of about 190. There are five non-parochial schools.

LUCKENSFORD, a village in the parish of Inchinnan, Renfrewshire.

LUCKLAW-HILL. See Logie, Fifeshire.

LUCKYHILL. See Haddingtonshire.

LUDE. See Blair-Athole.

LUFFNESS-BAY, a small bay on the south coast of the frith of Forth, between the parish of Aberlady and that of Dirleton, Haddingtonshire. The bay now bears the name of Aberlady, but figures in history, under that of Luffness, as the port of Haddington. That ancient burgh having been for ages a sort of commercial metropolis, where the court of "the four burghs" assembled, under the chamberlain, to decide on the disputes of traffic, conceived the notion of becoming a sea-port, though upwards of 5 miles from any harbour, and obtained from James VI. a charter vesting it with full powers over the bay of Luffness. But the town was baffled nearly as much in its marine commerce, as after-

wards in its repeated efforts at manufacture; and at the epoch of the Revolution it had connected with its port just one vessel, of 80 tons burden, and £250 estimated value. In 1739, the estate of Luffness was bought by the Earl of Hopetoun for £8,350. See ABERLADY.

LUFFNESS-HOUSE. See HADDINGTONSHIRE.

LUGAR, a post-office village in the parish of Auchinleck, Ayrshire. It was built chiefly for the accommodation of the work-people connected with the recently erected Lugar iron-works. The magnificent viaduct, called the Lugar viaduct, on the line of the Glasgow and South-western railway, over the river Lugar, has been noticed in our article on Cumnock.

LUGAR-WATER, a brief but beautiful rivulet of the district of Kyle, Ayrshire. Its principal head-streams, Glenmore and Bella waters, rise in the east of the parishes of Old Cumnock and Auchinleck, and run each about 5½ or 6 miles, not far distant from each other, to a junction ⅔ of a mile above Logan-house. The united stream runs 8 miles westward, between Auchinleck on the north and Old Cumnock on the south, to a confluence with the Ayr, near Barskimming. In its progress it passes the villages of Cumnock and Ochiltree, and the superb mansions of Dumfries and Auchinleck. Its banks are sometimes deep ravines, wooded to the top,—sometimes high perpendicular walls of rock, or naked, overhanging, and menacing crags,—sometimes gentle slopes, or undulating declivities, waving with trees,—and sometimes a series of little green peninsulas, curvingly cut asunder by the sinuosities of its channel. A round hillock, called the Moat, nearly isleted by the stream, and situated above the village of Cumnock, commands an exquisite view over a considerable extent of the picturesque and romantic banks. The rivulet, at its junction with the Ayr, seems equal to it in volume of water. Hence Burns' epithet of 'stately Lugar.'

LUGGATE (THE), a rivulet of the parish of Stow, Edinburghshire. It rises in two small headwaters on the north and the south sides of the Sole, in the south-west extremity of the parish, close on the boundary with Peebles-shire; and running first 3½ miles eastward, and next 3¼ miles south-eastward, falls into Gala water at Haugh-head, a mile below the village of Stow. It is throughout a cold mountain-stream, fed by many naked little rills, and subject to sudden and turbulent overflowings.

LUGGIE (THE), a rivulet of Lanarkshire, and the detached part of Dumbartonshire. Issuing from a small lake on the boundary between the counties, near the south-east extremity of the parish of Cumbernauld, it runs 6½ miles westward along the boundary, augmented in its progress by four or five feeders from Lanarkshire. Assuming now a direction a little north of west, it flows 3½ miles along the interior of the parish of Kirkintilloch; and then debouching, runs a mile northward, beneath an aqueduct of the Forth and Clyde canal, and past the town of Kirkintilloch to the Kelvin. Excepting for a brief space in the parish of Kirkintilloch, where it blushes into beauty, it is a dull, uninteresting stream, sluggish in its motion, and ditch-like in its banks.

LUGGIE (THE), a rivulet of Linlithgowshire, of brief course under its proper name, but formed of two considerable head-waters. Its farthest source is Bog water. This rises in the parish of Bathgate, 1½ mile north-east of the town; makes a circuit of 6 miles round the south, when, running in a northerly direction, it passes the west side of the town; and now flowing deviously 1¾ mile farther, takes the name of Ballencrieff-water; and, under this name, it runs 1½ mile north-westward, on the bo dary between Torphichen and Bathgate, to the p where it contributes to form the Luggie. bauchlaw, the other head-stream, rises in Lana shire; and, excepting brief sinuosities, and a n of due northerly course immediately before join the Ballencrieff, moves uniformly toward the no east. After flowing 2¾ miles in Lanarkshire runs for 3 furlongs into Torphichen, then descri for 2 miles the boundary between that parish Lanarkshire, and then, over 3¾ miles to its termi tion, divides Torphichen from Bathgate. The uni stream of the two head-waters, now strictly Luggie, commences half-a-mile north of Brid castle, and has a course of less than a mile nor eastward to the Avon not far from Crawhill. length, to the head of Bog water, is 10 miles, a to the head of Barbauchlaw-burn 10½.

LUGTON, a village in the parish of Dalkei Edinburghshire. The tract around it was ancien a separate barony from that of Dalkeith, having fortalice of its own, and belonging to a branch the family of Douglas. It was annexed to parish of Dalkeith so late as 1633, and became property of Anne, Duchess of Buccleuch, in 16 The village, till lately, was inhabited chiefly colliers. Population, 230. Houses, 34.

LUGTON (THE), a rivulet partly of Renfre shire, but principally of Cunningham, in Ayrshi Excepting very numerous but not large curvatur and 1¼ mile of westerly course immediately ab its termination, its uniform direction is south-we It rises half-a-mile north of Loch-Libo, in the par of Neilston, Renfrewshire, and, after traversing th lake, and making a distance from it of 1½ mile, enters Ayrshire, divides Beith and Kilwinning its right bank from Dunlop and Irvine on its le and falls into the Garnock 2 miles from the town Irvine, and the same distance, in a straight li from Irvine harbour. For a mile above its mou it traverses the richly-wooded pleasure-grounds Eglinton-castle, and ⅔ of a mile above its mou has that princely mansion on its brink.

LUI (THE), a head-stream of the Dee, descendi from Benmacdhu, through Glenlui, and the for of Mar, and joining the Dee on its northern si about 3 miles below the linn of Dee.

LUICHART (LOCH), a lake, 6 miles long, a generally ½ a mile broad, in the parish of Cont Ross-shire. It is formed by an expansion of head-stream of the Conan; and the road from Po ewe to Inverness is carried along its left bank.

LUIN (LOCH), a lake on the mutual border Ross-shire and Inverness-shire, sending off a sh gish, tortuous stream north-eastward to the ri Moriston. It has a marshy character; and glen which it occupies is sequestered and pasto and extends nearly on a line with Glen-Garry a Glen-Moriston.

LUINA (LOCH), an occasional name of Lo Avich in Argyleshire.

LUING, an island, with a post-office station its own name, in the parish of Kilbrandon, Argy shire. It is 6½ miles in length, and rarely m than 1 in breadth. It is separated on the no from Seil by a strait scarcely 300 yards wide; it thence extends due southward at a distance from 1½ to 3½ miles from the coast of Nether Lo and the entrance of Loch-Melfort, with the isla of Torsay and Shuna upon its east side. As gro ed with these two islands and with Seil, it exhi an extensive range of picturesque and pleas scenery. The surface is in general low, thou never absolutely flat, along the coasts and in southern district; but, as it recedes northward

s into many rocky eminences and cliffs, shows a ght tendency toward the formation of two dis- t ranges, and attains an extreme altitude of be- en 600 and 700 feet. Clay-slate forms the great s of the island, and has been very extensively rried for roofing slates. Several hundreds of es have recently been reclaimed; and the Mar- of Breadalbane has erected on Luing one of finest farm-steads in Scotland.

LUING (Sound of), a strait along the west side he southern half of Luing island. It measures iles in length, and 1¼ in mean breadth; and des Luing and Ardluing from Scarba, Lunga, isa, and one or two islets.

LUKE'S (St.). See Edinburgh and Lanark.

LUMPHANAN, a parish, containing a post-office on of its own name, in the Kincardine-O'Neil ict of Aberdeenshire. It is bounded by Leochel, gh, Kincardine-O'Neil, Birse, Aboyne, and ll. Its length south-south-westward is 6 miles; its greatest breadth is 4 miles. Its south end is nded by the river Dee; the greater part of its side is drained southward by Lumphanan-burn, he Dee; and its north end, to the extent of t 2 miles, is within the basin or river system of Don. Its surface, in a general view, consists ly of low, valley-ground, and partly of flanking s. The name Lumphanan signifies the 'bare e valley;' but the valley, though a 'little valley' is no longer 'bare,' being well cultivated and ly productive. The loftiest hills are Mealmead Craiglich, the latter of which rises steeply for t a mile from the arable land. The soil varies a deep loam on the low grounds to a thin sand he acclivities. The predominant rock is granite. ut 2,770 acres are in tillage; about 4,300 are oral or waste; and about 550 are under wood. re are eight principal landowners. The value ssessed property in 1843 was £2,741. There few remains of ancient fortifications, and some ne, one of which, about a mile north from the rch, on the brow of a hill, is alleged to be that e usurper Macbeth, who, according to tradition, here slain by Macduff, in single combat, as he northwards, and was buried under this cairn, gh Shakspeare makes Dunsinnan the scene. ed several places lay claim to this 'honour;' Lord Hailes, upon the authority of Andrew nton, attributes the event to Lumphanan. The sh is traversed by the road from Aberdeen to land. Population in 1831, 957; in 1851, 1,088. ses, 207.

his parish is in the presbytery of Kincardine-O'- , and synod of Aberdeen. Patron, Sir William tes, Bart. Stipend, £153 18s. 3d.; glebe, £10. Schoolmaster's salary, £27, with about £20 fees, and are in the Dick bequest. The parish church built in 1851, and contains 500 sittings. There Free church, with an attendance of about 200; the amount of its receipts in 1856 was £55 17s. There are a non-parochial school at Camphill, a public library at Burnside.

UMSDEN, an ancient manor in the parish of lingham, Berwickshire, belonging to a family of name so early as the reign of David I. The nt peel of Lumsden probably occupied the site e present farm-house of East Lumsden; but in early part of the 14th century the Lumsdens re- ed their family-abode to Blanerne on the banks Whitadder, where its picturesque remains exist.

UMSDEN, Aberdeenshire. See Leith-Lumsden.

UNAN (The), a river of Forfarshire. Issuing a spring called Lunan-well, in the parish of ar, it runs 2½ miles north-eastward to Rescobie-loch, half the distance in the interior of Forfar, and the other half on the boundary with Rescobie. While traversing the lake, and for half-a-mile further, it bisects Rescobie; over the next 2½ miles, during which it expands into Balgaves-loch, it divides that parish, on its right bank, from Aberlemno and the northern section of Guthrie on its left; and thence to the German ocean, except for 3 miles, where it cuts off a wing of Inverkeilor, it has Kirkden and Inverkeilor on the right, and Guthrie, Kinnell, and Lunan on the left. Its course, for 3½ miles above its embouchure, is north-easterly; but, from entering Rescobie-loch to that point, it is due eastward. Its length is 16¾ miles; and its terminating point is at Lunan-bay in the vicinity of Redcastle. It flows with a clear current, and abounds with trout and pike.

LUNAN (The), a rivulet of Perthshire, formed by various picturesque rills emptying themselves into the Loch of Lows, in the parish of Caputh. Speedily after its efflux from that lake it becomes lost for ¾ of a mile in the circular loch of Butterstone. Issuing thence it runs 2 miles eastward, and 1½ south-eastward—nearly all this distance in the parish of Clunie—and for another ¾ of a mile expands into Loch-Clunie. A mile farther east it is once more a lake, or, for 1½ mile, is lost in Loch-Drumellie. Running now 3¾ miles south-eastward, it divides Kinloch and Blairgowrie on its left bank from Clunie, Lethendy, and Caputh on its right, and falls into the Isla, 2 miles east of Meiklour.

LUNAN, a parish in the east coast of Forfarshire. Its postal communication is through Chance-Inn, adjacent to its southern boundary. It is bounded by Lunan-bay, and by the parishes of Inverkeilor, Kinnell, Craig, and Maryton. Its length eastward is 2¾ miles; and its mean breadth is 1¼ mile. A small rapid rill, leaping along in cataracts sometimes 20 or 30 feet deep, and traversing a beautifully romantic dell, called Buckie-den, occasionally perpendicular on its sides, and generally gemmed with flowers and shrubs, forms its boundary-line on the north. Lunan-water, limpid in its waters and pebbly in its strand, traces the boundary on the south. The beach of the marine boundary on the east will be noticed in the next article. The surface rises rapidly from the sea and the Lunan till it attains a height of nearly 400 feet above sea-level, and then recedes in a scarcely perceptible ascent, almost in a table-land to the further boundary. Seen from the Inverkeilor side of the Lunan near the sea, it has the appearance of a richly-cultivated hill-side, with a fine southern exposure. Its summit-land commands an extensive prospect of the German ocean and the coast. The soil, for a brief way on the shore, is sandy; on the lower declivities, is deep and rich; on the higher grounds, is frequently shallow; and on the average, is good and fertile. The arable and the uncultivated grounds are in the proportion to each other of about 7 to 2. Trap rock has been quarried for building, but good sandstone was recently discovered. The chief landowner is the Earl of Northesk, and there are two others. The only mansion is Lunan-house. The estimated value of raw produce in 1836 was £6,394. Assessed property in 1843, £1,964 10s. Various localities have names indicating the ancient vicinity—supposed to be at Redcastle—of a royal residence, See Inverkeilor. Walter Mill, or as some historians call him, Sir Walter Mill, the last Scottish martyr in the cause of the Reformation, was priest of Lunan during 20 years preceding his renunciation of popery. He was burnt at St. Andrews, in the 82d year of his age. Alexander Peddie, nearly the last surviving priest of compelled prelacy, and allowed by sufferance to

retain his cure after the abolition of Episcopacy, was minister of Lunan till 1713, and bequeathed to the parish some plate for the communion-service, on the singular condition that it should be lent when required to any Episcopalian congregation within a distance of 7 miles. The parish is traversed by the road from Arbroath to Montrose. Population in 1831, 298; in 1851, 279. Houses, 59.

This parish is in the presbytery of Arbroath, and synod of Angus and Mearns. Patron, the Crown. Stipend, £158 0s. 10d.; glebe, £15. Schoolmaster's salary, £28 17s. 3d., with £25 fees, and £15 other emoluments. The parish church was erected in 1842, and is situated at the south-eastern extremity of the parish. The ancient name of the parish was Inverlunan; and its church, previous to the Reformation, was a vicarage of the monks of Arbroath.

LUNAN-BAY, a beautiful semicircular indentation of the German ocean, 5 miles in extent of coast line, in the parishes of Inverkeilor, Lunan, Maryton, and Craig, Forfarshire. Its coast for a mile at each extremity is bold and rocky, occasionally exhibiting pyramidal columns upwards of 100 feet in height; and, over the intermediate or central 3 miles, in the middle of which enters Lunan-water, it is a low sandy beach, slightly chequered with small stones, regularly flanked with bent-covered knolls, and immediately overlooked by the high grounds of Lunan. Beautiful varieties of sea-shell, and occasionally some jasper and onyx gems, are found along the strand. The bay has a fine sandy bottom, and affords safe anchorage in any storm except from the north-east and east.

LUNANHEAD, a village in the parish of Forfar. Population, 191.

LUNASTING, a parish, now united to Nesting, in Shetland. It has a church of its own, which was repaired about 1840. See NESTING.

LUNCARTY, a suppressed parish and a village in the Strathmore district of Perthshire. The parish was anciently a rectory, is now incorporated with Redgorton, and forms the north-east division of its main body. The village stands near the Tay, 4 miles north of Perth, and has about 230 inhabitants. Luncarty bleachfield has long been reputed the most extensive in Britain. Its grounds comprehend upwards of 130 acres. The water-power by which the works are driven includes the whole volume of the streams Ordie and Shochie, carried along an artificial canal, and also a considerable volume led out from the Tay by means of a dam run nearly across the river. Four falls of the water-power are effected, and impel 24 sets of beetles. The works bleach about two millions of yards of linen-cloth in the year, and employ upwards of 120 hands.

Luncarty is famous in connexion with the decisive overthrow of the Danes, about the year 990, by Kenneth III., romantically aided by the peasant-ancestor of the noble family of Hay. The scene of conflict is on the Tay, 2 miles above the confluence with it of the Almond. It was marked till the end of last century by many little tumuli, through which the farmers long shrunk to drive the plough; and it has still two monumental stones, one of which, four feet high, bears the name of Denmark. The narrative of the battle, as given by Boethius, Fordoun, and Buchanan, has been said by Lord Kaimes to possess 'every mark of fiction;' but it by no means exceeds possibility, and, vouched by both historiographers and some monuments, is probably an instance of the romance of real occurrences excelling that of the novelist's idle fancies.

The Danes, strong in numbers and fiery in resolve, landed on the coast of Angus, razed the town and castle of Montrose, and moved across Angus and along Strathmore, strewing their path with desc tion, and menacing Scotland with bondage. K neth the King heard at Stirling of their descent, hastened to take post on Moncrieff-hill, in the p insula of the Earn and the Tay; but while th organizing the raw troops, whom he had swept gether, and waiting the arrival of forces suited his exigency, he learned that Bertha or anci Perth was already besieged. Arraying w soldiery he had, and debouching so as to get northward of the enemy, he marched to Lunca saw the Danes posted on an eminence to the sou and next day taunted and provoked them to a t of strength on the intervening level ground. rush of the Danes was dreadful; it shook the mage from the wings of the Scottish army, seemed about to transfix the main body; but it keenly observed by three puissant ploughmen, fat and sons, of the name of Hay, or Haia, who were work in a field on the opposite side of the river, were bold enough to attempt to infuse their c courage into the faltering troops. Seizing the y of the plough, and whatever similar tools were hand, they crossed the Tay at a ford, and arriv just at a crisis when the wings had given way, the centre was wavering, they shouted shame death against the recreant who should flee, and p cipitated themselves with such fury on the forem of the Danes, as to gain the Scots a moment for lying at a spot, still called Turn-again hillock. H the father, as if he had been superbuman, had difficulty in drawing some clans to follow in wake; and plunging with these down a deep ravi while the battle was renewed on ground at a li distance from the original scene of action, he rus upon the Danes in flank and rear, and threw th into confusion. A band of peasants, who were in ing near or drawn together from curiosity, raised a loud shout of jubilation, and were suppo by the Danes to be a new army. The invaders stantly ceased to fight; they became a ming mass of routed men; and, not excepting their lead and their king himself, they either were hewn do by the sword, or perished in the river. An assem of the states, held next day at Scone, decreed to g the peasant-conqueror the choice of the hou course or the falcon's flight of land, in reward his bravery. Hay having chosen the latter, falcon was let off from a hill overlooking Perth, flew eastward to a point a mile south of the ho of Errol, alighting there on a stone which is called 'the Hawk's stane.' All the interve lands were given in property to Hay's family; they have since been either alienated, or parce out among various lines of descendants.

LUNDERSTONE. See INNERKIP.

LUNDIE, a parish on the south-west borde Forfarshire. It contains a small post-office vil of its own name, 6 miles south-east of Cu Angus, and 9 north-west of Dundee. It is bou by Perthshire, and by Kettins, Newtyle, and A terhouse. Its length east-south-eastward miles; and its greatest breadth is 2 miles. A of the range of the Sidlaw hills, rising to an alti of about 850 feet above sea-level, extends along north and west sides, separating it from Strathm and giving it a sheltered and sequestered app ance. The district south and east of the swells into beautiful undulations, is divers with four lakes, and has an average elevatio about 550 feet above the level of the sea. cepting plantations, and the tops of the hills whole surface is arable. The soil is various for the most part is of a deep, free, black co kindly and productive. The largest of the la

of a mile in length; and this and another emit ad-streams of the Dichty. The Earl of Camper- wn is proprietor of almost the whole of the parish; d his lordship's family took their original territo- l designation from it, and have still their bury- ce in its church-yard. The real rental in 1855 s £2,867. Lundie is united to Fowlis-Easter, se two parishes forming one charge. See Fow- -Easter. Population of Lundie in 1831, 456; in 1, 450. Houses, 93. Population of the united ish in 1831, 778; in 1851, 750. Houses, 146. The united parish of Lundie and Fowlis-Easter is the presbytery of Dundee, and synod of Angus l Mearns. Patron, the Earl of Camperdown. gend, £201 0s. 11d.; glebe, £9. There are two ish churches, distant from each other about 4 es; and the minister officiates in them on alter- te Sabbaths. The church of Lundie is a building considerable antiquity, well repaired about the r 1847, and containing about 300 sittings. The rch of Fowlis-Easter is a very ancient structure, pure Saxon-Gothic style, with features challeng- the enthusiastic notice of antiquaries, and ntifully refitted in 1842, with about 350 sittings. re are two parish schools; and the master of h has a salary of about £30, with about £25 fees. re is a subscription library in Fowlis-Easter. tle fairs, of no great importance, are held in ndie in June and August.

LUNDIE-HILL, a wild, bleak, Highland height, the upper part of the parish of Strickathrow, farshire.

LUNDIN. See Largo and Fifeshire.

LUNDINMILL, a village in the parish of Largo, eshire. Population, 499. Houses, 82.

LUNGA, an island on the west side of the sound uing, in Argyleshire. It extends about 2½ miles ⅜ of a mile north and south; and is separated at ends by very narrow straits, from Ormsa and rba. The strait at the south end, between it and rba, is obstructed on the east by a rocky islet, has a tumbling and impetuous tidal current, e as violent and grandly scenic as that of the more celebrated Corrievrekin. Lunga consists a long irregular hilly ridge, generally less than feet above sea-level, but occasionally rising to ly 1,000. This ridge is disposed in uneven, y, and often naked eminences, interspersed with hes of boggy ground and heath, as well as with sional coppices of birch and alder; and it admits her level ground nor more than tiny pendicles of declivity as can be cultivated, even with the ic. On the western side, it is almost entirely e and abrupt; and on the eastern side, it is skirted shelving rocks, but descends somewhat more ly, and displays a greater extent of verdure. artz rock occupies the western side, and clay slate eastern, both intermingled with other schistose stances, and traversed by numerous trap veins. n the different eminences of the island, the views extremely interesting; on the east the glassy ce of the sound of Luing smoothly gliding along reling eddies like a majestic river; and, on the h, the vexed and foaming current of the mimic Corrievrekin, overhung by the grand form of rba, stooping down in one vast yet varied mass, ocky shores and a wooded amphitheatre, and y contrasted with the long low lines of the op- e coasts, and with the numberless islets and s which adorn and diversify the almost retiform

UNNAFIRTH, the belt of sea which separates south end of Yell from the mainland of Shet- d. It is a continuation south-eastward of Yell-

LUNNASTING. See Lunasting.

LURG-HILL. See Grange, Banffshire.

LURGIE-CRAIGS. See Stitchel.

LUSCAR. See Carnock.

LUSRAGAN (The), a streamlet running north- ward to the sea, in the parish of Muckairn, Argyle- shire.

LUSS, a parish, containing a post-office village of its own name, in Dumbartonshire. It is bounded on the north by Arrochar; on the east by Loch-Lomond; on the south by Bonhill and Cardross; and on the west by Row and Loch-Long. Its length south- ward is 8½ miles; and its breadth is from 2½ to 5 miles. Alpine mountains, some of them towering aloft to nearly 3,000 feet above the level of the sea, spread out their bases over much the larger part of the area. But the congeries of mountains, even where most compact, is cloven down into glens of such beauty and picturesqueness as quite to relieve the rugged aspect of the landscape. Along the northern boundary, and for a brief way in the inte- rior, is Glen-Douglas, 4½ miles in length, traversed all the way by the little stream which gives it name, and opening at Inveruglas, or its mouth, upon the ferry across Loch-Lomond to Rowerdennan at the foot of Benlomond. Two and a quarter, and 3½ miles southward, are Glenmaachan and Glenma- curn, converging into the sylvan glen of Luss, and aggregately with the latter curving 6 miles south- eastward, and traversed by the two head-waters and the united volume of the streamlet Luss to the village. Farther south, Glenfinlas, watered by its cognominal brook, stretches 3 miles south-eastward, and then runs, in a wooded dress, 1½ mile eastward to Loch-Lomond, opposite Inchmurrin. Near the southern boundary, the lower part of Glenfruin, noted as the scene of a sanguinary fight in 1603, be- tween the clans of Macgregor and Colquhoun, goes 2½ miles eastward and north-eastward to a point 1½ mile south of the termination of the former glen. The only low-lying surface stretches along Loch- Lomond from the southern boundary to Ross-Dhu, the seat of Sir James Colquhoun, Bart., 2 miles south of the village; and is partly level, partly a waving plain, and partly a regular ascent, which soon rises up in acclivity, and becomes lost in the aspirings of the mountains. Many hundred acres, on the low grounds, up the sides and hollows of the glens, and along the whole brink of Loch-Lomond, are covered with wood, much of it natural, and very beautifully grouped. From the southern boundary to the village a series of fine little headlands run out into Loch- Lomond; and north of the village the surface rises up from the very margin of the lake, merely admits of a feathered belting of wood, and then soars away into mountain. The varied superficial outlines of the parish, its low grounds and its uplands, its woods and its glens, contribute largely and very gorgeously to the magnificent framework in which the pictured beauties of the most boasted of the Scottish lakes is set. Some of the loveliest baskets of shrubbery, too, which rest on the lake's waters, are contributed by Luss; for Inchtavanach, Inch- conachan, Inchlonaig, Inchgalbraith, and Inch- frechlan, are all within its limits. See these articles. Two of the most admired views of the lake and of the scenery which environs it, are ob- tained from the highest grounds of Inchtavanach, and from Strone-hill in the vicinity of the village. Loch-Long touches the parish, or rather a protru- sion of it, over a distance of only ⅜ of a mile. Copi- ous springs of excellent water are numerous. A freestone quarry supplies building material for local use; and quarries of grayish-blue and dark-blue slate, at Camstraddon and Luss, yield a large pro-

duce for exportation. On the Fruin are a saw-mill, a grain-mill, and a mill for paring down logwood; and on the Luss above the village are a saw-mill and a grain-mill.

About 1¼ mile south of the village are the remains of a large cairn called Carn-na-Cheasoig, 'the cairn of St. Kessog.' This saint is said to have suffered martyrdom near the site of the cairn in the 6th century, and to have been buried on the site of the church; and he was anciently worshipped by the Romanists as the tutelary of the parish. Haco of Norway, during his invasion of 1263, spread bloodshed and devastation through Luss and its islands. Alwyn, the second Earl of Lennox, granted the lands of Luss to the dean of Lennox; and from the dean's descendants the lands passed, in the 14th century, to the Colquhouns of Colquhoun. One of the Colquhouns, called Sir John, was, in 1474, made Lord-high-chamberlain of Scotland, became, in 1477, governor of Dumbarton castle for life, and, in 1478, was killed in defending the fortress from besiegers. The celebrated Rev. John M'Laurin, known generally in connection only with his subsequent ministry in Glasgow, and the recent distinguished scholar and Gaelic translator, Dr. John Stuart, were ministers of Luss. The parish is traversed, up the margin of Loch-Lomond, by the road from Dumbarton to the Highlands; and has, in its southern division, two deflections from that road, the one leading to Helensburgh, and the other leading up Glenfruin. The village of Luss stands on the Dumbarton and Highland road, at the mouth of the rivulet Luss, 9 miles north-north-east of Helensburgh, and 13 north-north-west of Dumbarton. Its situation, on the margin of Loch-Lomond, at the base of Strone-hill, in the vicinity of three of the finest islands in the lake, is very picturesque. About two years ago, Sir James Colquhoun made known a resolution to sweep away its rude straggling huts, which had formed the main bulk of it, and to rebuild it with neat cottages on a regular, specific plan. Its own character, therefore, will be put into keeping with the beauty of its site. It has a good inn, and is much frequented by tasteful tourists. The Loch-Lomond steamers call at it, both in going up the lake and in going down. Fairs are held in it on the 24th day of May, old style, on the 3d Tuesday of August, on the 14th day of October, old style, and on the 7th day of November, old style. The population of the village is about 260. Population of the parish in 1831, 1,181; in 1851, 907. Houses, 177. Assessed property in 1843, £4,214 17s.

This parish is in the presbytery of Dumbarton, and synod of Glasgow and Ayr. Patron, Sir James Colquhoun, Bart. Stipend, £268 0s. 11d; glebe, £17. Unappropriated teinds, £489 9s. 7d. Schoolmaster's salary, £34 4s. 4½d., with from £9 to £12 fees. The parish church was built in 1771, and contains 500 sittings. There is a Free church, with an attendance of about 100; and the amount of its receipts in 1856 was £135 14s. 7½d. There are three non-parochial schools and a small public library; and two of the schools have exterior aid. The parish of Luss, previous to the Reformation, was a rectory, and between 1429 and that epoch was a prebend of the cathedral of Glasgow, served by the prebendary's vicar pensioner. The ancient parish was greatly more extensive than the modern. In 1621, the forty pound lands of Buchanan, on the east side of Loch-Lomond, were detached from it, and incorporated with Inchcailliach, the modern Buchanan; in 1659, the lands of four proprietors, at the south end of the lake, were annexed to Bonhill; and, in 1658, all the extensive territory on the north, which now constitutes Arrochar, was ma independent. But, on the contrary, the lands Caldannach, Presstelloch, and Conglens, which ciently belonged to Inchcailliach, have, in mode times, been united to Luss; and the lands of Ba nachrae, within the limits of Row, are attached to quoad sacra. There were anciently chapels in Lus glen, at Rossdhu, and on the lands of Buchanan.

LUSSA (The), a rivulet of the island of Mu Argyleshire. It issues from a chain of lakes in t parish of Torosay, and runs 2 miles north-eastwa and 4 south-eastward to the sea at Loch-Spel Its current is rapid, and its volume considerable.

LUSTYLAW. See Damhead.

LUTHER (The), a stream of Kincardineshi It rises among the Grampians, on the north bord of the parish of Fordoun, and runs 5 miles sout ward through the interior of that parish, and 6 mil south-westward through the middle of the parish of Laurencekirk and Marykirk, to a confluence wi the North Esk at a point about 1¾ mile above t village of Marykirk.

LUTHERMUIR, a post-office village in the pari of Marykirk, Kincardineshire. It is inhabited pri cipally by hand-loom weavers. The tract arou it, from which it takes its name, was formerly barren moor, which the writer of the Old Statistic Account did not think worth his notice; and ev some time after it became a seat of population, was a resort of the destitute and abandoned fr many surrounding parishes. The village has u dergone great vicissitudes, consequent on the pr carious employment of its inhabitants. Populatio 967. Houses, 216.

LUTHRIE, a post-office village on the east si of the parish of Creich, Fifeshire. It is pleasant situated, about 2¼ miles from the frith of Tay, a about 4½ miles north-north-west of Cupar. It h a brewery and two meal mills, and is inhabit chiefly by weavers and artizans. Population, 1 Houses, 27.

LYBSTER, a post-office village in the parish Latheron, Caithness-shire. It stands at the head Amherst-bay, a little east of the great north ro and 13 miles south-west by south of Wick. It co tains a chapel of ease and a Free church. Fa are held in it twice a-year. A tract around it w temporarily a quoad sacra parish, constituted the ecclesiastical authorities; and the population this in 1841 was 2,699.

LYDIAMILL. See Dairsie.

LYDOCH (Loch), a lonely sheet of water the moor of Rannoch, in the north-west corner Perthshire. The distance from the inn at King house to the western extremity of the lake, is ab 6 miles; from the eastern, or lower extremity, the head of Loch-Rannoch, it is much the sa Loch-Lydoch is about 7 miles in length, and ab a mile in breadth. About 4 miles from its east end it separates into two distinct branches of alm equal size and length—the one of which stretc almost due west, while the other takes a south-w direction; thus giving it the appearance of a h fork, with the handle towards Loch-Rannoch. moor of Rannoch and Loch-Lydoch are descri by Dr. M'Culloch in his usual caustic yet grap manner: "Pray imagine the moor of Rannoch; who can describe it? A great level, (I hope word will pardon the abuse of it,) 1,000 feet ab the sea, 16 or 20 miles long, and nearly as m wide, bounded by mountains so distant as scarc to form an apprehensible boundary; open, sil solitary; an ocean of blackness and bogs, a w before chaos; not so good as chaos, since its ments are only rocks and bogs, with a few pool

water-bogs of the Styx, and waters of Cocytus, with one great, long, sinuous, flat, dreary, black, Acheron-like lake, Loch-Lydoch, near which arose three fir-trees, just enough to remind me of the vacuity of all the rest. Not a sheep nor a cow; even the crow shunned it, and wheeled his croaking flight far off to better regions. If there was a blade of grass anywhere, it was concealed by the dark stems of the black, black, muddy sedges, and by the yellow, melancholy rush of the bogs."

LYLESLAND, a district on the south side of Paisley, and within the parliamentary boundaries of that burgh, inhabited chiefly by weavers, and most of its houses are of recent erection.

LYMVILG. See LYNWILG.

LYMYCLEUCH-BURN, a rivulet of the parish of Teviothead, Roxburghshire. It rises at the Pikethowe, on the boundary with Dumfries-shire, and runs about 6 miles northward to the Teviot below Binns. Its course is nearly parallel with that of the Teviot.

LYNCHAT, a village near the south-western extremity of the parish of Alvie, Inverness-shire. Population, 73. Houses, 17.

LYNDALE. See SNIZORT.

LYNE (THE), a river of Peebles-shire, the next in local importance to the Tweed. It rises in various little head-waters close on the boundary with Edinburghshire; one of them on Weatherlaw, a very brief distance from the sources of the North Esk, and the Water of Leith; another of them on West Cairn-law, the largest of the Pentlands, 1,800 feet high; and several of them draining Cauldstane-slap, a grand mountain-pass, or place of egress, from Tweeddale to the north. The Lyne, receiving in its progress Baddingsgill-burn, West-water, and numerous mountain-rills, runs 5¾ miles south-eastward through Linton, 2 miles southward between Linton on the west and Newlands on the east, and 2¾ in the same direction through Newlands. It is now joined, half-a-mile below Drochil-castle, by Earth-water, which bears along with it the tributary waters of a branch of the Medwin, on its right bank, runs 4 miles south-eastward between Stobo and Manor on the right, and Newlands, Lyne, and Peebles on the left, and falls into the Tweed 2¾ miles in a straight line above Peebles. Its entire length of course is 15½ miles, or, including sinuosities, about 20. The Lyne is a good trouting-stream.

LYNE (THE), Fifeshire. See DUNFERMLINE.

LYNE AND MEGGET, two parishes in Peebles-shire, widely apart in position, but mutually identified in parochial interests. The post-town is Peebles. Lyne is nearly circular, with a small square northward projection; and is bounded on the north by Newlands, on the north-east by Harehope-burn, which divides it from Eddlestone, on the east and south-east by Meldon-burn, which divides it from Peebles, on the south and south-west by Lyne-water, which divides it from Stobo, and on the west by Powe-burn and Stevenston-hill, which divide it from Newlands. The circle is 2¾ miles in diameter, and the square projection ¾ of a mile deep. A stripe of low ground stretches along the Lyne, sharp and marvellously in its soil, and bleak and naked in its aspect, but plied to a certain extent with the plough. The rest of the area is upland and strictly pastoral, once covered with natural wood, but now adorned with scarcely a tree. In the south-west, overlooking the Lyne, are vestiges of a Roman camp, 6 acres in extent, and occupying a singularly advantageous site. The Glasgow and Peebles turnpike runs along the Lyne.—Megget is distant geographically 8 miles, but along the shortest practicable path 14 miles. It lies on the southern verge of the county; and is bounded on the north by Manor, on the east and south-east by Selkirkshire, on the south-west by Dumfries-shire, on the west by Tweedsmuir, and on the north-west by Drummelzier. It measures nearly 6 miles from east to west, and between 6 and 7 from north to south. St. Mary's Loch, for 1 mile on the south-east, belongs to it in common with Yarrow. Megget-water rises in the extreme west, and, running due east to St. Mary's Loch, cuts the parish into almost equal parts. The ground is very hilly. The summits and higher acclivities are clothed with heath and coarse grass; but the lower slopes afford excellent pasture. Moorfowl abounds. A species of eagle, from the heights on the boundary with Dumfries-shire, sometimes carries of a young lamb, even in view of the shepherd. Two old towers, whose ruins still exist, seem to have accommodated the Scottish kings when hunting in the forest. Traces exist of several ancient roads stretching in various directions, and probably cut out for the accommodation of the royal hunters. On Glengabbern-burn, a tributary of Megget-water, are some traces of a search for gold, which Boethius, Buchanan, and other writers, say was successful. The heritors of the two parishes are the Earl of Wemyss, Murray of Henderland, and Purdie of Lyne-Townhead. The estimated value of raw produce in 1834 was £6,542. Assessed property in 1843, £3,021. Population in 1831, 156; in 1851, 158. Houses, 26.

The united parish is in the presbytery of Peebles, and synod of Lothian and Tweeddale. Patron, the Earl of Wemyss. Stipend, £153 9s. 1d.; glebe, £25. The parishes were united in 1620. Lyne was originally a chaplainry subordinate to Stobo, but afterwards became a rectory. The church is a solid structure, built previous to the Reformation, but repaired in 1831, and containing 70 sittings. There is also an edifice in Megget, fitted up partly as a church with 70 sittings, and partly as a schoolhouse, and erected about the year 1804. The ancient church of Megget is now a ruin at Henderland, surrounded by a cemetery, which is still in use. There are two parochial schools; and the salary of the Lyne master is £25 13s. 3½d., with £15 fees, and £2 10s. other emoluments,—that of the Megget master, £7, with £4 fees, and £1 15s. other emoluments.

LYNEDOCH, an estate, on the river Almond, in the parish of Methven, Perthshire. It was the property of General Thomas Graham, one of the heroes of the Peninsular war, and the victor of Barossa; and it gave him the title of Baron, on his elevation to the peerage, at the conclusion of the war. Lynedoch-house, in which his lordship occasionally resided till the close of his long life, is very beautifully situated on the left bank of the Almond, 1¾ mile north-east of Methven village. About ¼ a-mile north-west of Lynedoch-house, in a secluded spot, called Dronach-haugh, at the foot of a beautiful bank or brae of the same name on the Almond, is the grave of 'Bessie Bell and Mary Gray,' celebrated in pathetic song. Bessie Bell, according to the common tradition, was daughter of the laird of Kinvaid, and Mary Gray of the laird of Lynedoch. Mutually attached in strong and tender friendship, they lived together at Lynedoch when the plague broke out in 1645; and to avoid it, they retired to a romantic spot, called Burn-braes, on the estate of Lynedoch, and there, in a bower or temporary dwelling, lived in complete seclusion. A young gentleman of Perth visited them in their solitude, for the purpose, it is said, of supplying them with food; but unhappily he communicated to them the very pestilence from which they had fled. Falling victims to the disease, they were, according to the usage of the period, re-

fused sepulture in the ordinary burying-grounds; and they slept together, as they had latterly lived, amid a scene of solitude and romance.

"They thocht to lie in Methven kirkyard
Amang their noble kin;
But they maun lie on Lynedoch brae
To beek forenent the sun."

LYNWILG, a post-office station in the parish of Alvie, less than ½ a-mile from the church of Alvie, Inverness-shire.

LYON (The), a river of Breadalbane, Perthshire. It rises on the south-east side of Benachastle, in a long south-westerly projection of the parish of Fortingal, close on the boundary with Glenorchy in Argyleshire, runs 1¾ mile north-eastward across the projection, and then describes the segment of a circle over a distance of 5¾ miles between Fortingal on its left bank, and the most westerly section of Kenmore on its right. At midway of the 5¾ miles it expands into Loch-Lyon. Leaving Kenmore it runs 23 miles along Fortingal, part of the distance north-eastward, but generally in an easterly direction; and then, over a distance of 1½ mile south-eastward, dividing Dull on its left bank from a part of Weem on its right, it falls into the Tay 2¼ miles after that magnificent river's efflux from its cognominal lake, and amidst the gorgeous scenery which surrounds Taymouth-castle. Its entire length of course is 32 miles. Of a host of mountain-tributaries, which on both banks come obstreperously down upon its path, the longest is Glenmore water, 7½ miles in length, and joining it at the point of its leaving Fortingal. The Lyon has two considerable cascades,—the one called the Sput-baan, at the entrance of its glen, and the other the fall of Moar, 4 miles above Glenlyon church. At the latter it leaps over a considerably lofty precipice into a deep narrow pool. The river traverses the districts of Glenlyon and Fortingal proper; and, as to the nature and aspect of its basin, is described under these titles.

LYRE-SKERRY. See Shetland.

M

MAAM-CHLACH-ARD. See Inverness-shire.

MAAM-RAITACHAN. See Inverness-shire.

MAAM-SOULE. See Loch-Benevan.

MAAR-BURN, a rivulet of Nithsdale, Dumfries-shire. It rises in the parish of Durrisdeer, and runs 5 miles southward and south-eastward, partly within that parish, and partly on the boundary between it and Penpont, to a confluence with the Nith. It washes the ducal grounds of Drumlanrig-castle.

MABEARY (Loch). See Lochmabbery.

MACALISTER'S-BAY, a bay, about 2 miles broad, but of no great length, on the east coast of the island of Mull, Argyleshire.

MACALLAN. See Knockando.

MACANREE (Loch), a small lake in the parish of Port-of-Monteith, Perthshire.

MACBETH'S CASTLE. See Martin's (St.).

MACDUFF, a post-town, seaport, and burgh-of-barony, in the parish of Gamrie, Banffshire. It stands on the east side of the mouth of the Deveron, about 1½ mile north-east of Banff, but is included in the parliamentary boundaries of Banff burgh, and communicates with that town by a magnificent bridge on which there is no toll. The two towns have in many respects a community of interest, as if they were only one town; yet, in some respects, they are rivals, and maintain a conflict of interest. Macduff occupies an uneven site impinging on irregular sea-cliffs, and therefore presents romantic groupings of buildings; and it is at present being very much improved and extended. The town is modern, having risen, since 1732, from little else than a collection of fishermen's huts to be a place of considerable size and importance, containing a number of regularly planned streets and good houses, with one of the best harbours in the Moray frith and a thriving and rapidly increasing trade. Previous to 1783 it was called 'Down.' In that year it received a charter of Novodamus from the Crown, at the desire of the proprietor, James, Earl of Fife, erecting it into a 'free and independent burgh-of-barony.' The rate of the harbour-dues being about one-half lower than those of Banff harbour, and the port itself, though subordinate in customs matters to Banff, being preferable to its rival in situation, depth, and accommodation, Macduff has much more import and export traffic than Banff. The harbour is the private property of the Earl of Fife. The amount of the harbour and shore-dues, for 1831 was £248 10s.; for 1852, £516. The chief exports are grain, cured herrings,—for which this is the most important station between Cromarty and Fraserburgh,—salmon, cod-fish, live cattle, and cured pork, to London Leith, and some other places in the south. The chief imports are lime and bone-manure, coals, groceries, &c.; and from Sweden, iron and deals; Russia hemp; and Holland, flax. Herrings are extensively exported to Prussia and other foreign parts. Macduff has a town-house, a chapel of ease, a Free church several schools, a public library, a news-room, an offices of the Union bank and the North of Scotlan bank; and it enjoys the same facilities of communication by sea and land as Banff. Populatio in 1841, 2,228; in 1851, 2,527. Houses, 554.

MACDUFF'S CAVE. See Kilconquhar.

MACDUFF'S CROSS. See Newburgh.

MACFARQUHAR'S BED. See Cromarty.

MACHAIG, a small circular lake, nearly a mile i diameter, 3½ miles north of the village of Doune, i the parish of Kilmadock, Perthshire. Its banks a wooded and beautiful. A streamlet carries off i superfluent waters by a circuitous route to the Teit a little below Doune.

MACHAN. See Hamilton.

MACHANSHIRE. See Dalserf.

MACHAR (New), a parish, containing the po office station of Parkhill, in the Aberdeen-prop district of Aberdeenshire. It is bounded by Udn Belhelvie, Old Machar, Dyce, Fintry, and Keit hall. Its length south-south-eastward is 9 mile

nd its breadth is from 2 to 3 miles. The lands of Straloch at its north end belong to Banffshire, but re now rated and politically attached to Aberdeenhire. The lands of Torryleith, immediately south f the lands of Straloch, belong quoad civilia to ldny, but have long been attached quoad sacra to New Machar. The river Don traces for 2 miles the outhern boundary of the parish; and a large burn ises about a mile above the north end of the parish, nd runs through all its interior, driving several orn-mills, and falling into the Don a little above he bridge of Dyce. The surface of the parish is in eneral rather level; and the soil is various, but for he most part arable and well-cultivated. There are xtensive plantations, especially in the southern istrict, in the vicinity of the Don; and in this uarter also is a beautiful little lake called Bishop's-ch, anciently Loch-Goull, on an islet in the midst which the Bishops of Aberdeen resided before the antry was erected. The ruins of their castle still ist. The islet is finely adorned with trees. There e few objects of antiquarian or historical interest; it on a moor within the parish an engagement took lace, in 1647, between the Royalists and Covenantrs, in which the latter were victorious. The manons are Parkhill, Straloch, and Elrick. There are x landowners. The average rent of arable land is out £1 per acre. Assessed property in 1843, 5,227. The parish is traversed by the road from berdeen to Banff, and has ready access to the reat North of Scotland railway. Population in 831, 1,246; in 1851, 1,298. Houses, 252.

This parish is in the presbytery and synod of berdeen. Patron, the Earl of Fife. Stipend, £217 s. 4d.; glebe, £16. Schoolmaster's salary, £30, ith £8 8s. fees, and a share in the Dick bequest. he parish church was built in 1791, stands exactly miles distant from Aberdeen, and contains about 0 sittings. There is a Free church, with an atndance of 560; and the amount of its receipts in 56 was £322 19s. 5½d. There are two nonrochial schools, and two public libraries. The rish of New Machar originally formed part of at of Old Machar; and, after being disjoined it as called, first the upper parish of St. Machar, xt Upper Machar, and next New Machar.

MACHAR (Old). See Aberdeen.

MACHAR (The). See Harris.

MACHERS (The), a large peninsula, lying tween Luce-bay and Wigton-bay, and conituting the south-eastern one of the three great visions of Wigtonshire. The name is Celtic, and gnifies 'flat or low country.' Though the boundy-line between the Machers and the district called e Moors is not well-defined, the Machers may be ewed as including the parishes of Whithorn, Glasrton, Sorbie, Kirkinner, and most of Mochrum, d as comprehending an area of about 64 square iles. Yet, measured in a line, from the estuary of e Luce and the Piltanton at the head of Luce-bay an expansion of the estuary of the Cree between rty-port, and at the head of Wigton-bay, it would clude all Mochrum, and parts of Old Luce, Kirkwan, and Penningham, and comprehend at least 4 square miles.

MACHIRHANISH. See Campbelton.

MACHLINE. See Mauchline.

MACHONY, or Madrany (The), a streamlet the Strathearn district of Perthshire. It rises in heights of Blair-in-roan, and flows about 9 es eastward through the parishes of Muthill and ckford, to a confluence with the Earn, near the dge of Kinkell. The name Machony signifies in elic a battle, and is supposed by some antiquaries to an allusion to the famous battle of the Grampians.

MACHRYKILL. See Dailly.

MACKINTOSH. See Daviot and Dunlichity.

MACKISTON. See Maxton.

MACLACHLAN. See Strathlachlan.

MACLARTY, an islet belonging to the parish of Craignish, Argyleshire.

MACLEOD'S TABLES. See Helvels.

MACMARRY. See Gladsmuir.

MACNIVEN, an islet belonging to the parish of Craignish, Argyleshire.

MADDERTY, a parish, containing the post-office station of Madderty, the barony burgh of Craig, and the villages of St. David and Bellyclone, in the Strathearn district of Perthshire. Its outline is somewhat triangular. It is bounded on the north by Crieff and Fowlis-Wester, and measures, on that side, 5⅝ miles; on the south-east by Gask and Trinity Gask, and measures, on that side, 4¼ miles; and on the south-west by Trinity Gask and Crieff, and measures, on that side, 3 miles. The surface is level, carpeted with good soil, chiefly arable, and well enclosed and cultivated. Along the greater part of the northern boundary runs the Pow, or Powaffray, a stagnant yet fitful stream, moving sluggishly in an artificial canal 6 feet deep and 24 wide, but subject to inundations which now injure the adjacent low grounds and now enrich them with alluvial deposits. The south-western boundary runs between 1 and 1⅜ mile distant from the Earn. The chief object of interest in the parish is the ruined abbey of Inchaffray: which see. There are eight landowners; but the only mansions are Woodend and Dollary. About 450 acres are under plantation. The average rent of the arable land is about £1 12s. per acre. Assessed property in 1843, £3,500. The parish is traversed by the ancient Roman road from the camp of Ardoch to the Tay; it is traversed also by a modern turnpike road; and it is distant, at the nearest point, 2 miles from the town of Crieff, and will derive advantage from the Crieff extension of the Scottish Central railway. Population in 1831, 713; in 1851, 593. Houses, 119.

This parish is in the presbytery of Auchterarder, and synod of Perth and Stirling. Patron, the Earl of Kinnoul. Stipend, £233 17s.; glebe, £11. Unappropriated teinds, £264 14s. 4d. Schoolmaster's salary, £34 4s. 4½d., with £12 fees, and £6 other emoluments. There is a Free church, with an attendance of 185; and the sum raised in connexion with it in 1856 was £142 9s. 1d. Madderty gave the title of Baron to James, the second son of the second Lord Drummond, and the ancestor of the Viscounts of Strathallan. He was created Lord Madderty in 1609.

MADDISTON, a village in the parish of Muiravonside, Stirlingshire. It stands, in picturesque irregularity, on the side of a hill, about ⅔ of a mile south-west of the parish church. Population, 164. Houses, 32.

MADDY (Loch). See Lochmaddy.

MADDY-MOSS, a bog, of upwards of 120 Scotch acres in area, at the northern extremity of the parish of Dollar, in Clackmannanshire. It is very retentive of water, and occasionally bursts its barrier, sending down a muddy torrent to the Devon.

MADOES (St.), a small parish at the west end of the Carse of Gowrie, Perthshire. It contains the hamlets of Hawkstone and Cotton, and adjoins the post-office station of Glencarse; but its post-office is Perth, 6 miles to the west-north-west. It is bounded by Kinfauns, Errol, the frith of Tay, and the Inchyra district of Kinnoul. Its length, from north to south, is 1⅜ mile; its greatest breadth is 1¼ mile; and its

area is only 1,152 imperial acres. The surface seems, on a hasty survey, to be a perfect level, but really consists of two smaller esplanades and a larger one, respectively about 3, 9, and 14 feet above the level of the Tay, and of a slow swell whose ridgy summit has an altitude above the Tay of about 60 feet. The district lies opposite the mouth of the Earn, where the Carse of Gowrie expands in the full breadth and blush of its beauty, and becomes, with the intervention of the Tay, ¾ of a mile broad—the continuation eastward of the fine valley of Strathearn. The soil, toward the river, is a deep strong clay, and, on the higher grounds, a rich brown loam. Excepting about 30 acres disposed in plantation, and about 60 laid out in permanent pasture, the whole area is constantly in tillage. A quarry of sandstone similar to that of Clashbennie, in Errol, is worked at Cotton. Near the eastern boundary is a stone of some historical note, called 'the Hawk's stane,' and referred to in our article Luncarty; and in the churchyard is an elaborately sculptured and very beautiful Runic monument. Pitfour-castle, the residence of Sir John Stuart Richardson, Bart., the sole heritor of the parish, is a spacious quadrangular edifice, surmounting an artificial terrace, and environed by tastefully ornamented pleasure-grounds. The parish is traversed by the road from Perth to Dundee, and by the Perth and Dundee railway, and has ready access to the Glencarse railway station. A pier and shore-house, of much utility for shipping, were erected in 1832. The yearly value of the raw produce of the parish, including £1,500 for fishings, was estimated in 1839 at £9,720. Assessed property in 1843, £4,182 7s. 2d. Population in 1831, 327; in 1851, 288. Houses, 67.

This parish is in the presbytery of Perth, and synod of Perth and Stirling. Patron, Sir John S. Richardson, Bart. Stipend, £218 16s. 4d.; glebe, £80. Unappropriated teinds, £89 19s. 1d. Schoolmaster's salary, £34 4s. 4½d., with £10 fees, and £4 10s. other emoluments. The parish church was built in 1798, and contains 410 sittings. There is a public religious library. The original name of the parish is presumed to have been St. Madoch or Madox, and appears to have been derived from the same Culdee evangelist as Kilmadock. And while corrupted, in literary usage, into St. Madoes, it has been still more strangely corrupted, in the ordinary pronunciation of the inhabitants, into Semmiedores. An old ballad mentions—

"The stannin' stanes o' Semmiedores."

MADRANY (The). See Machony (The).

MADRUMBEAGH. See Fortingall.

MAEDIE (Loch), a lake on the mutual border of Edderachillis, Tongue, and Farr, Sutherlandshire. It measures about 6 miles in circumference. Its margin is remarkably diversified with little bays and promontories, and its bosom is studded with bushy islets. The stream which carries off its superfluence flows eastward to Loch-Naver.

MAGBIEHILL. See Newlands.

MAGDALENE-BRIDGE. See Duddingstone.

MAGDALENE-PANS. See Inveresk.

MAGHAIG. See Machaig.

MAGNUS (St.). See Kirkwall.

MAGNUS-BAY (St.), a spacious bay on the west coast of the mainland of Shetland. It measures 8½ miles at the entrance, expands to 11 miles, and indents the land to the depth of 7 miles. It enters between the headland of Eshaness on the north, and that of Sandness on the south; but has in its mouth, half-a-mile from the latter, the island of Papa-Stour; so that it is reduced at the entrance to an open channel of only 6 miles broad. Around its inner verge are the islets of Vemantrey, Mickle Roe, Little Papa, and Linga, besides various holms and skerries; and projecting from it into the land are various bays or voes, which contain safe and excellent anchorage for any number of vessels, of any burthen,—particularly Hillswick, Olna frith voe, Gron frith voe, and Unzie frith.

MAGUS-MOOR, a district on the western skirts of the parish of St. Andrews, and the eastern of Ceres parish, Fifeshire, formerly wild and bleak, but now in great part tamed of its savage and sterile aspect by the culture of the plough. It is celebrated in history as having been the scene of the murder of Archbishop Sharp, on the 3d of May, 1679. The spot where, according to tradition, the 'rude deed' was done, is about 4 miles from St. Andrews, on the lands of Strathkinness, the property of Mr. White Melville, where there is a stone erected to the memory of some of the Covenanters who, having been taken at Bothwell-bridge, were brought here and executed.

MAICH (The), a rivulet of Renfrewshire and Ayrshire. It rises on the south-west border of the parish of Lochwinnoch, on the south-east skirt of Mistylaw, and runs 5 miles south-eastward, chiefly on the boundary between Renfrewshire and Ayrshire, to the north end of Kilbirnie-loch. It is a lonely, moorland stream, traversing a deep channel, but occasionally fringed with copsewood.

MAIDEN-CASTLE. See Kennoway, Campsie, and Falkirk.

MAIDEN-CASTLE CAVE. See Vigean's (St.).

MAIDEN-CAUSEWAY, an ancient line of road, proceeding from Bennochie into the woods of Pitodrie, in Aberdeenshire. It is paved with stones, and about 14 feet wide, and has every appearance of having been a vicinal way of the Romans.

MAIDENKIRK. See Kirkmaiden.

MAIDEN-PAP, a mountain in the parish of Latheron, Caithness-shire. It flanks the south side of Berriedale-water immediately east of Morven, and has an altitude of nearly 2,000 feet above the level of the sea.

MAIDENS, a village in the parish of Kirkoswald, Ayrshire.

MAIDEN-SKERRY. See Northmaven.

MAIDEN-STONE. See Andrew's (St.).

MAIN (The). See Luce (The).

MAINLAND OF ORKNEY. See Pomona.

MAINLAND OF SHETLAND, the largest of the Shetland islands, comprehending about one-half of their area, and the larger part of their population. It extends nearly due north, in a long ragged band of territory, from Sumburgh-head in north latitude 59° 52′ 18″, to Fethaland point in latitude 60° 38′ 20″. Its length is usually computed at 60 miles, and occasionally exaggerated to 90 or even upwards of 100; but does not seem, as measured in a straight line, to exceed 56. Its breadth, over 1 miles from Sumburgh-head, never exceeds 4½ miles and probably does not quite average 3; over the same distance, from Fethaland point, it is exceedingly various, but seems to average about 4½ miles and over the intermediate distance it gradually swells out from the ends, and then bursts suddenly out in the middle to an extreme measurement, from Railsburghness on the east to Sandness on the west, of 20¾ miles. But all the way round, and especially in the central and chief district, the island is so constantly and whimsically indented by projections of the sea, as to have an utterly indescribable outline, and to be, in nearly all practical respects, a numerous cluster of islets. Seen from its loftiest ground, Rona's hill, a bold height in the

parish of Northmaven, which commands a view of the entire archipelago, it is altogether undistinguishable as a single island, and appears as if cut to pieces, by its very numerous and deeply indenting friths and coes, into community of character with the smaller islands which hang upon its flanks. Only one spot on the whole mainland is more than 2 miles distant from either a limb or the body of the sea, and even it is distant not 2½ miles; and greatly the larger part of the area lies within 1 mile of some beach. At one point, called Mavis-Grind, between the parishes of Northmaven and Delting, only an isthmus of 100 yards, most of which is overflown by spring-tides, prevents the island from being quite bisected; and at several other points, isthmuses are not very much broader. Excepting Fair Isle, situated midway to Orkney, Mainland contains, in Sumburgh-head, the most southerly land in Shetland. As to surface, geognostic character, statistics, and nearly all the details of a topographical notice, this island so extensively identifies itself with the whole group that information respecting it claims to be arranged under the article SHETLAND. Its parishes, though in most instances including adjacent minor islands, are Dunrossness, Lerwick, Sandsting, Tingwall, Walls, Delting, Nesting, and Northmaven.

MAINS. See KILMARNOCK and KILBRIDE (EAST).

MAINS AND STRATHMARTINE, two parishes politically united to each other, and lying mutually contiguous, Mains on the east and Strathmartine on the west, near the south-western extremity of Forfarshire. Strathmartine contains the villages of Baldovan and Kirkton; but both parishes lie in the vicinity of Dundee, and have that burgh for their post-town. The united parish is bounded by Tealing, Murroes, Dundee, Liff, and Auchterhouse. Its length east-south-eastward is 5¾ miles; and its greatest breadth is 3¼ miles. The parishes are nearly equal in extent. Mains is of very irregular outline, and Strathmartine is almost square. The surface of the united parish is a beautiful strath, rising gently on both sides from a line along the centre, to having heights of less than 400 feet above sea-level. All is enclosed with thorn-hedges, or agreeably shaded with trees; all, excepting about 140 acres of moor- and and rocky hillocks, and about 440 acres of plantation, is subject to the plough; and all abounds in the sweet and soft beauties of landscape. The soil comprises some alluvial or haugh ground, and elsewhere is, in general, a deep, fertile, black loam, superincumbent on gravel, clay, or rock. The strath is traversed from end to end, right along the middle, by Dighty-water, and long took from it the name of Strathdighty. Fithie-water forms the boundary-line for 3 miles on the north. A very copious and sweet spring, called Sinavey, bursts perennially from a rent in the face of a rock at the castle of Mains. Freestone abounds, and is extensively quarried. There are ten principal landowners; but the only mansions are Baldovan-house, belonging to Sir John Ogilvy, Bart., Balmure-house, belonging to Mr. Webster, and Strathmartine-house, belonging to Mr. Laird. The estimated value of raw produce in 1833 was £31,714. The value of assessed property in 1843 was £12,455. The real rental in 1855 was £13,689. Manufactures, similar to those of Dundee or subordinate to them, employ three-fourths of the population, and are conducted with the aid both of steam and of the water-power of the Dighty. Some of these establishments have occasioned the disappearance of lesser ones which, as they figured 65 years ago, presented numerically a more imposing array; for there were then no fewer than 33 mills of various sorts in Mains, and 10 in Strathmartine. Many of these, however, were very small concerns. The united parish is traversed by the road from Dundee to Forfar, and by the Dundee and Newtyle railway; and it has stations on the latter at Baldovan and Baldragon. Population of Mains in 1831, 1,156; in 1851, 1,299. Houses, 235. Population of Strathmartine in 1831, 855; in 1851, 735. Houses, 123.

Mains was anciently called Mains of Fintry, from Fintry-castle, the most conspicuous of its architectural objects. This castle, along with most of the property of the parish, belonged for centuries to the Grahams of Fintry, who acquired it by intermarriage with the noble house of Angus. See FINTRY-CASTLE. The best known of these Grahams was the fierce Claverhouse, Viscount Dundee, the persecutor of the Covenanters; and one of the latest was Robert Graham, the friend of Burns, and a distinguished patron of agricultural and mechanical enterprize. The mansion of Claverhouse, in which Viscount Dundee resided, stood on the Mains property; and there was erected on its site, a few years ago, a monumental edifice in the form of a ruin. Whatever was the connexion of the two leading Graham families, the Claverhouse branch was probably the elder, for the superiority of both estates went with that of Claverhouse to Lord Douglas, by whom it is still held. Their armorial bearing was the same; the spelling of the name was different. The last of the Claverhouse branch, by male descent, was Alexander Grahame, Esq., of Duntrune, who died about the beginning of this century, leaving his name, arms, and two-thirds of his property, to his nephew William Stirling Grahame, Esq. Strathmartine is believed to have acquired its name from an ancient local hero, whom a traditionary story narrates to have killed a dragon which had devoured nine maidens; and an ancient standing stone, supposed to be monumental of him, and situated on the north side of Strathmartine parish, still bears the designation of Martin's stone.

The united parish is in the presbytery of Dundee, and synod of Angus and Mearns. Patron, the Crown. Stipend, £217 8s. 4d.; glebe, £52. The two parishes were united in 1799; and each, at that time, had its own church. Mains church was very ancient, and had become ruinous; but Strathmartine church had been built so late as 1779. The present church of the united parish was built in 1800, and contains about 900 sittings. There is a Free church, with an attendance of about 190; and the amount of its receipts in 1856 was £138 14s. 10½d. There are two parochial schools, and the salary attached to each is £34 4s. 4½d. There are an endowed female school two female industrial schools, a Free church school, and an asylum for imbecile children,—the last a handsome building recently erected by Sir John and Lady Jane Ogilvy, and patronised by the Queen.

MAINS OF DAVIOT. See DAVIOT.

MAINS OF ERROL, a village in the parish of Errol, Perthshire. Population, 62. Houses, 12.

MAINS OF KENMURE. See GALLOWAY (NEW).

MAINSRIDDLE, a village in the east part of the parish of Colvend, Kirkcudbrightshire. Here is an United Presbyterian church.

MAINS-WATER. See EAGLESHAM.

MAISLEY. See KEITH.

MAISTERTON. See NEWBATTLE.

MAITLAND PANS. See INVERESK.

MAKERSTON, a parish, containing a post-office village of its own name, on the northern border of Roxburghshire. It is bounded by Berwickshire, and by Smailholm, Kelso, Roxburgh, and Maxton. Its length eastward is 3¼ miles; and its greatest breadth is 2½ miles. The river Tweed traces all its southern and south-eastern boundary. The parish is distant, at the nearest point, only 2½ mile from

Kelso, lies in the immediate vicinity of Fleurs and Roxburgh-castles, has a southern exposure along one of the finest parts of the Tweed, looks up the vale of the Teviot, and largely partakes the brilliant character of so noble a neighbourhood. The surface is a gently hanging plain, declining slowly from the northern boundary to the Tweed. The soil, in the south, is a rich loam superincumbent on sandstone or gravel, and, in the north, is a thin clay on a retentive bottom. Excepting about 80 acres of wood, the whole area is in tillage. Makerston-house, the seat of General Sir Thomas Makdougall Brisbane, Bart., the principal landowner, is an elegant residence, situated on the Tweed, surrounded with fine old woods, and commanding a very beautiful prospect up the Teviot. The estimated value of the raw produce of the parish in 1834 was £10,423. Assessed property in 1843, £3,729 5s. 8d. The northern part of the parish is traversed by the road from Kelso to Edinburgh. The village of Makerston is a small place on the Tweed, 5 miles west-south-west of Kelso. Population of the parish in 1831, 326; in 1851, 345. Houses, 62.

This parish is in the presbytery of Kelso, and synod of Merse and Teviotdale. Patron, the Duke of Roxburgh. Stipend, £239 17s. 6d.; glebe, £25. Unappropriated teinds, £329 12s. 7d. Schoolmaster's salary, £34 4s. 4½d., with £28 fees, and £37 other emoluments. The parish church was built in 1807, and contains about 200 sittings. There is a Free church, with an attendance of 60; and the amount of its receipts in 1856 was £94 10s. 2½d. The manor of Makerston belonged, at the middle of the 12th century, to Walter Corbet, who gave the church and a carrucate of land to the monks of Kelso; and before 1220, it passed, by marriage with Christiana Corbet, into the possession of William, the son of Patrick, Earl of Dunbar. The monks of Kelso, trying to be liberal to the grandchild of their benefactor, granted of their free-will to Christiana and her husband permission to hold religious services in the chapel of their own manor; and for this magnanimous feat they were rewarded by a release of all claims which the parties might have on their estates.

MALCOLM'S TOWER. See DUNFERMLINE.

MALHORN. See TROQUEER.

MALLENY. See CURRIE.

MALLOM. See KEITH.

MALLORE, a mountain range, extending from north-east to south-west, in the parish of Muckairn, Argyleshire. Its loftiest eminences have an altitude of about 1,100 feet above sea-level.

MALZIE-WATER, a rivulet of Wigtonshire. It carries off the superfluent waters of six contiguous lakes, two of them of considerable extent, in the parish of Mochrum, and runs 6 miles southward, but chiefly eastward, in that parish and in Kirkinner, to the Bladenoch, ¾ of a mile above Torhouse.

MAMORE. See ELLANMUNDE.

MANAR-HILL. See INVERURY.

MANBANE-MOUNTAIN. See GARRY (THE).

MANDERSTON. See DUNSE.

MANGASTER-VOE, a bay on the west side of the parish of Northmaven, in Shetland.

MANGERTON, an old strength on the east bank of the Liddel, about a mile south of New Castleton, in the parish of Castleton, Roxburghshire. It was the chief seat of the warlike Border clan, the Armstrongs. See CASTLETON.

MANNER. See MANOR.

MANNERSTON. See LINLITHGOWSHIRE.

MANNOCH. See KNOCKANDO.

MANOR, or MANNER, a parish, containing a post-office station of its own name, in Peebles-shire. It is bounded by Selkirkshire, and by Megget, Drummelzier, Stobo, and Peebles. Its length northward is 8¾ miles; and its breadth varies from 1 mile to 5¾ miles. The Tweed traces the boundary for 3¼ miles on the north-west and the north. Manor-water, rising close on the southern boundary, and uniformly pursuing a northerly course, traverses the parish for 6¼ miles nearly along the middle, and then runs wendingly 2¾ miles near or along the eastern boundary to the Tweed, 1¾ mile above the town of Peebles. About 16 streamlets, most of them tiny mountain-rills, and the chief of them Newholmhope-burn, Glenrath-burn, and Haddleshope-burn, not more each than 3¼ miles in length, come transversely down upon the Manor, ploughing their way along ravines and glens. The boundary-line, except over the northern narrow third of the parish, is formed by water-shedding mountain-ridges; and all the interior, except a narrow vale along the Manor, and some beautiful haugh-ground upon the Tweed, is strictly and wildly upland. Excepting two heights, one in the interior, and one on the boundary, all the elevations constitute an elliptical range, narrow on the south, broad along the sides, and shorn down into plain or cut away on the north. The acclivities are in general rapid; and toward the source of the Manor, or the head of its vale, they closely approach, and are mural and towering. Many of them are scarred, or, in local phrase, sclentered, and reflect the sun's rays with a brilliance which gives warmth to the tillage in the vale. All appear, at least wherever the rock looks out from the surface, to consist of greywacke, the strata running north and south, and dipping to the west; and on their higher acclivities are heathy, but on their sides and their lower acclivities are in general more or less grassy. The loftiest summit is DOLLAR-LAW: which see. Scrape, on the boundary with Drummelzier, has an elevation of 2,800 feet; and nearly all the summits rise from between 1,600 to 1,900 feet above sea-level. The valley grounds, the haughs, and the arable heights, amounting in the aggregate to about 1,700 acres, are drained, fully enclosed, and in excellent cultivation; and though carpeted with clay and loam of no great depth, are fertile to a degree surpassing theory in so bleak a region. Wood, in belts and clumps on the lower grounds, and in straggling detachments up the narrow basins of the minor streams, occupies an aggregate area of about 400 acres. There are seven principal landowners. The estimated value of raw produce in 1834, exclusive of live stock, was £3,722. Assessed property in 1843, £3,866 19s. 4d.

In the vale of the Manor, about 1¼ mile north of the church, between two mountainous and boldly ascending heights, and in the midst of a morass, is a British or Danish camp. On an acclivitous conical height called Chesters, a mile distant, are fortifications of loose stones from 26 to 32 feet wide, with an exterior elliptical wall upwards of 650 feet in circumference, usually pronounced Roman on the evidence chiefly of the name of their site, and in defiance of that furnished by their form. Coins not long ago found in or near the fortifications were English, and some of them comparatively modern; yet others reported to have been formerly found in it were — hastily perhaps — pronounced Roman. Castles, towers, and peel-houses—or buildings of one or other of these classes according to the power and resources of the proprietors—were anciently so numerous in the parish as to prove it one of the most stirring arenas of the Border feuds and forays. They stood in sight of each other, crowned with means of raising alarm fires, and formed at once individual fortalices able to resist attacks, and

chain of beacons sending suddenly up at need signals of fire by night and of smoke by day. Connected with these and other memorials of a freebooting age, is the remarkable path called the THIEF ROAD: which see. On the summit of Woodhill, an eminence rising in the midst of a plain, there is, says Armstrong, "some appearance of a building called Macbeth's castle, but probably a place for the worship of the Druids to the heathen god Woden (!)" "Standing-stone," says the same writer, "is a large rude monument which, from its situation on Bellum or War-rig, may have been erected to commemorate some remarkable event. From the appearance of the impression of several horses' feet having been cut on the stone, it is thought to have been the site of a fair." But the object in the parish which now excites the greatest interest is the cottage of 'the Black dwarf,' situated on Woodhouse farm in the vale of the Manor. The deformed and eccentric creature, David Ritchie by name, built the cottage and garden walls, lived as a recluse in the cottage, and was buried in Manor churchyard. Sir Walter Scott became acquainted with him, and had opportunities of marking those physical and moral features which are so boldly limned in his tale, while on visits to Professor Ferguson at his mansion of Hallyards. A monument to the memory of David Ritchie was erected in Manor churchyard, in 1845, by Messrs. W. & R. Chambers. The parish possesses pretty good facility of communication in its nearness to the town of Peebles. Population in 1831, 254; in 1851, 256. Houses, 40.

This parish is in the presbytery of Peebles, and synod of Lothian and Tweeddale. Patron, the Earl of Wemyss. Stipend, £175 5s. 8d.; glebe, £42. Schoolmaster's salary, £34, with £16 fees, and about £5 other emoluments. Manor was anciently a mere chaplainry, under the rectory of Peebles, and formed jointly with it the prebend of the archdeacon of Glasgow. The present parish-church, situated on the Manor 1¼ mile above its confluence with the Tweed, was built about the middle of the 17th century, and contains 200 sittings. Its predecessor, the place of worship of the chaplainry, seems to have stood at Manorton, 1¾ mile farther up the river. A chapel dedicated to St. Gordian, who was martyred by Julian the apostate, and whose fame seems to have travelled in some unusual way to the recesses of Tweeddale, anciently stood in the vale of Newhope-burn, 4 miles south of Manorton, and is commemorated by some slight vestiges. Not far south-west of the present parish-church is a pedestal called 'the font stone,' which of old supported the font of Manor chapel.

MANSFIELD, an estate and a village in the parish of New Cumnock, Ayrshire. The estate was purchased by the distinguished agricultural improver, Sir Charles G. S. Menteath, Bart., of Closeburn, and underwent great improvement at his hands. It possesses much mineral wealth in coal and limestone, which Sir Charles turned to vigorous account by mining operations and by railway transit. The estate now belongs to Sir James S. Menteath, Bart. The village stands in the vicinity of New Cumnock. Population, 122.

MANSLAUGHTER-LAW. See CRANSHAWS and HAMMERMOORS.

MANUEL. See EMANUEL.

MANXMAN'S LAKE. See KIRKCUDBRIGHT.

MAR. See MARR.

MAR-BURN. See MAAR-BURN.

MARCH. See MERSE.

MARCHFARM, a village in the parish of Kirkbiner, Wigtonshire. Population, 61. Houses, 12.

MARCH-GILL, a ravine, traversed by a rivulet, on the mutual border of the parishes of Lanark and Carluke, Lanarkshire.

MARCHMONT. See GREENLAW and KELSO.

MARCHTOWN. See STRATHBUNGO.

MAREE (LOCH), a magnificent lake in the parish of Gairloch, Ross-shire. It commences about 8 miles west of the grand watershed of the kingdom, and extends about 18 miles north-westward, with a breadth of from 1 mile to 3 miles. It is fed by innumerable mountain streams; and it sends off its superfluence north-westward, in the river Ewe, to the head of Loch-Ewe. Mountains everywhere overlook it, of great height and of beautifully characterized contour, so that its shores present an inexhaustible variety of the most romantic and interesting scenery. The most remarkable are Sliabhach, or the High mountain, the File mountain, Benlair, Benbharchan, and Craegtolly. Sliabhach, in the Greinord, is said to be upwards of 3,000 feet in height, and from it Lewis, with the town and bay of Stornoway, can be distinctly seen. The effect of this superb mountain, seen at once from its base to its summit, is, perhaps, more striking than that of any mountain in the Highlands. The File mountain, which is on the opposite side of the lake from Sliabhach, is exceedingly remarkable. It seems to be composed of quartz rock, and entirely destitute of verdure; but nothing can be more striking than the effect of sunshine upon its different pointed, rocky, and nearly inaccessible summits. At the western extremity, Benlair is a principal feature in the landscape—graceful, solid, broad; and where its skirts descend steep into the water, the scenes are peculiarly original and grand. The northern margin of Loch-Maree presents a great variety of close scenery, consisting of rocky and wooded bays, and creeks rising into noble overhanging cliffs and mountains; here also are displayed some of the finest general views of the lake. But there is one portion of the margin of the lake so peculiar as to deserve the most minute description, and that of Dr. M'Culloch is so vivid and so true, that we cannot refrain from extracting it: "In one place in particular, the remains of a fir forest, in a situation almost incredible, produce a style of landscape that might be expected in the Alps, but not among the more confined scope and tamer arrangements of Scottish mountains. Immediately from the water's edge, a lofty range of gray cliffs rise to a great height; so steep as almost to seem perpendicular, but varied by fissures and by projections covered with grass and wild plants. Wherever it is possible for a tree to take root, there firs of ancient and noble growth, and of the most wild and beautiful forms, are seen rising above each other, so that the top of one often covers the root of the succeeding, or else is thrown out horizontally in various fantastic and picturesque modes. Now and then some one more wild and strange than the others, or some shivered trunk or fallen tree, serves to vary the aspect of this strange forest, marking also the lapse of ages, and the force of the winter storms which they have so long braved."

The bosom of Loch-Maree is ornamented by islands of varied size and appearance. They are about twenty-seven in number, and lie chiefly in a cluster on the middle of the lake, at which place it has its greatest breadth. The largest of these are Ealan-Sooin, Ealan-Maree, Ealan-Rorymore, and Ealan-Rorybeg. Ealan-Sooin, or St. Swithin's Isle, contains a surface of about 30 acres of ground, heathy, with a small lake and a few fir-trees. Ealan-Rorymore was planted with firs about 40 years ago; and Ealan-Maree is beautifully wooded with every variety of timber. The lake is supposed

to have had at one time a much lower level than it has at present; and it is thought that this has been occasioned by the accumulation of sand and gravel at the lower end, by which the water was dammed in. Indeed there is some reason to think, that Loch-Maree and Loch-Ewe originally formed one lake, under the name of Loch-Ewe, as the village at the head of Loch-Maree is named Cean-Loch-Ewe, or 'the Head of Loch-Ewe.' The name of Loch-Maree, in the present form of the lake, was derived from Ealan-Maree, which tradition affirms to have been dedicated to the Virgin Mary, and which contains a burying-ground, and has a sacred well. Various traditionary tales are told respecting this island, showing it to have figured largely in the historical and superstitious beliefs of the former inhabitants of the surrounding country. Ealan-Rorymore was anciently inhabited by John Roy, the grandson of Hector Roy, who was the first of the present family of MacKenzie of Gairloch. He occupied it as a place of security for his family, from the attacks of the M'Leods, who having been driven from the possession of the surrounding lands by Hector Roy, frequently afterwards endeavoured to regain their ancient domains. This island was afterwards inhabited by Alexander, or Allister, the son of John Roy, who is still talked of in tradition as a man of great valour and wisdom. The M'Leods had anciently a castle on Loch-Tolly, a small lake near Loch-Maree. In this castle, a sister of Hector Roy, who was married to a M'Leod, and two of her sons, were savagely murdered by their younger brother, who took possession of the lands. Hector Roy obtained letters of fire and sword against the murderer and his adherents, drove them from the lands, took possession of them himself; and the shores of Loch-Maree and Gairloch have ever since been the property of his descendants.

MAREG, a land-locked bay, in Loch-Seaforth, in the island of Lewis. See Seaforth (Loch).

MARESTONE, a village in the parishes of Rescobie and Aberlemno, Forfarshire. Population, 26. Houses, 7.

MARGARET'S HOPE (St.), a harbour and a post-office village in the island of South Ronaldshay, Orkney. The harbour is a small bay, projecting into the middle of the north coast of the island, and opening into the sound which separates South Ronaldshay from Burray. It is one of the safest and best harbours for small vessels in the kingdom. A fishery here, which drew regular visits from London lobster smacks, and engaged the capital of different English companies, was, for many years, the only regular fishery in Orkney. The village stands at the head of the harbour, and is the seat of an industrious population, chiefly engaged in fisheries. It has one of the best inns in the south of Orkney, and is a prominent link in the chain of mail communication between Orkney and the mainland. Population, 260. Houses, 38.

MARGARET'S-LAW. See Largs.

MARK (The). See Esk (The North), Forfarshire.

MARKET-KNOWE. See Longforgan.

MARKIE (The), a rivulet, rising on the east side of the eastern screen of Glenfiddich, traversing a wing of the parish of Mortlach, and running into the Deveron near the house of Edenglassie, in Banffshire.

MARKIE (The), a small mountain affluent of the Spey, in the parish of Laggan, Inverness-shire.

MARKINCH, a parish, comprising a main body and a detached section, in the Kirkcaldy district of Fifeshire. It contains the post-office villages of Markinch, Balgonie, Thornton, and Windygates, the villages of Woodside, Inverleven, Balcurrie, Haughmill, and Burns, and part of the village of Star. The main body is bounded by Kettle, Kennoway, Wemyss, Dysart, Kinglassie, and Falkland. The detached section lies 1¼ mile east of the nearest part of the main body, and is situated on the frith of Forth, and on the right bank of the river Leven, between Wemyss and Scoonie. The entire parish measures about 7 miles in length from north to south, and from 2 to 5 miles in breadth from east to west. "Its general aspect is varied and picturesque. From the Lomond hills, as a background on the north, it slopes gently towards the south and east. The parish is intersected by four fertile valleys, watered by as many streams, which unite towards the eastern extremity. The valleys are separated by corresponding ridges of low hills; each chain rising gradually above the other in the direction of the summit-level. Nor are thriving and extensive plantations wanting to heighten the natural beauties of the landscape,—and the varied succession of hill and dale. The proportion of wood is considerable; and being principally of the ornamental kind, and in the vicinity of gentlemen's seats and villas, it is so disposed as to produce the most favourable effect." The rocks are of the coal formation, with protrusions of trap, and accumulations of diluvium. Coal is very extensively worked. Ironstone abounds, and was for some time worked on the spot, and afterwards exported to the Tyne for smelting. There are nineteen landowners; and ten of them are resident. The value of assessed property in 1843 was £16,080 15s. 9d. Manufactures have been much incited by local facilities, and are extensive and various. There are paper-mills at Rothes, Auchmuty, and Balbirnie; a woollen factory at Balbirnie; flax spinning mills at Scythrum, Thornton, Milton of Balgonie, and Haugh; bleachfields at Rothes, Lochty, Balgonie, and Haugh; and a distillery at Cameron-Bridge. The weaving of linens also is an extensive employment. The parish is traversed by the Edinburgh, Perth, and Dundee railway; it contains, at Thornton, 18½ miles from Edinburgh, the junctions with that railway of the branches westward to Dunfermline and eastward to Leven; and has also, at 21 miles from Edinburgh, and at 11 from Cupar, a station for Markinch. Population in 1831, 4,967; in 1851, 5,843. Houses, 1,047.

One of the principal objects of antiquarian interest in the parish is Balgonie castle. The buildings are obviously of different ages; but the castle was lately in repair, and formed one of the residences of the Earl of Leven within the last seventy years. The great tower is the most ancient, and was probably erected about the 14th or 15th century. It is situated on the banks of the Leven, about 36 feet above the bed of the stream. It is 80 feet high, with a battlement at the top, and is 45 feet in length, by 36 in breadth, over the walls. The walls of the two lower stories, which are arched with stone, are 8 feet thick. The remaining buildings form an extensive quadrangle, enclosing a court; and a portion of them are said to have been erected by the first Earl of Leven.—The house of Balfour is remarkable, as containing an original portrait of the well-known Cardinal Bethune, and another of Mary Bethune, one of the Queen's four Marys. At Brunton an ancient tower at one time existed, said to have been the remains of a residence of the Earls of Fife; and from it, it is alleged, in popular tradition, there was a subterraneous passage to the Maiden-castle in the neighbouring parish of Kennoway.—At Bandon there are also the

ruins of an ancient tower, and at Kirkforthar the remains of a chapel which once existed here, but was suppressed previous to the Reformation.—Of antiquities of a more ancient date, in all probability, than any of these, may be mentioned an ancient cross, which stands on a rising ground to the north of the village of Markinch, and near the garden entrance to Balbirnie. It is a broad slab about 7 feet high, but without any carving, so far as can now be discovered. Immediately east of this cross, and on the opposite side of the public highway, is a small hill of an oblong shape, about 200 yards in length, called Markinch-hill. It is remarkable from the circumstance of its northern declivity presenting six regular terraces at different heights, about 20 feet broad, and extending the whole length of the hill. Formerly these terraces were to be seen on entering Markinch from the north; but the hill was planted by the late General Balfour, and the terraces, consequently, in a great measure, concealed. They are obviously artificial; but the purpose for which they were intended is not so plain. Colonel Miller thinks this hill was a Roman station, and that by the Romans the terraces were constructed; others think that games were anciently held in the low ground to the north, and that the terraces were made for the convenience of the spectators. The fact of the low ground, and also of that which surrounds the hill on which the church of Markinch stands, having been anciently a marsh, would seem to be inconsistent with this idea. Stone-coffins, or cistvaens, containing calcined bones, have been found in the parish.

This parish is in the presbytery of Kirkcaldy, and synod of Fife. Patron, the Crown. Stipend, £284 4s.; glebe, £30. Unappropriated teinds, £719 5s. 1d. Schoolmaster's salary, £34 4s. 4½d., with £70 fees, and £17 10s. other emoluments. The parish church was enlarged and partly rebuilt in 1806, and contains 1,050 sittings. There are two chapels of ease, respectively at Thornton and at Milton of Balgonie, both built at the church extension epoch, and both under the patronage of the male communicants. The one at Thornton contains upwards of 400 sittings; and the one at Milton contains 650. There is a Free church at Markinch, whose receipts in 1856 amounted to £311 3s. 8½d. There are two United Presbyterian churches, respectively at Markinch and at Inverleven, the former with an attendance of 300, the latter with 175. There are nine non-parochial schools; and two of them receive extraneous aid. The original church of Markinch was founded by the Culdees; and it afterwards figures in very early records. Hugo, the ancestor of the family of Wemyss, the second son of Gillimichael, fourth Earl of Fife, conferred the church of Markinch with a toft, and the teinds belonging to the same, upon the canons of St. Andrews, which was confirmed by his son Hugo, previous to 1171. The tower of the present church is of great antiquity, though certainly not by any means of that age which has been attributed to it, that of the 9th or 10th century; though we should be inclined to assign it to the 14th or 15th century. The spire, however, which surmounts it, is of comparatively modern erection.

The Village of Markinch stands on the road from Leven to Kinross, and near that from Kirkcaldy to Cupar, about ½ a-mile north of the river Leven, 3 miles east of Leslie, 5 east by north of Leven, and 7 north of Kirkcaldy. Its site is the summit and slopes of a gentle eminence, which was anciently surrounded by water, and more recently by a deep morass. The eminence appears to have been still an island when the original church was founded upon it; and, the whole country exterior to the zone of water being then covered with dense forest, the island was an "island of the forest;" and such is the meaning of the word Markinch, *mark* being the Norse word for "forest," and *inch* the word for "island." The morass was long ago drained, and is now in many parts covered with buildings, but can still be distinctly traced throughout its original extent. The southern part of the eminence within it is the site of the church, and has a knolly form; the northern part is Markinch hill, which has been noticed in our account of the parish; and the part between these, and connecting them, is a sloping ridge along the summit and sides of which the primitive habitations were constructed. But since the draining of the morass, the village has extended itself on all sides. The inhabitants share largely in the general industry of the parish. The village is lighted with gas, and has a branch office of the Commercial bank. Fairs are held on the second Tuesday of February, on the last Tuesday of March, on the second Tuesday of May, on the second Friday of October, and on the third Tuesday of December. Population, about 1,400.

MARLEE. See Kinloch.

MARLEFIELD. See Eckford.

MARNOCH, a parish, containing the post-office village of Aberchirder, in the north-east of Banffshire. It is bounded for about 1½ mile on the east by Aberdeenshire, and on other sides by the parishes of Inverkeithnie, Rothiemay, Grange, Ordiquhill, Boyndie, Banff, Alvah, and Forglen. Its length south-eastward is about 8 miles; and its greatest breadth is about 5 miles. The river Deveron traces the southern and south-eastern boundary for about 6 miles, measured in a straight line, but wends so sinuously as to achieve at least twice that distance along its bed; and numerous burns run southward to that stream, along little vales which pleasingly diversify the interior of the parish. The general surface may be reckoned comparatively champagne; but has strathlets and hollows along the course of the streams, and is considerably diversified in the middle, and on the north-east and west borders, by rising-grounds and hills. The soil varies from a rich loam to clay and moorland. On the banks of the Deveron the land is very fine and generally arable. There are extensive and beautiful plantations; and the district is well-cultivated, even the hilly tracts upon its borders being subject to the plough almost to their summits. Granite is the predominant rock, and is extensively quarried. Limestone also occurs, and was formerly worked. There are eleven principal landowners. The rent of the arable land is generally from 18s. to £1 2s. per acre, but falls so low in some places as 12s. and rises so high in others as £3. There is a considerable extent of moss, part of which is used for cutting peats. The value of assessed property in 1856 was £9,545 19s. 6d. The principal mansions are Auchintoul, Netherdale, Ardmellie, and Cluny. The principal antiquities are the ancient tower-looking mansion of Kinardy-castle on the Deveron, belonging to the Earl of Fife, and the old castle of Crombie on the west side of the parish, belonging to the Earl of Seafield. The parish is traversed by the road from Banff to Huntly, and by that from Portsoy to Turriff. Population in 1831, 2,426; in 1851, 2,994. Houses, 651.

This parish is in the presbytery of Strathbogie, and synod of Moray. Patron, the Earl of Fife. Stipend, £242 12s. 2d.; glebe, £15. Unappropriated teinds, £363 4s. 4d. Schoolmaster's salary, £34 4s. 4½d., with about £35 fees, and £53 other emoluments. The parish church is a plain modern edifice, containing 900 sittings. There is a Free church, a very

handsome edifice, built at the cost of upwards of £2,000, and containing about 1,000 sittings; and the amount of its receipts in 1856 was £379 6s. 2d. There are also an United Presbyterian church, a Baptist chapel, an Episcopalian chapel, and a Roman Catholic chapel. There are nine non-parochial schools, and a large parochial library. Marnoch is famous for its connexion with one of the stiffest of the contests under the veto act which led to the formation of the Free church. The parish has its name from the same saint as Kilmarnock and Kilmaronock.

MARR, or Mar, an ancient district of Aberdeenshire. It lies in the south-western quarter of the county, principally between the Dee and the Don. It comprises the subdivisions of Braemar, or the mountainous district, Midmar, or the district immediately east of Braemar, and Cromar, or the lowland and well-cultivated district. It is not now one of the recognised political divisions of the county. But it still gives the title of Earl to the ancient family of Erskine. The origin of this earldom is lost in antiquity. In 1065, Martacus, Earl of Marr, was witness to a charter of Malcolm Canmore in favour of the Culdees of Loch-Leven. The first historical notice of the Erskines is one of the 13th century, when the heads of the family were only Lords Erskine. In 1436, James II. created or confirmed Thomas, the ninth Lord, Earl of Marr; but the earldom was forfeited by John, the eleventh Earl, who took part as leader in the insurrection of 1715; after which it remained in abeyance till 1824, when it was restored by act of parliament in the person of John Francis Erskine, a lineal descendant of the family. No part of this district belongs to the Earls of Marr. Marr lodge, on the Dee, about 2 miles below the linn of Dee, is a commodious hunting-seat of the Earl of Fife.

MARSCO, one of the Cuchullin mountains in the parish of Strath, in the island of Skye.

MARTIN, a small inhabited island in the parish of Lochbroom, and county of Cromarty. It lies in the frith or elongated bay of Lochbroom, 4 miles north-north-west of the village of Ullapool, and is separated from the coast of the district of Coigach by a channel of little more than half-a-mile in breadth. The island measures about 5 miles in circumference.

MARTINHAM (Loch), a lake in the parishes of Coylston and Dalrymple, chiefly in the former, in the district of Kyle, Ayrshire. It stretches from north-east to south-west, in a stripe 1½ mile in length, and 1 furlong in mean breadth. From Loch-Fergus, a smaller lake lying half-a-mile to the north-west, it receives one stream, and at its own north-eastern extremity it receives another; and it sends off its superfluence at its other end, in a stream 2½ miles long, to the Doon, near Dalrymple church. Its waters abound in pike, perch, and eel, and are frequented by wild geese, wild duck, the teal, and the widgeon. On the bosom of the lake is a completely wooded islet; amidst its woods are the ruins of an ancient manor-house, 100 feet long, and 30 wide; and both the ruined walls and the trees which surround them are thickly overrun with ivy. On a graceful low promontory on the north-west side of the lake, stands Martinham-lodge; and here and elsewhere the banks are beautifully sylvan.

MARTINS (St.). See Logiepert.

MARTINS (St.), Haddingtonshire. See Haddington.

MARTINS (St.), Ross-shire. See Kirkmichael.

MARTINS (St.), a parish in the Strathmore district of Perthshire. It contains the post-office village of Guildtown and the village of Caroline-place; and also adjoins the post-town of Balbeggie. It is bounded by Cargill, Collace, a detached section of Forfarshire, Kilspindie, Kinnoul, Scone, Redgorton and Auchtergaven. Its length eastward is 5⅝ miles and its breadth varies from 1¾ mile to 4¼ miles. The river Tay traces its boundary for 2¼ miles on the west. The surface of the parish, though neither hilly nor the reverse, rises considerably above the level of the Tay, and is much diversified by troughs rising grounds, and undulations. Plantations are extensive enough to give a warm appearance to the interior; copse-woods fringe and feather the edge of the Tay; and enclosures and culture spread neatness over the whole area. The soil in general is a black mould on till, but very much improved; and toward the river it is naturally good and fertile. Freestone everywhere abounds, and is extensively quarried. The other chief minerals are limestone and rock marl. Vestiges are still distinct of a Roman road leading from the ancient Bertha eastward, past Berry hills, Ditchmuir, and Byres toward the parish of Cargill. Several Druidical temples are observable. But the most interesting antiquity is a circular elevated spot, with ancient remains, known among the people of the surrounding country as Macbeth's castle, and noticed in our article on Cairnbeddie. There are seven landowners, and the most extensive of them is Macdonald of St. Martins. The house of St. Martins is a fine modern mansion. The real rental in 1856 was £7,076 15s. 3d. Assessed property in 1843, £5,804 18s. 3d. A considerable number of the parishioners are employed in the coarse linen manufacture. The parish is traversed by the road from Perth to Blairgowrie and Cupar Angus; and it has near access, across the Tay, to the Luncarty and Stanley stations of the Scottish Midland railway. Population in 1831, 1,135; in 1851, 983. Houses, 119.

This parish is in the presbytery of Perth, and synod of Perth and Stirling. Patron, the Crown. Stipend, £248 17s. 8d.; glebe, £22. Unappropriated teinds, £8 5s. 6d. Schoolmaster's salary, £34 4s 4½d., with about £15 fees, and £16 other emoluments. The parish church is a handsome edifice, built in 1842, and containing very ample accommodation. There is a subscription school. A branch savings bank was established, but has become extinct. The present parish of St. Martins comprehends the ancient parishes of St. Martins and Cambusmichael united upwards of 160 years ago. The church of St. Martins became that of the united parish, and anciently lay within the diocese of Dunkeld, and was a mensal church of the abbey of Holyrood. The church of Cambusmichael—still indicated by its ruins beside the Tay, on a low plain of the carse which the Gaelic language calls 'Cambus'—ancient was included in the diocese of St. Andrews, and belonged to the abbacy of Scone. A small chapel stood beside it within the limits of the cemetery.

MARTIN'S STONE. See Mains and Strat-martine.

MARTLE, or, according to local pronunciation, Markle, a hamlet in the parish of Athelstaneford, Haddingtonshire. It is 4½ miles north-east of Haddington. According to Buchanan it was ancient called Miracle, from a miraculous incident which he relates concerning a battle fought here: see Athelstaneford.

MARTYR'S. See Glasgow.

MARTYR'S BAY. See Iona.

MARYBURGH, a small village in the parish of Cleish, Kinross-shire. It stands on the road between Perth and North Queensferry, 4 miles south of Kinross, and 7½ north-east of Dunfermline. Population, 39. Houses, 9.

MARYBURGH, a village in the parish of Fodderty, Ross-shire. It stands on the west road fr

Inverness to Tain, 1¾ mile south of Dingwall. It is of comparatively recent formation, and partakes the character of a new village, inhabited by crofters and mechanics. Here are a chapel of ease, a Free church, and two public schools. Population, 403. Houses, 99.

MARYBURGH, a town in the parish of Kilmalie, Inverness-shire It stands at the mouth of the rivers Lochy and Nevis, on the east side of the angle of Locheil, adjacent to the base of Ben-Nevis, and in the immediate vicinity of Fort-William; and, being intimately associated with Fort-William, both historically and as a seat of population, it has practically ceased to be known by its own name, and is now known in distant parts of the kingdom, and even, in a degree, in its own neighbourhood, by the name of Fort-William. The village and the fort originally bore the names respectively of Gordonsburgh and Inverlochy,—the former from being built on the property of the noble family of Gordon, and the latter from being situated at the embouchure of the Lochy; but, after the accession of the Orange family to the British throne, they assumed the names of Maryburgh and Fort-William, in honour of the consort-sovereigns. See FORT-WILLIAM.

MARYCULTER, a parish, containing a post-office station of its own name, on the north border of Kincardineshire. It is bounded by Aberdeenshire, and by Banchory-Davenick, Fetteresso, and Durris. Its length, east-north-eastward, is 6 miles; and its greatest breadth is 2¾ miles. The river Dee traces the whole of its northern boundary; and a considerable burn, coming in from Fetteresso, runs northward through its centre to the Dee. Some small haughs and dales lie along the banks of the river; but the rest of the surface is uneven and rocky, and rises inward the boundaries into the skirting hills of the Grampians, some of which are moorish, heathy, and rocky, while others have a clothing of verdure interspersed with large stones. The soil on the side of the river is naturally thin and sandy; that of the rising midland becomes deeper and blacker, with occasionally a bottom of clay; and that toward the southern border is predominantly swampy, turfy, and mossy. Vast improvements, however, have been effected, on ground which "thoroughly to improve, enclose, and render tolerably fertile," says the author of the Old Statistical Account, "may be almost termed a new creation." About 3,300 imperial acres are in tillage; about 4,200 are pastoral or waste; and about 850 are under plantation. The predominant rocks are granite and gneiss. What is named "iron-slag" is also found. Upwards of one-half of the parish belongs to Mr. Gordon of Fyvie; and the rest is distributed into six properties. The mansions are Maryculter, Kingcaussie, Heathcote, and Auchlunies. Part of the parish appears to have been a favourite haunt of the Knights-Templars. The only antiquities are some small cairns. The parish is traversed by the south road of Deeside, and has ready access across the Dee to the Culter station of the Deeside railway. Population in 1831, [illegible]; in 1851, 1,055. Houses, 189. Assessed property in 1843, £4,513 8s. 8d.

This parish is in the presbytery and synod of Aberdeen. Patron, Duff of Fetteresso. Stipend, £[illegible] 12s. 2d.; glebe, £20. Schoolmaster's salary, £[illegible], with £10 fees. The parish church was built in 1787, and contains 460 sittings. There is a Free church, and the amount of its receipts in 1856 was £[illegible] 0 4s. 3½d. There are a Roman Catholic college and a Roman Catholic chapel at BLAIRS: which see. There are two non-parochial schools and a parochial library. The original form of the word Maryculter was Mariæ Cultura.

MARYHILL, a quoad sacra parish and a post-office village, in the quoad civilia Barony parish of Glasgow, Lanarkshire. The parish was constituted by the Court of Teinds on the 10th of July, 1850; and it contained in 1851 a population of 6,700, with 560 houses. The Crown is patron. The village of Maryhill is situated on the road from Glasgow to Drymen, on the left bank of the Kelvin, at the point where that stream is crossed by the Forth and Clyde canal, and on the very western verge of Lanarkshire, 3 miles north-west of Glasgow. The dell of the Kelvin here is exceedingly romantic; the aqueduct of the canal across the dell is lofty and picturesque; the locks of the canal, in a rapid descent to it on the Maryhill side, are very curious; the village itself has a clean, pleasing, and showy appearance; and the whole place, viewed in connexion with its environs is much admired. The village was recently created a burgh, with magistrates and police commissioners. There are in it the quoad sacra parish church, a Free church, an United Presbyterian church, a Roman Catholic chapel, several schools, and a public library. There are likewise in it two print-works, bleachfields, a spinning-mill, a gas-work, an iron-foundry, and a ship-building yard. Public coaches run to Glasgow, and in transit to Milngavie, several times a-day. Population of the village in 1841, 2,552; in 1851, 4,000.

MARYKIRK, a parish, containing the post-office villages of Marykirk and Luthermuir, on the south border of Kincardineshire. It is bounded by Forfarshire, and by the parishes of Fettercairn, Fordoun, Laurencekirk, Garvock, and St. Cyrus. Its length eastward is about 7 miles; and its greatest breadth is about 6 miles. The North Esk runs for 5 miles along the southern boundary; the Luther runs south-westward through the middle of the interior, to the North Esk; and the Black burn, the Dowrie burn, and the burns of Balmakelly and Balmaleedie drain the side districts into the larger streams. The surface of the parish comprises large part of the south-western extremity of the Howe of Mearns, and has a predominantly champaign character, sloping gently from the north and the east to the North Esk; but rising grounds, called the hills of Kirkton and Balmaleedie, extend in two parallel ridges along the south-east border, from the vicinity of the hill of Garvock to the vicinity of Marykirk village, their upper end being separated from the hill of Garvock only by a defile or large gap called the Wide-open. The soil is very various, but in general is fertile and well-cultivated. In some parts along the North Esk and the Luther, it is loamy alluvium; in some other parts, it is sandy or gravelly; in many places, it contains boulders; in some parts, it is a wet and rather poor clay; and in the north and north-east, it was formerly moorish, but has been much ameliorated by cultivation. Sandstone, belonging to the old red formation, abounds and is quarried; and various kinds of trap occur in the rising grounds. About 6,955 imperial acres are in tillage; about 573 are in pasture; and about 1,532 are under wood. There are seven landowners. The real rental in 1842 was £7,245; the value of assessed property in 1843, £7,988; the estimated value of raw produce in 1842, £24,231. The mansions are Kirktonhill, Balmakewan, Inglismaldie, Thornton-castle, and Hatton. There are in the parish a spinning-mill, a flax-mill, six corn-mills, and five saw-mills. A very considerable employment also is handloom linen weaving. The parish is traversed by the north road from Dundee to Aberdeen, by the road from Fettercairn to Montrose, and by the Aberdeen railway; and it has a station on the railway, 4 miles

from Laurencekirk and 34 from Aberdeen. The village of Marykirk stands in the south-east corner of the parish, near the North Esk, on the road from Montrose to Fettercairn, 6 miles north-west of Montrose. It had an ancient cross, part of which is still standing. It anciently bore the name of Aberluthnet, in allusion to the debouch of a small rivulet in its vicinity; and it gave that name also to the parish,—a name which continued to be used so late as the beginning of last century. A bridge of four arches over the North Esk, situated a little below the village, and built in 1813, proved of very high utility to the surrounding country. Population of the village, about 300. Population of the parish in 1831, 2,032; in 1851, 2,232. Houses, 473.

This parish is in the presbytery of Fordoun, and synod of Angus and Mearns. Patron, Crombie of Thornton. Stipend, £246 6s. 1d.; glebe, £8. Unappropriated teinds, £121 4s. 10d. Schoolmaster's salary, £30, with £20 fees. The parish church was built in 1806, and contains 638 sittings. There is a Free church in Marykirk, with an attendance of 200; and the amount of its receipts in 1856 was £89 10s. 1d. There is an United Presbyterian church at Muirton, built in 1824, and containing 430 sittings. There are a Congregational chapel at Sauchieburn, and a Baptist one at Luthermuir. There are five non-parochial schools and a public library.

MARYPARK, a post-office station subordinate to Cragellachie, on the east side of Morayshire.

MARYPORT, a creek 2½ miles north of the Mull of Galloway, on the east coast of the parish of Kirkmaiden, Wigtonshire, one of about sixteen tiny bays which indent the outline of that peninsular parish. Though this creek is currently called a port, the only real harbours in the parish are Drummore, 1¾ mile to the north, and Portnessock on the west coast.

MARY'S BOWER. See Habbie's Howe.

MARY'S (St.). See Edinburgh, Glasgow, Kelso, and Ronaldshay (South).

MARY'S ISLE (St.), a peninsula, 1½ mile in length, and 3 furlongs in mean breadth, in the parish of Kirkcudbright, Kirkcudbrightshire, formed by the main channel of the estuary of the Dee on the west, and a bay advancing inland from the broader part of that estuary on the east. The retreat of the sea, so noticeable along the whole coast of Kirkcudbrightshire, is peculiarly observable in this peninsula. The sea, in former times, made the place literally an isle, and covered at every tide at least one-half of its present cultivated surface. The west side is high ground, defended by a border of rocks; but the east side visibly discloses from end to end, in large shell-banks, the former line of high water. The whole peninsula is ornately occupied with the wooded and very beautiful pleasure-grounds of the Earl of Selkirk, and presided over by his lordship's principal residence in their centre. The grounds are elegantly laid out in winding walks, and gardens and lawns of uncommon elegance; and form a gorgeous environ, at only ¾ of a mile distance, of the burgh of Kirkcudbright. The family of Selkirk are among the most aristocratically descended in the south of Scotland, and are nearly allied to the chief houses both of Hamilton and of Douglas.

A priory, founded in the reign of David I. by Fergus, Lord of Galloway, occupied the isle till the Reformation; and having been dedicated to the Virgin Mary, occasioned its ancient name—which was the Isle of Trahil or Trayl—to be superseded by that of St. Mary's Isle. The priory was called 'Prioratus Sanctæ Mariæ de Trayl.' It was the seat of canons-regular of the order of St. Augustine; and being given by its founder to the abbey of Holyrood, became a dependent cell of that establishment. The prior was a lord of parliament. The priory was surrounded with high walls, which enclosed an extensive area. The outer gate was distant at least half-a-mile from the priory, and stood at a place about the same distance from the town, and still called the Great Cross. The inner gate led immediately to a group of cells, the habitations of the monks, and was called the Little Cross. All the buildings were swept away about 165 years ago, to give full scope for beautifying the ground as a noble demesne.

While the Earl of Selkirk was extending his garden toward the close of last century, 14 human skeletons were discovered by the workmen, placed regularly alongside of one another with their feet to the east, occupying a spot quite different from the burying-ground of the monks, one of them distinguished by some monumental honours from the rest, and all the remains possibly of persons interred previous to the existence of the priory. David Panther, or Panitor, was prior of St. Mary's Isle toward the middle of the 16th century. See article Cambuskenneth. He was one of the most eminent literary men of his day, and wrote letters, published by Ruddiman in 1772, which afford a model of classical latinity; but, according to Buchanan, he was a profane man, and instigated persons at court to all manner of impurities; and according to John Knox, "eating and drinking was the pastyme of his lyif." He died at Stirling on the 1st of October, 1558. Robert Richardson, descended from a line of respectable citizens of Edinburgh, and previously promoted to the offices of lord-treasurer and general of the mint, was made commander of St. Mary's Isle about the year 1560; and he used such adroitery as to hold all his lucrative situations under both Mary and her son. Large estates were purchased by him; and at his death, in 1571, were left to his two sons, Sir James Richardson of Smeaton, and Sir Robert Richardson of Pencaitland. The noted Paul Jones, when infesting the coast with his fleet in 1778, made a descent on St. Mary's Isle, with the view of seizing the Earl of Selkirk as a hostage during the war with America. His lordship being from home, all the silver-plate in his mansion was seized and carried away; but it was returned uninjured and without cost, seven years after the depredation.

MARY'S LAKE (St.), a beautiful small lake lying between two precipitous hills, very richly wooded, in the immediate vicinity of the town of Tobermory, in the island of Mull. The elegant modern mansion of Drumfin stands on its banks.

MARY'S LOCH (St.), a beautiful sheet of water formed by expansion of the river Yarrow, on the west border of Selkirkshire. It is about 4 miles in length; and, with the lesser lake of the Lowes, lie imbedded amid hills in a beautiful pastoral country. "There are few spots," says an anonymous writer, "where there is so little that is repulsive to man, and yet so few traces of his presence. You may scan the abrupt green hills on either side, from the water's edge to their summits, without seeing any work of human art, save scattered here and there on the declivities those mysterious-looking circular sheep-pens, which look like so many gigantic dog-collars dropped from the clouds, and remaining where they fell. The banks sink abruptly down into the lake, the waters of which are exquisitely transparent. Wordsworth says—

'Through her depths St Mary's lake
Is visibly delighted,
For not a feature of those hills
Is in the mirror slighted.'

t is, in fact, a most minute and faithful looking-lass to all the hills; and they look as clean and nooth as if they had shaved themselves by it. he whole scene must have indeed been very dif-rent from its present aspect, when these abrupt ills were covered with dusky pines.

'They saw the derke forest them before,
They thought it awsome for to see,'

ys the ballad of the outlaw Murray, describing ie advance of the King's 'full 5,000 men,' in one the expeditions of the Jameses to make war on ie rievers." Sir Walter Scott, in his Introduction the second canto of 'Marmion,' has given a most aphic description of this loch:—

"Oft in my mind such thoughts awake
By lone St. Mary's silent lake.
Thou know'st it well.—nor fen, nor sedge,
Pollute the pure lake's crystal edge:
Abrupt and sheer, the mountains sink
At once upon the level brink:
And just a trace of silver sand
Marks where the water meets the land.
Far in the mirror, bright and blue,
Each hill's huge outline you may view;
Shaggy with heath, but lonely bare,
Nor tree, nor bush, nor brake is there,
Save where, of land, yon slender line
Bears thwart the lake the scattered pine.
Nor thicket, dell, nor copse you spy
Where living thing concealed might lie;
Nor point, retiring, hides a dell,
Where swain, or woodman lone, might dwell;
There's nothing left to Fancy's guess,—
You see that all is loneliness:
And silence aids,—though the steep hills
Send to the lake a thousand rills,
In summer-tide so soft they weep,
The sound but lulls the ear asleep:
Your horse's hoof-tread sounds too rude—
So stilly is the solitude!"

The road from Peebles and Innerleithen to St. ary's loch passes through a wild mountain defile, hich opens on the vale of the Yarrow about 3 miles m the lake. On emerging from this, the lonely rrow all at once bursts on the traveller's view; d here for a time nothing is seen but mountains vered with sheep, and the cottage, long associated th the name and writings of the Ettrick Shepherd, hich stands at a short distance east of the lake, d which, more than any other feature in the land-pe, makes St. Mary's loch an object of interest to lovers of poetry. Almost every mountain and eam in 'the Forest' have been hallowed by the aius of the bard, who

"Found in youth a harp among the hills,
Dropt by the Elfin-people; and whilst the moon
Entranced hung o'er still St. Mary's loch,
Harped by that charmed water, so that the swan
Came floating onwards through the water-blue,—
A dreamlike creature listening to a dream;
And the Queen of the Fairies rising silently
Through the pure mist, stood at the shepherd's feet,
And half-forgot her own green paradise,
Far in the bosom of the hill,—so wild!
So sweet! so sad! flowed forth that shepherd's lay."

At the foot of the loch stands the ruined tower of YHOPE: which see. Opposite the farm of Dry-e, on the other side of the lake, is the farmstead-of Bowerhope; and, behind it, the lofty and pre-itate Bowerhope-law, of which the bard of Ettrick, ntemplating its mass in winter, has sung,—

"But winter's deadly hues shall fade
On moorland bald and mountain shaw,
And soon the rainbow's lovely shade
Sleep on the breast of Bowerhope-law."

the head of the lake, and directly over the old wer, are the braes or four hills of Chapelhope, rugged and broken outskirts of which are cele-ted as the last retreat of the persecuted Cove-nanters. More distant, and peeping over these, is the top of Carrifrangans, a dreadful precipice in Moffatdale. Towering above Carrifrangans, though not so distant, is the pointed summit of the White Coomb, one of the highest mountains in the south of Scotland. On the same side is a hill called the Braken-law. Here the river Meggat joins the lake after flowing through Meggatdale, a wild district, the principal hunting-scene of the royal Stuarts in this part of the kingdom. At the foot of the Braken-law is seen, though indistinctly, the ruined chapel and burial-place of St. Mary's, from which the lake derives its name. This, also, the poet's pen has rendered a classic spot. In this lonely place the bones of many an outlaw mingle with the dust; and here the shepherd of the present day still finds his last resting-place.

"For though in feudal strife a foe
Hath laid our Lady's chapel low,
Yet still beneath the hallowed soil,
The peasant rests him from his toil:
And, dying, bids his bones be laid
Where erst his simple fathers prayed."

Marmion. Introduct. to 2d Canto

This ancient chapel is the subject of many traditions, and of a variety of ballads and poetry of ancient and modern date.

"St. Mary's loch lies shimmering still,
But St. Mary's kirk-bell's lang done ringing!
There's naething now but the grave-stane hill
To tell o' a' their loud psalm-singing!"

Among the ballads, that of 'the Douglas tragedy' has been rendered familiar to the reading world by Sir Walter Scott in the 'Border Minstrelsy.' The Lord William and Lady Margaret of that ancient ditty, were buried in the chapel.

"Lord William was buried in St. Mary's kirk,
Lady Margaret in Mary's quire;
Out o' the lady's grave grew a bonny red rose,
And out o' the knight's a brier.

"And they twa met, and they twa plat,
And fain they wad be near;
And a' the world might ken right weel,
They were twa lovers dear.

"But by and rade the Black Douglas,
And wow but he was rough!
For he pulled up the bonny brier
And flang'd in St. Mary's loch."

An ancient and very popular tradition has also given the ground-work of Mr. Hogg's ballad of 'Mess John;' and the chapel is the scene of the principal incident in his ballad of 'Mary Scott.' Here the daughter of stern Tushilaw is supposed, by the poet, to have been brought for interment; here she awaked from that sleep which appeared to all the sleep of death; and here was married to her lover, Pringle, Lord of Torwoodlee.

MARY'S LOCH (St.), or Loch Moir, a mountain lake, about 3 miles long, with an average breadth of 1 mile, in the northern part of the parish of Alness, in Ross-shire. Its sides are flanked by alpine, rocky, precipitous heights, which give its scenery a sublime character. The lake is very deep, and has never been known to freeze further than a few yards from the side. Its name is derived from an ancient Roman Catholic place of worship, situated in a romantic glen at one of its extremities, and the ruins of which still exist.

MARY'S WELL. See Tarbat and Kirkholm.

MARYTON, a parish, consisting of two detached estates, in the maritime district of Forfarshire. Its post-town is Montrose, 3 miles to the north-east and north. The larger estate, called Old Montrose, the property anciently of the great family of Montrose, but now of the Earl of Southesk, is bounded on the

north by the river South Esk, which divides it from Dun,—on the north-east by Montrose-basin, which divides it from Montrose,—on the east and south by Craig, and on the west by Farnell. Its length, from north to south, is 2¼ miles; and its breadth expands from 1½ mile, toward the north, to 2½ on the extreme south. Pow-water is its boundary for ¾ of a mile with Farnell; and Haugh-burn bisects it north-eastward to Montrose-basin. The southern extremity rises in a hillocky ridge, and sends up from a base of rock 300 or 400 feet above sea-level, a bulky artificial eminence, called Maryton-law, intended probably as a beacon-post, or as a seat of feudal justice, and commanding a fine view of the German ocean, with the rich carpeting of Craig parish on the foreground,—of the harbour, basin, town, and links of Montrose, foiled by the undulating heights of Kincardineshire, in the distance,—and of the rich green strath of the South Esk, with the town of Brechin in the centre, and the bold ascents and rugged skyline of the Grampian mountains on the back-ground. Excepting this hillocky screen along the south, the whole area is nearly level, and consists, on the surface, of a very fine loam, or of powerful wheat-bearing carse-land, both in a state of prime cultivation. Part of the rich ground has been embanked, to protect it from encroachment by the tides. Formerly vessels of from 50 to 60 tons used to bring lime and coal up the basin, as far as the farm of Old Montrose, and to carry potatoes and other farm produce to the London market; but of late years this practice has been discontinued. Vestiges are visible of the foundations and moat of the old castle of Bonnyton, anciently the residence of the Woods of Bonnyton, whose estate, once separate, is now incorporated with that of Montrose —The lesser estate and district of the parish is called Dysart, lies from 6 to 11 furlongs south of the larger district, and became in 1856 the property of Mr. Grant. It is 2½ miles in length from east to west; varies in breadth from a furlong to 1½ mile; and is bounded by the German ocean, by Lunan, and by Craig. The romantic dell called Buckyden is its boundary-line for a considerable way with LUNAN: which see. The coast-line, about a mile in length, is bold, and sends off the surface at a considerable elevation above sea-level. The whole area lies higher than that of Old Montrose, excepting the latter's southern bank, and is carpeted with naturally a much poorer soil; yet it is all enclosed and under culture.—The whole parish comprehends about 2,180 acres, of which about 200 are in pasture and under wood, and all the rest in tillage. A coarse stone, a species of trap, is quarried in several places as road-metal and material for stone fences. Old Montrose has somewhat near access to the Farnell-road and Dun-bridge stations of the Aberdeen railway; and Dysart is traversed by the great coast road from Dundee to Aberdeen. The real rental of the parish in 1855 was £5,177. The estimated value of raw produce in 1833 was £14,508. Population in 1831, 419; in 1851, 336. Houses, 76.

This parish is in the presbytery of Brechin, and synod of Angus and Mearns. Patron, the Crown. Stipend, £198 6s. 9d.; glebe, £18. Schoolmaster's salary, £30, with £10 fees, and £4 other emoluments. The parish church was built in 1791, is situated in the south-east corner of Old Montrose, and contains nearly 300 sittings. There is a Free church, also with about 300 sittings; and the amount of its receipts in 1856 was £461 9s. 6½d.,—of which £420 was for local building purposes. There is a parochial library. The name of Maryton, like nearly all the other topographical names with the word Mary in their composition, was assumed in Roman Catholic times in honour of the Virgin Mary; and a well on the border of the parish still retains the name of Mary well.

MARYWELL, a village in the parish of St Vigeans, Forfarshire. It is a station of the county police. Population, 138. Houses, 36.

MASSAN (THE). See EACHAIG.

MASSICK (THE). See INVERNESS-SHIRE.

MASTERTON, a village in the parish of Dunfermline, 1½ mile north-north-west of Inverkeithing, Fifeshire. It is situated upon an eminence, and commands fine prospects of the frith of Forth, and the adjacent country. Here is an hospital for four widows, founded and endowed in 1676, by Sir Henry Wardlaw of Pitreavie. Population, 145. Houses, 35.

MATHERS. See CYRUS (ST.).

MATTHEW'S (ST.). See GLASGOW.

MAUCHLINE, a parish, containing the post-town of Mauchline, and the villages of Haugh and Auchmillan, nearly in the centre of the district of Kyle, Ayrshire. It is bounded by Craigie, Galston, Sorn, Auchinleck, Ochiltree, Stair, and Tarbolton. Its length southward is about 7 miles; and its breadth varies from 2 to 4 miles. Mauchline-hill, forming part of what is called 'the Long Ridge of Kyle,' and attaining a considerable altitude, rises a little north-eastward of the town, runs in a ridge westward about a mile in the parish, and terminates at Schioch hill in Tarbolton. The ridge commands a magnificent view of nearly all Ayrshire and the frith of Clyde, foiled on the south by Cairnsmuir and other alpine summits of Galloway, on the west by the Paps of Jura towering up behind the bold mountains of Arran, and on the north by Benlomond and adjacent sky-scaling heights looking over the undulating hills of Renfrewshire. Excepting in Mauchline-hill the surface of the parish is, in general, flat, with a gentle prevailing declination to the south. About 340 acres of marshy ground and declivities are covered with wood; a patch of the medium size of a field is moss; and all the rest of the area is arable, fully enclosed, excellently cultivated, and cheerful in aspect. A large tract of land, formerly called Mauchline-moor, exhibits no traces of its ancient condition, but vies with many a naturally favoured spot in its culture, its enclosures, and its belts of wood. The soil, in the vicinity of the town, is light and sandy; in a few localities, is a rich loam; and, over the greater part of the parish, is of a clayey nature. Coal, limestone and ironstone abound, but are so thin in the strata that they have ceased to be worked. White sandstone, much esteemed for its colour, for the fineness of its grain, and for its durability, is quarried at Deaconbank; and excellent red sandstone, from strata of great thickness, is worked in the vicinity of the town. The river Ayr runs across the south end of the parish, between steep red sandstone rocks 40 or 50 feet high, overhung by wood, and both beautiful and romantic. Of several caves cut out of the rocks, resembling those at Auchinleck, noticed by Dr. Johnson, one bears the name of Peden's cave, and is said to have been a frequent hiding-place of the celebrated Alexander Peden during the period of the persecution. Lugar-water joins the Ayr, on its left bank, a little above Barskimming. Cessnock-water runs north-westward through the northern part of the parish. Lochbroom, 2¼ miles north-west of the town, was a lake of 60 acres in area, but has been drained, and is intersected by the Glasgow and South Western railway, and now presents to the view fruitful fields instead of water. There are nine principal landowners. The average rent of arable land is £1 5s. per acre. The estimated value of raw produce in 1837 was £15,790. Assessed

property in 1843, £7,572 6s. 1d. Population in 1831, 2,232; in 1851, 2,470. Houses, 349.

On Mauchline moor, in 1647, a party of the King's troops were defeated by a party of Covenanters; and their military chest, it is said, was found, many years afterwards, hid on the scene of action. Five Covenanters were martyred in the parish under the reign of James VII., and were commemorated by a tombstone—now substituted by a recently erected monument—at Mauchline town-head. The celebrated reformer and martyr, George Wishart, was invited, in 1544, to preach in the church of Mauchline; and, on his arrival, he found the place guarded by a party of soldiers, posted there to resist him by the sheriff of Ayr, a heated opponent of the Reformation. Some of the country-people proposing to force an entrance, he dissuaded them, saying: "It is the word of peace I preach unto you; the blood of no man shall be shed for it this day. Christ is as mighty in the fields as in the church; and He himself, when he lived in the flesh, preached oftener in the desert and by the sea-side, than in the temple of Jerusalem;" and he then moved away to Machline-moor, followed by a multitudinous assembly, and there preached to them upwards of three hours. The parish is traversed by the road between Glasgow and Dumfries, by three other turnpikes, by several subordinate roads, and by the Glasgow and South-western railway; and it has a station on the railway, 9½ miles from Kilmarnock, and 43 from Glasgow. A bridge over the Ayr at Barskimming, and a railway viaduct at Ballochmyle, are very elegant erections, each having a single arch 100 feet wide, respectively 90 and 95 feet high.

This parish is in the presbytery of Ayr, and synod of Glasgow and Ayr. Patron, the Marquis of Hastings. Stipend, £230 19s. 11d.; glebe, £20. Unappropriated teinds, £33 5s. 5d. Schoolmaster's salary, £34 4s. 4½d., with £40 fees, and £10 other emoluments. The parish church was built in 1829, and contains about 1,100 sittings. There is a Free church, whose receipts in 1856 amounted to £647 9s. 1d. There is also an United Presbyterian church, with an attendance of about 300. There is a school called the New educational institution, founded and endowed by the heirs of the late Mr. Stewart of Laverock-bank near Leith, and conducted by 2 male teachers, with salaries of respectively £40 and £20, and by a female teacher, with a salary of £20; and of the scholars who attend it, 50 are taught gratis, and the rest pay fees. There are likewise a female school of industry in the town, and a subscription school at Crosshands. The ancient parish of Mauchline comprehended not only all the present parish of Mauchline, but also all the territory which now forms the parishes of Sorn and Muirkirk; and it all belonged to the Stewart's princely domain of Kyle-Stewart. George Chalmers says,—"At the commencement of the reign of William, in 1165, Walter, the son of Alan, granted to the monks of Melrose the lands of Mauchline, with the right of pasturage, in his wide-spreading forest on the upper branches of the Ayr river; extending to the boundaries of Aydesdale: and the Stewart, also, gave the same monks a carrucate of land, to improve, in the places most convenient; all which was confirmed to them by King William, at the request of the donor. The monks of Melrose planted, at Mauchline, a colony of their own order; and this establishment continued a cell of the monastery of Melrose till the Reformation. In the before-mentioned grant of the lands of Mauchline, or in the confirmations thereof, there is no mention of the church of Mauchline. It is, therefore, more than probable that the parish-church of Mauchline was established by the monks of Melrose, after they had become owners of the territory: and it is quite certain that the church belonged to them. It is apparent that the country which formed the extensive parish of Mauchline, was but very little settled when the monks obtained the grant from the first Walter. This fact shows, that during the reign of David I., and even during the reigns of his grandsons and successors, Malcolm IV. and William, Renfrew and Ayr were inhabited chiefly by Scoto-Irish, who did not supply a full population to the country. The monks afterwards acquired great additional property in the district, and contributed greatly to the settlement and cultivation of it. They obtained ample jurisdictions over their extensive estates of Mauchline, Kylesmure, and Barmure, which were formed into a regality, the courts whereof were held at Mauchline. This village was afterwards created a free burgh-of-barony, by the charter of James IV., in October, 1510. Before the Reformation there were in this parish two chapels; the one on Greenock-water, in the district which now forms the parish of Muirkirk, and the other on the river Ayr, on the lands that now form the parish of Sorn. This last was dedicated to St. Cuthbert, and stood a little to the eastward of the present village of Catrine, on a field which is still called St. Cuthbertsholm. The church of Mauchline, with its tithes and pertinents, continued, at the Reformation, to belong to the monks of Melrose, who also held the extensive barony of Kylesmure and Barmure, in that parish; and the whole was granted, in 1606, to Hugh, Lord Loudoun. An act of parliament was then passed, dissolving from the abbey of Melrose the lands and barony before-mentioned, and the parish-kirk of Mauchline, with its tithes and other property; and erecting the whole into a temporal lordship to Hugh, Lord Loudoun; and creating the town of Mauchline into a free burgh-of-barony, with a weekly-market and two fairs yearly. The great effect of such grants was only to make one ungrateful, and a dozen discontented. The monks had done fifty times more good to the country than the Loudouns ever essayed. In 1631 the large district which forms the parish of Muirkirk was detached from Mauchline, and formed into a separate parish. In 1636 it was settled that the district which is now included in the parish of Sorn should be detached from Mauchline, and formed into a separate parish; and a church was built at Dalgain in that year; but, from the distractions that followed, the establishment of this new parish was not fully completed till 1692. The parish of Mauchline was thus reduced to less than a fifth of its former magnitude."

The Town of Mauchline stands at the intersection of the Glasgow and Dumfries road with the Edinburgh and Ayr road, adjacent to the Mauchline railway station, 1¼ mile north of the river Ayr, 2 miles west-north-west of Catrine, 5 east by north of Tarbolton, 6½ north-west of Cumnock, 7 south of Galston, 12 east-north-east of Ayr, and 30 by road, but 43 by railway, south by west of Glasgow. Its site is on the south side of Mauchline-hill. Its environs are a delightfully cultivated country, studded with fine mansions. The town is neatly edificed, has a pleasing appearance, and, measured by the bulk of its population, looks prosperous and important. Its charter as a burgh-of-barony having been lost, about 140 years ago, in the conflagration of the Register-office of Edinburgh, it has not re-acquired power to elect its own magistrates. Its peace, however, is well-preserved by ten resident and neighbouring justices of peace. The parish-church, occupying a site in the centre of the town, is highly ornamental to it, and has been pronounced one of the most handsome ecclesiastical edifices in Ayrshire. It is chiefly

Gothic, and built of red sandstone; and at the east end it sends up a tower 90 feet in height, and surmounted by turrets. Its predecessor, a lumpish, plain, sombre building, well-known to most Scotchmen as the scene of Burns' 'Holy Fair,' stood for six centuries on the same site, surrounded by the public burying-ground. The new educational institution is a neat structure, with tasteful flower-plots, in the outskirts of the town. Many objects both in the town and in its vicinity are associated with the poet Burns and with his satires. The farm of Mossgiel, on which he resided nine years, and which he subleased from Mr. Gavin Hamilton, writer in Mauchline, lies about a mile north-west of the town: see article Mossgiel. An old edifice, the relic of the ancient priory, and the residence in Burns' days of Mr. Hamilton, called Mauchline-castle, situated near the church, was the scene of some of his amours, and contains a room in which he wrote his profane parody called 'the Calf.' The cottage or change-house of 'Poosey Nancy,' or Agnes Gibson, which was one of his chief resorts in quest of the 'clachan yill,' and the scene of his piece called 'the Jolly Beggars,' stands nearly opposite the church-yard-gate. It was "the favourite resort," says Allan Cunningham, "of lame sailors, maimed soldiers, wandering tinkers, travelling ballad-singers, and all such loose companions as hang about the skirts of society." Separated from the gable of this house, only by the commencement of an intervening lane, stands the public-house kept by John Dow, another great resort of Burns, a thatched plain building of two stories. On a pane on one of its back windows the poet wrote the absurd epitaph on his host, representing Dow's creed to be simply a comparative estimate of the value of his several liquors. The lane which strikes off between these houses is the Cowgate, along which 'Common sense,' or the poet's correspondent Dr. Mackenzie, escaped when a certain minister appeared at the tent. In the church-yard, so painfully associated with the demoralizing images, and in some instances too just satire of our bard's 'Holy Fair,' may be seen the graves of the Rev. Mr. Auld, Nanse Tinnock, and some other persons whom he made the butt of his rhymes. Various scenes of his exquisite lyrics,—pieces in which the effusions of his genius may be enjoyed with less pain and damage to the moral feelings,—occur along the banks of the river Ayr.

Mauchline has an extensive manufacture of wooden snuff-boxes, cigar-cases, card-cases, fire-screens, ladies' work-boxes, drawing-room ornaments, and other similar articles, beautifully painted in variety of colours, or checked into tartan. This trade began at Cumnock with the fine hinge of the snuff-box; but it afterwards was altered and greatly extended by the ornamental painting; and it has taken a deep seat in that form in Mauchline, in so much as to furnish large constant supplies of articles to the English and the foreign market. The weaving of cotton goods, also, employs a large proportion of the inhabitants. Fairs are held for cows, horses, and hiring on the Thursday after the 4th day of February; for cows, on the second Thursday of April; for races and general business, on the last Thursday of April; for cows and horses, on the Wednesday after the 18th day of May, and on the fourth Wednesday of June; for cows, horses, and shearers, on the first Wednesday of August; for cows, horses, ewes, and lambs, on the 26th day of September, or on the Thursday after; and for cows and horses, on the Thursday after the 4th day of November, and on the 4th Wednesday of December. The town has a gas-light company, an office of the Commercial bank, and seven insurance agencies. Population in 1831, 1,364; in 1851, 1,449.

MAXTON, a parish on the north border of Roxburghshire. It contains the villages of Maxton and Rutherford; but its post-town is St. Boswells, about 1½ mile to the west. It is bounded by Berwickshire and by Makerston, Roxburgh, Ancrum, and St. Boswells. Its length north-eastward is 3½ miles, and its greatest breadth is 2¼ miles. The river Tweed traces curvingly, for 4 miles, the western and northern boundaries, along a path of red sandstone, and between alternately sloping and steep banks of great beauty. The southern corner of the parish is occupied by the north-east end of the high ridge called Lilliard's edge, famous as the scene of the battle of Ancrum-moor: see Ancrum. Half-a-mile north of this rises a hill called Moorhouselaw. All the rest of the surface is a plain gently sloping to the Tweed. Nearly 700 acres are planted; and about 10 acres are bog. The soil of the higher parts of the arable lands is thin and wet, upon a stiff, retentive till; but that of the other parts is either a rich, clayey loam, superincumbent on till, or a light, sharp, dry soil, superincumbent on sand or stone or gravel. There are five landowners, all non-resident. The yearly value of raw produce, exclusive of the produce of gardens, woods, and fisheries, was estimated in 1834 at £12,000. Assessed property in 1855–6, £6,161 4s. The parish is traversed by the road from Melrose to Kelso, and by the Kelso fork of the Edinburgh and Hawick railway; and it has stations on the railway for Maxton and Rutherford, at respectively 43¾ and 46¼ miles from Edinburgh. The village of Maxton stands on the Melrose and Kelso road, on the west border of the parish, near the Tweed. It was anciently a place of some importance, and is even said to have had 4,000 or 5,000 inhabitants; but it now consists of a few huts, the shaft of its ancient cross standing before them, and the foundations of its ancient houses occasionally marring the plough in the adjacent fields. Population of the parish in 1831, 462; in 1851, 550. Houses, 91.

About 1¼ mile north-east of the village of Maxton, on a high bank overlooking the Tweed, stand the ruins of Littledean tower, built in the form of a crescent, and anciently a place of some strength. The Kerrs of Littledean, a family of considerable Border fame, resided here, and have a burying vault adjoining the church.—In the north-east corner of the parish, on a rocky height overhanging the Tweed, is a nearly circular camp about 480 feet in circumference, called Ringly hall, defended on one side by the river, and on other sides by moats and ramparts. An English army is traditionally reported, the date without mention of date or occasion, to have occupied this position for several days, confronted by a Scottish force, who were ensconced on the opposite bank of the river in a ravine which retains, from the occurrence, the name of 'the Scots hole.' The English, being superior in numbers, forded the Tweed, and, after a severe encounter with the Scots on a rising ground still called the Plea-brae, suffered complete discomfiture. The spot at which the English passed was called Rue-the-ford, on account

of their having had so grievous cause to regret fording the river, and transferred its name, altered into Rutherford, to the lands around it, and the village in its vicinity. If this traditionary story be correct, it must be so ancient as to refer to a time preceding the epoch of authentic Border history.—A Roman road, which crosses the Tweed near Melrose, and the Teviot near the mouth of the Jed, runs along the whole south-western boundary of Maxton. On the face of Moorhouselaw-hill, overlooking it, are traces of a Roman camp.

This parish is in the presbytery of Selkirk, and synod of Merse and Teviotdale. Patron, Charles Balfour of Balgonie. Stipend, £224 8s. 9d.; glebe, £10. Unappropriated teinds, £268 19s. 3d. Schoolmaster's salary, £30, with about £20 fees, and £5 5s. other emoluments. The parish church is part of an old building modernized in 1812, and containing 200 sittings. The present parish of Maxton comprehends the ancient parishes of Maccuston or Mackiston and Rutherford. The monks of Melrose received, at the end of the 12th century, a carrucate of land in the parish of Mackiston; and in 1227 made an agreement with the parson to pay 4 marks of silver annually, as a composition for the tithes of his land. The church was dedicated to St. Cuthbert. Walter, the Steward of Scotland, received from Robert I. the barony of Maxton, along with other lands forfeited by William Soulis; and he gave the church, with 4 acres of arable land, to the monks of Dryburgh, subjecting it to them as a vicarage till the Reformation. The advowson of the church of Rutherford anciently belonged to the Earls of Douglas, and was afterwards possessed by Rutherford of Rutherford; but it went into abeyance when the church was abandoned. In Rutherford parish there was an hospital dedicated to Mary Magdalene, used as an hospitium for strangers and a retreat for the poor and the infirm, and given by Robert I. to the monks of Jedburgh.

MAXWELL. See Kelso.

MAXWELL-HEUGH, a village in the parish of Kelso, Roxburghshire. It is situated on the right bank of the Tweed, directly opposite the eastern part of the town of Kelso. It stands on a heugh or elevation up which gently ascends the Berwick and Carlisle turnpike from Kelso bridge. Its site is one of the most brilliant which village can occupy. The view of town and country landscape enjoyed in the descent from it to the bridge, is one of the finest in the vicinity of Kelso: see article Kelso. Among a profusion of wood which surrounds the village, one poplar-tree in its immediate neighbourhood is 31 feet in girth at the surface of the ground, and 16 feet high before sending off a branch, and has been computed to contain nearly 900 cubic feet of timber. Maxwell-heugh is a place of high antiquity, and had a seat of the Earl of Morton in the reign of Elizabeth. Its name is taken from its site,—a 'heugh' in the ancient parish of 'Maxwell.' Immediately behind the village is the Kelso railway station, forming the junction of the Branch North British railway with the English North Eastern. Population of the village, 334. Houses, 25.

MAXWELL'S THORNS. See Dryfesdale.

MAXWELLTON, a village in the parish of East Kilbride, Lanarkshire. It is situated little more than ½ a mile to the east of the town of East Kilbride, and may be considered as practically a suburb of that place. Population, 334. Houses, 72. See Kilbride (East).

MAXWELLTON, a burgh of barony, in the parish of Troqueer, Kirkcudbrightshire. It stands on the right bank of the river Nith, on the eastern verge of Kirkcudbrightshire, directly opposite the town of Dumfries, and is included within the parliamentary burgh boundaries of that town. Its site is a bank or low ridge curving along the edge of the river, and is connected with Dumfries by two bridges. The old parts of the burgh are poorly built and badly aligned; but the new parts are pleasant, neat, and airy. A narrow street or alley, immediately on the Nith, north of the new bridge, inhabited principally by families of the poor and working classes, leads out to the fine ruins of Lincluden, and bears the name of College-street. A street parallel to this brings down the Glasgow and Dumfries turnpike, is straight and spacious, has several good houses, and, near the middle, on its west side, exhibits a burgh or public building of neat exterior. A street at right angles with these, and on a line with the new bridge, carries westward the Dumfries and Portpatrick road, is also straight and spacious, and at its west end goes gracefully off into the country in a series of villa-like houses. A wide brief street forking into two between the bridges, a street somewhat parallel to it on the west, and one or two other thoroughfares are in general of mixed or poor appearance, but slightly relieved of their plain, low, dingy aspect by a sprinkling or occasional series of tolerable houses. The whole burgh, so far as it presses on the river, or from the northern extremity till below the old bridge, so far imitates London as to have no terrace or street-line looking out upon the stream; but it entirely wants even a mimic resemblance of the picturesqueness of architectural outline exhibited by the vast metropolitan prototype. Yet seen either from Dumfries or from almost any point of view near or distant on the east side of the river, it gives out features to a glowing landscape which add much to its attractions and its warmth. A beautifully curved hill swells up at the south end but a brief distance from the brink of the river, and bears aloft a conspicuous cylindrical pile which was at first a wind-mill, but is now an observatory. Along the face of this fine rising-ground, fronting Dumfries, stands a range of elegant houses. On the brink of the stream, with but a narrow belt of plain intervening from the base of the hill, stands a complete suite of large grain mills, each mill supplied with water-power in one of several parallel dams, extending from a strong high-water wier built diagonally across the whole breadth of the river. The entire town, exclusive of its burgh roods, is about two-thirds of a mile in length, and nearly the same in breadth.

Maxwellton has two large and flourishing iron foundries, a waulk-mill, a dye-house, two rope-works, a tannery, and the Dumfries granaries. Its butcher-market is as extensive as that of Dumfries, or fully more so, affording a daily supply in the utmost excellence and variety. There is also, on the Maxwellton side of the river, a fishery of salmon, grilse, and herlings, more than sufficient for the supply of the two burghs and the adjacent country. Maxwellton also shares considerably, in a general way, in the trade and commerce of Dumfries. It has two places of worship,—the one a chapel of ease, containing 800 sittings, which has, for some time, been unoccupied,—the other a Free church, of nearly the same capacity, with about 500 members, and whose receipts in 1856 amounted to £352 3s. 7½d. The parish church of Troqueer stands about a mile south of the centre of the burgh. The parish school, also, is landward; but there are in the town an endowed school, and a Free church school, jointly attended by above 300 children. Maxwellton shares in the Dumfries water-works; and it has a gas-light com-

pany of its own. It formerly bore the name of Bridgend, and was one of the most disorderly villages in the kingdom, without any proper local government, and serving as a refuge to the delinquents of Dumfries. But in 1810, it was erected into a free burgh of barony, under the name of Maxwellton, in honour of Mr. Maxwell of Nithsdale, its superior, and was placed under the government of a provost, two bailies, and four councillors; and it speedily underwent very remarkable improvement, as to at once its police, its trade, the condition of its houses, and the manners of its people. The general police act also was lately adopted with good effect; and the management of this is reposed in 12 commissioners, 3 of whom are police magistrates. Stewartry circuit small debt courts are held in it on the 9th of January, the 9th of April, the 9th of July, and the 1st of October, and justice of peace small debt courts are held on the first Thursday of every month. Population in 1841, 3,230; in 1851, 3,820. Houses, 455.

MAXWELLTON, one of the western suburbs of Paisley, situated within the parliamentary burgh of that town in Renfrewshire.

MAXWELLTON, Dumfries-shire. See GLENCAIRN.

MAY (ISLE OF), an island in the mouth of the frith of Forth, 6 miles south-south-east of Crail, in Fifeshire. It is generally supposed to belong to the parish of Anstruther-Wester; but it is claimed also by the parish of Crail. It measures about 1 mile in length, and ¾ of a mile in breadth. It consists entirely of greenstone, of a dark gray colour tinged with green. The shores are precipitous, but the surface is upon the whole flat: hence perhaps the name *May* or *Magh*, which in Celtic signifies 'a plain.' The western extremity, which is the broadest, presents cliffs of about 160 feet in elevation, with a tendency toward the columnar structure. The eastern extremity subsides into a long low ridge or reef. Kittiwakes, auks, guillemots, terns, titlarks, cormorants, and gannets, are the species of birds commonly seen upon it. The southern coast has the most fertile appearance. In the words of Ferguson,

> "Here, the verdant shores
> Teem with new freshness, and regale our sight
> With caves, that ancient Time, in days of yore,
> Sequester'd for the haunt of Druid lone,
> There to remain in solitary cell."

The island has a well of fine water and a small lake, and affords excellent sheep-pasture. There are upon it the ruins of a priory, which formerly belonged to the abbey of Pittenweem; and of a chapel, which was dedicated to St. Adrian, who was killed by the Danes in 870, and buried here. The saint's shrine was formerly much resorted to in cases of barrenness. William Lamberton, Bishop of St. Andrews, purchased it from the monks, and bestowed it upon the canons regular of the priory. After the Reformation, the island came to the Balfours of Montquhandie, and subsequently to Allan Lamond, who sold it to Cunningham of Barns. Alexander Cunningham of Barns obtained a charter from Charles I., of the island, with liberty to build a lighthouse, for which a tax was imposed on all ships passing up the frith. He erected a tower 40 feet high, on the top of which a fire of coals was constantly kept burning. This proved of much service to the navigation of the frith, although vessels would often run within half-a-mile of the island before the light was discernible. With the estate of Barns, the island was purchased by Scot of Scotstarvet, upwards of 130 years ago, and came to the late General Scott of Balcomie, by whose daughter, the Duchess of Portland, it was sold f £60,000 to the Commissioners for Northern light In 1815–16, they rebuilt the tower, and fitted it u with oil lamps and reflectors. The beacon was l up on the new plan on February 1st, 1816. It situated in N lat. 56° 12′, and W long. 2° 36′. Fro the lighthouse, Fifeness bears, by compass, N by ½ E, 5 miles; and the Staple-rocks lying off Du bar S by W ½ W, 10 miles; the Bass SW ¼ W, miles; and the Bell-rock NE, 15 miles. The lig resembles a star of the first magnitude, and may seen from all points of the compass, at the distan of about 7 leagues. It is elevated 240 feet abo the medium level of the sea. At one time, abo 15 fishermen and their families resided on the islan but afterwards the only inhabitants were the tw light-keepers and their families; and in 1851 t number of individuals was 18.

MAY (THE), a small river of the Ochil a Strathearn district of Perthshire. It issues fro the side of John-hill, close on the point where t four parishes of Auchterarder, Dunning, Glendevo and Fossaway meet. It runs 6 miles north-eastwar 2¾ miles of this distance through Dunning, 2 b tween Dunning on the left and Forgandenny on t right, and 1¼ partly in Forgandenny and partly b tween it and the most southerly section of Fortevio It now runs 2¼ miles northward, most of the di tance through Forgandenny, and a brief way on t boundary with the main body of Forteviot. It th finally enters Forteviot; and, after a course throug it of 1¼ mile westward and 1¾ northward, falls in the Earn a few yards below Forteviot bridge, a about a mile above Dupplin castle. Its enti length of course is between 11 and 12 miles. tributaries are numerous; but, its course being f most of the way among the Ochils, they are small. After entering Forteviot, its path, its bank and its motions afford a continued series of fine su jects for the pencil and the muse. The thick gre woods which surround the house of Invermay co down upon its margin, and fling their shadows o its rapids; and they still exhibit many specimens the birches which, more than a century ago, beca the topic of Mallet's popular ballad of 'the Birks Invermay,' set even then to an air which had lo before borne the same name. Among several fa of the stream, two are noted for their attractio the linn of Muckersey, where the river leaps ove perpendicular rock of 30 feet in height; and Humble-bumble, where, among rugged rocks, we ing trees, tufts of shrubbery, and many an elem of romance, the stream tumultuates in a cataract such wild unwonted sounds as to have suggested uncouth Humble-bumble designation. Among woods of Invermay, particularly on the brink of frolicking current, grow some rare plants, render the locality an inviting one to a botanist. On banks of the river, near its most romantic scen anciently stood the Pictish city of Forteviot, seat of the court of Pictish kings, and an objec warlike contention at the period immediately p ceding the fall of the Pictish power. The r mixes its name also with the private history of of the Scottish kings.

MAYBOLE, a parish, containing a post-tow its own name, also the villages of Culroy, Dun and Fisherton, in the north-west corner of the trict of Carrick, Ayrshire. It is bounded by frith of Clyde, and by the parishes of Ayr, Dalrym Kirkmichael, and Kirkoswald. Its greatest len in a straight line, is 9 miles, but by the nea practicable road is 12; its greatest breadth, straight line, is 5 miles, but by the nearest pr cable road is 7; and its area is 33¼ square miles.

eastern and south-eastern districts are an undulating plain, very diversified in surface, never subsiding long into a level, nor ever rising into decided upland. The other districts are a sea of heights, partly arable, and partly pastoral, so pleasingly and rapidly diversified in superficial outline as to want nothing but a free interspersion of wood to be delightful rambling-ground to a lover of fine scenery. Along the middle of the hill district, parallel with the frith, and 1½ mile distant from it, stretches a range of summits nearly 4 miles long, attaining an extreme altitude of 924 feet above sea-level, and bearing the name of Brown Carrick hill. This range, though heathy in itself, and rising like a screen to intercept a view of the frith and its frame-work from the interior, commands one of the most gay, magnificent, and extensive prospects in Scotland. On the south-east and south stretches the surgy surface of Carrick, expanding away in alternations of green height and brown bold upland till it becomes lost among the blue peaks of the southern Highlands of Scotland; on the south-west and west are the broad waters of the frith of Clyde, with many a sail like a sea-bird skimming the surface, and the rock of Ailsa riding like an ark on the wave, while behind are the serrated mountains of Arran veiled in misty exhalations, or curtained with clouds of every form and tone; on the north, immediately under the eye, extends the deep sylvan furrow of the Doon, with the monument of Burns glittering like a gem on its edge; and away thence stretches the great luxuriant plain of Kyle and Cunningham pressed inward in a long sweeping segment by the frith, gaily spotted with towns which look like cities in the distance, chequered also with a profusion of mansions and demesnes, and gliding dimly away in the perspective into the gentle heights of Renfrewshire, overlooked in the far horizon by the blue summit of Benlomond. The same prospect, in much of its extent and most of its elements, is seen from a thousand vantage-grounds of this inspiriting land of beauty; but nowhere are its scope so unbroken, its groupings so superb, and its effect upon the mind so exquisitely thrilling. Should any one wonder that Burns grew up on the threshhold of this home of romance, and for many years might have daily gazed on its gorgeous visions, and yet has not made an allusion to it in his writings, he must remember that the bard, though possessing a keen eye for the beauties of nature, was the painter rather of manners than of landscape,—the type in poetry not of Salvator Rosa, but of Hogarth and the limners of Holland.

The river Doon, over 4½ miles in a straight line, but over 7 or 8 along its numerous curvatures, forms the boundary-line on the north-east. But over ¼ of a mile above its embouchure it forsakes its ancient bed, and places a small portion of the parish, a piece of haugh-ground, on its right bank. Along nearly all its connexion with Maybole, it has a deeply-furrowed, dell-like path, profusely covered with copsewood and trees. Girvan-water forms the boundary for a short distance on the south-east; and in there a mirthful fine-clad stream. Rannoch-burn, running 2⅔ miles westward along an entwisting glen to the sea, traces part of the southern boundary. The interior running waters, owing to the configuration of the surface, are mere rills; but the largest gathers a considerable volume in five or six sources on Brown Carrick hill, and runs in an easterly course of 4 miles to the Doon near Auchendrane. Of four or five tiny lochlets, all lying in the south-east, the only noticeable one is Heart-loch, whose outline is exactly designated by its name, and whose appearance in a wooded hollow, with vegetation coming freely up on the outer surface of its waters, is softly beautiful. Perennial springs of excellent water are numerous, especially on the site and in the vicinity of the town; and one of them, called the Well-trees' Spout, emits a stream powerful enough to drive a mill wheel, or between 160 and 170 imperial gallons per minute. Of various mineral springs, formerly of medicinal repute, but all now neglected, the most remarkable is St. Helen's-well, 2½ miles north of the town on the high road to Ayr,—anciently associated with Popish superstition, and reputed to have the power on May-day of healing or invigorating sick or delicate infants.

The geological structure of the coast presents an interesting correspondence in its strata with those of the confronting coast of Arran. The predominant rocks of the interior are old red sandstone and trap. The sandstone, in a quarry at St. Murray's, often affords beautiful specimens of arborescence, from the presence of the black oxide of manganese, and is traversed by veins of lead ore. The soil of the arable lands is partly of a light nature, and partly of a strong, clayey character. About 17,000 imperial acres are in tillage; nearly 1,000 are under plantation; about 570 are meadow; and the rest of the area is variously moorland and hill pasture. The principal landowners are the Marquis of Ailsa, the Right Hon. T. F. Kennedy of Dunure, Sir James Fergusson, Bart., Elias Cathcart, Esq. of Auchendrane, Sir David Hunter Blair, Bart., and four others. The estimated value of raw produce in 1837 was £47,552. Assessed property in 1855-6, £28,592. The parish is traversed by the road from Ayr to Girvan, and has a branch railway of its own, completed and open for traffic in September 1856, and going into junction with the Ayr and Dalmellington railway. There were in the parish, in the feudal times, at least fifteen towers or castles, the residences of brawling chiefs. Dunure-castle, an interesting extant one of these, has been noticed in our article on Dunure. Grenand, or Greenan castle, half-way between the mouth of the Doon and the Heads of Ayr, is a tall, gaunt, lanthorn-looking pile, rising nakedly upon the margin of the sea, on an elevated bank, overlooked by a bold ascent; and, as seen with the Clyde for its back-ground, it has a haggard aspect, strikingly suggestive of the misery of feudal times. The castles of Newark, Maybole, and Kilkenzie, have recently undergone renovation or repair, and are at present inhabited; but all the others—the castles of Auchendrane, Smithstown, Beoch, Craigskean, Garryhorne, Doonside, Dalduff, Glenayas, Sauchrie, and Brochlock—are much dilapidated, or have left but a few vestiges. Numerous camps occur, so small and of such rude construction, as evidently to have been thrown up by small invading bodies of those Irish who subdued the Romanized British tribes. Tumuli, the burying-places of a field of carnage, are frequent. The whole parish was, in common with districts around it, tyrannized over in ancient times by the Kennedies; and exhibits not a few memorials of disasters inflicted, or of conflicts maintained, by them and their underlings. Population in 1831, 6,287; in 1851, 7,615. Houses, 948.

This parish is in the presbytery of Ayr, and synod of Glasgow and Ayr. Patron, the Crown. Stipend, £335 7s. 5d.; glebe, £30. Unappropriated teinds, £51 19s. 3d. Schoolmaster's salary, £34 4s. 4½d., with about £100 fees. The parish church was built in 1808, and altered and improved in 1830, and contains 1,192 sittings. There are two chapels of ease; the one at the west end of the town, built by the late Sir C. D. Fergusson; the other on the coast, at Fisherton. There is a Free church in the town:

and the amount of its receipts in 1856 was £647 9s. 1½d. There is an United Presbyterian church in the centre of the town, built in 1797, and containing 555 sittings. There is also an Episcopalian chapel. There are six non-parochial schools. The present parish of Maybole comprehends the ancient parishes of Maybole on the south, and Kirkbride on the north. The church of Maybole, anciently dedicated to St. Cuthbert, was given in the reign of Alexander II. by Duncan of Carrick, son of Gilbert of Galloway, to the Cistertian nuns of North Berwick, whose convent was founded soon after 1216; and continued to belong to them, and to figure as a vicarage established by the bishop of Glasgow, till the Reformation. The entire revenues of the vicarage were estimated in the reign of James V. at only £53 6s. 8d.; and half of even these was annexed, for some time before the Reformation, to the prebend called Sacrista Major in the collegiate church of Glasgow. At the Restoration, the revenues of the parsonage, the glebe excepted, were held on lease by Thomas Kennedy of Bargany, for the yearly payment of £22, twenty oxen, and twelve cows. In 1451, a chaplainry was founded in the church by Sir Gilbert Kennedy of Dunure, dedicated to St. Ninian, and endowed with the lands of Largenlen and Brochlock. A chapel, subordinate to the parish church, anciently stood on the lands of Auchendrane; and other chapels, in other parts, were traceable at the end of the 17th century. The church of Kirkbride was given to the same parties as the church of Maybole, and by the same donor, and continued in their possession till the Reformation. The annexation of its parish to Maybole occurred probably in the days of Popery, and certainly before 1597. In that year, the church of Maybole figures as the place of worship for both parishes, and, by an act of parliament, was formally separated from the convent of North Berwick, and established as a rectory. The ruins of the church of Kirkbride, on the shore about half-a-mile north of Dunure castle, are still distinctly observable, surrounded by a burying-ground which continues to be used, and in the vicinity of a field which bears the name of the priest's land or glebe. In 1371, Sir John Kennedy of Dunure founded, near the parish cemetery of Maybole, a chapel for one clerk and three chaplains, dedicated it to the Virgin Mary, and endowed it with the five mark lands of Barrycloych and Barrelach, the six mark lands of Treuchan, and various other sources of revenue. This collegiate chapel seems to have been the earliest establishment of its class in Scotland; and afterwards, when similar ones arose, it was called a collegiate church, and its officiates were styled provost and prebendaries. During part of the reigns of James III. and James IV., Sir David Robertson was provost; and, in 1525, Mr. Walter Kennedy, rector of Douglas, canon of Glasgow, and rector of the university of Glasgow, was appointed to the office. The ground on which the town stands belonged to the collegiate church. Two houses, which were the domiciles of two of its priests, and orchards which belonged to the domiciles of the others, still exist. The church itself is now the burying-place of the Marquis of Ailsa and other parties, whose ancestors arrested the progress of the pile toward ruin; and is surrounded by a planted and neat patch of ground enclosed within a wall.

The Town of Maybole is a burgh of barony and the reputed capital of Carrick. It stands near the southern extremity of the parish of Maybole, on the road from Glasgow to Portpatrick, 9 miles south by west of Ayr, 12 north-north-east of Girvan, 22 south-south-west of Kilmarnock, and 81 south-west of Edinburgh. It stands chiefly on the de vity and partly along the skirts of a very bro based and flattened hill, with an exposure to east, the summit of the hill intervening betwee and the frith of the Clyde; and it commands a pl sant and somewhat extensive view over one-half the points of the compass into the interior of C rick. An old rhyme, using one of several obsol variations of the town's ancient name, says,—

"Minnibole's a dirty hole,
It sits aboon a mire."

This representation, in the sense usually attac to it of the town being situated on miry ground now, and probably always was, incorrect. A br belt of deep green meadow, nearly as level a bowling-green, stretches along the base of the h and seems anciently to have been a marsh; but could not have been a marsh of a miry kind, otherwise than green and meadowy, nor does even at present, form the site of more than a v small and entirely modern part of the town. T whole ancient site is declivitous, abounding w copious springs of pure water; and not improba was clothed in its natural state with heath. T sets of names, both very various in their ort graphy, but represented by the forms *Maiboil* a *Minnybole*, were anciently given to the town; th have greatly perplexed etymologists, and seem have bewildered the usually astute George Chalme but they may, Professor Gray thinks, be referred Gaelic roots, which make them mean 'the Hea ground upon the marsh,' and 'the Heath-grou upon the meadow.' A town built upon a heat declination, and closely skirted by a meadc or even a grassy marsh, may thus, without 'sitt aboon a mire,' be both 'Minnibole' and Mayb The lower streets of the town, called Kirklan Newyards, and Ballony, are not within the limit the burgh, and consist almost wholly of weav houses and workshops, tidier and better than sim buildings in many other towns. The main st runs nearly north and south, and—with the exc tion of a brief thoroughfare going off westwar right angles from its middle—occupies the high ground within the burgh. A considerable sp deeply sloping between it and the low-lying subu is disposed to a small extent in the ancient ce tery and the relics of the collegiate church; greater extent in four or five incompact and irr larly arranged streets; and to a yet greater ex in fields and gardens which give all the intersec thoroughfares a straggling or detached appears and impart to the whole town a rural, airy, healthful aspect.

The only parts of the town which draw the a tion of a stranger, are the Main street, and wh called the Kirk-wynd. These are narrow, ar varying width, quite destitute of every moder traction, and sinless of all the ordinary graces fine town; yet they possess many features of an stateliness, decayed and venerable magnific and even fading dashes of metropolitan great which strongly image the aristocratical pa Edinburgh during the feudal age. As the c of Carrick, the place anciently wielded more ence over its province than the modern metrop the kingdom does over Scotland, and containe winter residences of a large proportion of the rick barons. As the seat, also, of the courts o tice of Carrick bailiery,—the place where all of importance in a roistering and litigatin were tried,—it derived not a little outward r tability from the numbers and wealth of the pa practitioners who made it their home. In com

too, with its collegiate church and its near vicinity to Crossraguel abbey, it borrowed great consequence from the presence of influential ecclesiastics who, in a dark age, possessed more resources of power and opulence than most of the nobility. No fewer than 28 baronial mansions, stately, turreted, and strong, are said to have stood within its limits. Two of several of these which still remain figure in association with such interesting history that they must be specially noticed.

The chief is the ancient residence of the Ailsa or Cassilis family, the principal branch of the Kennedys. The building stands near the middle of the town, bears the name of the Castle *par excellence*, and is a high, well-built, imposing pile, one of the strongest and finest of its class. It was the place of confinement for life of the Countess of Cassilis, a daughter of the first Earl of Haddington, who eloped with the Gipsy leader, Johnnie Faa. See Cassilis. The Earls of Cassilis, directly and through the medium of collateral branches of their family, wielded such power over the province that they were called both popularly and by historiographers, "Kings of Carrick;" and they used the castle of Maybole as the metropolitan palace of their "kingdom." Gilbert, the fourth Earl, who lived in the unsettled period succeeding the commencement of the Reformation, pushed his power into Galloway, and seized the large possessions of the abbey of Glenluce. He, for some time, saw his uncle abbot of Crossraguel; but, the office passing to Allan Stewart, who enjoyed the protection of the Laird of Bargany, he rapaciously desired to lay hands on all its revenues and temporal rights. His brother, Thomas Kennedy, having at his instigation enticed Stewart to become his guest, the Earl conveyed the ensnared abbot to Dunure castle, the original residence of the Cassilis family, and there, by subjecting him to terrible torments, forced him to resign by legal instruments the possessions of the abbacy. A feud arose from this event, or was aggravated by it, between the Earls of Cassilis and the Lairds of Bargany, and at last issued in very tragical events. In December, 1601, the Earl of Cassilis rode out from Maybole castle at the head of 200 armed followers to waylay the Laird of Bargany on a ride from Ayr to his house on Girvan-water; and on the farm of West Enoch, about half-a-mile north of the town, he forced on the Laird an utterly unequal conflict, and speedily brought him and several faithful adherents gorily to the ground. The Laird, mortally wounded, was carried from the scene of the onset to Maybole, that he might there, if he should evince any symptom of recovery, be despatched by the Earl as 'Judge Ordinar' of the country; and thence he was removed to Ayr, where he died in a few hours. Flagrant though the deed was, it not only passed through manœuvring and state influence highly characteristic of the period—passed with impunity, but it was formally noted by an act of council as good service to the King. The Laird of Auchendrane, son-in-law of the slain baron, was one of the few adherents who bravely but vainly attempted to carry the onslaught, and he received some severe wounds in the encounter. Thirsting for revenge, and learning that Sir Thomas Kennedy of Colzean intended to make a journey to Edinburgh, he so secretly instigated a party to waylay and kill him, that no witness existed of his connexion with them except a poor student of the name of Dalrymple, who had been the bearer of the intelligence which suggested and guided the crime. Dalrymple now became the object of his fears; and, after having been confined at Auchendrane, and in the island of Arran, and expatriated for five or six years a soldier, he returned home, and was doomed to destruction. Mure, the Laird, having got a vassal, called James Bannatyne, to entice him to his house, situated at Chapel-Donan, a lonely place on the coast, murdered him there at midnight, and buried his body in the sand. The corpse, speedily unearthed by the tide, was carried out by the assassin to the sea at a time when a strong wind blew from the shore, but was very soon brought back by the waves, and lodged on the very scene of the murder. Mure, and his son who aided him in the horrid transactions, fell under general suspicion, and now endeavoured to destroy Bannatyne, the witness and accomplice of their guilt; but the unhappy peasant making full confession to the civil authorities, they were brought up from an imprisonment into which the King, roused by general indignation, had already thrown them, and were placed at the bar, pronounced guilty, and summarily and ignominiously put to death. These dismal transactions form the groundwork of Sir Walter Scott's dramatic sketch, called 'Auchendrane, or the Ayrshire Tragedy.'

The house now occupied as the Red Lion inn, was anciently the mansion of the provost, and is notable as the scene of a set debate between John Knox, the reformer, and Quentin Kennedy, uncle of the fourth Earl of Cassilis, and abbot of Crossraguel. An account af the transaction, written by Knox himself, was republished in 1812 by Sir Alexander Boswell, from a copy—the only one extant—in his library at Auchinleck. The debate was occasioned by a challenge, on the part of the abbot, given in the church of Kirkoswald; it was conducted in a dingy, pannelled apartment, in the presence of 80 persons, equally selected by the antagonists, and included several nobles and influential gentlemen; it lasted for three days, and was eventually broken off through the want of suitable accommodation for the persons and retinues of the select auditors; and it did good service in practically prostrating the abbot, and in arousing public attention to the corruptions of Romanism. The members of a 'Knox club,' instituted in the town to commemorate the event, and consisting of all classes of Protestants, used to hold a festival to demonstrate their warm sense of the religious and civil liberties which have accrued from the overthrow of the Romish domination.

The noticeable civil buildings, additional to the two mentioned, are the ancient town-residences of the Lairds of Blairquhan, now used as the tolbooth, —the ancient residence of the Lairds of Kilhenzie, now the White Horse inn,—the ancient residence of the Kennedys of Knockdow, now called the Black house,—the house occupied by Sir Thomas Kennedy of Colzean, now the property of Sir Thos. M. Cunningham,—the ancient residence of the Kennedys of Ballimore, situated in the Kirk-wynd,—the ancient residence of the abbots of Crossraguel, called the Garden of Eden,—and the Town-hall, a cumbrous old pile with a low, heavy, spiral tower, situated at the Cross. Though the town has not one modern public civil building, it abounds in commodious and comfortable dwelling-houses, greatly superior, for every domiciliary use, to even the best of its remaining baronial mansions. The parish-church is a plain edifice, and might even claim to be neat were it not disfigured by a small unsightly steeple. The church at the west end of the town is a very creditable edifice. The United Presbyterian church draws attention by having had a deep slice cut away from one of its corners, occasioned by a bigoted attempt to prevent its erection.

Maybole, after passing through a season of great depopulation and decline consequent on the aboli-

tion of hereditary jurisdictions, has risen into considerable importance as a busy outpost of the cotton-manufacturers of Glasgow, and a ready receptacle of the immigrant weavers of Ireland. It has no manufacture whatever of its own, beyond the usual produce of handicraftsmen for local use; and figures chiefly as a seat of population, where the Irish weavers and the agents of Scottish employers conveniently meet. Incomers from Ireland have been so numerous as almost to counterbalance the aboriginal inhabitants, and give law to the place. Excepting a few coarse woollens and blankets, all the fabrics woven are pullicates, imitation thibets, and mull and jaconet muslins. Maybole, jointly with the villages of Crosshill and Kirkmichael, had, in 1828, 1,700 hand-looms, and, in 1838, 1,360. The condition of the weavers is similar to that in other towns where weaving is the chief occupation, and if darkened by some peculiar local features, is perhaps at least equally lightened by others. A weekly market is held on Thursday; and annual fairs are held on the third Thursday of January, April, July, and October. The town has offices of the Royal Bank of Scotland, and of the Union Bank. It has likewise six insurance agencies, a water company, a gas light company, and a mechanics' institution, and is the meeting place of the Carrick farmers' society. It has long had daily coach communication with Ayr, but it will derive greatly increased benefit from its branch railway to the Ayr and Dalmellington railway. It was erected into a burgh of barony in 1516, and is governed by 2 bailies, 15 councillors, and a treasurer. Its public revenue averages about £65 a-year. A bailie court is held on every Thursday, and a justice of peace court sits on the first Wednesday of every month. Population in 1841, 3,431; in 1851, 3,862. Houses, 394.

MAYFIELD. See Glasgow, Paisley, Kilmarnock, and Ayr Railway.

MAYSHIEL. See Haddingtonshire.

MEADOWBANK. See Kirknewton.

MEADOWMILL, a village in the parish of Tranent, very near the boundary with that of Prestonpans, and on the road between Preston and Seaton, Haddingtonshire. It is of modern erection, and stands on the field of the battle of Prestonpans, fought in 1745. Its name occurs in a well-known Jacobite song. A little south of it stands the elegant form of Stiell's hospital; and immediately north of it passes the line of the North British railway. Population, 120.

MEAG (The), a rivulet of the centre of the southern border of Ross-shire. It issues from Loch-Benachan, and runs 8 miles east-north-eastward to a confluence with the Conan at Scatwell.

MEALBUIDHE, a mountain in the parish of Fortingal, Perthshire, having an altitude of 3,480 feet above the level of the sea.

MEALCEANDEARG, the central one of three ranges of alpine mountain in the eastern division of the parish of Glenshiel, Ross-shire. It rises nearly 4,000 feet above the level of the sea, and displays a grandly romantic outline.

MEALFOURVOUNIE, a mountain in the parish of Urquhart, Inverness-shire. It is situated at the foot of Glen-Urquhart and Glen-Moriston, and forms a conspicuous feature on the north-west flank of Loch-Ness. It is broad-based and round-backed; sends up, from a broad stage at four-fifths of its whole elevation, a dome-shaped peak, which constitutes the remaining fifth of its altitude; and attains altogether an elevation above sea-level of, some authorities say, 2,700 feet,—others say 3,060 feet,—and others even 3,200 feet. The great mass of the mountain, from the summit downward, consists coarse conglomerate, whose abraded portions a gneiss, granite, quartz-rock, mica-schist, and san stone, cohering with extremely little cement; a its lower declivities, including seemingly its wh base, consist of a hard compact splintery roc which has usually been described as primary r quartz-rock, but which may be stratified sandsto completely indurated, and in a great measure d vested of its stratification by the subjacency of gr nite, and which is so hard and crystalline as to quarried and regularly used for causewaying t streets of Inverness. The upper stage or peak the mountain is very steep on the west, and almo mural on the north and south; and it is connect with the rest of the mountain, on the east, by long tapering ridge. On the western side, at t bottom of the peak, is a lochlet of about 4 acre whence flows toward Loch-Ness a rill always r mantic, and, in rainy weather, powerfully scen descending in the brief distance of 2 miles a heig equal to that of the entire course of the Twee tumbling along a broken channel down the face a sublime mountain-frontlet of rock, waving arou it in its lower course a gay assemblage of trees, a performing two singularly beautiful cascade-lea amidst overhanging foliage of the richest tin On the west side of this rill, near its source, a nearly 1,500 feet up the mountain, is a rockin stone of about 20 feet in circumference, which moveable by two persons. The view from the su mit of Mealfourvounie is grand and extensive, a comprehends the whole of the Glenmore-nan-Albi from Fort-George on the north-east to Fort-Willia on the south-west, a distance of more than 70 mil On the north the eye wanders over various scene away to the mountains of Ross and Caithness; a on the south, it expatiates over the whole of Stra errick and the country watered by the head-strea of the Spey. Immediately below Loch-Ness stretch slenderly along, like a narrow ditch, deeply su within steep banks; and at 6 miles' distance, t Fall of Foyers glitters in its belt of shining spr between sheets of dark-brown mountain, like light of the sky struggling through a vertical fiss in the heights. Mealfourvounie is noted for be the first landmark seen by mariners, after they p the Moray frith round Kinnaird-head, or from south, and for guiding their navigation over m of that vast gulf.

MEALHORN, a mountain in the parish of derachyllis, and in the south-west of the R forest, in Sutherlandshire. It has an altitude nearly 3,000 feet above sea-level.

MEALMEADHONOCH, a mountain in the In ness-proper district of the parish of Durness, Sut landshire.

MEALNENION, the conical summit of Ben brie, 3,200 feet high, on the mutual border of parishes of Lairg and Farr, Sutherlandshire.

MEARLSFORD. See Falkland.

MEARNAIG. See Glensanda-Hill.

MEARNS, a parish, containing the post-office lage of Newton-Mearns, and part of the post-o village of Busby, in the south-east of Renfrews It is bounded by Lanarkshire, Eaglesham, Ayrs Neilston, Eastwood, and Cathcart. Its length north-eastward is about 7 miles; and its gre breadth is 3½ miles. The Earn traces most of boundary with Eaglesham, on the south-east; White Cart traces all the boundary with Lan shire on the east; and several smaller stre mostly tributaries of the White Cart, run in th terior. The surface of the parish is beauti diversified with gentle eminences or small

hills, and gradually rises from the north-east to the south-west, where there is a moor of considerable extent. It has always been distinguished for its fine pasture; and even in the present times of extended cultivation, it is very largely devoted to depasturement and the dairy. The soil, in some small tracts in the lower district, lies on a clay bottom, and has a stiffish character; but in most other places it lies on a porous, fractured, rapidly decomposing subsoil of trap rock, of the kind locally called rotten rock, and is of a light dry quality, quick, and stimulating. There are three small lakes in the moors, and one in the lands of Pollock, all very attractive to anglers. There are about fifty landowners; but Sir Hew Crawford Pollock, Bart., owns more than one-fourth of the entire valuation, and the greater number are small proprietors farming their own lands. The principal properties are Pollock, Mearns, Southfield, Caplerig, Greenbank, Fingleton, and Netherhouse. The old valuation was £4,725 6s. 6d. Scotch. Assessed property in 1856, £18,658 4s. 8d.

The earliest name that appears on record, in connection with this parish, is that of Roland of Mearns, who is mentioned as a witness to the donation which Eschina, wife of Walter the Steward, gave to the monastery of Paisley in the year 1177. Robert of Mearns appears in the same capacity in a grant made to that establishment in 1250. In the 13th century, the barony of Mearns came by marriage to the Maxwells of Caerlaverock, afterwards Lord Maxwell, and Earls of Nithsdale. About the year 1648, it was sold by the Earl of Nithsdale to Sir George Maxwell of Nether Pollock, from whom it was soon afterwards acquired by Sir Archibald Stewart of Blackhall, to which family it has since belonged. The castle of Mearns is a large square tower situated on a rocky eminence, about a mile south-east of the village of Newton-Mearns. It is surrounded by a strong wall, and seems to have been secured by a drawbridge. It has long been uninhabited, the proprietors having their residence at Ardgowan. The estate of Pollock in this parish is called Upper Pollock, to distinguish it from Nether Pollock in the parish of Eastwood; but it was the original estate to which the name Pollock belonged, and which gave the name of Pollock to the family who still hold it, and who are one of the oldest families in Scotland. The mansion house of Upper Pollock was built about the end of the 17th century, and stands on a rising ground, embosomed among old trees, yet commanding an extensive view. Southfield house is a very pleasant residence, well sheltered with wood. Caplerig was anciently a seat of the Knights Templars. The late Professor Wilson spent part of his boyhood as a boarder in the manse of Mearns; and he often, in his writings, alluded to the scenes of that period of his boyhood; so that Mearns is nearly as much associated with his great name as if it had been the place of his nativity. The parish is traversed by the road from Glasgow to Kilmarnock, and by that from Paisley to Eaglesham; and it enjoys daily communication by public coach with Glasgow, from both Newton-Mearns and Busby. The village of Newton-Mearns stands on the Glasgow and Kilmarnock road, about ½ a mile north-west of the parish church, and 7 miles south-south-west of Glasgow. It is a burgh-of-barony, and has the right of holding a weekly market and two annual fairs. It consists chiefly of a single street, situated on a rising ground, and commanding a pleasant prospect. Should this be the 'Nova villa de Mernis,' (Newtown of Mearns,) mentioned in two donations by Sir Herbert Maxwell to the monastery of Paisley, between the years 1272 and 1316, it boasts a considerable antiquity, and affords an instance of a place continuing to be described by a name centuries after it had ceased to be applicable. The population of the village is about 550. There are cotton works at Busby, a printfield at Netherplace, and a printfield and bleachfield at Wellmeadow. Population of the parish in 1831, 2,814; in 1851, 3,704. Houses, 337.

This parish is in the presbytery of Paisley, and synod of Glasgow and Ayr. Patron, Sir M. R. S. Stewart, Bart. Stipend, £283 19s. 6d.; glebe, £20. Unappropriated teinds, £1,560 0s. 6d. Schoolmaster's salary, £34 4s. 4½d., with £63 fees, and £4 other emoluments. The parish church is a very old building, altered and enlarged in 1813, and containing 730 sittings. There is an United Presbyterian church at Newton-Mearns, originally built in 1743, and containing 490 sittings, but entirely rebuilt about 1840. There is also an United Presbyterian church at Busby, built in 1836, and containing 400 sittings. There are five non-parochial schools. There was in popish times a chapel at Upper Pollock; but it disappeared after the Reformation. The ancient vicarage of Mearns was a perpetual one, with altarage and lands.

MEARNS, an ancient and popular designation of Kincardineshire: which see.

MEATHIE. See Inverarity.

MEDAN'S CAVE (St.). See Kirkmaiden.

MEDWIN (The), a rivulet of the middle ward of Lanarkshire. It is formed by two streams, the North Medwin and the South Medwin, which unite about 1¾ mile south-east of the village of Carnwath; and, being formed there by these streams, it runs about 1½ mile north-westward, on the boundary between the parishes of Carnwath and Libberton, to the Clyde. The North Medwin rises on the confines of Edinburghshire, and has a course of about 8 miles, in a south-south-westerly direction, chiefly within the parish of Carnwath. The South Medwin rises near Garvaldfoot, in the parish of Linton, in Peebles-shire, and has a course of about 10 miles, in a south-westerly direction, chiefly on the boundary between the parishes of Dunsyre and Carnwath on its right bank, and the parishes of Dolphinton, Walston, and Libberton, on its left bank. A little below its source it is divided by a mill-pond into two rills, one of which continues the course toward the Clyde, while the other goes to the Tarth, and through that to the Tweed. It is said also that one of the fountain-sources of the Medwin emits two rills, one of which flows to the Water of Leith. And thus is there a common affluence toward the Clyde, the Tweed, and the Forth.

MEETHILL. See Peterhead.

MEGGET, a parish in Peebles-shire, forming the basin of a rivulet of its own name, and often popularly designated from it Meggetdale. The parish is united to Lyne: which see.

MEGGET (The), a rivulet of the parish of Westerkirk, Eskdale, Dumfries-shire. It rises in the extreme north of the parish, very near the boundary with Roxburghshire, and flows 6½ miles southward to a junction with Stennis-water. The united stream, about half-a-mile farther south, falls into the Esk in the vicinity of Waulkmill. The Megget is strictly a mountain-stream, fed by four or five large and as many small brawling brooks. It has attractions for the angler, flows in the vicinity of a noted antimony mine, and washes the village of Jamestown.

MEGGSHILL. See Gretna.

MEIDHOPE. See Linlithgowshire.

MEIG (The). See Meag (The).

MEIGLE, a parish, containing a post-office village of its own name, on the eastern verge of Perthshire. It is bounded by Forfarshire, and by Cupar-

Angus and Alyth. Its length south-westward is 5½ miles; and its breadth varies from 1 mile to 2½ miles. Dean-water, maintaining the sluggish character which pervades it over its whole course, creeps 3½ miles along the north-west boundary. The river Isla, sweeping away the Dean, and occasionally inundating its banks with the freshets which it brings down from the Grampians, continues the boundary-line for 2 miles. Meigle-burn, coming in from Newtyle, waters the south-western and larger district, and augments the Dean a mile above that stream's influx to the Isla. The parish lies in the centre of Strathmore, and has no other variation of surface than a few very gentle rising grounds. The soil, in some places, is sandy; in others, is clayey; but, in most, is a rich dark-coloured loam. The whole surface is enclosed, and beautifully cultivated. Belts and groves of trees cover nearly 200 acres. Red sandstone, suitable for building, is worked in two quarries; and shell-marl has been removed in considerable quantities from a small bog near the southern extremity. There are five principal landowners. The value of assessed property in 1843 was £5,441 11s. 1d. Drumkilbo, a mile east of the village, is a fine mansion, embosomed in wood. Kinloch-house, 1¼ mile west of the village, is pleasantly situated. Meigle-house and Potento contribute to adorn the district. Belmont-castle, the seat of Lord Wharncliffe, ⅔ of a mile south of the village, is an elegant modern quadrangular pile, agglomerated with the old tower of a former mansion. In Belmont park is a tumulus called Belliduff, which tradition assigns as the spot on which Macbeth fell in combat with Macduff; and at some distance stands, almost erect, a block of granite, 20 tons weight, called Macbeth's stone, and said to be monumental of one of his generals. These objects, and the traditions connected with them, though they fail to prove that Macbeth was not slain at Lumphanan in Aberdeenshire, may probably show that Meigle was the scene of some of his fighting. There are some very antique and curious monuments in the churchyard, associated with the name of the fabulous King Arthur's faithless wife, Guinevar, or Vanora. The village of Meigle stands on Meigle-burn, in the centre of the parish, on the road from Cupar-Angus to Kirriemuir, about a mile north of the junction station of the Scottish Midland railway with the Dundee and Newtyle railway, 5½ miles south-west of Glammis, 6½ north-east of Cupar-Angus, and 13 north-north-west of Dundee. It seems to have been a seat of population, or at all events was a burying-place, before the introduction of Christianity. A weekly market was formerly held in it, but has fallen into disuse. Annual fairs for horses and cattle are held on the last Wednesday of June and October. The village has two inns and an insurance agency. A post-gig runs through it between the railway station and Alyth. Population of the village, about 300. Population of the parish in 1831, 873; in 1851, 686. Houses, 144.

This parish is the seat of a presbytery, in the synod of Angus and Mearns. Patron, the Crown. Stipend, £237 19s. 2d.; glebe, £18. Unappropriated teinds, £30 3s. 1d. Schoolmaster's salary, £34 4s. 4½d., with £16 fees, and £5 other emoluments. The parish church was mainly built about 1780, but comprises two aisles of a previous edifice; and it contains about 700 sittings. There is a Free church, with an attendance of about 200; and the amount of its receipts in 1856 was £66 3s. 5d. There is also an Episcopalian chapel. There is a private school. Meigle was anciently the occasional residence of the Bishops of Dunkeld.

MEIGLE-HILL. See Galashiels.

MEIKLEBEN, one of the Lennox hills in Stirlingshire, so situated as to seem to unite the Campsie and the Kilsyth ranges. It has a fine contour, rises to an altitude of about 1,500 feet above sea level, is seen from a great distance in the direction of Lanark, and forms a conspicuous landmark from the frith of Forth.

MEIKLE-CESS-LAW. See Longformacus.

MEIKLE-FARNESS, a quondam village, now quite extinct, in the parish of Cromarty.

MEIKLE-FERRY. See Dornoch Frith (The).

MEIKLEFOLLA. See Fyvie.

MEIKLEHOLMSIDE-BURN, a brook, tracing part of the south-western boundary of the parish of Moffat to the incipient Annan, in Dumfries-shire.

MEIKLE-LOCH, a lake about a mile long, and half-a-mile broad, near the centre of Glen-Urquhart, in the parish of Urquhart, Inverness-shire. Its banks are adorned with the houses and grounds of Lochletter, Lakefield, and Sheuglie. The glen comes down upon it with the expansion of a strath; but, immediately after passing it, becomes contracted and winding. Luxuriant birches swarm on the gently sloping banks behind the fine fields of Lakefield and Lochletter, climb the steep acclivities of the narrowing glen below, and combine with the glassy surface of the lake and the bold contour of the mountains to render the place one of the most captivating of the close scenes of the Highlands.

MEIKLEOUR, a post-office village in the parish of Caputh, Perthshire. It is situated 5 miles west of Cupar-Angus. Cattle markets are held in it several times a-year. Population, 110. Houses, 37.

MEIKLE-RIVER. See Lochbroom.

MEIKLE-ROE, an island in the parish of Delting, Shetland. It is situated in the south-east of St. Magnus' bay, and has a somewhat circular outline, with a diameter of about 2½ miles. Its eastern half lies very near the islets and peninsulas at the head of the bay. Population in 1841, 214; in 1851, 290. Houses, 50.

MEIKLEWARTHILL, an estate and a village in the parish of Rayne, Aberdeenshire. There is a round knoll on the estate called the Earl of Mar's Rieve, which probably made some figure in the rude jurisprudence of the feudal times. Population of the village, 152. Houses, 41. A large annual cattle market is held here about Whitsunday.

MEIKLEWOOD. See Gargunnock.

MEIN-WATER, a rivulet of Annandale, Dumfries-shire. It rises on the north-east side of Ris hill, in the north of the parish of Middlebie, with a few yards of the source of one of the tributari of the Milk, and flows 4½ miles southward, and south-westward to the Annan, at a point ¾ of a mi south of Hoddam church. Its course is chiefly Middlebie; but, for 2 miles above its mouth, is part in Hoddam, and partly between these two parish It has three tributaries, all from the north, and no exceeding 3½ miles in length of course. The stre runs, for some distance above its termination, amo land of a gravelly soil; and it frequently overflo its banks, alters its channel, and sweeps away e bankments.

MELBY, a post-office station subordinate to L wick, in Shetland.

MELDON-BURN. See Eddlestone.

MELDRUM, a parish, containing the post-to of Old Meldrum, in the Garioch district of Aberdee shire. It is bounded by Fyvie, Tarves, Bour and Daviot. Its length east-south-eastward is abo 6 miles; and its breadth varies from 2 to 4 mil The whole parish is ridgy rising ground, surround by vales and valleys in the neighbouring parish Its north-western extremity has a considera

altitude above the exterior vales; but its other parts have only a moderate height, and descend by an easy inclination, presenting a diversity of rich well-cultivated table land, sloping to the west, the south, and the east. Several points of the surface command extensive views, on the one hand of the district of Foremartine and Buchan, and on the other hand, of the celebrated valley of the Garioch, bounded on the west by the lofty Bennochie. The summit grounds are extensively heathy; but the slopes, particularly on the south-west and the south, have a rich fertile soil. Upwards of 500 imperial acres are under plantation; upwards of 1,100 are pastoral or waste; and about 5,800 are either regularly or occasionally in tillage. Hornblende rock, of a quality which admits of being polished like marble, is found in large detached masses; whinstone is common; rock-crystal occurs in the hill of Bethelnie; and limestone was wrought for some time near the boundary. The average rent of the best land per Scotch acre is £4 10s. adjacent to the town, and £2 in the country districts. The estimated value of raw produce in 1840 was £15,642. Assessed property in 1843, £4,999. Meldrum-house is a fine residence, in the antique style of architecture, surrounded with beautiful scenery. The remains of a Roman encampment existed till recently on Bethelnie farm. The road from Aberdeen to Banff traverses the parish; and a branch railway from Old Meldrum to Inverury was opened in the summer of 1856. Population in 1831, 1,790; in 1851, 2,002. Houses, 401.

This parish is in the presbytery of Garioch, and synod of Aberdeen. Patron, Urquhart of Meldrum. Stipend, £223 19s. 10d.; glebe, £28. Unappropriated teinds, £40 17s. 5d. Schoolmaster's salary, £28, with fees, a share in the Dick bequest, and some other emoluments. The parish church was built in 1684, enlarged in 1767, and new-seated in 1810, and contains 674 sittings. There is a Free church, with an attendance of 700; and the amount of its receipts in 1855 was £280 19s. 7d. There is an United Presbyterian church, built in 1822, and containing 312 sittings. There is an Episcopalian chapel, built in 1813, and containing 170 sittings. There are three non-parochial schools. The ancient name of the parish was Bethelnie; and that name is still retained by a district in it where the ancient church was situated. The modern name Meldrum is Celtic, and signifies, the shoulder-hill or ridge-hill, and seems to allude to the general configuration of the parochial surface.

MELDRUM (Old), a post-town, a market town, and a burgh-of-barony in the parish of Meldrum, Aberdeenshire. It stands on the road from Aberdeen to Banff, 5 miles north-north-east of Inverury, and 18 north-north-west of Aberdeen. Its streets are very irregularly built; but they nevertheless contain a number of good houses. The town-hall is a respectable edifice, surmounted by a spire. The inhabitants appear to possess a spirit of enterprise,—they are chiefly merchants, professional men, tradesmen, handicraftsmen, and labourers. There is a good weekly market for provisions; and during the winter and spring months a market is held every fortnight for the sale of cattle and grain. There are also two annual fairs in May and November. A considerable manufacture of cotton goods is carried on. There are also a brewery and a distillery; and in the vicinity are several corn-mills. The town was erected into a burgh-of-barony in 1672, but has not now any local magistrate. There are in it a mechanics' institution, with reading-room and library. There is likewise a horticultural society. Population in 1831, 1,004; in 1851, 1,579.

MELFORD (Loch), a small sea-loch of Argyleshire. It enters between points Degnish and Ashnish, opposite the island of Luing; is 1⅔ mile broad at the entrance, and extends 4 miles inland, in an east-north-easterly direction, along the southern boundary of Nether Lorn. Its name means 'the Lake of the high eminences or lumps of land,' and may be regarded as descriptive of its scenery. Several islets lie on its bosom; and Melford-house overlooks its north-east extremity.

MELGAM (The). See Lintrathen.

MELGUND-CASTLE. See Aberlemno.

MELISTA. See Uig.

MELLENDEAN-BURN, a brook flowing on the boundary between the parishes of Kelso and Sprouston, Roxburghshire.

MELLERSTAIN, a village in the parish of Earlston, Berwickshire. It stands near the Eden, 8 miles north-west by west of Kelso. Population, 173. Houses, 45.

MELNESS, a district, having a post-office station of its own name, in the north-west of the parish of Tongue, Sutherlandshire. Here is a Free church, forming one charge with the Free church of Eriboll.

MELROSE, a parish in the extreme north of Roxburghshire, forming a northerly projection of that county between Selkirkshire and Berwickshire, to the southern extremity of Edinburghshire. It contains the post-town of Melrose, the post-office villages of Dernock and Gattonside, the villages of Eildon, Newstead, Newton, and Blainslie, the antiquarian locality of Old Melrose, and a large part of the post-town of Galashiels. It is bounded by the counties of Selkirk, Edinburgh, and Berwick, and by the parishes of St. Boswells, Bowden, and Lindean. Its length south-eastward is 10¾ miles; and its greatest breadth is 6½ miles. The river Tweed traces the boundary 1½ mile north-eastward with Selkirkshire, runs 4½ miles eastward through the interior, and traces the boundary 2½ miles eastward and southward with Berwickshire. Bowden burn traces the southern boundary 1½ mile eastward, past the village of Newton, to the Tweed. Cauldshields-loch, another small lake, and a brook flowing from them to the Tweed, trace the southern boundary 1½ mile westward with Lindean. Galawater traces the boundary 4½ miles south-south-eastward with Selkirkshire to the Tweed. The Leader traces the boundary 4¾ miles southward with Berwickshire to the Tweed. Allen-water, traversing the prototype of the Glendearg of Sir Walter Scott's monastery, and almost hid in many places by overhanging woods, runs southward from near the northern extremity at Blinkbonnie to the Tweed, a little above Pavilion. Numerous tiny rills rise in the interior, and flow toward the larger streams, contributing, by their mimic dells and knots of copse-wood, to adorn a district of no common wealth in the number and loveliness of its running waters. The whole of the bold fine eastern summit, half of the far-seeing central one, and the northern skirt or lower declivity of the western one, of the Eildon hills, are in the parish, and form an imposing screen along its southern boundary. See Eildon-hills. A person entering by the turnpike from the south crosses the brokenly furrowed bed of Bowden-burn, ascends the north-eastern skirt of the Eildons, with a finely cultivated slope going down from the right to a narrow and almost obstructed part in the path of the Tweed; and 1½ mile after crossing the boundary, he sees suddenly revealed to him the vale of Melrose, with its villages and orchards and opulent corn-fields,—its sinuous, shining, gorgeous belt of intersecting river, and its framework of romantic braes feathered all over in many parts with plantation, and cloven picturesquely down with the receding vales of the Leader, the Allen, and the Gala.

The panorama of the vale, either as seen from this point, which places Cowdenknowes, the recess of the Leader, and the whole north hill-screen fully on the back-ground,—or from vantage-ground, in the vicinity of the town, which places the elegant remains of the abbey on the foreground, and brings the luscious orchard-beauties of the vale and the fine knoll which bears aloft the parish-church fully before the eye,—or from the declivities between the foot of Gala and that of Allen-water, whence Abbotsford is seen as a prime attraction, and the eye is carried over a long sweep of the Tweed, and the Eildon hills show their finest proportions, and lift two beautiful cones against the sky back-ground,—is one of the most unmingledly interesting of the landscapes which most combine grandeur with beauty and fertility, in the south of Scotland. "The valley of Melrose," says the New Statistical Account, "must have been a noble lake at some remote period, the Tweed entering it by a narrow inlet, across which Melrose-bridge is thrown, and leaving it by a narrow outlet at Tweedwood, before the formation of which, the whole space, enclosed by the Eildon and Gattonside hills, must have been a continued sheet of water. A substratum of water-sand, dense or penetrable by the spade, pure or gravelly, is always met with in digging a few feet below the surface. At a comparatively recent period, less than two centuries ago, the course of the Tweed seems to have been on the south side of the valley. A fine rich flat, now on the south side of the river, is called Gattonside-haugh, and its feudal tenures show that it once actually formed a part of the Gattonside lands, which are on the north side of the river. In these tenures a right is retained to an ancient church-way, severed by the Tweed, along which the inhabitants used to pass of old to the Catholic service in the abbey. Near the village of Newstead the old channel of the river is beautifully marked; and what was formerly a deep pool and perilous eddy, across which Claverhouse is said to have been ferried, is now a fine meadow, but still continues to be called 'the wheel.' The change in the course of the Tweed seems to have been aided by human industry, as a strong embankment is necessary to prevent it from resuming its old domain."

Between one-fourth and one-third of the area of the parish lies south of the Tweed, and, excepting on the Eildon-hills and a patch of moorland, stretching from their western base, is all in cultivation. The district north of the Tweed is, over an extent of 25 square miles, strictly upland and pastoral; yet it yields so largely to the plough, either regularly or occasionally, on the banks of the rivers, and up the lower acclivities of the hills, as to have arable grounds and natural pasturage in proportion to each other of 5 to 3. The soil in the southern district of the parish is chiefly a strong clay, excellently adapted for wheat; along the Tweed is of a fine, light, dry nature, fit for all kinds of grain; and, in the northern district, is first a light earth mixed with sand, and superincumbent on gravel,—next, a strong clay upon till, full of springs and very wet,—and, next, moss. Georgical operations of every sort have been conducted boldly, extensively, and with skill, and have worked great achievements. At least 1,200 acres, and probably a larger number, which formerly were either waste or of small pastoral value, are under plantation. Greywacke, which abounds over all the north and west, with a north-easterly dip, is worked as building material. A species of conglomerate, which occurs at Quarry-hill, west of the town, is also used for building. Though sandstone occurs in the south-east corner of the parish, that used for masonry is brought from Sprouston or from Belses in Ancrum. There are about 50 landowners, drawing each a rental of £5(and upwards. The value of assessed property in 1855 was £35,759 4s. 4d. About twenty mansions and villas stand in the vicinity of the Tweed, contributing largely to the decorations of its valley; and the most conspicuous of them is Abbotsford, which we have made the subject of an article in its own alphabetical place. The parish is traversed by the road from Edinburgh to Jedburgh, and by the Hawick fork of the North British railway; and it has stations on the latter at Galashiels, Melrose, and Newton. Population in 1831, 4,339; in 1851, 7,365. Houses, 915.

This parish is in the presbytery of Selkirk, and synod of Merse and Teviotdale. Patron, the Duke of Buccleuch. Stipend, £300 3s. 3d.; glebe, about £12. Unappropriated teinds, £308 17s. 3d. Schoolmaster's salary, £34, with about £50 fees, without any other emoluments. The parish church was built in 1810, and contains 953 sittings. There is a church at Galashiels, which was originally built as an extension church, and has recently been constituted by the court of teinds a quoad sacra parish church for the north-west district of Melrose parish, called Ladhope. There are two Free churches, the one called Melrose church at Melrose, the other called Ladhope church at Galashiels; and the receipts of the former in 1856 were about £400,—of the latter, £232 17s. There is an United Presbyterian church at Melrose, built in 1823, and containing 443 sittings. There is also an United Presbyterian church at Newton, built in 1772, and containing 452 sittings. There are likewise at Melrose a Congregational chapel, and an Episcopalian chapel. The principal schools, additional to the parish school, are Weirhill academy, a Free church school, an Episcopalian school, 3 boarding-schools for young ladies, and 6 ordinary schools at Newton, Blainslie, Langshaw, Gattonside, Dernock, and Newstead. The ancient church of Melrose, situated at the present town of Melrose, appears to have belonged, from the time of the local suppression of the Culdees, till the year 1136, to the monks of Coldingham; in that year at the founding of the Cistertian abbey, it was obtained from them by David I., in exchange for the church of the Virgin Mary in Berwick; and thence till the Reformation, it became strictly identified with the abbey in its history. The original name of the parish was Fordel; and this, in 1136, was substituted by Melrose, the name of the site of the Culdee establishment, arrogated and assumed in that year by the new-fledged Cistertian abbey. Three chapels anciently stood in the district north of the Tweed. One was situated at the village of Gattonside, was regularly built of freestone, and seems to have been appurtenant to some manor. Another, dedicated to St. Columba, the far-famed founder of the Culdee establishment of Iona, and giving to its site his abbreviated name with the adjunct signifying a field or pasture, stood at Colmslee, on Allen-water, and had anciently in its neighbourhood the dairy of the Melrose monks, and still survives in some observable vestiges. The third chapel, called Chieldhelles, and consisting of handsome stone architecture, stood in the north-east corner of the parish, on a tiny tributary of the Leader, and still gives its name to the spot which it occupied.

Old Melrose, situated 2½ miles east of the present town of Melrose, is now identified, as to architecture, with only one modern mansion. But the name strictly belongs to a peninsula 5 furlongs long and between from 2 to 3 broad, formed by a reduj

cation of the Tweed. The banks, all round, are lofty and wooded, varied with perpendicular rocks, jutting like buttresses from top to bottom; and the surface rises from them on all sides in a regular, smooth, grassy ascent, till it terminates in a small table-ground, crowned with the modern mansion, and both constituting and commanding a most beautiful scene. This promontory took the name of Melrose, afterwards transferred to the new town and to the whole parish, either from the Irish, *Maol-Ross*, signifying 'the bald projection,' or from the British, *Mell-Rhos*, signifying 'the projection of the meadow.' Old Melrose was the site of a Culdee establishment, one of the earliest on the continent of Scotland. Eata, one of the twelve disciples who accompanied Aidan, the founder of the bishopric of Lindisfarn, from Iona to Northumbria, seems not to have followed his master in accommodating himself to incipient prelacy, and, at all events, turned early aside from immediate co-operation with him to become the apostle of the upper vale of the Tweed. Eata appears on record, in the year 664, as the abbot or head of the Melrose establishment. His successor was Basil, a person whom Bede describes as "distinguished for his virtues and of a prophetic spirit." Cuthbert, one of the most famous saints of Scotland, probably one of the most zealous and enlightened of her early missionaries, and afterwards the nominal bishop of Lindisfarn, and the real laborious itinerating preacher of Northumbria, entered the establishment under Basil, and succeeded him in its presidency. Basil's fidelity and success are attested in his having given name to the neighbouring parish of St. Boswell's; and those of Cuthbert, mingled with some leaning toward the begun developments of prelacy, lie broadly stamped on the early ecclesiastical history and reminiscences of the south-east of Scotland and the north-east of England,—the whole of the ancient Northumbria. The Culdee establishment of Melrose, says Milne, "was a famous nursery for learning and religious men, who were filled with zeal for propagating the Christian religion, particularly among their neighbours the pagan Saxons." Nor does it seem to have been less illustrious for resisting the innovations of Romanism; for John of Melrose was one of several Culdees who boldly accused Boniface, a special emissary of the Pope to Scotland, as "the fabricator of falsehoods, the troubler of peace, and of the Christian religion, and the corrupter of it both by word and by writing;" and he is particularly recorded to have made himself obnoxious to the Romanists by impugning the Papal dogmas. But however simple, evangelical, and anti-Romish the establishment may have been, it suffered, in common with the parent-college of Iona, the foul fate of afterwards being treated by the Roman Catholic monks as if it had been an early offshoot of their own church.

The establishment flourished and enjoyed peace during two centuries; but before or about the middle of the 9th century, when the Saxon power was broken by the ascendency of the Scots, and incursions were made from the north to the upper and lower Tweed, it was overthrown either by Kenneth II. or by Kenneth III. At a future period, after it had remained for a season in utter desolation, Aldwin, Turgot, and some other Culdees, came from "Girwy to what was formerly the monastery of Mailros, but then a solitude; and being delighted with the retirement of that place, began to serve Christ there." But they were subjected to great injuries and persecutions on account of their peculiar doctrines, by King Malcolm; and menaced by him with death, and by the superior of Girwy with excommunication if they remained, they speedily withdrew from it the fading glories of Culdeeism. The place was never again the site of a college; but became a mere chaplainry, dedicated to St. Cuthbert, and endowed with the privileges of a sanctuary. The foundations of a stone wall were not long ago traceable, which defended the establishment on the accessible side, and stretched from bank to bank of the Tweed across a narrow part of the isthmus. At the entrance, about the middle of the wall, stood a house, built probably for the porters, and still giving the name Red-house to its site. The place where the chapel stood continues to be called the Chapel-knowe; and adjacent places on the Tweed yet bear the names of Monk-ford, and Haly-wheel,—the holy whirlpool or eddy. The original buildings, like those of Iona, were such as could not have left any traces. Bede, speaking generally of the ecclesiastical erections of the early Culdees, says they were all of oak, and thatched with reeds. The remarkable causeway called the Gerthgate, leads off from Old Melrose, past the site of the Culdee chapel of Colmslee, to Soutra-hill. See Fala. Another 'abbey,' of which no records exist, but which seems to have been intermediate between the establishments of Old and New Melrose, stood in the vicinity of Newstead.

The Town of Melrose is delightfully situated at the north base of the Eildon hills, on the road from Edinburgh to Jedburgh, contiguous to the Melrose station of the Edinburgh and Hawick railway, 3 furlongs south of the Tweed, 4 miles east-south-east of Galashiels, 7 north-east by north of Selkirk, 11 north-west of Jedburgh, and 35 by road, but 37¼ by railway, south-east by south of Edinburgh. It has partly the character of an antique dingy place, with narrow thoroughfares and ancient houses, and partly the appearance of a modern, spruce, aspiring seat of population, with elegant and airy edifices; and in both respects it looks in good keeping with its situation, harmonizing partly with the grand antiquities adjacent to it, and partly with the magnificent landscape around it. It has recently, on the whole, undergone much improvement, in consequence of many wealthy strangers being attracted to it for occasional or permanent residence. The body of it consists of three lines of houses, arranged along the sides of a triangular open area. A modern and pleasant little street leads out at the west corner toward Galashiels; and narrow, brief thoroughfares lead off at the other corners toward Gattonside and Jedburgh. Some of the houses display on their lintels, amid the general plainness of their walls, sculptured stones traced with the I. H. S. and other popish devices, affording obvious indication that, at the time when these houses were erected, building materials were abstracted, largely and remorselessly, from the pile of the adjacent abbey. In the centre of the open triangular town area stands the cross, a structure bearing marks of great antiquity. It is about 20 feet high, and has on its apex a carving of an unicorn sustaining the arms of Scotland. A literal cross anciently surmounted the structure, and, according to the usage of popish times and things, received homage from pilgrims preliminary to their entering the precincts of the monastic pile; but this was destroyed in 1604. About a rood of land, called the Corse-rig, in a field near the town, is held by the proprietor on the condition of his keeping the Cross in repair. Another cross anciently stood at a place, half-a-mile westward on the road to Dernock, still called the High Cross. The jail, a plain, small, modern structure, occupies the site of a curious ancient one. On a stone still preserved of the old jail, the arms of Melrose are sculptured,

—a 'mell,' or mallet, and a 'rose,'—a punning hieroglyphic version of the town's name. The parish church is a modern, plain, but neat and pleasing edifice, surmounted by a spire, and situated on a rising ground, called the Weir hill, a few perches west of the town. The Free church has a well-proportioned spire, and figures beautifully in the landscape. The railway station also is a good modern feature, very spacious and handsome. A suspension bridge for foot passengers takes across a communication from the town directly to Gattonside; but the bridge of the Edinburgh and Jedburgh highway and the viaduct of the railway are higher up the river.

Melrose was long famed for the manufacture of a fabric called Melrose land-linen, commissions for which were received from London and foreign countries. So early as 1668, the weavers were incorporated under a seal-of-cause from John, Earl of Haddington, the superior of the burgh; and for a considerable period preceding 1766, the quantity of linen stamped averaged annually between 33,000 and 34,000 yards, valued at upwards of £2,500. But toward the end of last century, the manufacture rapidly declined; and, long ago, it utterly and hopelessly disappeared. Cotton-weaving, subordinately to Glasgow, was introduced as a succedaneum, and had a short period of success; but it, too, became extinct. A bleachfield for linen also was tried, and failed. Even the woollen trade, so singularly prosperous in several neighbouring towns, was tried here without success. An ancient fair held in spring, called Kier or Scarce Thursday fair, was long a famous carnival season, but afterwards became an occasion of business, and then dwindled to extinction. Business fairs are now held on the first Monday of January, February and March, on the Saturday before the last Tuesday of March, on the first Monday of May and August, on the 12th day of August, or on the Tuesday after that day, on the Saturday after the first Tuesday of October, on the first Monday of November and December, and on the 22d day of November, or on the Tuesday after that day. The fair of the 12th day of August, or of the Tuesday after, is a lamb fair, one of the most extensive in Scotland, at which the number of lambs exposed for sale, ranges from 60,000 to 100,000. There is also held a weekly market for grain. The town has an office of the British Linen Company's Bank, an office of the Royal Bank, a savings' bank, eleven insurance agencies, four principal inns, a gas company, a water company, six public or congregational libraries, three benefit societies, a total abstinence society, a free masons' lodge, a farmers' club, a curling club, a cricket club, a vagrant relief society, and some religious institutions. Railway trains afford ready communication with all places north and south; and an omnibus runs to Earlston. Melrose was erected into a burgh of barony in 1609, and is nominally under the government of a baron bailie; but no burgh courts are held, and there is neither burgh property, revenue, nor expenditure. Justice of peace courts are held as required; and sheriff's small debt courts are held on the first Friday of February, May, August, and November. Population in 1841, 893; in 1851, 966. Houses, 145.

The grand attraction of Melrose is its superb abbey. This, indeed, from its extent, its symmetry, and its artistic beauty, is one of the grandest objects of antiquarian interest in the kingdom. The pile, as an establishment for Cistertian monks, was founded by David I. in 1136. Its site is a piece of level meadow, immediately north-east of the town, and about ¼ of a mile south of the Tweed. The original edifice is said to have been completed in ten years, but was either wholly or partially destroyed by fire in 1322, and must have been greatly inferior in magnificence to its successor. What now remains of the re-edificed structure exhibits a style of architecture ascertained to belong to a later age than that of David, and gives distinct indications of having been in an unfinished state at the Reformation,—appearances of rough temporary closings-up of design, with a view to subsequent resumption and completion. While the nucleus of the building was constructed at one effort, under the reign and patronage of Robert Bruce, and perhaps aided by some preserved and renovated portion of the original erection of David I., the entire edifice in the extension of its parts, and in the profusion of its architectural decorations, seems to have been the progressive work of upwards of two centuries, extending from 1326 till the Reformation. The Cistertians were noted for their industrious habits, and their patronage and practice of such departments of the fine arts as were known in the middle ages; and, in common with all the monastic tribes, they regarded the embellishing of ecclesiastical edifices up to a degree as high as their resources could produce, as pre-eminently and even meritoriously a work of piety. The vast magnificence of the abbey, with its innumerable architectural adjuncts and sculptured adornings, seems thus to have been the result of a constant, untiring, and ambitious effort of the resident monks, powerful in their skill, their numbers, their leisure, and their enthusiasm, and both instigated and aided by the munificent benefactions which made continual additions to their originally princely revenues, and testified the applause of a dark but pompous age for the sumptuousness of the dress thrown around the fane of religious pageants. The architecture is the richest Gothic, combining the best features of its gracefulness and elaboration, and everywhere showing a delicacy of touch, and a boldness of execution, which evince the perfection of the style. The material, while soft enough to admit great nicety of chiselling, possesses such power of resistance to the weather that even the most minute ornaments retain nearly as much sharpness of edge or integrity of feature as when they were fresh from the chisel. The abbey, though inferior in proportions to many works of its class, and only about half the dimensions of York minster, is the most beautiful of all the ecclesiastical structures which seem ever to have been reared in Scotland; and has seldom, in aggregate architectural excellence, been surpassed, or even equalled by the edifices of any land. What remains is only the principal part of the church, with some trivial fragments of connexion with the cloister. From observable indications on the north side of the standing ruin, the cloister appears to have been a square 150 feet deep, surrounded with a spacious arcade or piazza, and lined along the east, west, and north walls with the habitations of the monks.

Though the abbey was regularly noticed in topographical works, and figured boldly in history, and lifted up its alluringly attractive form before the eye of every traveller along the Tweed, it excited little attention, previous to the present century, to be coolly abandoned to the rough dilapidations of persons who estimated its sculptured stones at the vulgar quarry-price of building material. Much care has, in recent times, been used, at the expense of the proprietor, to strengthen its walls, slate the remaining part of the roof, and furnish various other means of conservation; and it has its reward in a promise that the pile will yet long stand to give practical lessons in majestic architectural beauty. The pl

incidentally owes nearly all its modern fame to 'the mighty minstrel,' whose mansion at Abbotsford on the west, and his grave in Dryburgh on the east, compete with it in challenging the notice of the tourist. Sir Walter's adoption of it and the town, as the St. Mary's and the Kennaquahair of his tales of 'The Monastery' and 'The Abbot,' brought it boldly before the gaze of the myriad admirers of his novels, and his well-known personal enthusiasm in making it a favourite retreat from study, and in passing successive hours in scanning over, for the five hundredth time, its labyrinth of graces, drew towards it the wondering eye of the imitative crowds who looked to him as a master of taste. But what first roused attention to it, and kept up the vibration in every subsequent thrill of interest in its attractions, was his masterly description of it in 'The Lay of the Last Minstrel.' Two extracts, though familiar to many a reader, may be acceptable as vivid pictures of the most remarkable parts of the pile, and fine specimens of the enchanting power of the painter. The one describes the beautifully fretted and sculptured stone-roof of the east end of the chancel:

"The darkened roof rose high aloof
On pillars lofty and light and small;
The keystone that locked each ribbed aisle
Was a fleur-de-lys or a quatre-feuille;
The corbells were carved grotesque and grim;
And the pillars, with clustered shafts so trim,
With base and with capital flourish'd around,
Seem'd bundles of lances which garlands had bound."

The other passage describes the surpassingly elegant eastern window:

"The moon, on the east oriel shone,
Through slender shafts of shapely stone
By foliaged tracery combined:
Thou would'st have thought some fairy's hand
'Twixt poplars straight the osier wand
In many a freakish knot had twin'd;
Then framed a spell, when the work was done,
And changed the willow-wreaths to stone."

As to a prose description, one by Mr. Hutchinson, copied by Grose, is still perhaps the best that has been written. "The view from the entrance into the churchyard," says he, "is noble. This church is in the form of a cross. The south end of the transept presented itself in front. The arching of the doorway is composed of a semicircle, with various members of the most delicate work falling behind each other, supported on light and well-proportioned pilasters; on each side is a projection of rich tabernacle work. The corners of this end of the structures are composed of angular buttresses, terminated by spires of tabernacle work. These buttresses are pierced with niches for statues. The pedestals and canopies are of the lightest Gothic order, and ornamented with garlands of flowers in pierced work; above the south gate are several niches for statues, decreasing in height as the arch rises, in which some mutilated effigies remain, many in standing positions, others sitting, said to represent the apostles. In the centre are the arms of Scotland, a lion rampant in reverse, with a double tressure; above which is the effigy of John the Baptist, to the waist, suspended on a cloud, casting his looks upwards, and bearing on his bosom a fillet, inscribed 'Ecce filius Dei.' This is a very delicate sculpture, and in good preservation. On the buttress, east of the door, is the effigy of a monk suspended in like manner, supporting on his shoulders the pedestal of the niche above; in his hands a fillet is extended, on which is inscribed 'Passus e. q. ipse voluit.' On the western buttress is the like effigy bearing a fillet, inscribed 'Cu. venit Jesu. seq. cessabit umbra.' These two sculptures are of excellent workmanship. To the westward of this last effigy is the figure of a cripple, on the shoulders of one that is blind, well executed. Above the south door is an elegant window, divided by four principal bars or mullions, terminating in a pointed arch; the tracery light, and collected at the summit into a wheel; the stonework of the whole window yet remaining perfect. This window is 24 feet in height within the arch, and 16 in breadth: the mouldings of the arch contain many members, graced with a filleting of foliage; the outward member runs into a point of pinnacle-work, and encloses a niche highly ornamented, which, it is said, contained the figure of our Lord. There are eight niches which sink gradually on the sides of the arch, formerly appropriated to receive the statues of the apostles. The whole south end rises to a point to form the roof, garnished with an upper moulding, which is ornamented with a fillet of excellent rose-work; the centre is terminated by a square tower. It will suffice to remark in this place, that the pedestals for statues, in general, are composed of five members of cornice, supported by palm boughs, or some other rich-wrought foliage, and terminating at the foot in a point with a triple roll. The caps, or canopies of the niches, are composed of delicate tabernacle work, the spires ornamented with mouldings and a fillet of rose work, and the suspended skirts graced with flowers. The interior of the canopy is of ribbed work, terminating in a suspended knot in the centre. This description will do to carry the reader's idea to every particular niche.

"At the junction of the south and west members of the cross a hexagon tower rises, terminating in a pinnacle roofed with stone, highly ornamented. From hence the aisle is extended, so as to receive three large windows, whose arches are pointed, each divided by three upright bars or mullions, the tracery various and light; some in wheels, and others in the windings of foliage. These windows are separated by buttresses, ornamented with niches. Here are sculptured the arms of several of the abbots, and that also of the abbacy, 'a mell and rose.' These buttresses support pinnacles of the finest tabernacle work. From the feet of these last pinnacles are extended bows or open arches, composed of the quarter division of a circle, abutting to the bottom of another race of buttresses, which arise at the side wall of the nave; each of these last buttresses also supporting an elegant pinnacle of tabernacle work, are ornamented with niches, in two of which statues remain; one of St. Andrew, the other of the Holy Virgin; the side-aisles are slated, but the nave is covered with an arched roof of hewn stone. From the west end of the church is continued a row of buildings, containing five windows, divided by the like buttresses, the tracery of two of the windows remaining, the rest open. Each of these windows appertained to a separate chapel, appropriated and dedicated to distinct personages and services; the places of the altars, and the fonts, or holy-water basons, still remaining. The east end of the church is composed of the choir, with a small aisle on each side, which appears to have been open to the high altar. This part is lighted by three windows towards the east, and two side windows in the aisle; the centre window is divided by four upright bars or mullions; the traceries are of various figures, but chiefly crosses, which support a large complicated cross that forms the centre; the arching is pointed, and part of the tracery here is broken. The side lights are near as high as the centre, but very narrow, divided by three upright bars or mullions; the mouldings of the window

arches are small and delicate, yet ornamented with a fillet of foliage. On each side of the great window are niches for statues; and at the top there appears the effigies of an old man sitting, with a globe in his left hand, rested on his knee, with a young man on his right: over their heads an open crown is suspended. The buttresses at this end terminate in pinnacles of tabernacle work; the mouldings and sculptures are elegantly wrought.

"The north end of the cross aisle of the abbey is not much ornamented without, it having adjoined to the cloister and other buildings. The door which leads to the site of the cloister (the building being demolished) is a semicircular arch of many members; the fillet of foliage and flowers is of the highest finishing that can be conceived to be executed in freestone, the same being pierced, the flowers and leaves separated from the stone behind, and suspended in a twisted garland. In the mouldings, pinnacle-work, and foliage of the seats which remain of the cloister, I am bold to say, there is as great excellence to be found as in any stone-work in Europe, for lightness, ease, and disposition. Nature is studied through the whole, and the flowers and plants are represented as accurately as under the pencil. In this fabric there are the finest lessons, and the greatest variety of Gothic ornaments, that the island affords, take all the religious structures together. The west side of the centre tower is yet standing; it appears to have supported a spire; a loss to the dignity and beauty of the present remains, to be regretted by every visitant. The balcony work is beautiful, being formed of open rose-work. The present height of the tower wall is seventy-five feet. The length of this edifice, from east to west, is 258 feet, the cross aisle 137 feet, and the whole contents of its ichnography 943 feet. We entered at the south door, and no expression can convey an idea of the solemn magnificence which struck the eye. The roof of the north and south ends of the transepts remains, supported by intersecting groins, in various directions, of the lightest order; the joinings ornamented with knots, some sculptured with figures, and others of pierced work in flowers and foliage; the arching of the interstices constructed of thin stones, closely jointed; over the choir, part of the roof of like workmanship still remains. The side-aisles are formed by light-clustered pillars, richly capitalled, with garlands of flowers and foliage disposed delicately in the mouldings; in some the figures of animals are interspersed. The pillars which supported the tower towards the east are gone, so that three sides of it are down, leaving a chasm, through which you look up towards the remaining quarter. The north aisle is lighted by a circular window, representing a crown of thorns, which makes an uncommon appearance. Here are the effigies of Peter and Paul, one on each side of the tower, but of inferior sculpture."

The nave, at the time of Mr. Hutchinson's visit, was used as the parish church, and was in a main degree blocked up from critical examination. It is now partly cleared of incumbrances and defacements, so as to present its architecture distinctly to view, marred only by some remains of the superposed, clumsy, modern masonry. But Mr. Hutchinson's account of it, in the state in which he saw it, is curious, both for indicating the intrinsic harmony of this part of the edifice with the other parts, and for showing, by a notable instance, how debased and dark a beautiful bright thing may be made by bad taste. "On opening the door," says he, "it is not to be expressed the disagreeable scene which presented itself. This place is filled with stalls; in the disposition of which irregularity alone seems to have been studied. Some are raised on upright beams, as scaffolds, tier above tier; others supported against the walls and pillars: no two are alike in form, height, or magnitude. The same confusion of little and great, high and low, covers the floor with pews. The lights are so obstructed, that the place is as dark as a vault. The floor is nothing but the damp earth. Nastiness and irregularity possess the whole scene. The fine workmanship of the pillars, whose capitals, for flowers and foliage, exceed all the rest of the building; the ribs of the arches, and the ornaments of their intersections, are scarce to be seen in the horrid gloom which possesses the place. Here are several tombs of eminent personages: on the north wall is inscribed, under a coat of armour, 'Here lies the race of the house of Zair.' Many altars, basons for holy water, and other remains of separate chapels, appear in the aisles; among which are those of St. Mary and St. Waldave."

The Cistertian monks of this abbey were the first of their order who obtained footing in Scotland; and, according to general Cistertian usage, they dedicated the establishment to their patron-saint, the Virgin Mary. David, that "sair saunt for the croon o' Scotland," made them the chief of their class, or the mother-establishment of the kingdom, and bestowed on them the church of the parish, extensive lands, and numerous privileges. Their original gift from him consisted of the lands of Melrose, Eildon, and Dernock, the lands and wood of Gattonside, the fishings of the Tweed along the whole extent of these lands, and the rights of pasturage, of pannage, and of cutting wood for fuel and building, in the forests of Selkirk and Traquair, and in that lying between the Gala and the Leader. Other possessions in the form of lands, churches, and privileges, were afterwards so rapidly heaped on them by David, and by his successors and subjects, that, against the close of the 13th century, they had vast property and various immunities in the counties of Roxburgh, Berwick, Selkirk, Peebles, Dumfries, Ayr, Haddington, and Edinburgh. In 1192, Hassendean, in its church, tithes, lands, and other emoluments, was given by Jocelin, bishop of Glasgow, to the monks, on condition of their establishing at it a house of hospitality, "ad susceptionem pauperum et peregrinorum ad domum de Melros venientum;" and it now became the seat of a cell, where several of their number resided, to execute the trust of relieving the poor, and entertaining the pilgrim. In some year between 1181 and 1185, a bull of Pope Lucius exempted the monks from paying tithes for any of their possessions. The monks were now large proprietors, with numerous tenants; great husbandmen, with many granges and numerous herds; lordly churchmen, with uncommon privileges, high powers, and extensive influence. But a pertinacious controversy had long existed between them and the men of Stow, or the vale of Gala-water—then called Wedale—respecting two objects of great importance in that age,—pannage and pasturage, under the several proprietors; and, in 1184, a formal settlement of the controversy, emphatically known in history as 'the peace of Wedale,' was made by William the Lion, assisted by his bishops and barons. Yet, during such times, disputes among cattle-drivers and swine-herds could hardly be prevented, and, when adopted by their superiors, were sometimes carried up to tumult and homicide. In 1269, John of Edenham, the abbot, and many of his conventual brethren, for the crimes of violating the peace of Wedale, attacking some houses of the bishop of St. Andrews, and slaying one ecclesiastic, and wounding many others, were

excommunicated by a provincial council which sat in Perth.

As Melrose stood near the hostile border, it was usually involved in the rancorous events of Border feud and international war. In 1285, the Yorkshire barons, who had confederated against King John, swore fealty to Alexander II. in Melrose chapter-house. In 1295, Edward I. granted the monks a protection; and in August of next year, while he rested at Berwick after the general submission of Scotland to his usurping interference, he issued a writ commanding a restitution to the monks of all the property which they had lost in the preceding melée. In 1322, at the burning and desolating of the abbey by Edward II., William de Peebles the abbot, and several of the monks were slain. In 1326, Robert Bruce made a most munificent grant for the re-edification of the abbey, amounting to £2,000 sterling—a vast sum at that period—from his revenue of wards, reliefs, marriages, escheats, and fines within Roxburghshire; and he seems to have afterwards made other grants and to have been followed in his money-giving patronage by David II. In 1328, writs were issued to the abbot by Edward III. for the restitution of pensions and lands which they had held in England, and which had been taken from them during the war, by the King's father. In 1334, the same monarch granted a protection to Melrose, in common with the other abbeys of the Scottish border; in 1341, he came from Newcastle to keep his Christmas festival in Melrose abbey; and in 1348, he issued a writ "de terris liberandis abbati de Meaurose." to deliver to the abbot his lands. Richard II., in 1378, followed the example of Edward in giving a protection to the monks; yet in 1385, when he made his expedition into Scotland, he set fire to the abbey, in common with other religious houses on the Border. But, four years afterwards, the monks were indemnified for the damage he did them, by the grant of two shillings on each 2,000 sacks of Scottish wool, and of a portion of the King's custom on hides and woolfels, exported at Berwick; and, in 1390, they received from Richard a formal renewal of protection. During the period of rude, rancorous warfare which intervened between the rebuilding of the edifice under Robert Bruce, and the commencement or precurrent events of the Reformation, the abbey must have sustained many more shocks than are recorded; yet it seems to have rebounded from each blow with undiminished or even increased vigour, and in spite of temporary demolitions, made steady progress in financial greatness and architectural grandeur. But during the reigns of Henry VIII., Edward VI., and Elizabeth, it suffered collisions and dilapidations, chiefly from the English and partly from the Scotch, too severe, and in too troublous times, to issue otherwise than in its ruin. In 1544, the English penetrated to Melrose, and destroyed great part of the abbey; in 1545, led by Lords Evers and Latoun, they again pillaged it, and were pursued and beaten on Ancrum-moor; and, in the same year, they recrossed the border under the Earl of Hertford, and a third time laid the abbey waste. "The English commanders," says George Chalmers, "were studious to leave details of the destruction that they committed, which only perpetuates their own disgrace." At length, in 1569, the nobility of Scotland and their military retainers, under the sacred name of the Reformation, and with an unjust reflection of the odium they incurred on John Knox and his fellow-reformers, completed by pillage, defacement, and dilapidation, what the English had left to be done in order to the conversion of the pile into an unroofed, gutted, partially overthrown, and altogether yawning ruin.

Though the monks of Melrose were exempted by charters and custom from rendering military service to the Crown; yet they fought under James the Steward of Scotland, during the war of the succession; and again they fought under Walter the Steward, in strenuous support of the infant-prince, David Bruce. Declarations were afterwards made by both stewards, and subsequently confirmed by the Duke of Albany, on the day of the feast of James the Apostle, in 1403, that the military service of the monks having been rendered by the special grace of the abbot and convent, and not in terms of any duty they owed to the Crown, should not be regarded as any precedent for their future conduct. Owing to mutual benefits, a very intimate connection seems to have existed, from the days of Bruce, or from the foundation of the monastery, between the abbots of Melrose and the Stewarts of Scotland. In 1541, James V., by a sacrifice of his public policy to his private feelings, solicited and obtained from the Pope, the abbey of Melrose, in addition to that of Kelso, to be held, in commendam, by his natural son James. At the Reformation, when the lands, rights, and privileges of religious houses were annexed to the Crown, those belonging to Melrose abbey were granted by Queen Mary to James, Earl of Bothwell. Becoming lost to him by forfeiture in 1568, they were next, through the influence of the well-known Earl of Morton, bestowed on James Douglas, the second son of William Douglas of Lochleven. Some years later, they again sought an owner, and, with some exceptions, were erected into a temporal lordship in favour of Sir John Ramsay, who had protected James VI. from the rapier of Gowry, who was created Viscount of Haddington, and Earl of Holderness in 1606, and who, in 1625, died without issue, leaving the estates to fall back to the Crown. Sir Thomas Hamilton, who, from his eminence as a lawyer, rose to high rank and great opulence, who was created Earl of Melrose in 1619, and who afterwards exchanged this title for the vacant one of Earl of Haddington, eventually obtained the abbey and the greater part of its domains; and, in more recent times, he has been succeeded in the splendid heritage, by the family of Buccleuch. At the epoch of the Reformation, when the monks were obliged to give up an account of their rentals, the revenues of Melrose abbey were variously stated; but on one authority, they are recorded to have consisted of £1,758 Scottish,—19 chalders, 9 bolls of wheat,—77 chalders, 3 bolls of bere,—44 chalders, 1 boll, 2 firlots of oats,—14 chalders of meal,—8 chalders of salt,—105 stones of butter,—10 dozen of capons,—26 dozen of poultry,—376 moor-fowls,—340 loads of peats,—and 500 carriages.

MELROSE, Banffshire. See GAMRIE.

MELSETTER. See WALLS.

MELSHACH-HILL. See KENNETHM

MELUNDY. See DALLAS.

MELVICH, a post-office hamlet in Glen Halladale, in the parish of Reay, Sutherlandshire. Its position is on the left bank of the river Halladale, immediately above the debouch of that stream into Melvich bay, and on the road between Thurso and Tongue, 24 miles west by south of Thurso, and 8 miles east of Strathy. On the opposite bank of the river, and at the head of the bay, stands conspicuously the mansion of Bighouse, long the seat of the ancient branch of the chiefs of the clan Mackay, and now the property of the Duke of Sutherland.

MELVILLE, an ancient parish on the North Esk, now united chiefly to Lasswade, and partly to Dalkeith, Edinburghshire. An English baron called Male settled in the locality under the reign of Malcolm IV., and called his manor Male-ville. He was

Vicecomes of Edinburgh castle under Malcolm IV., and Justiciary under William the Lion. The family acquired other lands in Mid-Lothian during the 13th century, and remained in possession of their ancient manor till the reign of Robert II. The original stock now ending in a female heir, Agnes, her possessions passed by marriage to Sir John Ross of Halkhead, whose descendants were, by James IV., created Lords Ross. The barony of Melville remained with them till 1705; and in the course of last century, it was purchased by David Rennie, and passed, by marriage with his daughter, to Henry Dundas, created Viscount Melville in 1802. Melville castle, the residence of the present noble owner, is noticed in our article on Lasswade. Melville church was given by its founder to the monks of Dunfermline, and continued with them till the Reformation; yet, contrary to the usual practice, it was maintained as a rectory, the monks simply holding the right of presenting to the benefice.

MELVILLE-HOUSE. See Monimail.

MELVILLE-MOUNT. See Andrews (St.) and Fifeshire.

MENAWAY. See Keig.

MENGALAY. See Mingala.

MENMUIR, a parish, containing the hamlet of Tigerton, in the northern part of Forfarshire. Its post-town is Brechin, 1¾ mile distant from its south-eastern boundary. It is bounded by Lethnot, Strickathrow, Brechin, Careston, and Fearn. Its length eastward is 6¼ miles; and its greatest breadth is 4 miles. Its southern half lies in Strathmore, is flat, retains some marshy grounds, and seems anciently to have been what the name Menmure or Menmore is said to signify, 'a great moss.' Most of this flat is now reclaimed and arable, of fair quality in its soil, enclosed and sheltered with fences and with belts of wood, and under skilful cultivation. The whole of this district is traversed lengthways, at an average distance of 5 furlongs from the boundary, by Cruick-water, meandering in constant, freakish, but brief sinuosities. The soil, while towards the stream sharp and gravelly, becomes loamy as it recedes; and on the slopes which skirt the plain, it improves into a deep sandy clay, very fertile, and showing an expanse of luxuriant land. The northern part of the parish consists of the first gradient in the stupendous shelving ascent of the Binchinnin Grampians. At the east end are the heights of White and Brown Caterthun, remarkable for their antiquities. See Caterthun. Westward of them runs Menmuir-hill, a ridgy height, 2¾ miles to the western boundary. North of this, in a nook of the parish which projects between Fearn and Lethnot, rises Peat-hill, the first of a water-shedding series or ridge of heights which runs 15 miles transversely up the Binchinnin region to its highest summit line. West-water, one of the two great head-branches of the North Esk, flows a mile along the north, receiving, at the point of impingement, Pelphrie burn, after the latter's course of 2¾ miles on the same boundary. A chalybeate spring, on the farm of Balhall, was formerly in much repute, but became long ago neglected. The most extensive landowner is Arbuthnot of Balnamoon; and there are four others. The only mansion is Balnamoon-house, a modern edifice. The average rent of land is about £1 5s. per acre. Assessed property in 1843, £5,614 18s. 5d. Some of the parishioners are hand-loom linen weavers. The parish is traversed by the road from Kirriemuir to Fettercairn. Population in 1831, 871; in 1851, 693. Houses, 153.—This parish is in the presbytery of Brechin, and synod of Angus and Mearns. Patron, Erskine of Bathall. Stipend, £158 2s. 5d.; glebe, £18. Schoolmaster's salary, £34 4s. 4½d., with £15 fees. The parish church is a commodious edifice, built in 1842. There is a Free church for Menmuir, with an attendance of 150; and the amount of its receipts in 1856 was £133 10s. 6d.

MENOCK. See Minnick.

MENSTRIE, a post-office village, partly in the parish of Alloa in Clackmannanshire, and partly in the Perthshire portion of the parish of Logie. It stands at the southern base of the Ochil hills, on the road from Stirling to Dollar, 2 miles from Alva, 4 from Alloa, and 5 from Stirling. A streamlet flowing past it, from the Ochils to the Devon, renders it an advantageous site for woollen manufacture. A considerable and growing trade has long been carried on in the fabrication of serges, Scotch blankets, and various other woollen goods. Population, 518. Houses, 117. A popular rhymer assumes some spirit of fairyland to have formerly loved Menstrie for its rural beauty, but to have been driven away from it by the introduction of manufactures, and represents the phantom as sometimes saying pathetically at dead of night,—

"Oh, Alva woods are bonnie,
Tillicoultry hills are fair,
But when I think o' Menstrie,
It maks my heart ay sair."

MENTEITH See Monteith.

MENZIE-HILL, a locality where there is a mineral spring, long famous but much overrated, in the parish of Eaglesham, Renfrewshire.

MENZION-BURN, a brook, running in a north-easterly direction to the Tweed, in the parish of Tweedsmuir, Peebles-shire.

MERCHANTS (The). See Kintyre (Mull of).

MERCHISTON-CASTLE, a modernized old castellated mansion, adjacent to the hamlet of Boroughmoor, in the south-western outskirts of the city of Edinburgh. It consists of a square tower of the 15th century, with a projection on one side, and considerable modern additions. It was from a very ancient period the patrimony of the family of Napier; and here the celebrated inventor of the logarithms was born.

MERECLEUGHHEAD. See Ettrick.

MERKINCH. See Highlands (The), and Inverness-shire.

MERKLAND. See Kirkpatrick-Fleming.

MERKLAND (Loch), a lake on the south-east border of the parish of Edderachyllis, Sutherlandshire. It is about 3 miles in length, extending in a south-easterly direction, and sends its superfluence, by a stream of about 1½ mile in length of course, to Loch-Grian, and through that to Loch-Shin, in the neighbouring parish of Lairg. It lies within the ancient territory of the Dirriemore forest; and its head is adjacent to the grand central watershed of the kingdom.

MERKLAND WELL. See Lochrutton.

MERRYSTONE, a village in the Gartsherry district of the parish of Old Monkland, Lanarkshire. It is inhabited chiefly by miners, and stands grouped with the other villages of the Coatbridge mineral-field. Population, 676.

MERRYSTONE (West), a village in the Crosshill district of the parish of Old Monkland, Lanarkshire. Population, 493.

MERSE (The), a large champaign fertile district on the eastern part of the Scottish border. In modern political distribution of territory, it is the largest and most southerly of the three districts of Berwickshire, and, according to Timothy Pont's survey of that county in the reign of Charles I., contains 202½ square miles, or 129,600 statute acres in loose popular phraseology, it is the whole of Ber

wickshire, and strictly identical with the county; and in topographical nomenclature, based on strict reference to uniqueness of geographical feature, it is the whole low country lying immediately north of the Tweed, semicircularly screened by the Lammermoor-hills and the heights of Teviotdale, and including all the political Merse of Berwickshire, and all the district of Roxburghshire which lies on the left bank of the Tweed. Ancient political usage not only sanctioned the last of these senses, but carried the Merse into the lowlands of Teviotdale, and viewed Roxburgh-castle, situated on the right bank of the Tweed, as the capital of the whole district. The name is combined with that of Teviotdale as the designation of a synod, the second in the General Assembly's list.

MERSINGTON. See ECHT.

MERTON, a parish in the extreme south-west of Berwickshire. It projects from the rest of the county, and is bounded on the north by Earlston, and on all other sides by Roxburghshire. Its post-town is St. Boswells, adjacent to its southern boundary. Its length eastward is about 5 miles; and its breadth varies from 1¾ to 4¼ miles. The Tweed flows along the whole western and southern boundary, and makes three large and unusually fine reduplications, one of which sweeps round Dryburgh abbey, another the church of Merton, and the third, on the opposite bank, the beautiful peninsula of Old Melrose. The ground rises, in a great variety of gradient and outline, eastward and northward, from the river,—is agreeably diversified with hedge-rows and plantations,—and exhibits, in its diversity of haugh and bold bank, cliffy, steep, and gentle ascent, rolling surface and level table-land, a scene of great picturesqueness within narrow limits. The view which meets the eye in passing from the village of Newton on the opposite bank, to visit Dryburgh abbey, is, for its smallness of scope, one of the most delightfully impressive in Scotland. See DRYBURGH. But from the summit of Bemersyde-hill in the west, where the ground in general is high, the parish, while picturesque in itself, commands a prospect of the vale of Melrose, and of a long eastward stripe of the basin of the Tweed, a near view of the Eildon hills, and a distant one of the blue Cheviots, unitedly a landscape of exquisite loveliness and many a romantic feature. "Wood, water, hills, ruins, and fertile fields," are words which do not even give a dry list of its elements, and afford no hint whatever of the warm colours, the fine groupings, and the bold contrasts and blending beauties of the scene. The soil, toward the Tweed, particularly in the haughs, is sharp with a gravelly bottom; and elsewhere it is, with few exceptions, a stiff clay superincumbent on till. About 500 acres are planted. Reddish coloured sandstone, very durable, and admitting a fine polish, abounds along the Tweed, and formerly was quarried. There are five landowners. The value of assessed property in 1843 was £6,429 10d. The principal residences are Merton-house, belonging to Lord Polwarth, Dryburgh-abbey, belonging to the Earl of Buchan, and Bemersyde-house, belonging to Haig of Bemersyde. The family of Haig, says Sir Robert Douglas, "is of great antiquity in the south of Scotland; and in our ancient writings, the name is written De Haga. Some authors are of opinion that they are of Pictish extraction; others think they are descended from the ancient Britons; but as we cannot pretend, by good authority, to trace them to their origin, we shall insist no farther upon traditional history, and deduce their descent by indisputable documents from Petrus de Haga, who was undoubtedly proprietor of the lands and barony of Bemersyde in Berwickshire, and lived in the reign of King Malcolm IV. and William the Lion." Captain Clutterbuck is made to say, in 'the Monastery,' that his friend the sage Benedictine could tell to a day when the De Hagas settled in the country. A remote tradition, towering up in admiration of the antiquity of the family, affirms that it will never become extinct; and having been thrown into a doggerel rhyme, it has, like some other things of the sort, been fathered upon Thomas of Erceldoun, and called a prophecy. The parish enjoys easy access across the Tweed to the Melrose, Newton, and Maxton stations of the Edinburgh and Kelso railway. Population in 1831, 664; in 1851, 692. Houses, 129.

This parish is in the presbytery of Lauder, and synod of Merse and Teviotdale. Patron, Lord Polwarth. Stipend, £259 6s. 4d.; glebe, £14. Unappropriated teinds, £63 3s. 11d. Schoolmaster's salary, £30, with £10 fees, and £4 4s other emoluments. The parish church was built in 1658, and repaired in 1820. The ancient church was given by David I. to the canons of Dryburgh, and remained a vicarage under them till the Reformation.

MERTON, Wigtonshire. See MOCHRUM.

MESHIE (THE), a brook running northward to the Spey at a point nearly opposite Laggan-church, in Badenoch, Inverness-shire.

METHILL, a seaport village in the parish of Wemyss, Fifeshire. It stands on the shore of the frith of Forth, contiguous to the detached portion of the parish of Markinch, about ½ a mile south-west of Inverleven, and about 1 mile north-east of Buckhaven. It was erected into a free burgh of barony, in 1662, by the bishop of St. Andrews. Its harbour has long had the reputation of being one of the best on the south coast of Fifeshire. Its east pier was extensively overthrown by a storm in 1803, with the effect of considerably choking the entrance to the harbour; but this was repaired in 1838, at the cost of upwards of £1,800. The amount of harbour dues levied in 1852 was £87. A chapel of ease was built in the village, as an extension church, in 1838, at the cost of £1,050; and it contains 800 sittings, and is in the patronage of the male communicants. A district, comprising the village of Methill and some country around it, was temporarily an ecclesiastically constituted quoad sacra parish; and this, in 1841, contained a population of 1,513. The village of Kirkland adjoins the village of Methill; and these two villages had, in 1831, a population of 1,112, and in 1851, a population of 1,073. Methill itself had, in 1831, a population of 509.

METHLICK, a parish in the Buchan and Formartine districts of Aberdeenshire. It contains a post-office station of its own name, 7 miles north-north-east of Old Meldrum. The parish comprises a main body and a small detached district. The main body is bounded by New Deer, Ellon, Tarves, Fyvie, and Monquhitter. The detached district lies to the east of the main body, is separated from it by a tongue of Tarves, and is called variously Little Drumquhindle, Inverebrie, and Six Ploughs,—the second of these names being indicative of its situation at the confluence of the brook Ebrie with the Ythan, and the last an allusion to its extent as measured in olden times by the work of six ploughs. The extent of the parish from north to south is about 8 miles; and from west to east, exclusive of the detached district, about 5 miles. The river Ythan runs south-eastward across the main body, having about two-thirds of the whole on its left bank in Buchan, and about one-third on its right bank in Formartine. The water of Gight traces the western boundary southward to the Ythan. The water of

Kelly drains the southern district eastward and northward to the Ythan. The banks of the Ythan within the parish are mostly clothed with wood. The south-eastern district is wholly occupied by the beautifully ornate policies of Haddo-House. See the article HADDO. In the northern district there is a considerable tract of barren land on parts of the hills of Balquhindacy, Belnagoak, and Skilmoney, most of whose surface, however, is in cultivation. About 2,000 Scotch acres, or more, have been brought into cultivation within the last 55 years; and nearly as many acres have been planted. The best land lies within 1½ mile of either side of the Ythan. The soil there is a yellow loam on a gravelly and rocky bottom; but the soil further from the river becomes poorer, and is principally a light, black mould on a moorband pan. The predominant rocks are gneiss and syenite. A limestone quarry was worked for some time at Inverebrie. The landowner of the entire parish is the Earl of Aberdeen. The value of assessed property in 1843 was £4,233. Population in 1831, 1,439; in 1851, 1,997. Houses, 367.

This parish is in the presbytery of Ellon, and synod of Aberdeen. Patron, the Earl of Aberdeen. Stipend, £159 13s. 7d.; glebe, £8. Schoolmaster's salary, £33, with £40 fees, and £48 other emoluments. The parish church was built in 1780, and repaired in 1840, and contains about 600 sittings. There is a Free church, with an attendance of 130; and the amount of its receipts in 1856 was £105 17s. 1d. There are five schools, a parochial library, and a savings' bank. The rector of Methlick, in the Roman Catholic times, was a prebendary of Aberdeen, residing and officiating in that city; and the officiate at Methlick was his vicar or perpetual curate. There were anciently two chapels in the parish,—the one at a place still called Chapelton, the other at Andet, near a farm-house which is still called Chapel-park. Dr. George Cheyne, the author of a treatise on the 'Philosophical Principles of Natural Religion,' and Dr. Charles Maitland, the introducer of vaccine inoculation into Britain, were natives of Methlick. Fairs, principally for hiring, are held on the Thursday after the 11th day of May, and on the day in November after Peterhead. There is in the parish an office of the North of Scotland bank.

METHVEN, a parish, containing the post-office villages of Methven and Almondbank, also the village of Scrogiehill, in the Glenalmond district of Perthshire. It is bounded by Monedie, Redgorton, Tibbermore, Gask, and Fowlis-Wester. Its length eastward is 5 miles; and its breadth is between 3 and 4 miles. The surface is agreeably diversified with hollows and rising grounds, but is nowhere hilly, and in general slopes to the south, and terminates in a narrow plain. In few districts has georgical operation wrought higher achievements in reclaiming stubborn waste ground, and covering it with the beauties of husbandry and the forest. Though formerly a large proportion was moorish common, all the area, with very trivial exceptions, has now a warm, sheltered, rich, and highly cultivated appearance. The soil in the north is thin, sharp loam; and, in the other districts, is principally clay, but gives place to tracts of loam and gravel. The wood of Methven is a natural forest, upwards of 200 acres in extent, chiefly oak, birch, and hazel, and has long been periodically cut as coppice. Plantations exist to the aggregate extent of not less than 1,500 acres, and are so disposed in rows and belts among the arable grounds, and in clumps crowning the rising grounds, as to give a cheerful aspect to the landscape. Almond-water describes the segment of a circle over a distance of 6½ miles, cutting off from the main body of the parish part of the lands of Lynedoch, but elsewhere running along the boundary. It flows in a rapid current between bold rocky banks, which are alternately bare and wooded; and in passing the estate of Lynedoch, and the woods of Methven-castle, it furnishes some very picturesque views. A stream called the Pow, or Powaffray, rises in two head-waters in the west, one of which runs 2½ miles along the boundary, and the other convergently to it in the interior; and the two uniting at the south-western extremity of the parish, the joint stream goes away to become tributary to the Earn. Another stream rises near the sources of the former, and runs in a zigzag course, 4½ miles through the interior, past the village of Methven, and 3 miles along the southern boundary to the Almond. Light-grey sandstone and greenstone abound, and are quarried—the former for building, and the latter for causewaying and macadamizing. Methven-castle, the seat of Smythe of Methven, a fine baronial edifice of the 17th century, stands on a bold acclivitous rising ground, ¾ of a mile east of Methven village. Its park is celebrated as the scene of Robert Bruce's defeat in 1306 by the English troops, under the Earl of Pembroke. Lynedoch-house occupies a very beautiful site on the left bank of the Almond, 1¾ mile north-east of Methven village. See LYNEDOCH. The parish is traversed westward by the road from Perth to Crieff. A bill was introduced to Parliament in the summer of 1856 for a railway from Methven to Perth, estimated to cost £24,000. The village of Methven stands on the Perth and Crieff road, 6 miles west by north of Perth, and 11 east by north of Crieff. It is neatly edificed. Its inhabitants are chiefly employed in hand-loom cotton weaving, and have most of their work, through resident agents, from manufacturers in Glasgow. Fairs are held on the Monday in May before Amulree, on the first Thursday of August, and on the fourth Thursday of October. The population of the village is about 1,000. Population of the parish in 1831, 2,714; in 1851, 2,454. Houses, 466. Assessed property in 1843, £10,600.

Previous to 1323, the lands of Methven belonged to the Mowbrays, whose ancestor, Roger Mowbray, a Norman, accompanied William the Conqueror to England. "A branch of this family," says the Old Statistical Account, "afterwards established itself in Scotland, and became very flourishing. To Sir Roger Mowbray belonged the baronies of Kelly, Eckford, Dalmeny, and Methven, lying in the shires of Forfar, Roxburgh, Linlithgow, and Perth; but, for adhering to the Baliol and English interest, his lands were confiscated by Robert I., who bestowed Eckford, Kelly, and Methven, on his son-in-law, Walter, the eighth hereditary lord-high-steward of Scotland, whose son, Robert, was afterwards king, and the second of the name, in right of his mother, Marjory Bruce, daughter of Robert I. The lordship of Methven was granted by him to Walter Stewart, Earl of Athole, his second son, by Euphame Ross, his second wife; and, after his forfeiture, remained in the Crown a considerable time. It became part of the dowry lands usually appropriated for the maintenance of the queen-dowager of Scotland, together with the lordship and castle of Stirling, and the lands of Balquhidder, &c., all of which were settled on Margaret, queen-dowager of James IV., who, in the year 1524, having divorced her second husband, Archibald, Earl of Angus, married Henry Stewart, second son of Andrew Lord Evandale, afterwards Ochiltree, a descendant of Robert, Duke of Albany, son of King Robert II. Margaret was the eldest daughter of Henry VII. of England, in

whose right James VI. of Scotland, her great-grandson, succeeded to that crown on the death of Queen Elizabeth. She procured for her third husband a peerage from her son, James V., under the title of Lord Methven, anno 1528; and, on this occasion, the barony of Methven was dissolved from the Crown, and erected into a lordship, in favour of Henry Stewart and his heirs male, on the Queen's resigning her jointure of the lordship of Stirling. By Lord Methven she had a daughter, who died in infancy, before herself. The Queen died at the castle of Methven in 1540, and was buried at Perth, beside the body of King James I. Lord Methven afterwards married Janet Stewart, daughter of the Earl of Athole, by whom he had a son, Henry II., Lord Methven, who married Jean, daughter of Patrick, Lord Ruthven, and was killed at Broughton by a cannon-ball from the castle of Edinburgh, in 1572, leaving a son, Henry III., Lord Methven, who died without issue. This third Lord Methven is mentioned on the authority of Stewart's Genealogical Account of the House of Stewart. In the year 1584, the lordship of Methven and Balquhidder was conferred on Lodowick, Duke of Lennox, in whose illustrious family it continued till it was purchased, in 1664, by Patrick Smith of Braco, a great-grandfather of the present Lord Methven, from Charles, the last Duke; who, dying without issue, anno 1672, his honours, (of which Lord Methven was one,) with his estate and hereditary offices, fell to Charles II. as his nearest male-heir; the King's great-grandfather's father, and the Duke's being brothers."

The parish of Methven is in the presbytery of Perth, and synod of Perth and Stirling. Patron, Blythe of Methven. Stipend, £284 4s. 3d.; glebe, £30. Unappropriated teinds, £422 17s. 2d. Schoolmaster's salary, £34 4s. 4½d., with £25 fees, and from £5 to £10 other emoluments. The parish church stands at the village of Methven, was built in 1783, and enlarged in 1825, and contains about 1100 sittings. There is a Free church at Methven, with an attendance of about 200; and the amount of its receipts in 1856 was £89 3s. 2½d. There is an United Presbyterian church at Methven, with an attendance of about 230. There are in the parish several non-parochial schools, a public library, and an agricultural association. The earliest religious establishment of the parish was a collegiate church, founded and endowed with lands and tithes, in 1433, for a provost and several prebendaries, by Walter Stewart, Earl of Athole. An aisle, now the burying-place of the family of Methven, and anciently connected with the original church, has a stone sculptured with the royal lion of Scotland, surmounted by a crown, and seems to have been erected by some of the royal family,—probably by Margaret, the mother of James V., when residing at Methven-castle. There is also in the burying-ground an aisle containing the remains of the late Lord Lynedoch, and now the property of Mr. Graham of Redgorton.

MEY, an ancient barony and chapelry, now incorporated with the estate of the Earl of Caithness, and still imparting its name to various localities in the parish of Canisbay, Caithness-shire. Mey-head, or St. John's head, is situated 2 miles south-west of the island of Stroma, in the Pentland frith, and was the site of the ancient chapel of Mey, dedicated to St. John. Immediately off this headland is a dangerous piece of sea, jagged with some rocky islets which look up from the surface only during ebb-tide, and bear the designation of the Men of Mey. A locality on the coast, 3 miles west of the headland, is called the Mill of Mey, and is the site of a Scottish Baptist place of worship. Loch-Mey lies half-a-mile south of this; is of no great depth, and measures about 1½ mile in circumference. The hamlet Mey stands ⅔ of a-mile south of the lake, on the coast road from Thurso, and 13 miles east of that town; and it possesses a post-office, and commands an extensive field of limestone deposit. See Canisbay.

MEYRICK, a mountain, having an altitude of about 2,500 feet above the level of the sea, in the parish of Minnigaff, Kirkcudbrightshire.

MIAGHAILT (Loch), a small fresh water lake, discharging its superfluence by a subterraneous passage through rocks to the sea, in the parish of Kilmuir, in the island of Skye.

MICHAEL'S (St.). See Cupar and Dumfries.

MICKERY. See Inch Mickery.

MID-CALDER. See Calder (Mid).

MIDDLEBIE, a parish, containing the post-office villages of Eaglesfield, Kirtlebridge, and Waterbeck, in Dumfries-shire. It lies partly in Annandale, and partly between that district and Eskdale. It is bounded by Tundergarth, Langholm, Half-Morton, Kirkpatrick-Fleming, Annan, and Hoddam. Its length west-south-westward is 9 miles; and its greatest breadth is 4½ miles. The surface along the south and south-west is low and undulating, along the centre has considerable rising grounds, along the north and north-east becomes wild and mountainous, and altogether forms a transition-tract between the agricultural valley of lower Annandale and the pastoral heights of upper Eskdale. About 300 acres, chiefly on a hill in the south-west corner, are planted; between a fifth and a fourth of the whole area is in tillage; and all the remainder is pastoral or waste. The soil is very various, but, for the most part, is either a stiff or a loamy clay. Limestone is rich and plentiful. Freestone of a reddish colour abounds. Expensive but hitherto vain searches have been made for coal. Kirtle-water rises in the north-east corner of the parish, runs 7½ miles partly in the interior and partly along the southern boundary, and, for some time before taking its leave, assumes a sweetly picturesque dress. Mein-water rises close on the northern boundary, and has much the greater part of its course in the interior and along the margin before falling into the Annan. The principal landowners are the Duke of Buccleuch, Sir F. J. W. Johnstone, Bart., Sir John H. Maxwell, Bart., and Sharpe of Hoddam. The estimated value of raw produce in 1835 was £26,000. The value of assessed property in 1843 was £8,192 2s. 6d. The real rental in 1855 was £9,683. There were anciently several peel-houses in the parish, but the only extant one is the ruinous tower of Blackett-house. At Birrens, a little south of the parish church, are perfectly distinct remains of the fossæ, aggeres, and prætorium of a Roman camp. It lies 2½ miles south-east of the kindred one on Brunswark-hill in Hoddam. The 'Bells of Middlebie' was formerly a phrase noted and current in Dumfries-shire, owing to the great preponderance of the name among the parishioners. One of the Bells of Blackett-house figured in the tragical story of 'Fair Helen of Kirkconnel Lee:' see Kirkconnel. Dr. Currie of Liverpool, the author of 'The Life of Burns' and of other works, was a native of Middlebie. A number of the inhabitants are employed in cotton and linen weaving. The parish is traversed by the road from Glasgow to Carlisle, and by the main trunk of the Caledonian railway; and it has a station on the latter at Kirtlebridge, 3 miles from Ecclefechan. Population in 1831, 2,107; in 1851, 2,163. Houses, 402.

This parish is in the presbytery of Annan, and synod of Dumfries. Patron, the Duke of Buccleuch. Stipend, £218 11s.; glebe, £27 10s. The parish

church was built in 1821, and contains 534 sittings. There is an United Presbyterian church at Waterbeck, which was built in 1792, and contains 490 sittings. There are two parochial schools; and the teacher of each has a salary of £17 2s. and about £24 fees. There are four private schools, and a circulating library. The present parish of Middlebie comprehends the ancient parishes of Middlebie, Penersax, and Carruthers, which were united in 1609. Middlebie, means in Anglo-Saxon 'the Middle dwelling or middle station,' and distinguishes the Roman work near the church from those of Netherbie in Cumberland and Overbie in Eskdale-muir, in opposite directions, and each about 10 miles distant. The lands of Middlebie belonged, before the Reformation, to the noble family of Carlyle, and, for the most part, passed, in the reign of James VI., into the possession of Sir James Douglas of Drumlanrig, the ancestor of the Dukes of Queensberry. Penersax, written also Penesax and Pennisax, vulgarized into Penersaughs, and perhaps originally Pen-y-sax, 'the summit of the Saxons,' lay along the Mein, and forms the western part of the united parish. Its church stood on the south side of the Mein, but has long ago disappeared. The lands of Penersax belonged, in the 15th century, to Kilpatrick of Dalgarnock, passed, in 1499, to Carruthers of Mousewald, and, in the reign of James VI., were acquired by the Drumlanrig family. On a height above the site of the ancient hamlet of Carruthers stood a British fortlet, whence came the name Caer-rhythyr, 'the fort of the assault.' Carruthers forms the eastern part of the united parish. Its lands anciently belonged to the Earls of Bothwell; they fell to the Crown by the forfeiture of Earl James in 1567; they were given by James VI., along with the earldom, to his worthless nephew Francis Stewart, and were forfeited by that traitor in 1592; and they subsequently followed the lands in their vicinity into the possession of the Douglases of Drumlanrig. All the three parishes were anciently rectories. Middlebie, for some time after the Reformation, was the seat of a presbytery; but, in 1743, it was shorn of the honour, in favour of Annan and Langholm.

MIDDLEFOODIE. See Dairsie.

MIDDLESHAW, a post-office station subordinate to Lockerby, Dumfries-shire.

MIDDLETON, a village in the parish of Borthwick, Edinburghshire. It is pleasantly situated on the old road from Edinburgh to Galashiels, 13 miles south-south-east of Edinburgh. It was formerly a place of some importance, having a stage inn. It was likewise at one time a chief seat of the tinkers or gipsies. But it is now an entirely rural place, inhabited principally by persons employed in agriculture. Population, 148. Houses, 32.

MIDDLETON, a village in the parish of Orwell, Kinross-shire. Population, 66. Houses, 13.

MIDDLETON, Forfarshire. See Kirkden and Friockheim.

MIDDLETON, Kincardineshire. See Fettercairn.

MIDDLETON (North), a village in the parish of Borthwick, Edinburghshire. It consists of a line of cottages by the way-side, built since 1825. Population, 68. Houses, 15.

MIDHOLM. See Midlem.

MIDHOPE, an ancient residence of the Earls of Linlithgow on the north-west border of the parish of Abercorn, Linlithgowshire. It consists of a square turreted tower, with an unsightly addition on its east side. Its upper stories are inhabited by labourers, and are reached by an ancient oaken massive stair.

MIDHOPE BURN, a rivulet of Linlithgowshire, rising in the parish of Linlithgow, and running 7 miles east-north-eastward, partly through that parish, and partly on the boundary between Abercorn and Carriden, to the frith of Forth at Nethermill. It is also called Nethermill-burn. The lower part of its course is through a deep wooded glen.

MIDLAND JUNCTION RAILWAY. See Scottish Midland Junction Railway.

MIDLEM, or Midholm, a village in the parish of Bowden, Roxburghshire. It stands on the road from Selkirk to Kelso, 3½ miles east of Selkirk. Here are an Original Secession church and a parochial school. Population, 185. Houses, 50.

MIDMAR, a parish in the Kincardine-O'Neil district of Aberdeenshire. Its post-town is Echt, a short way beyond its eastern border. It is bounded on the south by Kincardineshire, and on other sides by the parishes of Kincardine-O'Neil, Cluny, and Echt. Its length eastward is nearly 7 miles; and its greatest breadth is 5½ miles. It lies midway between the Dee and the Don, about 15 miles west of Aberdeen. Its surface is very diversified, comprising part of the hill of Fare, two elevated hill-ridges, and many eminences, together with intersecting vales and hollows; yet, excepting in its portion of the hill of Fare, it cannot properly, in any part, be termed upland. See Fare (Hill of). Some of the arable land in the north-west has an elevation of upwards of 700 feet above sea-level; but the arable land of the other districts has not an average elevation of more than about 460 feet. The soil on the slopes of the hills is, to a great extent, a thin soil of sand and clay, occasionally of a loamy character, superincumbent on gravel. The prevailing rocks are granite and whinstone. About 3,600 Scotch acres are in tillage; about 1,300 are under plantation; about 800 are good pasture; and about 4,080 are moss and moorland. The most extensive landowner is Col. Gordon of Cluny; and there are two others. Midmar-castle, a seat not now inhabited, stands on the north side of Fare-hill, about 300 feet from its base, and commands an extensive and very beautiful prospect to the north and north-east. The estimated value of the raw produce of the parish in 1842 was £11,780. Assessed property in 1843, £4,475. On the moor of Daharick, a battle is said to have been fought between Wallace and Cumyn. A rivulet that runs through that tract is called Douglas-burn from the name of a hero who fell in this engagement. The parish is traversed by the road from Aberdeen to Tarland; and its southern part is within available distance of the Banchory station of the Deeside railway. Population in 1831, 1,056; in 1851, 1,160. Houses, 219.

This parish is in the presbytery of Kincardine O'Neil, and synod of Aberdeen. Patrons, the Crown and Sir W. Forbes, Bart. Stipend, £223 14s. 7d. glebe, £25. Schoolmaster's salary, £27, with £3 fees, a share in the Dick bequest, and some other emoluments. The parish church was built in 1787 and contains about 600 sittings. There is a Free church preaching station at Bankhead, with an attendance of about 230; and the amount raised in connexion with it in 1856 was £59 9s. 10d. There is also an United Presbyterian church of Midmar. There are three private schools.

MIDSTRATH. See Birse.

MID-YELL. See Yell.

MIGDALE, a lake about 2 miles long and 1 broad in the parish of Criech, Sutherlandshire. It lies about 1½ mile north of the Dornoch frith.

MIGLO (The), the head-stream of the Eden, flowing eastward through the parish of Strathmiglo, and giving name to that parish, in Fifeshire.

MIGVIE, a parish in Aberdeenshire, united to that of Tarland: which see.

MILBUY. See MULLBUY.

MILDRIGGEN (THE), a small tributary of the iver Bladenoch, in the parish of Kirkinner, Wigonshire.

MILE-END. See GLASGOW.

MILGUY. See MILNGAVIE.

MILK (THE), a rivulet of Annandale, Dumfriesire. It rises in the north-east extremity of Tunergarth, and runs 1½ mile to the boundary with utton and Corrie. Thence, over a distance of 9½ iles, it divides Tundergarth, on its left bank, from utton and Corrie, Dryfesdale and St. Mungo, on s right. Its prevailing direction over this part of s course, except for 1½ mile of southerly run at e end, is south-west; and it receives in its proess Corrie-water from the north, and about twenty dependent and chiefly very short brooks. Leaving ndergarth it flows southward 2½ miles through Mungo, and 1 mile between that parish and ddam to the Annan, half-a-mile above Hoddamstle. In the upper half of its course, it is a chilly untain stream; but over most of the lower half, as fringings of wood and of pleasing landscape. out midway in its progress through St. Mungo is overlooked by the mansion of Castlemilk.

MILLARSTON. See MILLERSTON.

MILLBANK, a locality, with a long established per-mill, in the parish of Ayton, Berwickshire.

MILLBANK, Aberdeenshire. See LONGSIDE.

MILLBAY, a village in the island of Luing, in e parish of Kilbrandon, Argyleshire. It was built r the accommodation of the workers in the slate arries.

MILL-BAY, a bay on the east side of the island Stronsay, in Orkney.

MILLBRAKE. See DEER.

MILLBREX. See FYVIE.

MILLBRIDGE, a hamlet in the parish of Cathcart, Renfrewshire. Population, 22. Houses, 5.

MILLBURN, any brook driving a mill, or any locality washed by such brook and taking name from it. Brooks and localities of the name of Millburn are very numerous in Scotland,—many of them probably having received the name in the times of village, when the mill of an estate or barony, together with the brook which drove it, was an object of local interest inferior only to the church and the manor-house. Among the parishes in which the name occurs are Crawfordjohn, Dirleton, West-Kilbride, North-Berwick, Renfrew, Dalserf, Bonhill, Tranent, Colton, Castleton, and Ratho.

MILLCROFT, a village adjacent to Creebridge, in the parish of Minnigaff, Kirkcudbrightshire.

MILLDENS. See BELHELVIE.

MILLEARN. See TRINITY GASK.

MILLENWOOD. See CASTLETON.

MILLERHILL, a post-office village in the parish of Newton, Edinburghshire. It stands adjacent to the Edinburgh and Dalkeith railway, 1½ mile north-north-west of Dalkeith. It is inhabited principally by colliers. There are, however, two Millerhills,—the Easter and the Wester. Population of Easter Millerhill, 220. Houses, 50. Population of Wester Millerhill, 70. Houses, 18.

MILLER'S ACRE. See FORTEVIOT.

MILLERSTON, one of the western suburbs of Paisley, situated within the parliamentary burgh of Paisley, in Renfrewshire.

MILLERSTON, a village in the Barony parish of Glasgow, Lanarkshire. Here are a chapel of ease and a Free church preaching station; at the latter of which, the sum of £63 16s. 1d. was collected in 18[illegible]. Population, 466.

MILLFIELD, a village in the parish of Inverkeilor, Forfarshire. Population, 65. Houses, 12.

MILLGUY. See MILNGAVIE.

MILLHALL. See EAGLESHAM.

MILLHEUGH, a village in the parish of Dalserf, Lanarkshire. It stands in the northern part of the parish, on the Glasgow and Carlisle road, in the vicinity of Larkhall. A bleachfield was commenced here about 16 years ago. Population, 384.

MILLHOUSE, a post-office station subordinate to Lockerby, Dumfries-shire.

MILLHOUSE, a post-office station subordinate to Greenock, Renfrewshire.

MILLHOUSE, a manufacturing locality in the parish of Liff and Benvie, 3 miles north of Dundee, Forfarshire.

MILLHOUSE, Lanarkshire. See KILBRIDE (EAST).

MILLIKEN. See KILBARCHAN.

MILLIKEN-PARK, a station on the Glasgow and South-western railway, 1½ mile south-west of Johnstone, in Renfrewshire.

MILLMOUNT. See KILMUIR (EASTER).

MILL-OF-HALDEN, a village in the parish of Bonhill, Dumbartonshire. Population, 147. Houses, 27.

MILLPORT, a post-town, seaport, and watering-place, on the island of Big Cumbray, Buteshire. It stretches round a pleasantly sheltered small bay at the south end of the island; partly overlooks the Little Cumbray, and partly confronts the opening through Fairley road to the bay of Ayr or eastern side of the frith of Clyde; and is situated 2½ miles west of the nearest part of the Ayrshire coast, 5 miles south-west of Largs, 11 south-east of Rothesay, and 24 south of Greenock. Its form is that of the segment of a circle; its houses are almost all neat, two storey, whitewashed structures; its handsome parish-church, surmounted by a low square tower, looks out from an area in the middle of the curve; and the entire appearance of the place is airy, clean, and not a little pleasant. But for a great paucity of wood in the environs, the village and its vicinity would be one of the most beautiful places on the Clyde. Yet either the spot itself, or any one of several vantage-grounds in its immediate neighbourhood, commands magnificent views of the frith of Clyde, the cultivated slopes of the Ayrshire sea board, thickly embellished with villas and with the body and wings of Fairley and Largs, the spiry and bold mountains of Arran, the gentle coasts of the Isle of Bute, the rugged outlines of the Argyleshire alps,—altogether a most magnificent panorama, great in extent, very diversified in feature, and containing many grand groupings of the picturesque. The edifices of the town and its environs, also, are interesting. The Episcopalian church and college, in particular, form an elegant range of buildings, with a pyramidal spire. There are in the town a Free church, a Baptist place of worship, a parochial school, a Free church school, two schools of industry for females, an Episcopalian boys' school, and an Episcopalian girls' school. There are also a reading-room, a public library, a Free church congregational library, an Episcopalian lending library, a gas light company, and a harbour company. There are five resident justices of the peace; and sheriff small debt courts are held in February, May, August, and November. Millport is a creek of the port of Greenock. The amount of harbour dues levied in 1852 was £210. The harbour, though of small capacity, can contain vessels of considerable burthen; and has a fine pier, erected chiefly at the expense of the Marquis of Bute. The depth, at low water, is 6 feet, and, at high-water, 14 feet. Immediately adjacent to the harbour is a good anchoring ground, capable of accommodating several ships, fully protected by two

islets called the Allans, and affording safety to vessels during the prevalence of the most violent storms. Fifteen or sixteen sloops belong to the place, some carrying so few as 14 and none more than 40 tons each. Six steam-boats in summer, and two in winter, maintain daily communication with Glasgow, and with places intermediate. Millport depends, to a large extent, for its support on the influx during summer of temporary residents from Glasgow; it wears almost wholly and even characteristically the aspect of a sea-bathing quarter; and it has steadily risen and maintained its footing in popular favour. The operative part of the population are employed either in the fisheries, or in weaving for the manufacturers of Glasgow. The number of looms is about twenty. The stated population is about 1,000; but the population in the summer months is at least double.

MILLSEAT. See KING-EDWARD.

MILLS-OF-DRUM, a station on the Deeside railway, the first station east of Banchory, and adjacent to the boundary between Kincardineshire and Aberdeenshire.

MILLS-OF-FORTH. See MILNATHORT.

MILLTIMBER, a station on the Deeside railway, intermediate between Murtle and Culter, Aberdeenshire.

MILLTOWN. See MILTON.

MILMAD. See CORSE.

MILNATHORT, a post and market-town in the parish of Orwell, Kinross-shire. It stands on North Queich-water, at the intersection of the road from Edinburgh to Perth with the road from Cupar to Stirling, 1¾ mile north by east of Kinross, and 14 miles south of Perth. Its site is ¾ of a mile from the north-west corner of Loch-Leven, amid the fine tract of country which is screened by the Lomond-hills on the east and by the Ochil-hills on the north and the west. The town is neatly built, and consists of five good streets. A crazy, shabby old bridge formerly bestrode the Queich here; but this was recently superseded by a handsome new structure. The parish church stands on a height in the vicinity; and there are in the town a Free church, an United Presbyterian church, and several schools. The town, also, has a large public library and some other institutions; and it is lighted with gas from the works which supply the town of Kinross. The inhabitants of Milnathort, for a long series of years, were employed chiefly in cotton-weaving; but, owing to the decline of wages, they, almost at one bound, leaped, about 18 years ago, into the new and much more remunerating occupation of weaving tartan shawls and plaiding; and, though their old workshops were, in general, too small to admit the larger looms which became necessary, they broke alertly through the difficulty, and, when other resources did not offer, obtained accommodation in large airy buildings constructed on speculation for their use, and let to them in "stances" for hire. The villagers, as a community, are characterized by enterprise, enlightenment, and an advanced state of social progress. A large portion of them also count ancestry from some of the earliest and staunchest Seceders, and maintain with firmness the principles of the Secession. Their village, being the nearest large one to the seat of the Rev. Ebenezer Erskine's long-continued ministry in the adjacent parish of Portmoak, became an early stronghold of dissent; and has, to a great extent, witnessed in miniature the scenes of the general Secession history. Annual fairs are held, for the sale of cattle and horses, on the second Thursday of February, and the Thursday preceding the 25th of December; and, for the sale of cattle, sheep, and horses, on the last Wednesday of April, old style, the 9th day of July, the 29th of August, and the 5th of November. A weekly market is also held for the sale of corn by sample. An act of parliament was passed in 1855, for making a railway from the Edinburgh, Perth, and Dundee railway at Ladybank, by way of Auctermuchty and Strathmiglo, to Milnathort and Kinross. The popular name of Milnathort is Mills-of-Forth,—a name most probably suggested by the designation Forthrif, which anciently belonged to the circumjacent district. Population, 1,605. Houses, 320.

MILNGAVIE, a small post-town, and seat of manufacture, in the Stirlingshire part of the parish of New Kilpatrick. It stands on Allander-water, 4 miles south of Strathblane, 4½ east of Duntocher, and 7 north-west of Glasgow. It is tolerably well built, and has a chapel of ease, an United Presbyterian church, a mechanics' institution and a public library. There are in the town, or in its vicinity, a cotton-factory, extensive calico-printing and bleaching establishments, and several corn-mills. Daily communication is maintained by stage-coach with Glasgow. The popular name of the town, or corruption of the name, is Millguy. Population 1,432.

MILNHEAD. See KIRKMAHOE.

MILNHOLM. See CASTLETON.

MILNRIGGS. See CUNNINGHAM.

MILNTOWN, a village in Glenurquhart, in the parish of Urquhart and Glenmoriston, Inverness-shire.

MILNTOWN, a village in the parish of Kilmuir-Easter, Ross-shire. Four yearly fairs are held in it. Population, 200. Houses, 43.

MILTON, a village in the parish of Rothiemay, Banffshire. Population, 79. Houses, 25.

MILTON, a manufacturing village in the parish of Old Kilpatrick, Dumbartonshire. It stands in the vicinity of Duntocher, and has a large cotton-factory, which was begun in 1821, and was built on the site of the Dalnotter iron-works. Population 136. Houses, 68.

MILTON, a village in the parish of Glammis, Forfarshire. Population, 83. Houses, 18.

MILTON, a fishing village in the parish of St. Cyrus, Kincardineshire. It was formerly a place of some importance, comprising several parallel ranges of houses with gardens and bleaching greens; but during the last 60 or 70 years, it has suffered so much injury from the encroachment of the sea, and from other causes, as to be now both small and ruinous, containing not more than 10 inhabited houses with an aggregate population of less than 50. In its vicinity is a strong chalybeate spring, which has for some time a considerable medicinal repute.

MILTON, one of the northern suburbs of the city of Glasgow, Lanarkshire. Within it are a chapel of ease and a Free church, which take designation from it. See GLASGOW.

MILTON, a small village on the banks of the Ruthven, in the parish of Auchterarder, Perthshire.

MILTON, a post-office village in the parish of Campsie, Stirlingshire. It stands on the southern border of the parish, and has a station on the Campsie railway, 1¼ mile north of Kirkintilloch, and 4 miles south of Lennoxtown. Here is a missionary station, served by a minister of the Established church, and maintained by the contributions of the Campsie parochial congregation. A distillery was formerly in operation at Milton, but has been discontinued. Population, 564. Houses, 98.

MILTON, a village in the island of Jura, Argyleshire. It is the only place in Jura which can be called a village; and part of it bears the separate name of Craighouse. It has an inn and a distillery

a corn-mill and a smithy, and is inhabited also by various artificers.

MILTON, a hamlet, with a large flour-mill, in the east end of the parish of Kilmarnock, Ayrshire.

MILTON, Morayshire. See KNOCKANDO.

MILTON, or HERBERTSHIRE, a village in the parish of Dunipace, Stirlingshire. It stands on the left bank of the Carron, in the vicinity of Denny, and is connected with that town by a handsome bridge. Its inhabitants are chiefly persons employed in calico-printing. Population, 761. See DENNY.

MILTON-BRIDGE, a fine old bridge of 3 arches, taking the highway from Carluke to Larkhall over the Clyde, at a point about 18 miles south-east of Glasgow.

MILTON-BRIDGE, a post-office station subordinate to Penicuick, Edinburghshire.

MILTON-BURN. See FOWLIS WESTER.

MILTON-DUFF. See ELGIN.

MILTONFIELD. See KILPATRICK (OLD).

MILTON-LOCH. See URR.

MILTON-LOCKHART. See CARLUKE.

MILTON-OF-BALGONIE. See BALGONIE.

MILTON-OF-EONAN. See GLENLYON.

MILTON-OF-MATHERS. See MILTON, Kincardineshire.

MILTON-OF-STRATHBRAN. See STRATHBRAN.

MINCH (THE), the channel which separates the island of Lewis from the Scottish mainland. It extends in a north-north-easterly direction; has a width of from 20 to 30 miles; is flanked, on all the west side, by the island of Lewis,—on all the east side, by the mainland parts of Ross-shire and Sutherlandshire; opens out, at its north end, into the North sea; and forks, at its south end, round the island of Skye. The water in it is exceedingly salt. The currents through it are regular and very rapid. Its depths are generally great, but so exceedingly variable as to indicate a very rugged bottom. The name Minch signifies "the stormy sea."

MINCH (THE LITTLE), the sound which separates the Outer Hebrides from the island of Skye. It is a continuation southward of the western side of the Minch. Its breadth varies from 10 to 20 miles. Its west side is flanked chiefly by the southern part of Harris, and by North Uist and Benbecula.

MINCHMOOR, a broad-based, but short mountain-ridge, extending north and south on the mutual border of the parishes of Traquair and Yarrow, in the counties respectively of Peebles and Selkirk. The highest summit rises 2,285 feet above sea-level. A little north of this, an old road crosses the ridge communicating between Peebles and Selkirk. This road, from the great altitude to which it rises, and the wildness of the scene which it traverses, is a remarkable specimen of the ancient straightforward throughfares, which scorned a detour, and mounted boldly up in the face of formidable obstructions. The road was the path of Montrose's retreat from Philiphaugh; and it is still used by foot-passengers who scorn the luxury of a level but circuitous throughfare. By the wayside, in a wild part of the road, there is a spring called Cheese-well, which was formerly believed to be under fairy government, and is said to have received its name from the practice of passengers dropping into it bits of cheese as offerings to the fairies.

MINDERNAL. See DURRIS.

MINDORK-CASTLE. See KIRKCOWAN.

MINEFIELD. See CRERAN (LOCH).

MINES, a village in the parish of Minnigaff, Kirkcudbrightshire. Its population, jointly with Blackcraig, is about 320.

MINGALA, an island in the parish of Barra, Inverness-shire. It lies nearly at the southern extremity of the Outer Hebrides, 9 miles south-west of the island of Barra; and is separated from Pabba on the north-east by the sound of Mingala, which is $1\frac{3}{4}$ mile wide, from Bernera on the south-west by the sound of Bernera, which is 5 or 6 furlongs wide. Its extreme length is $2\frac{1}{2}$ miles, from north-east to south-west; and its extreme breadth is $1\frac{3}{8}$ mile. Its south-west coast is remarkably bold and precipitous, rising almost sheer up from the sea in towering cliffs of gneiss. Innumerable flocks of puffins, razor-bills, penguins, and kittiwakes frequent these cliffs in summer; and they disappear early in autumn with their young. The highest ground on the island appears to be short of 1,000 feet above sea-level; and the general surface is pastoral, yet it contains some arable land, so as to be inhabitable by man. Population in 1851, 114. Houses, 23.

MINGARRY-CASTLE, an ancient fortalice on the south coast of Ardnamurchan, Argyleshire. It overhangs Loch-Sunart, looking across it southward along the Sound of Mull; and it confronts south-westward the body of Mull island, and

> "—— ——— sternly placed,
> O'erawes the woodland and the waste."

Its distance due north from Tobermory is 7 miles. The fortalice, though strictly a ruin, is in a state of proximate integrity; and must be regarded as one of the most interesting architectural antiquities of its class. It skirts the edges of a precipitous rock, about 24 feet high; and is defended on the land side by a dry ditch. The entire structure is a hexagon of three larger and three smaller sides, which regularly alternate. Two of the sides toward the land are occupied with the castle, which has three stories, divided into six apartments, and approached by a central staircase; and the other sides are formed by a dead wall, and interiorly disposed partly into outhouses, and partly into a small triangular court. Battlements surmount all the sides, but are so narrow that they could have afforded small scope for the working of artillery. A few loopholes constitute the only external openings. The whole hexagon is upwards of 200 feet in circumference; and the enclosed castle is 50 feet in length. The fortalice was anciently the seat of the MacIans, a clan of Macdonalds, descended from Ian, or John, a grandson of Angus Og, Lord of the Isles. During the Marquis of Montrose's enterprise of 1644, Allaster Macdonald of Colkitto, the famous partisan of the Marquis, and commander of the Irish auxiliaries, besieged and captured it. John of Moidart, captain of Clanranald, was commissioned by the Marquis of Argyle to recapture it; but he seized the opportunity of being in arms, to send relief to the place, and to lay waste Argyle's district of Sunart. The name Mingarry means the destroyed den, or the reduced fort.

MINGINISH, a mission station of the royal bounty, also a post-office station, in the parish of Bracadale, in the island of Skye.

MINN (THE), an arm of the sea, projecting from the head of Magnus' bay, and separating the island of Meikle Roe from the parish of Aithsting, in Shetland.

MINNICK-LOCH. See KELLS.

MINNICK (THE), a rivulet of the parish of Sanquhar, in Upper Nithsdale, Dumfries-shire. It rises on the west side of Lowther-hill, $1\frac{1}{2}$ mile south from the village of Leadhills in Lanarkshire, and flows 6 miles westward to the Nith, 2 miles below

the burgh of Sanquhar. Three brooks, each nearly equal to itself in bulk, give it the tribute of their waters. Some wildly romantic spots occur on its banks, interesting both in themselves, and in association with traditions of the Covenanters.

MINNICK, or Minnock (The), a rivulet of Ayrshire and Kirkcudbrightshire. It rises among the high mountains of the parish of Barr, and runs about 13 miles southward, through that parish, and the parish of Minnigaff, to the Cree. Its course, except near its termination, is through a dreary country. It is fed by numerous rills, particularly by the superfluence of Lochs Trool, Round, Long, Falley, and Neldricken, in one accumulated stream.

MINNIEHIVE, a post-office village in the parish of Glencairn, Dumfries-shire. It stands on Dalwhat-water, a little above its confluence with the Castlefairn and the Craigdarroch, 7 miles south-west of Thornhill, and 16½ north-west of Dumfries. It received a charter, in the first half of the 17th century, erecting it into a burgh of barony, and conferring on it the privilege of a weekly market. It is the largest seat of population in the district of Nithsdale south-west of the Nith, and may be regarded as the capital of that district. The villages of Dunreggan and Kirkland are in its vicinity, and may be viewed as suburbs. Fairs are held in it on the last Tuesday of March, on the 25th day of June, old style, or on the Tuesday after that day, on the Friday in August before Lockerby, and on the Saturday in September before Lockerby. The August and September fairs are chiefly for lambs. The village has an office of the Union bank, two subscription libraries, and an United Presbyterian church. In the centre of it is a pillar 9 feet high, on a circular pedestal 5 feet high, bearing the date 1638, and seeming to have been erected as a market-cross; and in the vicinity is a monument to the memory of the Rev. James Renwick, the last of the Scottish martyrs in the cause of religious liberty. The village has, in recent years, undergone considerable improvement in the number and neatness of its houses. Population, 667. Houses, 129.

MINNIGAFF, a parish in the extreme west of Kirkcudbrightshire. It is separated only by the river Cree from Newton-Stewart, which is its post-town; and it contains the villages of Minnigaff, Creebridge, Millcroft, Mines, and Blackcraig. It is bounded by the counties of Wigton and Ayr, and by the parishes of Carsphairn, Kells, Girthon, and Kirkmabreck. Its length south-eastward is 17 miles; and its breadth, for the most part, varies from 8 to 12 miles. On the boundaries, and in the interior, are about 20 lakes and lochlets, most of them imbosomed among wild hills, in districts either abandoned to desolation or trodden only by the shepherd and his flock. The chief are Loch-Moan, on the north-west boundary, 1¼ mile long, deeply indented in outline, and studded with several islets; Loch-Enoch, 5 miles eastward on the same boundary, 2½ miles in circumference, variously isleted within, and jagged all round with peninsulas; Loch-Neldricken, 1½ mile south of Loch-Enoch, ¾ of a mile long, and half-a-mile broad; Loch-Valley, half-a-mile farther south, nearly a mile long, and of slender breadth; Long-loch and Round-loch, the former a stripe ¾ of a mile in length, the latter a circular sheet, half-a-mile in diameter, and both within a mile south of Loch-Valley; Loch-Dee, a mile south-east of Round-loch, 1½ mile long, and ¾ of a mile broad, the reputed source of the Galloway Dee; Loch-Trool, 2 miles east of Loch-Dee, stretching south-westward in a narrow stripe of 1¾ mile long, and wearing at its lower end a gently picturesque dress; Loch-Grannoch, on the eastern boundary, 6¾ miles south-east of Loch-Dee, 2¼ miles in length, but touching the parish for only 1 mile, and belonging chiefly to Girthon; and the Loch of Cree, a slender expansion of the river Cree, 2⅝ miles in length, terminating 3½ miles above Newton-Stewart, beautifully wooded, and lovely in its banks. The river Cree, from its source in Loch-Moan, till 1½ or 2 miles below the point of its beginning slowly to open into an estuary, has its whole course along the north-western, western, and south-western boundaries. Not fewer than about 24 independent rills, besides 3 considerable streams, flow into it from Minnigaff, many of them of short course, nearly all brawling among bleak hills, but a few of them finely wooded. Minnick-water, coming down from Ayrshire, runs 7 miles southward, and 1⅜ mile south-westward to the Cree, a little above the Loch of Cree. Penkill-water rises a mile south of Loch-Trool, and flows 4½ miles southward, and the same distance south-westward, to the Cree, immediately above Newton-Stewart. Pilnour-water rises 1½ mile west of the New-bridge of Dee, and runs 10 miles south-westward and southward, all in the interior except a mile above its mouth on the boundary with Kirkmabreck to the Cree, at the point where that river leaves the parish. The river Dee runs, from its sources in Dry-loch, Loch-Dungeon, and Long-loch, to a little below the New-bridge of Dee, 10 miles along the eastern and south-eastern boundary.

The surface of the parish, though not strictly alpine, is one of the most rudely highland in the south of Scotland. Excepting in a warm nook of about 6 square miles in the extreme south, and in some beautiful but narrow stripes along the principal streams in the west, it is everywhere rugged, very extensively heath-clad, and, for the most part, altogether and irreclaimably pastoral. Several summits have an altitude of about 1,600 or 1,700 feet above the level of the sea; the summit of Meyrick has an altitude of 2,500 feet; and the summit of Cairnsmuir, though not so high as that of Meyrick, is so situated as to look as high, and commands a very extensive and varied prospect. The heights in the interior have aggregately a grand effect; and the hollows and vales amongst them contain some interesting close scenes. The interior heights, though seemingly inhospitable, are comparatively little snow-clad, and enjoy a mildness of climate denied to many Scottish districts of much lower ground. A stripe of carse-land, of no great breadth, extends for several miles along the Cree; and both this and the low grounds adjacent to it have a richly cultivated character, and borrow beauty from the openings among the hills. Some of the higher acclivities are clothed all over with plantation; many of the lower slopes form fine green pasture; and some of the valley grounds are finely adorned with mansions and parks. The vale of Pilnour-water in particular, presents some charming wild scenes. The stream is sometimes obstructed with rocks, and impetuously breaks away from them; its banks are plentifully wooded; its gambols are overlooked by the mansion and pleasure-grounds of Bargaly; and its hill-screens rise and open and close in many diversified forms. The total extent of land in tillage is about 6,000 imperial acres; the extent constantly waste or in pasture is about 80,767; and the extent under wood is about 1,600. The principal landowners are the Earl of Galloway, the Rev. M. Heron M'Kie of Bargaly, Dunbar of Machermore, and Stewart of Cairnsmuir. The mansions are Kirouchtree, Cumloden-cottage, Bargaly, Machermore, and Carnsmuir. The average rent of the arable land is about 16s. per acre; and that of the whole parish is about 2s. 7d. The value of assessed property

1843 was £10,976. The estimated value of raw produce in 1842 was £24,382.

Greywacke and clayslate are the predominant rocks; but granite occurs extensively in boulders, and is used for building. Veins of lead ore, varying in thickness from 2 to 5 feet, occur on the estates of Machermore and Kirouchtree. Those of Machermore were once a source of considerable wealth; they gave rise to a populous village, occupied solely by miners; they were wrought with great earnestness; but at length the veins became greatly exhausted, and since 1839 they have been wrought only to a very trivial extent. A standing-stone and some cairns occur on a plain below Kirouchtree-house, and are believed to be memorials of some ancient battle. The glen of Trool was the scene of a skirmish between the troopers and the Covenanters on a winter Sabbath morning of 1685. The ruins of the castle of Garlies, a building of unknown antiquity, the ancient seat of the Earls of Galloway, giving to them their title of Lord Garlies, are situated about 1½ mile from the village of Minnigaff. Three moat hills, seats of feudal jurisprudence, are situated respectively in the vicinity of Minnigaff village, in the vale of the Pilnour, and on a sequestered spot on Cardrachurd-moor. Various tumuli occur among the hills; and some of them have been opened, and found to contain human bones and pieces of weapons. There are in the parish two grain mills, a tan-work, and a small woollen manufactory. The Pilnour is navigable for a short distance; and there is a small quay at Pilnour-bridge, where vessels of 60 tons may load and discharge. The parish is traversed across its south-east end by the road from Dumfries to Portpatrick. The village of Minnigaff stands on a low piece of ground, at the confluence of the Penkill and the Cree, sufficiently near Newton-Stewart to be a sort of suburb of that town. It is a place of some antiquity, and had weekly markets, and was occasionally the meeting-place of the synod of Galloway, long before Newton-Stewart existed. But it is now a very poor place, containing little more than a dozen houses. Even the little village of Creebridge, situated about ¼ of a mile below it, has eclipsed it. Population of the parish in 1831, 1,855; in 1851, 2,054. Houses, 323.

This parish is in the presbytery of Wigton, and synod of Galloway. Patron, the Crown. Stipend, £269 3s. 9d.; glebe, £20. Unappropriated teinds, £48 7s. Schoolmaster's salary, £34 4s. 4½d., with £28 fees, and £6 other emoluments. The parish church stands at the confluence of the Penkill and the Cree, overlooking the village of Minnigaff, and is a beautiful Gothic building, with an elegant tower. It was built in 1836, and contains 850 sittings. There is a chapel of ease at Bargrennan, built in 1839, and containing 207 sittings. There is a subscription school at Bargrennan, and a school, built chiefly by Lady H. Maxwell and Mrs. Stewart, in the mines district. Dr. Alexander Murray, the celebrated linguist, was a native of Minnigaff; and General Sir William Stewart, one of the peninsular heroes, resided several years in it, and lies buried in its churchyard. The name Minnigaff was written, in several monuments of the 13th and 14th centuries, Monygove; and alludes, in its Celtic or Gaelic origin, to the stony moorland which prevails among the hills. The church was a free parsonage at the commencement of the 13th century, when 'the parson of Monygove' then witnessed a charter of John, bishop of Galloway; but it was afterwards given to the monks of Tongueland, and followed the fates of their property both before and after the Reformation. There were anciently in the parish two chapels subordinate to the mother-church.

MINNISHANT, a post-office station subordinate to Maybole, Ayrshire.

MINNOCK (The). See Minnick (The).

MINNONIE-BURN, a brook, draining part of the parish of Gamrie in Banffshire, and part of the parish of King Edward in Aberdeenshire, southwestward to the Deveron.

MINNYHIVE. See Minniehive.

MINSH (The). See Minch (The).

MINTLAW, a post-office village in the parish of Longside, Aberdeenshire. It stands on the west border of the parish, at the intersection of the road from Peterhead to Banff with the road from Aberdeen to Fraserburgh, 8¾ miles west-north-west of Peterhead. It was founded during the first quarter of the present century, and had encouraging prospect of increase; but it soon became stationary. Here are a parochial school, and an endowed female school. Fairs are held on the Tuesday after the 25th of February, on the Tuesday after the 14th of April, on the Tuesday after the 14th of June, on the Tuesday after the 25th of August, on the Tuesday after the 7th of October, and on the Tuesday after the 14th of December. Population, 240.

MINTO, a parish, containing the villages of Minto and Hassendean, in Roxburghshire. Its post-town is Denholm, adjacent to its south-eastern border. It is bounded by Lilliesleaf, Ancrum, Bedrule, Cavers, Wilton, and a detached part of Selkirkshire. Its length eastward is 5¾ miles; and its greatest breadth is 3 miles. The river Teviot, flowing over numerous fords, along a pebbly bed, and between banks singularly varied and highly picturesque, runs, for 3¾ miles, generally along the southern and south-eastern boundary, but over this distance intersects on the side of Minto some small portions of Cavers. Except for ¼ of a mile in the extreme west, where the land rises abruptly up in a bold, sylvan, beautiful bank, a belt of haugh-ground about 1 or 1½ furlong broad, lies along the margin of the stream. Flanking all the haugh except its east end, there is either a steep bank or a rapid swell; behind both of which the surface, excepting at two places where it is depressed into dells, and at two others where it towers aloft into hills, rises with a slow and almost regular gradient away to the northern boundary. The westerly dell is the romantic Hassendean: which see. The easterly dell combines the beauties of a noble demesne, the picturesque varieties of the lake, the cascade, and the purling stream, the wooded glen and the dark ravine, and is altogether a home of romance. Near its head a high weir thrown across it produces both a fine little sheet of water above, and a bold freakish waterfall below. A smooth green bank rises slowly up from the edge of the artificial lake, and bears aloft the elegant and noble pile of Minto-house, which, while embowered in a profusion of wood, commands gorgeous vista-views athwart the vale of the Teviot. Below the fall the dell becomes less ornate, and subsides into its natural wildness, but continues till near the Teviot to be delightfully fascinating. A furrowy depression in the ground, nowhere deep enough to be even a mimic glen, brings down a pretty streamlet at mid-distance between the dells, and discharges its watery freight across the haugh, directly opposite the bold beautiful bank which screens the village of Denholm from the Teviot. A mile west and north-west by west of Minto-house, rise the two hills of Minto, based on a considerably elevated table-land, and shooting up to an altitude of about 870 feet above sea-level. They are regularly ascending, green, broad-shouldered, elevations, and figure conspicuously from almost every point of view in one of the richest landscapes

of Teviotdale. Somewhat continuous with the hills, but after an intervening depression, runs eastward behind Minto-house, a broad hilly ridge, becoming bold and towering as it approaches the Teviot; and when near that stream, it breaks almost sheer down in the romantic assemblage of cliffs called Minto crags. The cliffs are a vast mass of trap-rock; and they soar into different points, from various platforms in their ascent, and attain an elevation above sea-level of 721 feet. Along their base are strewn huge blocks, detached from the beetling precipices; over their rugged ledgy face are scattered growths of herbage and ivy; and partly on their skirts, partly on their summits, are massive clumps of plantation. A ruin, of small size but considerable strength, called Fatlips castle, the remnant of an ancient border fortalice, stands on their summit, and is supposed to have belonged to Turnbull of Barnhills, a border freebooter of great note; and a small platform, on a projection of the crags a little below the summit, commanding an unobstructed view of the surrounding country, popularly bears the name of Barnhill's bed, and is supposed to have been used by the freebooter as a place of outlook. "The view from the crags is highly diversified and beautiful. The windings of 'the silver Teviot,' through a pleasing vale, sometimes contracted, and again expanding, can be traced above and below for many a mile, the prospect on the one hand being terminated by the fine outline of the Liddesdale hills, along with those on the confines of Dumfries-shire, and in the opposite direction by the smoother and more rounded forms of the Cheviots. Rubberslaw, the highest hill in this vicinity, rises immediately in front, with Denholmdean, celebrated by Leyden, on the right, and the narrow bed of the Rule on the left; while behind, to the north, are distinctly seen the Eildon hills, the Black-hill, Cowdenknowes, and more remotely Smailholm-tower, Hume-castle, and the low, dark skyline of the Lammermoors." Sir Walter Scott, in the following lines, has finely associated the grandeur of this view with the antiquarian associations of the place:—

> "On Minto-crags the moonbeams glint,
> Where Barnhill hewed his bed of flint;
> Who flung his outlawed limbs to rest,
> Where falcons hang their giddy nest,
> 'Mid cliffs from whence his eagle eye
> For many a league his prey could spy,
> Cliffs doubling on their echoes borne,
> The terrors of the robber's horn,—
> Cliffs which for many a later year,
> The warbling Doric reed shall hear,
> When some sad swain shall teach the grove,
> Ambition is no cure for love."

The landowners of the parish are the Duke of Buccleuch, the Earl of Minto, Scott of Teviotbank, and Dickson of Hassendean. Teviotbank-house, situated on the bank behind the haugh-ground, three furlongs east of Hassendean, is a modern mansion in the old English style, from an elegant design by Burn, and forms a marked and pleasing feature in the general landscape. The village of Minto, situated midway on the swell toward the base of the hills, nearly three furlongs west of Minto-house, and about a mile north-north-west of Denholm, is a pleasant assemblage of about twenty neat cottages, commanding much of the Teviotdale part of the prospect seen from Minto-crags. The parochial school here is a large, neat building; and the parish church, a few yards to the west, is a handsome Gothic edifice, with a quadrangular, pinnacled tower. The manse, half-a-mile to the south, on lower ground, washed by the central brook of the parish, is in the style of a Tuscan villa, and exhibits kindred taste to that which gently and joyously luxuriates over most of the objects and surface of this interesting district. About 800 acres of the parochial area are under plantation; about 1,500 acres are in pasture; and little more than 800 own the dominion of the plough. The soil toward the Teviot is a light loam; and farther north it is a strong clay lying upon till. The estimated yearly value of raw produce in 1838 was £9,689. The real rental in the same year was about £3,220. The value of assessed property in 1843 was £4,210 12s. The parish is traversed by the Hawick railway, and has a station on it at Hassendean. Population in 1831, 481; in 1851, 467. Houses, 78.

This parish is in the presbytery of Jedburgh, and synod of Merse and Teviotdale. Patron, the Earl of Minto. Stipend, £224 8s. 9d.; glebe, £40. Unappropriated teinds, £268 5s. 8d. Schoolmaster's salary, £34 4s. 4½d., with £25 fees, and £10 10s. other emoluments. The parish church was built about 25 years ago, and contains 360 sittings. The present parish of Minto comprehends the ancient parish of Minto, which was a rectory, and part of the ancient parish of Hassendean. The original barony of Minto, however, appears to have been more extensive than even the present parish of Minto, and of course much more extensive than the ante-Reformation parish; for Robert Bruce granted to William Barbitonsoris two parts of the lands of 'Kirkborthwic,' and three parts of 'the miln thereof,' 'infra baroniam de Minthou;' and Kirkborthwick is about 9 miles west-south-west from Minto. The noble family of Elliot, whose title of Earl is taken from the parish, and whose history has deeply entwined its name in the chaplets of modern renown, came into possession of the ascendant portion of its lands only at the recent period of the Union. "On the 30th of April, 1706, Sir Gilbert Elliot obtained a grant of the barony of Minto, in Roxburghshire, with the patronage of the church, the tithes, and with the manse and glebe of Minto, and also a grant of the barony of Headshaw, with the patronage of the church of Ashkirk, and the tithes thereof." Sir Gilbert—a son of Gawin Elliot of Midlem mill, and a grandson of Gilbert Elliot of Stobbs, called "Gibbie wi' the gowden garters," and of Margaret Scott of Harden, commonly called 'Maggy Fendy'—acted a stirring part in the wars of the Covenanters, under the last of the reigning Stuarts, and narrowly escaped destruction for his enthusiastic attachment to the cause of Presbyterianism and religious liberty; he was one of the Scottish deputation to the prince of Orange to adjust measures for giving him the British crown; he was appointed clerk to the privy council at the Revolution, was made a baronet in 1700, got a seat in the College-of-justice under the title of Lord Minto in 1705, and died in 1718, at the age of 67. Sir Gilbert Elliot, the second of the name, and the son of the first, was also a member of the College-of-justice, and became successively a Lord-of session, a Lord-of justiciary, and Lord-justice-clerk; and, with the aid of one of his sisters, made a singular escape from an enraged party of Jacobites, during the last rebellion, by hiding himself among Minto-crags. The sister who, on this occasion, played the heroine, was Miss Jane Elliot, the authoress of one of the three exquisite lyrics known in Scottish song under the common name of 'The Flowers of the Forest.' The third Sir Gilbert Elliot sat in parliament, first for Selkirkshire, and next for Roxburghshire, and became Treasurer of the navy; and he wrote the fine pastoral,

> "My sheep I've forsaken, and left my sheep-hook,
> And all the gay haunts of my youth I've forsook,"

inserted in the note on Minto-crags in the 'Lay of the Last Minstrel.' The fourth Sir Gilbert, figuring from the commencement till nearly the close of the wars with France, filled the offices successively of

Governor of Toulon, Viceroy of Corsica, Minister plenipotentiary at Vienna, President of the Board of control, and Governor-general of India; and was raised, in 1797, to the peerage under the title of Baron Minto, and, in 1812, received the additional dignities of Viscount Melgund and Earl of Minto. His son, the present Earl, succeeded to the family estates in 1814, married, in 1806, the daughter of Patrick Brydone, Esq., author of the well-known 'Tour in Sicily,' sat early in parliament, and rose to the offices successively of Minister-plenipotentiary to the court of Berlin, and First Lord of the Admiralty.

MIOBLE (The), a brook of considerable volume, flowing into Loch-Morar, in the parish of Ardnamurchan, Argyleshire.

MIRACLE. See Martle.

MIRES-HILL. See Eaglesham.

MIRRAN (The). See Fortingal.

MISERY (Mount). See Kilmaronock.

MISTY-LAW. See Lochwinnoch.

MIULIE (Loch), a small lake near the head of Glenstrathfarrar, in the north-west extremity of Inverness-shire. An islet on its bosom was the retreat of Lord Lovat after the ruinous defeat at Culloden; and the summit of an adjacent mountain was his post when helplessly surveying the conflagration of his mansion, and of the houses of his clansmen.

MOAN (Loch). See Minnigaff.

MOAR (Fall of). See Lyon (The).

MOAT-BURN, a brook running north-eastward to the Tweed, in the parish of Tweedsmuir, Peeblesshire.

MOCHERMORE. See Minnigaff.

MOCHRUM, a parish, containing the post-office village of Port-William, also the villages of Eldrig and Kirk of Mochrum, on the southern coast of Wigtonshire. It lies along the upper part of the east side of Luce-bay, and is bounded elsewhere by the parishes of Old Luce, Kirkcowan, Kirkinner, and Glasserton. Its length south-south-eastward is 12 miles; and its greatest breadth is 5¾ miles. The extent of coast is 9½ miles. For a mile from the north-west extremity, it forms a steep rocky hill overhanging the sea, altogether inaccessible by boats, but traversed along the brink by a road which was constructed by the filling up of deep caves and the removing of vast rocky blocks; and hence, to the south-east extremity, it is a stripe of flat smooth gravel beach 50 yards in mean breadth, flanked by a bold and precipitous bank, which, for the most part, forbids access from the sea, but, in several places, is cleft by creeks and tiny bays. Though there are several landing places for small boats, the only harbour or accessible point for sailing craft is at Port-William. Numerous independent brooks run westward to the shore; but most of them rise within mid-breadth of the parish, and the longest has a course of only 4½ miles to Port-William bay. White-loch, ⅔ of a mile long and 3 or 4 furlongs broad, lies in the south-east corner, encincture with wood, and overlooked by Monreith-house, the elegant and commodious seat of Sir William Maxwell, Bart. On its banks, near the modern mansion, stands the old family castle of the Maxwells, amidst a clump of lofty trees; and in the vicinity are vantage-grounds which command an extensive view away to the mountains of Mourne in Ireland, the Isle of Man, and the hills of Cumberland. Near the north-west end of the parish, amidst a wide tract of moorland, lies a cluster of six lakes. Two of them, Mochrum-loch and Castle-loch, have each several islets, and measure upwards of 1¼ mile by half-a-mile; and these, with the other four, which are much smaller, send off their superfluent waters in one stream, forming Malzie-water: which see. At the north end of Mochrum-loch, and south of the smaller lakes, stands an ancient tower or castle, called the Old Place of Mochrum, which, seen from a little distance, has a curious appearance, looking, amidst the lakes, almost like a large ship at sea. The general surface of the parish is of the broken character which prevails in Wigtonshire, neither level nor mountainous, its flat grounds very limited, and its hills of no great elevation. Large tracts, at both ends of the parish, consist chiefly of rocky eminences and mossy swamps, bleak and barren in their general aspect, and thinly interspersed with small patches of good dry arable land. The soil, for several miles along Luce-bay, is, for the most part, either a fine light or a strong deep loam, exceedingly fertile; and, towards the centre of the parish, it gradually becomes thin and stony. Only about 200 acres are under plantation. The value of assessed property in 1843 was £8,979. The parish lies midway between the towns of Wigton and Whithorn on the east, and the village of Glenluce on the west, and is traversed by the roads from both the towns through Glenluce to Stranraer. The village of Kirk of Mochrum is a small place, with upwards of 120 inhabitants, in the south-east district of the parish, on the road from Whithorn to Glenluce, 2 miles north of Port-William. Population of the parish in 1831, 2,105; in 1851, 2,946. Houses, 465.

This parish is in the presbytery of Wigton, and synod of Galloway. Patron, the Crown. Stipend, £160 0s. 4d.; glebe, £30. Unappropriated teinds, £2 6s. 4d. Schoolmaster's salary, £31, with £16 fees, and £4 other emoluments. The parish church was built in 1794, and enlarged in 1832, and contains 700 sittings. There is an United Presbyterian church at Port-William. There are four non-parochial schools. Mochrum was anciently a vicarage of the canons of Whithorn. In 1606 the church was granted, along with other property which had belonged to the canons, to the bishop of Galloway; in 1641 it was transferred to the university of Glasgow; in 1661 it was restored to the Bishop of Galloway; and, at the final abolition of Episcopacy, it reverted to the Crown. A chapel anciently stood near the old castle of Merton. Another chapel, dedicated to St. Finnan, and called Chapel-Finnan, or Chapel-Fingan, stood on the coast under the cliff. Its ruins figure in an account of Galloway, written in 1684, yet are still extant. The lands of Mochrum were given, in 1368, to Thomas Dunbar, second son of Patrick, Earl of March. The Dunbars, who descended from him, took title from Mochrum, had their seat at the old place of Mochrum, and figured somewhat distinguishedly as a family. Cadets of the house founded the families of Dunbar of Clugston and Dunbar of Baldoon, the latter now represented by the Earl of Selkirk. Gavin Dunbar, son of Sir John Dunbar of Mochrum, became prior of Whithorn about the year 1504, was afterwards made preceptor to James V., and became, in 1522, Archbishop of Glasgow,—in 1526, Lord-chancellor of Scotland,—and in 1536, one of the Lords of Regency during the King's visit to France. The family was raised to the baronetage in 1694, and is now represented by Sir William Dunbar, Bart. The Maxwells of Monreith settled in the parish in the early part of the 17th century. John Maxwell, younger of Monreith, acted a distinguished and military part among the Covenanters, stood high in fame among their leaders, and made narrow escapes from martyrdom in their cause. Another celebrated and recently deceased offshoot of the family was Sir Murray Maxwell, commander of the Alceste in the Amherst embassy to China, aide-de-camp to William IV.,

and, at his death, under appointment to the governorship of Prince Edward's Island.

MOCHRUM, Ayrshire. See KIRKOSWALD.

MOFFAT, a parish partly in Lanarkshire, but chiefly in Dumfries-shire. The Dumfries-shire part projects northward from the adjacent regions of the county, forms the northern extremity of the district of Annandale, and contains the post-town of Moffat. The parish is bounded by Tweedsmuir, Megget, Ettrick, Eskdalemuir, Hutton, Wamphray, Kirkpatrick-Juxta, and Crawford. Its length eastward is about 15 miles; and its greatest breadth is 8½ miles. For 24 miles along the west, north, and east, the boundary-line is formed by the highest summits or water-shedding line of the southern alps of Scotland, which attain here their highest altitude, and send off hence their long broad spur across the counties of Peebles and Selkirk toward the Lammermoors. Evan-water cuts a gorge in the north-west through this mountain-barrier; and coming down from Crawford, flows ⅔ of a mile on the boundary between that parish and Moffat, and then rushes over a rocky and declivitous bed 3¾ miles southward through the interior to Kirkpatrick-Juxta, at Middlegill. Cloffin-burn rises in three head-streams in the extreme west, and runs 3 miles south-eastward and eastward to the Evan, at the point of its entering Kirkpatrick-Juxta. Garpel-water rises in the south-west extremity, runs nearly 2 miles along the southern boundary, and then passes away to become afterwards tributary to the Evan. The river Annan rises in the extreme north, and runs 8½ miles almost due south, but over the last 5 miles is the boundary-line with Kirkpatrick-Juxta lying on its right bank; and while on this boundary, 1¼ mile before ceasing to touch Moffat, it receives at one point Evan-water on its right bank, and Moffat-water on its left. A number of small local independent streams join it in Moffat, all, except one, on its left bank; the most considerable being Granton, Well, and Frenchland burns, respectively 3½, 4, and 3 miles long. Moffat-water rises in the extreme north-east, and runs 10½ miles almost direct south-west to the Annan; augmented in its progress by numerous mountain rills. LOCH-SKENE [which see] supplies the earliest of these rills on the right bank, —that in the course of which occurs the celebrated waterfall called the GREY MARE'S TAIL: which see. The courses of even the three chief streams, the Evan, the Annan, and the Moffat, are, for a long way, sheer gorges, overhung by steep and often almost inaccessible hills, admitting little more than space for excellent though hanging roads, and possessing at their upper end, even on the beds of the streams, an altitude of about 1,000 feet above sea-level. That of the Evan nowhere in the parish expands into a vale, but continues throughout a mountain pass; that of the Moffat slowly opens into a belt of meadow and arable land; and that of the Annan, 3½ miles before the river leaves the parish, and just before it reaches the town, suddenly expands into a beautiful valley of considerable breadth, the commencement of the rich strath or 'Howe' of Annandale, screened on three sides by towering uplands, and blooming athwart the surface with luxuriant vegetation. A singularly fine scene in the gorge or glen of one of the brooks is called the Bell-craig, supposed to be a corruption of Belled-craig, the provincial pronunciation of Bald-craig.

About 3,800 acres of the whole area of the parish are in tillage; about 450 are under wood; and upwards of 34,000 are waste or pastoral. The soil in the valley ground is alluvium; on the lower declivities of the hills, it is a light dry gravel, in most places tolerably deep and fertile; and on the higher grounds, it produces grass and heath, and rarely yields to the predominance of moss. The mountains on the boundary include HARTFELL, which we have separately noticed, and about one-half of those mentioned in the article DUMFRIES-SHIRE, as forming the northern screen of the county. The heights along Moffat-water vie in elevation with those along the boundary; so that one-half, or upwards, of the parish is occupied with the loftiest Scottish mountains south of the Forth and Clyde. Nearly all the heights are curved and regular in outline, broad in their summits, and clothed with vegetation on their surface. Saddleback, 1⅞ mile south-east of Hartfell, is a curious exception, being so narrow at the top that a person may bestride it, and sit as on a saddle, and see two beautiful streamlets trickling away from its opposite bases. The eagle, anciently a multitudinous inhabitant of the Moffat alps, now rarely meets the eye of an observer of the cloud-capped landscape. Nearly one-half of the parish belongs to Johnstone of Annandale, and the rest is distributed among ten or twelve principal landowners, besides a number of smaller ones. The estimated yearly value of the raw produce in 1834 was £16,105. The value of assessed property in 1843 was £8,653 17s. 6d. The real rental in 1855 was £13,311. Vestiges still exist in this parish of the Roman road which passed up Annandale, and is noticed in our article on Dumfries-shire. In its vicinity are traces of some large Roman encampments. Three miles south-east of the town are vestiges of a British encampment. Near the road from the town to Moffat-well, is a high conical mount, anciently surrounded with a deep ditch, and now enclosed and planted, and appearing a beautiful object from the road; and a few hundred yards west of it is another and smaller mount. A mile east of the Roman road, in a deep sequestered glen, are two artificial excavations in freestone rock, capacious enough to accommodate a number of cattle. In various localities are ruins of peel-houses and old towers, built with sea-shell mortar. A curious locality, also, is noticed in our article on ERICKSTANEBRAE. The wild wilderness along the upper part of Moffat-water is the scene of many a stirring tradition respecting the gatherings and hidings of the persecuted Covenanters, and their narrow escapes from the bloodhound pursuit of Claverhouse and his dragoons. The gorge of the stream seems to have been regarded as a defensible pass; while deep seclusions among the towering mountains behind were treated as places of ensconcement and elusion from pertinacious pursuit. On an eminence, which commands the convergent ravines of Moffat-water and Loch-Skene burn, there are vestiges of a rude battery thrown up to defend the country toward the north-east; and another eminence on which parties were stationed to note to the congregations assembled in the ravines the approach of danger, is still called the Watch-hill. The parish is traversed by turnpikes leading northward respectively toward Glasgow, Edinburgh, and Selkirk, along the vales and gorges of the three principal streams; and is traversed also, up Evan-water, by the Caledonian railway, but has access to that railway only at Beattock station, within Kirkpatrick-Juxta, 2 miles from the town of Moffat. Population of the Dumfries-shire part of the parish in 1851, 2,278. Houses, 423. Population of the entire parish in 1831, 2,221; in 1851, 2,304. Houses, 429.

This parish is in the presbytery of Lochmaben, and synod of Dumfries. Patron, Johnstone of Annandale. Stipend, £279 10s. 10d.; glebe, £35. Unappropriated teinds, £222 16s. 8d. The parish church was built about the year 1790, and contains 1,000 sittings. There is a Free church, with an

attendance of 530; and the amount of its receipts in 1856 was £417 6s. 9d. There is likewise an United Presbyterian church. The parochial school, and another school which had been endowed for nearly 200 years, were, in 1834, united under the direction of a headmaster and an usher. The parochial schoolmaster's salary, previous to this measure, was £25 13s. 3d., with fees, and £5 other emoluments. There are a boarding-school and five other non-parochial schools. The ancient church of Moffat was one of the churches of Annandale transferred, in 1174, by Robert de Bruce to the bishop of Glasgow; and it was afterwards constituted one of the prebends of the see. A chapel anciently stood between the Annan and the Evan at a place still called Chapel.

Moffat has been called the Cheltenham of Scotland, and is more distinguished for its medicinal waters than any place north of the Sark and the Tweed. The wells are three. Two of them, called the Hartfell-spa and the Garpel-well, are noticed in our articles HARTFELL and GARPEL-WATER. The third, called distinctively and emphatically Moffat-well, is a strong, sulphureous water, about 1½ mile north of the town, easily accessible thence by an excellent road, which is kept scrupulously neat and trim. The well is enclosed in a plain stone edifice, in a corner of a broad green esplanade, commanding a lovely view of the pastoral valley and its hill-screens; and near it are a neat cottage for its keeper, and a lank-looking building which was formerly used as a ball-room and for public breakfasts. The water oozes out of a rock of compact greywacke, containing interspersed pyrites. A bog in the vicinity probably co-operates with the pyrites in the greywacke to afford the sulphureous impregnation. The water has an odour resembling that of Harrowgate, but is not quite so strongly sulphureous. It has a somewhat saline taste; it sparkles in the glass like champaign; and it is so remarkably volatile that it can be drank in perfection only at the fountain. No closeness of cork can prevent some of its best qualities from forsaking it in bottles. Being used as a wash, and for warm bathing, it is now conveyed to the village in pipes; but to serve its purposes as an internal medicine, it needs still to be taken at the spa. The well is coated on the sides with a yellowish grey crust of sulphur; and, when allowed to remain some days quiescent or unpumped, it becomes covered with a yellowish white film of sulphur. Chemical analyses of the water have been made at various times since 1759; and according to one made by Mr. Macadam of Glasgow in 1853, an imperial gallon of it contains ·353 cubic inch of free sulphuretted hydrogen, a quantity of free and combined sulphur equal to that in 2·168 cubic inches of sulphuretted hydrogen, 1·51 grain of sulphuret of sodium, 60·72 grains of chloride of sodium, 7·25 grains of chloride of magnesium, 10·02 grains of chloride of calcium, 3·46 grains of silicate of soda, 1·31 grain of carbonate of lime, ·87 grain of carbonate of magnesia, 2·27 grains of organic matter, 1·45 grain of saline matter lost in the analysis, and traces of free silicic acid. The well was discovered, or came into notice as a spa, upwards of two centuries ago, and has ever since attracted invalids from all parts of the kingdom. Its water is pronounced a powerful remedy in all scrophulous and scorbutic cases, in affections of the lungs, in travel, in rheumatism, and in dyspepsy, biliousness, and other complaints of the stomach and bowels; it is very light, and powerfully diuretic; and it figures in common fame as the means of achieving "most wonderful cures."

The TOWN of MOFFAT stands on the left bank of the Annan, 1¾ mile above the influx of the Moffat and the Evan, and 2 miles north-north-east of the Beattock station of the Caledonian railway. Its distance by road is 14 miles from Elvanfoot, 16 from Lockerby, 21 from Dumfries, 50 from Edinburgh, and 54 from Glasgow; but, by railway through Beattock, it is 15 from Elvanfoot, 15½ from Lockerby, 55½ from Dumfries, 62½ from Edinburgh, and 67½ from Glasgow. Its site is a rising-ground or slight acclivity, with a southerly aspect, having an elevation of 370 feet above the level of the sea. Around it lies a beautiful prospect of the upper vale of the Annan, richly luxuriant in its fields and hedgerows, finely chequered and spotted with wood, gaily embellished with water, villa, mansion, and park, and picturesquely screened with gentle green acclivities, overlooked on the back-ground by alpine summits. Sheltering plantations climb the finely curved outlines of the Gallow-hill immediately on the north, stretch away in a little sheet of forest on the west and the south, and give all the environs both a warm and an adorned appearance. The spire of the church appears, when viewed in some directions, to rise elegantly from the midst of an extensive grove. Nor does the town stand well with regard merely to its immediate neighbourhood, but, being situated at the head of the luscious valley which stretches away in an expanding stripe 25 miles to the Solway frith, at the entrance of three grand inlets to the deepest wildernesses and most tremendous chasms of the southern Highlands, and only 4½ miles south of Erickstane-brae-head, whence issue streams that run from the highest ground in the south of Scotland, east, west, and south to the Atlantic, the German, and the Irish seas, it commands from its own site, and from vantage-grounds in its vicinity, many most picturesque blendings and groupings of Highland and Lowland scenery, and probably yields to no watering-place in the world for mingled grandeur and beauty of position. In itself, too, it is a pretty, tidy, smiling town, with modest and yet dressy attractions to the gay lounger and the fashionable invalid. Its principal street stretches north and south down the slow declination of the rising ground; is spacious, handsomely edificed, exceedingly smooth and clean, dry within an hour after the heaviest rains, and altogether so disposed as to form a most agreeable promenade for both inhabitants and strangers; and was, some years ago, so much widened in its central parts as to form there a Place or large oblong square. In the middle of the street is a cistern for public use, affording a copious supply of the purest spring-water, fetched in leaden pipes beneath the bed of the Annan, from the parish of Kirkpatrick-Juxta. An elegant set of baths was erected in 1827 on a superior plan, with a large apartment to serve as both a public reading-room and an assembly-room. The front of this edifice is adorned with a Doric portico; and it adjoins the principal inn, the Annandale Arms. There is likewise a large private hotel. Connected with the baths are a billiard-room and a bowling-green,—the latter enveloped in a shrubbery. The meal-house and market-house are commodious buildings. Most of the private houses are new or recent, nearly all the town having been either formed or rebuilt within the last fifty years; and a large proportion of the houses are fitted up as private lodgings for the use of visitors. The common building material is a bluish coloured greywacke, which is faced in the masonry with white sandstone; and this gives the houses a pleasant appearance, which is further aided, in many cases, by climbing rose-bushes or trellised plants. The town has a large public library, a trades' reading-room and library,

and offices of the Union Bank, the Bank of Scotland, and the British Linen Company's Bank. The shops are generally of a superior kind, affording a ready supply both of ordinary wants, and of many luxuries. A regular market is held once a-week; and fairs are held on the third Friday of March, old style, on the 29th day of July, and on the 20th of October, or the Tuesday after. An omnibus, in communication with the railway trains, runs regularly between the town and Beattock. Justice of peace courts and sheriff small debt courts are regularly held in Moffat; and the public peace of the town is well preserved. The population, according to the census, in 1841 was 1,413, and in 1851, was 1,491; but these figures do not show what the population was in the summer months.

The climate of Moffat is so mild and healthy as to attract invalids and occasional residents whose cases do not require any use of the spas. Showers approaching it from any point over three-fourths of the compass, and threatening to discharge themselves on the vale, are very frequently drawn down to exhaustion by the vast mountain-screen in the vicinity. The lands which environ the town are so gravelly and irretentive that moisture, when it falls, very speedily disappears, and gives no aid either to morassy stagnation in the fields, or to a bemiring of the public roads. "Typhus," says the reverend statist in the New Account, "has often prevailed in Glasgow, Edinburgh, Carlisle, and other cities when there was no such distemper in Moffat. Providence averted even the cholera, though severe in Glasgow, and especially in Dumfries, with which there was daily intercourse, only two or three doubtful cases having occurred, and among strangers affected before they reached Moffat. If the climate be the cause of any local distempers, the writer has never heard of it, nor the medical friends he has consulted on the point." All the public thoroughfares leading from the town are safe, easy, and pleasant; bridges on the roads are good; public promenades and strolling-grounds have a trimmed and inviting aspect; and nuisances of every description are prevented. All the antiquities, curiosities, and remarkable scenes noticed in our account of the parish, and in the articles Hartfell, Grey Mare's Tail, and Loch-Skene, are accessible to parties in quest of recreation, and form a pleasing variety of resource for the rambler and the man of taste. A thousand localities easily reached will richly gratify the botanist, the mineralogist, and the general student of natural history. Craigieburnwood, and the moat on Coatshill, opposite Earl Randolph's tower, offer fine retreats for picnic parties. Queensberryhill, whose summit commands a clear view of a vast and very gorgeous panorama, is accessible to the lover of landscape who begins to get strength at the wells. Even the glowing lakes, and 'dowy dens,' and verdant braes of Yarrow, with the tower of Dryhope, the birth-place of Mary Scott, are not altogether beyond reach.

Moffat is historically associated with only one event of note. In the year 1333, while Scotland lay bleeding and ignominiously enthralled at the feet of usurpation, Sir Archibald Douglas, at the head of 1,000 horsemen, marched down by night upon the town, surprised and defeated the forces of Edward Baliol, slew or captured various distinguished English officers and near relatives of the vassal-king of Scotland, and obliged the mocker and usurper of royalty to run a race of dispersion and flight to the Solway. Among eminent persons connected in any way with Moffat, were Bishop Whiteford of Brechin, who was a landed proprietor in the parish in the reign of Charles I., and whose daughter, the wife of James Johnstone of Corehead, is said to have been the discoverer of the medicinal properties of Moffat-well,—Dr. Moffat, an eccentric but talented native, an object of some personal notice by Cromwell, and the author of a Treatise on Dieteties,—the good James Earl of Hopetoun, whose family inherited the Johnstone property in the parish, and who himself occasionally resided at Moffat-house,—the Rev. Dr. Walker, translated from the pastorate of the parish to the Natural History chair of Edinburgh,—Mr. Macadam, the famous roadmaker, who died at the town in 1836, in the 81st year of his age,—and Dr. David Welsh, the Professor of Ecclesiastical History in Edinburgh, who was a native of the parish.

MOFFAT WATER. See Moffat.

MOIDART. See Moydart.

MOIN (The), a mountainously moorish tract of country, on the north coast of Sutherlandshire. It lies partly in the parish of Durness, and partly in that of Tongue; extends due southward from the coast at Whitenhead; and measures about 12 miles by 4½. Its elevation, a very brief way from the shore, is upwards of 1,300 feet; and, though variegated by several ranges of bold rugged heights, it continues somewhat uniform, and bears aloft a broad expanse of bog, till, at the southern extremity, it shoots grandly up in the alpine height of Ben-Hope: which see. The passage of this wild tract, lying directly in the way between Tongue and Eriboll, or between east and west of the extreme north of the continent, was formerly the laborious work of an entire day; but, in consequence of the construction of the new line of road, at the late Duke of Sutherland's expense, along the coast, it is now the easy and comfortable task of a single hour.

MOLL, an ancient parish, now comprehended in Morebattle, on the eastern border of Roxburghshire. It comprises the upper part of the basin of Bowmont-water, adjacent to the English border, 12 miles south-south-east of Kelso. The church and village of Moll stood upon the Bowmont; and there is even now, on the banks of that mountain-stream, a hamlet, commonly known by the corrupted name of Mow-haugh; and a little lower may be seen the ruins of Mow-kirk.

MOLLENBURN, a village in the parish of Cadder, Lanarkshire. It stands at the south-east extremity of the parish, on the road from Glasgow to Stirling. It is advantageously situated for wood, water, and building material, and might easily admit of improvement and extension. It has a good school. Population, 202.

MOLLINDINAR BURN. See Glasgow.

MOLLMONT. See Galston.

MON-, a prefix in numerous Celtic names of places in Scotland. It is an abbreviation of monah, which signifies 'a moor' or 'an upland moss.' But, in some instances, the particular moor which it originally designated has been either reclaimed or greatly modified by modern cultivation; as in the instance of Monifieth, signifying 'the moor of the stag,'—and in the instance of Monikie, signifying 'the moor of mist.' The proper form of the prefix, in some names, though originally written Mon, has been changed by usage into Min or Minni or Men; as in the case of Minnigaff, originally written Monygoff, and signifying 'the black moor,'—and in the case of Menmuir, originally written Monmore, and signifying 'the great moor.'

MONADHLEADH MOUNTAINS, a range of lofty and rugged heights, extending from south-west to north-east, in a line parallel to the Glenmore-nan-Albin, and occupying the central districts of the southern division of Inverness-shire. They

rest on a high base or table-land of dreary heathy moor; and are comparatively flowing in their outlines, unbroken in their declivities, and free from abruptness or jaggedness of aspect. They embosom extensive glens where great herds of black cattle feed, and send down slopes where large flocks of sheep are pastured; yet they contain irksome solitudes, vast and dreary wastes, which are abandoned to the grouse and the ptarmigan, the roe and the red deer. In their upper or south-west district they contain the sources of the chief head-streams of the Spey, the Dulnain, the Findhorn, and the Nairn; and, in their lower district, they chiefly divide Strathdearn, or the vale of the Findhorn, on the north-west, from the upper vale of the Spey on the south-east. The mountains consist principally of granite and quartz rock.

MONAEBURGH. See KILSYTH.

MONAHOUDIE. See KNOCKANDO.

MONALTRIE. See BRAEMAR and GLENMUICK.

MONANCE (ST.). See ABERCROMBIE.

MONAR (LOCH), an alpine lake at the head of Glen-Strathfarrar, on the mutual border of Inverness-shire and Ross-shire. It is about 7 miles long, and occupies a wild hollow a little to the north of the mountain Scour-nalapich, which is nearly as high as Ben-Nevis, and soars aloft in a beautiful peak. The shores of the lake are savage, yet picturesque; and at the east end, where the lake contracts to a narrow, winding strait, there are remnants of an ancient pine forest. At the foot of the lake stands Monar-house; and there the carriage-road up Glen-Strathfarrar terminates.

MONBODDO. See FORDOUN.

MONCRIEFF, or MORDUN, a hill in the parish of Perth, immediately north of the Bridge-of-Earn, and 4 miles south of the city of Perth. It forms the connecting link between the Ochil and the Sidlaw ranges, except as these are cloven asunder by the Earn and the Tay; and it has an altitude above sea-level of 756 feet. It consists chiefly of compact trap or greenstone, displaying on the south side a columnar formation; but contains, near its western extremity, some patches of conglomerate. A considerable part of it is under cultivation, and its heights are richly wooded, but have here and there bold protrusions of rock. The road from Bridge-of-Earn to Perth passes over its west shoulder, at the height of 182 feet. The summit of the hill, or even the highest part of the road upon its shoulder, commands one of the most gorgeous prospects in Scotland, comprising Strathearn, the Carse of Gowrie, the grand sweeps of the Tay, the hill of Kinnoul, the city of Perth, a profusion of mansions, woods, and parks, and, away in the far distance, the frontier ranges of the Grampians. A stranger, ascending the hill from the south, sees none or very little of this prospect till he approaches the summit, when the whole of it bursts at once upon his view, so that the effect of its own surpassing brilliance is considerably heightened by the suddenness of its revelation. The invading legions of the Roman army, approaching this spot, were so enraptured with the view, supposing it to resemble the then gorgeous environs of Rome, that they exclaimed,—"Ecce Tiber, ecce Campus Martius,"—"Behold the Tiber, behold the Field of Mars!" Here also Queen Victoria, when on her first progress to the Highlands, made a pause to look round on the splendid panorama, and appeared to be highly charmed with the scene.

MONCUR. See INCHTURE.

MONEDIE, a parish in the Glenalmond district of Perthshire. Its post-town is Perth, 4 miles to the south-south-east. It is bounded by Auchtergaven, Redgorton, Methven, and Logiealmond. Its length and breadth are each about 2 miles. Its surface is but slightly diversified, comprising no hills, but only rising grounds, which run northward and southward from the banks of the Shochie. On the low flat parts, the soil is partly a light loam, and partly of a gravelly character, superincumbent in both cases on dry, hard, deep gravel; on the parts of the rising-grounds adjacent to the river, it is a rich loam, on a strong deep clay; and in the parts of the rising-grounds more distant from the river, it is a cold wet till, naturally of moorish character, covered with dwarf heath. About 2,718 imperial acres are in tillage; about 771 are in pasture; and probably 400 are under wood. The landowners are the Duke of Athole and the Earl of Mansfield. The average rent of the arable land is about £1 10s. per acre. The value of assessed property in 1843 was £3,654 4s. The eastern extremity of the parish is adjacent to the Luncarty station of the Scottish Midland railway; and the interior is traversed by a road leading up to Logiealmond and Glenshee. Population in 1831, 300; in 1851, 321. Houses, 53.

This parish is in the presbytery of Perth, and synod of Perth and Stirling. Patron, the Earl of Mansfield. Stipend, £215 19s. 11d.; glebe, £14. Schoolmaster's salary, £34 4s. 4½d., with about £10 fees, and £5 16s. other emoluments. The parish church was built about the year 1817, and contains 460 sittings. The parish was, previous to the Reformation, a free parsonage and a prebend of Dunkeld. Alexander Myln, the prebendary of it, toward the close of the 15th century, wrote a work, entitled 'Lives of the Bishops of Dunkeld,' which has recently been reprinted in the Transactions of the Literary and Antiquarian Society of Perth. The parish, after the Reformation and till about 1760, belonged to the presbytery of Dunkeld.

MONESS-BURN, a brook, about 7 miles in length of course, flowing north-eastward, along the boundary between the parishes of Dull and Logierait, and through the village of Aberfeldy, to the river Tay, in Perthshire. It is famous for three cascades, and for the wooded ravine in which these occur, which were celebrated by the muse of Burns, and characterized by Pennant as an "epitome of everything that can be admired in waterfalls." The lowest and finest of the falls is about a mile from Aberfeldy, and the uppermost about 1½ mile. The dell appears to be from 200 to 300 feet deep, and is so very narrow that the trees on its opposite sides almost meet each other's branches; and romantic walks have been formed through it, and seats erected, for the use and convenience of visitors. The approach to the falls is from Aberfeldy, and should always be made under the direction of a guide. "The burn of Moness," says a tasteful observer, "is bounded by high impending rocks, from whose chasms and crevices, fine trees and matted underwood seem to start, deepening the gloom below; while a narrow and dangerous path at their base leads you, with the effect of gradual initiatory preparation, to the cascades themselves. These form a retiring succession of brilliant gushing torrents, gradually veiled, as they recede from the eye, by the thin leafy screen of the over-arching woods, which render it one of the completest specimens of the secluded waterfall that I have ever seen."

MONFODE-BURN. See ARDROSSAN.

MONGARRY, a hamlet near the river Don, in the parish of Tullynessle, Aberdeenshire. Adjacent to it is the site of General Baillie's encampment on the night previous to the battle of Alford in 1645.

MONIAIVE. See MINNIEHIVE.

MONIFIETH, a parish, containing the villages

of Drumsturdymoor and Barnhill, the post-office village of Monifieth, and the greater part of the post-town of Broughty-Ferry, on the southern border of Forfarshire. It is bounded by the frith of Tay, and by the parishes of Dundee, Murroes, Monikie, and Barry. Its length southward is 5 miles; and its breadth varies from 3½ miles to 1½ mile. Dighty-water, coming in from Dundee, runs 2½ miles westward, and half-a-mile southward to the frith at Milton, making several fine descents for yielding water-power to machinery. Murroes-burn traces the western boundary for a mile, and joins the Dighty at the place where that stream enters the parish. Buddon-burn comes down upon the extreme north, traces for 1¼ mile the western boundary, runs 1¾ mile south-eastward across the interior, and afterwards, just before falling into the frith, runs 3 furlongs along the eastern boundary. The coast is low and sandy,—with a considerable extent of light downs, of the kind called links; and the sea is, year by year, making inroads upon it, owing to the double effect of the winds blowing away the sand and raising the tide. Behind the links, east of the Dighty, extends for a mile an almost level plain, the soil of which is at first light and sandy, but extremely fertile, and afterwards becomes a rich black loam. Behind the links, west of the mouth of the Dighty, the ground forms an elongated swell or low ridge, bold on the south, and gently sloping on the north, running westward between that stream and the frith. The rest of the parish has in general a southern exposure, and is diversified with gentle swells, and with the species of hills called laws. The soil is in general an excellent black loam, but deteriorates in quality toward the north, and eventually becomes, over a small tract, tilly and moorish. The highest ground is Drumsturdy-moor-law, 2¼ miles from the shore, and supposed to rise 530 feet above sea-level. The hill is of a beautiful oval form, green over all its sides and summit, a very fine feature in the landscape, and measuring 133 yards by 66 on the superficies of its top. A charming view is obtained from it of Forfarshire to Arbroath,—the German ocean till lost in the horizon,—the frith of Tay, the bay of St. Andrews, the rich expanse of Fife, and the hills of Lothian,—the level and pleasant tract westward along the Tay, the tower and crowded harbour and picturesque landscape of 'Bonny Dundee,' part of the Carse of Gowrie, and the fine long hill-screen of the far-ranging Sidlaws. Around the summit of the hill are the broad foundations of an ancient fortress, with several large vitrified masses of sandstone and whinstone firmly compacted by fusion. A little south-west of this hill is the Gallow-hill of Ethiebeaton, said to have been the scene of summary feudal justice under the barons, who owned the grounds of Ethiebeaton, Laws, and Ornochie. About 4,574 imperial acres in the parish are under cultivation; about 926 are in pasture, chiefly links; and about 554 are under plantation. The principal landowners are Lord Panmure, Sir J. Ramsay, Bart., and Mr. Erskine of Linlathen; and there are nine others. The estimated value of raw produce in 1842 was £34,440. The value of assessed property in 1843 was £14,641 13s. 1d. The real rental in 1855 was £18,315. Grange-house, the ancient seat of the Durhams, now of Largo, occupied a pleasant site half-a-mile from the shore, and was famous for an escape of Erskine of Dun in the times of the Reformation, and for a nearly successful attempt at escape by the Marquis of Montrose when in custody on his way from Assynt to Edinburgh; but the old mansion was recently replaced by a comfortable new one. Linlathen-house is a large mansion on the banks of the Dighty; and Laws-house is a recently constructed edifice, in a florid style of architecture on a very commanding site, near the vitrification on Drumsturdy-moor-law. At the mouth of the Dighty is a large spinning mill, driven partly by steam; half a mile up that rivulet is an extensive bleaching work; in Broughty-Ferry is a variety of manufactories; and in the village of Monifieth are a foundry and machine work, and a cart and plough manufactory. A considerable number of the parish'oners are employed in various ways, but principally in weaving, for the manufacturers of Dundee. The parish is traversed by the road from Dundee to Arbroath, and by the Dundee and Arbroath railway; and it has stations on the latter at Broughty-Ferry and Monifieth, and enjoys also all the advantages of the water-communications at Broughty-Ferry. The village of Monifieth stands in the south-east corner of the parish, 3 miles north-east of Broughty-Ferry and 7 east by north of Dundee. It stands on the face of a rising-ground, ¼ a-mile from the nearest part of the frith, and has a thriving appearance. A half yearly fair for cattle and horses used to be held in it, but has fallen away. The parish church, in its vicinity, is a plain but conspicuous building, erected in 1813; and in the burying-ground are some beautifully carved antique tomb-stones, more tasteful and ornate than usually occur in a rural cemetery. Population of the village, 308. Houses, 68. Population of the parish in 1831, 2,635; in 1851, 4,267. Houses, 731.

This parish is in the presbytery of Dundee, and synod of Angus and Mearns. Patron, Lord Panmure. Stipend, £264 12s. 8d.; glebe, £12 10s. Unappropriated teinds, £393 1s. 4d. Schoolmaster's salary, £25 13s. 3½d., with £35 fees, and some other emoluments. The parish church contains 1,100 sittings. There is a chapel of ease at Broughty-Ferry, built in 1826, containing 720 sittings, and under the patronage of the male communicants. There is a Free church at Monifieth, with an attendance of 400; and the amount of its receipts in 1856 was £288 3s. 10d. There is also a Free church at Broughty-Ferry, with an attendance of 440; and the amount of its receipts in 1856 was £464 5s. 3d. There are likewise in Broughty-Ferry an United Presbyterian church and an Episcopalian chapel. There are 7 non-parochial schools,—several of them supported by endowment or extrinsic aid; and there are two parochial libraries, besides some other institutions. The ancient parish of Monifieth was a free parsonage, in the diocese of St. Andrews; and it had before the Reformation four chapels; one at Broughty-Ferry, where there is still a burying-ground,—one on the banks of the Dighty at Balmossie-mill, the foundation-stones of which were dug up near the end of last century,—one on the spot in the land of Ethiebeaton which is still called Chapel-Dokie,—and one at the village of Monifieth. Dr. David Doig, rector of the grammar school of Stirling and a writer in the Encyclopædia Britannica, was a native of Monifieth.

MONIKIE, a parish, containing the villages of Craigton, Newbigging, Guildie, Bankhead, and Camustown, in the south of the maritime district of Forfarshire. Its post-town is Dundee, 9 miles to the south-west. It is bounded by Murroes, Inverarity, Guthrie, Carmylie, Panbride, Barry, and Monifieth. Its length southward is 7 miles; and its greatest breadth is 5 miles. The surface is diversified by several hills. A small tract in the extreme south corner consists of sandy downs. The land for 2¾ miles, thence northward, is distinguished for fertility, has a southern exposure, and presents a warm and wealthy appearance. A large elongated hill or hilly ridge, called Downie, now interpo

from east to west, and sections off a colder climate and an inferior soil lying to the north. The district behind it, comprising about two-thirds of the whole area, is at first comparatively cold and moist, yet not unproductive, and eventually becomes an extensive tract of moorland, with an elevation of about 400 feet above sea-level,—now partially reclaimed and under tillage, but chiefly covered with heath and coarse grass, and occupied as pasture ground. A deep winding ravine, traversed by a streamlet, and called Denfiend or the Fiend's den, bisects the central hilly ridge, and, at a place where its sides are precipitous, is spanned by a single arch of a strong massive bridge. On Downie-hill, surmounting a summit which commands a view of large portions of seven counties, stands the 'Live and let live testimonial,' an erection raised, in 1839, by the tenantry of the late Lord Panmure, "to perpetuate the memory of a nobleman who, through a long life, made the interests and comforts of his tenantry his sole and unwearied object." The testimonial is situated 1 mile north of the Dundee and Arbroath road, 2 miles south-west of Panmure-house, and 5½ miles north-west of Buddonness, and is now one of the most conspicuous landmarks, over a great expanse of ocean and estuary, on the east coast of Scotland. It was constructed from a design by John Henderson, Esq., of Edinburgh. It rises to the height of 105 feet from the ground; and consists of a broad lower basement of rustic-work, containing one or two small rooms,—a quadrangular upper basement, the angles of which are flanked with heavy open buttresses,—and a colossal cylindrical column rising up into a balustrade, and surmounted by an ornamental vase. A stone-pillar stands in the centre of the cylinder, and carries up to the top a lightning-conductor in its interior, and a spiral stair on its exterior. Both this object, and extensive works for supplying the town of Dundee with water, and situated about ⅔ of a mile from the parish church, are attractive to visitors. Downie-hill consists chiefly of a fine trap, well-suited for both building and road-making, and containing beautiful specimens of agate, jasper, and spar; but at its west end is a quarry of excellent sandstone, which supplies an extensive district to the south. About 4,448 acres in the parish are under regular cultivation; and about 500 are under wood. The landowners are Lord Panmure, Lord Douglas, Fyff of Smithfield, Mitchell of Affleck, and Kerr of Newbigging. The real rental in 1855 was £8,101. Newbigging-house is the principal mansion. Affleck-castle is a fine specimen of the old feudal fortalice; and though now for a long time uninhabited, yet is seemingly almost entire. Hynd-castle is now but the vestige of another old keep, of smaller size, crowning an artificial mound, which must, at one time, have been surrounded by water and a morass. A tumulus called the Hair-cairn or Heir-cairn on the western border of the parish, is the only one left of several cairns which appear to have been raised there as monuments of some ancient battle. An ornamental stone pillar in the form of a cross, at Camustown, is believed to mark the spot where Camus, the Danish general, was slain and buried after the defeat of his army by Malcolm II. at Barry. The southern part of the parish is traversed by the road from Dundee to Arbroath, and by the Dundee and Arbroath railway; and has near access to the Monifieth and Barry stations of the railway. Population of the parish in 1831, 1,322; in 1851, 1,317. Houses, 294.

This parish is in the presbytery of Dundee, and synod of Angus and Mearns. Patron, the Crown. Stipend, £280 11s. 4d.; glebe, £12. Unappropriated teinds, £144 1s. 5d. Schoolmaster's salary, £34 4s. 4½d., with about £22 fees, and £5 other emoluments. The parish church was built in 1812, and contains 921 sittings. There is a Free church at Monikie, with an attendance of about 100; and the amount of its receipts in 1856 was £154 6s. 0½d. There is an United Presbyterian church at Newbigging, in the south-west corner of the parish. There are four non-parochial schools.

MONIMAIL, a parish, containing the post-office village of Letham, and the villages of Monimail and Easter Fernie, in the Cupar district of Fifeshire. It is bounded by Criech, Moonzie, Cupar, Cults, Collessie, Abdie, and Dunbog. Its length south-southeastward is 6 miles; and its greatest breadth is 5 miles. The northern part of it consists of a fine range of hills, the highest of which is called Mounthill; and the southern part, though diversified by soft and gentle undulations, is comparatively level, being a portion of the north side of the Howe of Fife. The prevailing rock in the northern district is trap, generally of a kind unfit for building; and the rocks of the southern district comprise some sandstone, and belong to the coal formation. The soil in the north is partly a mixture of decomposed trap and vegetable mould, and partly a clayey loam less fertile than the former; and that in the south is generally a light thin alluvium, superincumbent on gravel. About 3,000 acres in the parish are in tillage; about 2,000 are in pasture and parks; and about 500 are under wood. The landowners are the Earl of Leven, Hope of Rankeilour, Balfour of Fernie, Paterson of Cunoquhie, and Crichton of Nether-Rankeilour. The value of raw produce was estimated in 1836 at £21,100. Assessed property in 1856, £11,183 14s. A number of the parishioners are employed in linen-weaving. The parish has near access to stations on both forks of the Edinburgh, Perth, and Dundee railway. Population in 1831, 1,230; in 1851, 1,102. Houses, 227.

The castle or mansion of Fernie, one of the interesting artificial objects in the parish, has been separately noticed in our article Fernie. The present mansion of Balgarvie, at the eastern extremity of the parish, is a modern edifice, plain and commodious; but was preceded by one which belonged to a branch of the family of Balfour, from whom were descended the Lords Balfour of Burleigh. "It is said," says Sir Robert Sibbald, "that there was here a strong castle, which was taken and levelled by Sir John Pettsworth as he was marching with the English forces to the siege of the castle of Cupar in the reign of King Robert I." Of this castle, if there ever was one here, not a vestige now remains. Over or Upper Rankeilour is a very elegant house, built by General John Hope, fourth Earl of Hopetoun; and the grounds around it are magnificently wooded. Upper Rankeilour originally formed a portion of the property of the family of Rankeilour of that ilk; but at an early period it became the property of a branch of the Sibbalds of Balgony, with whom it remained till the reign of Charles II., when it became the property of Sir Archibald Hope, grandson of the famed Sir Thomas Hope of Craighall. A monumental pillar, to the memory of the late Earl of Hopetoun, stands on the summit of Mounthill. It is a plain Doric column 92 feet in height, surmounted by a square capital of 15 feet. It is hollow within, and has a narrow spiral staircase by which there is an ascent to the top, whence a fine view of the vale of Stratheden, and the friths of Forth and Tay, is obtained. North of Rankeilour is the Mount, now the property of Mr. Hope, but once the residence of Sir David Lindsay, Lord Lyon-King-at-Arms, during the reign of James V. West

of Fernie is Melville-house, the seat of the Earl of Leven and Melville. The house was erected, in 1692, by George, first Earl of Melville, in the fashion then prevalent in Scotland. It is a large square building, consisting of two principal stories, and a basement and attic. Two deep projecting wings enclosed a court at the original front, the entrance to which is ornamented by winged Mercuries. The front has since been changed, and a new entrance has been made at what was formerly the back elevation. The name of Melville, as applied to the grounds around the house, is comparatively modern; for the park and enclosures include portions of the lands of Monimail, of Letham, and of Halhill. The lands of Monimail anciently belonged to the Archbishop of St. Andrews, who had a castle here, a portion of which still remains to the north of Melville-house. It was originally built by Bishop William Lamberton, who died in June 1328, and appears to have been enlarged and improved by Cardinal Beaton, as a head with a cardinal's cap is carved on different parts of the walls. Archbishop Hamilton resided at the castle of Monimail during a severe illness, when he was attended and cured by the famous Italian physician, Cardan. About a mile from the site of the old church is a strong spring of pure water, which is known by the name of Cardan's well; so called, says tradition, because it was by the use of this water that the physician cured the Archbishop.

The parish of Monimail is in the presbytery of Cupar, and synod of Fife. Patron, the Earl of Leven. Stipend, £367 14s. 9d.; glebe, £12. Unappropriated teinds, £607 0s. 2d. Schoolmaster's salary, £34 4s. 4½d., with about £33 fees and other emoluments. The parish church was built in 1796, is a rather handsome building with a tower, and contains nearly 600 sittings. There is a Free church, with an attendance of about 140; and the amount of its receipts in 1856 was £66 11s. 10½d. There are four non-parochial schools, and two parochial libraries. The ancient church of Monimail was a mensal church of the archbishopric of St. Andrews.

MONIVAIRD AND STROWAN, two parishes, united both civilly and ecclesiastically, and lying chiefly in the upper end of Strathearn, Perthshire. Each consists of a main body and detached sections; the main bodies mutually contiguous, and the detached sections entirely isolated. Their post-town is Crieff, within half a mile of their eastern limits. The river Earn seems originally to have been, for three miles, the boundary between them; but it has greatly altered its course here, and deflected from the boundary. The main body of Monivaird is bounded on the west and north by Comrie; on the east by Monzie and Crieff; and on the south by Strowan; and it measures in length from north to south 8 miles, and in extreme breadth 6 miles. One detached part of Monivaird lies 2 miles south of the south-west extremity of the main body; is nearly an equilateral triangle measuring 1¾ mile along each side; is bounded on the south-east by Muthill, and on the north and the south-west by Comrie; and occupies part of the vale and the right mountain-screen of Glenartney, drained by Druchill-water. The main body of Strowan stretches along the south side of the Earn's valley in contact with the main body of Monivaird; is bounded on the east and south by Muthill, and on the west by Comrie; and measures in extreme length from east to west 6 miles, and in extreme breadth 3 miles. Its largest detached section lies 4 miles south-west of the nearest part of the main body, and 1¾ mile south of the detached section of Monivaird; is bounded on the west and north by Comrie, on the east by Muthill, and on the south by Kilmadock; measures three miles both in extreme length and in extreme breadth; and occupies the south-east side of the head of Glenartney, or of the congeries of hills, traversed by ravines and glens, and drained by the head-streams of Druchill-water. See GLENARTNEY.

A large part of the united parish is hilly or mountainous. The heights which stretch along the south-east boundary of the Glenartney districts, and the southern boundary of the main body of Strowan, divide the waters which are tributary to the Forth from those which are tributary to the Tay; and the heights along the northern extremity of Monivaird divide the basins of the Earn and the Almond. Most of the loftier heights are very rocky and heath-clad; yet they have many patches and expanses of verdure, and furnish sustenance to numerous flocks of sheep. Those in the north of Monivaird are among the highest Grampians which flank Strathearn. Benchonzie, which is the highest, and stands on the boundary, has an altitude above sea-level of 2,923 feet. Near its eastern base is a cluster of small conical hills, which strike the eye of every stranger as a curious *lusus naturæ*. Torlum, a hill on the southern extremity of Strowan, rises 1,400 feet above sea-level. The lesser hills, and the broken slopes gliding down toward the Earn, have picturesque forms, and are well wooded. Nearly the whole surface of the parish displays much variety and great force of landscape. See STRATHEARN, GLENTURRET, and GLENLEDNOCK. There are several small lakes; the largest of which, Loch-Turret, about a mile long, and ¼ of a mile broad, lies in the bosom of Glenturret, at the foot of Benchonzie, surrounded by very bold, craggy mountains; while the most interesting, covering about 30 acres, lies a mile north of the Earn, at the base of the shelving series of heights, embosomed among hanging woods and luxurious pleasure-grounds, reciprocating embellishments with the splendid mansion of Ochtertyre. The predominant rocks are greywacke and old red sandstone in the hills, and new red sandstone in the strath; but clay-slate also occurs, and both this and the sandstones are quarried. The soil of the hills is to a great extent moorish; but that of the low grounds is in general light, gravelly, and fertile. Above 3,000 imperial acres in the parish are in tillage; about 25,000 are constantly in hill pasture; and about 3,000 are under wood. A considerable proportion of the woodland is natural forest; and, as is noticed in an old song, the oak is a particular favourite:—

"By Auchertyre there grows the aik."

The principal landowners are Sir William Keith Murray, Bart., of Ochtertyre, Stirling of Strowan, Williamson of Lawers, Lord Abercromby of Fern-tower, and Colquhoun of Clathick; and there are several others. Ochtertyre-house is a modern structure, most delightfully situated on a richly wooded terrace, sloping southward to the banks of the lake of Monivaird. The views from various points around it are surpassingly beautiful and charmingly diversified. The remains of an old castle, comprising a square tower of about 18 feet on each side within the walls, stand on a gentle rising-ground which runs into the middle of the lake on the same side as the mansion, and must anciently have been an island, or nearly so, accessible only in one place and by a drawbridge. The castle was formerly of much greater extent than at present; it is traditionally said to have belonged to the Red Comyn, the rival of Sir Robert Bruce; it is called an ancient fortalice in a document of the year 1467; and it was

inhabited for some time about the middle of the 17th century by Sir William Murray, the first baronet of Ochtertyre. Lawers-house is also a very beautiful and romantic residence, looking in the distance like an Italian castellated villa. It is surrounded with a very fine wood, and yet commands a brilliant prospect athwart Strathearn. Strowan-house and Clathick-house are commodious, modern mansions. An ancient castle of the Earls of Strathearn stood on the summit of Tomnachastle, a beautiful eminence about 3 miles west of Crieff, commanding very romantic prospects, and possessing the greatest capabilities of military defence in the times prior to the invention of gunpowder. The foundations of this castle were still visible in 1832; but they were then removed to give place to the erection of a monument to the memory of General Sir David Baird, the hero of Seringapatam, who was a landowner in the parishes of Monivaird and Crieff. This monument is now a conspicuous feature in the general landscape of Upper Strathearn. It is an obelisk 82 feet high, an exact imitation of Cleopatra's needle, and is formed of blocks of Aberdeen granite, some of which weigh five tons each. A number of persons of the sept of Murray, denoted by Sir Walter Scott as "eight score of the Murrays, with their wives and children," were massacred in 1511 by a body of the Drummonds, the former having taken refuge in the church of Monivaird, while the latter, who were at feud with them, set fire to the church, and prevented their escape from the flames. The mausoleum of the family of Ochtertyre now stands on the scene of the massacre and site of the church, and is an elegant Gothic building, with stained glass windows. On the estate of Ochtertyre are vestiges of two Roman posts of observation, commanding views of the camps respectively at Dalginross and on the Moor of Orchil. Many sepulchral cairns existed near the Earn, but have been removed as material for stone fences. A very large one, called Cairn Chainichin, 'the monumental heap of Kenneth,' still exists, and is supposed to have been raised to the memory of Kenneth IV., sirnamed the Grim, who, according to the register of St. Andrews, was slain "at Moieghvard in 1001." Several small Roman antiquities have been found and preserved. The compact and large part of the united parish is traversed by two roads along Strathearn; and the detached sections are cut by the road between Comrie and Callander. Population of Monivaird in 1831, 531; of Strowan in 1831, 395; of the united parish in 1851, 790. Houses, 147. Valuation of property in 1856, £8,927.

This parish is in the presbytery of Auchterarder, and synod of Perth and Stirling. Patrons, the Crown and the Earl of Kinnoul. Stipend, £261 7s. 10d.; glebe, £30. Schoolmaster's salary, £34 4s. 4½d., with £15 fees, and £7 other emoluments. The church of the united parish was built in 1804, and contains 600 sittings. There were two churches for the respective parishes till 1804; and public worship was conducted in them on alternate Sabbaths. The date of the union of the parishes is not certainly known, but must have been prior to 1662. "The modern name Monivaird," says the Old Statistical Account, "is a corruption of the ancient, which was Moivard, as appears by a grant made by the Earl of Stratherne, in the beginning of the 13th century, of the church of St. Servanus, or Orph of Moivard, to the monastery of Inchaffery. The ancient name is still retained, in the speech of few inhabitants of the parish, who use a corrupted dialect of the original language of Scotland. The origin of the name cannot easily be traced. Its etymology is Gaelic; being made up of two words, *Moi Vard*, signifying 'the plain of Bards.' Strowan is probably a corruption of St. Ronan, the tutelar saint of Strowan parish." Vestiges of an ancient chapel exist to the south of the house of Lawers. An ancient cross, bearing the initials I. N. R. I., stands a little to the south-west of the house of Strowan, on a spot where markets used to be held. Among distinguished natives of Monivaird and Strowan may be mentioned Colonel Campbell of Lawers, who figured largely in the wars of the Covenanters against the Stewarts; Colonel Dow, the author of a History of Hindostan; Sir Patrick Murray, who figured largely as a statesman and as an officer of state in the four first decads of the present century; and Sir George Murray, who acted as quarter-master-general to the British army throughout the Peninsular war, and afterwards figured much as a stateman and as a cabinet minister.

MONKCASTLE. See KILWINNING.

MONKFORD. See MELROSE.

MONKLAND, an ancient barony in the north-east of the middle ward of Lanarkshire. It long constituted one district or parish; but in 1640 it was divided into the two parishes of Old or West Monkland, and New or East Monkland. The name of Monkland was obtained from the district having been the property in early times of the monks of Newbattle. In the early part of the reign of Malcolm IV., that monarch granted to these monks a large tract of territory, which extended from the boundaries of Lothian on the east, to the Clyde on the west, and which constituted a hundred pounds lands of the ancient extent, the monks having ample jurisdiction over all of it. Excepting the lands and manor-place of Lochwood, which belonged to the bishops of Glasgow, the monks of Newbattle possessed every acre of territory in what are now Old and New Monkland, a considerable part of which they held in their own hands for cultivation, and let out the remainder in lease. From documents still extant, it appears that they obtained permission from the landed proprietors of the west of Scotland, as well as those in the Lothians, for free passages for themselves, their servants, cattle, and goods, from their monastery of Newbattle, to their domains in Clydesdale; and from King Alexander II. they obtained similar grants of free passage by the usual ways, with permission to depasture their cattle for one night, on every part of their route, excepting upon the meadows and growing corn. The rectorial revenues of Monkland were joined to those of Cadder, in forming a rich prebend, which was held as the appropriate benefice of the subdean of Glasgow; and although the period of this arrangement is not known, it continued till the Reformation. Previous to this era, a chapel was erected at Kipps, on the borders of the present district of New Monkland, which was the property of the Newbattle monks; and the abbots are said to have held annual courts at it, when they levied their rents and feu-duties, and transacted the other business pertaining to their barony of Monkland. This chapel was destroyed at the stormy period of the Reformation, and its site can scarcely now be pointed out. About the same time, the monastery of Newbattle was overthrown, and all the fair domains which had so long remained in the possession of the monks were wrested from them.

In 1587, the barony of Monkland was granted in fee to Mark Ker, the commendator of the monastery, and at the same time he was created Lord Newbattle; but afterwards the barony was divided, and parcelled out into various hands. A portion called Medrocs fell to the share of Lord Boyd; but a still larger share of the barony was acquired by

the wily and hoarding Sir Thomas Hamilton of Binning, the King's advocate of the times of James VI. He obtained a charter for it from that monarch in 1602, and at the same time a grant of the patronage of the churches of Cadder and Monkland. Sir Thomas subsequently sold the barony to Sir James Cleland, whose son and heir, Ludovick, disposed of it to James, Marquis of Hamilton. In 1639, the Marquis secured his purchase by a charter from the King, granting him the lands and barony of Monkland, with the right of patronage of the churches of Cadder and Monkland, to be held of the King, in fee, for the yearly payment of a trifling sum in the name of bleach-ferm. In the reign of Charles II., the College of Glasgow purchased from the Duchess of Hamilton the patronage and tithes of the subdeanery of Glasgow, as well as of the churches of Cadder and Monkland; and for this a charter was also obtained from the King, which was ratified by act of parliament in 1672. Subsequently to this period, the heritors of the parishes of New and Old Monkland purchased the right of presentation to both these parishes from the College, under authority of the act 1690, respecting the purchase of church-patronage; and it has since been exercised by the heritors and elders. The tithes of both parishes, however, still belong to the College of Glasgow, out of which the stipends of the parochial ministers are paid.

Monkland is famous for its abundance of coal, iron, and other valuable minerals. Its coal has been long worked, and continues to be worked increasingly; but its iron began to be worked only about 50 years ago, and is now its staple produce. The increase in mining since the iron began to be worked has been almost magical, changing the face of the whole district, chequering it everywhere with towns and villages, rendering it all a teeming scene of population and industry, drawing through it a net-work of communications in road and railway and canal, and giving it, through its iron furnaces and its coal-pits, a conspicuous or almost distinctive character for streams of flames and clouds of smoke. Its population rose from 10,998 in 1811, or from 14,345 in 1821, to 50,534 in 1851. Its economic condition has, in consequence, become peculiar; presenting a medium character between that of an open country and that of a manufacturing city. The following official report upon it, drawn up in 1850, is interesting:—

"The large mining villages now no longer exhibit the aspect of extreme filth and neglect for which they were formerly conspicuous. It requires time to bring a population, not yet accustomed to habits of cleanliness, to regard it for its own sake; the masters are, therefore, obliged to employ men and carts expressly to keep the spaces about the houses free from accumulations of refuse, and to look to the drainage, &c. The effect has been salutary in many respects. The agents also occasionally inspect the houses themselves, prevent overcrowding, and fine or dismiss dirty and disorderly families. In many places proper drains have been made, either covered or laid with stone or brick, and hard and dry road-ways have taken the place of the natural soil, which in wet weather was often deep with mud. Much therefore has been done towards placing the population in circumstances in which the decencies and comforts of domestic life are possible; though the original arrangement of the majority of the mining villages in large squares, or long unbroken rows, must still remain an obstacle; and it has been so far recognised as such, that in most of the more recent works it has been abandoned, and the cottages have been built fewer together, larger, and with more rooms, and with garden-ground and all proper conveniences nearest hand. The number of schools, formerly so inadequate, is now increasing yearly, and there is every disposition to make them efficient, by appointing and paying well-qualified masters and mistresses. The Messrs. Baird of Gartsherrie, who began these salutary measures some years ago, for their own immediate neighbourhood, by building a church and a magnificent establishment for all the branches of elementary education, have followed it up by opening other schools in some of the mining villages; and they speak with satisfaction of the good effects produced upon the habits of the population, and especially of the children, by the frequent supervision, advice, and instruction of resident clergymen and able teachers. Mr. Wilson of Dundyvan also has entered very cordially into the improvement of the education at the four schools he has now established in connexion with his extensive works; lending-libraries likewise are to be set on foot; and much has been done in the neighbourhood, and at his works especially, by the zeal of the minister of the Episcopal chapel at Coatbridge, to diminish excessive drinking. The excellent schools at the works of Mr. Murray, Mr. Stewart, and elsewhere, are increasing in numbers. A handsome school, with a master's house attached, is now being built at Airdrie by Mr. Alexander, the proprietor of a large portion of the mineral dues of the district. An act of parliament was obtained two years ago for establishing a rural police in the mining portion of the county, the effect of which has been to produce much more general quiet and order and respect for the law in the mining villages. The administration of justice has been rendered more complete by the appointment of the proper staff of law officers to reside and hold their courts in the district. A water-company, which procured an act of parliament last year, has made good progress with their arrangements for supplying the town of Airdrie with water, the deficiency of which was great, and in all probability it will, before long, extend its supply to some of the large villages around, and to the great collections of houses near the principal works."

MONKLAND, Roxburghshire. See JEDBURGH.

MONKLAND AND KIRKINTILLOCH RAILWAY, a railway extending from the centre of the district of Monkland in Lanarkshire, north-westward to the town of Kirkintilloch in Dumbartonshire. It connects at the south-east ends with the Ballochney and the Caledonian railways, and near the north-west end, by branch, with the Edinburgh and Glasgow railway. By act of parliament in August 1848 it was amalgamated with the Ballochney railway and the Slamannan railway, to form what is now called the MONKLAND RAILWAYS: see that article. The Monkland and Kirkintilloch railway was authorized by parliament in 1824, and opened for traffic in 1826. It had, at first, only a single line laid with fish-bellied rails of small weight, adapted solely for horse-haulage; but afterwards was made a double line, with parallel rails of heavy weight adapted for locomotive-working. Its length, from its south-east terminus at Palace-craig to its north-west terminus at Kirkintilloch, is 10½ miles; but including a branch to the junction with the Ballochney railway at Kipps' byre, the total length is 12 miles. A commodious basin was formed at its north-west terminus, at the Forth and Clyde canal for the loading of vessels of every size by which the canal is navigated; and through this a communication was made for its traffic to both the eastern and the western seas. The difference of level between the junction with the Ballochney railway at Kipps

Syre, and the basin at the point of communication with the Forth and Clyde canal, is 134 feet. The average gradient is thus 1 in 111; but the gradient at different parts varies from 1 in 60 to 1 in 5,200. The Monkland and Kirkintilloch railway is not properly of itself a passenger line; though parts of it contiguous to the junctions with the Ballochney railway and the Caledonian railway are traversed by passenger trains; yet, simply in its proper character of a traffic line, it has achieved great results, and earned high profits. The trade upon it for the first three or four years, indeed, was comparatively small; but as the mineral resources of the districts adjacent to it became developed, its traffic increased with amazing rapidity. Previous to its formation, the lands in the neighbourhood were comparatively shut up: their mineral fields were comparatively unproductive: and only a thatched cottage was here and there seen to dot the surface. But the railway once in operation, a change, as if effected by magic, came over the face and feelings of the district. Public works were erected,—population gathered in masses by thousands,—splendid edifices were called into existence,—and property, once considered almost valueless, excepting for the scanty returns of its tillage or herbage, became a mine of wealth which may enrich many succeeding generations.

MONKLAND CANAL, an artificial navigable communication between the city of Glasgow and the district of Monkland in Lanarkshire. It commences in the northern suburbs of Glasgow, or rather is prolonged westward there into junction at Port-Dundas with the Glasgow branch of the Forth and Clyde canal; and it proceeds east-south-eastward, through the Barony parish of Glasgow, and the parish of Old Monkland, to the river North Calder. At the boundary with the parish of Bothwell. It sends off four branches.—one about a mile in length to Calder ironworks, near Airdrie, in the parish of New Monkland; one, about a mile in length, to Gartsherrie ironworks; one, about ¼ of a mile in length, to Dundyvan ironworks; and one, also about ¼ of a mile in length, to Langloan ironworks, all in the parish of Old Monkland.

The project of the Monkland canal was suggested in 1769, as a measure for securing to the inhabitants of Glasgow, at all times, a plentiful supply of coals. The corporation of the city immediately adopted the project, employed the celebrated James Watt to survey the ground, obtained an act of parliament for carrying out the measure, and subscribed a number of shares to the stock. The work was begun in 1761; and the operations were carried on till about 10 miles of the canal were formed. The first five of these miles, extending from the basin to the bottom of Blackhill, are upon the level of the upper reach of the Forth and Clyde canal; the other 5 miles, beginning at the top of the Blackhill, are on a level 96 feet higher. The communication between these levels was at that early time carried on by means of an inclined plane, upon which the coals were lowered down in boxes, and re-shipped on the lower level. The capital which had been declared necessary to complete the undertaking was £150,000, divided into 600 shares; but this sum was found to be altogether insufficient; for, in addition to expending it, a debt of some amount was contracted in executing the above part only of the operations. The concern, in this unfinished state, produced no revenue; and the creditors naturally became pressing. A number of the stockholders, who refused to make advances either for the liquidation of the debt, or for the completion of the plan, sold their whole stock of the company was consequently brought to sale, and purchased, in 1789, by Messrs. William Stirling and sons of Glasgow. These gentlemen, immediately after acquiring the property, proceeded to complete the canal; and, in 1790, having, in conjunction with the proprietors of the Forth and Clyde canal, procured a second act of parliament, empowering the latter to make a junction between these navigations, by a cut from their basin at Port-Dundas in Glasgow to the Monkland canal basin, built locks at Blackhill, and extended the Monkland canal to the river Calder; and that navigation was made the aqueduct for passing the supplies of water from this stream, and a reservoir formed upon it, to the Forth and Clyde canal. On these operations the Messrs. Stirling are understood to have expended £100,000.

The Monkland canal is 35 feet broad at the top, and 24 feet at the bottom. The depth of water upon the lock-sills is 5½ feet. To connect the upper and lower levels, at Blackhill, there are two sets of four double locks of two chambers; each chamber is 71 feet long from the gates to the sill, and 14 feet broad; the ascent in each being 12 feet. The level at the top of the Blackhill is continued to Sheepford, 8 miles, where there are two single locks of 14½ feet each, after which the canal goes on upon the level it has then gained to the river Calder. The supplies of water for it are derived from the contiguous streams, from the river Calder, and from the reservoir at Hill-end, beyond Airdrie, covering 300 acres of ground near the source of that river, and which was formed at the expense of the proprietors of the Forth and Clyde navigation. From the advantage which the canal offers of easy communication with both the Eastern and Western seas, and from its unlimited command of coal, the vicinity of it has always been considered favourable for the establishment of manufactures, especially of a bulky nature. For a long series of years, the revenue of the canal was wholly absorbed by the expenses of its extension and improvement. In 1807, when a dividend first began to be made, the gross revenue amounted to £4,715; and, in 1814, it was £5,087; although the navigation during this year was stopped during eleven weeks, principally by the severe frost, but partly on account of some necessary repairs. From 1814 or 1815, up to the year 1825, the traffic continued without much variation; but about the last-mentioned date a great impulse was given to it by the establishment of ironworks in the district of Monkland. When the project of opening up that district by railways to Glasgow and Kirkintilloch was first started, it created much alarm in the Canal company, lest the traffic should be entirely diverted from their navigation to the new channels. The alarm was not unfounded; but it only induced the company to reduce their dues to about one-third of the rate which had been charged up till that time, and also to expend large sums in making such improvements on the canal, and on things connected with it, as seemed fitted to facilitate its traffic. One of these improvements was the making of additional reservoirs in the parish of Shotts, and uniting in the river Calder, which flows into the canal at Woodhall, near Holytown, thereby insuring an increased supply of water. Another improvement was the forming of extensive loading basins and wharves at Gartsherrie and Dundyvan, for the reception of traffic from the mineral railways in the vicinity. A third improvement was the making of new locks at Blackhill, near Glasgow, of such character as to excel all works of their class in Great Britain. These locks now comprise two entire sets of four double locks each, either set being worked independently of the other; and they were formed at an expense of upwards of £30,000. In 1850, the

increase of traffic still going on, the supplies of water had again fallen short, and even the new locks at Blackhill could not pass the boats without undue delay. An inclined plane with rails was now formed at these locks, 1,040 feet in length, and 96 feet in total ascent, at an expense of £13,500, by which empty boats are taken up at a saving of 5-6ths of water, and about 9-10ths of time. Each boat is conveyed afloat in a caisson; and the traction is done by steam-power and rope-rolls. The plan is unique, was contrived by Messrs. Leslie and Bateman, and has answered admirably.—In 1846, under parliamentary sanction, the Monkland canal became one concern with the Forth and Clyde canal. The purchase price of it to Messrs. Stirling and Sons in 1789 is said to have been only £5 per share; but the purchase price to the Forth and Clyde company in 1846 was £3,400 per share.

MONKLAND (NEW), a parish in the north corner of the middle ward of Lanarkshire. It contains the parliamentary burgh of Airdrie, the suburban villages of Arden, Ballochney, and Clarkston, and the landward villages of Greengairs, Riggend, and Watt's town. It is bounded by the counties of Dumbarton and Stirling, and by the parishes of Shotts, Bothwell, Old Monkland, and Cadder. Its length east-south-eastward is nearly 9 miles; and its greatest breadth is about 7 miles. The rivulet Loggie traces most of its boundary on the north with Dumbartonshire; some small headstreams of the Avon flow out of it on the north-east into Stirlingshire; and the North Calder traces all its boundary on the south-east with Shotts. Much of its surface has an elevation of from 600 to 700 feet above the level of the sea; but the rise is so gentle and continuous that there is nothing which deserves the name of a hill or mountain. The elevated lands are situated in the centre of the parish, and run from east to west over its whole length, declining on each side to the waters of the Loggie and the North Calder. Much of the highest parts is covered with moss, and is incapable of improvement except at a very great expense; but the lower tracts, especially in the vicinity of the streams, and along the south-west and the west, present an agreeable diversity of vale and gently rising-ground, and are in a high state of cultivation. The soil of the arable lands in the eastern and central parts is mossy and late; but that in the northern and western parts is partly of a dry character, and partly a strong clay. The parish was, for a long period, particularly during the war, famous for its culture of flax. In some years, so much as 800 acres were under this species of crop; but the welcome advent of peace, and still more, the cheapness and universal introduction of cotton-cloth, rendered flax-cultivation here, as in every other part of the country, at that time, unprofitable. The present agriculture of the parish has no peculiar features. Its mining industry, however, as noticed in our article MONKLAND, is pre-eminently great, or almost distinctive. So far back as the writing of the Old Statistical Account, it is stated that "coal and ironstone are, or may be, found almost on every farm." And since then, the working of these minerals has been most extensive, and is still in the course of rapid increase. The quality of the coal is only equalled by its abundance, which in many places is found in seams from 9 to 10 feet in thickness. The ironstone is found both in balls and in seams; and much of it is of the valuable kind called blackband, which is so abundantly mixed with coal as to require little addition of fuel in the burning. Many of the extensive ironworks in the neighbourhood, or even at a distance, particularly those of Calder, Chapel-hall, Gartsherrie, Clyde, and Carron, are supplied with ironstone from New Monkland. Limestone also is worked here, particularly in the northern district, but not to great extent. Several mineral springs, too, exist, chiefly of the chalybeate kind; but the Monkland-well, near Airdrie, is the most famous, and at one time enjoyed an extensive reputation for its efficacy in the cure of scorbutic and other cutaneous diseases, as well as for complaints in the stomach and eyes,—insomuch as to be a favourite resort even for the wealthy and fashionable citizens of Glasgow and its neighbourhood; but its character as a watering-place has long departed from it, both from a falling off—undeserved it may be—in the reputation of the springs, and from the lack of features of rural beauty, which have been borne down by the onward march of a bustling and industrious mining and manufacturing population. There are fourteen principal landowners, and a great many smaller ones. Among the chief mansions may be mentioned those of Airdrie-house, Monkland-house, Rochsoles, and Auchengray. The parish is traversed by the middle road from Glasgow to Edinburgh, and by the Monkland railways; and the most populous parts of it have near access also to the Caledonian railway and the Monkland canal. Population in 1831, 9,867; in 1851, 23,201. Houses, 2,269. Assessed property in 1843, £35,966 13s. 10d.

This parish is in the presbytery of Hamilton, and synod of Glasgow and Ayr. Patrons, the heritors and kirk-session. Stipend, £339 13s. 4d.; glebe, £21 10s. Unappropriated teinds, £334 16s. 10d. The parish church stands on a commanding eminence about 2 miles from the western boundary; it was built in 1777, and repaired in 1817; and it contains 1,200 sittings. There are two chapels of ease in Airdrie, called the East church and the West church; the former containing 588 sittings, the latter containing 1,200; but the East church is unoccupied. There is also a small chapel of ease at Clarkston. There are three Free churches in Airdrie, called the West, the High, and the Broomknoll,—two of them containing jointly 1,500 sittings; and the receipts in 1856 of the West church amounted to £304 13s. 11¼d.,—of the High church to £333 7s. 11d.,—of the Broomknoll church to £203 3s. 9d. There are two United Presbyterian churches in Airdrie, each with about 560 sittings. There are also in Airdrie a Reformed Presbyterian church, with 350 attendants; an Episcopal chapel, with 600 sittings; an Independent chapel, and a Morrisonian chapel, with jointly 910 sittings; a Baptist chapel, with 490 sittings; two Methodist chapels, one of them with 647 sittings; and a Roman Catholic chapel, with about 1,000 sittings. The salary of the parochial schoolmaster is £30, with about £30 fees, and about £20 other emoluments. There are in Airdrie a town academy, a Free church academy, a seminary for young ladies, a charity school, a ragged school, and a number of institutions of various kinds, which will be found noticed in our article on AIRDRIE. There are also subscription schools at Clarkston, Greengairs, and Coathill, other schools enjoying some aid at Clarkston and Greengairs, and a number of private or miscellaneous schools at Airdrie and elsewhere. There is a poor-house for the parish of New Monkland, containing accommodation for 300 persons; and the number of inmates in it on the 1st of July 1851 was 181; and on the 1st of July 1854 was 148.

MONKLAND (OLD), a parish on the north-west border of the middle ward of Lanarkshire. It contains the post-towns of Coatbridge, Calderbank, and Baillieston, part of the post-town of Tollcross, and the villages of Braes, Carmyle, Bargeddie, Caithill, Causeyside, Dundyvan, New Dundyvan, Lan-

loan, Faskine, Greenend, Barachnie, Craigend, Merrystone, West Merrystone, Swinton, Coatdyke, Gartcloss, Gartsherrie, Summerlee, Foxley, Broomhouse, and Dykehead. It is bounded by Barony of Glasgow, Cadder, New Monkland, Bothwell, Blantyre, Cambuslang, and Rutherglen. Its length north-westward is about 10 miles; and its greatest breadth is about 4½ miles. The North Calder traces all the southern and south-western boundary, to the confluence with the Clyde at Daldowie; and the Clyde itself traces all the western boundary thence till it passes away from the parish in the vicinity of Clyde iron-works. The appearance of the parish is generally flat, or gently undulating; and whether the fertility of its superficies, or the abundance of its mineral treasures is considered, Old Monkland is one of the most important and wealthy parishes in Lanarkshire. The writer of the Old Statistical Account says,—"A stranger is struck with the view of this parish. It has the appearance of an immense garden." This account, penned half-a-century ago, is still generally true, if we except the fact that improved culture has vastly increased the production of the soil, and that the rapid advance of population, and the majestic progress of the mineral trade, have sadly marred those features of rural loveliness for which the district was formerly celebrated. Withal, there are few districts which combine so much of the attributes of country-life with the bustle and stir of manufactures; for the soil of Old Monkland is dotted at every little distance with the ornate villas of the aristocracy of the western capital,—with the blazing furnaces and tall chimneys of the iron and coal works,—with stripes of thriving plantation, and clumps of old wood,—with orchards, grassy holms, or waving grain,—and with the homely farm-steading, or lowly dwelling of the cottar. From the facilities of obtaining lime and manure both by canal and railway, a soil—which is naturally fertile—has been improved to the highest degree; and the yearly value of the agricultural produce of the arable lands of the parish is superior to that of an equal extent of arable lands in most other parts of Scotland. The soil here, on the whole, is much more fertile than the soil above the coal fields in the other parts of the country. The arable soil is of three kinds. That along the Calder and the Clyde is a strong clay, changed by cultivation into a good loam; that of the middle districts is a light sand, very fruitful in oats and potatoes; and that toward the north is mainly reclaimed bog or otherwise mossy. In the northern district, the coal crops out, and there are about 1,500 acres of peat-moss. In Old Monkland, as in New Monkland, flax used to be extensively cultivated, some of the farmers having each so much as from 20 to 30 acres annually under that crop; but the system of agriculture now pursued on the best farms, is a four-year rotation of potatoes or turnips, wheat, hay, and oats, with sometimes one year or two of pasture between the hay and the oats.

This parish, however, is chiefly remarkable for its working of coal and iron. In an account of it, published before the beginning of the present century, it is said: "This parish abounds with coal; and what a benefit it is for Glasgow and its environs to be so amply provided with this necessary article! There are computed to be a greater number of colliers here than in any other parish in Scotland." The progress in the coal-trade, since the period alluded to, has been almost magical; and as no year passes without new pits being sunk, while the old ones continue in vigorous operation, it would seem that scarcely any limits can be set to the vast aggregate production. The pits have a depth of from 30 to 100 fathoms; and the principal working seams, according to the Rev. William Patrick's account of them, in the New Statistical Account of Scotland, are as follow: "1. The upper coal; coarse, and seldom workable; its average distance above the Ell-coal from 14 to 16 fathoms. 2. The Ell or Mossdale coal; three to four feet thick, of inferior estimation in this parish, and generally too thin to work; but in some places a thick coal, and of excellent quality. 3. The Pyotshaw, or rough ell; from three to five feet thick, and from seven to ten fathoms below the Ell-coal. 4. The main coal. It often unites with the above, and forms one seam, as at Drumpellier in this parish. These two seams are thus sometimes in actual contact, and in other instances separated by a wide interval of six or seven fathoms. 5. Humph coal; seldom thick enough to be workable in this parish, and generally interlaid with fragments of freestone, about ten fathoms below the main coal. 6. Splint-coal; about four fathoms below the Humph, and of very superior quality. It varies from two to five feet in thickness, and is mostly used for smelting iron. This seam, when of any considerable thickness, is justly esteemed, when got by the proprietors here, a great prize. 7. Little coal; always below splint, the distance varying from three fathoms to six feet. It is from three to three-and-a-half feet in thickness, and is a free, sulphury coal of inferior quality. 8. The Virtue-well, or Sour-milk coal, from two to four feet thick, occurs from 26 to 28 fathoms below the splint. 9. The Kiltongue coal lies 22 fathoms below the Virtue-well, and like it, is from two to four feet in thickness. 10. The Drumgray coal lies six fathoms below the Kiltongue, and perhaps from 60 to 100 fathoms above the first or upper band of limestone. It is seldom more than 18 or 20 inches thick. There are, besides these 10 seams, about 23 smaller seams between them, none of which are of a workable thickness. The total thickness of the coal-measures above the lime may be about 775 feet." The same account adds: "This large and important coal-field is much intersected with dikes, and a knowledge of these is a knowledge of the strata, and of the manner in which they are affected by them."

Still more than to its coal, however, is the parish of Old Monkland, in recent times, indebted to its ironstone and iron-works: although it is proper to mention that the ore for the supply of the latter is, to a great extent, drawn from New Monkland. The introduction of the hot air blast, the increasing demand for iron for railway and other purposes, but, above all, the abundant possession of the most valuable of all the iron metals,—the black-band,—which contains so much coal as nearly to burn itself,—are the main causes which have contributed to the almost unparalleled advance of Old Monkland in population and prosperity. To the burning of ironstone were added, about the year 1839, and in the following years, works and machinery for the manufacture of malleable iron; and these have already risen to compare with the pig-ironworks, in the proportion of about 30 to 100 in the yearly value of their produce. Everywhere are heard the brattling of machinery, the sonorous stroke of mighty hammers, and the hissing and clanking of the steam-engine; and the flames which perpetually belch from the craters of its numerous furnaces, and for miles around illume the country on the darkest nights, have not inappropriately earned for Old Monkland the title of the 'Land of Fire.' Fortunes have been realized here in the iron-trade, with a rapidity only equalled by the sudden and princely gains of some of the adventurers who accompanied

Pizarro to Peru. It is understood, for example, that the profits of a single establishment in this line during the year 1840, were nearly £60,000; while little more than 20 years previously the co-partners of this company were earning their bread by the sweat of their brow, in following the agricultural vocation of their fathers. The principal iron-works in the parish, or immediately adjacent to it, are those of Gartsherrie, Dundyvan, Monkland, Calder, Clyde, Summerlee, Carnbroe, and Langloan. Of 113 pig-iron furnaces in blast, in Scotland, in the year 1854, producing 750,000 tons of pig-iron, 50 were in Monkland; and of 42 other pig-iron furnaces, then existing in Scotland, but not in blast, 17 were in Monkland. The ironstone strata in Old Monkland and New Monkland—the strata from which the Monkland furnaces have their supply—are described by the Rev. Mr. Patrick as follows: "1. The Upper black-band. It lies about 24 fathoms above the Ell-coal, as indicated in the succession of strata given above. It is of very local occurrence, like all the ironstones, and has only been found worth working at Palace-craig. It is of inferior quality, and only about 18 inches thick. 2. The black-band, also called Mushet's black-band, from the name of the person who first worked it to any extent. This is the great staple commodity for the supply of the iron-market, and when found to any extent is a certain source of wealth to the proprietor. Its average depth below the splint is about 15 or 16 fathoms; and it varies in thickness from 14 to 18 inches, and occupies an area of from 8 to 10 square miles. 3. Airdrie-hill black-band. In this property, which is in New Monkland, there is a band of ironstone, varying from 2 to 4 feet in thickness, lying about 3 feet below the black-band, or Mushet's band. It is found only in part of the lands of Airdrie-hill, and is by far the most local of all the ironstones."

Several kinds of sandstone, and several varieties of trap, within the parish, are in great local request for building purposes, and have been extensively quarried. A good deal of weaving is done in the parish, for the manufacturers of Glasgow; and there are likewise other considerable departments of industry, particularly in the towns. The facilities of communication by road, railway, aad canal, are remarkably great, having been multiplied and ramified in proportion to the large and rapidly increasing demands of the district for heavy traffic. The principal of them will be found described or indicated in our articles Caledonian Railway, Monkland Railways, Monkland Canal, and Coatbridge. There are ten principal landowners; but the residences of wealthy inhabitants are very numerous, and of great variety; and even the architecture and general appearance of some parts of the principal seats of population are of a high order of commodiousness and beauty. Population in 1831, 9,580; in 1851, 27,333. Houses, 3,550. Assessed property in 1815, £19,806; in 1843, £151,232.

This parish is in the presbytery of Hamilton, and synod of Glasgow and Ayr. Patrons, the heritors and kirk-session. Stipend, £344 13s. 4d.; glebe, £16 15s. Unappropriated teinds, £378 4s. 11d. The parish church stands on the south-west border of the parish; it was built in 1790, and enlarged since 1822; and it contains 902 sittings. There is a chapel of ease at Crosshill, under the patronage of the male communicants; it was the first place of worship in Scotland built on the church-extension scheme; and it contains about 500 sittings. There is also a chapel of ease at Gartsherrie, built chiefly at the cost of the proprietors of the Gartsherrie iron-works, and under the patronage of the subscribers; it is a very elegant structure, with a steeple, erected about 1839; and it contains 1,050 sittings. There is a Free church at Coatbridge, with an attendance of 230; and the amount of its receipts in 1856 was £151 2s. 0¾d. There are, likewise, at Coatbridge an United Presbyterian church, an Episcopalian chapel, and a Roman Catholic chapel, all of recent erection. There are one principal parochial school, and three subordinate parochial schools; and the salary connected with the former is £31, while that connected with each of the latter is £6 15s. 11d. There are an academy, conducted by a number of teachers and assistants, male and female, at Gartsherrie; an academy, with male and female departments, at Dundyvan; a school, with two teachers, at Drumpeller; a school at the Summerlee iron-works; a Free church school, a Roman Catholic school, a ladies' boarding school, and a mechanics' institution, at Coatbridge; and several private schools in various parts of the parish. There are also a public library at Langloan, and circulating libraries and some other institutions at Coatbridge.

MONKLAND RAILWAYS, an amalgamation of the Monkland and Kirkintilloch railway, the Ballochney railway, and the Slamannan railway, together with some branches and small extensions. Each of the three railways amalgamated will be found described in its own alphabetical place. They connect the city of Glasgow, in various ways on the west, with the town of Linlithgow and the port of Borrowstownness on the east; and are ramified in the district of Monkland, and connected there with several parts of the Caledonian railway system. They were formed chiefly for mineral traffic, and continue to derive their principal profit from that traffic; yet are partly employed for the conveyance of passengers. The main lines of them began to be worked conjointly in the spring of 1845; and they were amalgamated by act of parliament in the autumn of 1848, when the capital in shares of the Monkland and Kirkintilloch was £246,000,—of the Ballochney, £110,000,—of the Slamannan, £210,000. The branch to Borrowstownness was formed subsequently to the amalgamation, at a cost of £74,445. The extent of the system open for traffic after the completion of that branch was 42 miles; and in the summer of 1853, power was obtained by the company to form five connecting lines with the Edinburgh and Glasgow railway, the Bathgate mineral fields, &c., of a total length of 10½ miles, at the estimated cost of £73,085.

MONKLAND-WELL. See Monkland (New).

MONKMIRE, a lake, about a mile in circumference, on the mutual border of the parishes of Blairgowrie and Bendochy, in Perthshire. It was originally a shallow, reedy pool, with a profusion of rich marl in its bottom; and it was deepened into a lake by extensive excavation of the marl for the purposes of manuring.

MONKRIG. See Haddington.

MONK'S BURN, a brook flowing into the left side of Douglas water, in the parish of Douglas, Lanarkshire.

MONK'S BURN, a brook flowing into the North Esk, about a mile below Newhall, on the borders of Peebles-shire and Edinburghshire. It enters the glen of the Esk, in several considerable falls, amidst much fine landscape; and is overlooked at its mouth from the opposite side of the Esk, by a height called the Steel, said to have got its name from being the scene of a skirmish with a straggling detachment of General Monk's army.

MONK'S CROFT. See Hassendean.

MONK'S GRAVE. See Fossaway.

MONK'S ISLAND. See Inchtavanach.

MONKSTON, a village in the parish of Collessie, Fifeshire. It is of modern erection, and consists of neat houses, arranged in one line, with an interval of 12 feet between every four houses. The site of it was part of a tract called Monk's moss, which took that name from its having been granted to the monks of Lindores abbey, for supplying them with heath and moss for fuel. Population of the village, 102. Houses, 24.

MONKTON AND PRESTWICK, an united parish on the coast of Kyle, Ayrshire. It contains the post-office village of Monkton, the barony burgh of Prestwick, and the village of Prestwick-Toll. It is bounded by the frith of Clyde, and by the parishes of Dundonald, Symington, Craigie, Tarbolton, St. Quivox, and Newton-upon-Ayr. Its greatest length from north to south is 3¾ miles; its breadth is from 1½ to 3½ miles; and its area is between 9 and 10 square miles. Two brooks—one of which, called Powburn, is powerful enough to drive two corn-mills—run across the parish to the sea. The coast-line is about 2¼ miles long, low, flat, and sandy, looking tamely up from a very slow dip of submerged beach, and variegated with bluffs and sandy knolls covered with bent. The surface of the interior rises slightly from the frith, but looks to the eye almost a dead level. The soil along the coast, and over a considerable part of the southern district, is light sand incapable of tillage; in the central district, is a deep, rich loam; and in the north and north-east, is a strong earthy clay. The grounds subject to the plough, and those which are waste or in pasture, are nearly in the proportion to each other of 24 to 7. The extent of woodland is about 50 acres. Coal has been extensively worked; and excellent sandstone, both red and white, is quarried. The principal mansions are Fairfield, Adamton, and Orangefield. There are six principal landowners. The estimated yearly value of raw produce in 1837 was £12,573; and the total real rental in the same year was £4,509. Assessed property in 1843, £4,942 5s. 3d. The parish is traversed by the road from Irvine to Ayr, and by the Glasgow and Ayr railway; and it has stations on the railway at Monkton, 36½ miles from Glasgow, and at Prestwick, 37½ miles from Glasgow. The village of Monkton stands on the road from Ayr to Irvine, at a point whence a road deflects, about a mile from the sea, 3½ miles north-north-east of Ayr, 7 south-south-east of Irvine, and 8 south-west of Kilmarnock. Population of the village, about 380. Population of the parish in 1831, 1,818; in 1851, 1,960. Houses, 310.

This parish is in the presbytery of Ayr, and synod of Glasgow and Ayr. Patron, the Countess Ensidel. Stipend, £275 9s. 4d.; glebe, £24. Unappropriated teinds, £459 17s. 7d. Schoolmaster's salary, £34 5s. 4½d., with fees, and some other emoluments. The parish church stands midway between the villages of Monkton and Prestwick, and is a very handsome edifice, built in 1837, serving as a conspicuous landmark, and containing 825 sittings. The old parish churches are still standing, and were both in use till 1837. That of Monkton is from 3½ to nearly 4 feet thick in the walls, has long been bent off the perpendicular on one side, is roofed chiefly with oak, and has the traditionary fame of being the very building near which Sir William Wallace had the remarkable dream recorded in the 8th book of the poem of Blind Harry. The church of Prestwick is probably of equal antiquity, has stone buttresses at the east end, and serves as a landmark. There is a Free church of Monkton, with an attendance of 430; and the amount of its receipts in 1856 was £210 12s. 4½d. There are a free church school in Monkton, a burgh school in Prestwick, and a subscription school, called the New Prestwick school. The united parish was constituted in the 17th century; and it comprised the old parish of Monkton, which was anciently called Prestwick, the old parish of Prestwick, which was anciently called Prestwick-burgh, and the chapel district of Crossby, which, previous to the Reformation, belonged to Dundonald. Prestwick lies on the south, Monkton in the middle, and Crossby on the north. The first had its name from being the 'habitation of a priest;' the second from becoming the property of monks; and the third from having a 'dwelling at a cross.' The church of Monkton was anciently dedicated to St. Cuthbert, and that of Prestwick to St. Nicholas; and both were given by Walter, the son of Allan, the first Steward of Scotland, to the monks of Paisley, and continued to be, the former a vicarage, and the latter a chaplainry, under them till the Reformation. In 1779, the southern part of Prestwick was detached from the district, and erected into the parish of Newton-upon-Ayr. Between Prestwick and Prestwick Toll, stand some ruins of an ancient hospital for lepers, dedicated to St. Ninian. The establishment is traditionally said to have been founded by King Robert Bruce, who was himself afflicted with leprosy, the result of hard fare, hard living, and hard work. It was endowed with the lands of Robert-loan, now called Loans, in Dundonald parish, with the lands of Sheles and Spital Sheles, and some other lands in Kyle Stewart; and it was governed by a prior or guardian, and had a chaplain. Wallace of Newton acquired, in the reign of James II., its lands of Spital-Sheles, the hereditary governorship of its other lands, and the hereditary possession of its office of keeper; and in 1515, Hugh Wallace of Newton resigned the whole in favour of his brother Adam. All that now remained of its revenue, were the feu-duties payable from its lands granted in fee-farm; and this was thenceforth distributed in equal shares among eight objects of the greatest charity,—the leprosy having long disappeared. The right of appointing the recipients belonged for a long time to Wallace of Craigie, but was purchased in 1787 by the burgh of Ayr. Robert Gordon, in his description of Kyle, written in the reign of Charles I., mentions the chapel of the hospital, and says that the persons admitted to the charity were then lodged in huts or cottages in the vicinity.

MONKTON HALL, a village on the left bank of the river Esk, a mile north of Musselburgh, in the parish of Inveresk, Edinburghshire. While the Scottish army lay around it previous to the battle of Pinkie, a hurried and imperfect parliament was convoked in the village, and enacted that the nearest heir of any person who should fall in the battle should, if the slain were an ecclesiastic, receive a gift of his benefice, and if a layman, have his ward, nonentresse, relief, and marriage free. Population, 117. Houses, 26.

MONORGAN. See LONGFORGAN.

MONQUHITTER, a parish, containing the post-office village of Cuminestown and the village of Garmond, in the Turriff district of Aberdeenshire. It is bounded by King Edward, New Deer, Methlick, Fyvie, and Turriff. Its length southward is about 10½ miles; and its greatest breadth is about 8 miles. Its surface, for the most part, was formerly very moorish and barren, but has been materially improved by reclamation and culture. It has generally a monotonous undulating character; and its hills look bleak and barren. But its best grounds are in beautiful cultivation; and even its bogs have their uses in affording supplies of excellent peat

fuel. The extent of plantation in it is yet comparatively small. Two rivulets, the water of Assleed and the water of Idoch, drain its interior, and draw toward them the tribute of numberless copious springs; the former running in a southerly direction, and tracing the boundary with New Deer and Methlick, to fall eventually into the Ythan, while the latter runs in a south-westerly direction, giving to its basin the name of the vale of Idoch, passing near the parish church and the village of Cuminestown, and departing into the parish of Turriff to become tributary to the Deveron. A red sandstone abounds and is extensively quarried; but it is very ferruginous, and not a good building material for dwelling-houses. The prevailing soils of the arable lands are a reddish loam, and a deep black mould, both of them superincumbent on pebbly clay. Vast additions have been made, within the last fifty years, to the extent of cultivated land. Some of the arable land is let so high as £2 2s. per acre; but most of it brings no greater an average than from 10s. to £1. The value of assessed property in 1843 was £5,419. At Leudrum in this parish, tradition relates that a great battle, which continued three days, was fought between Donald of the Isles and the Thane of Buchan, in which the former received a final overthrow. A prophecy was long current that corn growing on 'The Bloody Butts of Lendrum' would never be reaped without strife and bloodshed amongst those engaged in the work, and it is said to have been surprising how often this prediction was literally fulfilled; "a circumstance which may be easily accounted for," says the author of the Statistical Account, "by the trepidation, or the furor which, according to the respective constitutions of the reapers, is inspired by the recollection of this awful scene." The locality here known as Finlay's mire, indicates the spot where some Covenanters were cut off by the Ogilvies; and heads of spears, &c., have been found in an exhausted moss in the vicinity. Population of the parish in 1831, 2,004; in 1851, 2,295. Houses, 431.

This parish is in the presbytery of Turriff, and synod of Aberdeen. Patron, the Earl of Fife. Stipend, £232 6s. 5d.; glebe, £20. Unappropriated teinds, £298 1s. 7d. Schoolmaster's salary, £34 4s. 4½d., with about £30 fees, and a share in the Dick bequest. The parish church was built in 1764, and enlarged in 1792, and contains 1,050 sittings. There is a Free church, with an attendance of 250; and the amount of its receipts in 1856 was £98 6s. 8¾d. There is an Episcopalian chapel at Cuminestown, built in 1844, and containing 140 sittings. There are 3 non-parochial schools and a Sabbath-school library. The parish of Monquhitter was anciently part of the parish of Turriff, and was made a separate parish in 1649.

MONREITH, a village in the parish of Glasserton, Wigtonshire. Population, 94. Houses, 24.

MONRITHMONT-MOOR, a tract of about 2,000 acres, stretching northward from the most northerly part of the Sidlaw hill range in Forfarshire. It was once a waste common, unowned by any parochial district; but is now almost all a densely planted forest, and is understood to be distributed among the parishes of Farnell, Kinnell, Kirkden, Guthrie, and Brechin,—about three-fourths being included in the first.

MONS-HILL. See DALMENY.

MONTAGUE'S-WALK. See KINNOUL.

MONTCOFFER. See KING-EDWARD.

MONTEITH, a district in the south-west of Perthshire. Excepting the parish of Balquhidder, which anciently belonged to the stewartry of Strathearn, the district of Monteith comprehends all the lands west of the Ochil hills in Perthshire, whose waters discharge themselves into the Forth. The vale of the Teith, whence the name is derived, occupies the central and larger part, but is flanked on the one side by the Perthshire section of the upper vale of the Forth, and on the other side by the lower part of the vale of the Allan. The entire district is about 28 miles in length from east to west, and 15 in extreme breadth; and includes the whole of the parishes of Callander, Aberfoyle, Port-of-Monteith, Kilmadock, Kincardine, and Lecropt, and part of the parishes of Kippen, Dunblane, and Logie. Large tracts of it are eminently rich in the finest elements of landscape. Previous to the abolition of hereditary jurisdictions, Monteith was a separate or independent stewartry. The district anciently gave the title of earl to a branch of the noble family of Graham. The earldom was created in 1428, became conjoined with the earldom of Airth, and since 1694 has been dormant.

MONTEITH (LOCH OF), a fine sheet of water in the parish of Port-of-Monteith, Perthshire. It is of a circular form, and about 7 miles in circumference. Its shores display none of that rude magnificence and grandeur which is the usual characteristic of Highland scenery; but, on the other hand, they present an aspect of soft pastoral beauty which soothes the soul, and fills the contemplative mind with thoughts calm and quiet as its own transparent waters. The northern shore is beautifully adorned with oak, Spanish chestnut, and plane trees of ancient growth,—the remains of those which adorned the park of the Earl of Monteith. On the same side, the manse and church of Port-of-Monteith, with the elegant mausoleum of the family of Gartmore situated close on the margin of the water, increase the interest of the scene. The lake contains three islands, two of which, from the noble wood that adorns them, add greatly to the beauty of its expanse; and a long, narrow, wooded promontory, which runs far into the water, diversifies the southern shore. The larger island is called Inchmahome, or 'the Isle of Rest;' and well is it named so, for a more calm abode could not easily be selected than might here be found for a pious mind: see INCHMAHOME. The island immediately to the west, which is less in size, is called the island of Tulla, or the Earl's Isle. Tulla signifies, in Gaelic, 'a hall;' and on this island the Earls of Monteith had their residence, the ruins of which still exist, comprising an ancient tower and some domiciliary buildings. The smallest island is called the Dog Isle, where the Earls had their dog-kennel; while the stables were situated on the western shore of the lake. Of the chapels attached to the priory of Inchmahome, one was situated at the east end of the lake, about a furlong north from its outlet, and close to the shore; another was at Arnchly, 'the Field of the Sword,' about a mile from the west end of the lake; a third at Cappellerroch, in the barony of Drummond; and a fourth at Balquahapple, formerly the property of the family of Drummond.

MONTEITH (PORT OF), a parish, containing the post-office village of Gartmore and the villages of Ruskie and Tomachar, in the district of Monteith, Perthshire. It lies on the southern border of the county, being separated along most of its southern extremity by the river Forth, from Stirlingshire and Kippen; and it is bounded on the other side by Aberfoyle, Callander, Kilmadock, and Kincardine. Its length eastward is 9 miles; and its greatest breadth is 6¼ miles. Loch-Vennachoir lies on its northern boundary, and the loch of Monteith lies nearly in its centre; and these two lakes contribute much brilliance to its landscape. See VENNACHOIR

(Loch) and Monteith (Loch of). The Forth flows across the south-east wing of the parish, cutting off there a district of 2½ miles by 1½ around the village of Gartmore, and then commences to trace the southern boundary; it runs incessantly in bold sweeping sinuosities, so as to have connection with the parish over a distance of at least 12 miles; and just when entering, it debouches from among the grand hill scenery of its origin and early course, and begins to move with the slow proud pace of queenly beauty along the magnificent valley which thenceforth forms its broad smooth path. Goodie-water, issuing from Loch-Monteith, flows 3½ miles eastward through the interior. Loch-Drunkie, a mile long, zoned with wood, and ensconced among towering heights, lies on the western boundary, and sends off a streamlet 1½ mile long to Loch-Vennachoir. Loch of Letter, Loch of Roskie, and Dow-loch, are a chain of lochlets in the north-east, whence issues a tributary of the Goodie, 2¾ miles in length of course, chiefly along the eastern boundary. Lochan-Ballach, a mile from Loch-Vennachoir, forms a beautiful round basin, about half-a-mile in circumference, on the highest summit of a lofty ridge of heights. The northern district of the parish, comprising about one-third of the whole area, is wildly upland, consisting of a congeries of rocky and mountainous elevations, chiefly covered with heath, and admitting cultivation only in some confined hollows, and along some narrow skirts. The south-east corner comprises a part of Flanders moss, in all respects similar in character to the famous one of Kincardine. The rest of the area, including the district on the south side of the Forth, is nearly all level, consisting of rich carse land toward the river and of dryfield toward the hills, and presenting an appearance of much fertility and high culture. The summits in the northern district have an elevation of from 1,500 to 2,000 feet above the level of the sea; they form, at this part, the frontier of the Scottish Highlands; and the transition from them to the lowlands of the parish is sudden and perfect, insomuch that the altitude of large part of these lowlands is not more than 20 feet above the level of high tide mark in the Forth. A limestone occurs in the mountains of the quality of marble, having a blue ground streaked with white; and when burnt, it affords a quicklime of the purest white. A bluish grey sandstone occurs in the champaign district, close in texture, and very suitable for pavements and staircases. There are eight principal landowners, and about ten or twelve less extensive ones. The chief residences are Cardross-house, Rednock-house, Gartmore-house, Blairhoyle, and Inner Trosachs. A Roman castellum, about 50 paces in diameter and irregularly square, occurs at the north-west extremity of Moss Flanders. A Roman ter appears to come in this direction, branching off from the great Roman causeway which extended from Camelon to Brechin. An eminence, called Keirhead, either wholly or partly artificial, and now the site of a house of its own name, occurs about a mile north-east of the castellum of Flandershill, and appears to have anciently been a military post overlooking the plain on the south. A skirmish took place in 1489 between King James IV. and the Earl of Lennox at Tullimoss, north-west of the Loch of Monteith. A spot called Suir, near the house of Gartmore, is noted as the place where Rob Roy is said to have taken from the factor of the Duke of Montrose his collection of rents. The parish is traversed along the middle westward by the road between Doune and the south bank of the head of Loch-Katrine, and northward by two roads from Stirlingshire, which converge, and run toward Callander. Population, in 1831, 1,664; in 1851, 1,419. Houses, 241. Assessed property in 1843, £8,100.

This parish is in the presbytery of Dunblane, and synod of Perth and Stirling. Patron, Erskine of Cardross. Stipend, £280 12s. 5d.; glebe, £8. Unappropriated teinds, £636 4s. 8d. Schoolmaster's salary, £34 4s. 4⅓d., with £15 fees, and £20 other emoluments. The parish church is situated on the north bank of the Loch of Monteith, and has an attendance of about 240. There is a chapel of ease at Gartmore, under the patronage of the communicants, built in 1790, and containing 415 sittings. There is also a Free church at Gartmore, whose receipts in 1856 amounted to £86 8s. 9½d. The parish anciently was called simply Port, and still is often popularly called Port; and that name was, in the first instance, given to the landing-place of the priory of Inchmahome, and of the seat of the Earls of Monteith, on the shore of the Loch of Monteith. A village rose at the landing place, took the name of Port, and was erected by James III. into a burgh of barony; and the parish church being erected there, the name was naturally extended to the parish. The ancient parish, however, was not so extensive as the modern one; it belonged to the priory of Inchmahome; and in 1615 there was annexed to it part of the ancient parish of Lany.

MONTQUHANY. See Kilmany.

MONTQUHITTER. See Monquhitter.

MONTROSE, a parish, containing a royal burgh of its own name, at the north-east extremity of the maritime district of Forfarshire. It is bounded on the north by Logie-Pert and Kincardineshire; on the east by the German ocean; on the south by the South Esk, which divides it from Craig; and on the west by Montrose basin and by Dun. Its length southward is 4 miles; its greatest breadth is a little upwards of 3 miles; and its area is about 3,080 Scotch acres. The North Esk runs 3 miles along the northern boundary, chiefly between high and wooded banks, and is there isleted and picturesque. The South Esk touches the parish only while running between Montrose basin and the sea: See Esk (South). Tayock-burn, coming in from Dun, runs 1½ mile south-eastward, partly in the interior and partly along the boundary, to the north-east corner of Montrose basin. This basin is an expanse of nearly ellipsoidal outline, about 7 miles in circumference, alternately sheeted with pent-up water, and exposed in the naked repulsiveness of sand and sludge at the influx and the recess of the tide. At high water, it has a charming appearance, looks like a brilliantly zoned lake, and washes the walls of the gardens which subtend the whole west side of the town; and, by the regular and rapid rush of waters which it occasions in the action of the tide, it both promotes the cleanliness of the burgh and prevents the formation of a bar injurious to navigation across the mouth of the river. An attempt was at one time made, by running a dike from near the Forthill, along the bank of the South Esk toward the estate of Dun, to cut off a considerable part of the basin, and convert the strong carse clay which forms its bed into arable land. But the dike, in consequence of misunderstandings among the parties interested, was very slowly constructed; and, just when nearly completed, it was laid prostrate by a storm. The work was, not long ago, traceable, and bore the name of the Drainer's dike. Wild geese arrive in great flocks at the basin about the end of October, and remain till March, frequenting the wheat stubble or the green wheat fields on the low

grounds during the day, and spending the night on the lagoon. Flocks of wild ducks alternate or reverse the possession of the two localities with the geese. Swans visit the basin in severe storms, but speedily depart. Many other species of aquatic birds, as well as varieties of the duck and the goose, frequent the locality.

The beach along the sea-coast of the parish is pure sand, dipping at so fine a gradient beneath the wave, and affording so smooth a carpeting for the feet, as strongly to allure even the most timid to the luxury of sea-bathing. A low bank of bluffs and sandy knolls, thinly clad with bent, flanks the line of floodmark from Esk to Esk. Behind this bank, and parallel to its whole length, stretches a belt of undivided common, with very light soil and short thin herbage, of the kind provincially called links, narrow in the north and centre, but widening toward the south, and eventually occupying the whole peninsula between the basin and the sea, except the site of the burgh and its outskirts. Land of naturally the same description—sandy to a great depth, and capable of bearing but slender vegetation—lies for 6 or 7 furlongs from flood-mark all the way along to the North Esk; and, behind the belt of common, it is, on the north, covered with a plantation of firs, and, toward the town, subjected to a scantily productive tillage. A mound or low bank of round water-worn stones, only a few yards in breadth, and traversed along the summit by the coast road from Dundee to Aberdeen, runs for a mile parallel with the sea, and flanks the sandy grounds. West of this mound, the lands are all powerfully fertile, and under prime cultivation. The surface slowly rises toward the north-west, and attains its highest elevation on the boundaries with Dun and Logie-Pert; and though even here of very inconsiderable height, a fine view is obtained hence of the whole parish, the basin and the town, the windings of the South Esk among rich fields and parks, much of the upper end of Strathmore studded with mansions and feathered with wood, the round tower and antique steeples of Brechin, the vast galleried amphitheatre of the Forfarshire and Kincardineshire Grampians, and a far-stretching expanse of the German ocean. The gentle general swell, the summit of which gives this landscape to the eye, is called Montrose hill. All the lower part of the parish is sand to a great depth, mixed with sea-shells, evidently of modern deposit, indicating that Montrose basin, at a very recent geological period, was a bay. Great part of the higher grounds of the parish probably rests on limestone; and on the estate of Hedderwick that rock has been quarried. The stones used in building have not been found within the parish, but have generally been brought by land from Brechin, or by sea from Fifeshire. A mineral well in the parish has had some medicinal repute among the people in its immediate neighbourhood, but has never attracted visitors from a distance. Much of the land adjacent to the town, or in the near environs, is disposed in small properties or feus of from two to eight acres each; and the rest of the land is distributed chiefly among five proprietors. The parish is traversed for three miles by the coast road from Dundee to Aberdeen, for two miles by a road going off thence to Fettercairn, and for nearly one mile by another road going off toward Brechin; and it has a branch railway, commencing at the town on the side of the links, and curving north-westward 3½ miles to the Aberdeen railway at the Dubton junction. The value of the assessed property of the landward part of the parish in 1843 was £7,286 7s.,—of the burgh, £21,558 10s. 6d. The real rental in 1855 of the landward part was £5,858,—of the burgh, £31,259. Population of the parish in 1831, 12,055; in 1851, 15,822. Houses, 1,608.

This parish is in the presbytery of Brechin, and synod of Angus and Mearns. The charge is collegiate. Patron of the first charge, the Crown; of the second charge, the Town-council. Stipend of the first minister, £292 5s. 1d.; glebe, £20. Unappropriated teinds, £90 6s. 8d. Stipend of the second minister—derived from an assessment upon house-rents within the burgh, at the rate of 5d. per pound, in virtue of an act of the Scottish parliament in 1690, authorizing a maximum assessment of 1s. per pound—£340. The parish-church was built in 1791, is double-galleried, and contains 2,500 sittings. There is a second place of worship connected with the Establishment, called Melville church, of recent erection, and now constituted a quoad sacra parish church. There are two Free churches, St. John's and St. George's, each having an attendance of between 900 and 1,000; and the receipts of the former in 1856 were £1,299 15s. 6½d.,—of the latter, £511 17s. 5d. St. John's was built in 1829 as a chapel of ease, at the cost of £3,969; and it contains 1,430 sittings. St. George's was erected after the Disruption. There are two United Presbyterian churches;—the one in Mill-street, a fine new building on the site of a predecessor which had 550 sittings; the other in John-street, built in 1824, at the cost of £1,100, and containing 750 sittings. There is a Scottish Episcopalian chapel, called St. Mary's, in Panmure-place, erected a few years ago, partly by means of a donation of £1,000 from Mr. Scott of Brotherton, and containing about 500 sittings. There is also an English Episcopalian chapel, called St. Peter's, built in 1724, and containing about 800 sittings. There are two Independent chapels; the one connected with the Congregational Union of Scotland, and built in 1844 in lieu of a former one; the other not so connected, but belonging to the Evangelical Union; and the two together containing 1,250 sittings. There is a Baptist chapel, which was built in 1826, and contains 200 sittings. There is a Wesleyan Methodist chapel, built in 1814, at the cost of upwards of £900, and containing 330 sittings. There is likewise a Glassite place of worship, with an attendance of about 30. The principal schools are the Montrose academy, giving instruction in Latin, Greek, natural philosophy, physical geography, mathematics, arithmetic, ancient geography, modern geography, history, English grammar, composition, modern languages, writing, drawing, and needle work, and conducted by a rector, a rector's assistant, four masters, and a mistress; Dorward's seminary, giving instruction in English, writing, arithmetic, navigation, Latin and French, and conducted by two masters; the old parish sessional schools, with English, writing and industrial departments; the Loanhead sessional school, conducted by one master; St. John's Free church schools, with English, writing, and industrial departments; the burgh infant school, conducted by female teachers; White's free school, conducted by one master; Straton's free school, conducted by master and a mistress; and the Castle-street school, established on the principle of the ragged schools for children of the lowest class.

MONTROSE, a post and market town, a seat of manufacture, a sea-port, and a royal burgh, stands 8 miles east by south of Brechin, 12 north-north-east of Arbroath, 18 east-north-east of Forfar, 2 south-south-west of Stonehaven, 30 north-east Dundee, 38 south by west of Aberdeen, and 70 north north-east of Edinburgh. But these distances a by road; and those by railway are 9½ from Brechi 17 from Arbroath, 22 from Forfar, 26 from Ston

haven, 42 from Aberdeen, and 124 from Edinburgh. The site of the town is in the peninsula which forms the south end of its cognominal parish. One side of the town, over its whole length, extends north and south along the shore of Montrose basin; a large wing of it expands south-eastward along the South Esk; much of its east side straggles into the links; its north end attenuates in a line nearly parallel to the basin; and its burgh lands, partly occupied by buildings, but more extensively disposed in public promenade, or unenclosed common, comprise the whole tract between the basin and the ocean. The ground beneath and around the town, excepting three knolls on the basin, and the low sand-bank along the margin of the links, is nearly all a dead level. Yet neither the low flatness of the site nor the encincturement by water is damaging to healthiness or scenery. The dryness of the soil, the absence of all marsh, and the sweeping action of the current between the basin and the sea, act favourably on the climate; and to a person approaching from the south, and coming in view of the town from the high ground traversed by the public road in the parish of Craig, the fine sweep of the broad South Esk fringed with shipping, docks, and various edifices, and stretching out to the sea on the right,—the large circular basin set round with richly-cultivated fields, and forming the foreground to a far-spreading expanse of luxuriant landscape on the left,—the town lifting up several imposing structures, and retiring in a large broad field of architecture in front,—the receding prospect behind it exhibiting a fine variety of swell and hill and plain, of mansions, fields, and woods, till the eye ceases to discern distinctive features,—and the dark, vast amphitheatre of the Grampians, piled shelvingly against the sky, and forming a stupendous mountain-bulwark at 20 miles distance,—altogether present one of the most diversified and magnificent views in the United Kingdom.

The town, as entered by the suspension-bridge over the South Esk, commences in two streets, forking-off from the end of the bridge, running somewhat parallel, each about ¼ of a mile long, and both leading north-eastward to the head of the principal street. That next the basin bears the name of Bridge-street, and is straight, spacious, modern, and neatly though not entirely edificed. The other bears the names of Upper-Fishergate and Castle-street, and is narrow, of unequal width, winding, antique, and disagreeable. Murray-street and High-street, the principal thoroughfare, runs due north, and is nearly half-a-mile long. Commencing continuously with Castle-street, and 100 yards east of the end of Bridge-street, it is at first a spacious area, split into two thoroughfares by a suite of old town buildings; it next has a moderate width, and is subtended on the east by the town-house and hundred edifices; it now, over a distance of 300 yards, becomes a street of uncommon spaciousness, or rather a slender, elongated rectangle; and it finally goes off in a straight line, of fair breadth and reputable appearance. In its expansive part, it has fifty houses, excellent shops, and decidedly a city-aspect; yet, several of the houses being of the gable-end construction, and most of them seeming to economize space, it strangely but pleasingly blends ancient and oriental with modern and airy features. A spacious road, called the Mall, continues the line of this street about 5 furlongs northward; and is thickly sprinkled with edifices,—the mansion, the villa, and the cottage. Two hundred yards east of the end of the bridge commences a thoroughfare, which makes nearly the segment of a circle over two-thirds the length of the town, forming a kind of parallel to both Castle-street and High-street, and then bends slightly sea-ward till it debouches into the links. This street is called for a short way Apple-wynd, and afterwards Baltic-street; it is of very unequal width, now a mere alley, and now a spacious roadway; and, with some pleasant exceptions, is mean and dingy in its houses. Of some seven or eight communications which run westward from it, the chief are the New-wynd and John-street, both opening into the very wide part of High-street, each about 220 yards long, and the latter entirely modern and neatly edificed. Running out into the links, in continuation of John-street, is Union-street, erected since 1838, and terminating at some extensive factories of earlier erection. From the middle of New-wynd, two narrow but closely-built streets, called Market-street and Kincardine-street, wend to the head of the Mall. Along the east side of the town facing the links, runs what is called the Walk, chiefly a terrace, or one-sided street-line, containing many comfortable and elegant houses. A triangular space lying east of the south end of this, and measuring nearly ¼ of a mile along the South Esk, is occupied with various clusters and street-lines of houses, the chief of which are River-street, parallel with the river, and Commerce-street and Dock-street, running up into the links. Some considerable and very fine extensions of the town have been made during the last few years; the chief of which is a kind of suburb round the railway station on the links.

The town-house presents its west side to the narrow commencing part of High-street, and its front to the elongated parallelogram; it has an arcade below, and makes a fine termination to the long spacious area in the centre of the town; its pediment has an illuminated clock; and the building contains a council-room, a guild-hall, a court-room, a coffee-room, and a large apartment occupied as a public library. The trades-hall is a neat building on the east side of the High-street, a little north of the town-house. A freestone statue of the late Sir Robert Peel, by Mr. A. H. Ritchie, was recently set up in the High-street. The jail, built about 25 years ago, is a neat substantial structure, which superseded a disgraceful old prison of two or three miserable cells, and is but too much wanted by the state of provincial crime. In the year ending 30th June 1854, there were confined in it 189 persons, on the average 31 days each, at the net cost per head of £16 18s. 5d. The Montrose academy, situated on the links, is an elegant and commodious structure, surmounted by a dome. Dorward's house of refuge, built in 1839, and affording accommodation for 150 inmates, is a neat building in the old English style of architecture. William Dorward, Esq., merchant in Montrose, gave for the erection and endowment of this institution £15,600 in his lifetime, and likewise bequeathed to it £14,000, and placed the whole under the management of 24 trustees. The lunatic asylum, situated on the links, ¼ of a mile south-east of the academy, and 250 yards from the river, is an extensive edifice, originally built in 1780, and afterwards repeatedly enlarged. This institution originated with the late Mrs. Carnegy of Charleton, received a royal charter in 1811, and is supported by endowments and by the fees for patients. The present building, however, will soon be superseded by a much larger and more elegant one, which is in the course of erection at Sunnyside, about 2½ miles from the town, at an estimated cost of upwards of £20,000; and negotiations are at present afoot for transferring the present edifice and its grounds to Government, to be fitted up as barracks and store-houses for the Angus and Mearns militia. An in-

firmary and a dispensary were formerly connected with the lunatic asylum,—giving relief annually to some hundreds of out-of-door patients, besides a few received within the walls; but a new and separate infirmary was erected near the bridge, in 1839, after a design by Mr. Collie of Glasgow, at the cost of £2,500, and this is under the charge of the same directors as the lunatic asylum, and has been found to be more beneficial as a separate than formerly as a subordinate establishment. The public baths in Bridge-street have both an exterior neatness of architecture and an internal excellence of arrangement which might adorn the metropolis. Even the water-cistern or reservoir, at the northern extremity of the town, whence the inhabitants obtain an ample supply of the purest water, is an object to challenge notice, being great in height, and pleasingly chaste in architecture. The parish church, situated immediately east of the town-house, is a huge building, measuring 98 feet in length by 65 feet over walls. A rickety unsightly steeple, which had belonged to a former church, was taken down in 1832, and substituted by an elegant, massive, Gothic tower, erected at a cost of £3,000, from a design by Gillespie Graham of Edinburgh,—the tower rising to a height of upwards of 100 feet, and surmounted by a spire of nearly the same height. The west end of the church faces the street, and was originally plain, but has been recently altered to suit the style of the tower and spire. St. John's Free church, situated in John-street, is a handsome Grecian edifice; and most of the other places of worship, especially the recently erected ones, are either neat or elegant structures, or at least creditable.

Till near the end of last century, communication was maintained across the South Esk, with the burgh and the great road to Aberdeen, only by means of a ferry at Ferryden. In 1793, a colossal timber-bridge was built across the gullet between Inchbrayock and the burgh, and was esteemed a wonderful erection; but in consequence of an ill-advised narrowing of the channel at its site, the rapid current soon carried away its original bottom, and threatened to sweep it off from the foundation; and, after various expedients were adopted with only temporary success to prevent its destruction, it eventually became a piece of mere shaking, fragile patchwork, and was condemned. A magnificent suspension-bridge destined to succeed it, and designed by Captain Samuel Brown of the royal navy, was founded in September, 1828, and finished in December, 1829, at a cost of about £20,000. The distance between the points of suspension is 432 feet. Each of the two towers, the tops of which form these points, is 23½ feet high from the foundation to the roadway, 44 feet from the roadway to the top of the cornice, and 3½ feet in the entablature,—in all 71 feet; is 40½ feet broad at the cutwater, and 39½ at the roadway; and is perforated by an archway 18 feet high, and 16 feet wide. Of four counter-abutments for securing the chains, and which are 115 feet distant from the towers, each consists of an arched chamber, a strong counterfort, a tunnel, and lying spandrel arch. In these the backstay-chains are strongly imbedded and fastened by great plates; and thence they rise to channels on the tops of the towers. "The bars of which the main suspending chains consist measure 8 feet 10 inches from centre to centre of the bolt-holes, 5 inches broad between the shoulders, and 1 inch thick throughout. All the main links or bars are of the same thickness, except those in the towers, which are $\frac{1}{16}$th of an inch thicker, and of length to suit the curve of the cast-iron saddles. Each main suspending chain—of which there are two on each side of the bridge, one over the other, placed one foot apart—consists of four lines of chain bars. The joints of the upper main chains are over the middle long bar in the lower chains; and the suspending rods which support the beams on which the roadway is laid, are 5 feet distant from each other. The chains are of wrought cable-iron; the beams are of cast-iron, formed with open spaces 26 feet 8 inches long, 10 inches deep at the neck of the tenons, and 1 inch thick in every part between the flanges." The roadway is 26 feet broad between the suspending rails; the planking or platform is bolted to the iron-beams, and overlaid with a composition of coal, tar, pitch, and broken metal, impervious to water, and deadening the hollow noise caused by the tread of horses and the motion of vehicles; along the sides of the platform runs an ornamental cornice, contrived so as to lessen the vibration of the bridge; and a stripe of the roadway at each side is disposed for foot-passengers, and railed off from the carriage-way by a handsome guard-chain. Such was, and such, with some differences of detail as to the roadway, still is, the suspension-bridge of Montrose. But the splendid and seemingly powerful erection has, on two occasions, suffered appalling accidents. "A crowd having assembled on it," say the Messrs. Nicol, "to witness a boat-race, and a rush taking place to the east end as the boats passed through, the upper chain gave way, owing to an imperfection about one of the saddles on the top of the north tower, and fell, resting on the lower chain. Several persons were caught between the chains, and killed on the spot; but fortunately the under chain proved sufficient to support the additional weight, otherwise the whole party would have been precipitated into the water. The bridge was speedily repaired during 1838; but in October that year a fearful gale tore up and destroyed about two-thirds of it, which were thrown into the river; but the main chains were uninjured, and the roadway has been re-constructed on an entirely new and substantial plan by Mr. J. M. Rendal, civil engineer, at an expense of upwards of £3,000. Including all repairs, the whole cost of the erection has been nearly £27,000." The new plan of the roadway was designed chiefly to prevent the oscillation as well upward as downward and consisted in the adoption of a system of vertical and longitudinal trusses, extending above and below the line of the bridge; and this has answered so exceedingly well that, while formerly in a gale the motion ranged to 3 or 4 feet, it does not now exceed 3 or 4 inches. At the time when the bridge was erected, the central arch of the stone one across the southern channel of the South Esk was taken down and substituted by a revolving drawbridge. Fort hill, a small eminence standing close upon the river at the site of the suspension-bridge, and anciently crowned with a fortification, was cut through during the preliminary operations for the erection of the bridge, and disclosed a stratum of human bones nearly 14 feet thick.

The harbour of Montrose comprises the reach of the South Esk from the bridge to the sea, but is principally occupied in the upper part of that reach 650 yards downward from the bridge. It is naturally one of the best on the east coast of Scotland and it has been well provided with artificial appliances. The entrance to it from the sea, indeed is somewhat narrow, and cannot easily be taken some points of the wind; but it has 18 feet of depth over the bar at low water of spring tides, and is therefore accessible, at all hours, to vessels of large draught. A lofty white beacon stands on a rocky promontory on the south side of the entrance; and

two lighthouses, the one 45 feet high, the other 35 feet high, were erected in 1818 on the left bank of the river, about 400 yards apart from each other, between the sea and the occupied part of the harbour, to guide vessels up to the quay during the night; and, the lights being visible, in clear weather, at the distance of 8 miles, they also indicate well to seaward the entrance of the harbour. The quays are well constructed and very commodious; and there are a wet dock capable of accommodating 6,000 tons of shipping, a patent slip for repairing vessels, and a dry dock on the opposite bank.

The port of Montrose, as a custom-house port, formerly comprehended the range of coast from Buddonness on the south to Bervie-brow or the Todhead on the north, and therefore included Westhaven, Easthaven, Arbroath, Johnshaven, and Gourdon. The shipping belonging to it within that range comprised, in 1789, 53 vessels of aggregately 3,543 tons; in 1820, 33 vessels, of aggregately 7,946 tons; in 1831, 106 vessels, of aggregately 10,300 tons; in 1838, 115 vessels, of aggregately 15,000 tons; and in 1854, an increased number of vessels, of aggregately 22,172 tons. But the port, as a custom-house port, now comprehends only the stretch of coast from Redhead to Todhead, —the stretch from Buddonness to Redhead having become assigned to Arbroath; and the shipping belonging to Montrose, within its contracted range, averaged, in the years 1845–1849, 14,835 tons, and amounted, in the year 1855, to 14,207 tons. The amount of customs received at its custom-house, in the average of the years 1845–1849, was £24,204, and in the year 1850, £15,667. The amount of dues levied within the limits of the port, in 1852, was £3,700 at Montrose, £24 at Johnshaven, and £116 at Gourdon,—in all, £3,841. Four large vessels were long employed in the Greenland whale-fishery, and fully shared the fates of that precarious trade. Steam vessels, at a more recent period, plied regularly to Leith and to London, but have been discontinued. Sailing vessels now ply regularly to London and to Newcastle. The coasting trade, in a general view, is very miscellaneous; and the foreign trade is chiefly with the Baltic. The principal exports are manufactured goods, fish, grain, and cattle; and the principal imports are coal, lime, slate, iron, flax, hemp, and timber. In 1854 the foreign and colonial trade of the port comprised a tonnage of 4,788 inwards in British vessels, 6,788 inwards in foreign vessels, 1,757 outwards in British vessels, and 6,625 outwards in foreign vessels; and the coasting trade comprised a tonnage of 36,323 inwards in British vessels, 47 inwards in foreign vessels, and 19,502 outwards in British vessels.

The manufactures of Montrose are very considerable both in importance and variety. There are in the town five flax spinning-mills, which employ about 1,200 persons, and consume annually about 5,750 tons of flax. There are also connected with the town, but situated on the North Esk, three large flax spinning-mills, and two bleaching works, one of the mills in the parish of Montrose, the other two in the parish of Logie-Pert, the three employing about 500 persons. The weaving of linens, in the several departments of dowlas, sheetings, sailcloth, and bagging, is carried on in the town to the extent of about 1,450 pieces of cloth in the week. The number of persons employed in the weaving is about 1,400; the number of power-looms, about 130; and the number of hand-looms, about 400. A very considerable extent of weaving is done, for the manufacturers of the town, at agencies in the surrounding country. The making of starch, of a superior quality and to a very considerable amount, is carried on in three establishments. Ship-building has long been carried on to a considerable extent, and with a ratio of increase nearly proportioned to the slow but steady prosperity of the town's commerce. There are likewise in the town two iron foundries, two large tan-works, two extensive rope works, two machine-making establishments, several breweries, and a full proportion of workshops in all the ordinary departments of artificership. More unmanufactured tobacco, for the uses of the manufacturing tobacconist, is imported into Montrose, than into any other port of Scotland except Glasgow and Leith. The species of snuff-box long known as the Cumnock box, which gave rise to the peculiar fancy-article manufacture of Mauchline, was made in Montrose before being known in Ayrshire.

Montrose had a parent-bank till 1828; and it has, at present, branches of the Bank of Scotland, the British Linen Co.'s Bank, the Eastern Bank, the Royal Bank, the Union Bank, the National Bank, and the North of Scotland Bank. It has likewise a savings' bank, with branches at Ferryden, Edzell, St. Cyrus, Laurencekirk, and Johnshaven. The principal inns are the Star in the New-wynd, the White Horse and the Black Horse in Murray-street, the Ship, the Commercial, and the Crown-Temperance in High-street, the Railway in Erskine-street, and the Salutation in Bridge-street. There are 29 insurance agencies, and a local marine insurance association. Abundant communication is enjoyed through the branch railway to the Dubton junction of the Aberdeen railway, noticed in our account of the parish; and in order to shorten the railway communication to Arbroath and Edinburgh, a survey has just been made for a projected railway from Montrose to Arbroath. The line surveyed commences at the south end of the bridge, goes westward to the farm of Fullarton, and will involve the necessity of a piled viaduct over the Black Sands, but will not, in any other part of its route, involve any engineering difficulties. A weekly market is held in the town on Friday, when the chief part of the grain shipped at the port is sold by sample, and all descriptions of farm and garden produce are exposed; and annual fairs are held at Whitsunday and Martinmas, chiefly for the hiring of servants. Two newspapers are published every Friday, the Montrose Review and the Montrose Standard. There are three public news-rooms, —the Exchange reading-room in the town-house buildings, the insurance association reading-room in Meridian-place, and the reading-society's news-room in High-street. There are three public libraries,—the Montrose public library, founded in 1785, and containing about 10,000 volumes,—the grammar-school library, founded in 1686, and containing many old rare works,—and the reading-society's library, founded in 1819, and containing about 3,000 volumes. There is a natural and antiquarian society, which was established in 1837, whose museum, in Panmure-place, contains a valuable collection in most departments of natural history, together with many coins and antiquities, and is accessible to all classes at very small charges. The principal local institutions, philanthropic and miscellaneous, additional to those which have been already indicated in this paragraph, in our account of the public buildings, and in our enumeration of the public schools, are an ancient hospital fund, yielding about £190 a-year, which is distributed monthly among decayed townspeople, their widows, and children; an indigent female society, distributing about £100 a-year; a ladies' clothing society; a destitute sick society; fifteen mortifications, ranging in date from 1744 to 1844, and varying in amount from £100 to about £4,000, the interest of which is divided variously

among the poor or the indigent; a Montrose home or town mission; an auxiliary Bible society; a horticultural society; a royal Albert golf club; a choral society; and a curling club. A race-course was at one time tracked out on the links, on as fine ground for racing as anywhere exists; but it long ago went into disuse. A theatre, also, was at one time built in Bridge-street; but, after being for a short while the occasional resort chiefly of apprentices and strangers, and then exhibiting for several years an appearance of desertion and of premature desolation, it was converted into dwelling-houses.

Montrose, as a royal burgh, is of high antiquity. It received its first charter from David I., and obtained extensions of its privileges from David II. and James IV. The value of the burgh property on the 30th of September 1855, was estimated at £73,319 4s. 8½d., and the amount of debts and obligations at that date was £35,636 4s. 2d., leaving a balance in favour of the burgh of £37,683 0s. 6½d. The amount of the yearly revenue in 1855 was £2,896 16s. 8½d. The town council comprises a provost, three bailies, a dean of guild, a treasurer, an hospital-master, and twelve councillors. Its ordinary meetings are held on the second Wednesday of every month. But the council acts also as commissioners of police and improvements; and in that capacity, it holds its statutary meetings on the second Monday of February, May, August, and November, and its ordinary meetings on the second Monday of each of the other eight months. A police court is held in the police office, under the precedency of the provost, every Monday morning; and a burgh or bailie court is held in the court-room, under the precedency of the bailies, every Thursday forenoon. A sheriff small debt court is held in the court-room, on the third Friday of January, March, May, July, September, and November. A justice of peace small debt court is held in the court-room on the first Monday of every month. There is a guildry incorporation, with dean, treasurer, and six assessors. There are seven incorporated trades,—the blacksmiths, the wrights, the shoemakers, the weavers, the masons, the bakers, and the tailors. The town is lighted at night with gas, by a company formed in 1827; and is supplied with water, brought in pipes from a place about 3 miles distant in the parish of Dun. The streets are well paved, well superintended, and kept clear of every sort of nuisance. The limits of the parliamentary burgh are more extensive than those of the royal or municipal burgh, and comprise Rossie island in the parish of Craig, and part of the parish of Dun. The town, as a parliamentary burgh, unites with Arbroath, Brechin, Forfar, and Bervie in sending a member to parliament. Municipal constituency in 1855, 369. Parliamentary constituency in 1839, 387; in 1855, 384. Population of the royal or municipal burgh in 1841, 13,402; in 1851, 14,328. Houses, 1,336. Population of the parliamentary burgh in 1851, 15,238; of whom 541 were in parts of the parish of Montrose not included in the municipal burgh, 154 were in Rossie island, and 215 were in the parish of Dun.

Montrose was anciently called Celurea. Very conflicting and uncertain opinions have been advanced as to the etymology of its modern name, and are thus succinctly disposed of by the Messrs. Chambers:—"In Latin, it is called *Manturum* by Ravenna; and by Cambden, *Mons Rosarum*, 'the Mount of Roses;' in French, *Mons-trois*, 'the three hills or mounts;' in the ancient British, *Manter-rose*, 'the mouth of the stream;' in the Gaelic, *Mon-ross*, 'the promontory hill,' or *Moinross*, 'the promontory of the moss;' or the *meadh* (pronounced *mu*) *ain-ross*, the field or plain of the peninsula.' The second of these derivations, though the most unlikely of all is countenanced by the seal of the town, which bear the ornament of roses, with the following motto:—'Mare ditat, Rosa decorat,'—the sea enriches an the rose adorns; but the two last, besides being th most probable, correspond best with the pronunci ation of the name by the common people in th neighbourhood, and by all who speak the Gaeli language, to wit, *Munross*." Montrose is named i Dalrymple's Annals of Scotland, under the yea 1244, as one of the principal towns of the kingdon which, in that year, were destroyed by fire. A cas tle, of very ancient origin, formerly crowned th summit of Fort-hill; and, on the authority of Si James Balfour and of Wynton, contests the noto riety of having been the scene of King John Baliol' humiliation to Edward of England, and divestmen of his royal robes and crown:—

> "This John the Baliol, on purpos
> He tuk and browcht hym til Munros,
> And in the castell of that town,
> That then was famous in renown,
> This John the Baliol dyspoyled he
> Of all his robys of ryaltie.
> The pelure tuk off his tabart,
> Tume tabart he was callyt aftyrwart."

Montrose, according to Froissart, was the por whence Lord James Douglas, at the head of a nu merous knightly retinue, embarked in the spring o 1330 to fulfil the last charge of King Robert Bruce to carry his heart to Jerusalem and deposit it in th holy sepulchre. In the rolls of the parliament held in Edinburgh in 1357 for ransoming David II. from his English captivity, Montrose figures in the very centre of the royal burghs, eight preceding and eigh following it; and would therefore appear to have a that period attained very considerable consequence The inhabitants of Montrose suffered severe an arbitrary oppressions from John Erskine, Laird o Dun, the grandfather to the celebrated reformin companion of John Knox, and from members of hi family; and eventually driven beyond patience b their tyranny, obtained, in 1493, a royal warran calling them to account for their conduct. In 153 the tyrant's grandson, the illustrious Erskine Dun, afterwards the superintendent of Angus, intro duced Greek literature into Montrose, and estal lished there a seminary in which the Greek languag was taught by persons brought by him from Franc This seminary was the earliest appliance in Sco land for conveying a knowledge of Greek. Andre Melville, born in the contiguous parish of Craig, o ten styled the father of presbytery in Scotland, an justly regarded as the reviver of Scottish learnin and the founder of Scotland's literary greatness, w educated in this seminary; and when he remov in his 14th year to the university of St. Andrew he astonished his teachers, none of whom understo Greek, by displaying acquaintanceship with t learned language. James Melville, the nephew Andrew, also attended this seminary, and, in h diary, gives some interesting details of the manag ment of the school, and of kindness shown to hi by the parish minister. In 1612, Montrose w nessed the birth within its precincts of Jam Graham, Marquis of Montrose, the distinguish figurant in the civil wars of Scotland, first as t champion of the Covenant, and next and chiefly the enthusiastic partisan of the infatuated Stua From May 1648 till February 1649, the plague isolated the town, driving crowds to the country panic, and making such fearful havoc among th who remained, that a large tumulus is pointed to the present day, on the links immediately nor east of the town, as the place where many

tims to it were interred. At the commencement of the 18th century, John Young, a citizen of Montrose, who had been sent by the magistrates to Holland to learn the best known methods of constructing and working windmills, was the only person found in Scotland to understand the management of pumps in coalworks. In December 1715, the Chevalier, missing the frith of Forth, whither he designed to steer with his French fleet, sailed into Montrose, and commenced there his preposterous expedition; and in February 1716, he spent a night in the town, went by a back-door from his lodgings to those of the Earl of Mar, walked thence by a private footpath with two attendants to the sea-side, and there was taken on board a vessel prepared to carry him off, and made his escape to France. The house in which he lodged was that in which the Marquis of Montrose was born, and long commanded attention as the most noted ancient tenement of the town, but, a considerable number of years ago, was removed. The late Sir Alexander Burnes was a native of Montrose. The noble family of Graham, who have had from Montrose the titles successively of Earl, Marquis, and Duke in the peerage of Scotland, have long ceased to possess any connexion of interest with either the town or its vicinity.

MONTROSE (Old). See Marytон.

MONWIG (Loch of), a lake, deep, dark, about 200 yards long, and frequented by great flocks of geese and ducks, in the midst of an extensive deep moss, in the parish of Aberdour, Aberdeenshire.

MONYGOVE. See Minnigaff.

MONYMUSK, a parish, containing a post-office village of its own name, in the Garioch district of Aberdeenshire. It is bounded by Keig, Oyne, Chapel of Garioch, Cluny, and Tough. Its length eastward is about 7 miles; and its greatest breadth is between 4 and 5 miles. The river Don runs a short distance on the northern boundary, and then runs south-eastward and eastward through the interior, placing about one-third of the parish on its left bank, and about two-thirds on its right bank. The tracts on the western and south-western borders are hilly, having heights of various form and considerable altitude, but nowhere rising higher than about 1,400 feet above the level of the sea. The tracts nearest the river are in a fine state of cultivation, and highly embellished with wood. About 9,370 imperial acres, in the entire area, are either regularly or occasionally in tillage; about 3,080 are pasture or waste; and about 4,150 are under wood. The soil of the arable lands is partly of a clayey nature, but principally a light loam. Granite is the predominant rock in the hills, and has been extensively quarried; and large blocks of it were, a number of years ago, sent for ornamental building purposes to London. Iron ore, of rich quality, has long been known to exist, containing 65 per cent. of iron; but it has not been worked, on account of the scarcity of fuel. A quarry of felspar was for some time worked by an agent of one of the Staffordshire potteries, but was abandoned on account of the great expense of the land carriage to Aberdeen. The average rent of the arable land is from 15s. to £1. The estimated value of raw produce in 1840 was £14,910. Assessed property in 1856, £5,578. The only landowner is Sir James Grant of Monymusk, Bart., the lineal descendant of Sir Francis Grant of Cullen, who was knighted by Queen Anne, and became a senator of the college of justice under the title of Lord Cullen. Monymusk-house, the seat of Sir James, is an ancient spacious edifice, in a pleasant situation on the right bank of the Don. Pitcaithie-castle is a roofless ruin, anciently the seat of the family of General Hurry, who made some figure in the times of the Covenanters. About ½ a mile east of Monymusk-house, and contiguous to the Don, is a field called the Campfield, on which King Robert Bruce's army is said to have bivouacked on the night before the battle of Inverury. The only three noticeable antiquities are some vestiges of two Druidical circles and an old chapel. The parish is traversed by two turnpike roads; and the eastern extremity of it is within 5 miles of the Kintore and Inverury stations of the Great North of Scotland railway. There are in the parish a distillery and two saw-mills. The village of Monymusk stands nearly in the centre of the parish, near the south side of the Don, 19 miles west-north-west of Aberdeen. It is a place of some antiquity, and is mentioned by Buchanan as having been visited by Malcolm Canmore, when on his way to suppress an insurrection in the north. It was almost entirely rebuilt a few years ago; and it now forms a very neat square, with some fine old trees in the centre. An annual fair for cattle is held here on the last Thursday of August. Monthly winter markets were tried a few years ago, but did not succeed. A railway station is to be formed about ¾ of a mile from the village, on a railway which is now in the course of formation, from the Great North of Scotland railway at Kintore to Alford. Population of the village about 135. Population of the parish in 1831, 1,011; in 1851, 940. Houses, 159.

This parish is in the presbytery of Garioch, and synod of Aberdeen. Patron, the Crown. Stipend, £202 15s. 6d.; glebe, £15 10s. Schoolmaster's salary, £26, with about £23 fees, a share in the Dick bequest, and about £10 other emoluments. A priory was founded at Monymusk by Malcolm Canmore; but no part of its buildings, except perhaps the present parish church, is now in existence. The parish church, whether part of these buildings or not, is at least very old; and at its west end is a square tower 50 feet high, surmounted by a spire 40 feet high. The spire was renewed in 1822; the church itself, also, was at that time repaired and enlarged, and it now contains 580 sittings. There is likewise in the village an Episcopalian chapel, containing 150 sittings. There is in the northern part of the parish an endowed school, called Lord Cullen's school, which originated in a bequest by Sir Francis Grant of Cullen; the schoolmaster of which has a salary of about £50, together with about £10 fees.

MONYNUT. See Innerwick.

MONZIE, a parish, containing a village of its own name, in the Glenalmond district of Perthshire. Its post-town is Crieff, 3 miles south-south-west of the village; and the post-town of Gilmerton, in Fowlis-Wester, is also adjacent. The parish is bounded by Kenmore, Weem, Dull, Fowlis-Wester, Crieff, Monivaird, and Comrie. Its length eastward is 9 miles; its greatest breadth is 8 miles; and its area is about 48 square miles. Its southern boundary is the skirt or lowest declivity of the Grampians; and its area all runs up among the first or frontier gallery of the broad and broken Grampian range. Two-thirds of it are a congeries of very high hills, partly green, but mostly covered with heath, bleak and naked, rarely trodden by human foot, cut down by narrow, swampy, bent-clad flats, and abandoned as irreclaimable wilderness to the pasturing of Highland or black-faced sheep. The other third, however, is singularly rich in the beauty, variety, and boldness of its scenery. The rivulet Barvie, which runs 4 miles along the western boundary to the southern extremity, has nearly its whole course along a broken, rapidly descending, and very deep dell; and leaps from ledge to ledge in an almost constant succession of small cascades, sometimes

100 feet below the brow of its banks, and all the way overhung by steep rocks, partly naked and frowning, partly dressed out in a profusion of natural wood. The rivulet Keltie, which runs parallel to the Barvie, about a mile east of it, over a distance of 3¾ miles in the interior, comes coldly down for half its length among the mountains, enters the seclusion of a dark ravine, and, becoming pent up by a pressure of rocks to a breadth of five feet, tumbles tumultuously down a smooth rocky precipice, 90 feet in height, into a pool 43 feet broad, called, along with the cascade, Spout-bay. The stream now contracts within a very narrow bed,—runs along a thickly wooded dell, 150 feet deep,—performs several leaps of 10 feet among inaccessible steeps,—steers its way in a channel through solid rock, at one place 12 feet wide and 9 deep, at another 6 feet wide at top, 12 feet wide at bottom, and 10 feet in depth,—and finally debouches into a plain through a rocky gorge, only about 4 feet wide. All the way along the dell, there is an artificial footpath, for the accommodation of the tourist; and in full view of Spout-bay stands a hermitage, where a stranger may survey the cascade. The river Shaggie rises, as do also the two former streamlets, in the loftiest hill-range of the parish, runs 4½ miles south-eastward, southward, and south-westward, in the interior, receives the waters of the Keltie, traces for a mile westward the southern boundary, and, drinking up the Barvie, passes away to become tributary to the Earn. Its upper course is between high banks luxuriantly clad in copsewood, and is picturesquely varied by three waterfalls,—one of them, a mile above the village of Monzie, over very rugged rocks, 55 feet high, from a platform 18 feet broad, into a pool 43 feet wide; and, from a point a little below this fall, where its banks suddenly widen and break down into a plain, its lower course is along a rich and blooming valley, the seat of two-thirds of the whole population. Near the head of the valley stand the village of Monzie and the parish church; ¾ of a mile to the south-west, appears the fine form of Monzie-house, peering out from amongst a grove of stately aged trees; and at the side rises the picturesque Knock, lifting up masses of pine into communion with the clouds. North of the mountain-range, whence spring the streams already noticed, runs the Almond, traversing the extreme length of the parish, from west to east,—maintaining all the way, with the exception of 2 miles south-eastward, a direction due east,—and tracing, for 2 miles before it takes its leave, the boundary-line between Monzie on the north, and Fowlis-Wester on the south. Over its whole course within the parish, but especially toward the east, where it traverses the singular gorge called the Small glen of the Almond, or emphatically Glenalmond, the stream, both in itself, and especially on its banks, is a continuous chequered belt of thrilling romance: see articles ALMOND and GLENALMOND. Near the large cave, midway up the face of a stupendous rock, and capable of accommodating 60 men under arms, mentioned in the former of these articles, is a natural adjustment of stones into arches and corridors, called 'the Kirk of the wood;' so curiously constructed, as almost to seem a work of art. In a particular part of the glen, among the hills, there is a distinctly repeating verbal echo; and, in the Small glen, owing to its sinuosities offering obstructions to a free current of the air, and to the absence of all lateral communication, whirlwinds are formed, which have occasionally lifted horsemen from their saddle, and obliged travellers to seek shelter for hours behind the rocks, and a sound is produced so loud, hollow, and reverberating, that strangers almost invariably mistake it for thunder. Tempests and whirlwinds occasionally sweep the whole hill country, unroofing houses, overturning stacks, tearing up heath and broom, and even rolling along large stones; slight shocks of earthquakes are sometimes felt coming east from Comrie; and waterspouts and sudden inundations from rain sometimes spread desolation along the valleys. In 1756, a waterspout, breaking out in the heights above the village of Monzie, took its course down the Shaggie, raised it 20 feet perpendicular at the bridge, and swept entirely away a bank near the village, which cost £500; and left behind in its sudden subsession, such quantities of fish, that the inhabitants carried them home in basketsful. Two years later, the water, during a heavy rain in the hills, collected on the top of the brae near Monzie, and carried down such a quantity of earth into the Shaggie, as left a den 200 feet long, upwards of 100 feet wide, and 70 feet deep.

Slate of excellent quality is worked in Glenalmond; red sandstone, compact and durable, is quarried on the estate of Cultoquhey; limestone also occurs in the parish, but is of indifferent quality and not worked. The prevailing soil of the arable lands is light, dry, and fertile. There are several hundred acres of thriving plantation. The average rent of the arable land is from £1 10s. to £2 per acre. The estimated value of raw produce in 1837 was £6,341. Assessed property in 1843, £4,300. The principal landowners are Campbell of Monzie, Patton of Glenalmond, Maxtone of Cultoquhey, Moray of Abercairney, Williamson of Lawers, and Sir W. K. Murray, Bart. of Ochtertyre. The only mansions are those of Monzie and Cultoquhey. The antiquities are numerous and various. About two miles east of the church, on the high ground at the lower end of the deep narrow defile of Glenalmond,—the only pass through the frontier Grampians over a distance of 40 miles,—are vestiges of a large camp, defended on two sides by water, and on the other sides by morass and precipice. It is about 180 paces long, and 80 broad. It is traditionally called the Roman camp, and has been alleged to have accommodation for 12,000 men. On a moor immediately east of it, several acres were, till a few years ago, thickly dotted with cairns, some of which measured from 11 to 14 paces in diameter; and from their sepulchral contents, as well as other evidence, it appears to have been the scene of some great ancient battle. Two miles to the north, enclosing the summit of the high hill of Dunmore, overlooking Glenalmond and completely commanding that romantic pass, is a strong fort, inaccessible on all sides but one, defended by a deep trench 30 paces beyond the walls, and consisting of strong stone bulwarks, in some places double, partly vitrified on the west side, and enclosing an area of about half-a-rood. The erection is believed to be Celtic, and has by some, who credulously follow the legends of tradition, been regarded as the habitation of Fingal after his house was burnt by Gara. Even that house itself is said to have stood near the camp at the lower end of the glen, at a locality called in Gaelic *Fianteach*, 'Fingal's-house.' The statist in the Old Account, who is one of the believers, adds, "And we know both his [Fingal's] father and his son are buried here: and elsewhere he tells us that a particular cairn "called Cairn-Comhal, in memory of Fingal's father that "there is a small camp on the south side of the parish, near to Cultoquey, called in Gaelic *Comh Cults*, i. e. Comhal's battle;" and that "traditi says Comhal fought here, but lost the battle." T locality of the 'Cairn-Comhal' is a moor two mi east of 'Fianteach,' on which there are, or lat were, many cairns and tumuli. In its vicinity i

fort called Lenē, twice as large as that on the hill of Dunmore, exceedingly strong, surrounded by two ramparts 20 feet apart, and each 20 feet thick, the inner wall measuring 240 paces in circumference. Other antiquities, Druidical, Roman, and Celtic, occur, or have been dug up; but excepting the reputed grave of Ossian [see ALMOND], about which there has been much rencontre of wit, and respecting which the old statist stoutly says, "We are certain that the famous Caledonian bard, Ossian, lies here," they are too many and minute to bear separate notice. The parish is traversed by the Highland road from Crieff to Aberfeldy; and the greater part of its inhabited portion is sufficiently near Crieff to derive benefit from the railway communication thence. The village of Monzie stands on the southern border, near the point where the parishes of Monzie, Crieff, and Monivaird meet. It has very long been stationary, and possesses a population of about 120. A fair called St. Lawrence's used to be held here, for lambs, sheep, and black cattle, on the 22d and 23d of August; but the fair for the latter of these days was transferred, a number of years ago, to Crieff. Population of the parish in 1831, 1,195; in 1851, 1,199. Houses, 231.

This parish is in the presbytery of Auchterarder, and synod of Perth and Stirling. Patron, the Crown. Stipend, £158 16s. 11d.; glebe, £27. Schoolmaster's salary, £34 4s. 4½d., with about £30 fees, and £7 13s. other emoluments. The parish church was built in 1831, and contains 512 sittings. There is a Free church, with an attendance of 350; and the amount of its receipts in 1856 was £251 3s. 10d. The modern parish was greatly altered in boundaries from the ancient one by the Court of Session in 1702. Two large and contiguous tracts, which occupy its present centre, and which belonged respectively to Crieff and to Fowlis-Wester, were annexed to it; and two detached districts—those of Logiealmond and of Innerpeffray—which lay at a considerable distance respectively to the east and to the south, were separated from it, and united, the former to Monedie, and the latter to Muthil. Near Buchandy bridge, at the lower end of Glenalmond, are the ruins of St. M'Bean's chapel, surrounded by a cemetery still partially in use. Near the north-east corner of the parish, in a most romantic situation, stood another chapel, now quite erased, but commemorated by its cemetery. Tradition says, that on the evening before the battle of Luncarty, seven men took the sacrament here, all of whom went to the field, and only 6 returned.

MOODIESBURN, a post-office village in the eastern district of the parish of Cadder, Lanarkshire. Population, 220.

MOODLAW (LOCH), a small lake, situated at a considerable altitude, and remarkable for being the point in which the counties of Roxburgh, Selkirk, and Dumfries meet, or as belonging equally to these three counties.

MOONZIE, a parish in the Cupar district of Fifeshire. Its post-town is Cupar, 3 miles to the south-east. It is bounded by Kilmany, Cupar, Dunnimail, and Creich. Its length east-south-east-and-west is rather less than 2 miles; and its greatest breadth is 1½ mile. Its surface presents a pleasing diversity of hill and dale, and has an extreme elevation of about 300 feet above the level of the sea. Several beautiful eminences are situated in the west; and the descent from them to the east is a gentle slope, terminating in a considerable valley. A few rocks on the top of Colluthie hill are rocky, and have been planted; about 36 acres on the farm of Lordscairnie, are arable moss land; and all the rest of the surface is excellent soil, partly a strong clay, but chiefly a black loam, in a high state of cultivation. An extensive marsh formerly existed on the farm of Lordscairnie, but was drained about 53 years ago, and converted into arable land. The prevailing rock is trap, in the condition popularly called rotten rock. The average rent of the arable land is £2 5s. per Scotch acre. The estimated value of raw produce in 1843 was £4,900; and the value of assessed property in that year £2,214 16s. The principal landowner is the Earl of Glasgow. An interesting antiquity is Lordscairnie-castle, popularly called Earl Beardie's castle. This is said to have been built by Alexander, third Earl of Crawford, commonly called Earl Beardy from his great beard, or the Tiger Earl from the fierceness of his disposition. All that remains of it is the keep or donjon, and a round tower which had formed a defence for the wall with which the court-yard was surrounded. This ruin is four stories high, and appears to have lost nothing of its original height, with the exception of the bartizans which surrounded its roof. It is 53 feet in length, and 42 in breadth, without the walls. The walls are strongly built, and between five and six feet thick. The ground-floor—as is common in such structures—appears to have been entirely occupied by cellars, having arched stone-roofs. The second floor was occupied entirely with the great hall, which is about 40 feet in length, and above 20 feet in breadth. The defence of the castle and its outworks was anciently strengthened by a broad morass which appears to have entirely surrounded the slight rising ground on which they were situated. Another antiquity is the house of Colluthie, which is traditionally said to have been built by Sir William Ramsay who, about the year 1356, married the daughter of Duncan, the last Earl of Fife of the ancient race of Macduff; but the house is manifestly not of such ancient date, and is remarkable only for the thickness of its walls and for some arched doors and windows. It was long much neglected, and nearly uninhabitable, but was repaired a few years ago, at considerable expense, so as to become a good mansion. The southern border of the parish is traversed by the road from Cupar to Newburgh. Population in 1831, 188; in 1851, 198. Houses, 45.

This parish is in the presbytery of Cupar, and synod of Fife. Patron, the Earl of Glasgow. Stipend, £187 17s. 10d.; glebe, £30. Schoolmaster's salary, £34 4s. 4½d., with about £14 fees. The parish church stands on a rising ground in the south-west part of the parish, and is as mall, plain, old building, with 171 sittings. It looks conspicuous as seen from the Newburgh road, and is a landmark to mariners entering the Tay. The ancient church was gifted by William Malvoisin, Bishop of St. Andrews, to the ministry of Scotland's Well,—an institution founded by him previous to 1238, and in which he planted a colony of the 'Fratres Sanctæ Trinitatis de redemptione captivorum.' It appears from the charter, that the church of Moonzie was dedicated to the Holy Trinity; it also appears, that the parish was at this time called Urhithumenesyn. The name was afterwards spelled Uchtermonsey, as in 1513, Alexander Crawford of Uchtermonsey succeeded his nephew in the earldom of Crawford. In consequence of the gift of the Bishop, the brethren of the ministry drew the tithes of the parish for their support, and supplied the cure; and this arrangement continued till the Reformation. In 1564 the parish of Moonzie was united to that of Cupar; but in 1625 it was again made a separate parish.

MOONZIE BURN. See LEUCHARS.

MOOR, or MUIR, a generic name signifying heathy ground, and used both as a prefix and as a suffix in many topographical names.

MOORFOOTHILLS, a double range of moorish hills, chiefly on the eastern part of the southern border of Edinburghshire, and partly on the mutual border of Edinburghshire and Peebles-shire. See the article EDINBURGHSHIRE.

MOORHOUSE. See EAGLESHAM.

MOORHOUSELAW. See MAXTON.

MOORKIRK. See MUIRKIRK.

MOORKIRK OF LUCE. See LUCE (NEW).

MORAL (FALL OF). See ENNERIC (THE).

MORAR, a territorial district and a lake on the west coast of Inverness-shire. The district is bounded on the north by Loch-Nevis, which divides it from Knoydart; on the east by the district of Lochiel; on the south by Arisaig; and on the west by the Sound of Sleat. Its extreme length, from east to west, is 19 miles; and its breadth varies between 4 and 9. Loch-Morar bisects a great part of it lengthwise, and divides it into two nearly equal sections, which are called respectively North and South Morar. The lake is 10½ miles long, and from 5 furlongs to 1¾ mile broad; it is overhung nearly all round, and, at a very brief distance, by water-shedding Highland heights, but has a fringing of wood upon its immediate banks; it is fed on the east by streamlets coming from the lochlets Beoraich and Anamack; and it discharges its superfluent waters on the west by a stream of only a few furlongs in length into a small bay. North Morar belongs to the parish of Glenelg, South Morar to that of Ardnamurchan; and both are included, in a large sense, in the comprehensive district of Lochaber. Morar is, with few exceptions, peopled by Roman Catholics; and, in 1836, was provided, by voluntary subscription, with a new Roman Catholic chapel.

MORAY FRITH, a gulf in the extreme north-east of Scotland; a sea rather than a bay or an estuary; the largest projection, and at the same time one of the most regular, which the ocean makes into the Scottish coasts. Loosely defined, but with reference chiefly to its interior waters, it is the Æstuarium Vararis of ancient geographers. Its limits, as assigned by the modern hydrography of the country, are somewhat various and not very distinctly understood; but, on the whole, they distribute into two easily ascertained parts, an exterior and an interior.

The exterior frith comprehends all the open sea south-west of a line between Duncansby-head in Caithness-shire and Kinnaird's-head in Aberdeenshire, onward to the entrance of the inner frith between Tarbetness in Ross-shire and Burgh-head in Morayshire. It blends with the German ocean on the north-east, and, along the artificial line of connexion with it, measures nearly 80 miles; it has the counties of Caithness, Ross, and Cromarty on the west, and measures on that side about 70 miles; and it has Morayshire, Banffshire, and Aberdeenshire on the south, and measures along that coast about 57 miles. Except at an opening on its west side, immediately north of Tarbetness, where it sends off the Dornoch frith, and at a smaller opening on the same side, 8 miles south of Duncansby-head, where it expands into Keiss or Sinclair bay, it has a singularly uniform coast-line, sufficiently diversified with gentle curvatures to be freed from monotony, but uncut by deep incisions, and everywhere marked with only tiny bays and small headlands. The principal rivers which enter it on the west are the Wick, the Berriedale, the Helmsdale, and the Brora; and on the south are the Findhorn, the Lossie, the Spey, and the Deveron. All the coasts of the frith, from Wick round to Kinnaird's-head, are rich in fish, and have become industriously plied in their fisheries; and, in particular, they yield immense quantities of herrings, though aggregately of inferior quality to those of the fisheries on the west coasts of Scotland.

The interior Moray-frith, where it opens from the exterior between Tarbetness and Burgh-head, is about 16 miles wide. It thence projects southwestward, to Ardersier or Fort-George, 24 miles along the coast of Ross and Cromarty, and 22 along that of Moray, Nairn, and Inverness. Fifteen miles south-west of Tarbetness, between the north and the south Sutors of Cromarty, which rise like the sides of a huge gateway to admit its ingress, it projects the Cromarty frith between Ross and Cromarty. From its entrance to Ardersier, it gradually contracts, till, over a distance of 2 miles, it is only from 1 to 1¼ mile broad. After passing Ardersier, it suddenly expands, and thence to Kessock-ferry, at the mouth of the river Ness, a distance of 9 miles it has a mean breadth of about 3 miles; but there it suffers rapid though brief contraction to about half a-mile, and, by a caprice in topographical nomenclature, loses its name, and is declared to terminate. A continuation of it 7 miles westward, by an extreme breadth of 2 miles, is called the frith or loch of Beauly: see BEAULY LOCH. The interior Moray-frith, except in its outer skirts, presents quite a contrast to the exterior frith as to at once the wealth, the abundance, and the variety of its fisheries; and though possessing along its coasts some regular communities of fishermen, affords them such small employment, that they generally resort to the fishing-grounds north of Tarbetness. For a notice of some geognostic phenomena connected with the frith, and of the general appearance of its coasts, see following article.

MORAY (PROVINCE OF), a large district in the north-east of Scotland, now without any political assignment of territory, yet quite distinct in the popular application of its name, the extent of its geographical limits, and the individuality of its physical features and historical associations. Though its boundaries are very variously stated by topographists, they may easily be ascertained by reference jointly to ecclesiastical jurisdiction and to physical configuration; the extent of the modern synod having been little altered from that of the ancient diocese, and the surface of the country forming, with slight exceptions, a convergence of upland troughs from a stupendous line of water-shed, to a great common plain or laterally prolonged lowland basin. The Moray frith, inner and outer, naturally constitutes the boundary on the north-east and the north. The boundary-line for the other sides commences between the embouchure of the Deveron and that of the Spey; it penetrates the country south-westward up the water-shed between these rivers and their tributaries, till it scales the Cairngorm mountains and touches the great central mountain-range of Scotland; it then turns westward, and moves along the summit ridge of that range till it passes the head of Loch-Laggan, and arrives at the sources of the Spey; it now proceeds north-westward to the head of Loch-Lochy, and thence northward till it falls upon the river Beauly at the cascade of Kilmorack, and it finally passes down that river and Loch Beauly north-eastward to the Moray frith. The province thus comprehends all Elginshire, Nairnshire, a considerable part of Banffshire, and nearly a moiety of continental Inverness-shire.

The eastern half of the province is aggregately much more lowland than the western; the mountains, which everywhere occupy the south, coming down with increasing approach to the north, till, for some distance on the west, they render the whole country characteristically highland. The northern dist-

as a whole is champaign, and may be described as a band of country prolonged for 60 miles from east to west, with a breadth of from 2 to 12 miles, and a superficial area of about 240 square miles. This long belt of lowlands is greatly diversified with ridgy swells, and terraced or low hilly ranges disposed parallel to the frith; and is intersected by the rivers Ness, Nairn, Findhorn, Lossie, and Spey, running across it to the sea. The grounds behind the lowlands appear, as seen from the coast, to be only a narrow ridge of bold or alpine heights, rising like a rampart to guard the orchards, the woods, and the fields below from all invasion; but, when approached, they disclose themselves in file behind file of long and broad mountain masses, receding, in all the wildness and intricacy of Highland arrangement, to a distant summit-line. Much the larger portion may be viewed as simply the screens of the vast glen, the long and grand mountain-strath of the Spey, and of the numerous tributaries which cut their way to it along lateral glens; another and considerable portion, partly identical with the former, are the vastly fissured masses of the Monadleagh mountains, flanking the Findhorn and its headwaters; and a third, though much smaller section, consists of the heights which tower up from the sides of the east end of the great glen of Scotland, admitting, amidst a little wilderness of alps, broad clefts and long narrow vales of picture and romance. Yet, so much opened are the Highland districts of the province, and so practicable many of the declivities to the plough or to other instruments of cultivation, that the bottoms and the reclaimed or reclaimable sides of the valleys are estimated to comprehend about one-third of the entire area.

Nearly all the interest of Moray as a province, and often all the associations of its name, are connected with its lowlands. The coast of the country is almost everywhere low; and the sea-board is remarkable for a great terrace bank which extends from the mouth of the Spey to Inverness, and thence to the great glen to Loch-Ness. This terrace rests upon a base about 14 feet above ordinary high water-mark, and possesses in itself an elevation above that base of about 76 feet; it sometimes juts out into the sea in the form of headlands, but generally overlooks a belt of low plain lying between it and the beach, and occasionally recedes several miles into the interior; and it varies in breadth from a few hundred yards to two miles, and is nearly horizontal in its surface. Other terraces or terraced banks occur along the skirts of the hills, but are unconspicuous and of comparatively small extent. Except along its skirt, where the vertebræ of whales and other saltwater shells of existing species have been found, the great terrace, so far as has been ascertained, does not contain any marine deposit, or afford any decided mark whatever of marine formation. It seems even free from either fossils or fragments of any organized bodies, except a few stumps of oak and fir trees, and consists throughout of the sandy particles, the rolled pebbles, and the massive boulders of all the rocks common to the circumjacent country. White sandstones and cornstones, which occur in sites in the west, have been carried away in loose fragments, and deposited on hills about Portsoy and Banff, at and beyond the eastern frontier of the province; and a beautiful red porphyritic granite, which occurs at Calder and Ardclach between the Nairn and the Findhorn, appears sprinkled in rolled boulders over the country as far east as the mouth of the Spey. Harmoniously with these appearances in the diluvial formation of the lowlands, the rocky escarpments on the sides of the interior mountains face generally to the south and the west, and neighbouring accumulations of their debris dip, in their slopes or inclined planes, toward the north-west. Hillocks of drifted sand, free above tide mark from all shells and other organic remains, and seemingly brought down from the diluvial terraces by the action of the prevailing south-west wind of the climate, extend for many miles along the margin of the frith, from Burgh-head to the vicinity of Nairn, and are continually changing their forms and their relative positions. A curious and singular formation, locally designated the 'Moray Pan or Coast,' occurs in various low grounds in the east, and occasions the worker of the soil no little perplexity and labour. It is a thin stratum of sand and gravel, brought chemically into contact with black oxide of iron, seemingly by infiltration from above, and glued by it into a hard compact mass; it is so hard as to break any plough which forcibly touches it, and, at the same time occurs at the inconvenient shallowness of scarcely a foot from the surface; it offers unconquerable resistance to the attempts of any trees or shrubs to penetrate it with their roots, and even kills every plant whose fibres come in contact with it; and it so baffles all ordinary methods of georgical operation, that the farmer has no certain way of counteracting its malign effects upon the soil, but patiently to demolish it with the pickaxe, and expose it in fragments to the attrition of the weather.

The lowlands of Moray have long been known to fame for mildness and luxuriousness of climate. A certain dryness of atmosphere, in particular, has been repeatedly celebrated by historians and poets. But this property, so delightful in itself, seems to have intimate connexion with the equally celebrated phenomenon of "the Moray floods." The high broad range of mountains on the south-west shelter the lowlands from the prevailing winds of the country, and exhaust many light vapours and thinly charged clouds which might otherwise produce such drizzlings and frequent gentle rains as distinguish the climate of most other lowland districts of Scotland; but, for just the same reason, they powerfully attract whatever long broad streams of heavy clouds are sailing in any direction athwart the sky, and, among the gullies and the upland glens, amass their discharged contents with amazing rapidity and in singular largeness of volume. The rivers of the country are, in consequence, peculiarly liable to sudden freshets and disastrous floods. One general and tremendous outbreak, in 1829, in which they desolated glen and plain, tore up woods and bridges and houses, and aspersed scores of square miles with the wreck of regions above them, afforded an awful exhibition of the peculiarities of the climate, and will long be remembered, in connexion with the boasted luxuriousness of Moray, as an illustration of how chastisement and comfort are blended in a state of things which is benignly adjusted for the moral discipline of man, and the correction of moral evil. So full an account of the floods, and so generally accessible to the reading population, has been given by the graphic pen of the late Sir T. Dick Lauder, Bart., that we need not attempt to give any details. The average annual fall of rain at Elgin, considerably east of the middle of the lowlands, was, for three years ending in 1829, 25·355 inches; and the average temperature for the same period was 48° 33′.

Probably no part of Scotland, not even East Lothian, can compete with Moray in the number and brilliance of the spontaneous testimonies which have been borne to its capabilities and wealth as orchard and tillage ground. A very old and common saying asserts, according to some versions,

that Moray has 15, and according to others that it has 40 days more of summer than most other parts of Scotland. George Buchanan extols the province as superior to any other district in the kingdom in the mildness of its climate, the richness of its pastures, and the profit arising from its fruit trees. Whitelock, referring to the time of Oliver Cromwell, says, "Ashfield's regiment was marched into Murray-land, which is the most fruitful country in Scotland." William Lithgow, after glancing at Clydesdale and the Carse of Gowrie, says, "The third most beautiful soil is the delectable plain of Moray, whose comely gardens, enriched with cornes, plantings, pasturage, stately dwellings, overfaced with a generous Octavian gentry, and toped with a noble Earl, its chief patron, may be called a second Lombardy, or pleasant meadow of the north." Sir Robert Gordon of Straloch, describing the province in 1640, says, "In salubrity of climate, Moray is not inferior to any, and in richness and fertility of soil it much exceeds our other northern provinces. The air is so temperate, that when all around is bound up in the rigour of winter, there are neither lasting snows nor such frosts as damage fruits or trees. There is no product of this kingdom which does not thrive there perfectly, or, if any fail, it is to be attributed to the sloth of the inhabitants, not to the fault of the soil or climate. Corn, the earth pours forth in wonderful and never-failing abundance. Fruits of all sorts, herbs, flowers, pulse, are in the greatest plenty, and all early. While harvest has scarcely begun in surrounding districts, there all is ripe and cut down, and carried into open barn-yards, as is the custom of the country; and, in comparison with other districts, winter is hardly felt. The earth is almost always open, the sea navigable, and the roads never stopped. So much of the soil is occupied by crops of corn, however, that pasture is scarce; for this whole district is devoted to corn and tillage. But pasture is found at no great distance, and is abundant in the upland country, and a few miles inland; and thither the oxen are sent to graze in summer, when the labour of the season is over. Nowhere is there better meat, nor cheaper corn, not from scarcity of money, but from the abundance of the soil." These testimonies all precede the era of modern agricultural improvement; and, so far as we are aware, they have no counterpart in the times since that era began. Moray, when other districts became aware of their poverty, and made a sudden and strenuous movement towards wealth, was, in a great measure, contented to live on the fame of its opulence; and, while congratulating itself on the "ease combined with elegance" of its natural position, eventually was excelled in the luxuries of the farm and the orchard by many a district which had been comparatively a desert. About the beginning of the present century, it had entirely lost its famed pre-eminence; and, while still distinguished by the superior earliness, fertility, and warmth of its soil, it exhibited a condition of agriculture, as to at once tenure, croppings, manuring, and nearly every other detail, which rendered any aggregate number of its naturally rich acres less valuable than many an equal area in the south-east of Scotland which, but 30 years before, had been mere wild pasture, or almost moorland waste. Such a laggard had Moray become, even at an earlier period, in following the footsteps of its reputation, that Principal Robertson, when he came to see it, exclaimed in surprise, "Is this the fine province of which I have heard so much?"

Some details which afford a view of both the successive stages and the present condition of the agriculture of the province, have already been given in our articles on Banffshire and Inverness-shire and such others as are of any value, we reserve fo the articles on Morayshire and Nairnshire, pa ticularly the former. We shall here do no mo than bring together a few facts common to the lo lands of the whole province, which exhibit the co dition of things a century ago, and present them i edifying contrast both to the ancient fame of th country, and to its present fine state of improvemen Leases were in general unknown; and when give were too short to be of any practical value. Lan was minutely subdivided into mailens, crofts, an small farms; and, at the same time, knew little o nothing of the luxury of enclosures. Tenants wer segregated into villages or townships, somewhat i the style which still prevails in Orkney and Shet land; and they had their arable grounds in run-rig and their pasture lands in common. Green crops and provisions of every sort for the hybernal sus tenance of cattle, had not been heard of, or if hear of, were despised. Some of the animals of the floc were slaughtered at the end of autumn, and con verted into salted meat; and the others were, wit no small difficulty, kept alive during a severe winte and very frequently were, as the phrase went, "a the lifting" in the spring,—so lean and attenuated that they had to be lifted from the ground, and as sisted to the pastures. A rude and primitive plough drawn by four or six oxen, and attended or worke by two drivers and a ploughman, moved lumberingly across every arable field, and shallowly scratche the weed-woven surface. The slede or sledge, an the kelloch, were beginning to supersede the simpl horse-borne pannier; the former a wooden fram without wheels, the latter a similar frame wit wheels formed of semicircles of solid board, an fastened to an axle which revolved in wooden hoops and both surmounted by a conical wicker basket o no great capacity, and drawn by means of horse-hair hemp, or twisted straw ropes, knotted together an fastened to wooden pins. The labourers in the fiel allowed most of the spring to pass away befor commencing their appropriate toils; and, during summer day, they worked a few hours in the morn ing, abandoned themselves to a long sleep towar noon, and, if nothing occurred to interest them i the house, or set them a-gadding from home, re sumed their labour for a short period in the evening Famines, or years of comparative scarcity, even i spite of the natural fertility of the soil, were, in con sequence, far from being infrequent. During th summer of 1743, 'the dear year,' so memorable ove all Scotland, thousands of the people of Mora wandered among the fields devouring sorrel, th leaves and stems of unfilled pulse, and whatev could mitigate the famishing corrosions of hunger and multitudes died of diseases contracted by parti inanition, and not a few of literal, absolute starv tion. Even so late as 1782, the noted year of th 'frosty har'st,' the province severely writhed und the scourge of scarcity.

The food, dress, and manners of the inhabitan at the same epoch, or a century ago, were in keepi with their modes of husbandry. Oats, rye, barle and pease-bread were the staff of life. Vario weeds and wild herbs, particularly the nettle a the mugwort, were gathered to give substance a relish to their thin oatmeal brose. Unskinned peas boiled into a soup, were a rare and coveted dis 'Sowens,' now so well-known among the peasant in some of the rich agricultural districts on the Sco tish border, and still a favourite dish and a regul article of food throughout the north-east of Scotlan were universally in use. Cakes, formed of oatme bran fermented to a slight degree of acidity, a

therefore only a hardened 'sowens,' but containing some aromatic seeds, were the bread of luxury on occasions of festivity. The potato did not begin to be generally cultivated till about the year 1750. A 'kail-yard' was a rare object among the peasantry so late as about 1790; and a garden, even at a considerably later date, was never or rarely seen as an appendage of a farm-stead. Milk, except during part of the summer half year, was a rarity; and home-made beer, with hops, or more commonly without them, was used among such persons as could afford it as a succedaneum. Fish were occasionally in use; and, in their dried state, they were eaten with a home-grown and coarsely prepared mustard; but the fisheries were very partially and inefficiently plied; and the shoals of herrings which now everywhere enrich the coast were allowed undisturbed occupancy of every bay and creek. Corn-mills, though known, were too few or costly or unappreciated to have yet superseded the use of the ancient hand-mill or quern. Barley was decorticated by being first softened in water and next beaten with a peculiarly shaped wooden mallet in a hollow stone; but in this prepared state it was only a hebdomadal luxury,—the distinguishing delicacy of the Sabbath-day dinner. Poultry and eggs seem to have been all disposed of as ecclesiastical contributions and the payment of rents. The dress of all the common people was simple, unvaried, and chiefly of home-grown and home-made material. 'Hodden-grey,' or a light blue cloth formed of wool from their own flocks, spun and woven in their own homes, and dyed with the indigenous herbs of their own fields, was the universal clothing material of the men. The work-day costume consisted of a short coat of this fabric, short knee-breeches, long stockings, and a broad flat blue bonnet; and even the full dress for Sabbath and for festal occasions, only substituted a long coat, of great size, of uniform cut, and with huge ornate brass buttons,—a coat so carefully preserved that one specimen often equipped grandsire, father, and son. Flax, grown in their own fields and manufactured in their own homes, furnished much of the material for the dresses of the females; and the high muslin 'mutch' or the flat 'toy,' such as are still used by the Norman and Flemish women, universally formed the female head-gear.

Moray, at the epoch of record, or about the close of the first century, was possessed by the British tribe of Vacomagi; one of those communities who, after and even sometime before the period of the Roman abdication, figured predominantly in the history of North Britain under the name of Picts. Their towns, while a separate tribe, were Tarnea, in Braemar, immediately beyond the south-eastern limits of Moray; Banatia, on the east side of the Ness, about 600 yards below its efflux from Loch Ness; Ptoroton, on the promontory of Burgh Head; and Tuessis, on the east bank of the Spey, a little below the parish church of Bellie. In the early Pictish periods the Vacomagi seem to have held a predominant or at least a distinguished place among the confederated tribes; and, at all events, appear to have had within their territory the earliest seat of the Pictavian monarchy: see INVERNESS. When the Scots, bursting beyond the limits of Dalriada, and pushing their stealthy but sure conquests northward among the western Highlands, arrived at the lands which form the mountain-rampart of Moray, they drove the Picts into the plains, and maintained entire possession of the alpine fastnesses and intervening glens. See DALRIADA, and historical section INTRODUCTION. After the Pictish and the Scottish dominions became united into one monarchy, the Scandinavian vikingr made frequent descents on the plain of Moray, and even enthralled it for long consecutive periods. See ORKNEY. Thorstein the Red, Sigurd, and Thorfin ruled over it, either independently or with slender acknowledgment of the superiority of the Scottish kings, from the commencement of the 10th to the middle of the 11th century. The Scandinavian settlers intermarrying with the Scottish and the Pictish Celts, a mixed race arose who seem to have been a necessitous, unsettled, turbulent people. Their chiefs or maormors soon began to assume the name of Earls; and having some connexion with the reigning family, they advanced pretensions to the throne, and convulsed the country by rebellions against the sovereign, and by deeds of regicide. They killed Malcolm I., in 959, at Ulern, supposed by Shaw to be Auldearn; they killed King Duffus at Forres, in 966, when he came to punish them for their crimes; and, about the year 1160, they raised a grand rebellion against Malcolm IV., and so provoked him by the daring and unweariedness of their strife, that, after overwhelming them with his army, he transported all who had assumed hostile arms, including the greater part of the population, to the southern districts of the kingdom, as far as Galloway, and gave their homes and their lands into the possession of strangers. The name Moray, originally Murref, and in modern times Murray, was, up to this time, a common cognomen in the province; but, in consequence, as is supposed, of this dispersion, it is now a rare name among the natives, and at the same time occurs often in the counties south of the Grampians. Both Malcolm IV., after expatriating the rebels, and his successor William the Lion, appear to have frequently resided in the province; for, from Inverness, Elgin, and various others of its localities, they dated several of their charters.

The mixed and altered race who henceforth were sons of the soil, lived for many centuries apart from their Celtic neighbours; and—as still appears by the resemblance of the vocalic sounds of the provincial idiom to those of the languages spoken north of France—they retained in speech, and probably in customs, many of the characteristics of their semi-Scandinavian predecessors. They appear also to have become, if not effeminate, at least greatly more peaceable, less hardy, and less acquainted with the use of arms than the stern mountaineers of the upland districts of Badenoch and Lochaber. Either from the superior richness of the country, or from the comparatively easy and peaceful character of the inhabitants, the Highland caterans regarded the plain of Moray as open and ever-available spoliage-ground, where every marauder might, at his convenience, seek his prey. So late, in fact, as the time of Charles I., the Highlanders continually made forays on the country, and seem to have encountered marvellously little resistance. The Moray men, it has been remarked, appear to have resembled the quiet saturnine Dutch settlers of North America, who, when plundered by the Red Indians, were too fat either to resist or to pursue, and considered only how they might repair their losses; and Pennant supposes that, in consequence of their being so mixed a race, Picts, Danes, and Saxons, and altogether aliens to the pure Celtic communities of the mountains, the Highlanders thought them quite 'fair game,' and never exactly comprehended how there could be any crime in robbing 'the Moray men.' So late as 1565, as appears from the rental of the church-lands in that year, the inhabitants of the province remained entirely a distinct people from the Highlanders, and all bore such names of purely Lowland origin as are still common around Elgin; and not till a comparatively

recent period did declining feuds and the prejudices of clanship permit social intercourse and intermarriages with the neighbouring Gordons, Grants, and Macphersons. Moray, in consequence of the attachment of its people to the cause of the Solemn League and Covenant, and of the Marquis of Montrose and his ally, Lord Lewis Gordon, having adopted it as one of their principal scenes of action, suffered more disasters than perhaps any other district of Scotland from the civil wars under the last of the Stuarts. So severe and memorable were the inflictions upon it by Lord Lewis Gordon, that an old rhymer classes his name with the Scottish designations of two of the worst plagues of an agricultural country:

> "The gule, the Gordon, and the hoodie-craw,
> Are the three warst things that Moray ever saw."

Montrose, after his victory of Inverlochy, in 1645, made a desolating descent upon the province, destroying the houses of all persons who would not join his standard, and inflicting upon the towns of Elgin, Cullen, and Banff the disasters of an indiscriminate pillage. Yet much as their country suffered in consequence of their opposition to the prelatic schemes of the Stuarts, "the men of Moray, in general, or at least in the upper parts of the country, became Presbyterians more from accident than from temper. During the alternations of Presbytery and Episcopacy which took place at the Reformation, they did not at all discover that decided preference to presbytery which marked the western and southern counties. Had no greater zeal existed elsewhere, the island would probably at present have had but one national church. At the Revolution few of the clergy of this province conformed to presbytery, but availed themselves of the indulgence which the government gave of allowing them to remain in their benefices for life upon qualifying to the civil government; and, in order to cherish presbytery, it was necessary, from time to time, to send clergy from the south country to serve the cure." The Moray men never, except in a small minority of instances, experienced that aversion to holidays which distinguished both the Covenanters of Scotland and the Puritans of England; and—probably without adverting to the origin of the practice—they still very generally, and in methods of glee and festivity, celebrate St. John's day, St. Stephen's day, Christmas day, and, in a less degree, some other holidays.

The original earldom of Moray existed before the era of modern authentic history; and, as to its nature, its extent, and the line or succession of individuals who held it, is an object of little more than vague conjecture. About 1131, Angus, Earl of Moray, was slain by the Scots at Strickathrow; in 1171, William the Lion promised to grant the earldom to Morgund, son of Gillocherus, Earl of Mar; and, during the reign of that King, Malcolm, Earl of Fife, and William Comyn, Earl of Fife and Justiciary of Scotland, were successively Custodes of Moray. Any accounts additional to these meagre particulars, are too ill-vouched to be trusted. But about 1314, the earldom breaks full upon the view, in joint distinctness and magnificence, as the princely gift of Robert Bruce to his tried and trusty companion in arms, Thomas Randolph. Its boundaries, as then established, considerably differed from those of the ecclesiastical province; yet comprehended to a large extent, the same territory, and were almost equally extensive. They commenced at the mouth of the Spey, and, except for including the lands of Fochabers and Boharm on the east bank, they went up the bed of that river all the way to the marches of Badenoch; they then included the lands of Kincardine, Glencairn, Badenoch, Maymez, Locharkedh, Glengarry, and Glenelg, along the north-west limits of Argyleshire, and the shores of the western sea; and they next ran along the marches of the earldom of Ross, till they fell upon the river Farrar, and thence went down that stream and the Beauly to the Moray frith. The estate and the title of the earldom, according to the original principle of peerages, were inseparable, the title becoming defunct upon the alienation of the estate. Thomas, the second Earl of the Randolph line, and the son of the first, succeeded to the possessions in 1331, and was killed in the battle of Dupplin in 1332. John, his brother, succeeded him, and was killed in the battle of Durham in 1346. Patrick Dunbar, Earl of March, and son-in-law of the first Earl, Thomas Randolph, was next heir according to the law and usage of Scotland, but was excluded by a limitation in the original charter to heirs-male; yet he was called Earl of March and Moray. His second son, John, was made Earl of Moray in 1372; but received his earldom shorn of the large districts of Badenoch, Lochaber, and Urquhart. The next Earls were Thomas, the son of John, and James, the nephew of this Thomas. The nearest akin were now two daughters; and Archibald Douglas, who was married to the younger, and was brother to the Earl of Douglas, and enjoyed in his favour all the powerful influence of his semiregal family, was made Earl of Moray in 1446; but he joined his brother's rebellion in 1452, was killed in 1455, and left his title and possessions a forfeit to the Crown. The earldom was, in 1501, obtained by James Stuart, the bastard son of James IV.; but, at his death, in 1544, it was again without an heir. In 1548, it was given to George, Earl of Huntly; and, in 1554, it was resumed by the Crown. It was next, after a lapse of eight years, bestowed on James, bastard son of James V., prior of St. Andrews, and afterwards the well-known Regent of the kingdom. This Earl—the founder of the Moray family, or ancestor of all the subsequent Earls—held his possessions by a variety and an intricacy of grants, which occasioned perplexity respecting their inheritance. In February 1561–2, he obtained the charter of the earldom; in January 1563–4, he obtained another charter, limiting the succession to heirs male; in June 1566, he obtained a third charter, throwing open the succession to his heirs general; and, in 1567, he obtained from parliament a ratification of the charter of 1563, limiting the succession to his heirs male. He was slain in 1570–71; and left no male heir. In 1580, James Stuart, the son and heir of James Stuart of Doune, received from James VI. the ward and marriage of Elizabeth and Margaret, the daughters of the deceased Earl; and a few days afterwards he married Lady Elizabeth, and assumed the title of Earl of Moray. As his claim to the earldom was doubtful, a charter was given him in 1592 by James VI. and the Scottish parliament, ratifying to his son all the charters granted to the Regent and the Lady Elizabeth. This, as it confirmed both what declared the succession general, and what limited it to heirs male, rendered the entire principle of the family succession inexplicable. Earl James, therefore, lost no time in obtaining an entirely new charter, whose provisions accorded with the earliest given to the Regent. This earl was murdered in 1592. A series of three Earls, each the eldest son, now followed, and died respectively in 1633, 1653, and 1700. Two brothers of the last of these next followed, and died respectively in 1735 and 1739. A series of three eldest sons next succeeded; the last of whom, Francis, died in 1848. The present Earl, the eleventh

A Fullarton & Co. London & Edinburgh

in succession, Francis Stuart, the son of him who died in 1848, was born in 1795. The other titles of the family are Baron Doune, of the year 1581, Baron St. Colme, of the year 1611, both in the peerage of Scotland, and Baron Stuart of Castle-Stuart, of the year 1796, in the peerage of Great Britain. The family seats are Darnaway-castle in Morayshire, Donibristle-castle in Fifeshire, Castle-Stuart in Inverness-shire, and Doune-lodge in Perthshire.

"The lowland situation of Moray," says a writer in the Sketches of Moray, a work to which we have been indebted for a number of our details,—"The lowland situation of Moray, joined to the amenity of its soil and climate, must have pointed it out as a desirable locality for our first religious establishments. It was early visited by the Culdees, the first messengers who brought the pure spirit of Christianity from the primitive churches of the east. Subsequently, about the beginning of the 11th century, numerous religious establishments from Italy planted the Romish religion in the province, and, from that period till the Reformation, the church engrossed the chief sway, and held extensive possessions in the district. A bishopric was established about the year 1100. The abbey of Kinloss, and the priories of Urquhart, Pluscarden, and Kingussie, besides several other religious houses and hospitals, quickly followed; and the province was regularly subdivided into parishes, and churches or chapels were erected in each." A notice of the bishopric, and of its history, revenues, and cathedral, is given in the article Elgin: which see. The synod of Moray, in the presbyterian Established church of Scotland, comprehends the presbytery of Strathbogie, with twelve parishes and one chapelry,—the presbytery of Abernethy, with six parishes and three quoad sacra parishes,—the presbytery of Aberlour, with five parishes,—the presbytery of Forres, with six parishes,—the presbytery of Elgin, with nine parishes,—the presbytery of Nairn, with six parishes,—and the presbytery of Inverness, with seven parishes, and two quasi-parochial or consociated churches. The Free church also has a synod of Moray, with presbyteries of Strathbogie, Abernethy, Aberlour, Elgin, Forres, Nairn, and Inverness. The Scottish Episcopal church has an united diocese of Moray and Ross, whose bishop has his residence at Inverness.

MORAYSHIRE—often called Elginshire, from the name of its capital—is the central division of the province of Moray. It is bounded on the north by the Moray frith; on the east and south-east by Banffshire; on the south by Inverness-shire; and on the west by Inverness-shire and Banffshire. Over 25 miles on the east its boundary is traced by the river Spey, and over 24 miles on the west, by a ridgy water-shed, the north-eastern prolongation of the Monadhleagh mountains; but everywhere else, except along the Moray frith, the boundaries are altogether artificial. Even the Spey is a boundary-line only at intervals, or with interruptions; and lies on its left bank, one farm belonging to Banffshire, and, on its right bank, no fewer than six pendicles of Morayshire,—each of which is from 5 to 9 miles in length. The county itself, however, is not compact; but consists of two separate, though not widely detached, parts. The larger part lies on the north; and is not very far from having the outline of an equilateral triangle. A straight line, from angle to angle, along its north side, measures 24½ miles, but everywhere cuts off a belt of sea-board which, in general, is narrow, but a little west of the Lossie has a breadth of 4½ miles; a straight line along the south-east side, measures 25½ miles, and, except for cutting off a projection beyond the Spey of six miles by 5, everywhere falls on or near the boundary; and a straight line along the south-west side, measures 24½ miles, but, over 7 miles, falls slightly beyond the boundary, and, over 11, falls slenderly within it. The smaller division of the county is separated from the larger by the intervention of a detached district of Inverness-shire, and by two very small detached districts of Nairnshire; and lies to the south-west at the distance of from 3½ to 5 miles. Except for a connecting neck of less than a mile, upon the Spey, a little below the church of Abernethy, this division would consist of two detached parts. Its western part lies on the left bank of the Spey, is bounded by that stream for 7 miles, and measures 12 miles from north to south, and 9 in the opposite direction; and its eastern part forms the largest of the county's sections on the right bank of the Spey, and extends 9 miles north-west and south-east, with a breadth of from 4 to 6½ miles. The superficial contents of the county are, in all authorities, so very variously and loosely stated, that they seem never to have been even proximately ascertained. Leslie's 'View of the Agriculture of Nairn and Moray,' assigns as the area of these counties conjoined, about 800 square miles, or 512,000 English acres; the author of 'The Beauties of Scotland' assigns 800 square miles to Morayshire alone; and Oliver and Boyd's Almanac at one time states the area of Morayshire at 531 square miles or 340,000 acres, and at another time states it at 840 square miles or 537,600 acres. The latter statement of Oliver and Boyd is the earlier of the two, being superseded by the other in the later years of the Almanac; and yet it is adhered to in 1856 by the notice of Morayshire in Douglas's Supplement for the Northern Counties.

The sea-board part of the greater of the two detached districts of the county is, in a general view, a champaign country, and contains more amenities of climate, wealth of cultivation, and beauty of landscape than any other territory of equal extent in the northern Lowlands. Its breadth ranges between 5 and 12 miles, and probably averages about 7. A pendicle of it in the north-east consists of the greater portion of the Culbin sands, and, of course, is all deduction from both worth and beauty. All the other portions are an expanse of low country diversified by many gentle rising grounds, and by the large terrace and the pleasant ridges noticed in our account of the province of Moray; and, being everywhere laden with crops, or arrayed in wood, or adorned with pleasure-grounds, or gemmed with towns and mansions, they present occasionally a luscious, and often an attractive picture. The district behind the plain ascends rapidly from hill to mountain, and becomes nearly throughout a wilderness of upland pasture, intersected with glens and vales along the course of streams enclosing numerous though small plains of great fertility and beauty, and containing along the skirts of the heights much land which luxuriates in verdure, or yields returns to the labours of tillage. The district in the extreme south is called Brae-Moray, and differs from the central mountain-ground chiefly in being extensively occupied with thriving forests of natural pine.

Though the champaign district has a northern exposure, and lies within the 58th degree of north latitude, it possesses singular mildness of climate. The hardier kinds of fruit, all the varieties of the apple, and most of the varieties of the pear and the plum, might, by a little attention, be abundantly produced on every farm; and fruits of greater delicacy, the apricot, the nectarine, and the peach, ripen sufficiently on a wall in the open air. The wind

blows from some point near the west during about 260 days in the year; and, in the summer, it is for the most part a gentle breeze, coming oftener from the south than from the north side of the west. Winds from the north-west or north generally bring the heaviest and longest rains; and winds from the south or south-east usually bring only slight or drizzling showers, occasionally accompanied with thunder. The district presents no object so elevated as to attract the clouds while they sail from the mass of mountains on the south toward the alps of Sutherland. Winter is singularly mild, and, for a very brief aggregate period, sheets the ground with snow; summer rarely commences its characteristic warmth till July; and autumn, in some years, is uniformly the driest and most pleasant season, and, in others, is rainy from about the equinox till after the middle of October. In the upland districts, rain falls to the amount of 5 or 6 inches more than the medium depth upon the coast; the seasons are often boisterous and severe; and unpropitious weather often forbids or thwarts the operations of husbandry.

The Spey, with the aid of its tributaries, drains rather more than a moiety of the whole area of the county. Dulnain-water, coming in from Invernessshire, and running to the Spey, cuts the western and larger section of Brae-Moray into nearly equal parts. Nethy-water drains most of the eastern section of Brae-Moray. Other tributaries of the Spey in the county are very numerous; but in no instance have more than about 6 miles length of run. The Lossie rises and has its whole course in the county; and makes a long curving sweep through nearly the centre of the lowlands, past the town of Elgin. The Findhorn, the most scenic stream of all Moray, and rich in the number and variety of its landscapes, runs 11 miles in the extreme west of the county, but, over part of this distance, a little before debouching to the sea, expands into Findhorn-loch. Dorbach-water issues from Loch-an-durb, flows parallel with the western boundary at about a mile's distance from it, and after a run of 10 miles, falls into the Findhorn below Reluglas. The other streams of the county are all inconsiderable brooks. —The loch of Spynie, situated in the cognominal parish, was formerly a conspicuous lake of 3 miles in length, but is now much reduced by draining. Loch Cots, in the same neighbourhood, was originally marine, and, in the 13th century, is described as a bay. Loch-na-boe, at no great distance from these other lakes, covers about 60 acres, and is surrounded by a forest of firs, planted about the year 1773 upon a barren heathy moor. Loch-an-durb, nearly 4 miles in length, and upwards of 1 mile in breadth, is situated amid a mountainous waste very nearly at the meeting-point of the three counties of Moray, Nairn, and Inverness. The other lakes of Morayshire are too inconsiderable to require separate notice.—Chalybeate springs occur in every corner of the county, but are in no instance much distinguished for their medicinal properties. Such wells as in Romish times were reputed holy, are generally of pure water, free from any mineral tinge.

The general geognostic features of the county are glanced at in the article on the province. Sandstone occurs in sufficient plenty and excellence to construct vast cities; and, in various localities, is quarried for every purpose of architecture, and for pillars, rollers, and paving-flags.—Limestone occurs in several places near the coast; it began to be quarried upon the estate of Glass-green about the year 1740; and it is now worked in various quarries. —Coal is conjectured to exist under the sandstone and the limestone, and has often been laboriously searched for, but has not hitherto been discovered. —Lead was mined for in the Coulard-hill, west of Lossiemouth, about the year 1773; but it occurred only in small nodules, and was abandoned.—Iron ore is believed to exist in abundance in the high country; and about the year 1730, an iron foundry, once of high consideration, but long ago almost forgotten, was established by the York building-company at Coulnacoil in Strathspey.—Shell marl occurs in the marshy vale of Litie, in a lochlet of 20 acres at Kinstorie, in the loch of Spynie, in the hill of Bencagen, and in a small hill on the estate of Clankum.—A thin light slate, of a blue or grey colour, is quarried at Clunie in Rafford. Several schistose rocks, so laminated that they form slabs or slates, occur among the primitive formations of the uplands. A stone, of a purple colour, highly indurated by a ferruginous matter, admitting the smoothest polish, but in a slight degree diaphanous, occurs about Rothes on the Spey, and has, under the name of porphyry, been formed upon the lapidary's wheel into toys and trinkets.

The soil of the arable lands of the county may be classified under the general names of sand, clay, loam, and reclaimed moss. Sand, or a light soil in which sand predominates, extends, with inconsiderable exceptions, over the eastern half of the lowlands, or all Speymouth, Urquhart, St. Andrews, Lhanbride, and Drainie, the eastern part of Spynie, the greater part of Elgin, and the lower lands of Birnie and Dallas. A clay soil prevails throughout Duffus and Alves, part of Spynie, and small pendicles of the sandy district. A loamy soil covers extensive tracts in Duffus, Alves, and Spynie, and nearly the whole of Kinloss, Forres, Dyke, the lower lands of Rafford and Edenkillie, and the plains or alluvial grounds of the highland straths. A clay-loam covers a considerable part of Knockando. Moss, worked into a condition for tillage, occurs in rather large extent in Knockando, and in pendicles in the champaign districts, almost always in the lowest situations, superincumbent upon sand, and so peculiar in quality as to emit on a hot day a sulphureous smell, and strongly affect the colour and formation of rising grain; it occurs also on the flats and slopes of the lower hills of the uplands, quite peaty in quality, but corrected in its sponginess by an intermixture of sand. If all the arable grounds were distributed into 63 parts, the sandy soils would be found to cover 24 of these, the clay soils 11, the loam soils 27, and the reclaimed moss soils 1. The lowlands of Alves and Kinloss resemble the landscape between Cambridge and Ware, except that they are more diversified by the dwellings of the farmers, and lines of trees around their gardens; so that they are not only luscious in beauty, but altogether free from patches of inferior or uncultivated soil. But the other champaign districts have all considerable or noticeable interminglements of waste,—fields or tracts thickly covered with whin-bushes, brooms, the most stunted and useless kind of heath, or an almost irreclaimable species of peat-earth; and the far-extending upland regions are prevailingly moor and mountain wilderness,—a country clothed in russet, freckled with naked rock, and largely abandoned to beasts of chase and the alpine-nested fowl. Leslie's 'Agricultural View of the Counties of Nairn and Moray,' published in 1811, estimates the amount of waste grounds in the two counties at 301,680 Scottish acres, in a supposed total of 407,200.

Forests of natural wood, as is proved by the existence of large trunks of oaks and pines in the mosses and in the beds of streams, anciently covered the greater part of the champaign country, and

formed part of the Sylvæ Caledoniæ of early historians. An expanse of natural pine still exists on the Strathspey frontier toward Inverness-shire, forming small part of a great forest of nearly 20,000 acres, chiefly within Inverness-shire, whence supplies of timber, in large quantities, have, for a long period, been floated down the Spey to Garmouth, for disposal there in advantageous traffic. Other natural woods, consisting of birch, hazle, alder, and a few oaks, occur in little groves and stripes along the banks of the rivers, and several of the smaller streams; and, in some instances, have been enlarged by plantation; but, in the champaign country, they are all of very limited extent. Plantations began generally to be formed about the year 1770; and they now cover many hills of moderate height, and a great proportion of the grounds in all parts of the county which are unfit for cultivation. Those of the smaller proprietors bear, in general, a larger proportion to the extent of their estate than those of the greater proprietors; the latter, however, being still considerable. The trees first planted were exclusively Scottish firs; but from about the year 1800 these began to be gradually cut out, and substituted by larch, and the harder kinds of timber. The total extent of wood in the county, in the year 1854, was estimated, in the agricultural statistic returns to the Board of Trade, at 1,354¼ acres.

The practice of tillage in Morayshire did not, for ages, venture to contest the possession of the plains and valleys with wolves and other wild animals; but, compelled to find a retreat in the most secure positions, commenced its operations on the upper slopes of the hills, still obscurely traced with ridges and other marks of tillage. But emboldened by usage, and becoming skilful by practice, it gradually came down from such unprofitable altitudes, invaded the thickets with fire, waged a warfare of extermination against the four-legged foes of improvement, and won the mastery successively of the lower slopes and the hanging or level plains. Though tillage must long have been much less practised than pasturage, and could make but sorry efforts compared to what it achieves in modern times, wheat is mentioned by early historians as a large article of produce, and, in common with other grains, was raised in sufficient quantity for the supply of all local demands. At the era of the Reformation, however, agriculture seems to have suffered a serious decline,—for then the amount of wheat in the Bishop of Moray's rental was only 10 bolls, while that of barley was 1,232; and, in the times which immediately succeeded, all classes became so engrossed with the ecclesiastical and political movements which tumultuously agitated all Scotland, that they had neither leisure nor inclination to improve the soil. The enactment of some beneficial laws to regulate the valuation and purchase of tithes, the establishing of parish schools, the dividing of commons, and eventually the conservation of woods, and the forming of enclosures, were the only circumstances which, during the long period of a century and a half, prevented the history of agricultural progress from being a total blank. So disastrous in the county were the seven years of scarcity which visited the province, [see preceding article,] that the magistrates of Elgin established a police for burying, at every dawn, the bodies of such miserable wanderers in quest of food as during the preceding night had fallen a prey to hunger in the highways and the streets. At the close of the first decade of the present century, improvement had asserted much mastery over most of the arts of both georgy and husbandry. The ploughmen were then skilful in trimming the plough and forming the furrow; the plough itself was as fine in structure and simple in management, as that of any of the advancing counties of the aroused kingdom; the grounds about the dwellings of the proprietors—though not those of the distant or exterior farms of estates—were enclosed; a portion of every large and well-managed farm was disposed in summer fallow; a regular system of rotations, with a due place to green crops and their virtual fallowing, was generally in practice; draining, manuring, irrigating, and embanking, had received a considerable amount of attention; and, in general, indications were afforded, which have since been progressively verified, that both proprietors and tenants were aware how rapidly other regions of Scotland had risen from poverty to wealth in agriculture, and were resolved to be no laggards in the stir and efforts of national improvement.

According to the statistics of agriculture, obtained in 1855 for the Board of Trade, by the Highland and Agricultural Society of Scotland, the number of occupiers of land paying a yearly rent of £10 and upwards, exclusive of tenants of woods, owners of villas, feuars, householders, and the like, was 1,159; and the aggregate number of imperial acres cultivated by them was 79,853¾. The distribution of the lands, with reference to crops, was 7,298¾ acres under wheat, 8,508 under barley, 17,974¼ under oats, 471¾ under rye, 494½ under bere, 84¾ under beans, 224¾ under pease, 240 under vetches, 11,967¾ under turnips, 3,717 under potatoes, 7¾ under mangel-wurzel, 2½ under carrots, 24½ under cabbages, 1 under flax, 5¾ under turnip-seed, 12 under all other kinds of crops, 251½ in bare fallow, and 28,519¾ in grass and hay in the course of the rotation of the farm. The estimated gross produce of the chief crops was 175,170 bushels of wheat, 280,764 bushels of barley, 507,773 bushels of oats, 13,104 bushels of bere, 7,273 bushels of beans and pease, 146,007 tons of turnips, and 18,585 tons of potatoes. The estimated average produce per imperial acre was 24 bushels of wheat, 33 bushels of barley, 28¼ bushels of oats, 26½ bushels of bere, 23½ bushels of pease and beans, 12 tons 4 cwt. of turnips, and 5 tons of potatoes. The numbers of live stock comprised 3,526 farm horses above three years of age, 720 farm horses under three years of age, 545 other horses, 5,964 milch cows, 5,303 calves, 11,162 other bovine cattle, 28,726 sheep of all ages for breeding, 14,171 sheep of all ages for feeding, 20,856 lambs, and 4,074 swine. In the year 1854, the number of occupiers of land paying a yearly rent of less than £10 was 613; the aggregate number of imperial acres of arable land held by them was 4,336; and the aggregate of their live stock comprised 368 horses, 1,301 bovine cattle, 1,687 sheep, and 241 swine.

Few farms comprehend 300 acres; a considerable number range between 300 and 140; another considerable number range between 120 and 60; a number larger than that of both these classes range between 50 and 20; and some upon the skirts of the larger farms, or upon the sides and bottoms of the glens, range between 18 and 5. In 1854 there were 55 landowners of the county; 10 of whom had a Scotch valuation not exceeding £50,—4 not exceeding £100, —8 not exceeding £200,—10 not exceeding £500,—7 not exceeding £1,000,—10 not exceeding £2,000, —3 not exceeding £5,000,—2 not exceeding £10,000, —and 1 upwards of £10,000. The valued rental of the county in 1674 was £65,603. The annual value of real property, as assessed in 1815, was £73,288; in 1849, £119,891. The real rental in 1855, as ascertained under the new valuation act, was £113,322 16s. The average of the fiar prices from 1848 to 1854, both inclusive, was wheat, 50s. 1½d.; barley, 27s. 8½d.; oats, 20s. 0½d.; rye, 28s. 2¾d.;

pease and beans from 30s. to 50s.; and oatmeal, 16s. 2d.

Blankets and wearing apparel of wool and of flax, are, to a large extent, of home manufacture. Much flax is spun for the Aberdeen manufacturers; and some coarse woollen cloth, called plaiding, is made in private families. A small manufactory of woollen cloth has long been established in St. Andrews Lhanbride. Tan-works have long existed in Elgin and Forres. The distilling of whisky is carried on extensively in the county, and may be regarded as its most prominent department of manufacture. The principal articles of export are black cattle and agricultural produce; yet, there are some years in which no demand for cattle exists, and some in which little corn can be spared. Most of the grain exported is shipped at Findhorn, Lossiemouth, and Garmouth; and disposed of at Leith, Dundee, and London. Sheep and swine are generally purchased by the Aberdeen butchers. Pork and salted beef are shipped at the new harbour and village of Burgh-head. Timber, chiefly from Strathspey forest, is annually exported to the value of nearly £2,000; and salmon to the value of £3,000. The principal imports are flax, ropes, hard and soft soap, and foreign bar-iron. The fairs of the county are in no instance considerable markets for sheep; and are less valued by the farmers than those of Banffshire. They amount altogether to about seventeen in the year, and are held at Elgin, Forres, Findhorn, Lhanbride, and Garmouth.

The interior communications of the county are numerous and good. One grand line of road runs along the champaign country through Elgin and Forres; and carries subordinate lines, aggregately amounting to about 70 miles, running athwart the same district. A great line passes up the Spey, but, over several miles, is on the Banffshire side of the river. Another line passes up the Findhorn and the Dorbach, to the former at Grantown in Invernessshire. One line connects Elgin and Rothes; and another diverges from Strathspey up the Dalnain. The only line of railway hitherto executed within the country is a short one from Elgin to Lossiemouth; but measures are in progress for connecting this westward with the Inverness and Nairn railway at Nairn, and eastward with the prolongation of the Great North of Scotland railway at Keith. Several projects for railways, both in similar directions to these and in other directions, within the county, were in high feather during the heat of the railway mania; and are worth being recorded, were it only for the sake of indicating the lines of level and the sources of traffic. One projected line was to extend from Elgin to Inverness, through Forres and Nairn, with a total extent of 44¼ miles, including branches, to be executed on a proposed capital of £300,000. Another was to extend eastward from Elgin in the direction of Banff, to be prolonged thence to Aberdeen. Another was to go south-eastward to Rothes and Huntly, in identification with the Great North of Scotland line. Two branches were to go from the Elgin and Inverness line to respectively Lossiemouth and Burgh-head. Another projected line was to pass through the southern part of the county, deflecting from the Elgin and Inverness line, and passing up Badenoch and down Athole, to terminate at Perth. There were likewise projects for other lines and branches; all of which, however, were competitors with those already mentioned.

The royal burghs in Morayshire are Elgin and Forres. The other principal towns or large villages are Fochabers, Garmouth, Lossiemouth, Burgh-head, and Findhorn. The less considerable villages are Rothes, Kingston-Port, Mosstodlach, Urquhart, Lhanbride, Stotfield, Branderburgh, Hopeman, New Duffus, Cummingston, Roseisle, Bishopmill, Kinloss, Crook, Coaltfield, Rafford, Dallas, Edenville, Archiestoun, Dyke, Kintessack, and Whitemyre. Some of the principal mansions are Gordon castle, the Duke of Richmond; Darnaway castle, the Earl of Moray; Innis-house, the Earl of Fife; Duffus-house, Sir Archibald Dunbar, Bart.; Ballindalloch castle, Sir George Macpherson Grant, Bart.; Altyre, Sir A. P. Gordon Cumming, Bart.; Roseisle, Charles S. C. Bruce; Grantlodge, Grant; Inverugie, Young; Muirton, Monro; Orton-house, Duff; Springfield, Macdonald; Tannochy, Urquhart; Castle-Grant, Grant; Dunkinty, Brown; and Lethan, Brodie. The principal antiquities are Kinloss abbey, the priory of Pluscardine, the ancient porch of the church of Duffus, the cathedral and other ancient structures of Elgin, an ancient well at Burgh-head, Duffus castle, Rothes-castle, Spynie-palace, Michael kirk at Gordonstown, Mortlach pillar, Bervie-tower, and Sweno's stone and other antiquities at Forres.

Morayshire unites with Nairnshire in sending a member to parliament. Its constituency in 1840 was 750; in 1855, 696. The sheriff county court and commissary court are held at Elgin every Friday during session; and the sheriff small debt court is held there on every Wednesday. Circuit sheriff small debt courts are held at Forres on the second Monday of February, April, June, August, October, and December; at Grantown, (which though in Inverness-shire, is, with the district around it, under the jurisdiction of the sheriff of Morayshire,) on the Wednesday after the second Monday of February, June, and October; at Rothes, on the Thursday thereafter; and at Fochabers, on the Saturday thereafter in February, June, and October. The number of committals for crime, in the year, within the county, was 19 in the average of 1836–1840, 35 in the average of 1841–1845, 41 in the average of 1846–1850, 23 in 1852, 42 in 1853, and 50 in 1854. The sums paid yearly for expenses of criminal prosecutions within Morayshire and Nairnshire, in the years 1846–1852, ranged from £834 to £1,352. The total number of persons confined in the jail at Elgin, within the year ending 30th June, 1854, was 114; the average duration of the confinement of each was 32 days; and the net cost of their confinement per head, after deducting earnings, was £19 10s. 4d. All the parishes of Morayshire are assessed for the poor. The number of registered poor in the year 1852–3 was 1,517; in the year 1853–4, 1,516. The number of casual poor in 1852–3 was 311; in 1853–4, 277. The sum expended on the registered poor in 1852–3, was £6,345; in 1853–4, £6,564. The sum expended on the casual poor in 1852–3 was £277; in 1853–4, £332. A poor-house, for Elgin parish, was erected at Elgin in 1855. The gross amount against the county for rogue-money in 1855 was £25; for prison assessment £273. Population of the county in 1801, 27,760; in 1811, 27,967; in 1821, 31,398; in 1831, 34,498; in 1841, 35,012; in 1851, 38,959. Males in 1851, 18,191; females, 20,768. Inhabited houses in 1851, 7,642; uninhabited, 223; building, 88.

Morayshire contains the fifteen entire parishes of Alves, St. Andrews Lhanbride, Birnie, Drainie, Duffus, Elgin, Speymouth, Spynie, and Urquhart, constituting the presbytery of Elgin; Dallas, Edenkillie, Forres, Kinloss, and Rafford, constituting, with the addition of Dyke, the presbytery of Forres; and Knockando, in the presbytery of Aberlour. It also shares with Banffshire the five parishes of Bellie and Keith in the presbytery of Stathbogie, and Boharm, Inveraven, and Rothes, in the presbytery of Aberlour; with Nairnshire, the par-

ish of Dyke in the presbytery of Forres; and with Inverness-shire, the three parishes of Abernethy, Cromdale, and Duthill, in the presbytery of Abernethy. In 1851, the number of places of worship within Morayshire was 64; of which 25 belonged to the Established church, 20 to the Free church, 8 to the United Presbyterian church, 3 to the Episcopalians, 4 to the Independents, 2 to the Baptists, and 2 to the Roman Catholics. The number of sittings in 21 of the Established places of worship was 12,138; in the 20 Free church places of worship, 10,089; in the 8 United Presbyterian places of worship, 3,506; in 2 of the Episcopalian chapels, 580; in 3 of the Independent chapels, 730; in the two Baptist chapels, 600; and in the two Roman Catholic chapels, 650. The maximum attendance on the Census Sabbath at 22 of the Established places of worship was 5,015; at 19 of the Free church places of worship, 5,270; at the 8 United Presbyterian places of worship, 2,050; at 2 of the Episcopalian chapels, 206; at 3 of the Independent chapels, 480; at the 2 Baptist chapels, 150; and at the 2 Roman Catholic chapels, 389. There were in 1851, in Morayshire, 65 public day schools, attended by 2,825 males and 1,824 females,—31 private day schools, attended by 398 males and 679 females,—and 61 Sabbath schools, attended by 1,874 males, and 2,339 females. The principal institutions, additional to the schools, will be found noticed in our articles on Elgin and Forres. The history of the county has been anticipated in the historical parts of our article on the province of Moray.

MORAYSHIRE RAILWAY, a railway from Elgin to Lossiemouth, in Morayshire. It was authorized in 1846 to commence at Craigellachie on the Spey, in connexion there with the Great North of Scotland railway, and to proceed by Rothes and Elgin to Lossiemouth harbour, with a total length of 11¼ miles; but the part of the scheme from Craigellachie to Elgin was abandoned by warrant of the railway commissioners in July 1851; and the part from Elgin to Lossiemouth, which has a length of 6 miles, was begun to be executed in November 1851, and opened for passenger traffic in August 1852. The line is worked by light engines, and the fish-joint is used throughout.

MORBATTLE. See MOREBATTLE.

MORDINGTON, a parish in the extreme east of the coast of Berwickshire. Berwick, 3¼ miles south-east of it, is the post-town for its southern and eastern parts; and Burnmouth and Ayton are within two miles of its north-western border. The parish is bounded by the German ocean, the liberties of Berwick, and the parishes of Hutton, Foulden, and Ayton. Its length southward is 4¾ miles; its greatest breadth is less than 2 miles; and its area is about 3,523 acres. The river Whitadder traces its southern boundary, moving there for 2 miles in bold serpentine folds, between steep banks, which are variously wooded and rocky, and predominantly picturesque. A brook which rises and runs a mile in the interior, traces for 1¾ mile the western boundary to the Whitadder. The coast—measuring 2½ miles in extent, and, with the exception of an indentation in the extreme north, trending in the direction of south-east by south—is throughout a bold precipitous breast-work of rock, perforated with caverns, abutted with projections, and occasionally overlooking vast masses of detached rock rising grandly or sublimely from the bosom of the sea. In the extreme north a sufficient recess of the rocky breast-work occurs to admit between its base and the sea a site for the romantic fishing-hamlet of Ross; and there a tiny brook has sliced down the cliffs with a vertical fissure, and, in a season of rain, leaps along in a series of cascades, finely harmonizing in scenic effect with the surgy sea-foam on the beach, and the smoke from the cottages on the margin of the ocean eddying in the breeze. The surface of the parish, over the southern half of its length, is flat, with a slight declination to the Whitadder; and over the northern and broader half, rises to a considerable elevation, undulated on the west side with many eminences, and falling off in a slope on the east. Heights on the west side command a magnificent prospect of the Merse, and a large part of Durham and Northumberland, with the wooded banks of the Tweed, the Whitadder, and the Blackadder on the foreground and in the centre, and the dark rampart of the Cheviots, the picturesque forms of Rubberslaw and the Eildon hills, and the bald tame outline of the Lammermoors in the distance; and the heights on the east side command a gorgeous sea-view, variegated with Holy Island, Bambrough-castle, and other striking objects on the bosom and the skirt of the liquid picture. The soil, for some distance from the Whitadder, is a stiff clay well-adapted for wheat and beans; thence to the coast it is, in general, a light loam, excellent for raising turnips, and sound for grazing sheep; but on the loftiest parts of the high grounds it is thin and poor, and includes considerable pendicles of heath-land, and of bog and morass. The arable and the uncultivated grounds bear to each other the proportion of 26 to 9. Between 25 and 30 acres, all in the southern district, are under plantation. Freestone abounds; ironstone occurs in small veins; limestone is plentiful, but of inferior quality; and coal exists in considerable quantity, and began to be worked about 17 years ago. The yearly value of the raw produce of the parish, exclusive of minerals, was estimated in 1835 at £6,843. Assessed property in 1843, £3,328 5s. 6d. Mordington-house, situated near the base of the uplands of the parish, 3½ miles from Berwick, was that in which Cromwell established his quarters, when he, for the first time, passed the Tweed. Another interesting object is EDRINGTON-CASTLE: which see. On the north-west border, occupying a singularly commanding site on a crowning summit of the uplands, called Hab or Habchester, are distinct vestiges of a Danish camp, consisting of two trenches whose mounds, 18 or 20 feet high, appear to have been faced with large stones toilsomely procured from the bed of the Whitadder. About a mile south-east of it is an abrupt hillock, still called 'the Witch's knowe,' on which a person was burnt for the imputed crime of sorcery, so late as the beginning of last century. In the south of the parish, opening on the Whitadder, is a sequestered glen, said to be the locality of 'Tibby Fowler o' the Glen.' The parish is traversed by the road from Edinburgh to Berwick, and by the North British railway; and it has near access to the latter at the Burnmouth station, 6 miles from Berwick. Population in 1831, 301; in 1851, 427. Houses, 79.

This parish is in the presbytery of Chirnside, and synod of Merse and Teviotdale. Patron, Renton of Lamberton. Stipend, £157 11s. 8d.; glebe, £37 10s. Schoolmaster's salary, £34 4s. 4½d., with fees, and £1 1s. other emoluments. The parish church was built in 1747, and contains 173 sittings. There is a Free church at Mordington, whose receipts in 1856 amounted to £72 8s. 2d. The present parish of Mordington comprehends the ancient parishes of Mordington and Lamberton. See LAMBERTON. The ancient Mordington was very small, comprising less than the half of the united parish. The barony of Mordington, with the patronage of the church, belonged at the epoch of record to Agnes de Morthington and her husband, Henry Halyburton; it was

given by Robert I. to Thomas Randolph, Earl of Moray; it passed at the death of John, the third Earl, on the disastrous field of Durham, to his sister, Black Agnes, Countess of Dunbar; it seems to have been given as a dowry to her daughter Agnes, on the latter's marrying James Douglas of Dalkeith; and it continued with the descendants of this Douglas till the Reformation, and eventually gave them the title of Baron in the Scottish peerage,—a title which became dormant in 1796.

MORDUN. See Moncrieff.

MORE (Loch), a lake, about 4½ miles long, in the parish of Edderachyllis, Sutherlandshire. It extends in a north-westerly direction, and sends off its superfluence about 1 mile northward to Loch-Stack, whence a stream runs about 3 miles north-westward to the head of Loch-Laxford. The basin of Loch-More is an alpine glen, flanked on the south-west side by Ben-More, and on the north-east side by Ben-Scrivy. The road from Scourie to Easter Ross passes along the south-west side of the lake.

MORE (Loch), a lake 1½ mile long and ¾ of a mile broad, in the Highland part of the parish of Halkirk, Caithness-shire. Streamlets which it gathers in several directions above, and sends off in one current to the north, are the head waters of the river Thurso. The lake, jointly with the united stream, give the glen which they occupy the ambitious name of Strathmore.

MOREBATTLE, a parish, containing a post-office village of its own name, in the extreme east of Roxburghshire. It is bounded by England, and by the parishes of Hounam, Eckford, Linton, and Yetholm. Its length southward is about 9½ miles; its greatest breadth is about 6 miles; and its area is about 39 square miles. The surface, excepting over two small tracts respectively in the extreme west and in the extreme north, consists entirely of hills and narrow vales, and runs up along all its boundary with England to the highest summits of the Cheviots. Its heights vary in altitude between 500 and 2,000 feet above sea-level; command, in many instances, very grand and map-like views of Teviotdale, Merse, and Northumberland, fringed on the east by the German ocean; and generally have a gracefully curvilinear outline and a deep verdure, very different from the usually stern features of a mountainous district. On the eastern and southern boundary rise Blackhag, Chillhill or the Schell, Arkhope-cairn, Cocklaw, and Windygate-hill; a little way into the interior are the heights of Sourhope, Blackdean, Plainlaw-green, Cove, Woodside, and Clifton,—the last rising beautifully aloft like a vast dome; west of Bowmont-water are the hills of Swindon, Belford, and Grubit; and west of the Kale are those of Gateshaw and Morebattle. Only a fair proportion of wood is wanted to complete the blending of grandeur into beauty, effected by the district's natural form and clothing. Bowmont-water rises in five or six head-streams at the southern extremity, and runs 7 miles north-westward and northward, along a fine pebbly path, between deeply verdant banks, sometimes careering in a rapid and then sleeping or eddying in a pool, watering for nearly 6 miles a narrow but delightful valley, and possessing powerful allurements to the angler. Kale-water comes down from the south at a point 2¼ miles west of the Bowmont, runs 2¾ miles northward, nearly half of this distance being along the boundary with an indentation on its right bank of Hounam, makes a sudden turn and runs 2 miles westward, chiefly along the boundary with Linton and Eckford, to its exit from the parish; and, over its whole course, rivals the Bowmont in all its pleasing attractions. On the boundary with Linton is the curious little sheet of water called Linton-loch; and on the boundary with Yetholm is Yetholm or Primside-loch.

The higher part of the parish is mostly in pasture. The lower part is in tillage; and, the soil being well suited to the turnip husbandry, the mixed system of farming is practised. The average rent of the pasture lands is from 8s. to 10s. per acre; and that of the arable lands is from £1 to £1 5s. Assessed property in 1843, £11,387 12s. 9d. The principal landowners are the Duke of Roxburgh, the Marquis of Tweeddale, Sir John Warrander, Bart., Elliot of Clifton, Ker of Gateshaw, and six others. Corbet-house, on the Kale, ⅔ of a mile south of the village of Morebattle, was burnt, in 1522, by the English in revenge of a foray partly headed by its proprietor, Launcelet Ker of Gateshaw, into Northumberland; and, about 45 years ago, it was renovated by Sir Charles Ker. Whitton-house, about 2 miles south-west of the village, was dilapidated by the Earl of Surrey during his extensively destructive inroad in the reign of Henry VIII., and is now in a ruinous condition. Various towers and peel-houses of the parish which figure in the border records have disappeared. On some of the heights are vestiges of British encampments, and circular rows of perpendicular stones called 'Trysting stanes,' of unascertained design or origin. Several villages, in former ages not inconsiderable in size, have disappeared. The village of Morebattle stands on the Kale, on the western border of the parish, at the point where the river becomes the boundary-line with Linton, 4 miles south-west of Yetholm, 5¼ miles west of the nearest point of the English border, 7 miles south-east of Kelso, and 9 miles north-east by east of Jedburgh. It contains about 300 inhabitants, consists chiefly of two-story slated houses, and has, of late years, undergone much improvement. Population of the parish in 1831, 1,055; in 1851, 997. Houses, 181.

This parish is in the presbytery of Kelso, and synod of Merse and Teviotdale. Patron, the Duke of Roxburgh. Stipend, £234 11s. 8d.; glebe, £16. Unappropriated teinds, £676 9s. 7d. The parish church, situated in the village, was built in 1757, and contains about 450 sittings. There is a Free church, with an attendance of 250; and the amount of its receipts in 1856 was £98 9s. 0½d. There is likewise, in the village, an United Presbyterian church. The original congregation connected with this was the earliest Secession congregation in the south of Scotland. Their first minister, Mr. Hunter, was ordained in 1739, and was the earliest Secession licentiate; and his successor officiated for seven years after ordination, in a tent on Gateshaw-brae. The original meeting-house stood at Gateshaw, and the present one was built about the year 1780. A great religious meeting, conducted by a body of Secession ministers from a distance, was held in 1839 on Gateshaw-brae, to celebrate the centenary of Mr. Hunter's ordination. There are two parish schools, the first in the village of Morebattle, the second at Mowhaugh, in the vale of the Bowmont. Salary of the first schoolmaster, £34 4s. 4d., with £36 8s. 5d. fees, and £8 other emoluments; of the second, £17 2s. 2d., with £10 fees. The interest of a mortification of £1,500 is expended in maintaining poor and destitute orphans, and paying fees for their education. The present parish of Morebattle comprehends the ancient parishes of Morebattle and Moll or Mow. Merebotle, which is the old orthography of the name, means, in Anglo-Saxon, 'the dwelling place at the marsh,' and alludes to the ancient circumjacency of marshy ground at the site of the village. The church of Merebotle belonged in some manner to the cathedral of Glas

gow so early as the 12th century, but was the subject of sharp controversy as to the right to its temporalities; and eventually was, in 1228, declared to be a prebend of Glasgow, while the archdeacon of that see should receive thirty merks a-year for a mansion, but should claim nothing of the rectory. There were anciently two chapels in the parish,—the one at Clifton on Bowmont-water, the other at Whitton, now called Nether-Whitton. The Moll—meaning in the British 'a bare, bald, or naked hill'—included the highest grounds, or southern and south-eastern parts, of the united parish. See the article Moll. Both the monks of Kelso and the monks of Melrose received grants of the ancient church of Moll; but those of Kelso obtained an adjudication of it, entirely to themselves, in 1269.

MOREDUN. See Liberton and Moncrieff.

MOREHAM. See Morham.

MORGAY, a small island in the parish of North Uist, in the Outer Hebrides. In 1851 it had 9 inhabitants and 1 house.

MORHAM, a parish, containing a post-office station of its own name, in the centre of Haddingtonshire. It is bounded by Haddington, Prestonkirk, Whittingham, and Garvald. Its length eastward is fully 3 miles; and its breadth is from 1 mile to ½ a mile. Its surface is part of a gently inclined waving plain, midway between the Lammermoors and the sea, and descending to the north. Its highest ground is about 413 feet above sea-level. Its only stream is the small burn of Morham, which collects its head waters within Garvald, and runs through Morham and Haddington to the Tyne. The only good piece of scenery within the parish is a pretty little glen on the minister's pasture glebe. The lands are all under cultivation, and well enclosed. The soil in general inclines to clay. A coarse soft sandstone is quarried; and coal was worked about 60 years ago, but seems to have been of very inferior quality, and was abandoned. There are six landowners. The average rent per acre is about £2 1s. Assessed property in 1856, £4,270 19s. The parish is not touched by any great line of road; but it lies, at its nearest point, within 2 miles of the town and railway station of Haddington. Population in 1831, 262; in 1851, 249. Houses, 54.—This parish is in the presbytery of Haddington, and synod of Lothian and Tweeddale. Patron, Dalrymple of Hailes. Stipend, £156 1s. 5d.; glebe, £14. Schoolmaster's salary, £34 4s. 4½d., with £36 15s. fees, and £2 other emoluments. The parish church was built in 1724, and has been occasionally repaired.

MORINISH, a post-office station subordinate to Tobermory, Argyleshire.

MORIR. See Morar.

MORISON'S-HAVEN, a harbour 5 furlongs west of the town of Prestonpans, in the parish of Prestonpans, Haddingtonshire. It has an east pier, with an elbow parallel to the shore, enclosing a space of 4 acres. The width of its entrance is 70 feet; its depth at high water of spring tides is 14 feet; and when entered, it is one of the safest harbours on the Forth. It is a creek of the port of Leith, and serves for the town of Prestonpans and some extent of circumjacent country. About 55 vessels, of aggregately about 3,800 tons, enter it in the year; and the dues levied at it amount to about £15 a-year. By right of charter, granted by James V. in 1526, and afterwards ratified by parliament, the monks of Newbotle—in modern orthography Newbattle—constructed it as a port whence they might export the coal which they had discovered on their lands of Prestongrange. Its name was originally Newhaven, but, in honour of new possessors, was changed successively to Achieson's-haven and Morison's-haven.

MORISTON (The), a river partly of Ross-shire but chiefly of Inverness-shire. It rises at the head of Glen-Clunie, in the former county, runs 5 miles eastward to Loch-Clunie, and, while traversing that lake, passes into Inverness-shire; and thence it has a course of 17 miles prevailingly eastward to Loch-Ness, at Invermoriston. It gives the name of Glenmoriston to all the vale below Loch-Clunie, and to the parish which consists principally of that vale, and is now united to Urquhart. Its chief tributary is the Luing, which, 2 miles below Loch-Clunie, comes down upon its right bank from Loch-Luing. The Moriston is an impetuous but romantic stream; it, for the most part, wildly riots, now from side to side, and now along ledges of a deep rocky channel; it once, not far from its embouchure, forms a very fine cascade; and it occasionally breaks loose from the restraints of a narrow and ravine-like channel, and steals abroad into tiny lacustrine expansions, embracing wooded islets or picturesque rocks. It has repeatedly, in its moods of repletion and wrath, swept quite away such bridges as intruded on its path; but it is now, 8 or 9 miles from its embouchure, spanned by a handsome new bridge which appears strong enough to withstand its brawling. The lower part of its vale is uncommonly beautiful; of varying width; profusely wooded with oak, birch, ash, poplar, and larch; and occasionally sheeted with trees up to the very summits of the hills. See Glen-Moriston.

MORLICH (Loch), a small lake on the east side of the parish of Rothiemurchus, Inverness-shire.

MORMOND, a village in the parish of Strichen, Aberdeenshire. It stands on the road from Peterhead to Banff, 9 miles south-south-west of Fraserburgh, 15 north-west by west of Peterhead, and 33½ north by west of Aberdeen. It began to be built in 1764, by direction of Lord Strichen, the proprietor of the ground on which it stands, and then one of the judges of the court of session. It is built upon a regular plan, with excellent granite, and laid off in streets. A good number of its houses are slated, and are neat and commodious. A town-house with a spire was erected in 1816, at the cost of £2,000. There is an office of the North of Scotland bank. Fairs are held on the first Tuesday of January, on the Tuesday after the 4th day of March, on the Wednesday after the 19th of May, on the Wednesday after the 12th of July, on the Wednesday after the 19th of August, and on the Wednesday after the 12th of November. The village is often called Strichen, after the name of the parish. Population, 681.

MORMOND-HILL, a small but conspicuous hill in the district of Buchan, Aberdeenshire. It is situated at a point where the parishes of Fraserburgh, Rathen, and Strichen meet, 6½ miles south-south-west of Kinnaird-head. Though possessing an altitude of only 810 feet above sea-level, it is a good landmark to mariners. Its form is conical.

MORNINGSIDE, a village in the parish of St. Cuthbert's, Edinburghshire. It is pleasantly situated on a southward slope, on the road leading from Edinburgh to Biggar and Dumfries, 1¼ mile south of Port-Hopetoun, and 2¼ miles distant from the Tronchurch, Edinburgh. Between it and the metropolis lie Boroughmoorhead and Burntsfield-Links. The village is an agreeable and worthy environ of Edinburgh, and forms a summer-resort of the citizens; and it so competes with Invereak the fame of being the Montpellier of the east of Scotland, as to allure invalids to its precincts for the benefit of its dry salubrious air. Here stands the Lunatic asylum of Edinburgh, originally a capacious edifice, and subsequently enlarged from designs by Mr. Burn. It is

finely situated in the midst of a policy of about 50 acres in extent. Here also are a chapel of ease, erected in 1837, and a Free church, erected in 1844. Near the latter is the residence which was built by the late Dr. Chalmers, and in which he died. All around the village, mansions and villas stand so thickly as almost to fill the whole tract with their lawns and gardens; and in the near vicinity, toward Edinburgh, are several lines or rows of residences, in a style of great elegance. All this district was part of the Boroughmoor; and in the wall of the public road is still seen the large "Bore Stone" in which James IV. placed his standard in 1513, when about to march to the field of Flodden. The village and the tract around it were temporarily a quoad sacra parish, of ecclesiastical erection; and the population of this, in 1841, was 1,795, with 328 houses.

MORPHY-HILL, a hill, about 500 feet high, in the west of the parish of St. Cyrus, Kincardineshire.

MORRISON'S-HAVEN. See Morison's-Haven.

MORRISTON (East and West), two villages in the parish of Old Monkland, Lanarkshire.

MORRISTON (The). See Moriston (The).

MORROCH-BAY, a small bay, very rocky, and dangerous for shipwrecks, on the coast of the North channel, at the mutual boundary of the parishes of Portpatrick and Stonykirk, 2 miles south-east by south of the town of Portpatrick, Wigtonshire.

MORT-HILL. See Murkle.

MORTLACH, a parish, containing the village of Dufftown and post-office station of Mortlach, in the Moray district of Banffshire. It is bounded by Boharm, Botriphnie, Glass, Cabrach, Inveraven, and Aberlour. Its length north-north-eastward is 12 miles; its greatest breadth is about 8½ miles; and its superficial extent is about 35,000 acres. From a mountainous line of water-shed across the south end of the parish, two glens extend 7½ miles north-eastward at the distance from each other of from 2 to 2½ miles. The eastern glen then suddenly debouches to the west, runs direct across to a junction with the other glen, and thence, with the expansion of a valley, goes 3 miles north-north-westward to the boundary with Boharm. The stream of the western glen is the Dullan; and that of the eastern and of the united glen is the Fiddich,—giving the name of Glenfiddich to all the district which forms its basin. The chief summits on the mountain-boundary of the south, are Coryhabbie-hill and Cook's-cairn, which look down into Glenlivet; the screen of much of the west side of the western glen is the huge broad-based Benrinnes, whose vast mass fills a large part of the neighbouring parish, and whose summit, wooing the clouds at an altitude of 2,765 feet above sea-level, looks away to the far-distant coast of Caithness; and the grounds which form the other screens of the glens, though less elevated than Benrinnes, are lofty enough to be fit attendants on it as a monarch-mountain. A small stream called Marky, rising on the east side of the eastern screen of Glenfiddich, cuts a projecting district of the parish into the delly vale called Glenmarky, and runs rapidly down the descent to meet the Deveron near the house of Edinglassie, where that river just touches the boundary, and makes a fine sweep away toward Huntly. Glenfiddich is one of the loveliest straths in Scotland; and contains many mixtures of the sweet and the wild, the bold and the beautiful,—many blendings of those features of landscape which invite the pencil and play upon the imagination. The whole parish, in fact, exhibits such variety of hill and dale, wood and water, arable grounds and flock-clad pastures, as render it rich in landscape. One of the finest scenes is the Craig of Balveny, with its old castle, and its encincturing objects; and another is the Giant's chair on the river Dullan, with the pretty little cascade called the Linen Apron, and the folds and wavings of the surrounding drapery.

The arable grounds of the parish amount to only about one-seventh of the whole area, and, for the most part, lie pretty high along the two principal streams. Some haughs occur; but they are not extensive. The uplands are clothed to the extent of about 600 acres with wood; and elsewhere they are variously moorland and coarse pasture, but are in general heathy. Granite, of a kind well-suited for building, is abundant. A dark clay-coloured slate, of pretty fair quality, is worked in several quarries. Limestone is very plentiful, and, in spite of a dearth of fuel, is extensively worked. A variety of limestone, both on the Dullan and the Fiddich, amounts in quality to an inferior marble. Appearances of alum and lead are observed on the burn of Tullich. A laminated rock occurs in one or two places of a nature suitable for whetstones or hones. The soil of the arable grounds is almost all loamy, deep, and fertile. Several chalybeate springs occur; and they are pretty powerful in their medicinal virtues, and have been found useful in cases of gravel and dyspepsy. A petrifying spring exists near the house of Kininvie. A small but deep lake, called Lochpark, in a den confined by two almost perpendicular hills, near the road to Botriphnie, emits the parent head-stream of the river Isla. The principal landowners are the Duke of Richmond, the Earl of Fife, Leslie of Kininvie, Gregory of Buchromb, and Duff of Drummuir. The average rent of the arable land is about £1 per acre. The yearly value of raw produce was estimated in 1836 at £17,300. Assessed property in 1843, £5,196 14s. 3d. A project was at one time afoot for forming a railway from the centre of this parish to Port-Gordon, but was abandoned. The Keith railway station, 10 miles north-east of its northern extremity, is at present the nearest point of railway. Population in 1831, 2,633; in 1851, 2,804. Houses, 507.

Mortlach is famous as the scene of a victory achieved by Malcolm II., in 1010, over the Danes. He had been beaten by these foemen the preceding year, and compelled to leave them in possession of Moray. Returning from the south with a reinforced and powerful army, he burned to expel the intruders, and found them in readiness to give him battle. The armies came in sight of each other near the church of Mortlach, and engaged a little to the north. Three of the Scottish generals fell in the first shock of collision; and panic and confusion followed among the Scottish troops. The King was reluctantly borne along with the retreating crowd till he was opposite the church of Mortlach, then a chapel dedicated to St. Molach; and here, while his army were partially pent up in their flight by the contraction of the vale and the narrowness of the pass, he performed some of the showy rites of saint-worship, and rallied and roused his troops with an animated appeal to their patriotism, and, placing himself at their head, wheeled round upon the foe, threw Enotus, one of the Danish generals, from his horse, and killed him with his own hand. The Scots, now flung back from fear to enthusiasm, made an impetuous onset, carried victory in their van, and thickly strewed the ground with the corpses of their foes. The scene of the second and finishing conflict seems to have been a few hundred yards south-west of the castle of Balveny, the more ancient part of which was probably then in existence; and may have been the fort noticed by historians as near

the field of battle. Another conflict of a different kind had connection with Auchindune-castle, in Mortlach, about the year 1670. A hereditary feud, which had long existed between the Mackintoshes and the Gordons, and which had often been alternately suppressed and revived, broke suddenly out at that time, and came then to a curious tragical termination. William Mackintosh, the heir to the chieftainship of the Mackintoshes, had been hindered by the feud from getting prompt or easy possession of his rights; and he formed the purpose of revenging himself by burning the castle of Auchindune, which belonged to the Gordons. The Marquis of Huntly, with a considerable force of retainers, marched expeditiously against him, rushed into conflict with him, and overpowered him. Mackintosh, thinking himself cruelly used, fled for redress to the Marquis's lady, and appeared before her as a suppliant; but the Marchioness, more ruthless than her lord, caused the suppliant's head to be struck off. Yet the feud, instead of being exasperated by this atrocity, was now extinguished; for Huntly immediately found himself opposed by a party of the nobility, all more or less intimately acquainted with Mackintosh, and felt induced to withdraw all opposition from the son of the ill-fated chief. The castle of Auchindune, notwithstanding the burning of it by Mackintosh, underwent such repair as to be inhabited till about 150 years ago. It occupies a commanding site, on a green conical mount, overlooking the Fiddich. It is supposed to have been built by Cochrane, the favourite of James III.; it formed, with all its barony, a part of the lordship of Deskford; and, till 1535, it belonged to the Ogilvies, but then passed to the Gordons. A piece of admirable workmanship, in the Gothic style, appears in the central apartment of the building. The burning of the castle by Mackintosh is commemorated in the following stanzas of an old song:—

"As I came in by Fiddich-side
In a May morning,
I met Willie Mackintosh
An hour before the dawning.

'Turn again, turn again,
Turn again, I bid ye;
If ye burn Auchindune,
Huntly he will head ye.'

'Head me, hang me,
That sall never fear me;
I'll burn Auchindune
Before the life leaves me.'

As I came in by Auchindune
In a May morning,
Auchindune was in a bleeze
An hour before the dawning."

Another old fortalice, which also was inhabited till about 150 years ago, is Balveny-castle. This stands on a beautiful eminence on the Fiddich, a little below the influx of the Dullan, and commands a rich though limited range of charming scenery. The structure is of various dates, and very magnificent. Tradition calls the oldest part of it a Pictish tower. In the front, and high over its iron massive gate, is inscribed a motto of the Stuarts, Earls of Athole, descriptive of the savage valour and unhappy circumstances of the times:—Fvrth. Fortvn. and. Fil. Thi. Fattris. The castle belonged successively to the Comyns, the Douglases, and the Stuarts; it passed, in the 16th and 17th centuries, into the successive possession of several other families; and it is now the property of the Earl of Fife. In 1446 there was a Lord Balveny of the name of Douglas. Both Auchindune and Balveny castles were strongly fortified by art, and had their walls, their ditches, and their ramparts. Another old building of inferior note at Edinglassie, is remarkable chiefly in connexion with an appalling instance of the miseries of civil war, and of the tyrannical power which was often wielded by the barons of the feudal age. Some of the Highland clans, on their march from Strathspey through Mortlach to Strathbogie, in 1690, the year of the engagement on the haughs of Cromdale, having burnt the house in prosecution of the public dissensions of the period, the laird, whose name was Gordon, seized 18 of them at random, when they were returning a few weeks after, and hanged them all on the trees of his garden. Mortlach claims to be the scene of the Scottish song of 'Roy's Wife of Aldivalloch.' The Glacks of Ballach mentioned in the lyric is a remarkable pass near the castle of Auchindune. A claim, though a contested one, is made also upon the song of 'Tibby Fowler in the Glen.' The old statist says, Tibby "lived in the braes of Auchindune, and was a plain-looking lass, with a swinging tocher." The old village of Mortlach stands on the Dullan, half-a-mile above its confluence with the Fiddich; but has dwindled away to insignificance.

This parish is in the presbytery of Strathbogie, and synod of Moray. Patron, the Crown. Stipend, £226 8s. 1d.; glebe, £8. Unappropriated teinds, £368 5s. 9d. Schoolmaster's salary, £34 4s. 4½d., with about £25 fees, a share in the Dick bequest, and £8 other emoluments. The parish church is partly a very ancient building, probably as old as the beginning of the 11th century, and partly a modern addition, erected about the year 1829; and it contains about 1,000 sittings. The walls of the ancient part of it are so strong that they may stand for many years to come; but they possess none of the architectural decoration which distinguishes so many old architectural edifices. There is a Free church, with an attendance of about 300; and the amount of its receipts in 1856 was £95 16s. There is also a Roman Catholic chapel, built in 1834, and containing 160 sittings. The upper part of the parish is included in the mission of Glenrinnes, noticed in our article on Aberlour, and contains the chapel of that mission. There are in the parish four non-parochial schools and a circulating library. Malcolm II., immediately after the victory of Mortlach, got the parish church converted into a cathedral, and the village into the seat of a diocese. Beyn or Bean, the first bishop of Mortlach, wielded the crosier about 30 years, and was interred in the village. Donortius and Cormac, the second and the third bishops, jointly filled the see upwards of 80 years. Nectan, the fourth and last bishop, was, in the 14th year of his preferment, removed by David I. to Aberdeen, and became, by his translation, the first bishop of that city. The bishopric of Mortlach, thus transmuted into that of Aberdeen, lasted from 1010 to 1139. In the order of precedence, it was next to St. Andrews, or ranked as the second diocese in Scotland; yet, as to both jurisdiction and endowments, it comprehended only the churches and church lands of Mortlach, Cloveth, and Dulmeth. Dr. Lorimer, the author of a treatise on Magnetism, was a native of Mortlach.

MORTON, a parish in the upper part of Nithsdale, Dumfries-shire. It contains the post-town of Thornhill, and the greater part of the village of Carron-bridge. It is bounded on the north-east by Lanarkshire, and on other sides by the parishes of Closeburn, Penpont, and Durrisdeer. Its length southward is about 7 miles; and its average breadth is about 4 miles. The river Nith comes down from the north at an acute angle upon the western boundary a little below its middle,—traces that boundary for 1¾ mile, making a beautiful bend in

its progress,—cuts off for 5 furlongs a small wing,—and runs all the way in a limpid stream upon a pebbly bed. Carron-water runs 3 miles along the western boundary to the point where that boundary is first touched by the Nith, and there falls into the Nith. Cample-water rises in the extreme north-east, runs 1½ mile southward through the interior, traces thence the eastern and the southern boundaries over a distance of 5½ miles, and then departs into Closeburn, to fall very soon into the Nith. Along the Nith, and a short way up the Cample, are beautiful belts of very rich holm or haugh, liable to be overflowed, but well-protected by embankments. Screening the holm-lands, a considerable ridge of rising ground swells up from their margin, somewhat bold near the middle, but gentle in gradient at the ends. The summit of this ridge is occupied by the town of Thornhill, and commands a picturesque prospect of a considerable extent of the valley and hill-screens of the Nith. North-eastward of the town rise two other hilly banks, parallel and of different height, running across the parish like huge natural galleries. Beyond the more northerly, the surface descends at a gentle gradient, and forms a valley; and then it shoots up in bold pastoral heights, which occupy about one-third of the whole area, form part of the southern alps of Scotland, attain altitudes of 2,500 and under, and climb up to the water-shedding-line between the two grand basins of the Lowlands. The soil of the first or most southerly low ridge of the parish is a light but fertile loam upon a gravelly bottom; that of the ridges immediately north of Thornhill, is heavy and retentive, and lies upon a clayey bottom; that of the interior valley is partly alluvial and all excellent; and that of the mountainous district, gives frequent way to the naked rock, and is elsewhere so thin and poor as to bear only a mottled sward of heath and coarse grass. A considerable tract, lying principally between Thornhill and the upper valley, is still unreclaimed, but would repay improvement. Nearly 600 imperial acres are under wood. The whole parish, except one farm, belongs to the Duke of Buccleuch. The estimated value of the raw produce in 1844 was £9,113. Assessed property in 1843, £2,817 10s. Real rental in 1855, £5,064.

Nearly in the centre of the parish, 2½ miles north of Thornhill, on the brink of a glen, traversed by a little tributary of the Cample, stands Morton-castle, one of the least dilapidated ruins of its class in Nithsdale. What remains, though but a fractional part of the original structure, measures 100 feet by 30 in area. The south front is nearly entire, rises to the height of 40 feet, has at each corner a circular tower about 12 feet in diameter, and is from 8 to 10 feet thick in the wall. The glen on one side with its water dammed up, and deep intrenchments on the other sides, must have rendered the place a seat of great strength. Of several very conflicting accounts which are given of the proprietorship of this castle, perhaps the most plausible is that of the Macfarlane manuscripts in the Advocates' library, as quoted by Grose. According to this account, the castle is of unascertained origin; was kept, in the minority of David Bruce, by Thomas Randolph, Earl of Moray; and afterwards passed into the possession of that branch of the Douglases who became Earls of Morton, gave them their title, and was allowed by them, in their solicitude about other strengths, to go to ruin. Yet the castle has smart competition for the honour thus assigned it. At a short distance north-west of the castle, and on the other side of the glen, are remains of a strong fortification, with intrenchments, which seem to have been a Roman fort or castellum. About 300 yards south of the castle, and on a rising ground, is the vestige of a small station or camp called Watchman Knowe. In various parts, principally in the vicinity of the castle, there formerly existed, or were found, memorials of Druidism, of the ancient Britons, and of the feudal times. At New Cample, near Thornhill, Mrs. Buchan and her followers took post after their expulsion from Irvine: which see. The northern half of the parish is all so mountainous and sequestered as to have no need of a road, and, therefore possesses none; but the lower district is traversed by the road from Glasgow to Dumfries, is well provided with other roads, and is traversed also by the Glasgow and South-western railway; and it has immediate access to that railway at the stations of Carron-bridge and Thornhill. Population in 1831, 2,140; in 1851, 2,482. Houses, 399.

This parish is in the presbytery of Penpont, and synod of Dumfries. Patron, the Duke of Buccleuch. Stipend, £236 2s. 7d.; glebe, £25. Unappropriated teinds, £366 8s. 3d. Schoolmaster's salary, £34 4s. 4½d., with about £30 fees. The parish church was built in 1841, and contains 1,060 sittings. There is an United Presbyterian church in Thornhill, containing about 500 sittings. There are four non-parochial schools. The ancient original church of Morton was probably built either by Dunegal, the great proprietor of Strathnith, in the reign of David I., or possibly by some earlier individual; and, before the end of the 12th century, it was given by Dunegal's grandson, Edgar, to the monks of Kelso, and thence became a vicarage till the Reformation.

MORTON, a parish in the south-east of Dumfries-shire. See Half-Morton.

MORTON-HALL. See Liberton.

MORTOUNE. See Calder (East).

MORVEN, a mountain in the parish of Latheron, Caithness-shire. Its summit is 5½ miles east of the boundary with Sutherlandshire, and 8 miles north-west of Berriedale. One account says, it is "elevated about a mile above the level of the sea;" another says, it is "supposed to be more than a mile above the level of the sea." The mountain is an unfailing barometer, an invariably correct indicator of approaching rain or drought, to the whole county, and is seen very far out at sea, and serves as an important landmark in storms. Its summit commands a view of nearly all the vast Moray frith, and much of the numerous counties which recede inland from its beach.

MORVEN, a mountain on the mutual border of the parish of Glenmuick and the parish of Logie-Coldstone, and adjacent to the south-east boundary of the parish of Strathdon, in Aberdeenshire. It has an elevation of 2,934 feet above the level of the sea. Its summit is part of the watershed between the basin of the Don and the basin of the Dee; and two ranges go off from its sides, the one westward in continuation of the watershed, the other south-eastward to the vicinity of the Dee.

MORVEN, or Morvern, a parish, containing a post-office station of its own name, in the north-west of the mainland of Argyleshire. It forms a peninsula, extending south-westward between Lochs Suinart and Linnhe, to the Sound of Mull, and connected with the district of Ardgour by an isthmus of 6 miles. Its outline is proximately triangular. It is bounded on the north by Loch-Suinart and Glen-Tarbert, which divide it from the parish of Ardnamurchan; on the south-east by Loch-Linnhe, which divides it from the district of Lorn; and on the south-west and west by the Sound of Mull, which divides it from the island of Mull. Its greatest length from east to west is 20 miles; its

greatest breadth is 15 miles; and its area is about 133 square miles. It comprises also the small inhabited islands of Oransay and Carna, in Loch-Suinart; and its extent of coast-line, even exclusive of these islands, is little short of 100 miles. A chain of lakes, partly marine and partly fresh-water, commencing with Loch-Teagus on the north, and terminating with Loch-Aline in the south-west, nearly isolates most of the district lying along the Sound of Mull, and containing the parochial places of worship, from the upper and much the larger district of the parish, called the Braes of Morven. All the country abounds with streams and torrents; and many close scenes of it have fine cascades, and other interesting features of water scenery. Its general surface, however, is bleak, tame, heathy upland. Its highest ground is the summit of Beneaddan, which has an altitude of 2,306 feet above the level of the sea. Several others of its mountains, also, have a considerable altitude; yet all are destitute of what writers on landscape call character; and, when seen in connexion with the bold ranges of Appin and Mull, they look very uninteresting. Yet there are portions of the parish which present very striking features. Much of its western sea-board along the Sound of Mull is highly picturesque; and the valley of Unimore, occupied by the chain of lakes from Loch-Teagus to Loch-Aline, overhung on one side by a range of high precipitous rocks, on the other by the mountains of Beneaddan and Bennahua, is one of the most brilliant pieces of scenery in the Highlands, blending together nearly all styles of landscape from the gently beautiful to the terribly sublime. Professor Wilson pronounced this valley no less than "an abyss of poetry," exclaiming also,

> "Morven and morn, and spring and solitude,
> In front is not the scene magnificent?
> ——— Beauty nowhere owes to ocean
> A lovelier haunt than this! Loch-Unimore!
> A name in its wild sweetness to our ear
> Fitly denoting a dream-world of peace!"

About 4,100 acres in the parish are in tillage; about 3,100 are under wood; and about 78,150 are pastoral or waste. A considerable proportion of the arable land lies along the Sound of Mull, either on rapid declivities, or at a considerable elevation above the level of the sea. The soil in general is a poor, light, open earth; and in some places is intermixed with gravel and small stones. The woods extend chiefly along the side of Loch-Aline, and in the south-west district adjacent to the junction of Loch-Linnhe with the Sound of Mull. A predominant rock is gneiss, originally covered by a deposit of secondary rocks, consisting of limestone and sandstone, with coal occasionally interspersed; a deposit so overwhelmed by trap, which in its turn has been much abraded and worn away, as to present to an observer a confused and obscure object of geognostic study. The situation of the coal is, on certain occasions, very remarkable; and occurring as it does on the summits of primary mountains of great elevation, it is quite fitted to startle a geologist nearly as much as a coal-surveyor. Sandstone, of excellent quality for building, is quarried at Loch-Aline and Artornish. Lead ore was formerly mined at Lurg in Glendubh, a glen which runs parallel to Loch Suinart; and copper ore was mined at Ternate, on the estate of Artornish. There are four resident landowners, and seven non-resident. In 1843, the real rental, as estimated in the New Statistical Account, was £5,700, the value of assessed property was £4,752 8s. 7d., and the estimated value of raw produce was £9,974. One of the most interesting antiquities in the parish is noticed in our article Artornish. Another interesting one is a castle at the head of Loch-Linnhe, called from its situation Kenlochaline-castle. See Aline (Loch). This castle is boldly perched on a high rock overhanging the water, as if the architect had chosen the situation where the effect would be the finest. It is very strong as a piece of masonry, and occupies, on the ancient system, a very strong military position; and though only a square tower with turrets and a corbel table, it exhibits such uncommonly fine proportions as render it markedly beautiful, and stands on so commanding and highly scenic a site as to make it one of the most picturesque of the Highland castles. It was occupied by Colkitto and his detachment of Irish troops, for the Marquis of Montrose, in 1664. There is another old castle, called the castle of Killundine; but it possesses little interest, and is comparatively modern. There are, on the sea-coasts, remains of several small forts, which were probably erected in the times of the Danish invasions. There are likewise some tumuli; one of which, called Carnna-Caillich or the old-wife's cairn, is a lofty pile of loose stones, 243 feet in circumference. On elevated spots, in various parts of the parish, but especially along the coast of the Sound of Mull, are Druidical circles of various diameters, but in no instance exceeding 24 feet. Dunien, Fingal's fort or hill, situated on the farm of Fiunarg, and now part of the glebe, is a curious round rock of considerable height, very steep, yet partly covered on the sides with a green sward, and washed at the base with a frolicsome stream which moves between high banks, and leaps along in little cataracts. The area on the top of the hill measures about half-a-rood, bears evident marks of having been encircled by a wall, and commands an extensive prospect. A village was formed a few years ago at Loch-Aline, and a substantial pier was built below it; so that now this locality is a seat of trade to the parish; yet Tobermory and Oban, the former about 4 miles distant from the nearest point of the parish, are still convenient resorts for marketing. Population of the parish in 1831, 2,137; in 1851, 1,547. Houses, 269.

This parish is in the presbytery of Mull, and synod of Argyle. Patron, the Duke of Argyle. Stipend, £155 2s. 3d.; glebe, £27 10s. The present parish comprehends the ancient parishes of Kiltuintaik and Kilcolumkill, which were united, it is believed, shortly after the Reformation. There are two parish churches, belonging respectively to the two ancient parishes, and both surrounded with burying-grounds, which anciently were enclosed, and had the privilege of sanctuary. The churches are situated on the coast, about 9 miles from each other. That of Kiltuintaik, the "cell of Winifred," was built in 1780, and contains 300 sittings; while that of Kilcolumkill, the "church of the cell of Columba," was built in 1799, and contains 500 sittings. The minister preaches in them alternately, and also preaches occasionally at places in the inland districts of the parish. There is a mission under the royal bounty for part of Morven, in common with Lismore. There is a Free church preaching station in Morven; and the amount raised in connexion with it in 1856 was £12 18s. 2d. There is a Roman Catholic chapel, built about 20 years ago. There are three parochial schools; and a salary of £34 4s. 4½d., is divided among the masters. There are likewise four non-parochial schools. The name Morven, as applied to this parish, is a modern refinement, substituted for Mohr-earrain, usually written Morvern; and it does not give the district any claim whatever to identity with the Morven of Ossian. "The word Mor Ven, as used in the

poems of Ossian," says the Rev. Norman M'Leod, in the Old Statistical Account, "is derived from the Gaelic words '*Mor Bheann*,' i. e. 'of the great mountains,' and seems to have been a general term for the Highlands or hilly country. The common notion is, that the whole Highlands were the country of Fingal and his heroes, for in every part thereof, as well as in this parish, there are names derived from them and their achievements. The whole Highlands might justly be called '*Duthaich nam mor-Bheann*,' or 'country of high hills.' But a Highlander never gives that name to this parish, but calls it *A mhor-earran*."

MORVICH (Hill of), a hill near the coast of the parish of Golspie, Sutherlandshire.

MOSSAT, a post-office station on the rivulet Mossat, which runs on the boundary between Auchindoir and Kildrummie to the Don, in Aberdeenshire.

MOSSBANK, an estate and a post-office station in the parish of Delting, Shetland. Here is an United Presbyterian place of worship.

MOSSBURNFORD, a locality on the river Jed, and in the parish of Oxnam, 3 miles south-east of Jedburgh, Roxburghshire. Here is an ancient baronial fort, strong in the walls, erected to suit the state of things in the time of the border feuds, and continuing to be inhabited till about the middle of last century.

MOSSFEEBLEBURN. See Ewes.

MOSSFENNAN, a mountain, about 1,650 feet high, in the parish of Glenholm, Peebles-shire.

MOSS-FLANDERS. See Flanders Moss.

MOSSGIEL, a small farm-hamlet, about half-a-mile to the north of the town of Mauchline in Ayrshire, celebrated as having been for several years the residence of the poet Burns. It is utterly destitute of landscape beauty; but the poet's fame has clothed it with a beauty and interest of a literary order.

> Hither romantic pilgrims shall betake
> Themselves from distant lands. When we are still
> In centuries of sleep, his fame will wake,
> And his great memory with deep feelings fill
> These scenes that he has trod, and hallow every hill.

Our readers would scarcely excuse our omitting Wordsworth's fine sonnet on this plain but consecrated spot:—

> "'There!' said a stripling, pointing with much pride
> Towards a low roof with green trees half-concealed,
> 'Is Mossgiel Farm, and that's the very field
> Where Burns ploughed up the Daisy.' Far and wide
> A plain below stretched seaward, while, descried
> Above sea-clouds, the Peaks of Arran rose;
> And, by that simple notice, the repose
> Of earth, sky, sea, and air was vivified.
> Beneath 'the random bield of clod or stone,'
> Myriads of daisies have shone forth in flower
> Near the lark's nest, and in their natural hour
> Have passed away: less happy than the one
> That, by the unwilling ploughshare, died to prove
> The tender charm of poetry and love."

The farm-steading, a very plain low house, with one small room and a kitchen, may still be seen, shaded by a few trees, on the west side of the Glasgow and Dumfries turnpike. The house continues nearly in the same state as when Burns occupied it, and was tenanted by his brother Gilbert till the year 1800. While residing here he published, by the advice of his superior and patron, Mr. Hamilton, the first edition of his poems.

MOSSGREEN. See Dalgety.

MOSS-ISLAND. See Inchmoan.

MOSS-KNOWE. See Kirkpatrick-Fleming.

MOSSMORRAN. See Fifeshire.

MOSSPAUL, a stage-inn on the road from Hawick to Carlisle, situated at the east base of Wisphill, between the sources of the Teviot and those of the Ewes, on the boundary between the parish of Ewes in Dumfries-shire, and that of Teviothead in Roxburghshire, 9½ miles north of Langholm, and 12½ south of Hawick.

MOSSTODLACH, a village in the parish of Speymouth, Morayshire.

MOSS-TOWER, a farm in the parish of Eckford, 5 miles north-east of Jedburgh, Roxburghshire. Here, on a piece of marshy ground, stood a very strong fortalice; and hence the name of Moss-tower. The fortalice was accessible at only one point, and by a causeway, and was one of the greatest strengths on the Scottish border. It was at one time a residence of Hepburn, Earl of Bothwell, but afterwards became the property of the famous Laird of Buccleuch, the ancestor of the Duke of Buccleuch. It was destroyed, in 1523, by an English force under Lord Dacre; and having been repaired, it was destroyed again in 1544, by an English force under Sir Ralph Eure; and having been again rebuilt, it was destroyed a third time, in 1570, by an English force under the Earl of Sussex. Its ruins were pulled down about 70 years ago to be used as building material for the adjacent farm offices.

MOSS-TOWER, Morayshire. See Elgin.

MOTHERTOP. See Keig.

MOTHERWELL, a small post-town in the parish of Dalziel, Lanarkshire. It stands on the road from Glasgow to Carlisle, 2 miles north-east of Hamilton, and 3 north-west of Wishawtown. In its vicinity is the Motherwell junction station of the Caledonian railway, where the western main line of that railway forks into the southern and northern branches toward Glasgow; and that station is distant 12 miles from the south side terminus of Glasgow, 16 miles from the north side terminus of Glasgow, 15½ from Carstairs junction, and 43 from Edinburgh. In the vicinity also goes off, from the Caledonian line, the branch railway to Lesmahago. At the Motherwell junction is the point of railway communication, for Hamilton and a populous circumjacent district, to all places in the east and the south. In the immediate neighbourhood, also, are collieries and a malleable ironwork. The stir and traffic about Motherwell, therefore, are exceedingly greater than what might be inferred from the mere amount of its own population. The town has a Free church, a Primitive Methodist chapel, and several schools. The name Motherwell was derived from a celebrated well, which was dedicated in the Romish times to the Virgin Mary, and called the "Well of our Lady." Population in 1841, 726; in 1851, 1,274.

MOTRAY (The), a small river of the north of Fifeshire. It rises in Norman's law in the parish of Abdie, and runs first eastward, through the parish of Kilmany, and on the boundary between that parish and Logie, and then southward, chiefly through the parish of Leuchars, to the head of the small estuary of the Eden, about ½ a mile below Guard-bridge. Its total length of course is about 12 miles. Its chief affluent is Moonzie-burn, which does not join it till near its mouth. The Motray drives a number of corn-mills. It is but a small stream in summer, but it often swells to a great bulk in winter.

MOULIN, a Highland parish, containing the post-office village of Pitlochrie, and the villages of Moulin and Kinnaird, in the north-east of Perthshire. It is bounded by Blair-Athole, Kirkmichael, Dowally, Logierait, and Dull. Its length southwestward is about 16 miles; and its greatest breadth is about 8½ miles. The river Garry, coming down from the north-west, cuts off a small wing 1½ mile by ¾, and traces the western boundary a mile southward to the Tummel; and the latter

stream thence runs 3¼ miles along the south-western boundary. Both streams abound in common river trout, and in salmon, sea-trout, and grilse; and are gorgeously, at times terrifically, grand in their scenery. The Garry, while running in the interior, traverses the celebrated pass of KILLIECRANKIE, [which see,] and over all its connection with the parish is wildly and sublimely impetuous The Tummel, though all the way to its junction with the Garry tumultuous and rapid, here becomes tranquilly majestic, and sweeps proudly along amid scenery softened down from grandeur into exquisite beauty. The Girnag, approaching from the south-east, runs 2¾ miles south-westward to the Garry at the upper end of Killiecrankie. Six or seven independent streamlets, the largest 4 miles long, rise in the interior, and run to the Garry and the Tummel. Parallel to these rivers, and at 4¼ miles' distance, a water-shedding line of summits runs across the parish; separating the south-west division of it which belongs to the district of Athole, from the north-east division which belongs to the district of Strathardle. The river Briarachan, coming down from the north immediately behind this line of heights, runs ⅜ of a mile southward on the boundary, and 1⅜ mile south-eastward and 3½ eastward through the interior to the point where it contributes to form the Ardle. The Arnate approaching from the north not far from its source, and 5¼ miles north-east of the Briarachan's point of approach, runs 6¼ miles southward to a confluence with the Briarachan. The Ardle, being formed by the union of these streams, runs a mile south-eastward to its exit from the parish. In nearly all the running waters cascades occur; and several of them are unusually beautiful. Those at Edradour and Urrard are particularly admired, and have been celebrated in song.

The general surface of the parish is a congeries of hills and mountains cloven down by vales or glens along the course of the streams. The highest ground is the pyramidal and very conspicuous BENVRACKIE: which see. The other hills, considered as Highland heights, are not of great bulk or altitude; yet they exhibit several high and abrupt precipices, and are, for the most part, clad in heath. Those of GLENFERNATE [which see, and see also STRATHARDLE] are exceptions, being beautifully verdant. The arable land is level in the How of Moulin, but, in general, gently declines toward the rivers; and it aggregately amounts to about 2,700 acres. The soil in the Athole district is tolerably deep and fertile; but that in the Strathardle district is shallower, and yields lighter crops. The fields around the village of Moulin, constituting the How, a space of 1½ mile long and ½ a mile broad, are among the most fertile in the Highlands of Perthshire, and have been called the garden of Athole. About 2,000 acres are under wood, part of it natural, and upwards of a half planted within the last 75 years. The principal rocks are mica-slate interveined by quartz. Limestone occurs in boulders of a fine marble texture, and in a bed considerably to the east of them, which forms part of a continuous field extending from the south-west of Perthshire to the north-east of Aberdeenshire; but, owing to the dearth of fuel, very little of it is worked. Granite and quartz are found in detached pieces; fluor-spar occurs in fragments in several places; and rock-crystal is found in Benvrackie. There are eleven landowners. In 1839, the real rental was about £7,300, and the estimated value of raw produce was £19,888. In 1843, the value of assessed property was £8,117 3s. 4d.

A curious ruin, variously conjectured to have been a religious house and a castle of the Earls of Athole and Badenoch, and seemingly erected in the 11th or 12th century, stands in the neighbourhood of the village of Moulin. It appears to have measured in area 80 feet by 76, to have had a round turret at each corner, and to have stood in a lochlet which has been drained and planted. More or less of the walls on three sides, and most of one of the turrets remain. The stones are unhewn, pinned with small flat stones, and cemented with lime and sand, so adjusted that they must have been poured in as a thin jelly. A plantation of large trees now occupies a considerable area within the ruin, obscuring the view from every quarter, and preventing it from having now the imposing appearance which naturally belongs to it. Small circular works, supposed to have been Pictish forts, and circles or ellipses of upright stones, or parts of such circles or ellipses, of the kind reputed to have been Druidical temples, are frequent. Vestiges of ancient Roman Catholic burying-grounds, indicating the quondam existence of Roman Catholic chapels, also occur. Seven or eight mansions, chiefly situated on the Garry and the Tummel, have beautiful surrounding pleasure grounds, and contribute greatly to the embellishment of the landscape. There are in the parish four distilleries, a brewery, a corn-mill, three saw-mills, and a dye-work. The village of Moulin stands in the southern corner of the parish, 1¾ mile from the Tummel, and 12 miles north of Dunkeld. A fair for the sale of horses and the purchase of seed-corn, is held here on the first Tuesday of March. The population of the village is about 200. The parish is traversed by a road up the Tummel and the Garry, by another up the Ardle and the Briarachan, and by a third which connects them. Population in 1831, 2,022; in 1851, 2,022. Houses, 404.

This parish is in the presbytery of Dunkeld, and synod of Perth and Stirling. Patron, the Duke of Athole. Stipend, £150 14s. 3d.; glebe, £13 13s. 4d. Schoolmaster's salary, £34 4s. 4½d., with £10 fees, and £9 other emoluments. The parish church is situated in the village of Moulin. It is a Gothic structure, with tower of inconsiderable height; and it was built in 1831, and contains 650 sittings. A chapel, in connexion with the Established church, was built about 8 years ago at Straloch, in the Strathardle district of the parish, by voluntary subscription of the parishioners of Moulin, and is served by a missionary of the royal bounty. The district on the right side of the Garry is ecclesiastically under the care of the quoad sacra parish minister of Tenandry. There is a Free church of Moulin, with an attendance of 300; and the amount of its receipts in 1856 was £137 13s. 9½d. There are four non-parochial schools, and a branch savings' bank. The distinguished Dr. Stewart, who died minister of Canongate, Edinburgh, was for nineteen years minister of Moulin. During his ministry in this parish, a remarkable and permanently beneficial revival occurred, which caused a great sensation at the period, and is detailed in the Rev. J. Sievwright's interesting memoir of the Doctor. Dr. Duff, the church of Scotland's first missionary to India,—Professor Forbes of the Oriental literature chair in King's college, London,—Donald Mackintosh, the compiler of the Gaelic 'Proverbs,'—and Captain Campbell of Finnab, well known for his gallant defence of the unfortunate Scottish colony of Darien, were all born in Moulin.

MOULTRY (THE). See MOTRAY (THE).

MOUNACK, a hill in the parish of Stornoway, in the island of Lewis. It has an elevation of not more than 700 feet above the level of the sea, but is the first land visible to persons crossing the Minch from the mainland to Stornoway.

MOUNT, a village in the parish of Campsie, Stirlingshire.

MOUNT-STEWART, the seat of the Marquis of Bute, in the parish of Kingarth, in the island of Bute. It occupies a fine site on the east coast of the island, 4 miles south-south-east of Rothesay; and commands a rich view of the frith of Clyde, the Cumbrays, and the coast of Ayrshire. The mansion was built in 1718, by James, second Earl of Bute. Its exterior is so devoid of even proximate ornament that it might be improved by a few ordinary touches of the trowel. Yet the leaden water-pipes at its angles are each decorated with eight coronets, "reminding us of the gouty old peer in 'Marriage à la Mode,' who put a coronet on his crutch." The door is converted into a glass window, and bears an inscription in doggerel verse, written by Prince Charles, when in concealment on the island. The picture-gallery is a large pleasant room, completely pannelled over with portraits of celebrated persons; and, in particular, contains a portrait of Rubens by himself, interesting portraits of the great Lord Bute, the Duchess of Lauderdale, and Henrietta, Duchess of Orleans and daughter of Charles I., Lady Mary Wortley Montague, and Lady Mary Menzies. The plantations around the house are extensive, and contain many noble trees.

MOUNT-TEVIOT. See Crailing.

MOUNT-VERNON. See Liberton.

MOUSA, an island in the parish of Dunrossness, in Shetland. It lies near the coast of Sandwick, on the east side of Mainland, 10½ miles south by west of Lerwick, and 13 north-north-east of Sumburgh-head. It measures about 2 miles in length, and about 1 mile in breadth; and extends north and south. In 1851, it had 10 inhabitants and 2 houses. A Scandinavian burgh here, called the burgh of Mousa, is perhaps the most perfect existing Teutonic fortress in Europe. "It occupies a circular site of ground, about 50 feet in diameter, and is built of middle-sized schistose stones, well laid together without any cement. The round edifice attains the height of 42 feet, bulging out below and tapering off towards the top, where it is again cast out from its lesser diameter, so as to prevent its being scaled from without. The doorway is so low and narrow as only to admit one person at a time, and who has to creep along a passage 15 feet deep ere he attains the interior open area. He then perceives that the structure is hollow, consisting of two walls, each about 5 feet thick, with a passage or winding staircase between them of similar size, and enclosing within an open court about 20 feet in diameter. Near the top of the building, and opposite the entrance, three or four vertical rows of holes are seen, resembling the holes of a pigeon-house, and varying from 8 to 18 in number. These admitted air and a feeble degree of light to the chambers or galleries within, which wound round the building, and to which the passage from the entrance conducts, the roof of one chamber being the floor of that above it. In this structure, it is on record that the ancient inhabitants, on the occasion of sudden invasion, hastily secured their women and children and goods; and it would appear that even one of the Earls of Orkney was not able to force it."

MOUSE (The), a rivulet of the upper ward of Lanarkshire. It rises on the eastern verge of the county, in the vicinity of Wilsontown; and runs in a south-westerly direction, through the parishes of Carnwath, Carstairs, and Lanark, to a confluence with the Clyde, a little below the town of Lanark. Its length of run, exclusive of sinuosities, is about 12 miles. The upper part of its course is moorish and bleak; but the lower part lies along a rich winding dell, eventually flanked by sublime crags, and is eminently picturesque. See Lanark and Cartland Crags.

MOUSWALD, a parish midway between the rivers Nith and Annan, and from 2 to 7 miles north of the Solway frith, Dumfries-shire. It contains the post-office village of Mouswald, and the hamlets of Old Brocklehurst and Cleughbrae. It is bounded by Lochmaben, Dalton, Ruthwell, and Torthorwald. Its length southward is 4¼ miles; its mean breadth is about 2 miles; and its area is about 8¼ square miles. The surface is diversified by some rising grounds, which are ploughed to the summit, and the highest of which has an altitude of about 680 feet above sea-level; but, in general, it is champaign, or even quite flat. Nearly 900 acres at the south end are part of Lochar Moss: which see. The arable and the uncultivated grounds aggregately bear the proportion to each other of about 33 to 10. Lochar-water touches, for a few yards, the south-west extremity. Wath-burn, coming in near its source from the north, moves along the whole western boundary to the Lochar, wearing the aspect, for most of the way, of a mossy, grass-grown ditch. Four independent rills, the largest 3 miles long, rise in the interior, and run sluggishly to Wath-burn. Springs of pure water are both copious and numerous. St. Peter's well, in the vicinity of the church, is a continuous spring for about 100 feet; and falling into the largest tributary of Wath-burn, prevents it from ever freezing for a considerable way below their point of confluence. The higher grounds command an extensive and very beautiful prospect. The chief rocks are greywacke and greywacke slate. Sir Alexander Grierson of Lag, Bart., is the most extensive landowner; and there are seven others. The estimated value of raw produce in 1836 was £7,620. The value of assessed property in 1843 was £3,997 5s. 9d. The real rental in 1855 was £4,720. The chief mansion is Rockhall, the seat of Sir A. Grierson. There are vestiges or ruins of five old Border strengths. The least dilapidated is at Raffles; and the largest and strongest is at Mouswald-Mains or the Place. A statue of Sir Simon Carruthers, the owner of the latter, the laird of Mouswald, and the son-in-law of one of the Queensberry family, lies in the aisle of the church, its head pillowed, its feet on a lion, and its hands in the elevated posture of supplication; but it has neither date nor inscription. Several camps occur, probably British; and one at Burronhill has a strong double fosse. Of several cairns, one, about 1¼ mile east of the church, measures 288

feet in circumference, bears the name of Tryal-Cairn, and is near a place called Deadmangill, where, tradition says, malefactors were executed, after being tried at the Cairn. The parish is traversed by the roads from Dumfries to Annan, and by the Glasgow and South-western railway; but it has no station on the railway, and lies midway between the stations of Dumfries and Ruthwell. The village of Mouswald stands 7 miles south-east of Dumfries, on the low road thence to Annan. Population of the village, about 150. Population of the parish in 1831, 786; in 1851, 686. Houses, 134.

This parish is in the presbytery of Lochmaben, and synod of Dumfries. Patron, the Marquis of Queensberry. Stipend, £249 19s. 2d.; glebe, £20. Unappropriated teinds, £1 17s. 8¾d. Schoolmaster's salary, £25 13s. 4d., with £9 10s. fees. There is a private school. The present parish church is a fine modern edifice, on a conspicuous site beside the village; and supplanted one which was of high but unknown antiquity. The original church was dedicated to St. Peter. The name, Mouswald, was anciently spelt Muswald and Moswald; and, bearing the meaning of 'the Wood near the moss,' it is very descriptive of the position, as well as of what seems to have been the original appearance, of the site of the church.

MOW. See Moll.

MOWICK. See Fetlar.

MOY, an ancient parish in Morayshire, now united to Dyke. See Dyke and Moy.

MOY and DALAROSSIE, an united parish, partly in Nairnshire, but chiefly in Inverness-shire. It contains the post-office station of Moy, 12 miles south-east of Inverness. It is bounded by Calder, Ardclach, Duthill, Alvie, Dunlichity, and Daviot. Its length from north-east to south-west is about 30 miles; and its mean breadth is about 5 miles. It entirely consists of two glens and their hill-screens, —that of the upper part of the river Findhorn, extending from end to end of the parish, and constituting its main body,—and that of Loch-Moy, and the rivulet Funtack, opening into the southern part of the former, and coming down upon it from the north-north-west. The glen of the Findhorn, or Strathdearn, so called from Earn, the Gaelic name of the river, is strictly a close mountain-vale, broadly screened with ranges of the Monadhleadh mountains, and possessing an average breadth, across its low grounds, of only about ¾ of a mile. Numerous recesses or tiny lateral glens bring down to its river the tribute of their mountain-brooks; they are, for the most part, cultivated over half-a-mile or more from their mouth; and, owing to their having been made the retreats of herds of cattle during the heat of summer, they bear the name of shielings. The main glen is first closed up, and next narrow, at its head; it afterwards possesses a long stretch of alluvial banks and terraces, which are extensively under cultivation; and, toward the north-east, it collapses into a dark ravine called the Streens, whose sides are formed by precipitous mountains of granite. The Findhorn bursts at the head of the glen from several springs, and chiefly from a fissure in a large rock, called the Cloven-stone. It courses along the whole vale with much rapidity; and it is subject to sudden powerful freshets, which sweep away headlong any stock or loose produce which may happen to be near its banks. The lesser chief vale of the parish, or the glen of Moy, is only about 4½ miles in length. Near its head lies Loch-Moy, about 1½ mile long, and half-a-mile broad; a beautiful sheet of water, whose immediate scenery, compared to the general irksomeness of the glen, has occasioned it to be described as resembling a gleam of sunshine on a cloudy day, yet one that renders the adjoining waste darker and more dreary. A hanging forest of birch and pines surrounds it, and has a beautiful appearance. At its north end stands Moy-hall, the family-residence of Mackintosh of Mackintosh; a commodious modern mansion, consisting of a middle square and two wings. On its west side are the church of Moy and the manse of the united parish. Of two islets in the lake, the larger contains ruins of an ancient castle, the former seat of the Mackintoshes, chiefs of the powerful clan Chattan; some vestiges of a street, which seem to indicate that part of the clan probably lived as an immediate body-guard round their chief; and a handsome granite obelisk, 70 feet high, on a base of about 20 feet square, erected, in 1824, to the memory of Sir Æneas Mackintosh, Bart. The smaller islet consists simply of a collection of loose stones, said to be artificial; and it was anciently used by the chiefs as a prison and as a place of capital punishment. Legendary story is rife with incident respecting the islets, the castle, and the loch of Moy; and—combined with a recital of old clan fights, as detailed by Sir Robert Gordon, of 'the curse of Moy,' as told in song, and of the heroism of Lady Ann Duff, the wife of Lachlan Mackintosh of Mackintosh, who acted so conspicuous a part in rescuing Prince Charles Edward in 1746—it makes ample offerings to the curiosity and the excited feelings of a stranger visitor.

The mountain-ranges of the parish are not remarkable for either form or altitude: they have easy and tame outlines, and nowhere rise more than 2,500 feet above sea-level; and they consist almost wholly of gneiss and granite. Upwards of 90,000 imperial acres on these heights are either waste-ground or sheep-pasture. But the whole, together with the intervening glens, were anciently covered with a continuous native forest, principally of birch, aspen, and mountain-ash. Coppices, to the aggregate extent of about 1,150 acres, still exist, and are periodically thinned; and plantations, principally of larch and Scottish pine, have, in recent years, been somewhat extensively made. The aggregate extent of the arable lands is not more than 3,000 imperial acres. Agricultural improvement here, till within the last few years, made less progress than in almost any other part of Scotland. In late years, however, great changes have taken place, both in the reclaiming of waste lands and in the improving of lands which were formerly arable. The progress of improvement has been materially aided by the discovery of excellent limestone in the upper end of the parish; and most of the farmers manufacture lime for themselves. There are ten landowners; but only one of them is resident, and even he during only the summer months. Ten shootings are let to sportsmen, and the mansions along with them, at an aggregate rental of £2,731. The land rental of the parish in 1856, as estimated under the valuation act, was £3,467 5s. 11d. The estimated value of raw produce in 1836 was £9,475. The parish is traversed for 10 miles by the great Highland road from Inverness to Perth. A handsome bridge over the Findhorn, with arches of wood resting on pillars of stone, was erected at a cost of £2,600, to replace a stone bridge which was swept away in the memorable flood of 1829. Fairs are held at Freeburn,—which see. Population of the parish in 1831, 1,089; in 1851, 1,018. Houses, 207. Population of the Nairnshire section in 1831, 25; in 1851, 13. Houses, 2.

This parish is in the presbytery of Inverness, and synod of Moray. Patron, Mackintosh of Geddes. Stipend, £234 3s. 4d.; glebe, £12. Unappropriated teinds, £188 17s. At what date Moy and Dalarossie

were united is not known. Churches still belong to both, and are in use on alternate Sabbaths. That of Moy was built in 1765, and repaired in 1829; that of Dalarossie, centrally situated in the vale of the Findhorn, was built in 1790; and each contains about 450 sittings. There is a Free church of Moy; and the amount of its receipts in 1856 was £85 13s. 3½d. There are two schools; one of which is parochial, and the other is in connexion with the Free church. The salary of the parochial schoolmaster is £31 16s. 8d., with £11 10s. fees and other emoluments. The name Moy, which is the Gaelic *Magh*, and means a 'meadow,' seems to have been imposed after the destruction of the ancient forest. The original name was Starsach-na-Gael, 'the gate of the Gael or Highlanders,' and alluded to an important pass about a mile below the site of the church of Moy, so narrow between high mountains that a few men could defend it against numbers, and intercept the inhabitants of the alpine regions from passing down to the low country toward Inverness. The ancient proprietor or chieftain found this pass so commanding that he exacted and readily received from the neighbouring clans a tax called 'the steak or collop of the booty,' for permitting them transit with their cattle plunder. A large cavern in the vicinity of the pass was made the retreat of women and children while the tribe were absent in predatory excursions in the low country. Aided by the natural strength of the pass, and by the facilities of the ground so to post a few men, that they might seem a powerful force, Donald Fraser Smith, with a handful of Highlanders, drove back the Earl of Loudoun during the rebellion of 1746, from an attempt to surprise Prince Charles Edward at Moy-hall. Dalarossie is a corruption of Dalfergussie, 'the valley of Fergus.' The celebrated Sir James Mackintosh, though born in the parish of Dores, was connected by parental residence with the parish of Moy and Dalarossie, and spent here, on his paternal property, the greater part of his youth.

MOY-CASTLE. See Mull.

MOYDART, a territorial district and a marine loch in the south-west extremity of Inverness-shire. The district is bounded on the north and north-east by Morar; on the south-east and south by Loch-Shiel, which divides it from Ardgour and Suinart; and on the west by the Deucaledonian sea. Its greatest length from east to west is 18 miles; and its mean breadth is 7 miles. Its coast-line, everywhere irregular, is very deeply indented by pieces of the sea, particularly by Lochs Aylort, Na-Nua, and Moydart. Its interior is thoroughly Highland, and possesses little interest. Some woods along Loch-Shiel and portions of the sea-coast, soften the prevailing wildness. It is traversed across the north by the road from Fort-William to Arisaig, and contains the latter village, the old ferry station to Skye. The district forms part of the enormous parish of Ardnamurchan. Loch-Moydart is situated on the southern boundary, and continues the narrow communication from Loch-Shiel outward to the sea. It penetrates 5 miles into the land; but over two-thirds of its length it is split into two channels by the island of Shona. The south or main channel has, at its entrance, two islets mantled with plantations of birch and larch; at its head it is adorned with the mansion of Kinloch-Moydart; on its south shore it is overhung by the bold form of Castle-Tioram; but everywhere else it has a dull, bald skirting of cold, unrelieved, heathy hills.

MOYNESS. See Auldearn.

MUCHALLS. See Fetteresso.

MUCK, an island in the parish of Small Isles, and district of Mull, Argyleshire. It lies 4½ miles north-west of the nearest part of the Argyleshire mainland, and 3¾ south-south-west of the island of Eigg. Its length is about 2 miles; and its breadth is less than 1 mile. Its surface is everywhere undulated, and presents in every part the rocky faces of the basaltic terraces which occasion its undulations. Only one decided hill shoots up from the general level of the low inequalities; and this is situated near the western extremity, and attains an altitude of about 600 feet. The shores are in general low and rocky; but near the west end, they rise into cliffs of about 50 or 60 feet in height. The soil of all the interior is fertile when in tillage, and naturally bears a perennial sward of rich fine grass. A sufficient number of springs exist to furnish an ample supply of pure water. Trap of the predominant varieties of basalt and fine greenstone, occasionally inclining to be amygdaloidal, forms the body of the island; but is proved by the protrusion of different beds of sandstone and limestone at the bay of Camusmore, to lie upon the upper members of the secondary strata. Peat, owing to the peculiar structure of the island, does not occur; and requires to be procured at great toil and expense, and with some uncertainty, from Ardnamurchan, or from Eigg and Rum. The fishing of cod and ling is a chief occupation, and very productive. Shelter for fishing-boats is afforded in numerous recesses of the coast; and two small piers for their accommodation exist in two creeks. The name of Muck in Gaelic is *Eilan-nan-muckd*, 'the island of Swine;' and has been unceremoniously translated by Buchanan into Insula Porcorum. Population in 1831, 155; in 1851, 53. Houses, 9. An islet, called Horse-island, lies on the north side of Muck, separated from it only by a foul, rocky, narrow channel, which ebbs dry at spring tides.

MUCK (Loch), a picturesque lake in the form of a crescent, about 30 acres in extent, flanked by bold, rugged, heathy hills, on the south-east border of the parish of Dalmellington, Ayrshire. Its waters are dark and deep, and abound in black trout.

MUCK (The). See Barr and Druisb (The).

MUCKAIRN, a quoad sacra parish, containing the post-office village of Bunawe, in the district of Lorn, Argyleshire. It belongs quoad civilia to the parish of Ardchattan, and has been described in our article on that parish. It was constituted by the ecclesiastical authorities in 1829, and reconstituted by the court of teinds in 1846. Its church is a parliamentary one, built in 1829, and containing 350 sittings. There is a Free church, with an attendance of 270; and the sum raised in connexion with it in 1856 was £50 9s. 2d. There are two schools; one of them parochial, with the minimum salary.

MUCKART, a parish, containing the post-office station of Muckart, and the villages of Pool and Yetts of Muckart, in the Ochil district of Perthshire. It lies on the border of the county, contiguous to Kinross-shire and Clackmannanshire; and is bounded by Glendevon, Fossaway, and Dollar. Its length south-westward is 4¾ miles; and its greatest breadth is 2¾ miles. The river Devon flows along all sides except the west and the north-west,—everywhere traces the boundary in its progress, except cutting off two farms in the extreme south,—touches the parish for 7¼ miles,—and, while in contact with it, displays the chief romance of its scenery. Two burns, both tributary to the Devon, but running in contrary directions, trace, for some distance, the western and north-western boundaries. A spur of the Ochil hills runs 1¾ mile eastward in the northern extremity, and terminates in a conical summit called Scamab, rising 1,350 feet above sea-level.

There are two other heights called Blairhill and Lawhill. All the hills are of fine outline, verdant on the sides, covered on the top with bent or heath, and affording excellent pasture for sheep. The middle and east parts of the parish lie between 500 and 600 feet above sea-level; and the lowest ground on the west upwards of 60 feet. The soil, in a small part is clay; but, in general, is light and gravelly; and, in the lower grounds, is sandy, but produces very good oats and barley. About 2,690 acres are in tillage; about 990 are uncultivated; and about 250 are under wood. The predominant rock in the upper districts is trap; but the rocks near the Devon belong to the coal formation, and comprise workable strata of ironstone, limestone, sandstone, and coal. The ironstone has long been worked on the Fossaway side of the Devon, and coal is worked on the Muckart side. There are five principal landowners, and fifteen smaller ones. The rent of the arable land ranges from £1 to £3, and averages about £1 8s. Assessed property in 1843, £4,000. The parish is traversed eastward by the road from Dollar to the Crook of Devon, and northward by a road from the Rumbling bridge to Strathearn; and it lies within available distance of the Tillicoultry branch of the Stirling and Dunfermline railway. The Yetts of Muckart is a small place, a mere hamlet, 3 miles from Dollar, and 10 from Alloa. Population of the parish in 1831, 617; in 1851, 685. Houses, 149.

This parish was recently transferred from the synod of Perth and Stirling to the presbytery of Kinross in the synod of Fife. Patron, the Crown. Stipend, £158 6s. 8d.; glebe, £20. Schoolmaster's salary, £30, with about £17 fees, and £7 10s. other emoluments. The parish church is a commodious edifice, built in 1838. There is an United Presbyterian church, containing nearly 400 sittings. There is a public library. The name Muckart signifies the boar's head, and has been supposed to allude to the shape of a hill, which terminates above the Yetts of Muckart.

MUCKERATH. See Duthil and Cromdale.

MUCKERSIE. See Forteviot.

MUCKLARIE. See Dunkeld.

MUCKLEBEN. See Meikleben.

MUCROSS. See Andrews (St).

MUDALE (The), a rivulet of the central part of Sutherlandshire. It rises near the highest ground in the county, on the confines of the parishes of Edderachyllis and Farr; and runs about 8 miles north-eastward to Loch Naver, giving the name of Strathmudale to the glen which it traverses.

MUDIESBURN. See Moodiesburn.

MUGDOCH, an ancient barony in the parish of Strathblane, Stirlingshire. It was acquired in the 12th century by the ancestors of the noble family of Montrose; and a castle on it, called Mugdoch-castle, became, in 1646, the principal residence of that family. This castle is now a ruin, and has long been so; yet it possesses much interest from being an edifice of unascertained antiquity, and likewise figures well, as a feature of scenery, at the south-west point of a lake of 25 acres in area, called Mugdoch-loch. The waters of the lake were anciently drawn round the castle, in the manner of a deep broad fosse; so that the place was inaccessible to any force which could be brought against it in the old times of rude warfare. After the restoration of Charles II., when the Earl of Middleton and his associates were employed in subverting the liberties of their country, Mugdoch-castle was one of the scenes of their bacchanalian orgies.

MUGDRUM, an estate in the parishes of Newburgh and Abernethy, Fifeshire. An island belonging to it, called Mugdrum-island, lies in the Tay, opposite the point where the counties of Fife and Perth meet. It is about a mile long and 200 yards broad, containing about 32 acres, of which the greater portion is under cultivation. The navigable channel of the river is here about 1,000 feet wide, the remainder being a shoal fast filling up with mud. Mugdrum-house stands on the shore of the Tay, opposite the lower part of Mugdrum-island, in the immediate neighbourhood of the town of Newburgh. It is a large heavy-looking edifice, erected in 1786; but beautifully situated near the river, amid extensive and very fine old woods. A very interesting antiquity, called Mugdrum-cross, stands within these woods, a short distance west of the town. It consists of an upright square stone pillar, fixed into a large oblong stone base. It is believed to have originally had transepts, making it literally a cross; but it long ago lost both the transepts themselves and the marks of their connexion with the shaft. Its eastern face is sculptured in four compartments, two of them with the fore part of a riding horse, the hind part and the main being broken away, while a third seems to be a representation of a boar-hunt. The southern and the western faces have been so injured that no carving can be now seen on them; and the northern face exhibits only such ornamentation as is common on very ancient standing-stones. Mugdrum-cross is altogether a remarkable monument; but nothing whatever is known of its history.

MUICK (The). See Glenmuick.

MUIR. See Moor.

MUIR OF ORCHIL. See Muthill.

MUIR OF ORD. See Ord.

MUIR OF RHYNIE. See Rhynie.

MUIRAVONSIDE, a parish, containing the post-office village of Avonbridge, the villages of Maddiston and Rumford, and part of the village of Linlithgow-bridge, on the eastern border of Stirlingshire. It is bounded on the north, the east, and the south-east, by Linlithgowshire, and on the other sides, by the parishes of Slamannan and Polmont. Its length north-north-eastward is fully 6¼ miles; its greatest breadth is 3¾ miles; and its area is about 14¾ square miles. The river Avon, whence it takes its name of Muiravonside, so circles round it as to form on all sides, except the west and north-west, its boundary-line; it traverses, while in contact with it, a distance, measured in straight lines and regular segments, of 10¼ miles, but measured along its beautifully sinuous bed, of probably 15 or 16 miles; and over most of the way, it is richly curtained with wood, or traverses a romantic dell, or otherwise possesses features of high scenic interest. The extreme west of the parish is part of the moorish tableau which flanks the south side of the great valley of the Forth and Clyde canal; and the rest of it all declines eastward, in a series of ever-varying ridges, toward the dell of the Avon and the carses of the Forth. The highest grounds have not an elevation of more than 400 feet above the level of the sea, or of 150 feet above the hollows at their own base; yet they command a gorgeous extensive prospect of the basin of the Forth, from the Lothians to Stirling, and from the flanks of the carses to the Ochils. Though much of the surface was originally moor and moss, yet all of it, except about a twentieth, is now arable land; and even a large part of the excepted twentieth is occupied by plantations, so disposed as to embellish tracts naturally bleak and dismal. The soil of the western district is cold and wet,—much of it retaining a strong dash of its original mossy character; but that of the eastern district is predominantly of a light gravelly nature toward the Avon, and of a

clayey character in the interior. The rocks are partly eruptive and partly of the coal formation. A fine-grained blue whinstone is extensively quarried. A sandstone of very close grain, with a fracture resembling that of marble, capable of retaining the chisel marks of sculpture unchanged through centuries, is worked. Coal has in recent years been found in great abundance, and is now very extensively mined. Iron ore, of fine quality, though with a comparatively small per centage of metal, is worked in the vicinity of Maddiston. The principal landowner is Forbes of Callendar. The gross yearly value of raw produce was estimated in 1841 at £38,250. Assessed property in 1843, £6,734 16s. Several mills of different kinds stand on the Avon, and are propelled by its water power. Half a mile north of the parish church stands the old castle of Almond, surrounded by a fosse, and formerly a seat of the Earls of Callendar. Three-quarters of a mile above Linlithgow-bridge, on the Avon, stands Emanuel Priory: which see. The parish is traversed by the road from Edinburgh to Falkirk, by the Union canal, by the Slamannan railway, and by the Edinburgh and Glasgow railway; it shares with Linlithgowshire the honours of the magnificent aqueduct and viaduct across the Avon; and it has near access to the Edinburgh and Glasgow railway, on the east side at the Linlithgow station, and on the west side at the Polmont station. Population in 1831, 1,540; in 1851, 2,647. Houses, 488.

This parish is in the presbytery of Linlithgow, and synod of Lothian and Tweeddale. Patron, the Crown. Stipend, £231 4s. 8d.; glebe, £9. Unappropriated teinds, £88 19s. 9d. Schoolmaster's salary, £34 4s. 4½d., with £24 fees and a glebe of 6 acres. The parish church was built about the year 1808, and contains 600 sittings. There is an United Presbyterian church at Avonbridge, built in 1803, and containing 308 sittings. There are a non-parochial school and a parochial library. The tract now forming the parish of Muiravonside was anciently part of the parish of Falkirk, and does not appear on record as a separate parish till the year 1606. A chapel stood in old times at Ballembriech, on the Avon, 3 miles west of the present parish church. The popular name of the parish, or rather popular abbreviation of the proper name, is Moranside.

MUIR-BURN, a brook tracing the boundary between Ayrshire and Renfrewshire, formerly also between the barony of Beith and the lands of the monks of Paisley, a short distance northward to Castle-Semple loch.

MUIR-BURN, Lanarkshire. See Glassford.

MUIRBURN-MEADOW. See Glasgow, Paisley, Kilmarnock, and Ayr Railway.

MUIRCLEUGH. See Lauder.

MUIRCOCKHALL. See Dunfermline.

MUIRDRUM, a post-office village in the parish of Panbride, Forfarshire. It stands on the road from Arbroath to Dundee, 6 miles south-west of Arbroath, and 12 north-east of Dundee. Population, 112. Houses, 30.

MUIRDYKES. See Lochwinnoch.

MUIRHEAD, a village in the parish of Liff and Benvie, Forfarshire. Population, 81. Houses, 16.

MUIRHEAD, a village in the parish of Kettle, Fifeshire. Population, 106. Houses, 21.

MUIRHEAD, a village in the eastern district of the parish of Cadder, Lanarkshire. Population, 49.

MUIRHOUSE. See Murroes and Cramond.

MUIRHOUSES, a village in the parish of Carriden, Linlithgowshire. Population, 139. Houses, 31.

MUIRKIRK, a parish in the extreme north-east of Kyle, Ayrshire. It comprises the most easterly land in the county; and contains the post-town of Muirkirk, and the village of Glenbuck. It is bounded on the north and the east by Lanarkshire, and on other sides by the parishes of Auchinleck, Sorn, and Galston. Its greatest length, from east to west, is 9 miles; its greatest breadth, from Forrest-cairn to Stoney-hill, is 8½ miles; and its area is about 58 square miles. On all sides except the west and the north-west, or over a sweeping segment of 25 miles, its boundary is a water-shedding line of summits. The surface of the interior is a rough, broken, dreary expanse of moorish hills, averaging from 800 to 1,000 feet in altitude, tame in outline, darkly heathy in general dress, now rising in solitary heights, and now forming ridges which run toward almost every point of the compass, slenderly intersected with uninteresting valley-grounds, and nearly altogether destitute of either grandeur or any other attraction of landscape. Cairntable, on the boundary with Lanarkshire, near the south-east extremity, is the highest ground, attains an altitude of 1,650 feet above sea-level, and commands, on a clear day, an extensive and diversified prospect. About the middle of the eastern boundary, and half-a-mile inland from it, are two artificial lakes, jointly covering 121 acres, cut out at the beginning of the century as reservoirs to supply the cotton-works at Catrine. Issuing from the first of these, and traversing the second, the river Ayr runs 8 miles westward through the parish, cutting it into very nearly equal parts. Of numerous independent streams, all of local origin, which join it in its progress, the chief on its right bank are Powness, Greenock, and Whitehaugh waters, respectively 3, 9½, and 5 miles long, and on its left are Garpel-water and Procribe-burn, respectively 4 and 2 miles long. The Ayr and the Greenock have a few eels, and abound with blackish-coloured trouts. Only about one-twentieth of the area of the parish is in tillage; and all the remainder, excepting about 300 acres of plantation, is disposed in sheep-walks,—some of them so excellent that the first-class prize for black-faced sheep fed on them has often been awarded at the Highland Society's shows. A natural forest extended, in the twelfth century, over a large part, perhaps nearly the whole, of the surface: and has left dreary memorials both in such names as Netherwood and Harwood, worn by utterly treeless farms, and in long trunks and branches deeply buried in moss. The mountain-ash is the chief tree which appears to grow spontaneously; it adorns the wildest scenes; and unexpectedly meets the eye by the side of a barren rock and sequestered stream, seldom seen except by the inhabitants of the air or the solitary shepherd and his flock. Coal lies on both sides of the Ayr, at no greater a depth than 60 fathoms, in six seams aggregately 30½ feet thick, and severally 3½, 3, 7, 9, 2½, and 5½; and is mined, on the most approved plans and in very large quantities, both for exportation and for local consumpt and manufacture. Ironstone occurs in the coal-field in five workable seams, so thick that three tons of stone are obtained under every square yard of surface. Limestone likewise plentifully occurs, and is worked jointly with the ironstone and the coal. Lead and manganese have been found, but not in such quantity as to be remuneratingly worked. The most extensive landowner is Lord Henry Bentinck; and there are nine other considerable landowners, besides a few smaller ones. The yearly value of raw produce, inclusive of £10,000 for minerals, was estimated in 1837 at £18,520. The value of assessed property in 1843 was £6,179 3s. 7d. The parish is deeply and pathetically associated with the martyrly history of the Covenanters. Of various monuments the most remarkable is the

tombstone of the eminent Scottish worthy, John Brown. See PRIESTHILL. On the top of Cairntable there are two large cairns. The parish is traversed eastward by the turnpike between Ayr and Edinburgh, and southward by the road between Glasgow and Dumfries by way of Strathaven; and it has a branch railway, commencing at a point 57¾ miles from Glasgow, and extending 10¼ miles west-south-westward into junction with the Glasgow and South-western railway at the village of Auchinleck. Population in 1831, 2,816; in 1851, 3,423. Houses, 574.

This parish is in the presbytery of Ayr, and synod of Glasgow and Ayr. Patron, the Marquis of Hastings. Stipend, £157 17s. 3d.; glebe, £25. Schoolmaster's salary, £28, with £60 fees, and £5 other emoluments. The parish church was built in 1813, and contains 1,000 sittings. There is a Free church, with an attendance of 200; and the amount of its receipts in 1856 was £82 7s. 6½d. There is an United Presbyterian church, which was built in 1823, and contains 380 sittings. There is likewise a recently erected Roman Catholic chapel, with about 100 sittings. There are two schools supported by the Muirkirk iron company, and three other non-parochial schools. Till 1631 the parish was included in MAUCHLINE: which see. The church erected in it, at its being made independent, was appropriately called the Kirk of the Muir,—abbreviatedly Muirkirk,—and more formally the Muirkirk of Kyle.

The TOWN OF MUIRKIRK stands near the centre of the parish of Muirkirk, on the river Ayr, at the intersection of the Ayr and Edinburgh, and the Glasgow and Dumfries roads, 13 miles south of Strathaven, 14 miles east of Mauchline, 25½ north-east by east of Ayr, 43 miles north-north-west of Dumfries, and 30 miles by road, but 57¾ miles by railway, south-east by south of Glasgow. It is the seat of an extensive iron manufacture, and was brought into existence, in the latter part of last century, by the discovery and smelting of iron ores. A small predecessor or nucleus of it previously existed, under the name of Garan; and the transmutation of this into the town of Muirkirk is noticed as follows in the Old Statistical Account: "The only village, or rather *clachan*, as they are commonly called, that deserves the name, lies at a small distance from the church, by the side of the high-road, on a rising ground called Garanhill, which therefore gives name to the range of houses that occupy it. They have increased greatly in number since the commencement of the works; and new houses and new streets have risen around them. Many new houses besides, some of them of a very neat structure, have been built at the works themselves; and others are daily appearing that will, in a short time, greatly exceed, in number and elegance, those of the old village, formerly, indeed, the only one that the parish could boast." The place has undergone great fluctuations of prosperity; but, during the last 20 years, and especially since the formation of the railway, it has been very flourishing, insomuch as to take firm rank among the great seats of the iron manufacture in Scotland. The works connected with it comprise large blast furnaces for pig-iron, extensive works for malleable iron, a foundry, and some extensive works for tiles and lime. There were formerly works for coal tar, but these are now in ruins. The town has an office of the Clydesdale bank of Scotland, a savings' bank, and a large circulating library. Population about 2,300.

MUIRSIDE, a village in the parish of Kinnell, Forfarshire. Population, 95. Houses, 21.

MUIRTON, a quondam populous village, now quite extinct, in the parish of Perth. Perthshire.

MUIRTON, Kincardineshire. See MARYKIRK.

MUIRTON (GREEN OF), a suburb of the town of Inverness.

MUIRYFAULDS. See KETTINS.

MULBEN-BURN, a brook draining the northern part of the parish of Boharm, in Banffshire, and running thence north-westward, along a very romantic rocky gorge, to the Spey at Boat of Bridge.

MULBRAX. See BIRSAY and HABRAY.

MULBUIE. See MULLBUY.

MULDONICH, one of the Barra islands at the south end of the outer Hebridean archipelago. It lies 1⅜ mile south of the mainland of Barra, and 2 miles west of Vatersa. It measures only about 2½ miles in circumference, is composed wholly of gneiss, and consists of a single hill, which rises 600 or 700 feet above sea-level. Its name means 'the hill of Duncan.'

MULIGRACH, the most northerly of the Summer islands, lying between the promontory of Rumone and the entrance of Loch-Broom, on the west coast of Cromartyshire. Sandstone strata, of which it wholly consists, can be traced gradually undulating from a horizontal position till they become nearly vertical, and then they lose their marks of stratification. The change of position is accompanied by fissures and caverns, indicating subsidence, or the operation of some analogous cause, after the formation of the last deposits of rock. The island has a circumference of probably not more than 2½ miles, and is not inhabited.

MULL, a political district in the north-west of Argyleshire. It comprehends the parish of Morven, the parish of Torosay, the parish of Kilninian and Kilmore, the parish of Kilfinichen and Kilvicenen, the parish of Coll and Tiree, and the Argyleshire portions of the parish of Small Isles. The first of these parishes lies principally on the mainland, but comprises two small islands in Loch-Suinart; the second, third, and fourth comprise the island of Mull, and all the isles and islets in its near neighbourhood; the fifth consists chiefly of the islands of Coll and Tiree; and the last comprises the islands of Muck, Rum, and Canna. The character of the district, therefore, will be well understood by reference to our articles on Morven and the several islands. Population in 1831, 18,997; in 1851, 15,189. Houses, 2,781. The presbytery of Mull, in the synod of Agyle, comprehends all the political district of Mull, together with the parish of Ardnamurchan; but within four of its quoad civilia parishes are included also the seven quoad sacra or parliamentary parishes of Kinlochspelvie, Sallen, Ulva, Tobermory, Iona, Aucharacle, and Strontian.

MULL, an island, forming the central part of the district of Mull, in Argyleshire. It constitutes rather more than one-half of that district, and is the third in magnitude of all the Hebridean islands. It is separated from Ardnamurchan on the north, by the lower part of Loch-Suinart,—from Morven on the north-east, by the Sound of Mull,—and from Lorn on the west, by the lower part of Loch-Linnhe; and is washed on all other sides either by the main body of the Deucaledonian sea, or by brief sounds of it flanked on the outer side by islands of inconsiderable size. So much is Mull indented by bays and marine lochs, that, though measuring, in extreme diameter, not more than 35 miles, it possesses a circumference along sinuosities of its coast of upwards of 300 miles. Its greatest length west-south-westward, from the point of Downrt, opposite the southern extremity of Lismore, to the small headlands on the Sound of Iona, is about 30 miles; its greatest breadth, in a line from the northern extremity over the summit of Benmore, to a point

below the farm of Scourr, in the Ross of Mull, is about 25 miles; and its superficial extent, as estimated by Mr. M'Donald in his 'General View of the Agriculture of the Hebrides,' is 420 square miles, or 210,000 Scotch acres. Were a line drawn from Treshnish point, opposite the island of Treshnish on the north-west, to the headland on the west side of the entrance of Loch-Buy, the main body of the island lying between that line and the continent would be nearly a parallelogram of 25 miles by 14, extending north-north-west and south-south-east, but, besides suffering other and very considerable intrusions from the sea, would be indented on the south-west to the extent of nearly 8 miles by Loch-na-Keal; and the parts of the island lying between the line and the main ocean, would comprise only 6½ miles in length of the peninsula of Gribon between Loch-na-Keal and Loch-Scridon, and about 16 miles of the long peninsula called the Ross of Mull, which runs out to the Sound of Iona, and, notwithstanding its great length, possesses a mean breadth of little more than 4 miles.

Mull may be summarily characterized as having a boisterous coast, a wet and stormy climate, and a rough, unpromising, trackless surface, redeemed only by fine spots 'few and far between' in sheltered valleys, or more frequently at the head of bays and the bolder inlets of the sea. "We passed the head of Loch-Frisa," says Lord Teignmouth, "and viewed from its shore the lofty summit of Benmore. Mull is, with the exception of some patches of arable land, a vast moor." Yet, as if willing to say something which might mitigate the effects of so unmeasured an anathema, his lordship adds: "Near Tobermory is a sequestered scene of much beauty, recalling to the Italian traveller in miniature the recollection of Terni. Sacheverel, 150 years ago, was struck with its resemblance to Italian scenery. A lake is enclosed by an amphitheatre of hills covered with oak, interspersed with torrents, forming picturesque cascades." "The rapidity," say the Messrs. Anderson, "with which its rocks decompose, prevents the island from having much picturesque beauty; and the tourist will be but ill rewarded in searching for fine scenery at any distance from the coast. Of an altitude exceeding 3,000 feet, the central group of mountains—among which Benmore rises supreme—vie in height with the Cuchullins of Skye, and, like that chain, bring down immense volumes of rain and vapour on the island."

A miniature or reduced copy of Dr. M'Culloch's picture of the island, which he sections off into five divisions, will give a sufficiently minute view of its contour and physical character.—The district lying north of the isthmus between the head of Loch-na-Keal and the mouth of Aros-water, is all hilly and irregular; yet, though high, cannot be called mountainous. Geognostically a trap district, it everywhere presents that terraced aspect whence the trap formation has its name, and rises in numerous stages from the shores to a maximum elevation in the interior of from 1,200 to 1,500 feet. Its coasts are now grassy slopes, now cliffs, and now rocky terraces, the first of the successive stages which recede into the interior; and they occasionally give place in deep bays, to small sandy beaches, formed of broken shells. Picturesqueness occurs charily and at long intervals along the shores, and is quite unknown in the interior. A few of the promontories and columnar ranges on Loch-na-Keal and the Sound of Ulva, are either clothed with ivy or decorated by the scattered remains of oak and ash coppices, and present solitary studies which are not deficient in interest to an artist; and some basaltic veins, in the same localities, have been left alone amid the erosion and decomposition of the softer rocks which once enclosed them, and now rise high above the surface with such resemblance to the ruined walls of castles, that, at a little distance, only the experienced eye of a mineralogist can detect their true character. The district thus noticed contains the topographical subdivisions of Mornish, Mishnish, and Quinish.—A second district includes all Gribon and a small part of Torosay, or the whole of the peninsular territory lying west of a line drawn from the head of Loch-Scridon, past the west base of Benmore to Loch-na-Keal. This consists of just such trappean terraces as occupy the area of the former, but acquires an altitude of not much less than 2,000 feet, maintains this altitude over an extensive table-land, and, while descending by interrupted slopes on the south to level shores on Loch-Scridon, breaks down on the west first in steep declivities, and next in high cliffs, which jointly have an elevation of at least 1,000 feet above sea-level. Of various caves in this part of the island which form objects of attraction to a numerous class of visitors, one known by the name of Mackinnon's, is dark, lofty, profound, and imposing on the imagination, yet presents nothing but an abyss of vacancy in which the eye vainly seeks for any distinctive object on which it may momentarily repose. Near this an open and arched but shallow excavation of great size penetrates some secondary strata; and in consequence of filtrations of small rills charged with calcareous matter, is adorned along the room with huge though rude stalactites. Ash-trees and ivy mantle over the walls and top of the exterior, and, in combination with the sublime background of towering cliffs, produce a scene of great effect and admirable colouring. The rocky strata of the coast in the vicinity of the caves resemble an irregular and huge inclined staircase, the surface looking to the land, and the outer edges turned upwards at a considerable angle. A pedestrian, in traversing them from the beach, laboriously surmounts one step only perhaps to be conducted to a lower point than that from which he ascended; and not till he has crossed a vast number of the alternate elevations and descents does he find himself on land even but a small degree higher than the level of the beach.—A third district, which may be designated the mountainous, extends due eastward from the second to the Sound of Mull, and flanks the coast of that Sound from the kirk of Torosay, or the castle of Aros, to a point between Macalister's bay and the head of Loch-Don. Irrespective of the vast and towering form of Benmore [which see], it attains, over the greater part of its extent, an average elevation of nearly 2,300 feet above sea-level; yet, on the north and east it gradually subsides in altitude, and eventually gives place to a belt of flat shore along the Sound.—A fourth district occupies all the area south of the former, and westward to a line irregularly drawn between Shiha and Bunessan in the Ross of Mull. This territory, in common with all the others yet named, is trappean; it possesses, over far the greater part of its area, uniformly high land; and in its coast-line it is strongly marked by lofty cliffs from Inimore to Loch-Buy, but eastward of that bay declines into the flat shores and indented outline of Loch-Spelis and Loch-Don.—The last district is the western part of the Ross of Mull, and extends inland from the extremity of that long peninsula only between 5 and 8 miles. It geognostically consists of granitic and metamorphic rocks, yet blends with the trap along the line of contact; and it is either disposed in small and numerous rugged eminences through which the naked rock very frequently projects, or presents the more undulating

features which attend the schistose varieties of gneiss.—The various modifications of trap rocks which prevail over the four principal districts, give place, in the Benmore region, to syenite and a blue claystone; and they elsewhere have interspersed among them, in positions of much distortedness, beds of limestone and sandstone belonging to the lias and oolitic series. Agates, zeolites, and the other enclosed minerals of basaltic and amygdaloidal rocks, occur in considerable numbers; carbonized wood has been discovered; and hypersthene, though not yet met with, probably exists. A fine red granite is found at the promontory of Ross.

Excepting on the small rocky district at the point of the Ross, and on a few of the summits in the mountainous tract, the soil of Mull is both deep and fertile, and bears a considerably larger crop of pasture in a given space than that of Skye. Yet Mull, of all the Hebrides, is least adapted for the cultivation of grain, and is compelled to exchange part of its abounding flocks of cattle for imported corn. Both proprietors and tenants have, for a considerable series of years, occupied themselves principally as graziers, and have experienced both an augmentation in the quantity and an amelioration in the quality of their stock. The Tweeddale breed of sheep has been universally substituted for the ancient Highland; and a few Cheviots may be found on the low-lying farms. The horses of the island have long been noted for hardiness; but, in consequence of improvements in husbandry, and alterations in the value of land, they have, of late years, decreased much in number. Woods at one time were so rife in Mull as to be celebrated for their extent and beauty; but, except in a few neglected coppices, chiefly of oak intermixed with birch and hazel, they have long since vanished. Larch, fir, and other trees have, to a noticeable extent, been planted in the north; and the ash grows with great vigour and beauty in sheltered situations in the east; but planes, so noted for their indifference to the power of winds, seem here to be almost entirely unknown.

Of several fresh-water lakes, the largest are Loch-Erison in the north, Loch-Uisk in the south, and Loch-Ba near the head of Loch-na-Keal. In a bay on the north-east called Bloody-bay, a little north of Tobermory, a sea-battle was fought in the 15th century, between Angus of the Isles and the Earls of Crawford and Huntly. The island, though singularly poor in antiquities, even possessing few and tame specimens of those dullest of all objects of antiquarian curiosity, barrows, cairns, and grave-stones, contains three interesting examples of the semi-ancient fortalice,—the castle of Aros, overhanging the Sound of Mull in the vicinity of the cognominal hamlet,—Duart-castle, looking up Loch-Linnhe, and garrisoned till lately by a detachment from Fort-William,—and the castle of Moy, standing in the vicinity of the modern mansion at the head of Loch-Buy. The chief trade of the island is centred at Tobermory, which is its only town; and there also are its seats of justice, and its principal civil institutions. See the article Tobermory. Mull, though divided into several parishes in the times of Popery, was consolidated into one parish at the Reformation. This was called the parish of Mull, and belonged to the presbytery of Lorn. About the time of the Revolution, the part of it north of the isthmus at Aros was erected into a separate parish, under the name of Kilninian. The rest of it continued for upwards of 40 years afterwards to be all one parish, under the name of the parish of Ross; and this was then divided into the parish of Torosay on the east, and the united parish of Kilfinichen and Kilviceuen on the west.

MULL (Sound of), the belt of sea between the island of Mull and the Scottish mainland. It is identified at its north end with the lower part of Loch-Suinart, and on the south with the lower part of Loch-Linnhe; and is undisputed in designation only between the headlands at Bloody-bay and Duart-castle,—a distance of about 19 miles. As thus limited, it is flanked on the continent side only by Morven, measures from 11 furlongs to 3¼ miles in breadth, and possesses only five or six islets, all of them quite inconsiderable. But regarded as including the whole band of sea which divides Mull from the continent, it may be viewed as commencing on the south between the headland at Loch-Buy and Macmarquesas point in Seill island, and cannot measure less than 36 miles in length, while it has occasionally a breadth of from 8 to 10 miles, is flanked by Mid and Nether Lorn and part of Ardnamurchan, and possesses the large island of Kerrera, besides various minor islands. The Sound, even limitedly understood, has depth enough to bear vessels of the largest burden; it sweeps in beautiful curvatures between comparatively mountainous and moorish shores, which are occasionally relieved by pendicles of deep verdure, and patches of birch and hazel coppice; and in all directions it is closed up in the distance by chains of wild and alpine heights, the chief of which are the prodigious masses agglomerated round Ben-Cruachan. "On each cape and promontory, as we wind along finely," say the Messrs. Anderson, "the fragments of the dark grey walls of the ancient Scandinavian burghs, and the shattered and picturesque battlements of more recent castles, rise up before us, recalling the thoughts of the stern olden time, when the whole of these shores were exposed to continual warfare and invasion. In fine weather a grander and more impressive scene, both from its natural beauties and its historical associations, can hardly be imagined. When the weather is rough, the passage is both difficult and dangerous, more particularly from the 'conflicting tides that meet from strait and lake,' and from the sudden gusts of wind that issue from the mountain glens. In clear moonlight, also, the sail is most delightful; and then,—

> 'Awaked before the rushing prow
> The mimic fires of ocean glow,
> Those lightnings of the wave;
> Wild sparkles crest the broken tides,
> And flashing round the vessel's sides,
> With elvish lustre lave!'"

MULL OF CARA. See Cara.

MULL OF GALLOWAY. See Galloway.

MULL OF KINTYRE. See Kintyre.

MULL OF OA. See Islay.

MULLBUY, a broad-based, extensive, ridgy hill in that district on the east coast of Ross and Cromarty, which is called Ardmeanach, or 'the Black isle.' The hill—though only about 500 feet high—extends from the moor of Ord to the town of Cromarty,—a distance of about 16 miles, and forms the spine of the peninsula between Beauly frith and all the upper part of the frith of Cromarty. It has a gently featured outline, and commands very pleasant prospects. Its predominant rock is the old red sandstone, which has been extensively quarried. The surface of the hill, to a very great extent, was long allowed to lie half waste, chiefly in a state of commonage, yet was all pronounced, by good judges, at an early period of the age of agricultural improvement, to be, every foot of it, available for the plough, with generally as good soil as the low grounds of the peninsula.

MULLHEAD. See Deerness.

MULLION. See Redgorton.

MULLOCH-BAY, a small free port at the south-west extremity of the parish of Rerrick, Kirkcudbrightshire. It is at present a mere landing-place, but could, at very small expense, be converted into a safe and commodious harbour.

MULROY. See Roy (The).

MUNCRAIG, a lofty rocky headland in the parish of Borgue, Kirkcudbrightshire. Its cliffs, as also those of two other headlands in the same parish, have irregular fantastic forms, and combine with adjacent rocky islets and the surgy tides of the Solway frith to form a piece of scenery alike curious, romantic, and sublime.

MUNDOLE. See Forres.

MUNGO (St.), a parish in Annandale, Dumfries-shire. Its post-town is Lockerby, ½ a mile from its northern extremity. It is bounded by Dryfesdale, Tundergarth, Hoddam, Cummertrees, and Dalton. Its length southward is 5 miles; its greatest breadth is about 3 miles; and its area is about 7¼ square miles. The river Annan traces the south-western and the southern boundary, over a distance of 3 miles, and contains at one point here a pool called the Rockhole, or vulgarly Rotchel, of an astonishing depth, formed in the middle of a rock. The water of Milk runs in a southerly direction, partly on the eastern boundary, but chiefly through the interior, to the Annan. Fine springs of water are numerous, generally welling up from sandstone rocks or from overlying trap. The surface of the parish, seen from heights which command a map-like view of it in the distance, appears to be level; but, though not strictly hilly, it has such swells and heights as, with the aid of Brunswark-hill in the contiguous parish of Hoddam, and the wooded rising grounds of Kirkwood in Dalton, to constitute, on a nearer inspection, a very gracefully varied and pleasing landscape. Nutholmhill, flanking the course of the Annan, but subsiding slowly into level ground toward the south, has an elevation of about 200 feet above sea-level; and Barrhill and Breckonhill form a ridge parallel to it on the north, possessing an altitude of about 250 feet. About 300 acres are under wood, chiefly plantation; and the same number, or upwards, are uncultivated. An alluvial soil, averaging about 18 inches in depth, and free from every kind of stones, covers about 286 acres along the Annan and the Milk. The principal landowner is Jardine of Castlemilk, and there are 18 others. The estimated yearly value of raw produce in 1834 was £9,197. The value of assessed property in 1843 was £3,952 5s. 6d. The real rental in 1855 was £5,456. The only noticeable house, either as a mansion or as a seat of historical association, is Castlemilk. Originally built and possessed by the Bruces, the ancient lords of Annandale, it passed as the marriage-dowry of the daughter of King Robert Bruce to Walter, High Steward of Scotland, and descended to their son Robert, the first of the Stewarts who came to the Crown. It afterwards went by marriage to the Maxwells, and was sold by them to the Douglases, and has subsequently undergone a repeated change of proprietors; but it still gives name to a branch of the most ancient family who owned it, except the Bruces,—the Stewarts of Castlemilk, in the parish of Carmunnock, Lanarkshire. It was besieged, during the minority of Edward VI., by Protector Somerset, whose station during the siege was not long ago traceable, and is called Cannon-holes. It was afterwards invested by Oliver Cromwell, and resisted for a considerable time his attacks. In 1707, it was dismantled and modernized into a dwelling-house; and in 1796, it was entirely rebuilt. The mansion stands on a rising ground, on the left bank of the Milk, south of Breckonhill, and is environed with fine pleasure-grounds and a beautiful country. The parish is traversed by the road from Glasgow to Carlisle, and by the Caledonian railway; and it has near access to the latter at the stations of Lockerby and Ecclefechan. Population in 1831, 791; in 1851, 645. Houses, 117.

This parish is in the presbytery of Lochmaben, and synod of Dumfries. Patron, the Crown. Stipend, £173 12s. 10d.; glebe, £60. Schoolmaster's salary, £34 4s. 4d., with £30 fees. The parish church is situated in the centre of the parish; and it was erected in 1841, and contains 319 sittings. The parish school likewise is centrally situated. The ancient parish was called Abermele, from the confluence of the Mele or Milk with the Annan; and the name was changed into Castlemele or Castlemilk so early as before the year 1170, the date of the erection of the Bruces' fortified residence. The church was confirmed by Robert de Bruce in 1174, to the episcopate of Glasgow, and became a mensal church of that see till the Reformation. The bishops of Glasgow are conjectured—chiefly from some remains visible at the end of last century of an ancient village, and of an extensive garden with a fish-pond—to have had a residence in the parish. Owing to the church having been dedicated to St. Kentigern, it has, since the Reformation, borne that saint's vulgar name of Mungo. The parish was, for a short period succeeding 1609, annexed to Tundergarth.

MUNGO (St.), Lanarkshire. See Glasgow.

MUNGO'S HILL (St.). See Huntly.

MUNLOCHY, a post-office village in the parish of Knockbain, Ross-shire. It stands on the road from Inverness to Fortrose, at the head of Munlochy-bay, an indentation of the Moray frith, 2 miles in length, and opposite Culloden-head. The village is 6 miles south-west of Fortrose, and 7 north of Inverness. It is an excellent fishing-station. Population, 85. Houses, 23.

MUNNOCK-BURN. See Ardrossan.

MURDER (Loch). See Tinwald.

MURDOCH'S-ISLE. See Ard (Loch).

MURIE. See Errol.

MURIESTON-WATER, a rivulet of the western wing of Edinburghshire. It rises at Cobinshaw, on the confines of Lanarkshire, and runs about 8 miles north-north-eastward through the parishes of Westcalder and Midcalder, to a confluence with Linnhouse-water, in the vicinity of the village of Midcalder, and near the Linnhouse's influx to the Almond.

MURKLE, an estate and a bay in the parish of Olrick, Caithness-shire. The name Murkle is supposed to be a corruption of Morthill, the 'field of death,' and to allude to a victorious slaughter of Danes in a pitched battle between them and the Caithness-men. Here are quarries of slate and flagstone. The bay of Murkle is a small arm of the south side of Dunnet bay, 2½ miles east of Thurso bay. It was formerly noted for its fisheries and its manufacture of kelp; and it is capable of being rendered a safe retreat, to vessels in distress, from the tempestuous boiling of the Pentland frith.

MURRAY-BURN, a brook, running on the north-western boundary of the parish of Colinton to the Water of Leith at Longstone, a little below Slateford, in Edinburghshire.

MURRAYFIELD, a post-office station 2½ miles from Edinburgh.

MURRAYS (St.). See Maybole.

MURRAYS-HALL. See Kinnoul.

MURRAY'S ISLES, two small islands, pastured by sheep, in the mouth of Fleet-bay, and in the parish of Girthon, Kirkcudbrightshire. They are also called the Isles of Fleet.

MURRAYTOWN. See GRANNOCH (LOCH).

MURROCH-GLEN. See DUMBARTON.

MURROES, an inland parish in the south of Forfarshire. Its post-town is Dundee, 2½ miles southwest of its southern border; and it contains the hamlets of Hole of Murroes, Bucklerhead, and Kellas. It is bounded by Inverarity, Monikie, Monifieth, Dundee, Mains, and Tealing. Its outline is exceedingly irregular, being deeply indented by the detached section of Dundee. Its length southward, measured over the middle of the Dundee indentation, is 4¼ miles; its breadth is generally somewhat upwards of 2 miles; and its area is about 7 square miles. Its surface has almost everywhere an undulating character; and its general rise, especially toward the northern boundary, is not inconsiderable. The greater part of it has a pleasant and highly cultivated appearance. Two rivulets, Fithie water and Murroes burn, drain it southward to the Dighty, and drive several thrashing and corn-mills, and a small flax-mill. The predominant rocks are sandstone and trap. The prevailing soil is black loam variously incumbent on rock, gravel, and clay; a considerable part of it deep and fertile, the rest of it light and less productive. About 3,430 Scotch acres are regularly or occasionally in tillage; about 65 are uncultivated; and about 150 are under plantation. The estimated value of raw produce in 1842 was £18,549; assessed property in 1843, £7,389; real rental in 1855, £7,206. There are five landowners. The principal residence is Ballumbie-house, standing in a well-sheltered situation, and commanding a fine prospect toward the south. Near the right bank of the Fithie, on the southern border of the parish, are the remains of the castle of Ballumbie, anciently a fortified residence, belonging to the Anglo-Norman family of Lovell, now long extinct, and the home of the celebrated Catherine Douglas, the wife of one of that family, and the heroine whose arm was fractured in an attempt to protect King James I. from the assassins who murdered him in Perth. At Easter Powrie, now called Wedderburn, also on the right bank of the Fithie, are the remains of another castle, anciently the residence of Gilchrist, Thane of Angus, from whom all the Ogilvies in Scotland are said to be descended: and afterwards the property of Wedderburn of Wedderburn, the representative of the noble family of Scrymseour of Dudhope and Dundee. The parish is traversed by the roads from Dundee to Forfar and Letham, and enjoys considerable advantages from its nearness to Dundee. Population in 1831, 657; in 1851, 643. Houses, 143.

This parish is in the presbytery of Dundee, and synod of Angus and Mearns. Patron, the Crown. Stipend, £172 4s. 8d.; glebe, £15. Schoolmaster's salary, £34 4s. 4d., with £24 fees, and a house and garden. The parish church is an elegant Gothic structure, with a handsome bell-turret, built in 1848, and containing about 400 sittings. The old name of the parish was Muirhouse,—a name indicating the moorish waste condition in which great part of the surface anciently existed; and this is still the proper name, but has become universally corrupted into Murroes. Robert Edward, the author of a short, elegant, Latin history of Forfarshire, was episcopal minister of this parish in the reign of Charles II.

MURTHLY, a district of the parish of Little Dunkeld, Perthshire. It has a station on the Dunkeld railway. Murthly-castle, a seat of Sir W. D. Stewart, Bart., of Grandtully and Logiealmond, is situated here, amid very fine scenery, with undulating grounds and woods, about 4 miles south of Dunkeld. A new mansion, remarkable for beauty of design and elegance of architecture, was erected a few years ago in front of the old castle. A small old chapel upon the grounds, also, was restored to nearly its primitive appearance, and fitted gorgeously up for use as a Roman Catholic place of worship.

MURTHLY, an isolated district of the parish of Weem, Perthshire. See WEEM.

MURTLE, an ancient barony in the parish of Peterculter, Aberdeenshire. It formerly belonged to the town of Aberdeen, but has been divided into several lots, which have passed into different hands, and assumed different names. The part of it still called Murtle contains an elegant modern Grecian mansion, in a commanding situation, with a charming view of Deeside and the Grampians. One of the brooks which intersect Peterculter is called Murtle-burn. There is a station for Murtle on the Deeside railway, the second station from Aberdeen.

MUSAY, or QUEEN'S ISLAND, a small island in Shetland, probably not more than 2½ miles in circumference. It lies about half-a-mile from the east coast of the Sandwick part of Mainland, and about 7 miles south by west of Bressay.

MUSSELBURGH, a post-town and parliamentary burgh, in the parish of Inveresk, Edinburghshire. Viewed apart from places of other names which lie within its parliamentary boundaries, it stands on the right bank of the river Esk, 3 furlongs south of the frith of Forth, 2½ miles east-south-east of Portobello, 3½ miles west of Tranent, 4 miles north by east of Dalkeith, and 5½ miles east by south of Edinburgh. Its site is a flat expanse only a few feet above sea-level, fringed on the north by fine sandy downs called Musselburgh links, lying between it and the frith, and flanked on the south by a beautiful ridge of rising grounds, which is picturesquely crowned with the church and village of Inveresk. But its boundaries as a burgh are, Ravenshaugh-burn on the east, the lands of Inveresk on the south, the burn at Magdalene-bridge on the west, and the sea-beach on the north. They extend 2½ miles in extreme length from east to west, ¾ of a mile in extreme breadth southward from the mouth of the Esk, and about 400 yards in mean breadth over about half-a-mile at each of the ends; and they comprehend the considerable town of Fisherrow lying compactly with Musselburgh along the opposite bank of the river, the large village of Newbigging stretching in one street with some appendages about ¼ of a mile southward from near the middle of Musselburgh to the extreme southern boundary, Magdalene salt-works near Magdalene bridge, and the villages of Westpans and Levenhall, near the mouth of Ravenshaugh-burn. Such a long broad field of partly compact and partly interrupted town,—skirted with the links of Musselburgh and Fisherrow, and with the luxuriant and gemmed slopes of Inveresk,—washed with the gay and brilliant waters of the frith of Forth,—bisected with the broad, shallow, limpid, pebbly stream of the Esk,—feathered in many a part with lines and clumps of trees,—and embellished all around with mansions, villas, lawns, and gardens,—render Musselburgh, as to the first impression it makes upon a stranger, and even to the eye of a person who is familiar with its defects but feels them tenfold compensated by abounding advantages, one of the most calmly delightful towns, small or great, in Scotland.

Musselburgh proper consists of a High-street, running 650 yards eastward from the end of the Newbridge; a street called Mill-hill, running 450 yards north-eastward from the end of the timber-bridge to the links; a spacious but short thoroughfare running southward from the ends of the timber bridge to

the High-street; another spacious thoroughfare communicating between the High-street and Newbigging; and various lanes and alleys, running parallel with these last thoroughfares. The High-street is not quite straight, and varies much in breadth; at the centre, and in the east end, it is very spacious; and, in spite of defects, it altogether pleases the eye more than the main street of probably any other Scottish town of equal bulk. The town has a large proportion of self-contained houses, many of them in the style of villas; it presents a fair array of good shops, and of municipal and marketing appliances; it is well and somewhat regularly built; and it has such freedom from the intermixture prevalent in second-rate Scottish towns of low, thatched, or otherwise mean houses, as to possess, in comparison with other places of its size, a city-like character. The High-street is on the line of the road from Edinburgh to Berwick. On its north side stands the Musselburgh Arms, the principal inn of the town; old-established and commodious. On the same side, west of the inn, stands the tolbooth, a place curious both in appearance and in history. It was built in 1590, of materials taken from the chapel of Loretto, afterwards to be noticed; and is said to have been the earliest marked instance in Scotland of a secular erection raised from the dilapidation of an ecclesiastical edifice. During two centuries the burgesses of the town were annually excommunicated at Rome for the "sacrilege." The tolbooth had originally no elegance of architecture, and came to have a decayed appearance; and, a number of years ago, it was renovated and adorned. A number of rebels were confined in it between February and September of 1746. Attached to it is the town-hall, a more modern erection, containing the council-room and an assembly-room. Humbly but venerably surmounting these buildings, is a spiral steeple much more ancient than the tolbooth, and endurable only for its antiquity. Its primitive clock bears the date 1496 upon the dial, and is said to have been a present to Musselburgh from the Dutch States, to encourage the continuance of an extensive commerce with their towns. At the west end of High-street is a monument, inaugurated in December 1853, to the memory of Dr. Moir, long distinguished in the town as a public man and a physician, and famous throughout the country as the Delta of Blackwood's Magazine. The monument consists of a statue 8½ feet high, sculptured by Handyside Ritchie, and a pedestal 20 feet high, in the form of a plain square pillar, bearing a suitable inscription.

The main communication across the Esk, connecting Musselburgh with Fisherrow, and taking over the Berwick and Edinburgh road, is an elegant stone bridge of five elliptic arches, erected in 1807, from a design by Sir John Rennie, very nearly level in its roadway, and a great ornament to the town. About 250 yards below this bridge is a substantial timber bridge, resting on iron pillars, and renovated in 1838. About 220 yards above the stone bridge of 1807 stands an ancient stone-bridge, supposed, from its being on the direct line between the Pretorium at Inveresk and the harbour of Fisherrow, from its connexion at the ends with remains not long ago extant of an ancient causeway, and from various architectural features in its structure, to have been built by the Romans. It is narrow in the roadway, and high in the centre; it was formerly defended in the middle by a gate, some traces of which exist in the side-wall; and it has three arches, each 50 feet wide, with a spring of only 10 feet, and the segment of the circle so much depressed in several parts towards a straight line as apparently to indicate that the frame or cover must have sunk during the process of erection. This bridge is now used only by foot-passengers, but is remarkable as the grand thoroughfare for ages between the south-east of Scotland and the metropolis, as an important pass during English incursions and invasions undertaken in the international wars, and as the bridge by which armies poured along to neighbouring fields of fatal and memorable conflict. It is, says Chambers in his History of the Rebellion of 1745–6, "a structure over which all of noble or kingly birth, that had approached Edinburgh for at least a thousand years, must certainly have passed; which has borne processions of monks, and marches of armies, and trains of kings; which has rattled under the feet of Mary's frolic steed, and thundered beneath the war-horse of Cromwell." While the Scottish army were passing along this bridge to the field of Pinkie, the master of Montrose and several other persons were killed upon it by shot from the English vessels lying off the mouth of the river. A mound was thrown up at Inveresk churchyard by Protector Somerset of England to defend the bridge as a pass, and was afterwards used for the same purpose by Cromwell. The Chevalier's Highland army traversed the bridge in 1745, on their way to the field of Prestonpans. "Departing from Duddingston," says Chambers, "the insurgents soon after fell into the post-road, and continued their march till they entered the Market-gate of Fisherrow, an old narrow street leading to the bridge, in passing along which Charles bowed to the ladies who surveyed him from the windows, bending to those who were young or beautiful even till his hair mingled with the mane of his charger. The army now passed along the ancient bridge which there crosses the Esk. Proceeding directly onward, the column traversed, not the town of Musselburgh, but the old kirk-road, as it is called, to Inveresk, and entered the street of Newbigging about the centre. It then marched along the precincts of Pinkie-cleuch, and sought the high grounds near Carberry." Above the old Roman bridge is a wooden viaduct, taking across the Musselburgh branch of the North British railway to a terminus near the centre of the town. This branch railway goes into junction with the Fisherrow branch of the old Edinburgh and Dalkeith railway, and proceeds in a north-westerly direction into junction with the main trunk of the North British railway at a point to the east of Portobello. It was opened for traffic in the summer of 1847, and has proved of great advantage to Musselburgh.

On the margin of the links, immediately beyond the ancient eastern gate of the town, stood a celebrated chapel and hermitage dedicated to our Lady of Loretto. The place had similar fame in Scotland to its romancely storied prototype in Italy; and, though not professing to enclose the very cottage of the Nativity, or any other ancient edifice of Palestine, fetched to it by miraculous flight through the air or navigation across the ocean, was believed to share the physical sanctity and the powers of supernatural cure which the fables of superstition ascribed to the Italian Loretto. The Musselburgh chapel was of high but unascertained antiquity, and probably owed much of its importance to the haze which rested on its early history. Keith says that it was connected with the nunnery of Sciennes in Edinburgh; but he perhaps means no more than that the ladies of that establishment were retained to patronize it, or, for reasons of superstition or interest, used their influence to extol it to their dupes. Pregnant women sent their child-bed linen to it to be consecrated in order to their safe recovery, and accompanied their commission with large presents

of money; and pilgrimages of young men and maidens, of invalids and roués, of the great laden with care and the small harassed by disaster, were made to it from all parts of the country, in quest of blessings supposed to be purchasable with money. A solitary ascetic who inhabited the attached cell of the hermitage, added greatly to the celebrity of the place. The importance of the hermit was afterwards singularly evinced by the incident told by Knox in his History of the Reformation, of his having written in his name, by request of the Earl of Glencairn, a satire on the hypocrisy of the Romish priests, entitled "Ane Epistill direct fra the halie Hermeit of Alareit to his brethren the Grey Friars," and beginning,

"I Thomas Hermeit in Lareit,
Sanct Francis Ordour do hairtillie greit."

Even James V. himself performed a pilgrimage to the chapel on foot from Stirling, in August 1530, before setting sail to seek among the daughters of France a partner for his throne. Yet the chapel became, if not a Paphos, at least a place of somewhat kindred character,—a noxious meeting-place of young men and women,—a scene of barter between the tricks and gains of priestcraft and the indulgence and chartering of vice. "Sir David Lyndsay of the Mount, Lord Lion King-at-arms," whose satires are well known to lacerate priestcraft to the bones, and to salve its bleeding flesh with spices, found no fitter, no less pitied, subject for his cat-o'-nine tails and his rude salving than the chapel of Our Lady of Loretto. "Parts of Musskelborowe towne, wi' the chapel of Our Lady of Lauret," were destroyed in 1544 by the English army under the Earl of Hertford; and the chapel, though afterwards thoroughly re-edified or repaired, was soon frowned away from its site by the Reformation, and made acquainted, stone by stone, as we have seen, with convicted and acknowledged malefactors. "Of this building, which must have been of considerable dimensions," says the New Statistical Account of Inveresk, written in 1839, "no vestige now remains, save a cell measuring 12 feet by 10, covered by a circular wooded mount. In the roof is inserted a strong iron bar, with an oaken pulley attached, but for what purpose seems doubtful. In 1831, the present proprietor of the villa of Loretto, the Rev. Thomas Langhorne, caused part of the earthen floor to be dug up, when a number of human skulls were discovered, some of which were in complete preservation, and remain so. Over the entrance is an antique carved stone, but from the date on it, 1634, it must have been placed there at a period subsequent to the destruction of 'the chapelle of Lauret.' The present villa of Loretto, which is extensive and commodious, appears to have been built during the last century, and is surrounded by delightful gardens and orchards."—In the town of Musselburgh there were anciently two other chapels, similar in character to that of Loretto, but of much less note.

Four hundred yards south of the villa of Loretto, gracing the south-east outskirts of the town, and presenting in itself, in its grounds, and in their historical associations, singularly engrossing attractions, stands Pinkie-house. See the article PINKIE. At the east end and on the south side of High-street, stood, till about 1809, the house in which died, in July 1332, the great Randolph Earl of Moray, the friend and compatriot of "the good Lord James" Douglas, and the second in command under Robert Bruce in the field of Bannockburn. It was a two-story house, buttressed in front with conical Flemish windows, each surmounted by a sculptured rose. The ground-floor was disposed in a vaulted passage or corridor 6 feet wide, and in two apartments with arched roofs, each 14 feet square, and, from the floor to the centre of the arch, 8 feet high. The house might well have been the best in the town at the remote date of its erection. The inhabitants are said to have formed a guard round the house during the celebrated inmate's illness, and to have received some notable reward in the form of privilege conferred on the town from the Earl of Mar, the succeeding regent. At the west end of High-street stands a house which figures in the letters of Humphry Clinker as that in which Dr. Smollet was received by Commissioner Cardonell. Near the Fisherrow end of the timber bridge, stands the plain villa of Esk-side, the quondam residence of Professor Stuart; and within the precincts of its garden is a detached, tasteful, two-storied, circular building, beautifully mantled in ivy, the study of the Professor's son Gilbert, in which several of his works were written, and one of the most arresting objects in the landscape seen down the Esk from the new bridge. The manse of Inveresk, built in 1806, and situated in the south-west of Musselburgh, is noticeable as probably occupying the site of the ancient popish parsonage-house, and especially as having supplanted a predecessor of great note in association with literature. During the incumbency of the late Dr. Carlyle, the former manse, built in 1681, was a favourite resort of Robertson, Hume, Campbell, Logan, Mackenzie, Smollet, Home, Beattie, and other distinguished literati of the last age; here a large part of the tragedy of Douglas was written; here, among the papers of Dr. Carlyle, was found a complete copy of Collins' long lost "Ode on the Superstitions of the Highlands;" and here, at an earlier period, were composed the sermons of Williamson. Ecclesiastical buildings in the town, and antiquities and interesting mansions in its vicinity, are noticed in the article INVERESK: which see.

The links of Musselburgh, long noted for promenading, golfing, and archery-ground, were, in 1816, adopted as the chief scene of horse-racing in the Lothians. A curvilinear or irregularly oval race-course, measuring about 1,000 yards in its greater axis, less than 400 in its lesser axis, and about 2,400 in its circumference, stretches eastward from a point 100 yards east of the Esk, and impinges for a considerable way close upon the sea. At the part of it which is nearest the town, and about 100 yards from Loretto, there is a well-constructed stand. Races, understood to be those of Edinburgh, but claiming intermixedly the prefix names of it and of Musselburgh, have, since 1817, been run here every autumn. Between the west end of the race-course and the frith stands the gas-work, erected in 1832, which supplies both Musselburgh and Portobello with gas. On the Links of Musselburgh, in 1638, the Marquis of Hamilton, acting as the representative of Charles I., and bearing a commission to destroy the power of the Covenanters, was met by so many thousands of that noble and undaunted people, and saw such demonstrations of their might and resolution, as utterly blenched the warm hue of the ruthless hopes he cherished. Moving from these links along the coast to Leith, he found the line of his whole route flanked with the triumphant partisans of the Covenant; and on approaching the rising ground near the Leith academy, was petrified to see so many as about 600 Presbyterian ministers arrayed in the caps, bands, and gowns of Geneva, and calmly but sternly glancing defiance at his master's purpose to make Prelacy the religion of Scotland. In 1650 the chief part of the infantry of Oliver Cromwell encamped on the links, while his cavalry were quartered in the town; and they remained here during nearly two months.

The spot on which Cromwell's own tent was pitched is still pointed out opposite Linkfield-house.

Musselburgh is very favourably situated for the purposes of manufacture; but its history, in that respect, has been fluctuating and curious. A broadcloth manufactory, begun in the end of the 17th century, was long carried on in great perfection, though not to great extent. A kind of checks called Musselburgh stuffs were, in the early part of the 18th century, fabricated in large quantities from coarse wool, at the price of from 2½d. to 5d. per yard, and chiefly exported to America for female servants' gowns; but soon afterward they were entirely jostled out of the market by cheaper and more showy fabrics of cotton. Woollen cloth, both coarse and fine, continued to be made in small quantities toward the end of last century, but has since altogether ceased to be a Musselburgh article of produce. About the year 1750 a cotton manufactory was commenced, and employed in the town and its environs about 200 looms; but it was speedily swamped by successful competition in other parts of Scotland. A manufacture of thicksets, waistcoats, handkerchiefs, and some kindred fabrics set flourishingly off, though on a small scale, toward the end of last century; and it too has disappeared. A china manufacture was begun about the same time, or earlier, at Westpans, and received some encouragement from the nobility and gentry on account of the neat embellishments of its ornamental china; but as it could not produce table-china cheap enough for common sale, it was abandoned; and a pottery for the coarser sorts of earthenware took its place. Dyeing is another occupation which once formed a prominent part of the town's trade, and has declined nearly to extinction. A starch-work at Monkton, south of Musselburgh, paid, in 1792, no less than £4,064 13s. 4d. of excise duty, but was given up on the following year. A salt-work was very long in operation at Magdalene-pans. The brewing of ale and beer was very extensively carried on in the town, in the latter part of last century, but underwent great decrease about 20 years ago. The tanning and currying of leather is carried on in three large establishments, and employs about 80 workmen. The manufacturing of sailcloth was commenced on a small scale in 1811, and rose in a few years to a very flourishing condition, occupying large premises, and employing a steam-engine of 55 horse power. The weaving of haircloth, principally for chair and sofa-covers, was commenced in 1820, and has for a number of years been carried on in several factories. The making of fishing-nets, by very ingenious methods, is also an extensive manufacture. The raising of garden produce, particularly in the department of seeds and esculent plants, is likewise a large trade.

The harbour of Musselburgh, or more properly that of Fisherrow—slightly noticed in our article on that town—is situated more than half-a-mile west of the mouth of the Esk, and dates so high as the period of the Roman province of Valentia. From a Roman military station, around which also was a municipium or colony of citizens, at Inveresk, a causeway led down along the old bridge to the harbour; and from two other Romanized localities, at a much greater distance, other causeways led down to the same point. From ruins which have been discovered in digging the foundations of many houses in Fisherrow, the immediate vicinity of the harbour would seem also to have been very anciently a seat of population, and very probably the site of a colonia Romana. In the middle ages, also, a commerce appears to have been carried on between it and Holland, so large as to draw the special attention of the Dutch States, and excite their wishes for its continuance. Yet the harbour is at present so shallow as to have only 4½ feet of water at neap tides. This fact, jointly with one formerly glanced at, that the English vessels, in 1547, got so close into the mouth of the Esk as to fire destructively upon the troops passing along the old bridge to the field of Pinkie, appears to intimate that the sea has somewhat receded. The circumstance that the approaches of the old bridge are completely beyond the reach of the tide, proves, at all events, that the sea has not encroached. The harbour stands on the edge of an expanse of loose sand at a point where there is no outward current either to form a bar or to wash away sleech. At the commencement of the present century it was in a rude condition, fit for little else than the accommodation of fishing-boats; and even yet it has greatly too short and ill-contrived, though substantial, a quay. Yet the trade, in spite of all disadvantages, has of late years rapidly and greatly increased. Though no vessel belongs to the port, many coasting-vessels of this country, and vessels of Norway, Prussia, and Holland, resort to it in preference to Leith. The number annually clearing from it is between 200 and 250, averaging each between 60 and 70 tons. A very rich coal-field around Musselburgh, perforated with numerous shafts, and plied by swarms of miners, furnishes a chief article of export, as well as of local enrichment. The other exports are principally bricks and tiles. The imports coastwise are very miscellaneous, and from abroad are chiefly timber, bark, skins, bones, rape, and oil-cake. The harbour, in its customhouse relations, ranks as a creek of the port of Leith. The amount of the dues levied at it in 1852 was £403.

Musselburgh has branch-offices of the Commercial Bank, and the Royal Bank, bowling greens, a public reading-room, a subscription library, a circulating library, a golf club, several friendly societies, and two mortifications for benevolent purposes. Its churches and its schools have been noticed in our article on Inveresk. Its schools have long been famous, not only for the town itself and its immediate neighbourhood, but for families at a distance; and so numerously have their pupils risen to distinction, that a club of these was at one time formed in Edinburgh, to hold periodical meetings there, in commemoration of their schoolboy days. As the climate is singularly healthy, and the situation advantageous for out-of-door exercise, and the best masters for modern languages, drawing, music, and other ornamental departments, can always be obtained from Edinburgh, boarding-schools are very successful and of more than average reputation. Musselburgh, from 1792 till near the close of the continental war, figured conspicuously as the site of military wooden barracks, so extensive that they often accommodated upwards of 2,000 men, of the militia and volunteer cavalry. In 1797, and at subsequent dates, Sir Walter Scott, as quarter-master of the Edinburgh light-horse, flung all the romance of his society over the place, aided by a novelist of totally different character, the well-known 'Monk Lewis,' then a resident in Fisherrow. So important to the town were the barracks, that when the last regiment marched out of them, a wag gave apt expression to the general despondency of the burghers by writing on the walls, 'A town to let.' Yet half-pay officers and retired capitalists, in considerable numbers, continued to make the town their home, and to benefit it by their presence; while invalids and rusticators, from Edinburgh and other places, have become largely attracted to it and to its neighbourhood, during the months of summer. An annual fair in the town, till about 65 years ago, was a scene of great business, particularly

in cattle, linen, woollens, and household utensils, and always lasted two days; but latterly it has become a mere gala season, without any traffic, and serving little other purpose than dissipation. Very abundant communication is maintained with Edinburgh, both by coaches along the road, and by the branch railway.

Musselburgh, previous to its being constituted a parliamentary burgh, was a burgh of regality. Its council comprises a provost, three bailies, a treasurer, and seven common councillors. The magistrates hold a small-debt court for sums not exceeding £5; and on the same days a civil court, with jurisdiction to any extent in point of value; and having a procurator fiscal, they take cognizance of all minor criminal cases, amounting to about 250 in the year. The magistrates and council act likewise as commissioners of police, and as harbour commissioners. The sheriff circuit court for the district in which Musselburgh stands, is held at Dalkeith. Musselburgh is a station of the Edinburgh county police. Very extensive property belonged at one time to the burgh; but a large portion of it was, long ago, sold or feued. What remained of it, comprising very numerous items, was valued, in 1833, at £35,000; and the debt at that time was stated to be £12,123. The revenue for the year ending September 1833, was £2,011 4s.; and the expenditure for the same year was £2,197 3s. 8½d. The revenue in 1839–40 was £2,022 14s. 1d.; in 1854–5, £1,643 6s. 6d. There are seven incorporated trades. Musselburgh unites with Leith and Portobello in sending a member to parliament. Constituency in 1840. 297; in 1856, 292. Population in 1841, 6,328; in 1851, 7,092. Houses, 890. Rental in 1856–7, £14,650.

Musselburgh is believed to have derived its name from a mussel-bank near the mouth of the Esk. But its earliest name was Eskmouth or Eske-muthe; and its next, including the manor over which it presided, was Musselburghshire. As Eske-muthe it is mentioned by Simeon of Durham so early as the 7th century; and it seems to have been a seat of population throughout the whole Northumbria-Saxon period. In 1201, the barons of Scotland assembled at 'Muschelburg' to swear fealty to the infant son of William the Lion, afterwards Alexander II. In the reign of David I., a grant was made by that "sair saunt to the Croon," of the manor of Great Inveresk, or 'Musselburghshire,' comprehending Musselburgh, Fisherrow, the church of Inveresk, with its tithes and other pertinents, and the mills and fishings of the manor, to the monks of Dunfermline; and this grant was confirmed in 1236 by a bull of Gregory IX., and at other dates by deeds of David I.'s successors. From the original grants the monks enjoyed a baronial jurisdiction over the manor; and from its confirmations, they acquired the increased jurisdiction of a regality. Alexander II., in 1239, granted to the monks a right of free forestry over all the lands of the district; and Robert III. gave them all the new customs leviable within the burgh. The vicars whom the monks sent or appointed to officiate in the church of Inveresk were sometimes called "vicars of Muscilburg," and appear, among distinguished or influential men, as witnesses to many charters. A dispute in the 13th century respecting temporalities between the vicars and the monks, which seems to have been keen, and which was terminated by a decision of the diocesan bishop that the vicars were entitled to the small tithes and the offerings at the altars of 'Muscilburg,' excepting the fish of every kind, and the tithes of the mills for which they were to pay the monks annually ten merks, seems evidence that, even at that early date, the altar of Our Lady of Loretto, and possibly the altars of the other chapels of the town, had become the resort of devotees.

The regality of Musselburgh and the property connected with it passed after the Reformation to Lord Thirlestane, and descended, with some dilapidations, to his posterity the Earls and Dukes of Lauderdale till 1710. The town is still in possession of a charter granted by John, Earl of Lauderdale, to the bailies, treasurer, council, and community of the burgh, confirming various ancient charters and rights granted to them by the abbots of Dunfermline, the oldest of which is there stated to have been given and granted by King David in the 34th year of his reign. There is also mention made in the charter by Lord Lauderdale of a charter and infeftment by Robert, Commendator of Dunfermline, with consent of the coventicle brethren, in favour of the bailies, councillors, and community of the burgh for the time being, dated 11th December, 1502, granting and confirming to them all and whole the burgh of Musselburgh, and ground and lands of the same, with liberties and advantages, as freely and honourably as any other burghs of barony or of regality within the kingdom of Scotland, or which of law, or the practice of the realm, belong to them; with power of entering burgesses, privileges of harbour and trades, of holding three weekly markets, and a fair during eight days at the festival of the Apostle James. The last mentioned charter also empowers the bailies and community to elect annually, at Michaelmas, two bailies, a treasurer, and officers to a sufficient number for the administration of justice, with power to hold courts and punish malefactors; and to levy small customs and harbour dues. Lord Lauderdale's charter also confirms two other charters of different lands, mills, multures, knaveships, &c., given to be held in feu, which are described at great length; and it contains a clause of *novodamus* of all liberties and privileges, harbours, stations, and receptacles for ships, anchorage and shore dues, bridge customs, creating and appointing free burgesses, with power of sale, &c., another fair for the space of two days on the 16th and 17th October, electing magistrates, holding courts, punishing malefactors, and, if needful, of putting them to trial and torture. It further gives the power of granting infeftments, and also a clause in virtue of which it has been the practice of the magistrates to grant titles according to the manner used in burgage tenure, viz., "also of cognoscing, entering, and seizing the heirs of the foresaid free tenants, in the foresaid lands, tenements, and others respectively above specified, when their certain right is clearly manifest, according to the old usage and custom of the said burgh." This charter was confirmed by Charles II., on 21st July, 1671: and under this last confirmation the property of the burgh is now held. In 1632, a charter under the great seal erected Musselburgh into a royal burgh; but, in the same year, in consequence of a compromise between its own magistrates and those of Edinburgh, a decreet of reduction of the charter was obtained by the latter from the privy council. But it still wanted none of the rights of a royal burgh except that of representation in parliament; and this it obtained by the great national measure of 1832. It now, therefore, differs from a royal burgh in nothing but the name.

MUTHILL, a parish a little south of the centre of the southern half of Perthshire. It contains the small post-town of Muthill, and the post-office village of Braco; and its north-east corner adjoins the post-town of Crieff. It is bounded by Strowan,

Crieff, Madderty, Trinity-Gask, Blackford, Dunblane, Monivaird, and Comrie. Its length eastward is 10½ miles; its greatest breadth is 8¾ miles; and its area is probably about 76 square miles. The river Earn, running in the direction of south-east by east, washes the northern district for 4½ miles, measured in a straight line, and about 7 measured along its sinuosities; over three-fourths of the distance it is the boundary with Crieff, and over the other fourth it cuts off on its left bank the lands of Innerpeffray, which once formed a detached part of Monzie. Allan-water, coming down from the east, runs for 2 miles along the boundary on the south. The Machony and the Knaik rise very near each other close on the western boundary, and traverse the parish lengthwise, the former eastward to the Earn, the latter eastward and south-eastward to the Allan. Loch-Balloch is a tame small lake in the north-west, whence runs a brook to the Earn. The pond of Drummond is a splendid artificial sheet of water, nearly a mile long and about half-a-mile broad, on the lands of Drummond in the north, curtained round with wood, and overhung on one side by a high rocky bank.

The western half of the parish is bleak, barren, and wildly pastoral, and lies within the Highlands; and the eastern and north-eastern half luxuriates in the picturesqueness and fertility of strath and glen, of pleasant slopes and diversified surface. The north-east corner, consisting of a large tract, is one of the most delightful parts of the luscious Strath-earn. Along the margin of the level and hanging grounds of this district, sweeps circuitously a hilly ridge, green and cultivated, terminating at the west end in the most conspicuous object in the parish, the hill of Torlum. This elevation alone fixes the eye which is turned toward the district fr m a distance on the east, and seen thence, seems to preside over lands, partly level and partly rising, which have nothing to dispute or lessen its supremacy; it is an exquisitely outlined cone, towering high above the circumjacent grounds, and lifting a forest of pine into communion with the clouds. Along the south side of the ridge which ends in this fine hill, lies a narrow vale, the basin of the Machony; and screening the vale along the other side, runs a naked and chilly upland range, akin in character to the Highland heights of the west, and abruptly losing itself among their huddled mass. This range commences on the east in what is called the Muir of Orchil, bears the name of Corryaur, runs along the parish in a line not far from its middle, forms the water-shed between the tributaries of the Forth and those of the Earn, and naturally divides the parish into two great districts, which may be designated Ardoch on the south, and Muthill proper on the north, and which belong respectively to Strathallan and Strathearn. The Strathallan district, except in its western or Highland part, may be viewed as generally declining to the Allan; and as to all the properties of naturally geographical boundary,—very remarkable antiquities, beauty of landscape, separate village, and ecclesiastical and school establishments, is essentially a distinct district; and might, with much propriety, be constituted a separate parish. See Ardoch. Muthill-proper, or the Strath-earn district, forms a landscape of many and very pleasing attractions. Seen from a height on its southern border, the eastern part of it appears "an extensive plain, richly wooded, and studded with noblemen's and gentlemen's seats—to the left the grounds of Drummond-castle, backed by Torlum and the lofty Benvoirlich—in the foreground, the town of Muthill, embosomed in wood, with Crieff beyond, and the heights in front of which it stands, overtopped by the Grampian range, presenting a landscape of extreme beauty, variety, and grandeur."

The predominant rocks of the parish are sandstones and traps; and the former are quarried as building material, the latter as road metal. The soil along the Earn and the Allan is alluvial; and that on the ascent thence to the watershed between these streams is, first, a light irretentive soil on a free bottom,—next, a strong sandy soil, with a mixture of gravel, on a wet retentive bottom,—and next, a poor moorish soil, naturally covered with heath and whins. About 11,700 acres are in tillage; about 12,140 are pastoral or waste; and about 2,510 are under plantation. The Drummond estate comprises about two-thirds of the whole parish; and there are nine other estates. Most of the heritors are resident. The yearly value of raw produce was estimated in 1837 at £60,773. Assessed property in 1843, £15,000. The principal antiquities of the parish, Ardoch-camp and Drummond-castle, are both separately described. Commanding a view eastward to the distance of 40 or 50 miles, is a small rock close by Drummond-castle, called Eagle's Craig, and, by the country people, Beacon-hill, the top of which is flat, and covered to a considerable depth with ashes. Several Roman roads intersect this parish, and vestiges of Roman camps are numerous. Large single standing-stones, from 10 to 14 feet high, are numerous; and remains of Druidical temples are not unfrequent. The parish is traversed by the west road from Glasgow to Perth; it is traversed also by the Crieff branch of the Scottish Central railway, and has a station on it for the town of Muthill; and its southern district has near access to the Blackford and Greenloaning stations of the Scottish Central railway. There were recently in it three distilleries, producing annually about 100,000 gallons of whisky. The town of Muthill stands on the Glasgow and Perth road, 3 miles south of Crieff, and 17 north by east of Stirling. It is one of the neatest, best built, cleanliest, and most pleasantly situated small towns in Scotland. A magnificent avenue, composed of beeches, limes, and chestnut-trees, embowers the road from it to Crieff; and in the western vicinity are the beautiful policies of Drummond-castle. The town has two or three inns, and is a police station. A few of its inhabitants are cotton weavers in the employment of the manufacturers of Glasgow; and most of the rest are agricultural labourers. Population of the town, 1,200. Houses, 152. Population of the parish in 1831, 3,234; in 1851, 2,972. Houses, 433.

This parish is in the presbytery of Auchterarder, and synod of Perth and Stirling. Patron, the Crown. Stipend, £265 11s. 9d.; glebe, £30. Unappropriated teinds, £370 4s. 1d. Schoolmaster's salary, £34 4s. 4½d., with £16 10s. fees, and £12 10s. other emoluments. The parish church occupies a commanding site at the town of Muthill, and is a fine Gothic structure, built in 1828, at the cost of £6,900, and containing 1,600 sittings. There is a chapel of ease at Ardoch, built in 1780, containing 600 sittings, and in the presentation of the male heads of families. There are two Free churches, respectively at Muthill, with an attendance of 450, and at Braco, with an attendance of 320; and the sum raised in 1856 in connexion with the former, was £150 16s. 10½d.,—in connexion with the latter, £204 14s. 11½d. There is also in Muthill a neat Episcopalian chapel. There are likewise in Muthill three schools, one or two beneficiary institutions, and a library and reading-room furnished and maintained by Lord Willoughby de Eresby. There is also an excellent library, left by the late Lord Madderty, at Innerpeffray. There are in the parish eight non-parochial schools. The parish church which preceded the present one is a

venerable building, now roofless, but still raising a time-worn tower over some ancient yews which encircle its choir. The church itself was originally a collegiate one, rebuilt by Bishop Ochiltree of Dunblane, about the year 1430; but the tower, which is square and about 70 feet high, has the characters which are usually ascribed to the artists of the 9th century. Beside the ruin are a monument erected by the people of Muthill to the memory of their late minister Mr. Russell, a man of much celebrity as a preacher and a divine,—also a monument, of a tasteful character, to the memory of Mr. Erskine, son of an Episcopalian minister of Muthill. A chapel—dedicated to St. Patrick—anciently stood in the sequestered Highland district of Blair-in-roan, and is commemorated in a well called St. Patrick's, which is absurdly reputed to be efficacious in the cure of hooping-cough. A Culdee establishment is contended by some writers to have stood in the parish. Muthill—in the days of popery and prelacy—was the residence of the dean of Dunblane; and, for some time after the Reformation, the seat of the presbytery, which afterwards took name from Auchterarder. Barclay, the founder of the sect of Bereans, was a native of the parish.

MUTTON-HOLE. See Davidson's Mains.

MYLNEFIELD, a post-office station in the parish of Longforgan, Perthshire. See Balbunnoch and Longforgan.

MYOTHILL. See Denny.

MYRESIDE, a village in the parish of Kettle, Fifeshire. Population, 105. Houses, 21.

MYRETON, an extinct burgh of barony, in the parish of Penninghame, Wigtonshire.

MYROCH-BAY, a small bay on the east coast of the parish of Kirkmaiden, 2 miles south by east of Chapelrossan, and 7½ north by west of the Mull of Galloway, in Wigtonshire.

N

NABAIGH. See Harris.

NABEANNIBH. See Harris.

NABO (Loch), a picturesque lake, about 3 miles in circumference, in the vicinity of Elgin, Morayshire.

NACAPLICH. See Skye.

NAGANA (Loch), a romantic sheet of water, in the parish of Assynt, Sutherlandshire.

NAIRN, a parish, containing a royal burgh and post-town of its own name, also the village of Seatown-of-Delnies, on the coast of Nairnshire. It is bounded on the north by the Moray frith, and on other sides by the parishes of Auldearn, Calder, and Ardersier. It expands toward the ends, and greatly contracts in the middle, so as to have proximately the outline of an hour-glass. Its greatest length from north to south is upwards of 8 miles; its greatest breadth is 6 miles; and its superficial extent is between 25 and 30 square miles. It all lies within the champaign country or great plain of Moray. The hill of Urchany, at one of the south corners, is the highest ground, and only noticeable eminence. For some distance from the skirt of this height the surface descends in a gentle slope; and along the sea-board it becomes low and flat. The river Nairn bisects the parish north-eastward and northward to the frith. The soil on the banks of the river is sand mixed with clay; in the southern district, is a rich and heavy mould; and about Kildrummie, around the town, and along the coast by Delnies, is light and sandy. A tract of about 400 acres around the town is as pleasant a piece of low ground as any in the north of Scotland. About 3,230 acres in the parish are in tillage; about 1,382 are pastoral or waste; and about 1,380 are under wood. The principal landowners are the Earl of Cawdor, Mackintosh of Geddes, Rose of Kilravock, Robertson of Househill, Grant of Viewfield, and Robertson of Newton. The average rent of land is about £3 near the town, and about £1 5s. at a distance. The value of assessed property in 1843 was £4,596 4s. 9d. The mansions are Geddes-house, Househill, Viewfield, Newton, Firhall, Auchrea, Millbank, and Ivybank. Some notices connected with the parish occur in our article Kilravock-Castle. On the north side of the hill of Geddes are vestiges of an old edifice, called *Caistel Fionlah*,—'Finlay's-castle,'—about 78 feet long, and nearly half as broad. It was surrounded with a ditch, still visible, round the middle of the eminence. A little east of the same hill are the remains of the castle of Rait, built at a remote but unascertained period, and the residence for some time of a branch of the powerful family of Comyn. At a place called Knock-ma-gillan, a little below this castle, 18 of the Mackintoshes were slain by the Comyns in a feudal brawl. At Easter-Geddes are the remains of an old chapel, the burying-place of the family of Kilravock, surrounded with a public cemetery. Lady Kilravock, and her husband, Hugh Rose of Geddes, obtained, in 1293, a charter from King John Baliol, confirming to them and their heirs the lands of Kilravock and Geddes. The chapel was founded in 1473, dedicated to the Virgin Mary, and endowed with £5 Scots and a small glebe. Its chaplain was to perform daily offices, not only for the soul of the founder, but also for the souls of his predecessors, and of his heirs and successors *for ever*. The parish is traversed by the road from Elgin to Inverness; and the part of it west of the town is traversed by the Inverness and Nairn railway, which was opened in November 1855. Population in 1831, 3,266; in 1851, 4,116. Houses, 791.

This parish is the seat of a presbytery in the synod of Moray. Patron, Brodie of Brodie. Stipend, £294 2s. 1d.; glebe, £18. Unappropriated teinds, £53 16s. 8d. Schoolmaster's salary, £30, with £10 fees, and £7 other emoluments. The parish church was built in 1811, and contains 902 sittings. There is a Free church, containing about 1,000 sittings; and the amount of its receipts in 1856 was £423 2s. 1d. There is an United Presbyterian church, built in 1815, at the cost of about £820, and containing 512 sittings. There is an Independent chapel, built in 1804, at the cost of £575.

and containing 416 sittings. There are likewise two Episcopalian chapels, the one English, the other Scotch. The principal schools, besides the parish school, are a General Assembly's school, a Free church academy, a monitory school, and two boarding-schools for young ladies.

NAIRN, a post-town, a seaport, a market-town, and a royal burgh, stands in the parish of Nairn, on the left bank of the river Nairn, immediately above that river's embouchure, 11 miles west of Forres, 15 north-east of Inverness, 23 west by south of Elgin, 86 north-west by west of Aberdeen, and 194 north-north-west of Edinburgh. The greater part of it has a dingy antiquated appearance. Its principal street, called Main-street, commences close on the river ¼ of a mile from the frith, and runs away south-westward to the distance of 3½ furlongs. This thoroughfare is nearly straight, and tolerably spacious; and has its old-fashioned aspect relieved by one or two fine modern public buildings. All the other old thoroughfares are narrow confined lines, either huddled in a mass round the foot of Main-street, or going crowdedly from its sides. Charles-street is a new, solitary, and partially edificed line along the river and harbour, from the foot of Main-street to the frith. Cawdor-street and Cumming-street are recently planned, spacious lines, the former parallel with the frith at a furlong's distance, the latter crossing it at right angles, and both situated north-west of the old town, along the margin of the town-links. Several good new houses have been erected also on the south-west wing of the old town. The streets were formerly noted for having the most uneasy pavement of any in the kingdom, but are now well-paved; and, in 1839, they began to enjoy the luxury of gas. The river, just before coming abreast of the town, forms an island of 1½ furlong in length, and opposite the lower end of the island is overlooked by the parish-church; and after passing the bridge two-thirds down the town, it continues to run direct along to the frith, leaving to the right its old channel which diverged among sandy grounds to the north-east, and formed a little island. The bridge was originally an excellent and substantial structure, built in 1631 or 1632; but it sustained much damage,—first from a flood in 1782, and next from the great flood of 1829. An inscription upon a stone of it, which long ago fell into the river, is 'Gulielmus Rose de Clava,' with the motto, 'Non est Salus, nisi in Christo; Soli Deo Gloria.' At the south-west end of the town stand the academy, a handsome structure, and a neat monument to the memory of Mr. John Straith, who was 40 years schoolmaster of the parish. Near the middle of High-street, on its north-west side, stand the town and county buildings, erected in 1818. The structure is the principal public edifice and architectural ornament of Nairn; and it has a fine appearance, and is surmounted by a handsome spire. Its interior contains the town and county jail, and a court and county hall; the latter very elegant and spacious, and occasionally used as a ball-room. On the same side as the town-house stands the principal inn. The original town occupying, perhaps, not quite the same site as the present, and one more seawards, was defended by a castle. Buchanan informs us that, as far back as the time of Malcolm I., the Danes captured this castle, and cruelly used its custodes or keepers. But every vestige of the structure, and even its site, were long ago overwhelmed by encroachment of the sea.

Nairn is distinguished for the dryness and healthiness of its situation, for its cheapness of provisions, and for the excellence of its appliances for sea-bathing. It has a very fine suite of warm, cold, and shower baths; it boasts a very fine bathing sea beach; it is of easy access from all sides of the province of Moray by public conveyance; it has been rendered specially accessible from the Inverness side by the recently opened railway, and promises soon to be made equally patent from the Elgin side by railway extension to the east; and, therefore, it has already become, and is likely to become increasingly, a favourite summer resort of sea bathers. Several reminiscences and objects both in the town and in its vicinity, also possess interest for strangers, or make pleasing appeals to the imagination. The town was long noted for standing so exactly on the boundary-line between the Highlands and the Lowlands, and being so completely bisected by the mutual repulsion of the Moray men on the east and the kilted Gael on the west, that the Lowland Scottish dialect was spoken at the one end of the street, and the Gaelic language at the other. According to a tradition of the place, James VI., when one day after his accession to the English throne, twitted about the smallness and unimportance of the towns of his native kingdom, wittily declared that he had "ae toon in Scotland, the toon o' Nairn, sae big that the inhabitants spake two different languages, and the folks at the ae end o't could not understand the folks at the ither." West of the town is the field on which the Duke of Cumberland encamped his army on the day before the battle of Culloden. The insurgents, aware of his position, came down the banks of the Nairn from Culloden with the design of attacking him by surprise; but they were too late in their movements, and, being overtaken by the dawn, were obliged to halt and return. Their fatigue and want of sleep occasioned by the long and useless night-march are sometimes assigned as a chief reason of their having suffered so signal and total a discomfiture in the action of next day. Two old castles of great historical interest, and sufficiently near the town to draw the attention of visitors, are noticed in our articles KILRAVOCK-CASTLE and CALDER. Within a range of 5 miles round the town—and, in about half the instances, within a range of 1½ mile—are about 17 or 18 mansions, various in their attractions, and jointly contributing much richness to the landscape.

A wharf and harbourage were constructed, at the mouth of the river below the town, in 1820, chiefly according to a plan by Mr. Telford; and, inclusive of a sum paid for the deterioration of a fishery by changing the course of the river, they cost not less than £5,500. The works were either swept away or much injured by the flood of 1829, and accumulations of sand were driven in by the sea, so that the harbour came to be of little use except for small vessels and for fishing-boats. New works were afterwards constructed, comprising the grand new feature of a breakwater of wood and stone, projecting about 1,200 feet seaward from the right side of the mouth of the river, with a slight angle at its outer end. This breakwater has been productive of the greatest benefit, preventing the accumulation of sand in the way of a bar, and affording complete shelter to vessels from the only winds to which the harbour is exposed. The other new works also are of value, but have reference principally to the restricting of the river to its fairway course below the town. The rise of spring tides in the harbour is 14 feet, and that of neap tides 11 feet. Nairn, in its custom-house relations, ranks as a creek of the port of Inverness; and the amount of dues levied at it in 1852 was £243. The harbour is well situated for trade; and it now possesses about 15 fine vessels; and is also a place of call, at all times of the year, for the steamers in transit between Inverness and

the Forth. The chief articles of import are coal, lime, groceries, and soft goods; and the chief articles of export are fish and fir timber.

The landward trade of Nairn must always be circumscribed by the nearness of the Highlands on the south, and by the vicinity of Inverness on the west, and of Findhorn and Forres on the east. Ordinary weekly markets are held on Tuesday and Friday; a corn market is held every Thursday; and fairs for horses and cattle are held on the third Friday of April, on the 20th of June, if a Wednesday or a Thursday, but otherwise, on the Wednesday after, on the 13th of August or first lawful day after, on the fourth Tuesday of September, on the Friday after the third Tuesday of October, and on the first Friday of November. Hiring fairs also are held on the Thursday before the 26th of May, and at the same time as the April, August, October, and November cattle fairs. There is a small salmon fishery at the mouth of the river, and along the adjacent shores. About 200 fishermen and boys are employed in the fishing of haddock and cod, but depend, for their main support, on removal at the herring season to the Caithness coast, to employ themselves there in the herring fishery. The town has offices of the Caledonian bank, the National bank, and the British Linen Company's bank. It has also seven insurance agencies, a national security savings' bank, four friendly societies, a shipwrecked fishermen and mariners' benevolent society, a ladies' benevolent society, a town and county hospital, a Nairnshire farmers' society, and a St. Ninian's mason lodge. A newspaper, called the Nairnshire Telegraph, is published every alternate Thursday. Four coaches run daily to Keith on the arrival of the trains from Inverness.

Nairn was originally called Invernairn. "This town," says the Report of the Commissioners on the Municipal Corporations, "appears to have been founded by William the Lion. Alexander II. made a grant to the Bishop of Moray 'in excambium illius terre apud Invernaren, quam Dominus Rex Willelmus, pater meus, cepit de episcopo Moraviensi, ad firmandum in ea castellum et burgum de Invernaren.' The lands and town were granted by Robert I. to his brother-in-law, Hugh, Earl of Ross; and they probably continued in the possession of that family till the forfeiture of John, Earl of Ross and Lord of the Isles, in 1475. At that period the tenure of the lands in Nairnshire, which had been formerly held under the Earls of Ross, was changed to a crown-holding; and a similar change very probably took place with regard to the town of Nairn, which then begins to be styled in records the King's burgh, and the royal burgh of Nairn; unless it may be thought that the terms of Robert I.'s grant of the earldom of Moray to Thomas Randolph (which cannot be easily reconciled with the Earl of Ross's charter) are sufficient to prove that Nairn, as well as Elgin and Forres, was then of the rank of a royal burgh." Any charters erecting the town into a royal burgh, or granting or ratifying its privileges, appear to be lost. But a charter of confirmation, though not copied, was confirmed by an act of parliament in 1597; and that act specially prohibits all who are not freemen and burgesses "from presuming to use or exercise the liberties and privileges pertaining to the said burgh and burgesses thereof within the bounds and limits set down in the foresaid infeftment." A considerable extent of landed property formerly belonged to the burgh; but it has almost all been alienated. The amount of the corporation revenue in 1833 was £141 12s. 8d.; in 1855, £711 1s. 4d. The town council comprises a provost, three bailies, a dean of guild, a treasurer, and eleven common councillors. The sheriff court for the county is held on every Wednesday and Friday during session, and occasionally during vacation. The commissary court is held on the same days as the sheriff county court, when business requires it. The sheriff small debt court is held on every Friday during session, and occasionally during vacation. The justice of peace small debt court is held on the first Monday of every month. The court of quarter sessions is held on the first Tuesday of March, May, and August, on the last Tuesday of October, and occasionally at other times by adjournment. Nairn unites with Inverness, Forres, and Fortrose, in sending a member to parliament. Constituency in 1855, 117. Population of the royal burgh in 1841, 2,672; in 1851, 3,401. Houses, 646. Population of the parliamentary burgh in 1851, 2,977. Houses, 562.—Nairn gave the title of Baron in the Scottish peerage to the ancient family of Nairn; and the title afterwards diverged to a younger branch of the ducal family of Athole. The peerage was created in 1681, attainted in 1746, and restored in 1824; and it has been dormant since the death of William, 6th lord, in 1837. It is said to be represented by the Baroness Keith of Banheath and Stonehaven-Marischal.

NAIRN (The), a river of Inverness-shire and Nairnshire, in Moray. Its source is near the central water-sheds of the boldly mountainous district of Badenoch, at a point 9 miles, in a straight line, east of the middle of Loch-Ness. Its course from end to end, is, with few and slight deviations, toward the north-east; and, measured in a straight line, extends to about 30 miles. Over 16 miles from its source, it is wholly an Inverness-shire stream; over the next 6 miles, it runs across a district in which that county and Nairnshire are irregularly dovetailed into each other; and over the remaining 8 miles, it flows wholly in Nairnshire. Till about the point of its ceasing to touch Inverness-shire, it is a Highland river, and gives the name of Strathnairn to the glen or widening vale which it traverses. Its immediate banks are green meadows and pasture-fields, with a few patches of corn land; and its flanking heights are, for the most part, barren heathy mountains. Some clumps and little belts of alder and birch occasionally make a pleasant fringe-work on its margin; and arrays of plantation and ornamental grounds overlook its progress past the house of Aberarder and on the property of Farr. But, in general, its valley exhibits only the repose of pastoral life, and possesses neither the power of landscape, nor the activity of life, which shakes up the quietude of a tourist, and stirringly appeals to his imagination. Yet "its long green meadows, on which clusters of cottages are seen at wide intervals from one another, the very absence of striking objects in the landscape, the stillness that hangs over the face of nature, interrupted only by the gurgling of the little rills that fall into the sombre and slow-moving waters of the Nairn, impress upon the solitary traveller, as he passes along, subdued and tranquil feelings." [Guide to the Highlands.] After leaving Inverness-shire, it traverses a low country, and is overlooked and enlivened by Kilravock-castle, various mansions, and the town of Nairn. Its influx to the Moray frith occurs 8 miles east of the great contraction of the frith at Ardersier, and 9 miles west-south-west of the embouchure of the Findhorn. It is called, in Gaelic, *Uisge Nearne*, or 'Water of Alders,' from the great number of trees and shrubs of that species of wood which anciently grew upon its banks; and it has communicated its name to the parish and county in which it terminates it course. During

the great floods of 1829, the Nairn was swollen into terrific proportions with the other Moray streams; but it worked havoc chiefly toward the end of its path on the estates of Kilravock and Cawdor, and at the burgh and harbour of Nairn.

NAIRNSHIRE, a small maritime county in the north of Scotland. It comprises a main body and several small detached districts in the province of Moray, and a detached district in the ancient earldom of Ross. The main body is bounded on the north by the Moray frith; on the east by Morayshire; on the south-east by the detached part of Inverness-shire; on the south by Morayshire; and on the south-west and west by the main body of Inverness-shire. Its greatest length, from north to south, is 19 miles; its breadth at the coast, and mean breadth over 9 miles into the interior, is 8 miles; its maximum breadth at a point where, after having suddenly expanded, it sends off to the west a long slender projection, is 16½ miles; and its minimum breadth, at the end of a gradual contraction towards the southern extremity, is 3¼ miles. One detached part lies among wild mountains, 2½ miles east of the main body; measures about 4½ miles by 1; and is bounded on the south by the detached part of Inverness-shire, and on all other sides by Morayshire. One pendicle, about a mile long, lies in the vicinity of Grantown, 5 miles south-east of the main body; and another pendicle of not larger extent, lies on the right bank of the Spey, at the distance in a direct line of about 19 miles. Another detached part lies immediately south-west of the sources of Nairn river; is surrounded on all sides by Inverness-shire; measures 5 miles by 3½; and is 4 miles east of Loch-Ness, 13½ south of Inverness, and 28 south-west of Nairn. The detached part in Ross lies along the river Conan and the east side of the head of the Cromarty frith; consists of the barony of Ferrintosh, and contains the parish-church of Urquhart [see these articles]; measures 4½ miles by 3; and is ¾ of a mile east of Dingwall, and 6½ miles north-west of Inverness. The area of the whole county is said to contain 200 square miles, or 128,000 acres; and its acres are stated to be in the proportion of about 70,000 cultivated, 30,000 uncultivated, and 28,000 unprofitable.

The first and the second detached portions which we named are patches of wild upland; the pendicle on the Spey is a tiny contribution to the vale of that river; and the detached part near Loch-Ness is the upper part of the mountain-glen of Farigag-water. Between two-thirds and three-fourths of the main body of the county, from the southern boundary downward, are covered with Highland heights, amassed in broad and in frequently cloven mountains, but ploughed throughout by the romantic and picturesque vale of the Findhorn. See Findhorn and Ardclach. The sea-board district is part of the fine large plain of Moray, and, over a breadth of from 1 mile to nearly 6 miles from the coast, is low and flat. The climate strictly resembles that of Morayshire: which see. The river Nairn runs north-eastward across the western wings of the uplands, and nearly the centre of the lowlands; and the Findhorn, at 7 or 8 miles distance, runs in a parallel direction through the uplands, achieving within the county a run of 11½ miles. A small stream in the lowlands, north-west of the Nairn, expands into the isleted loch of the Clans, 1¼ mile long, and forms likewise a second but smaller lake. The soil of the lowlands, east of the Nairn, is a rich free loam, superincumbent on sand or gravel; and, west of that river, is a stiff rich clay, or a sharp mould inclining to gravel. The arable land in the hilly district, crossed by the Findhorn, bears a small proportion to the waste; and, except on the banks of the brooks, has a sandy soil full of gravel and small stones. Shell marl occurs in large quantity in a small loch called Conan, and in a moss called Lity. Coal has been thought to exist, and has been searched for in the same neighbourhood. A dark blue stone, which burns in the fire but does not lose bulk, and which after incineration remains solid, is worked in one quarry.

About 8,000 acres in Nairnshire are occupied by natural woods, and about 4,000 by plantations. The history and practices of agriculture are similar to those of Morayshire. According to the statistics of agriculture, obtained in 1855 for the Board of Trade, by the Highland and Agricultural Society of Scotland, the number of occupiers of land paying a yearly rent of £10 and upwards, exclusive of tenants of woods, owners of villas, feuars, householders, and the like, was 428; and the aggregate number of imperial acres cultivated by them was 29,553. The distribution of the lands, with reference to crops, was 1,714½ acres under wheat, 3,043¾ under barley, 7,752¾ under oats, 255 under rye, 87 under bere, 16½ under beans, 100¾ under pease, 70½ under vetches, 4,467 under turnips, 1,542 under potatoes, 5¾ under mangel-wurzel, 3¾ under cabbages, 8 under turnip seed, 165¼ in bare fallow, and 10,320¾ in grass and hay in the course of the rotation of the farm. The estimated gross produce of the chief crops was 43,862 bushels of wheat, 98,914 bushels of barley, 199,633 bushels of oats, 2,697 bushels of bere, 2,814 bushels of beans and pease, 49,137 tons of turnips, and 5,937 tons of potatoes. The estimated average produce per imperial acre was 25 bushels of wheat, 32½ bushels of barley, 25¾ bushels of oats, 31 bushels of bere, 24 bushels of beans and pease, 11 tons of turnips, and 3 tons 17 cwt. of potatoes. The number of live stock comprised 1,410 farm horses above three years of age, 289 farm horses under three years of age, 127 other horses, 2,275 milch cows, 1,892 calves, 4,137 other bovine cattle, 21,316 sheep of all ages for breeding, 6,914 sheep of all ages for feeding, 10,257 lambs, and 1,489 swine. In the year 1854, the number of occupiers of land paying a yearly rent of less than £10, was 198; the aggregate number of imperial acres of arable land held by them was 1,656; and the aggregate of their live stock comprised 192 horses, 467 bovine cattle, 313 sheep, and 114 swine. In 1854 there were 15 landowners in the county; 3 of whom had a Scotch valuation not exceeding £100, —1 not exceeding £200,—3 not exceeding £500,—2 not exceeding £1,000,—2 not exceeding £2,000,—and 4 not exceeding £5,000. The valued rental of the county in 1674 was £15,162 Scotch. The annual value of real property, as assessed in 1815, was £14,902; in 1849, £20,156. The real rental in 1855, as ascertained under the new valuation act, was £22,643 15s. 4d. The average of the fiar prices from 1848 to 1854, both inclusive, was, wheat, 49s. 5½d.; barley, without fodder, 26s. 3½d.; barley, with fodder, 31s. 10½d.; oats without fodder, 20s. 2½d.; oats with fodder, 27s. 6½d.; and oatmeal, 16s. 3⅛d.

The only noticeable manufactures in Nairnshire are those of woollen cloth and whisky. The only commerce or fishery of any mark is that at the town of Nairn. The low country is well provided with roads; and the high district has one road up the Findhorn, and another at right angles with it, crossing the river at the bridge of Dulsie. A railway connects the town of Nairn westward with Inverness. The only royal burgh is Nairn; the only burgh of barony is Auldearn; and the principal villages are Calder, Seatown-of-Delnies, and Newton. The principal mansions are Cawdor-castle and Delnies-house, the Earl of Cawdor; Boath, Sir

James A. Dunbar, Bart.; Kilravock-castle, Rose; Kinsteary-lodge, Gordon; Lethen-house, Brodie; Millbank, Colonel Findlay; Nairn-grove, Macfarlane; Nairnside, Falconer; Ivybank, Gordon; Geddes-house, Mackintosh; and Viewfield, Grant. The principal antiquities are those noticed, or referred to, in our articles on the parish and burgh of Nairn.

Nairnshire unites with Morayshire in sending a member to parliament. Its constituency in 1838 was 107; in 1855, 132. The sheriff and other courts are all held at Nairn. The number of committals for crime, in the year, within the county, was 11 in the average of 1836–1840, 9 in the average of 1841–1845, 10 in the average of 1846–1850, 15 in 1852, 11 in 1853, and 14 in 1854. The total number of persons confined in the jail at Nairn, within the year ending 30th June, 1854, was 23; and the average duration of the confinement of each was 48 days. All the parishes of Nairnshire are assessed for the poor. The number of registered poor in the year 1852–3 was 308; in the year 1853–4, 309. The number of casual poor in 1852–3 was 16; in 1853–4, 21. The sum expended on the registered poor in 1852–3 was £1,313; in 1853–4, £1,312. The sum expended on the casual poor in 1852–3 was £7; in 1853–4, £6. The rate of assessment for rogue and police-money in 1855 was 4d. per £1, and for prisons, 2¾d. per £1. Population of the county in 1801, 8,322; in 1811, 8,496; in 1821, 9,268; in 1831, 9,354; in 1841, 9,217; in 1851, 9,956. Males in 1851, 4,695; females, 5,261. Inhabited houses in 1851, 2,022; uninhabited, 27; building, 19.

Nairnshire contains the entire parishes of Nairn, Calder, Ardclach, and Auldearn, in the presbytery of Nairn; and parts of Croy in the same presbytery, Dyke in that of Forres, Moy and Petty in that of Inverness, and Urquhart in that of Dingwall. The last of these is in the synod of Ross, and all the others are in that of Moray. Dyke is shared with Morayshire; Urquhart with Ross-shire; and Croy, Moy, and Petty with Inverness-shire. In 1851, the number of places of worship, returned in the census report as within Nairnshire, was 10; of which 3 belonged to the Established church, 4 to the Free church, 2 to the United Presbyterian church, and 1 to the Independents. The number of sittings in the 4 Free churches was 2,548; and in the 2 United Presbyterian churches, 1,050. The maximum attendance on the census Sabbath, at the 3 Established places of worship, was 450; at the 4 Free churches, 1,712; at the 2 United Presbyterian churches, 1,016, and at the Independent chapel, 223. There were in 1851, in Nairnshire, 14 public day schools, attended by 475 males and 323 females,—7 private day schools, attended by 133 males and 127 females,—and 14 Sabbath schools, attended by 467 males and 527 females. The history of the county is comprised in the historical parts of our article on the province of Moray.

NALNIRE (Loch), a picturesque lake on the boundary between the parishes of Kiltarlity and Kilmorack, Inverness-shire.

NAMBREACDEARG (Loch), a lake, abounding with trout, in the parish of Kiltarlity, Inverness-shire.

NAMOIN (Loch), a lake, abounding with trout, in the upper part of the parish of Kildonan, Sutherlandshire.

NANEAN (Loch), a lake, abounding with trout, and lying high among the hills, in the parish of Kirkmichael, Perthshire.

NANTHORN. See Ednam.

NA-NUA (Loch), a projection of the sea between the districts of Moydart and Arasaig, on the west coast of Inverness-shire. It commences opposite the island of Eigg; penetrates the land about 5 miles eastward, with a mean breadth of about 4 miles; and forks into two bays, the northern one of which is a continuation of Loch-Na-Nua, with a length of 3½ miles, and a mean breadth of about 1½ mile; while the southern one takes the name of Loch-Aylort. See Aylort (Loch).

NAORSAL, an islet lying immediately off the extremity of the peninsula of Rinns in Islay, and containing the headland called the point of Rinns.

NARROWS (The). See Kilfinichen.

NATHANSTIRN. See Nenthorn.

NAUGHTON-CASTLE. See Balmerino.

NAUNT (The), a rivulet of the district of Lorn, in Argyleshire. It runs northward, along a narrow, gorgy, wooded glen, about 6 miles, through the parish of Muckairn, parallel to the river Awe, to Loch-Etive. It makes several waterfalls; and its close deep glen, with precipitous sides, is, for several miles, so densely clothed with hazel and birch copsewood that scarcely a piece of rock or bare ground can be seen.

NAVAR. See Lethnot.

NAVE, an islet lying off the entrance of Loch-Gruinart, on the west coast of Islay.

NAVER (Loch), a lake in the upper part of the parish of Farr, Sutherlandshire. It extends northeastward, with a length of about 7 miles, and a medium breadth of about 1½ mile; and has been ascertained, by sounding, to have, in some places, a depth of 30 fathoms. Some parts of its shore are pebbly, and other parts are rocky and sandy. The rivulets Mudale and Vagasty, as well as numerous brooks, enter it from adjacent glens and corries. The scenery around it is very interesting. Its immediate banks are well tufted with native trees; the surfaces behind the banks rise generally into abrupt rocks or low hills, but soar on the south into the alpine Ben-Clybric, the mountain monarch of the county; while the back-grounds on the east and on the west are formed by the grand summits of respectively Kildonan and the Reay country. Immediately below Ben-Clybric, on a little island near the opposite shore, is one of those interesting remains of antiquity called Pictish towers or forts. It is, like all the others, of a circular form, and built of large stones laid upon each other without cement. The head of Loch-Naver is distant 21 miles from Lairg, and is approached thence by a good road leading down to the north coast; but solitary as many of the Highland roads are, few of them can be said to be more solitary than this.

NAVER (The), a river of Sutherlandshire, usually reckoned the largest in the county, but probably maintaining that status only when in flood. Its principal head-waters are Vagasty-water, rising within 4½ miles of Loch-Shin,—Mudale-water, rising close on the boundary of Farr with Edderachyllis,—and a tributary of the latter, issuing from Loch-Maddy at the meeting-point of Farr, Edderachyllis, and Tongue. The first and second of these flow respectively from the south and the west to the head of Loch-Naver; give their names, with the prefix of 'strath,' to the vales which they traverse; and have each a run of about 8 miles. The Naver, after issuing from its cognominal lake, flows 18 miles north-north-eastward and northward to the bay of Torrisdale on the North sea. Just when debouching from Loch-Naver it receives a large stream which comes from Loch-Coir-na-fearn; and, at various parts of its course, it is augmented by considerable tributaries. The river, for a Highland one, is not rapid, and displays much tranquillity and many amenities. It is bordered by broad bands of luxuriant

meadow, and naturally arable land, occasionally ornate in blooming copses; and is flanked, behind these, with verdant hills, overlooked in the distance by lofty mountains. In ancient times, towers extended in a chain of mutual communication along the whole of its strath; and not many years ago, dwellings and hamlets stood here, occupied by about 1,200 inhabitants. But nearly the whole strath is now pastoral, affording one of the most striking instances in the Highlands of the sweeping depopulation effected by the extension of the sheep husbandry. The Naver is the best stream for salmon in the Northern Highlands.

NEARTAY, a small Hebridean island in the sound of Harris. It lies 2½ miles north of North Uist, and 3 miles east of Bernera.

NEASE. See LANGHOLM.

NEATTIE (LOCH), a small lake, abounding with pike, in the parish of Kiltarlity, Inverness-shire.

NEDD-BAY, a small bay in the parish of Assynt, about 2½ miles south-west of Kyle-Scow, on the west coast of Sutherlandshire. It penetrates the land south-westward, to the mouth of a small stream; and forms a natural harbour, affording shelter and anchorage.

NEEDLE'S EYE. See GAMRIE.

NEIDPATH-CASTLE, an old baronial fortalice in the parish of Peebles, about ¾ of a mile west of the old town of Peebles. It is the strongest and most massive of the numerous feudal strengths still extant in Peebles-shire; and though ruinous and partly fallen, it still exhibits to the eye a bulky, imposing, square pile. Its walls are 11 feet thick, and consist of greywacke stones held together by a cement almost as hard as themselves. The castle stands on a rock at the lower end of a wide semicircular bend of the Tweed. The concave bank, or that on the side of the castle, is very steep, and of great height; about 60 years ago, it was thickly feathered over with wood, from its top to the river's brink; and, in its form and features, it is a vast romantic amphitheatre. The convex bank commences with a little plain half encircled by the river, and rises in a bold and beautiful headland, which seems to stand sentinel over the bend. Amidst this scene, the castle commands, on the north-west side, an important pass; and, on the east, it overlooks the opening vale of the Tweed, and the bridge and town of Peebles. Dr. Pennecuick, in his description of Tweeddale, thus celebrates it:

"The noble Nidpath Peebles overlooks,
With its fair bridge, and Tweed's meandering brooks.
Upon a rock it proud and stately stands,
And to the fields about gives forth commands."

The wood which embowered the castle and embellished the landscape, was avariciously destroyed by the last Duke of Queensberry, either meanly to impoverish the estate before it should fall to the heir of entail, or to fling what proceeds of it he could into the lap of his natural daughter. Wordsworth sings the ingloriousness of his conduct, and the natural scenic powers of the landscape in the following sonnet:

"Degenerate Douglas! oh, the unworthy Lord,
Whom mere despite of heart could so far please,
And love of havock, (for with such disease
Fame taxes him,) that he could send forth word
To level with the dust a noble horde,
A brotherhood of venerable trees,
Leaving an ancient dome, and towers like these,
Beggared and outraged! Many hearts deplored
The fate of those old trees; and oft with pain
The traveller, at this day, will stop and gaze
On wrongs, which Nature scarcely seems to heed;
For sheltered places, bosoms, nooks, and bays,
And the pure mountains, and the gentle Tweed,
And the green silent pastures, yet remain."

The castle was anciently the chief residence of the powerful family of the Frasers,—proprietors first of Oliver-castle in Tweedsmuir, and afterwards of a great part of the lands from that to Peebles,—sheriffs of the county, and progenitors of the families of Lovat and Saltoun. The last male of them in Tweeddale was the brave Sir Simon Fraser, who so signally distinguished himself in the triple action of Roslin-moor, noticed in our article on Lasswade. In 1312, the castle passed by marriage to the Hays of Yester, the ancestors of the Earls and Marquises of Tweeddale; and, when Charles II. marched for England, it was garrisoned by John, the second Earl, for the King's service, and held out against Cromwell longer than any other place south of the Forth. In 1686, it was purchased by the first Duke of Queensberry, and settled by him on his second son, the Earl of March; in last century it was the home of the early life of the third earl of March, who became by inheritance the fourth Duke of Queensberry; and at the latter's death without male issue in 1810, it was transmitted to the Earl of Wemyss, the descendant of a daughter of the Queensberry family.

NEILSTON, a parish in the central part of the upper ward of Renfrewshire. It contains the post-towns of Neilston and Barrhead, and the villages of West Arthurlee, Cross Arthurlee, Grahamstown, Newton-Ralston, Crofthead, Gateside, and Uplawmuir. It is bounded on the south by Ayrshire, and on other sides by the parishes of Lochwinnoch, Abbey-Paisley, Eastwood, and Mearns. The baronies of Knockmade and Shutterflat, though belonging quoad civilia to Neilston, are annexed quoad sacra to respectively Dunlop and Beith. Exclusive of these baronies, the length of Neilston is 8½ miles, its breadth is fully 4½ miles, and its area is about 36 square miles; but inclusive of Knockmade and Shutterflat, the length is 10½ miles, and the breadth is 5 miles. The direction of the length is north-eastward; and the general descent is in that direction, from the watershed with Ayrshire, along the Levern, to a point about ¾ of a mile below Barrhead.

The surface of the parish is exceedingly irregular and uneven. On the north-east border, the land is flat; in the south and the west, it is hilly, having an elevation of from 400 to nearly 900 feet above the level of the Clyde at Glasgow; and in various parts the ground rises into small hills of considerable height. A ravine or narrow vale, widening eventually into a valley, lies along the centre of the parish, traversed by the river Levern; and is flanked on the one side by a range of hills, called the Pad, about 2½ miles in extent, with an extreme altitude of about 820 feet above the level of the sea, and on the other side, by two ranges, called Corkindale-law and the Ferreneze, jointly upwards of 4 miles in extent, and the former with an extreme altitude of about 900 feet above the level of the sea. The view from the Pad is grand and extensive; while that from Corkindale-law is one of the most magnificent and excursive to be anywhere seen in Scotland. On one side, from Corkindale-law, are seen Dumbarton-castle, the vale of the Leven, Lochlomond, Benlomond, and a vast sweep of the Grampians; on another side are seen the vale of the Clyde from Bowling-bay to Hamilton, the Kilpatrick and Campsie hills, the city of Glasgow, a summit or two of the Ochils, the Lomonds of Fife, the Bathgate hills, the Pentland hills, Tinto, and the Lowthers; on another side are the hills of Kyle, of upper Nithsdale, and of Kirkcudbrightshire, and sometimes, in the far distance, the tops of the hills of Cumberland; and on another are the great plain of Ayrshire,

Brown-Carrick hill, the flanks of Loch Ryan, the mountains of Mourne in Ireland, the whole sweep of sea from Donaghadee to the Cumbraes, with Ailsa crag in the centre, and the lofty mountain masses of Arran on the west side.

The temperature of the atmosphere in this parish is, at all times, distinguishable into three climates, which are indicated, in spring, by the exfoliation of the poplar tree. "In the neighbourhood of Barrhead and all the level district around it on the east, which is the first climate, the weather is comparatively mild. There, the leaf of the poplar appears ten days before it is seen in the second district; which begins at the parting of the roads to Neilston and Irvine, and stretches on to about a mile to the west of Neilston village; and in the third district, the leaf of the poplar is not seen for a fortnight after it is out at Neilston." Most of the parish is subject to a greater aggregate of rain and storms than the districts around it. The Levern rises at its south-eastern extremity, runs about 2 miles in a north-westerly direction, then deflects to the north-east, and proceeds in that direction through the centre of the parish to the neighbourhood of Barrhead, where it begins to trace the boundary with Abbey-Paisley. Rivulets tributary to the Levern are numerous; and several of them possess much economical value. There are likewise three small natural lakes; one of which, called Loch-Libo, situated near the south-west border, though covering only about 16 acres, possesses great beauty, and has attracted the admiration of many tasteful observers. Dr. Fleming pronounces it superior, in picturesque scenery, to Rydal water in Cumberland, and says,—"Loch-Libo presents a scene of unparalleled beauty. Its lofty hills, on both sides, are wooded with fine old trees to the water's edge. Its oblong or oval figure pleases the eye; while its smooth and glassy surface, disturbed only by the heron, wild and teal-duck, swimming and fishing upon it, give it animation. Standing at the turn of the road, as you ascend northward, above the Shilford toll-bar, and looking west when the sun, in a fine summer evening, is pouring his rays upon it, its effect is enchanting." There are also five artificial collections of water, in the form of reservoirs or dams, for economical purposes, all of great volume, and one of them 72 acres in extent. Springs of the purest water abound; and one of them, issuing from the solid rock, at a place called Aboon-the-brae, is so copious as to discharge 42 imperial gallons every minute. The predominant rock is trap; but both at the eastern and at the western extremities of the parish, rocks of the coal formation, inclusive of limestone and ironstone, abound. Rare or curious minerals are sufficiently plentiful to draw the attention of mineralogical collectors. The soil of the flat eastern district is of a dry loamy nature, occasionally mixed with gravel, and generally resting on clay or till; that of the middle district is the debris of trap rock, irretentive of water, and well fitted for dairy pasture; and that of the western district is extensively moorish or mossy, in a state of pasturage or waste. The total extent of arable land is about 16,612 imperial acres; of waste land or pasture, 4,232 acres; and of woodland, 865 acres. The yearly value of raw produce in 1837, inclusive of £24,960 for coals and quarried stones, was estimated at £127,358. The value of assessed property in 1843 was £28,961.

The lands of Neilston, Crookston, Darnley, and others in Renfrewshire, belonged, in the 12th century, to a family named Croc; from whom they passed, in the succeeding century, to a branch of the illustrious House of Stewart by marriage with the heiress, Marion Croc. This branch became Earls and Dukes of Lennox; and to it belonged Henry Lord Darnley, husband of Queen Mary, and father of James VI. of Scotland. In progress of time the estate of Neilston passed from them, and was divided amongst a number of proprietors. In the New Statistical Account, Crawfurd is represented as saying in his History of Renfrewshire, that "passing from the House of Stewart, the lordship of Neilston came by marriage into that of Cunningham of Craigends;" whereas Crawfurd makes that statement with regard merely to a portion called Arthurlee, which had belonged to a branch of the Darnley family, and which now belongs to various proprietors. The transmission of the various estates since Crawfurd's time is given by his continuator, Robertson. There are at present ten principal landowners; among whom Spiers of Elderslie, Mure of Caldwell, the Earl of Glasgow, Sir W. C. Pollock of Pollock, and Dunlop of Arthurlee are prominent. None of the castles of the ancient proprietors remain; but mansions belonging to some of the present landowners, as well as mansions and villas belonging to other gentlemen, are numerous and elegant. The appliances of manufacture, also, in the form of printfields, bleachfields, and cotton spinning mills, are great and many,—serving, along with the mansions, the villas, the towns, and the villages, to sprinkle all the lower part of the parish with artificial decoration, and to give much of it a character intermediate between the urban and the rural. The printing of calicoes and the bleaching of cloth were commenced here in 1773; the spinning of cotton was introduced in 1780; and so rapid was the progress of these departments of industry, as well as of others related to them, that Sir John Sinclair, in connexion with the making up of the Old Statistical Account in 1792, selected Neilston as one of three parishes to show to the French chamber of commerce, by a description of these parishes in the French language, the status which manufactures had attained in the best rural districts of Scotland. The prosperity in manufactures, so soon reached in Neilston, has been maintained till the present day, receiving aid latterly from the formation of the Glasgow, Barrhead, and Neilston railway, and keeping up a rivalry, proportionably to the population, with the prosperity of Paisley and Glasgow. The parish is traversed from end to end by the road from Glasgow to Irvine; and communicates with Glasgow by seven railway trains in the day. Population in 1831, 8,046; in 1851, 12,233. Houses, 798.

This parish is in the presbytery of Paisley, and synod of Glasgow and Ayr. Patron, Spiers of Elderslie. Stipend, £321 4s. 4d.; glebe, £24. Unappropriated teinds, £777 14s. 11d. Schoolmaster's salary, £34 4s. 4½d. The parish church has a very fine Gothic window on the north side, and appears to have been built about the middle of the 15th century. It was repaired in 1762, repaired and enlarged in 1798, and repaired again in 1827, and contains 830 sittings. There is a chapel of ease at Barrhead, built by subscription, and in the presentation of the subscribers. There are also at Barrhead a Free church, an United Presbyterian church, an Evangelical Union chapel, and a Roman Catholic chapel. The receipts of the Free church at Barrhead in 1856 amounted to £447 1s. 8½d. The United Presbyterian church was built in 1796, and enlarged at two subsequent periods, and contains 838 sittings. The Roman Catholic chapel was opened in 1841. There are 12 non-parochial schools; three of them of a superior character. There is also a Levern mechanics' institution. The name Neilston first occurs in a grant of the patronage of the church, soon after the year 1160, by Robert Croc to the monastery of

Paisley; and it seems to be simply a variation of the words Neil's Town, derived from some person of the name of Neil who had settled here at or before the time of the founding of the original church.

The Town of Neilston stands on the right bank of the Levern, on the road from Glasgow to Irvine, 2 miles south-west of Barrhead, 5 south of Paisley, and 8½ south-west of Glasgow. It is remarkable chiefly as forming, with the neighbouring village of Crofthead, the upper part of the continuous seat of manufacturing industry which extends hence along the Levern to the north-eastern extremity of the parish; and it divides with Barrhead the local shopping trade for the surrounding country. Fairs also are held here, for cattle, on the third Tuesday of February, May, and October, old style,—and for amusements more than for business, on the fourth Tuesday of July, new style. Population in 1851, 2,075. Houses, 118.

NEISH. See Earn (Loch).

NELDRICKEN (Loch). See Minnigaff.

NELL (Loch), a lake in the parish of Kilmore and Kilbride, Argyleshire. It is about 2 miles long and half-a-mile broad, extends south-south-westward, and sends a brief stream to the head of the marine bay, Loch-Feachan. The two churches and the manse of the united parish are all within 1½ mile of its south end.

NEMPHLAR, a village in the parish of Lanark. It straggles a great distance along the high grounds above the right bank of the Clyde, and may be reckoned to stand 2 miles from the town of Lanark. Its population is about 350, and consists chiefly of weavers, miners, and small farmers. There anciently stood here a chapel belonging to the Knights-Templars.

NENTHORN, a parish on the southern border of Berwickshire. Its post-town is Kelso, 4 miles to the south-east. The parish, over four-fifths of its length, projects into Roxburghshire so as to be bounded chiefly by that county; and it is bounded elsewhere by the parishes of Earlston and Hume. Its length south-eastward is 4½ miles; its greatest breadth is 1¾ mile; and its area is a little upwards of 5½ square miles. The river Eden, approaching from the north, runs 1¾ mile along the western boundary, suddenly bends and runs 2¼ miles along the southern boundary, crosses the parish at its narrowest part, runs 1½ mile along the northern boundary, and then makes a bend, runs for half-a-mile in the interior, and passes away into Ednam. It has its course for a considerable way between a scaur 100 feet high, and an easily sloping bank; and at one place, near Newton Don, it falls over a perpendicular face of rock between 30 and 40 feet in height. The lands commence at the western extremity in a hilly rocky ridge, proceed thence in regular, wide, and soft undulations, and subside toward the east into the beautiful plain of the Tweed 1½ mile above Kelso, and in the immediate vicinity of the ducal demesne of Fleurs. The soil at the west end is improved vegetable mould, on cold till; and everywhere else it is a rich and fertile clayey loam. About 30 acres are a marshy lake; upwards of 300 acres are under wood; and all the rest of the area is grass or tillage. Marl, both shell and clay, has been found in considerable quantity; sandstone and trap, both suitable for building, abound; and basalt occurs in beautiful five-sided and six-sided pillars. Newton Don, the seat of Charles Balfour, Esq. of Balgonie, nephew of the Earl of Lauderdale, and the principal landowner of the parish, stands amidst finely embellished pleasure-grounds, ¾ of a mile from the extreme eastern boundary, overlooking one of the most lusciously beautiful landscapes in the south of Scotland. Nenthorn-house, the quondam seat of the Kerrs of Littledean, and now the property of Mr. Roy, is the only other mansion. The yearly value of raw produce in 1834, was estimated at £9,120. The value of assessed property in 1856 was £4,923 11s. 10d. There were formerly two villages, Nenthorn and Newton; but they are now extinct. The parish is traversed lengthwise by the road from Kelso to Edinburgh. Population in 1831, 380; in 1851, 441. Houses, 73.

This parish is in the presbytery of Kelso, and synod of Merse and Teviotdale. Patron, the Crown. Stipend, £172 8s. 11d.; glebe, £20. Schoolmaster's salary, £25 13s., with £7 10s. fees. The parish church was built in 1802, and contains 140 sittings. There is a Free church, with an attendance of 220; and the amount of its receipts in 1856 was £121 6s. 10½d. The parish appears to have been established during the 13th century, and was formed of the manors of Nathansthirn and Newton, lying respectively west and east of the line where the Eden passes from the southern to the northern boundary. The chapel of Nathansthirn became the parish church; that of Newton continued to be a chapel; both, previous to the parochial erection, were subordinate to the church of Ednam; and both were given in 1316-7, by the bishop of St. Andrews to the abbot of Kelso, in exchange for the church of Cranston in Mid-Lothian. The manors belonged in the 12th century to the Morvilles, the hereditary constables of Scotland, and followed the fortunes of their other possessions till the downfall and forfeiture of John Baliol.

NEPTUNE'S STAIRCASE. See Caledonian Canal.

NERSTON, a small village in the parish of East Kilbride, Lanarkshire. It stands about 1½ mile from the north-east corner of the parish; and its name is a contraction for North-East-Town.

NESS, a name of Scandinavian origin, designating many a headland or promontory in Scotland. It is often, in local or provincial usage, employed alone, or with only the definite article prefixed; but is, more generally, employed with a designative or descriptive prefix, as in the instances Fifeness and Buddonness. The name Ness, however, as applied to Loch-Ness, and thence to the river Ness, and to the town and county of Inverness, is formed from the word *ess*, "a cataract," and alludes to the fall of Foyers,—the words Loch Ness being a corruption of Loch an Ess, "the lake of the cataract."

NESS, a district in the north of the island of Lewis, taking name from the promontory commonly called the Butt of Lewis. See Barvas.

NESS, a small precipitous headland, pierced with a great cavern, called the Ness cave, in the parish of St. Vigean's, about ½ a mile east-north-east of the town of Arbroath, in Forfarshire. The cave was laid open by the removal of some rocks, in the course of quarrying stones for the new harbour of Arbroath. It consists of two compartments, an outer and an inner. The outer compartment is about 300 feet long, from 6 feet to 30 feet high, and 16 feet in extreme width; and is decorated over the sides and the roof with splendid stalactites. The inner compartment proceeds direct inward from the outer one, is neither so high nor so wide, and has a length of only about 100 feet; but is beautifully decorated also with stalactites and stalagmites.

NESS-BAY, a bay on the south-east coast of the island of North Ronaldshay, in Orkney.

NESS (Glen of). See Dalmellington.

NESS (Loch), a large, picturesque, fresh-water lake, in the north-east division of Inverness-shire. It is the longest, the largest, and, with the slender ex-

ception of Loch-Dochfour, the most northerly of the chain of fresh-water lakes which occupy the Glenmore-nan-Albin, and carry along the navigation of the Caledonian canal. It extends, with singular straightness, from south-west to north-east; and, at its extremities, is distant respectively 28 miles from Fort-William, and 6 from Inverness. Its length is 23 miles and 56 chains; and its breadth, from 2 miles at the north-east end, averages about 5 furlongs, then suddenly expands to upwards of 1¼ mile, and thence to the south-west extremity averages about a mile, and is remarkably uniform. The rivers Oich and Tarff enter it within very brief space of each other, at its upper end; the streams Foyers and Farigag, besides some rills, enter upon its right bank; and the Morriston and the Coiltie enter it upon its left. Two considerable bays expand at Invermorriston and Urquhart, and receive the Morriston and the Coiltie. Loch-Dochfour, somewhat less than half a mile in breadth, and 1¼ mile in length, is in a sense a continuation north-eastward of Loch-Ness, and communicates with it, or at least receives its superfluent waters, by a narrow channel of about ¼ of a mile in length. The depth of Loch-Ness in the middle is from 106 to 130 fathoms; and within 250 or 300 feet of the shore, is often from 40 to 50 fathoms. Its waters, in consequence, never freeze; and, even after escaping from it, they reach the sea, in the short run of the river Ness, before they can be cooled to the congealing point.

Except on the narrow part at the north-east end, where a fine belt of low ground stretches along the right bank, and is decorated all over with the wooded parks of Aldourie, the mountain-ranges which flank the great glen come direct down upon the lake, and even plunge their bases within the margin of its waters. They form two long lines of stupendous rampart, straight, lofty, and acclivitous; and render the prolonged and very narrow range along the lake like the restricted view seen through a fixed telescope. They sweep down now with a rapid slope, and now with an almost precipitous fall, and are rugged, rocky, and heath-clad, with ruts and escarpments worn by the rush of torrents and the erosion of the elements; yet, athwart their skirts and lower declivities, they are luxuriantly sheeted with forest, —the birch, the oak, the elm, the ash, the hawthorn, the aspen, and a thick underwood of holly, sloe, and hazel. So dense is the richly tinted mass of foliage, that a stranger surveying it from the bosom of the lake feels as if there were not space for another leaf. The two mountain ranges are, generally, nearly equal to each other in elevation, and have an average altitude above sea-level of between 1,200 and 1,500 feet. But about the middle of the left hand range rises the stupendous huge-based Mealfourvounie, sending up a dome-shaped summit to the height of upwards of 3,000 feet, and shaking down far-flaunting skirts of picturesqueness to the lake. See MEALFOURVOUNIE. Two ravines bring down the chief streams on the right, and two highly scenic vales, Glens Morriston and Urquhart, bring down those on the left; but no other opening cleaves the continuous piles of mountain, or variegates their character of sublime mural enclosure and impassable rampart. A few pendicles of arable land, tiny but pleasant patches of green and brown and yellow, occasionally and at wide intervals, open like a kind of glades among the woods; successive terraces also, in the ancient style of cultivation among the mountains of Palestine, are here and there carried along the face of the acclivities, and laden with the fruits of tillage; the two glens of Morriston and Urquhart, on the north-west, come exultingly out upon the lake, and make a charming display of large cultivated fields, and good and pleasant dwellings; and a limited number of mansions and objects of interest, as we shall afterwards see, hang upon the skirts of the hills, or sit snugly ensconced in some beautiful weather worn recess. But all else is one continuous sublime natural tunnel; the long narrow belt of water its path, the mountains and their wooded skirts its sides, and the cerulean or cloud-laden ether its arch.

Loch-Ness, as to the groupings, the lights and shades, and the minute and characteristic objects of its scenery, may be advantageously viewed both in a trip along its waters, and in a tour along its banks. Owing to the great length of the range of vision, the mountains, as seen from the surface of the lake, lose much of their grandeur, and seem at times to be clothed, in their most ornate parts, rather with luxuriant grass than with wood. Yet seen invertedly in their images in the water, they form, with the over-arching sky and the richly-tinted cloud, a series of pictures absolutely gorgeous. "The whole magnificent scene," says Miss Sinclair in narrating an excursion in a skiff upon the lake, "was reflected upside down in the water so distinctly, that we could scarcely tell the substance from the shadow. This effect was most amusing, as the high road skirted along the water side for many miles, while far down in the crystal tide we saw a repetition of every traveller, wood-cutter, cart, or carriage—no! —there were no carriages,—but abundance of cattle and horses. For the first time in my life, I now saw in the water exactly what we used as children to suppose the antipodes would appear, with a sky far beneath, while men, trees, and animals were perfectly at ease, with their heads downwards, and their feet supernaturally adhering to the earth. The appearance of amazing depth, occasioned by seeing the clouds reflected so far below us, had a sublime effect." But for some distance, round the influx of the water of Foyers, the tumultuousness with which that grandly picturesque stream tumbles upon the lake, and runs riot among its waters, destroys the pervading mirrory smoothness of the surface, and raises a tumulated and broken little sea. The lively writer whom we have just quoted says that, at this place, she encountered more sea than at all the other Highland ferries united, and that the little boat hopped along the waves with such unequal and terrifying motion as threatened every instant to end in its being "whummelled."

The road along the north-west side of the lake brings out its beauties to most advantage; and has such numerous windings and various elevations as lead, at almost every step, to new groupings, or to pleasing diversification of shade and of apparent magnitude. At one time the tourist looks from the naked shoulder of a hill, or the summit of some precipitous skirt of the mountain athwart all the bright far-stretching expanse of the lake; and at another, and but a pace or two onward, he dives low into a dense forest, and sees the lake only at intervals, and in small tesselated patches, glittering between the vistas of the wood, and intricately cu with the tracery of branches and foliage. Approached from Inverness, the whole basin of the lake bursts upon the view at a point 3 miles from the town, and is seen receding away between its parallel screens of mountain, till it becomes lost to the eye in the hazy distance. At the foot of the lake, on the flat gravelly peninsula which divides it from Loch-Dochfour, stand the ruins of the old church of Bona, the ruins of an old baronial strength called Castle Spiritual, and the traces of a Roman encampment, on the site of the aboriginal British town of Banatia. The hills, for a few miles, are precipitous, granitic, reddish in colour, and slenderly relieved with either

wood or verdure, and are somewhat descriptively called Craigderg, or the Red Rocks. In a hollowy recess high on the face of the heights farther on, lies ensconced the hamlet of Aberiachan, famous as the wild and almost inaccessible retreat in former times of bands of whisky-smugglers. Wood, particularly the birch, looks out in clumps and mimic groves from all the district beyond the Red Rocks, but, north-east of Glen-Urquhart, does not luxuriate in the profusion which everywhere else characterizes the banks of the lake. At the opening of Glen-Urquhart, stands the large good inn of Drumindrochet, about 15 miles from Inverness; and on a commanding site, on the more westerly of two little promontories which run out into the bay of Urquhart, rises, 2 miles south-west of Drumindrochet, the picturesque form of Urquhart-castle,—a stronghold grey with age, and not a little famous in the annals of the 14th and two following centuries. See URQUHART. The road, all the way from this fortalice to Invermorriston, a distance of 11 miles, commands scenes of very high beauty, and passes through richly disposed and abundant woods, and, for the most part, at a considerable elevation above the level of the lake. "The profuse intermixture of oak with birch and alder," say the Messrs. Anderson, in reference to this tract, "adds much to the richness and tone of colouring. Dark and dense masses of pine are frequently seen crowning the craggy heights above, while beneath, the rowan and hawthorn trees mingle their snowy blossoms, or coral berries, with the foliage of the more gigantic natives of the forest. The road is overhung by the fantastic branches of the yet youthful oak, while the stately ash, rooted in the steep declivities below, shoots up its tall, straight, and perpendicular stem, and with its scattered terminal foliage slightly screens the glassy lake, or purple-ground colour of the opposite hills; and the airy birch droops its pensile twigs round its silvery trunk, 'like the dishevelled tresses of some regal fair.' Fringing rows of hazel bushes line the road; and in autumn their clustering bunches of nuts invite the reaching arm." At the opening of Glen-Morriston, the antiquated yet modernized mansion of the proprietor of the glen, forms, amidst some fine parks, a pleasing foreground to a superb grouping of rocky and sylvan landscape. In the same vicinity stands the small but comfortable inn of Invermorriston; and a little beyond it is a cascade of large volume of water, amid a ravine and broken rocks, so distinctively featured and arranged as to woo the efforts of the draftsman. From this point to Fort-Augustus, at the head of the lake, a distance of 7 miles, the road for the most part proceeds along a low terrace or very narrow belt of plain, close to the lake's margin, and overhung with avenued ranks of birch and hazel; and about a mile from Fort-Augustus, it so rises as to command a good view—though not a first-class one—of the fort, the neighbouring village, a large part of Loch-Ness, and the continuation of the great glen up the course of the river Oich.

Hitherto the tourist has kept near the lake, and been able always to command views of its scenery; but, on leaving Fort-Augustus to return to Inverness down its south-east side, he is, for 12 miles to the mouth of the Foyers, conducted through Strathcrrick, between screens of granitic hills, the left-hand range of which flanks and excludes the lake. See STRATHERRICK. But he is richly compensated by finding on his way the surpassingly fine cascade scenery of the fall of FOYERS [which see]; nor in the part of the lake's banks from which he is excluded, does he lose more than a repetition of the wooded skirts of hills, altogether unvariegated by the presence of a house or any remarkable conformation of the ground. At the mouth of the Foyers, where the road resumes its progress on the margin of the lake, the house of Foyers peeps out from amidst an opulent expanse of luxuriant birch. From this place to Inverfarigag—a distance of nearly 3 miles—the road climbs along the face of the hill, and passes the white-washed mansion of Boleskine, figuring conspicuously in the elevation, and marking the near vicinity of the spot where Prince Charles Edward was received by Lord Lovat after the battle of Culloden. Inverfarigag presents only the repulsive objects of a few smoky hovels and a small public house; but it points the way to a strikingly grand and romantic pass a little way up the ravine of the river, and it is conspicuously overhung by a small house called the General's Hut, which commands a magnificent extent and variety of the lacustrine scenery, and is said to have been the head-quarters of General Wade while superintending the formation of the military road along Loch-Ness. From Inverfarigag to Dores—a distance of 8 miles—the road passes close by the water's edge; and though not overshadowed with much wood over the first half of the distance, it afterwards traverses such a closely compacted wilderness of wood and coppice, amid extended vistas, a stilly repose, and a charming freshness, which drew upon it from Dr. Macculloch the eulogium of being unequalled in the Highlands for adding novelty to beauty. "It is," says he, "a green road of shaven turf holding its bowery course for miles through close groves of birch and alder, with occasional glimpses of Loch-Ness and of the open country. I passed it at early dawn, when the branches were still spangled with drops of dew; while the sun, shooting its beams through the leaves, exhaled the sweet perfume of the birch, and filled the whole air with fragrance." At Dores, a small village with a neat church and manse, 8 miles from Inverness, the lake makes its sudden terminal contraction, and nearly completes the circuit of its scenery; yet in exulting farewell to the tourist, it spreads out before him probably the richest one of all its views, just as he surmounts a rising ground beyond the village, and is about to take leave of its banks.

In spring, and occasionally in the other seasons, large volumes of vapour arise from Loch-Ness, and sailing along the south-westerly winds to the low seaboard, discharge themselves in fertilizing showers. After a snow-storm, or about the beginning of a thaw, they often assume the most fantastic shapes; and, by expending part of their warmth and moisture upon the snow-clad mountains, they occasion such parallel and party-formed black streaks among the snow as indicate the course and relative temperatures of the winds, and make the mountains seem as if shirted in a hugely striped fabric.—Loch-Ness has the remarkable and mysterious property of being violently agitated during the occurrence, at even a distant part of the world, of an earthquake. On the 1st of November, 1755, at the time of the great earthquake at Lisbon, it was suddenly upheaved, and rolled itself with amazing impetuosity in a billowy volume toward its head, and there discharged a wave 200 yards up the river Oich, at a level five feet above the margin of the stream; and after experiencing a continued ebb and flow for about an hour, it amassed a huge ridge of billow, tossed it 30 feet up its north-west bank, and then subsided into its ordinary repose.

NESS (THE), a river conveying the superfluent waters of Loch-Ness to the Moray frith, in Inverness-shire. Its direction is north-eastward, and its length of course about 8 miles. Its channel is

gravelly, slowly and regularly inclined, and, on the average, about 180 feet wide. The river has a gentle and equable current, combining the ornamental properties of majestic movement with the useful ones of water-power over machinery. Its mean depth is, in summer, about 3 feet, and in winter 6 or 7 feet. A brief way before entering the frith, it is flanked on both banks, but particularly on the right, by the town of Inverness; and immediately below the town it expands into a harbour, and offers accommodation to the steamers and sailing craft which ply from the capital of the Highlands. Two islets, enclosed within its waters a little above the town, are naturally ornamental, and have been brought by horticulture and bridge-building into a very high state of artificial embellishment. See INVERNESS. The water of the river has a purgative power over persons not accustomed to drink it, and is supposed to owe this power to its holding in solution the decomposed matter of certain confervæ and mosses, which its high temperature keeps constantly vegetating in its channel.

NESSOCK. See PORTNESSOCK.

NESTING, a parish nearly in the middle of the eastern district of Shetland. Its post-town is Lerwick. The present parish comprehends the ancient parishes of Nesting, Lunnesting, and Whalsay, and a district of detached islands. Nesting and Lunnesting extend along the east coast of Mainland from Gletness to Lunnanness; and measure, in extreme length, 18 miles, and in extreme breadth 4 miles. Whalsay consists principally of the island of that name, lying nearly 3 miles east of the nearest part of Lunnesting; and the detached district of islands consists chiefly of the Out-Skerries, 5 miles north-east of Whalsay. See WHALSAY and SKERRIES. The principal marine indentations on the mainland are Catfirth, Doure, and Vidlau voes; and the principal headlands are Railsburgh, Eswick, Stavaness, and Lunnanness. The physical and agricultural features of the parish have a common character with most of Shetland. Gneiss is the predominant rock; but granite, syenite, mica-slate, and primitive limestone also occur. Only about 1,000 acres of the parochial area are in tillage; and most of the remainder is either pastoral or waste. The inhabitants are employed principally in the fisheries, and give but secondary attention to agriculture. The principal landowners are Bruce of Simbister, and Hunter of Lunna. A splendid mansion was built a few years ago in Whalsay, by Bruce of Simbister, at a cost of £20,000. Population of the parish in 1831, 2,103; in 1851, 2,420. Houses, 398. Assessed property in 1843, £862.

This parish is in the presbytery of Olnafirth, and synod of Shetland. Patron, the Earl of Zetland. Stipend, £150 8s. 6d.; glebe, £12. Schoolmaster's salary, £25 13s., with £2 10s. fees. There are three parish churches, respectively at Nesting, at Lunnesting, and at Whalsay. The Nesting church was built in 1794, and has capacity for accommodating the whole population on sacramental occasions. The Lunnesting church was repaired about 16 years ago; and is served by the parish minister in a regular rotation with the Nesting church. The Whalsay church was re-roofed a few years ago; and is served by a missionary. There are two non-parochial schools.

NETHAN (THE), a rivulet of the left side of the upper ward of Lanarkshire. It rises on the confines of the parish of Muirkirk, in Ayrshire, and runs in a northerly direction, through the interior of the parish of Lesmahago, to a confluence with the Clyde at Clydesgrove. It is joined by the Logan, and by a number of smaller streams; and, exclusive of sinuosities, it has a total run of about 11 miles. On one part of its banks stand the village of Abbeygreen and the parish church of Lesmahago; in another part is the magnificent old ruin of Craignethan-castle, the prototype of Sir Walter Scott's Tillietudlem; and in other parts are some fine residences, with highly embellished grounds. Much of its course lies along the bottom of a deep ravine, now a gorge, and now a narrow vale, whose flanks, covered with natural wood, rise almost vertically to the height of from 150 to 250 feet. The viaduct of the Lesmahago railway spans this ravine, at a point about 3 miles from the Clyde; and is one of the most magnificent works of its class in the kingdom. Measured merely from the level of the stream, it is not the highest bridge in Scotland; but measured from the foundation of the mason work to the level of the rails, it is the highest viaduct yet constructed, —higher than either the railway viaduct over the Tyne at Newcastle, or the Britannia bridge across the Menai in the vicinity of Bangor. See CRAIGNETHAN-CASTLE.

NETHANFOOT, a village in the parish of Lesmahago, taking name from its position on the rivulet Nethan, in Lanarkshire.

NETHER ANCRUM. See ANCRUM.

NETHERCLEUGH, a station on the Caledonian railway, in the parish of Applegarth, Dumfries-shire. It is 2½ miles north-north-west of Lockerby.

NETHER-COLL, a stream, running into the Broad-bay, in the parish of Stornoway, in the island of Lewis.

NETHERDALE. See MARNOCH.

NETHER-FRIARTON. See FORGAN.

NETHERHOUSE. See MEARNS.

NETHERINCH. See INCHBELLY.

NETHERINCH-BURN, a mountain brook running in the West barony of the parish of Kilsyth, to the south of the Corrie-hill, in Stirlingshire.

NETHER-KILRENNY. See KILRENNY.

NETHERLEE, a village in the parish of Cathcart, Renfrewshire. Population, 56. Houses, 8.

NETHERLEY. See FETTERESSO.

NETHERMAINS, a hamlet in the parish of Kinnaird, Perthshire. Population, 29. Houses, 8.

NETHERMILL. See DALRYMPLE, FETTERCAIRN, and GAMRIE.

NETHERMILL-BURN. See MIDHOPE-BURN.

NETHERMILLS, a station on the Keith extension of the Great North of Scotland railway. It is near the mutual boundary of Aberdeenshire and Banffshire, 6 miles from Keith, and at the point where the railway approaches nearest to the coast; and it is the station with which the towns of Cullen, Portsoy, and Banff communicate.

NETHERMOOR. See DEER (NEW).

NETHERPLACE. See MEARNS.

NETHERTON-HOLM. See KILMARNOCK.

NETHERTON-OF-GARSCUBE. See GARSCUBE.

NETHERTON-QUARRY, a village in the Dumbartonshire section of the parish of East Kilpatrick. Population, 111. Houses, 19.

NETHERWOOD. See MUIRKIRK.

NETHY (THE), a rivulet of Inverness-shire and Morayshire. Its source is on the west side of Benna-Bynack, one of the heights of the Cairngorm mountain-range, and scarcely a mile west of the boundary with the southern extremity of Banffshire. It runs about 8 miles northward through Badenoch, and 4 miles northward and north-westward through the south-east district of Morayshire; and falls into the Spey within a mile of the church of Abernethy. It gives the name of Abernethy to the parochial dis-

trict, and of the Braes of Abernethy to the amassment of hills, within the drainage of its head-streams and feeders. In dry weather, it is a mere brook; but, after rains or thaws, it swells high, and serves to float timber from an expanse of pine forests on its banks to be conveyed down the Spey in rafts to Garmouth.

NEVAY. See Essie.

NEVIS (Ben). See Bennevis.

NEVIS (Loch), an inlet of the sea, in the parish of Glenelg, and between the districts of Knoydart and Morar, Inverness-shire. It is about 13 miles long, and varies in breadth from 2 miles to 2 furlongs. Mountains almost everywhere rise from its margin; and, in many places, are sheeted far up with wood,—flinging, by their forms and altitude and dress, not a little scenic interest over the lake. On the north shore stands the curious Celtic mansion of Macdonell of Glengarry, built by the late Colonel Macdonell, so noted by common fame as the last perfect specimen of a Highland chieftain.

NEVIS (The), a rivulet of the south-west of Lochaber, Inverness-shire. It rises amidst a mass of mountains geographically 6 miles east of the summit of Bennevis, and runs 7 miles west-south-westward, 4½ northward, and 1 westward to Loch-Eil at Fort-William. It is overhung, over two-thirds of its course, by the southern and western fronts of the vast monarch-height Bennevis. Its career is rapid; and it forms several very romantic cascades. The narrow vale which it traverses derives from it the name of Glen-nevis; it is, for 4 miles opposite the south side of the mountain, adorned with wood; and, some miles from Fort-William, it has a large and curious rocking-stone, and, farther up, the vitrified fort of Dundornadill: which see.

NEWABBEY, a parish on the eastern border of Kirkcudbrightshire. It contains the post-office village of Newabbey, and the village of Drumbarn. It is bounded on the east by the estuary of the Nith, expanding into the Solway frith; and on other sides by the parishes of Kirkbean, Colvend, Kirkgunzeon, Lochrutton, and Troqueer. Its length south-eastward is about 10 miles; its greatest breadth is about 4½ miles; and its area is about 25½ square miles. The water-shed of a grand range of hills forms, for 8 miles, the southern and the western boundary-line, commencing with the magnificent Criffel and continued by Abbey-fell, Thorter-fell, Rise-hill, Long-fell, Bow-hill, and Lowtis-hill. See Criffel. A ridge of elevated ground, about 5 miles in extent, also occupies the north-west border. A strath, varying in width from 1 mile to 1½ mile, lies between the two ridges, and expands at its lower end into plain. The surface, from the flanks of the ridges coastward, first descends in gentle slopes and next becomes a level. The soil of the arable land on the slopes is principally a mixture of loam and gravel; but that in the north-eastern district is variously clay and moss upon a till bottom, and that in the flat part of the south-eastern district is alluvial clay, of the kind called carse land. Syenite is the predominant rock, presenting sometimes a coarsely stratified or columnar appearance; and coarse limestone, of little or no practical use, occurs in the south-east. A streamlet called the Newabbey Pow rises among the hills in the west, and runs 5½ miles eastward to the Nith at the boundary with Troqueer; augmented in its progress by about 12 brooks, the chief of which, on the right bank, are Kinharvie and Loch-Kinder burns. This stream is navigated for some way up by vessels of 60 or 70 tons, which import lime and coal, and export agricultural produce. There are three lakes, called Loch-End, Loch-Craigend, and Loch-Kinder, all beautifully fringed with wood or with arable fields, and forming pleasant features in the local scenery. The largest is Loch-Kinder, which we have separately described in the article Kinder (Loch.) The total extent of arable land is about 3,215 Scotch acres; of uncultivated land, 5,371 Scotch acres; and of woodland, about 600 Scotch acres. The average rent of the arable land is about £1 5s. per acre. The value of assessed property in 1843 was £4,784. The estimated value of raw produce in 1844 was £11,054. The principal landowners are Oswald of Auchencruive, Stewart of Shambelly, Moor of Carsewell, Maxwell of Terregles, Craik of Arbigland, and six others. The principal mansions are a very old one of Mr. Stewart in the village of Newabbey, a new one of the same landowner at a short distance from the village, and a large, embellished, fanciful, shooting lodge of Mr. Maxwell at Kinharvie. A monument, in honour of the Duke of Wellington and his army, was erected, soon after the battle of Waterloo, by subscription chiefly of the inhabitants of Newabbey, on an eminence called Glen-hill, at an altitude of about 400 feet above the level of the sea. It is a granite hollow column, 50 feet high and 16 feet in diameter, with a winding stair inside; and is visible throughout lower Nithsdale, the Solway frith, and the coast of Cumberland. A rocking-stone, a block of syenite, estimated to be about 15 tons in weight, lies insulated on a spot of hard land in a swamp on the farm of Craigend. Some ancient utensils have been found in Loch-End, and some old coins in the vicinity of the abbey. There are in the parish a grain mill, a carding mill, and a saw mill. The parish is traversed by the coast road from Dumfries to Kirkcudbright. The village of Newabbey stands on that road, on Newabbey Pow, on the north border of the parish, 1¾ mile from the Nith, and 7 miles south of Dumfries. It is a pleasant place, attractive for its fine old abbey ruins, and for the beauty of its environs, which command noble prospects of the Solway frith and the coast of Cumberland; and it contains a ball-room and inns. Population of the village, 175. Houses, 42. Population of the parish in 1831, 1,060; in 1851, 1,098. Houses, 199.

This parish is in the presbytery and synod of Dumfries. Patron, the Crown. Stipend, £254 7s. 1d; glebe, £20. Unappropriated teinds, £233 1s. 1d. The parish church was built prior to the Reformation, partly rebuilt about 50 years ago, and internally enlarged 17 years later, and contains about 470 sittings. There is a Roman Catholic chapel at Kirkconnel, a neat structure, erected in 1823. There are three parochial schools. Salary of the first master, £29 18s. 8¾d., with fees, and £3 other emoluments; and of each of the other masters, £10 13s. 10½d., with fees, and some other emoluments. There are two unendowed schools and a parochial library. The ancient parish long took its name from Loch-Kinder. The church was, in 1275, given by the Lady Devorgilla to the monks of Newabbey; and, during the latter period of Protestant Episcopacy, was possessed by the bishop of Edinburgh. The present parish comprehends, in addition to the whole of the ancient parish, the western half of that of Kirkconnel, annexed to it in the reign of Charles I.

The name Newabbey alludes to the ancient monastery, which popularly took the designation of New Abbey, to distinguish it from the abbey at Dundrennan, in the parish of Rerrick, which was founded considerably more than a century before it, and came to be popularly called the Old Abbey. Enough of the ruins of the Newabbey monastery remains to form an imposing object. The ruins occupy the middle of a fine level field of about 20

acres, called the Precinct, in the vale of the Pow, and in the immediate vicinity of the village, enclosed by a stone wall 8 or 10 feet high, built of granite stones of very great size. A dilapidation of the edifice was effected to a great extent on a mercenary bargain for giving it up as a quarry, and was prevented from being carried on to extermination by a subscription of £40 being raised on the part of some neighbouring gentlemen, as the price of desisting. The chapter-house, part of which remains, was what chiefly suffered from the barbarous dilapidator, and is said to have been an elegant piece of architecture. The church is the principal part of the existing ruin. The measurements, as communicated by Dr. Clapperton to Grose, are: Height of the tower, 90 feet; length of the whole church, 200 feet; breadth of the middle aisle, 35 feet; breadth of the side aisles, 15 feet; transept, 102 feet; breadth of the arches, 15 feet; diameter of the columns—of which there are six—at the base, 4½ feet; height of the shafts of the columns from base to capital, 10 feet; base of the columns supporting the tower, 10 feet; height of the shaft of these columns, 20 feet. In the roof of the south transept is an escutcheon, charged with 2 pastoral staves in *saltire;* over them a heart, and beneath them 3 mullets of 5 points, 2 and 1; said to be the arms of the abbey. An inscription over the escutcheon is, from its height and want of light, illegible; but is said to be "*Christus Maritus meus.*" On the south side of the ruinous pile stands the parish church, formed out of part of the connected edifices, and in the vicinity of a small gate leading into the abbey, of a singular style of architecture, surmounted by a bell, and bearing several defaced carvings in *basso relievo*, with two escutcheons. In the burying-ground east of the abbey church are some ancient tombstones: on one a cross, with a large and broad sword on its sinister side.

The abbey was founded in 1275 by Devorgilla, third daughter of Alan, lord of Galloway—niece to David, Earl of Huntingdon—widow of John Baliol of Bernard-castle, who died in 1269—and mother of John Baliol, the mercenary suitor for a dependent crown. Her husband's body seems to have been buried in a church or chapel on or near the site of the abbey; and this circumstance may have been the reason of the abbey's being built. When Devorgilla died in 1289, at the age of 80, the heart of her husband—which she had caused to be taken out of his body, to be embalmed, and to be deposited in a box of ivory, bound with silver and enamelled—was solemnly shut up with her own body in sepulture, near the high altar. Hugh de Burgh, the prior of Lanercroft, according to the manuscript chronicle of that house, composed an elegy for Devorgilla, which was inscribed on her tomb:—

> "In Dervorgil, a sybil sage doth dye, as
> Mary contemplative, as Martha pious:
> To her, O deign, high King! rest to impart,
> Whom this stone covers, with her husband's heart."

The abbey, owing to the characteristic circumstance of its foundress' sepulture, was called Sweetheart abbey; and continued long to be known by that name in all documentary usage. It was colonized by Cistertian monks, and appears to have been richly endowed. Grose assigns to it some possessions, which appear, from the charter of the bishopric of Edinburgh, to have belonged to the abbey of Holyrood. But, irrespective of these, it owned the churches of Newabbey, Kirkpatrick-Durham, Crossmichael, Buittle, and Kirkcolm, the baronies of Lochkenderloch and Lochpatrick, and much other property. In 1513, the monks placed themselves and their tenants under the protection of Lord Maxwell; in 1544, they feued to his family at a low rate, in compensation for services done them, their barony of Lochpatrick; and, in 1548, they gave him the five mark lands of Loch-Arthur, and constituted him heritable bailie of the whole jurisdiction over all their lands. The property was, in 1587, vested in the Crown by the annexation act; granted, in 1624, to Sir Robert Spottiswood and Sir John Hay; resigned by them, in 1633, in order to be given to the bishop of Edinburgh; given back, soon after the suppression of Episcopacy, to Sir Robert Spottiswood; and sold by his heir to the family of Copeland. Part of it, however—consisting of the lands of Drum in Newabbey—was burdened with a mortification by Queen Anne, in favour of the second minister of Dumfries. The last and only noted abbot was Gilbert Brown, who had a written controversy, on the doctrines of Romanism, with the celebrated John Welch of Ayr. Brown's treatise, though short, is erudite, and as far excels in literary properties the writings of his own brethren of the period, as it is inferior in argument, truth, and usefulness to the production of the Reformer. Welch wished to have a *viva voce* and public disputation, but could not conquer Brown's dislike to the measure as likely to damage his reputation. Calderwood says, that Brown sat in the parliament of August 1560, which approved the Confession of Faith. "Brown," says Dr. M'Crie, "was a busy trafficker for Rome and Spain, and a chief instrument of keeping the south of Scotland under ignorance and superstition." In 1596, he was denounced by the commissioners of the General Assembly to the King as a jesuit and excommunicated papist, and recommended to be seized and punished; and in 1605, he was with difficulty apprehended by Lord Cranston, captain of the Border guard, and, after brief confinement, banished from the kingdom. He died at Paris in 1612. —Near the abbey, but on higher ground, in a healthy situation, and commanding an extensive prospect, stands a ruin called the Abbots' tower, the quondam occasional residence of the abbots of Newabbey. A view of the ruin is given by Grose.

NEW ABERDOUR, See ABERDOUR, Aberdeenshire.

NEWARK, a quoad sacra parish in the town of Port-Glasgow, Renfrewshire. It was constituted by the Court of Teinds in 1855. It is only ¼ of a mile long, and ½ of a mile broad. Its church was built in 1774 as a chapel of ease, and contains 1,600 sittings. The ancient barony of Newark lay partly within the parish of Port-Glasgow, but chiefly within that of Kilmalcolm; and some notices of it have been given in our article on Kilmalcolm. But the ancient baronial residence, which is still tolerably entire, stands within the parish of Port-Glasgow, on a point of land projecting into the Clyde, in the eastern vicinity of the town of Port-Glasgow, forming a prominent feature in the landscape, and commanding a splendid view of the surrounding scenery. It is a quadrangular pile, with round turrets and battlements, and bearing over its main door the arms of the Maxwells. It ceased to be inhabited by its owners in the beginning of the 18th century; but it still was maintained in a state of rude repair to suit other purposes; so that it came to have a medium appearance between the occupied and the ruinous, all entire, and yet desolate and haggard. The site of the town of Port-Glasgow originally shared the name of Newark; and the bay, which was converted into a spacious wet dock, at a cost of £35,000, with large quays and bond warehouses, together with extensive, adjacent, enclosed spaces for receiving timber, still bears the name of Newark-bay.

NEWARK-CASTLE, a venerable ruin on the right bank of the river Yarrow, in the parish and county of Selkirk. It stands on a peninsula cut out by the encircling stream, amidst a wild scene of grandeur and beauty; but, though renovated, and in a state of tolerable conservation, it is inhabited only by the moping owl and the chattering daw. Its distance from the confluence of the Yarrow and the Ettrick is 2¼ miles, and from the burgh of Selkirk 4¼. It belongs to the Duke of Buccleuch, whose beautiful seat of Bowhill stands a little lower down the river; and, in the years of her widowhood, it was the residence of Anne, Duchess of Buccleuch and Monmouth, whose husband, James, Duke of Monmouth, was beheaded for insurrection in the reign of James II. Newark is the well-known scene in which 'the Last Minstrel' is made to sing his 'lay' to the sad-hearted Duchess:

"He passed where Newark's stately tower
Looks out from Yarrow's birchen bower:
The Minstrel gazed with wishful eye—
No humbler resting-place was nigh.
With hesitating step, at last,
The embattled portal-arch he passed,
Whose ponderous gate and massy bar
Had oft rolled back the tide of war,
But never closed the iron door,
Against the desolate and poor.
The Duchess marked his weary pace,
His timid mien, and reverend face,
And bade the page the menials tell
That they should tend the old man well:
For she had known adversity,
Though born in such a high degree;
In pride of power, in beauty's bloom,
Had wept o'er Monmouth's bloody tomb!"

The appearance of Newark-castle, and of the landscape in its vicinity, is finely noticed by Wordsworth:—

"That region left, the vale unfolds
Rich groves of lofty stature,
With Yarrow winding through the pomp
Of cultivated nature;
And, rising from these lofty groves,
Behold, a ruin hoary!
The shattered front of Newark's tower,
Renown'd in Border story."

Mary Scott, the flower of Yarrow, is supposed by many to have been born in Newark-castle; but she really was a native of the neighbouring parish, and a daughter of the Scotts of Dryhope. See YARROW. The scene of the beautiful old ballad, called 'The Sang of the Outlaw Murray,' though also belonging to Yarrow, is almost universally identified by the common people with Newark-castle.

NEWARK-CASTLE, Ayrshire. See MAYBOLE.

NEWARK-CASTLE, Renfrewshire. See NEWARK.

NEWARTHILL, a post-office village in the north-east district of the parish of Bothwell, Lanarkshire. It stands on the road from Hamilton to Shotts, at about equal distances from Hamilton and Airdrie. The tract around it is part of the great mineral field of the county. The village has a parochial school and an United Presbyterian church,—the latter built about the year 1810, and containing about 600 sittings. Population, 968.

NEW AUCHENAIRN. See AUCHENAIRN.

NEWBATTLE, a parish in the eastern division of Edinburghshire. It contains the villages of Newbattle, Stobhill, Easthouses, and Newton-Grange; and its borders adjoin the post-office stations of Dalkeith, Gorebridge, and Ford. It is bounded by Lasswade, Dalkeith, Cranston, Borthwick, and Cockpen. Its outline is that of a triangle, rounded at the corners, presenting its sides to the north, the west, and the south-east, and deeply indented on the last of these sides. It measures along the west 4 miles,—along the north nearly the same distance,—and along the south-east 4¾ miles; and has an area of about 8 square miles. Gore water runs about half a mile on the south-west boundary, to the neighbourhood of its confluence with the South Esk; and the latter stream, after running about 2 miles in Cockpen, runs across the north-west wing of Newbattle to Dalkeith. From the beautiful vale of this stream the surface gradually rises to a ridge, 2 miles distant, whose loftiest point attains 680 feet above sea-level; and thence it falls, almost regularly, off to the eastern and northern frontiers. A nodule or slight summit on the hilly ridge was anciently a post for observing the circumjacent country, and was crowned by a quadrangular enclosure, about 3 acres in area, believed to have been a Roman camp, and now densely covered with plantation. Great part of the ridge was, at no distant period, in a waste condition,—some of it marshy or wildly moorish; but all of it, excepting some trivial pendicles, is now in a productive state, some of it wooded, and most of it good arable land. About 4,700 imperial acres in the parish are in tillage; about 300 are under wood; and only about 7 or 8 are uncultivated. The soil in the valley of the Esk is a rich deep loam, incumbent on sharp gravel; that on the north and west sides of the hill is first a loam, next a strong clay, and next a whitish sandy earth; and that on the south-eastern slope of the hill is fertile vegetable mould. Gardens and orchards are so extensive as to yield an annual produce for the market worth upwards of £400. Rocks of the coal formation lie immediately beneath the surface, both near the top of the hill, and on its river-ward sides, dipping at a very acute angle toward the course of the stream; and they constitute, within the limits of the parish, a mineral field equal in wealth to that of any equal extent of territory in the kingdom. Limestone and sandstone are obtained in plenty from surface quarries; and coal can be mined in upwards of twenty seams, of from 1½ to 8 feet thick. To facilitate the exportation of the mineral produce, a private railway was constructed about 18 years ago at the expense of the Marquis of Lothian; and was carried across the vale of the South Esk by a viaduct 1,200 feet long, supported over most of its length by stone pillars, and at the river by three cast-iron Gothic arches, each 65 feet in span, and the main one 70 feet high. This railway was 1½ mile in length, and joined the old Edinburgh and Dalkeith railway at Dalhousie-mains. But it has been superseded by the Hawick branch of the North British railway, which crosses the Esk valley on a viaduct near where the old viaduct stood. The value of the mineral produce of the parish has of late years greatly increased, and now amounts annually to upwards of £80,000. The total value of all kinds of raw produce in 1839 was estimated at £29,397. The value of assessed property in 1843 was £12,705 17s. 5d. About three-fourths of the parish belong to the Marquis of Lothian; and the rest is divided among the Earl of Stair, Dundas of Arniston, and R. S. Wilson of Woodburn. The only mansions are Newbattle-abbey, which we shall afterwards describe, and Woodburn-house, the seat of Mr. Wilson. There are two corn mills, a flour mill, and a paper mill. The road from Edinburgh to Kelso, by way of Lauder, bisects the north-east wing of the parish; and that from Edinburgh to the extensive districts reached through the vale of Gala-water runs closely parallel to the western boundary, and is connected with roads to the east and to the west. The Hawick branch of the North British railway also impinges on the north-west wing of the parish, and is readily accessible at its stations of Eskbank and Dalhousie. The ancient

village, now the pitiful hamlet, of Newbattle, stands in the lowest grounds of the vale of the Esk, a mile south of Dalkeith, sheltered in nearly every direction by rising grounds, and embosomed among orchards and gardens. Its little cluster of plain houses, and its aspect of desertion and decay would ill accord with the surrounding landscape, but for the adjunct of the parish-church, a grotesque building, with an equally grotesque spire, squeezed into seclusion by a press of trees, and for the near vicinity of the principal gate to the pleasure-grounds of Newbattle-abbey. Population of the parish in 1831, 1,882; in 1851, 2,518. Houses, 456.

This parish is in the presbytery of Dalkeith, and synod of Lothian and Tweeddale. Patron, the Marquis of Lothian. Stipend, £183 4s. 7d.; glebe, £21. Schoolmaster's salary, £34 4s. 4½d., with about £25 fees, and £8 10s. other emoluments. The parish church was built in 1727, and contains about 550 sittings. A preaching station, in connexion with the Establishment, was commenced in Stobhill in 1837; and a chapel of ease was afterwards built there with 305 sittings, and capacity for 600. There is also a Free church preaching-station at Stobhill; and the amount of its receipts in 1856 was £16 2s. 8d. There are schools at Stobhill, Newton-Grange, and Easthouses. The present parish of Newbattle comprehends the ancient parish of Maisterton, and the Abbey parish of Newbattle. Maisterton adjoined Cockpen on the west, and was surrounded on all other sides by Newbattle. Its whole area and its church were acquired at successive but early epochs by the monks of Newbattle, and secured for 'their proper use.' The Abbey-church of Newbattle arose, in the 12th century, out of the establishment of the monastery. The proper and ancient name of Newbattle is Newbotle. The Saxon word 'botle' signifies simply a residence; and the prefix 'New' was assumed probably in contradistinction to Eld-botle or Old-botle in Haddingtonshire. But, as in the case of Morebattle, and other places of kindred names, the original 'botle' has been irretrievably corrupted into 'battle.'

The prime object of historical interest in the parish of Newbattle, is Newbattle-abbey. This was anciently, as its name imports, a monastery, and is now the seat of the Marquis of Lothian. David I. founded the monastery in 1140 for Cistertian monks, and fetched to it a colony of these monks from Melrose. Though he showed them less lavish favour than he expended upon the fraternity of Holyrood, he gave them incomparably more of worldly substance than decently comported with the austereness of their professions. He bestowed on them the district of Morthwaite, now called Moorfoot; the lands of Buchalch on the Esk; some lands, a salt-work, and rights of pasturage and wood-cutting in the carse of Callendar in Stirlingshire; a salt-work at Blakeland in Lothian; the right of pannage, and the privilege of cutting wood in his forests; and the patronage of several churches, with a right to some of their revenues. David's example was followed by Malcolm IV., by the Countess Ada, the widow of Earl Henry, by William the Lion, who gave the monks the lands of Mount Lothian, and, with some special services, confirmed the grants of David and Malcolm, and even by Alwin, the first abbot of Holyrood, who relinquished to the inmates of the new abbey, the lands of Petlendreich on the Esk. Various other persons also gave them lands in the country, tofts in the town, and churches in the several shires. Alexander II.—who delighted to reside at Newbattle—obtained a grave there for his consort, Mary; and, deeply moved by so affecting a circumstance, gave the owners of the place various donations and rights for the salvation of her, of himself, and of his predecessors. The monks likewise acquired much property and many privileges by purchase; in particular, they obtained the lands of Monkland in Lanarkshire, and secured the right of cutting a road to them for their own proper use. In 1203, Pope Innocent, by a bull, confirmed all their possessions and privileges; and, by another bull, he prohibited all persons from levying tithes from lands which they either held or cultivated. David II. gave the monks a charter, enabling them to hold their lands within the valley of Lothian in free forestry, with the various privileges which belonged to a forestry. But the monks, though figuring chiefly as accumulators of worldly property, incidentally conferred great advantages on the occupations of husbandry, of mining, and of commerce; for they incited and directed agricultural operations, they discovered, and perhaps were the first to discover, Scottish coal, and brought it from the mine, and they constructed a sea-port, and gave Scotland a specimen of the arts of traffic. See articles HADDINGTONSHIRE and MORISON'S-HAVEN.

The first abbot of Newbattle was Radulph, who, in 1140, accompanied the colony from Melrose. John, the 18th abbot, had to act a part in the difficult transactions respecting the succession to the Crown after the demise of Alexander III. In March, 1290, he sat in the great parliament at Brigham; in July, 1291, he swore fealty to Edward I. in the chapel of Edinburgh-castle; and in 1296, he again, with his monks, swore fealty to Edward, and, in return, obtained writs to several sheriffs for the restoral of his property. In January, 1296–7, Edward directed his treasurer, Cressingham, to settle with the abbot for the 'form' due by the abbey of Newbattle for his lands of Bothkennar. Whether Abbot John witnessed the accession of Robert Bruce is uncertain. In 1385 the abbey was burnt during the furious incursion of Richard II.; and during the 40 years which followed, the monks were employed in its re-edification. Patrick Madour, who was abbot in April, 1462, collected the documents which at present form the chartulary of Newbattle; and in October, 1466, he instituted a suit in parliament against James, Lord Hamilton, "for the spoliation of a stone of lead-ore," taken from the abbot's lands of Fremure in Clydesdale, and triumphantly compelled the coronet to make compensation, and do obeisance, to the cowl. Andrew, who was abbot in May, 1499, granted his lands of Kinnaird in Stirlingshire to Edward Bruce, 'his well-deserving armiger,' for the yearly payment of 16 merks; and in December, 1500, he gave to Robert Bruce of Binning and his wife, the monastery's lands of West Binning in Linlithgowshire, for the yearly compensation of four shillings. James Hasmall was probably the last abbot; he was present at the parliament of November, 1558; and, while he governed the abbey, it was burnt during the invasion of the Earl of Hertford. Mark Ker, the second son of Sir Andrew Ker of Cessford, becoming protestant in 1560, obtained the vicarage of Linton; and, in 1564, was made the first commendator of Newbattle. In 1581 he obtained a ratification by parliament of his commendatorship; and he appears to have annually drawn from the abbey property, £1,413 1s. 2d. Scotch, besides 99 bolls of wheat, 53 bolls 2 pecks of bear, and 250 bolls 2 firlots of oats, —subject, however, to several disbursements, and particularly the remarkable one of £240 Scotch to six aged, decrepit, and recanted monks. He died in 1584, an extraordinary lord of the court-of-session. His son, Mark, had a reversion of the commendatorship; on succeeding to it he had it formally

confirmed; and, in 1587, he obtained from the facile James VI. a grant of the whole estates of the monastery as a temporal barony, and afterwards, in the same year, got the grant ratified by parliament. In October, 1591, he was dignified with the title of Lord Newbattle, and had his barony converted into a temporal lordship; and in the parliament of next year he saw his title and its basis finally recognised. In 1606, he was created Earl of Lothian; and, in 1701, Robert, the fourth Earl, who was a member of the privy-council of King William, was raised to the dignity of the marquisate.

The buildings of the monastery have long ago been either wholly demolished, or, in any small remains which may exist, entirely concealed from observation by the erection on their site of the present noble mansion, the seat of the Marquis of Lothian, and the successor in name of the extinct abbey. An ancient wall which surrounded the monastery still retains the name of the Monkland-Wall, and is in some places in tolerable preservation. The mansion—the present Newbattle-abbey—is a large, commodious, modern edifice, and evinces, especially in its interior arrangements, good taste and judgment in the architect. Several folio manuscripts, which formerly belonged to the monks, enrich the library: they are written on vellum, in the Saxon character, and are adorned in every page with pictorial illustrations of the subjects which they treat. Many valuable paintings and portraits enrich the gallery, particularly a Titian, a Morillo, several Vandykes, and some family portraits. A lawn of upwards of 30 acres expands around the mansion. On one side it is watered by the South Esk, which, after brawling among the rocks of Cockpen, flows along the park in a quiet stream, and is overhung with plantations; and on the other side it is skirted by a waving line of woods, which, complying with the ascents and undulations of the banks, stretches upward in a many-curved surface, and exhibits a beautiful variety of shades. The belts of wood which flank the two sides of the lawn approach each other at the ends, and, on a grand scale, embower the mansion and its park, and exclude them from exterior view. At the east end stands a bridge across the Esk, of high and unknown antiquity, rudely built, and overspread with ivy. Newbattle-abbey was visited by King George IV. and by Queen Victoria.

NEW BELSES. See Belses.

NEWBIGGING, the name of many a locality in Scotland. It is a corruption of 'New building,' and may be supposed to have, in every instance, referred originally to some conspicuous new edifice in the vicinity of some conspicuous old one. Some localities now designated by it have lost the original edifice, and others have grown into hamlets or villages.

NEWBIGGING, a village in the parish of Newtyle, Forfarshire. It groups with the new village of Newtyle, but is not so large, and has rather an antiquated appearance. Its population is about 160.

NEWBIGGING, a village and an estate in the south-west of the parish of Monikie, Forfarshire. In the village is an United Presbyterian church, of long standing.

NEWBIGGING, a post-office village in the parish of Tealing, Forfarshire. Population, 88. Houses, 20.

NEWBIGGING, a locality, containing a small Druidical temple, and the remains of an ancient castellated tower, in the parish of Lethnot, Forfarshire.

NEWBIGGING, a locality, having a farm hamlet and a spinning mill, in the parish of Kinnell, Forfarshire.

NEWBIGGING, a village in the parish of Auchtertool, Fifeshire. Population, 67. Houses, 19.

NEWBIGGING, a locality, having a handsome mansion and extensive limestone quarries, in the parish of Burntisland, Fifeshire.

NEWBIGGING, a village in the parish of Carnwath, Lanarkshire. Its population is about 200, almost all weavers.

NEWBIGGING, a suburb of Musselburgh, in the parish of Inveresk, Edinburghshire. It is partly compact with the town, and all within the parliamentary boundaries, of Musselburgh. See Musselburgh.

NEW BLAIRINGONE. See Blairingone.

NEWBRIDGE, a village in the Mid-Lothian section of the parish of Kirkliston. It stands on the right bank of the Almond, on the western verge of Edinburghshire, 9 miles west of Edinburgh, on the road thence to Bathgate. One-sixth of its inhabitants was cut off by cholera in ten days in 1832. Population, 153. Houses, 21.

NEWBRIDGE, a village in the parish of Terregles, Kirkcudbrightshire. Population, 24. Houses, 7.

NEWBURGH, a parish, containing a post-town of its own name, in the extreme north-west of Fifeshire. It is bounded by the Tay, and by Abdie, Collessie, Auchtermuchty, and Abernethy. Its outline is very irregular, being nearly divided into two separate sections by indentations of Abdie on the east and Abernethy on the west, so as to have some resemblance to the outline of an ill-shaped boot, or to the letter L reversed. The section which represents the foot of the boot, or the horizontal part of the L, stretches along the Tay, and is about 2 miles in length from east to west, by scarcely half a mile in breadth from north to south; while the section which represents the leg of the boot, or the perpendicular part of the L, stretches across the ridge of the Ochils, and is nearly 3 miles in length from north to south, by ¾ of a mile in breadth. The northern section is a rich, beautiful, finely wooded level; but the southern section has a great variety of surface, comprising alternate elevations and depressions, and ascending to an elevation of about 600 feet on the hill of Craigsparrow, and to an elevation of about 800 feet on the hill of Blackcairn. The soil of the flat district is a very fertile clay, not inferior to that of the best parts of the Carse of Gowrie. The soil of the upper district is, for the most part, either a loose black loam, or a more compact ferruginous mould; and though generally shallow, is very fertile. Here the entire property of Pitcairly, through the exertions of a skilful and industrious tenantry, has been worked into a state of the highest cultivation, and lies among the surrounding Ochils somewhat like an oasis in a desert. The predominant rock is trap. About 737 imperial acres in the parish are in tillage; about 280 are pastoral or waste; about 88 are under timber trees; and about 40 are under fruit-trees. The orchards owe their origin to the monks of Lindores. The landowners are Hay of Leys and Cathcart of Pitcairly. The average rent of the clay lands is £6 per acre; and that of the arable lands in the southern district, about £3 10s. The value of assessed property in 1843 was £4,958 9s. 3d. The parish enjoys good seaward communication through the port of Newburgh; and it is traversed by the road from Cupar to Perth, and by the Perth fork of the Edinburgh, Perth, and Dundee railway, and has a station on the railway at the town. Population in 1831, 2,642; in 1851, 2,982. Houses, 349.

At the north-eastern extremity of the parish, in the vicinity of the town, on a gentle rising-ground,

in the middle of the rich clay-land near the Tay, stand the ruins of the ancient abbey of Lindores. This monastery was founded in 1178, by David, Earl of Huntingdon, brother of William the Lion, and heir-presumptive to the Scottish throne, after his return from a crusade in the Holy Land, in commemoration of his escape from shipwreck, and of his having taken Ptolemais from the Saracens. He planted it with monks of St. Benedict, of the order of Tyronensis, and dedicated the church to the Virgin Mary and St. Andrew the apostle. The monks were brought from the abbey of Kelso; they soon became so enriched as to draw the tithes of 22 parish churches; and in 1208, according to Sibbald, the number of them resident in the monastery was 26, besides the abbot. Lands, or woods, or other heritages were granted to the monks by William the Lion, Alexander III., Isabella de Bruce, and James II. One of the most distinguished of the abbots was Lawrence, known in history as Lawrence of Lindores, who co-operated with Bishop Wardlaw in founding the university of St. Andrews, and was raised by the Pope to the office of Inquisitor in Scotland. The buildings of the monastery appear to have been grand and extensive, and probably were a good specimen of the ecclesiastical architecture of the 12th and 13th centuries, either in the Norman style, or in the early Gothic style, or in a mixture of the two. But, besides sharing in the devastations of the Reformation epoch, they were long used as a quarry for repairing or erecting the houses of Newburgh, so that they now retain scarcely a trace of their ancient grandeur. The polished ashler stones of the walls, both outside and inside, have been almost all removed; parts of the mere skeletons of the walls, consisting only of small stones and lime, matted over with ivy, now form their chief bulk; and the vestibule of the church, situated in the centre of them, is the only part which retains any sort of tolerable preservation. The enclosing wall of the precinct, however, is still pretty entire; and within the enclosure, and in its immediate vicinity, are some fine old fruit-trees, the relics of the taste and pursuits of the monks. A famous causeway anciently extended from Lindores to the church of Ecclesiamagirdle, in the parish of Dron, whither the monks annually went to meet the nuns of Elcho, in conjoint devotion to their patron saint; but not a vestige of that causeway remains. Springs, formerly of superstitious fame, called the Monks' and the Abbot's wells, are still pointed out in the hills to the south of the abbey ruins. The last Earl of Douglas, after a life of trouble and turmoil, retired in his old age to Lindores-abbey, and died there in 1488. A stone coffin which was exhumed from among the ruins is thought by some antiquaries to have contained the body of David, Duke of Rothesay, heir apparent to the throne, who was barbarously murdered at Falkland; but it may as well have been the coffin of one of the abbots, or of some other person of distinction. After the Reformation, Sir Patrick Leslie of Pitcairly, the second son of the fifth Earl of Rothes, and a great favourite of James VI., received the abbacy of Lindores in commendam; and his eldest son, Patrick, afterwards had it erected into a temporal lordship, and was created Lord Lindores. A great part of the lands of the lordship was alienated by James, the third Lord, to John Bain of Pitcairly. David, the fifth Lord, dying without issue, was succeeded in the title by Alexander Leslie of Quarter, the grandson of Sir John Leslie of Newton, a younger brother of Sir Patrick Leslie the commendator, and first Lord Lindores, who became sixth Lord. His son Francis John, the seventh Lord, died without issue, when the title was claimed by Leslie of Lumquhat, who voted as Lord Lindores in several elections; but at the general election, 24th July, 1790, his votes were objected to; and the House of Lords, on 6th June, 1793, resolved that "the votes given by the Lord Lindores at the said election were not good." Since then, the title has remained dormant; and the lands are now in the hands of other families.

About a mile from the Tay, on the slope of the Ochils, in a pass leading up from the north of Fifeshire to Strathearn, is a small cairn of stones, known by the name of Sir Robert's Prap. This marks the place where a fatal duel occurred about the close of the 17th century, between Sir Robert Balfour of Dunnich and Sir James Makgill of Lindores. A little to the west of the town stands a curious antiquity, called Mugdrum-cross, which, together with Mugdrum-house and Mugdrum-island, we have noticed in the article Mugdrum. In the pass leading to Strathearn, about 200 yards east of Sir Robert's Prap, on high ground, overlooking Strathearn westward to the Grampians, stands another antiquity, similar to Mugdrum-cross, but far ruder, and greatly more celebrated. This is Macduff's cross, mentioned in a charter of Malcolm Canmore to Macduff, the thane of Fife, and anciently bearing an inscription which, though well preserved in record, has been a great perplexity to antiquaries. This cross is said to have been broken in pieces by the Reformers, on their way from Perth to Lindores; and nothing now remains but the large square block of freestone which formed the pedestal. This stone is 3 feet 9 inches high; 4 feet 7 inches in length, by 3 feet 9 inches in breadth at the base; and 3 feet 4 inches in length, by 2 feet 8 inches in breadth at the top. There are several holes or indentations on its different faces, which tradition says were nine in number, and in which nine rings were at one time fixed. There is no appearance of any socket in which the cross had been fixed; so that it must have been placed upon the surface of the stone, without any other support than that of its own base. The cross formed the girth or sanctuary for any of the clan Macduff, or any related to the chief within the ninth degree, who had been guilty of "suddand chaudmelle," or unpremeditated slaughter. Any person entitled to this privilege, and requiring it, fled to the cross, and laying hold of one of the rings, punishment was remitted on his washing nine times at the stone, and paying nine cows and a colpendach or young cow. The washing was done at a spring still called the Nine Wells, emitting a stream so copious as now to be employed in the operations of a bleachfield; and the oblation of the nine cows was made by fastening them to the cross's nine rings. In every instance, however, the person claiming sanctuary required to give proof of belonging to the clan Macduff, or of possessing consanguinity to the chief within the given degree; and whenever any claimant failed to produce this evidence, he was instantly put to death, and buried near the stone. There were formerly several artificial cairns and tumuli around the cross, and one rather larger than the rest about fifty yards to the north, which were all popularly regarded as the graves of those who had been slain here in consequence of failing to prove themselves entitled to the sanctuary, but which have all been obliterated by the levelling operations of the ploughshare. "Superstition," says Cant, "forbids the opening of any of them; no person in the neighbourhood will assist for any consideration, nor will any person in or about Newburgh travel that way when dark, for they affirm that spectres and bogles, as they call them, haunt that place." With the removal of the

traces of the graves, superstitious fears attached to the spot have died away. Sir Walter Scott has made the traditions and antiquities of this place the subject of a short dramatic poem, entitled 'Macduff's cross,' in the course of which he has very accurately described both the cross itself and its accidents. Says he,—

> "Mark that fragment,
> I mean that rough-hewn block of massive stone,
> Placed on the summit of this mountain-pass,
> Commanding prospect wide o'er field and fell,
> And peopled village and extended moorland,
> And the wide ocean and majestic Tay,
> To the far distant Grampians. Do not deem it
> A loosen'd portion of the neighbouring rock,
> Detached by storm and thunder. 'Twas the pedestal
> On which, in ancient times, a cross was reared,
> Carved with words which foiled philologists;
> And the events it did commemorate
> Were dark, remote, and undistinguishable,
> As were the mystic characters it bore."

The parish of Newburgh is in the presbytery of Cupar, and synod of Fife. Patrons, the Earl of Mansfield and Hays of Leys. Stipend, £255 14s. 2d.; glebe, £80. Schoolmaster's salary, £34 4s. 4½d., with about £30 fees, and £11 other emoluments. The parish church was built in 1833, and contains about 1,000 sittings. There is a Free church for Newburgh and Abdie, with an attendance of about 220; and the amount of its receipts in 1856 was £152 8s. 11½d. There are two United Presbyterian churches; the First with an attendance of 450,—the Second with an attendance of about 190. There are three non-parochial schools; and an elegant Madras female school, aided by government and by Dr. Bell's trust, is in course of erection. The parish of Newburgh was constituted in the year 1632, by an act of disjunction from the parish of Abdie; and was subsequently enlarged by the annexation to it of a part of the parish of Abernethy. Both the abbey of Lindores and a chapel within the burgh, dedicated to St. Catherine, were in the ancient parish of Abdie.

NEWBURGH, a post-town, a market-town, a seaport, and a royal burgh, stands on the coast of the parish of Newburgh, on the road from Cupar to Perth, and on the line of the Edinburgh and Perth railway, 7¼ miles north-west of Ladybank, 10¾ east-south-east of Perth, and 34½ north of Edinburgh. Great part of it is of recent erection; and even the oldest existing parts have nearly all been rebuilt within the last seventy years. The body of the town consists chiefly of one well-built street, about ½ a mile in length, of a range of houses fronting the harbour, and of some lanes leading down to the shore. A modern suburb, called Mount-Pleasant, stands to the south, and is within the parish of Abdie. Both the shops of Newburgh, and its principal dwelling-houses, are of a character indicating taste and prosperity. Its situation on the Tay is exceedingly pleasant; and both from its own appearance, with gardens and numerous fruit-trees among its houses, and from the rich, romantic, gay appearance of its environs, it presents a fine picture either to observers going up or down the river, or to observers on neighbouring vantage-grounds. The views outward from itself and from its vicinity, also, are exceedingly good. Even to a traveller on the railway, coming up from Ladybank to Perth, the prospects at Newburgh are remarkably striking and diversified, comprising first a sudden revelation of the whole basin of the lower Tay, and next a close view of Newburgh itself, an upper terrace of it standing above on the south, and the main body of it nestling below on the north, and projecting into the lake-like expanse of the frith. The principal public building is the town-house, with a spire, erected in 1808; and attached to this is a building of considerable size, erected about 1830, for the accommodation of the dealers in the stock market. The parish church is an elegant structure, in the Gothic style, erected in 1833, from a design by William Burn. One of the United Presbyterian churches, also, is a handsome structure.

In the 17th century, Newburgh was so devoid of trade as to be described in Cunningham's essay on the Cross of Macduff, as 'a poor country village;' and till pretty far in last century, although gradually improving, it remained much the same. Until within a few years of the publication of the first Statistical Account—1793—its inhabitants had been chiefly employed in husbandry; but the linen-trade had occupied them to a certain extent, and when that account was published, the greater portion of them were employed in that manufacture. At that time, however, there were only two persons who employed workmen; the greater part of the linen manufactured being woven by individual weavers on their own account, who sold their webs, when finished, at Perth, Dundee, Cupar, Auchtermuchty, and Glasgow. But the trade went on and prospered; and numerous manufacturers arose, not only to employ all the weavers in Newburgh, but also to furnish work for considerable numbers in Aberargie, Abernethy, Strathmiglo, Auchtermuchty, Dunshelt, Cupar, Springfield, Pitlessie, Kettle, Markinch, Falkland, and other places. The principal branch is the weaving of dowlas, partly for the markets of Manchester, Leeds, and London, and partly also for direct exportation to the West Indies and South America. The number of looms employed in the town in 1833 was 564; and the number of weavers now employed is at least 900. A very considerable trade in grain has, for some time, been carried on in Newburgh; and a weekly stock market was established in 1830, which is regularly frequented by dealers from most parts of Fifeshire, and even from Edinburgh, and which confers much benefit, not only on the town itself, but on the surrounding country. Even before the opening of the railway, about 35,000 sacks of corn were annually exported from Newburgh, most of which came from the districts now traversed by the railway. Malting was at one time pretty extensively carried on in the town, but has long been discontinued.

The harbour of Newburgh consists of a long pier parallel to the river, and five projecting piers at right angles to it. There are always here considerable bustle, and not a little real business. Vessels to the amount of about 1,600 tons belong to the port; and two packets are regularly employed in bringing from Dundee the raw material used in the linen-manufacture, and carrying away the manufactured goods. The principal other exports are grain, potatoes, and lime, and the principal imports are timber, coals, and miscellaneous small goods. Many of the vessels bound for Perth are obliged to wait here for the flow of the tide; and not a few of them unload part of their cargoes before they can, even with the tide, proceed up the river. The port of Newburgh, in its relation to the customs, is subordinate to Perth; and the amount of local dues levied at it in 1852 was £47. Two fairs were formerly held in the town for general business; but they have long degenerated into mere seasons of amusement. The town has an office of the Commercial bank, an office of the Central bank, a savings' bank, a gas-work, and several miscellaneous and charitable institutions.

Newburgh, notwithstanding its still being called "new," is a town of considerable antiquity; and it probably took its name in contradistinction to some older burgh which stood in its vicinity. No trace

of any such older burgh, however, is now in existence. The present town, or rather the remote nucleus of it, originated with the abbots of Lindores. It was erected into a burgh-of-barony by Alexander III., in 1266, in favour of the abbot and convent, with all the usual privileges of burghs-of-barony. In the charter it is called 'novus burgus juxta monasterium de Lindores.' In 1457 it was erected into a royal burgh; and on the 4th of July, in that year, John, abbot of Lindores, granted to the burgesses of Newburgh the land of Vodriffe and the hill to the south of it—about 400 acres in all—for which they were to pay to the abbot, homage and common service used and wont, with 40 bolls of barley. These acres now belong chiefly to a number of individual proprietors, and are held in free burgage, though they pay an annual fee-duty partly to the Crown and partly to the proprietor of the abbey-lands of Lindores. In 1631, Charles I. confirmed the ancient royal charter; but the burgh never exercised its right of sending a member to the Scottish parliament, and consequently at the Union, was not included in any of those sets of burghs which were invested with the right of sending members to the British parliament. The town is governed by two magistrates, and fifteen councillors, with a town-clerk. The magistrates have the usual civil and criminal jurisdictions within the royalty; and hold courts at regular periods for the decision of questions which are brought before them. The royalty extends 1½ mile to the south and west beyond the town, but excludes the harbour and extensive suburbs. A sheriff circuit court, for small debt causes, is held on the third Friday of February, May, August and November. The town is a station of the county police. The burgh income amounts to about £170 a-year. There is a considerable extent of corporation property; but there is also a considerable public debt,—amounting, in 1834, to £1,650. Population, exclusive of the Abdie suburb, in 1841, 2,491; in 1851, 2,638. Houses, 292.

NEWBURGH, a post-office village and small seaport, in the parish of Foveran, Aberdeenshire, 5 miles south-east of Ellon, and 10 north of Aberdeen. It occupies a pleasant site near the confluence of a tide-expanded streamlet with the Ythan, ¾ of a mile above the latter's influx to the ocean; and possesses important facilities for both a manufacturing and a fishing station. It contains several substantial and commodious houses, and has, in recent years, been much improved. Vessels belong to it, of an aggregate tonnage of about 700, and are employed chiefly in exporting grain, and in importing coal, timber, lime, and bones. It is a creek of the port of Aberdeen; and the dues levied at it in 1852 amounted to £48. Population, 393. Houses, 91.

NEWBURN, a parish on the south coast of Fifeshire. It contains the village of Drumeldrie-moor, and lies within a very short distance of the post-town of Largo on the west, and of the post-town of Colinsburgh on the east. It is bounded by Largo bay, and by the parishes of Largo, Kilconquhar, and Elie. Its length southward is about 3½ miles; and its greatest breadth is about 2 miles. It was anciently called Drumeldrie; and is supposed to have taken its present name from the circumstance of a brook which runs through a considerable part of it, having changed its course. Its shore is flat and sandy; its interior surface rises northward and westward; its highest ground is on the acclivity of Largo-law, on its north-west boundary; and its general landscape, both within itself and in views outward from it, is a brilliant assemblage of hill and dale, of woods and rocks and waters. About 2,400 imperial acres are in tillage; about 350 are pastoral or waste; and about 130 are under wood. There are eight principal landowners; and two of them are resident. The average rent of arable land is about £2 10s. The estimated value of raw produce in 1836 was £11,148. The value of assessed property in 1856 was £5,472 16s. 10½d. The parish is traversed by the roads from Largo to Anstruther and St. Andrews. It is traversed also by the East of Fife railway, which was authorised in 1855 to be made from Leven to Kilconquhar. Population in 1831, 418; in 1851, 375. Houses, 86.

This parish is in the presbytery of St. Andrews, and synod of Fife. Patron, Charles Inglis of Cramond. Stipend, £200 15s. 6d.; glebe, £25. Schoolmaster's salary, £29 18s. 10d., with about £14 fees. In 1659, the estate of Orkie was destined by its proprietor, John Wood, for erecting a free grammar school in Newburn, and maintaining several poor scholars; and on the ground of this bequest, the parochial schoolmaster educates and maintains the poor scholars, from the age of 7 to 15 years, and receives a liberal remuneration out of the rents of Orkie. The parish church of Newburn was built in 1815, and is capable of containing more than the whole population. Tradition says that there was anciently a Culdee church at Balchrystie in this parish; and a grant of that place is said to have been made for ecclesiastical purposes by King Malcolm.

NEWBYTH, a post-office village in the eastern part of the parish of King-Edward, Aberdeenshire. It stands on the road from Banff to Ellon, 5½ miles south-west of New-Pitsligo, 6 miles north-west of New-Deer, and 13 south-east of Banff. It was founded in 1764 by James Urquhart, Esq., upon his estate of Byth. It stands on a rising ground, and consists of two streets, which cross each other nearly at right angles. Many of its inhabitants have small lots of land in a fertile little tract of country lying close to it round about. The village has a chapel of ease, a neat building erected in 1852, a Free church preaching station, an endowed school, and a public library. Fairs are held on the Thursday after the 11th of May, on the Tuesday after the 26th of May, and on the Friday after the 21st of November. Population in 1851, 402.

NEWHALL, a romantic locality chiefly in the parish of Penicuick, Edinburghshire, and partly in that of Linton, Peebleshire; 3 miles south-west of Penicuick, and 13½ from Edinburgh. The mansion of Newhall stands on the left bank of the North Esk, within a curvature of the stream, 4 miles from its source, and while it forms the boundary-line between the counties. During the 16th century, and an unknown period preceding, it belonged to a family of the name of Crichton. In 1646, Dr. Pennycuick became its proprietor; and, in his works,

he mentions some particular plants found upon the grounds. He was proprietor also of Romano,—a place not far distant, in the parish of Newlands; and he there, in 1677, witnessed, with strong interest, a serious squabble between two parties of gypsies. In 1683 he built a dovecot on the scene of the quarrel, apparently to show his wit in the following very homely distich:—

"The field of gipsy blood which here you see,
A shelter for the harmless dove shall be."

About the period of the Union, Newhall was acquired by Sir David Forbes; and afterwards it was inherited by his son Mr. John Forbes, and became a favourite resort of some of the most eminent literati of the last century. While inhabited by the Crichtons it was an irregular castle, and with its appendages, covered the whole breadth of the point on which it stands, formed by a stripe or low spur from the base of the Pentlands, cloven down on each side by a deep ravine, and terminating in the glen of the Esk. The ground-floor in the front of the present building, was part of one of the towers; it is vaulted in the roof, and has on every side slits for defence; and it is so strong as, in one place, to have a closet cut out of the thickness of the wall. The eastern ravine is overhung by the remains of a small round tower, with some vaults; and it is densely filled with wildly growing trees, and threaded by a dark and romantic rill, which leaps along in several beautiful cascades, and flings up its spray amid the deep shades of the woods. The western ravine is overhung by a point on which anciently stood a religious establishment of some note, and a prison; and though this ravine is dry, it vies with the other in romance, and, like it, is shaded with thick foliage. A walk goes round the site of the chapel and prison, forming a noble terrace from the west end of the house looking up the glen, and over to a mineral well among copsewood and pines on the other side. A farm in the immediate neighbourhood bears the name of Spital, and probably formed an endowment for supporting, under the management of the religious foundation of Newhall, an hospital or hospice for the refreshment and shelter of travellers.

About half-a-mile above Newhall, amid a general flattening and widening of the Esk's banks, the stream encounters a contracting and forking ridge of limestone; and, forming a linn, bounds down in successive leaps to a circular pool, which, under birches and shrubs, and upon a bed of pebbles, spreads out between the rocks and a little verdant expanse. On the face of a promontory which looks up to this beautiful and sequestered spot, and is formed by the sudden expansion of the glen, is a round turf-seat, known in romantic association as Mary's Bower, commanding a full view of the linn, and terminating a winding path along the north brink of the glen. About half-a-mile below Newhall, Monk's-burn enters the glen of the Esk in several considerable falls, and amidst much fine landscape. See Monk's Burn. A little below this stream, and on the left bank of the Esk, is a clear deep lake, surrounded with rising knolls, and on three sides, by the wooded banks of the river sweeping round far beneath. The lake has no visible supply, outlet, or variation, and always laves the green sward at the foot of its dry and undulating banks. When a spectator stands at the eastern extremity at the mellowing of a summer's noon, and the fish begin to leap, and the sun gets behind the ornamented farm-house of Old Harleymuir on a height beyond the river above the Steel, and throws his warm empurpling rays on the Carlop's-hill in the distance to the right, the scene in view forms as enchanting a picture as the pencil could well select. Numerous other landscapes and objects of alternately soothing and thrilling interest exist on the grounds or their vicinity; the chief of which are the scene of Allan Ramsay's Gentle Shepherd, described in our article on Habbie's-Howe, and some antiquites noticed in the articles Carlops and Linton.

NEWHALL, Forfarshire. See Kettins.

NEWHALL, Kincardineshire. See Fetteresso.

NEWHALL, Ross-shire. See Kirkmichael.

NEWHALL, Orkney. See Deerness.

NEWHALLS, a village and a ferry station in the eastern vicinity of South Queensferry, Linlithgowshire. It is on the road from Queensferry to Edinburgh. Population, 90.

NEWHALLS BURN, a brook running into Quair-water, in the parish of Traquair, Peeblesshire.

NEWHARTHILL. See Newarthill.

NEWHAVEN, a suburb of the burgh of Leith, with the character of post-town, fishing-town, and sea-port, in Edinburghshire. It stands on the Forth, in the parish of North Leith, about 1 mile west of the mouth of the Water of Leith, and 2¼ miles north of the east end of Prince's-street, Edinburgh. It had, in the 15th century, a chapel dedicated to the Virgin Mary, and was designated from it, in a style characteristic of the period, "Our Lady's Port of Grace." James IV., who patronized the ecclesiastical erection, encouraged the coeval formation of a village, made it the site of a dockyard, and conferred upon it certain burghal privileges. The town-council of Edinburgh, becoming jealous of the consequence which it promised to attain, and exercising the same grasping policy which prompted them to enthral Leith, and purchase the royal charter of Musselburgh, bought, in 1511, from James V., the village and the harbour, with all their pertinents and rights. As a haven, formed, named, and patronized by the Crown, and possessing greater depth of water than Leith, and as the site of accommodation both for the building and the harbourage of vessels, it might early have rivalled and superseded Leith; but it was crushed into insignificance by the policy of Edinburgh, and has been permanently condemned to lose the fruit of its natural advantages, first in consequence of the difficulty of removing the great warehouse establishments of merchants fixed at Leith, and next in consequence of the great recent improvements and extension of Leith harbour. It was long a mere fishing-village, with a rude small pier; and, though promising for a time to reach some higher character, it has again subsided into a mere residence of fishers, with only improved advantages and a wider scope for prosecuting their occupation. A substantial stone pier and slip, extending to low-water, with a return head to the westward, was erected here at the joint expense of the Government and the Fife Ferries' trust, and has recently undergone considerable repair. The ferry boats between Mid-Lothian and Fife used this pier, in communication with Kinghorn; but, in September 1844, they were transferred to the new pier of Granton, in communication with Burntisland. Some of the coasting steamers also, even those plying to London, availed themselves, for some time, of the Newhaven pier; but had no proper accommodation here, and betook themselves, at the first possible moment, to Granton. About 180 fishing-boats at present belong to Newhaven, and even they are not sufficiently accommodated by the pier. In 1821, at a point about 500 yards to the west, a chain-pier, called Trinity-pier, upwards of 500 feet long, 4 feet wide, and extending to a depth of from 5 to 6 feet

at low water, was constructed by Captain Samuel Brown of the Royal Navy, at an expense of £4,000. This looked to be suitable for the coasting steamers, as well as for some other craft, and might have been expected to bring considerable access of prosperity to Newhaven; but it has never been extensively used, and was in a main degree superseded by the erection of Granton-pier.

Newhaven, as a town, is far from being pleasant. Its streets are irregular; many of its houses are lumpish and unsightly; and its whole atmosphere is malodorous with garbage and filth. Yet its environs, and even some of its outskirts, are clean and beautiful. The coast eastward of it to the vicinity of Leith-docks, has been much abraded by the sea, even to the destruction of the coast-road there; and it now exhibits an earthy precipice, directly overhanging the tide-swept sands. But the shore westward to the chain-pier has a pleasant narrow belt of low-ground, and dips to the tide in an excellent bathing-beach. A steep bank rises from the side of the belt of low ground; and the surface extends thence southward and eastward, all round Newhaven toward Edinburgh and Leith, in a brilliant expanse, thickly studded with villas, and commanding from many points very gorgeous views of the Forth and Fifeshire. A pleasant assemblage of houses stands adjacent to the chain-pier; and these, together with the adjacent villas, being feus of the Trinity-house of Leith, bear the name of Trinity. Contiguous to them, partly on the natural bank, partly on an artificial embankment, and describing a rapid curve, from the direction of north-north-west to the direction of west by north, passes the Edinburgh, Perth, and Dundee railway. At the south end of the curve is a station for Trinity and Newhaven, called Trinity station, possessing good appointments and very pleasant appurtenances. The local communication with Edinburgh is now, in a great degree, through this station; but there are also two great road thoroughfares, the one by way of Golden-acres and Canonmills, the other by way of Bonnington and Leith-walk. Newhaven has some inns and a profusion of public houses; the former noted for fish-dinners, the latter far more than enough for any possible proper wants of the inhabitants. There are also a parish church, which was built in 1838, and is in the presentation of trustees and male seat-holders, and a Free church, whose receipts in 1856 amounted to £429 5s. 4½d.

The inhabitants of Newhaven, notwithstanding the filth which surrounds their abodes, are an industrious, hardy, and thriving race. They have for centuries formed a peculiar and exclusive community, all more or less mutually related by marriage, and rarely intermarrying with others than natives. The males are mostly all fishermen, weather-beaten and athletic, and so trained from youth to spend most of their waking hours on the sea, that they are expert in nothing but handling the sailing-tackle and the net. Their wives and daughters,—well known in Edinburgh, and partially known by report throughout Scotland, as "the Fishwives of Newhaven."—are a sturdy corps of Amazons, so distinguished by peculiar habits as to be quite a study to the observer of human nature. They partake all the broad features which mark the character of their sisterhood of Fisherrow [see that article], and share with them the trade of supplying the markets of Edinburgh and Leith with fresh fish. But they possess additional features which are less apparent in the Fisherrow women; and, during two-thirds of the year, they have exclusively the trade of supplying the capital with oysters. They carry, in their creels or huge willow baskets, loads quite as heavy as any borne by their rivals; and entirely equal them in the masculine character of their strength and habits. When provoked, they exhibit a rude power of tongue, a coarseness and seamen-like vulgarity of abuse, which rival those of their Billingsgate contemporaries. They are so celebrated, too, for their exorbitant attempts at extortion,—very frequently asking three times the sum for their goods which a skilful purchaser induces them to take,—that other trades, when annoyed by purchasers cheapening their wares, or offering a much lower price than has been demanded, are in the habit of exclaiming, "What! would you make a fishwife o' me!" Yet they are honourable among themselves, and peaceable and orderly as members of the general community. They dress in a manner at once coarse, costly, and peculiar, —sufficiently tidy when viewed in connexion with their occupation, and not a little interesting to the lover of the picturesque. In consequence of their having to support their heavy creels with the whole muscular power of the head and neck, they wear a napkin for their head-dress, and have attached to their load a broad belt, which they rest across their forehead when moving, and let slip over their head when about to exhibit their merchandise. They usually wear a jerkin of blue cloth, and, on their neck and bosom, several fine neckerchiefs; and they wrap themselves up in a profusion of petticoats of different stuffs and colours, two or three being regularly adjusted on the person, and others so contorted into twists and bundles below the waist as to produce a strange bulkiness and grotesqueness of appearance. —Newhaven gave, at one time, the name of Viscount to an English family of the name of Cheyne, who never had any property in its vicinity. Charles Cheyne of Cogenho, in Northamptonshire, became, in 1681, the first Viscount Newhaven; and his son, who died in 1738, was the second and last.—The population of Newhaven is returned with Leith, but may be separately computed at about 2,100.

NEWHILL. See Dundonald.

NEWHILLS, a parish in the south-east corner of Aberdeenshire. Its post-town is Aberdeen, about 2 miles from its eastern extremity. It is bounded by Dyce, Old Machar, Banchory-Devenick, Peterculter, Skene, and Kinnellar. Its length south-eastward is about 6 miles; and its greatest breadth is about 5 miles. The surface in the north-east is low and level, but elsewhere is in general hilly, and toward the west may be called mountainous. The soil, over much the larger part of the area, is black, light, shallow, and spongy, incapable of resisting the influence of either much heat or much cold; but in the small level district, it is a deep rich mould, on a good subsoil, and productive of early and luxuriant crops. Upwards of 600 acres are under wood; nearly 1,800 are waste land or mountain pasture; and the remaining area is either regularly or occasionally turned over by the plough. The Don traces the boundary for 2 miles on the north-east; and six brooks drain the interior, either to the Don, or toward the Dee. Blue granite is very extensively quarried, both for home use, and for shipment at Aberdeen. There are 35 heritors and feuars; and most of the feuars occupy their own grounds. Springhill-house and Hazelhead-house, the seats of two of the heritors, are very fine mansions; and the houses of Sheddocksley, Fairley, Crailston, Cloghill, Gateside, Waterton, and Newhills, are also good residences. The rental, per Scotch acre, averages, in most parts, from £1 10s. to £2, but is, in some parts, so high as £3 and upwards. The antiquities are a large cairn, several tumuli, the vestiges of an old chapel, and some remains of a Druidical temple. A cave in one of the dens of the hill of Elrick is supposed by the

vulgar to penetrate for miles under ground, and celebrated in their legends as the residence of a noted robber and his gang. There are in the parish a woollen factory, three paper-mills, two snuff-mills, ten grain-mills, and a brewery; and these, together with the granite quarries, produce a bustling appearance. Annual fairs for cattle and horses are held at GREENBURN: which see. The parish is traversed by the roads from Aberdeen to Inverury and Strathdon; and is traversed also, along its north-east border, by the Great North of Scotland railway, and has a station on it at Buxburn. Population in 1831, 2,552; in 1851, 3,325. Houses, 533. Assessed property in 1843, £11,221.

This parish is in the presbytery and synod of Aberdeen. Patron, the Earl of Fife. Stipend, £414 12s. 2d.; glebe, £45. Schoolmaster's salary, £33 7s. 6d., with £25 fees, and a share in the Dick bequest. The present parish church was built in 1830, and is a very fine edifice, with large accommodation. There is a Free church, with an attendance of about 450; and the amount of its receipts in 1856 was £220 1s. 9d. There are two unendowed schools. The parish of Newmills anciently formed the south-east corner of the originally very extensive parish of St. Machar. The lands of Capelhills—a name probably derived from *Capella*, a chapel—were, in 1663, mortified for the maintenance of a minister, and made the site of a church. These lands consist of nearly 700 acres; and they were previously purchased from the town of Aberdeen, and were now devoted to ecclesiastical use, by a person of much benevolence of character, George Davidson of Pettans, an Aberdeen burgess. This gentleman mortified also his lands of Pettans, in Belhelvie, for the support of the ministers of Aberdeen; and erected a bridge over Buxburn, a rapid stream in Newhills, in which he had witnessed some persons perishing. The lands of Capelhills, on being rendered ecclesiastical, assumed the name of Newhills, and afterwards communicated that name to the new parish in which they lay,—a parish which was constituted in 1666.

NEWHOLM. See DOLPHINTON.

NEWHOLMHOPE-BURN. See MANOR.

NEWHOUSE, a village on the northern border of the parish of St. Ninian's, Stirlingshire. It is continuous with the north end of the village of St. Ninian's. See NINIAN'S (ST.).

NEWHOUSEMILL, a hamlet on the eastern verge of the parish of East Kilbride, Lanarkshire. In its vicinity stood the church of the ancient parish of Torrance.

NEWINGTON, an elegant modern suburb of the Old town of Edinburgh. It forms the extreme south of the city, occupies a site on the very gentle slope of the southern one of the three hills, where it nearly becomes lost in the plain; and is magnificently overlooked, on the north-east, by the centre and most towering part of the bold curve of Salisbury crags, and the most precipitous and picturesque face of Arthur's-seat. Minto-street, which runs through its centre, used, previous to the formation of the railways, to be the grand thoroughfare out of Edinburgh to all the central parts of the Scottish border, and to the western parts of England; and it was well fitted to give travellers entering from these parts a grand first impression of the city. This fine street, most of whose houses are in the villa style, and chastely elegant, is broadly winged on both sides, with brief streets, and spacious "places," and clusters of villas, which beautifully combine the seclusion and airiness of the country with the pretensions and advantages of the town.

NEW-INN, a post-office station subordinate to Nairn.

NEW KEITH. See KEITH.

NEW KELSO. See LOCHCARRON.

NEW KILPATRICK. See KILPATRICK (EAST).

NEW LANARK. See LANARK (NEW).

NEWLANDRIGG, a village in the parish of Borthwick, Edinburghshire. It lies much out of the common thoroughfare, and is in a decayed condition. Population, 132. Houses, 32.

NEWLANDS, a parish, containing the post-office station of Noblehouse, in the north of Peebles-shire. It is bounded on the north by Edinburghshire, and on other sides by the parishes of Eddlestone, Lyne, Stobo, Kirkurd, and Linton. Its length south-south-westward is about 9 miles; and its greatest breadth is about 3¾ miles. The river Lyne, flowing in a southerly direction, runs 2¼ miles along the western boundary, and 3¾ through the interior; and receives on its left bank, in drainage of a large part of the parish, the streams of Dead and Flemington burns. The Tarth describes over 2¾ miles the whole of the south-western and southern boundary to the Lyne. These streams are in request with the angler. A ridge of gently-ascending heights extends between the Lyne and the Tarth, occupies the south-west corner of the parish, and is variously occupied by wood and pasture. Along nearly the whole of the west side of the parish extends a hilly range bearing various subordinate names, and the general one of Kellyheads, parallel to the Pentlands, and interrupted only by the glen of Flemingtonburn. Along the west base of this range lies the vale of Dead-burn and of the Lyne, forming the central belt of the parochial area, and comprising most of its arable ground. The hills are, for the most part, green and heathless, and frequently dotted and clumped with wood. Trees thrive in every part of the parish, and cover about 340 acres. The land occasionally or regularly in tillage comprises upwards of 3,300 acres; and is chiefly a clayey loam, with a subsoil of close stiff till. The rock of the Kellyheads range is trap, abounding in fissures and rich in iron ore; and the rocks in the eastern district, on the estates of Whim, Lamancha, and Magbiehill, are those of the coal formation, comprising limestone, sandstone, shale, and coal. The limestone is extensively worked; the sandstone has been worked chiefly farther down in the vale, in the hill of Broomyleas; and the coal is limitedly worked. Chalybeate springs are numerous; and there are artificial ponds at Whim, Lamancha, and Magbiehill. There are twelve landowners, with each a rental of upwards of £100. The estimated value of raw produce in 1834 was £8,448 for crops, £2,110 for produce of sheep-pasture, £1,830 for dairy produce, and £1,502 for sales of black cattle. The value of assessed property in 1843 was £8,250 12s. 6d. On the tops of several hills are circular strong walls called rings. Drochil-castle, situated at the confluence of the Lyne and the Tarth, and not very much dilapidated, is said to have been built by Morton, Regent of Scotland, but not finished when he was beheaded. The parish is traversed lengthwise by the road from Edinburgh to Dumfries by way of Moffat; and its north-eastern extremity adjoins the Leadburn station of the Edinburgh and Peebles railway. Population in 1831, 1,078; in 1851, 950. Houses, 178.

This parish is in the presbytery of Peebles, and synod of Lothian and Tweeddale. Patron, the Earl of Wemyss. Stipend, £262 16s; glebe, £26. Unappropriated teinds, £37 14s. 7d. Schoolmaster's salary, £34 4s. 4½d., with £15 fees, and £20 other emoluments. The parish church is a neat building, erected in 1838. The previous church was in part an ancient edifice, exhibiting a mixture of Saxon

and Gothic architecture, and is now a ruin. There is an United Presbyterian church, with an attendance of 140. This church was originally a Relief one, built soon after the origination of the Relief body. There is, at the eastern extremity of the parish, an assisted non-parochial school. The ancient parish church belonged, for a time, to the monks of Dunfermline, but afterwards became a free rectory. Lord Chief Baron Montgomery, the first Scotchman who acquired the dignity of Lord Chief Baron, was a native of the parish. The Rev. Charles Findlater, author of the Agricultural Survey of Tweeddale, was long the parish minister. Dr. Alexander Pennycuick, the author of a small volume of poems, and of a poetical description of Tweeddale, was for some time proprietor of Romano. See NEWHALL.

NEWLANDS-BURN, a brook in Kirkmahoe, Dumfries-shire, more commonly called Duncow-burn. See DUNCOW.

NEW LANGHOLM. See LANGHOLM.

NEWLAW-HILL, an eminence in the parish of Rerrick, Kirkcudbrightshire, commanding a very extensive and most magnificent view of the Irish sea, with the Isle of Man and the mountains of Mourne.

NEW LEEDS. See LEEDS (NEW).

NEW LINTON. See LINTON (NEW).

NEWLISTON. See KIRKLISTON.

NEW LUCE. See LUCE (NEW).

NEW MACHAR. See MACHAR (NEW).

NEWMAINS, a post-office station subordinate to Motherwell, Lanarkshire.

NEWMILL, a village in the parish of Keith, Banffshire. It stands on the left bank of the Isla, 1½ mile north of Keith, and 8 miles south-east of Fochabers; and consists of two parts, Old and New. Its inhabitants are principally employed in agriculture; and connected with it are 100 feus, each comprising 5 acres of land. Population, 449. Houses, 129.

NEWMILL, a locality, with an extensive flour mill, in the middle of the parish of Kilmarnock, Ayrshire.

NEWMILL, Morayshire. See LHANBRIDE.

NEWMILL, Fifeshire. See DAIRSIE.

NEWMILLS, a locality with corn mills in the parish of Jedburgh, Roxburghshire.

NEWMILLS, a hamlet in the interior of the parish of Fordyce, Banffshire. Population, about 30.

NEWMILLS, a post-office village on the coast of the parish of Torryburn, Fifeshire. It stands on the verge of the county, being separated only by the burn of Torry from Perthshire. It stands on the road from Dunfermline to Alloa, ½ a mile west of the village of Torryburn, and 1½ mile east of Culross. Here are remains of a pier, once of considerable extent. Newmills is sometimes likewise called Torry. Population, 411. Houses, 97.

NEWMILLS, Haddingtonshire. See HADDINGTON.

NEWMILNS, a post-town and burgh of barony, in the parish of Loudoun, Ayrshire. It stands on the right bank of the river Irvine, 1 mile west of Darvel, 2½ miles east by north of Galston, 7½ east of Kilmarnock, and 24 miles by road, but 41 miles by railway, south of Glasgow. It is tolerably well built, and has an Established church, a Free church, and an United Presbyterian church, all handsome modern buildings. Its environs are very beautiful, comprising the noble park of Loudoun-castle, the finest pieces of "Loudoun's bonny woods and braes," and some other pleasant parts of the basin of the Irvine. In Newmilns is an old tower, whose early history is unknown, but which was the scene of several sanguinary events in the times of the Covenanters. The town has a small woollen mill, but is principally a seat of fine hand-loom cotton-weaving. The number of hand-looms in it, together with Darvel, at the time of the parliamentary inquiry in 1838, was 1,130; and immediately after the introduction of the Jacquard machine, a sum of upwards of £1,300 was spent in Newmilns alone in the purchase of machines. The town has a good market; and fairs are held on the first Thursday of February, on the third Wednesday of May, on the fourth Thursday of August, on the Wednesday after the first Tuesday of September, and on the fourth Wednesday of October. There are in the town an office of the Western bank, three insurance agencies, a gas-work, several schools, a subscription library, and a mortification yielding £60 a-year for the aid of decayed townsmen or their families. The adjacent country is rich in coal. The branch of the Glasgow and South-Western railway up the Irvine terminates at Newmilns, and has brought an accession of prosperity to the town. Newmilns was erected into a burgh of barony by a royal charter in 1490; and it is governed by two bailies, a chancellor, a treasurer and fiscal, and fifteen common councillors. Its total corporation income, at the date of the municipal corporation commission inquiry, did not exceed £10. The Marquis of Hastings, as Earl of Loudoun, is the superior. Population in 1831, 1,650; in 1851, 2,211. Houses, 220.

NEW MONKLAND. See MONKLAND (NEW).

NEW PENTLAND. See PENTLAND (NEW).

NEW PITSLIGO. See PITSLIGO (NEW).

NEWPORT, a post-office village and small seaport, in the parish of Forgan, Fifeshire. It stands on the Tay, directly opposite Dundee, in the direction of south-south-east from that town, and 2¾ miles west by south of Tayport. It is the ferry station on the line of direct road from Dundee into Fifeshire, and it ranks as a creek of the port of Dundee. In 1822, an act of parliament was obtained for concentrating at Newport the ferries to Dundee, which had previously been shared by Woodhaven, about a mile farther west, and for erecting at Newport and at Dundee new ferry harbours adapted to the use of double or twin steamboats. The ferry harbour erected, in consequence, at Newport, is a splendid structure, 350 feet long, 60 feet wide, projecting into a depth of 5 feet at low water of spring tides, and having on each side a carriage-way, all constructed after a design by Sir Thomas Telford. The port, in its commercial relations, serves for the exporting of agricultural produce, and the importing of lime and coal. The amount of dues levied at it in 1852 was £14. In its vicinity are two fine mansions and a number of elegant marine villas. There are in the village a Free church, an Independent chapel, a school, a gas-work, and a hotel. Population, 260. Houses, 51.

NEW PRESTWICK. See PRESTWICK TOLL.

NEW RATTRAY. See RATTRAY (NEW).

NEW SCONE. See SCONE.

NEW SEAT, a post-office station subordinate to Aberdeen.

NEWSHOT. See INCHINNAN.

NEW SPYNIE. See SPYNIE (NEW).

NEWSTEAD, a village in the parish of Melrose, Roxburghshire. It stands on the right bank of the Tweed, about a mile east of the town of Melrose, on the road thence to Lauder. The scenery around it is exquisitely beautiful. Near it is a Roman camp, upwards of 1¾ mile in circumference. The village not improbably had its name from the erection, in its vicinity, of a successor to the venerable church or ecclesiastical establishment of the Culdees at Old

Melrose. During the long interval which elapsed between the overthrow of the Old Melrose church —the edifice so intimately associated with the names of St. Boswell and St. Cuthbert—an ecclesiastical structure was built in a field adjoining the village, which still bears the name of Red Abbey Stead. Stones which formed part of the edifice have recently been dug up; they belong to the new red sandstone formation; and they seem to have been quarried from the thin upper strata of the sandstone beds of Dryburgh,—those very beds the lower and thick strata of which furnished the beautiful fine-grained materials of the far-famed abbey of New Melrose. The colour of the stone seems clearly to have originated the name of Red Abbey. All history of the edifice, except some vague tradition, is lost. Population of Newstead, 250. Houses, 64. See MELROSE.

NEWTON, the name of many mansions, farmsteads, hamlets, villages, and other localities in Scotland. It is an abbreviation of New Town; and is used sometimes alone, and sometimes with an adjunct. The "town" which it designates seems, in almost every instance, to have been originally a town in only the manorial or rural sense,—either a proprietorial residence with its offices, or a single group of farm-buildings, or a group of cottages, or at best a suburb; and in many an instance this "town" has long ceased to be a "new" town, and has undergone great changes of dilapidation or of extension.

NEWTON, a parish in the north-eastern district of Edinburghshire. It contains the post-office station of Millerhill, and the villages of Easter-Millerhill, Wester-Millerhill, Adamsrow, Claybarns, Edmonstone, New Engine, Old Engine, Sheriffhall-Engine, Pentecox, Redrow, and Squaretown. It is bounded by Liberton, Inveresk, and Dalkeith. Its length south-eastward is about 2½ miles; its greatest breadth is a little upwards of 1½ mile; and its area is upwards of 3 square miles. It comprehends the two ancient parishes of Newton on the south-east, and Wymet, now called Woolmet, on the north-west. Newton proper is bounded, on the Dalkeith side, partly by the barony of Lugton, and partly by the river Esk; and comprises the lands of Newton and the lands of Sheriffhall. The "new town" of the place must have been of very ancient origin, and, if it ever grew to be a town in any modern sense of that word, has been swept away, insomuch that the very church has now been about a hundred years in another situation, leaving the original locality to be now occupied by only an old tower and a farm-stead. The parish of Wymet comprehended the lands of Wymet and the lands of Edmonstone; but the name Wymet, or Woolmet, is of very doubtful etymology. The surface of what constituted the ancient parish of Newton is generally of a uniform character, sloping towards the Esk; and even the surface of what constituted the ancient parish of Wymet is not much diversified, yet forms part of a ridge which ascends from within the parish of Inveresk, by a gradual rise, westward to Gilmerton within the parish of Liberton. The view from the crest of this ridge is very extensive and brilliant; but the part of it comprised within the conjoint parish of Newton and Wymet is severely damaged, as a landscape, by paucity of wood, and by the red-tiled collier villages. The corner of Newton which touches the Esk is within Dalkeith park, has upwards of 80 acres of wood, and partakes generally in the richness of the Duke of Buccleuch's policy; the north-west corner of Wymet also is crossed by the Pow burn, and shares in the beauties of the vicinity of Craigmillar castle; but nearly all the rest of the united parish, excepting the park of Edmonstone, has a bare appearance, and wants even a perennial brook or other good permanent domestic supply of water. All the area, except the small pendicles of wood and pleasure ground, is under cultivation. The rocks are all of the coal formation; and extensive coal mines were, for upwards of two centuries, in operation, but some of them have been recently abandoned. The principal landowners are Wauchope of Edmonstone, the Earl of Wemyss, and the Duke of Buccleuch; the first of whom is the most extensive, and resident. See EDMONSTONE. The Earl of Wemyss's property of Woolmet-house has a somewhat baronial appearance, and must originally have been a splendid residence, but is now occupied as a farm-house. The average rent of land is from £4 to £5 per acre. The value of assessed property in 1843 was £9,739 8s. 1d. The estimated value of raw produce in 1845 was £16,400 for land produce, and £12,584 for coals. The parish is traversed by the roads from Edinburgh, Leith, and Musselburgh to Dalkeith, and by the Hawick branch of the North British railway; and it has ready access to the railway at the stations of Niddry and Glenesk. Population in 1831, 2,274; in 1851, 1,780. Houses, 387. The decrease of population is ascribed partly to an alleged error in the return for 1831, and partly to the abandonment of the coal mines.

This parish is in the presbytery of Dalkeith, and synod of Lothian and Tweeddale. Patron, Wauchope of Edmonstone. Stipend, £290 10s. 8d. Schoolmaster's salary, £34 4s. 4½d., with £60 fees, and £39 other emoluments. There are two non-parochial schools. The parish church was built in 1742, and re-seated in 1819, and contains 430 sittings. Both the ancient parish of Newton and the ancient parish of Wymet belonged to the monks of Dunfermline, and were incorporated with their lordship and regality of Musselburgh; and after the Reformation, they were included in James VI.'s grant to Lord Thirlstane. The tower of the ancient church of Newton, situated at the south-eastern extremity of the present parish, is still standing, having been preserved to form a feature in the landscape seen from Dalkeith-park. The ancient church of Wymet, situated adjacent to the village of Edmonstone, was converted first into a local chapel, and next into the burying-place of the Edmonstone family; and, having gone into decay, it was, a number of years ago, superseded by an elegant mausoleum.

NEWTON, a modern village in the island of Great Cumbrae, Buteshire. It figures in the census returns as a separate village; but it really is part of the small, neat, sea-bathing town of MILLPORT: which see. Population, 444. Houses, 49.

NEWTON, a village in the parish of Glammis, Forfarshire. It is also called Newton-of-Glammis. Population, 105. Houses, 28.

NEWTON, a village in the parish of Panbride, Forfarshire. It is also called Newton-of-Panbride. Population, 75. Houses, 17.

NEWTON, a locality, containing some slight vestiges of an ancient castle which belonged to the Ogilvies of Airlie, in the parish of Glenisla, Forfarshire.

NEWTON, a village in the parish of Wiston, Lanarkshire. Excellent limestone is worked in its neighbourhood. Population, 48. Houses, 16. It is also called Newton-of-Wiston.

NEWTON, a station on the Clydesdale-junction branch of the Caledonian railway. It is situated in the parish of Cambuslang, 1¼ mile north-west of Uddingston, and 5½ south-east of Glasgow, Lanarkshire. The district around it abounds in useful minerals, and is thickly peopled.

NEWTON, a village in the Ferintosh district of Nairnshire. It belongs to the parish of Urquhart and Logie-Wester, most of which is in Ross-shire, at a considerable distance from the main body of Nairnshire. Population of the village, 118. Houses, 36. See FERINTOSH.

NEWTON, a village in the parish of Pencaitland, Haddingtonshire. It is inhabited principally by colliers, and has a school for their children. Population, 168.

NEWTON, a village in the parish of Abercorn, Linlithgowshire. Limestone has very long been quarried in its vicinity. Population, 138. Houses, 28.

NEWTON, a village on the south-east verge of the parish of Melrose, Roxburghshire. It stands near the east base of the Eildon hills, about ⅔ of a mile from the right bank of the Tweed, on the road from Galashiels to Jedburgh, adjacent to the forking of the Hawick branch of the North British railway into the sub-branches toward respectively Hawick and Kelso, 1 mile north-west of Lessudden, and 3½ miles south-east of Melrose. Here is a United Presbyterian church of long standing. The village is also called Newton-Dryburgh and Newton-St.-Boswells. Population, 164. Houses, 43.

NEWTON, an estate and a village in the parish of Bedrule, Roxburghshire. The estate formerly belonged to a family of the name of Ker, a branch of the Kers of Fernihirst. There stood on it, in the old times, a Border baronial strength, which has now disappeared. The village is small, and of no note. Population, 24. Houses, 6.

NEWTON, an ancient chapelry, and a quondam village, in the parish of Nenthorn, Roxburghshire. The chapelry comprised the district of the present parish of Nenthorn lying east of the Eden. The village is now extinct. See NENTHORN.

NEWTON, a village in the parish of Kirkpatrick-Fleming, Dumfries-shire. It is of modern erection.

NEWTON, a suburb of the burgh of Kirkcaldy in Fifeshire. It consists principally of a single street, commenced about the year 1790, built on a regular plan, and going off from the east end of Linktown, nearly at right angles with it, in the direction of the parish church, in the parish of Abbotshall. Its population is about 800.

NEWTON, a village, also called Newton of Falkland, in the parish of Falkland, Fifeshire. See FALKLAND (NEWTON OF).

NEWTON, a suburb of the burgh of Cupar, Fifeshire. It stands on the north side of the Lady burn, on the lands of Pittencrieff; and is within the parliamentary boundary of Cupar, but not within the royalty.

NEWTON, a village in the parish of Fintry, Stirlingshire. It stands on the west border of the parish, and on the left bank of the Endrick, 5 miles east-south-east of Balfron.

NEWTON, an estate in the parish of Abbey-Paisley, Renfrewshire, formerly belonging to the family of Alexander, but now belonging to Speirs of Elderslie. It is also called Newton-Paisley.

NEWTON, an estate in the parish of Culsalmond, Aberdeenshire. Much wood, in recent times, has been raised upon it, and sold. In its woods, near Pitmachie, is a standing-stone with an inscription supposed to be in Runic characters. Near the mansion, also, is another old standing-stone with sculptures.

NEWTONAIRDS. See HOLYWOOD.

NEWTON-ARGYLE, a village in the parish of Southend, Argyleshire. In its vicinity is an inn.

NEWTON-BURN, a brook, rising near Turnlaw, and running in a northerly direction through the parish of Cambuslang, to the Clyde, near Clydesmill, in Lanarkshire.

NEWTON-BURN, a brook, running from Hempriggs loch to the water of Wick, in the parish of Wick, Caithness-shire.

NEWTON-DON. See NENTHORN.

NEWTON-DOUGLAS. See NEWTON-STEWART.

NEWTON-DRYBURGH. See NEWTON.

NEWTON-EDROM, a post-office village in the parish of Edrom, Berwickshire. The popular name of the village is simply Edrom.

NEWTON-GRANGE, a post-office village in the parish of Newbattle, Edinburghshire. It was founded only a few years ago, yet is larger than all the other villages of the parish put together. Here is an edifice containing boys', girls', and infant schools, capable of accommodating 280 scholars, built six years ago, at a large cost, by the Marquis of Lothian, in connexion with his rapidly extending coal-works.

NEWTONHALL, an estate and mansion in the parish of Gifford in Haddingtonshire, still occupied by a family of the name of Newton, one of whom, accompanying James VI. to England, is supposed—according to one tradition in Sir Isaac's Newton's family—to have been the ancestor of that great philosopher.

NEWTONHALL, Fifeshire. See KENNOWAY.

NEWTONHILL, a station on the Aberdeen railway, on the north-east border of the parish of Fetteresso, 1½ mile north of Muchalls, and 2½ miles south-south-west of Portlethen, in Kincardineshire.

NEWTONHILL, Fifeshire. See FORGAN.

NEWTON (LONG), a small village in the parish of Yester, and at the foot of the Lammermoors, in Haddingtonshire.

NEWTON (LONG), Roxburghshire. See ANCRUM.

NEWTONMORE, a post-office village in the parish of Kingussie, Inverness-shire. Fairs are held here on the second Wednesday in March, and on the Tuesday in April and in May after Beauly. Population, 222. Houses, 54.

NEWTON OF ABERDOUR. See ABERDOUR, Fifeshire.

NEWTON OF BELTREES. See BELTREES (NEWTON OF).

NEWTON-OF-CRIECH, a shipping-place for agricultural produce, on the north shore of the inner Dornoch-frith, and within the parish of Criech, on the southern border of Sutherlandshire.

NEWTON-OF-CULSALMOND. See NEWTON.

NEWTON-OF-FALKLAND. See FALKLAND (NEWTON OF).

NEWTON-OF-GLAMMIS. See NEWTON.

NEWTON-OF-LENNEL, also called New-Lennel. See LENNEL.

NEWTON-OF-MEARNS. See MEARNS.

NEWTON-OF-PANBRIDE. See NEWTON.

NEWTON-OF-PITCAIRNS. See PITCAIRNS.

NEWTON-OF-WISTON. See NEWTON.

NEWTON-PAISLEY. See NEWTON.

NEWTON-RALSTON, a village in the parish of Neilston, Renfrewshire. It stands in the valley of the Levern, between Neilston and Barrhead, and is inhabited chiefly by the work people of the adjacent factories. Population, 893.

NEWTON ST. BOSWELL'S. See NEWTON.

NEWTONSHAW, or NEWTON OF SAUCHIE, a village in the parish and county of Clackmannan. It stands 1¼ mile south of the river Devon, 1½ mile north of Alloa, 5 miles north-west of Kincardine, and 7½ miles east of Stirling. It was built for the accommodation of the work people employed by the Devon iron-company. Population, 798. Houses, 186. See SAUCHIE.

NEWTON-STEWART, a post-town, a market-town, and a burgh-of-barony, in the parish of Penninghame, Wigtonshire. It stands on the right

bank of the river Cree, at the intersection of the road from Port-Patrick to Dumfries with the road from Wigton to Ayr, in the immediate vicinity of the village of Minnigaff, 8 miles north-north-west of Wigton, 26 east by north of Stranraer, 33 west of Castle-Douglas, 52 west by south of Dumfries, and 125 south-south-west of Edinburgh. A younger branch of the Stewarts, Earls of Galloway, possessed the estate of Castle-Stewart, built upon it at his own expense a few houses to form the nucleus of a village, called the place Newton-Stewart, in honour of the family name, and held out some advantages to attract settlers. The earliest feu-contract is dated 1701. The idle, the giddy, those who hung loose upon society, were the first to flock to the incipient town. The advantages of the feus invited to it some peasants who had accumulated a few pounds. Smuggling did something to promote its advancement. A decent inn or two, a few shops, and some workrooms for ordinary artisans, were soon called for by its being a convenient stage between Ferry-town-of-Cree and Glenluce, and a suitable depot and resort for an extensive tract of circumjacent country. By these and other appliances the population was raised, 10 or 12 years before the close of last century, to about 900. Mr. W. Douglas, the respectable and enterprising merchant who became proprietor of the village of Carlinwark, and changed its name to Castle-Douglas, now purchased the estate of Castle-Stewart, altered the name of its village to Newton-Douglas, obtained for the place under this name a charter, erecting it into a burgh-of-barony, and commenced vigorous efforts to make it a seat of important manufacture. A company, with Mr. Douglas at its head, erected, at an expense of upwards of £20,000, a large factory for spinning cotton, and connected it with the introduction and support of cotton-weaving. A Mr. Tannahill, under the patronage of Mr. Douglas, commenced a small manufacture of coarse carpets. A tannery had long before been established, and now received stimulating encouragement, and was managed with judgment and success. These and other circumstances concurred to promise that the village would, under its new lord, rapidly rise to be a place of no small consequence; but they promised incomparably more than they performed. The new name of Newton-Douglas soon fell into disuse, and gave place to the original name of Newton-Stewart. The carpet factory proved an utter failure. The cotton-factory worked well for a few years, declined, was abandoned, stood for years unoccupied, and, in 1826, was purchased by Lord Garlies for a twentieth part of the original cost, and converted into a quarry for the building of cottages and farm-houses. The tanning and the currying of leather was the only trade which continued to prosper. Even the weaving of cotton for the manufacturers of Glasgow, though it had formed a ready resource for the town's weavers, went rapidly into decline, insomuch that the number of hand-looms, during the ten years following 1828, decreased from 311 to 100. The purchase of wool for the markets of Lancashire, partly on commission and partly on personal risk, next became a principal trade. Bacon-curing also was introduced about the year 1830, and rapidly began to employ capital to the amount of about £6,000 a-year. Some commerce, likewise, is carried on through the small harbour of Carty, about 1½ mile below the town, principally in the exportation of rural produce, and in the importation of lime, sandstone, coals, and general merchandise. Carty is a creek of the port of Wigton; and the amount of local dues levied at it in 1852 was £17. A weekly market is held on Friday; a cattle market is held on the second Friday of every month; and a lamb fair is held on the Wednesday in August before Minnihive. A mail car runs daily to Wigton and Whithorn; a mail car runs daily to Girvan, by way of House-of-Hill; a coach is daily in transit between Wigton and Ayr, by way of Know village; and a coach is daily in transit between Stranraer and Dumfries. The principal inn is the Queen's Arms. The town has offices of the British Linen Company's bank, the National bank, the City of Glasgow bank, and the Clydesdale bank. It has likewise nine insurance agencies, a gas-work, a subscription library, a public reading-room, and several miscellaneous and charitable institutions.

Newton-Stewart, unlike most other modern towns, was not begun to be edificed upon any regular plan; and, in consequence, long bore the appearance of a straggling and whimsical village,—builders raising their houses high or low, small or great, on a line with others or in recesses or projections, as caprice, accident, or convenience suggested. Irregularity has been so far corrected that the place now consists chiefly of a long principal street, with the town-house in the centre. At the close of last century all the houses were thatched, and most of them had only one story; but now more than one-half of them are slated and have two stories. The general building material is trap throughout the body of the walls, and either granite or sandstone in the lintels and other conspicuous parts. The principal public buildings, additional to the townhouse, are the bridge across the Cree, the parish church of Penninghame, a Free church, an United Presbyterian church, a Reformed Presbyterian church, and a Roman Catholic chapel. The bridge is an elegant structure of five arches, erected about 50 years ago, its chief parts of granite, and its parapets of sandstone. The parish church is a handsome Gothic erection, built about 16 years ago, after a design by William Burn of Edinburgh, at a cost of about £5,000. In the neighbourhood of the town are the mansions of Corsbie and Corriesel, the former belonging to the Earl of Galloway. The environs on the Kirkcudbrightshire side also are interesting, but have been noticed in our article on Minnigaff. The peace of the town is principally maintained by resident justices. Population in 1831, 2,241; in 1851, 2,599. Houses, 411.

NEWTON-UPON-AYR, a small parish, containing a burgh of barony suburban to Ayr, on the coast of Kyle, Ayrshire. It is bounded on the west by the frith of Clyde, and on other sides by the parishes of Prestwick, St. Quivox, and Ayr. Its length southward is 1½ mile; and its greatest breadth is about 1 mile. The river Ayr runs on its southern boundary, separating it from Ayr. The coast is flat, sandy, and of gloomy aspect; yet, at the northern extremity, projects a brief way in an inconsiderable rocky point. The surface of the interior is very nearly a dead level, and lies very slightly above high-water mark. The soil is naturally a barren sand, but has been greatly improved by intermixture with blue shale, fetched up from the coal-mines. Nearly 350 acres are arable; and about 80 are waste or in pasture. The coal formation understretches the whole parish, but has been much disturbed by the upheaving of trap, and is exhausted in its workable coal seams. An apparently inexhaustible quarry of good freestone is worked in the north. All the parish, excepting 9 or 10 acres, belongs to the freemen of the burgh of Newton-upon-Ayr. Nearly all its features of interest also belong to the burgh. Population, in 1831, 4,020; in 1851, 4,814. Houses, 545. Assessed property in 1843, £3,706 13s. 7d.

This parish is in the presbytery of Ayr, and

synod of Glasgow and Ayr. Patron, Thirteen delegates annually chosen by the freemen of the burgh. Stipend, £228; glebe, £19 10s. Schoolmaster's salary, £34 4s. 4½d., with fees. The parish church was built in 1777, and enlarged in 1832, and contains 1,032 sittings. There is a Free church in the burgh; and the amount of its receipts in 1856 was £419 8s. 4d. The parish of Newton-upon-Ayr was disjoined in 1779 from that of Monkton and Prestwick, by authority of the commissioners for the plantation of kirks; and the management of all the civil affairs of the church was assigned to the thirteen delegates who wield the patronage. The teinds still belong to Monkton.

NEWTON-UPON-AYR, a burgh of barony, a suburb of the royal burgh of Ayr, sharing with that place the characters of a town and a seaport, occupies the south end of the parish of Newton-upon-Ayr, contiguous on one side to the shore of the frith of Clyde, on another to the right bank of the river Ayr, and on a third to the conjoint suburb of Wallacetown, lying within the parish of St. Quivox. Its principal street is about 2,100 feet long, and 80 broad; but, over a considerable part, is far from being neatly edificed. Three or four streets lie between this and the frith, are regularly planned, and form a new town; but as yet they are only partially built. Three other small streets belong to the old town. The side contiguous to Wallacetown lies so compactly with that suburb that the line of demarcation could not be discovered by a stranger; and the side along the river partakes with Ayr all the fine scenery of the handsome new bridge, and much of the bustle, as well as the characteristic objects, of the harbour. On that side also, in the vicinity of the bridge, stands the fine terminus of the Glasgow and Ayr railway, an elegant Elizabethan structure, erected at an expense of £8,000. The only public buildings, previous to the erection of the railway terminus, were the council-house and the parish church, both very unpretending structures, the former built about the commencement of the present century, and surmounted by an humble steeple. Another object of interest recently constructed is a new cemetery, in the north-west environs. The town, so late as about the middle of last century, consisted entirely of one-story houses, thatched and of mean appearance. Towering above these, and situated in Garden-street, amidst gardens and trees, stood Newton-castle, the seat of the Baronet Wallace of Craigie, a castellated edifice of the kind common in the later feudal times. This old castle was taken down about 85 years ago; and the parish church was built near its site. The town was, for a long time, dependent chiefly on the collieries; and when they ceased, it remained for some time stationary. But, about 56 years ago, it received a new impulse from enterprize in trade and manufacture, and began to undergo extension and improvement. Among its later features are several fine villas and the improvements of the harbour.

The chief industrial occupations of the townspeople are various. Ship-building and rope and sail-making are the oldest, having employed about 60 workmen in the latter years of the last century; but they have, of late years, been much diminished by competition at Troon. Four foundries employ about 50 workmen, and produce all sorts of iron and brass machinery and tools. About 400 weavers, and upwards of 600 hand-sewers, work for the warehouses of Glasgow. The descendants of a colony of fishermen from Pitsligo, and places in its vicinity in Aberdeenshire, who long were a peculiar race in dress and habits, and conducted an extensive traffic, are now in a comparatively reduced condition, employ themselves chiefly in white fishing, and have no wider market than Ayr and its immediate neighbourhood. Newton possesses a joint interest with Ayr in the harbour, has a railway to it from the coal-mines in the parish of St. Quivox, and exports nearly all the coals, the traffic in which constitutes so large a part of the harbour's trade. Newton nominally shares also in the general town business of the surrounding country, having nominally a weekly market; but all the real general business, with unimportant exceptions, is done in Ayr. The government of Newton is in the hands of two bailies, a treasurer, and six common councillors. The corporation income amounts to about £440 a-year. The rights of the burgh, as to the use of its property, the power of granting feus, and the electing of the town council, are vested by charter in 48 burgesses. The origin of the burgh cannot be traced in history, but is traditionally ascribed to a grant by Robert the Bruce, in favour of 48 of the inhabitants, who had distinguished themselves in his service at Bannockburn in 1314. No satisfactory evidence of this can be referred to; but it is matter of history that Robert was at the parliament held at Ayr, 26th April, 1315, when the crown of Scotland was settled on him and his descendants; and it appears certain that the erection of the burgh of Newton must have occurred some time between 1208–14 and 1446. New charters confirmatory of all previously existing privileges, and assuming the origin of the burgh to have been beyond the memory of man, were granted by James VI. in 1595 and 1600; and these charters proceeded on the narrative of certain ancient writings and title-deeds respecting the original erection of the burgh having been exhibited to the King, and of its former charters having been lost in consequence of confusions created by the civil wars. Newton is comprehended within the parliamentary boundaries of Ayr. Its population is treated in the census as identical with that of the parish of Newton.

NEWTON-WAMPHRAY, also called Gilgal, a hamlet in the parish of Wamphray, Dumfries-shire. Some ancient pavement-stones have been dug up here, supposed to have belonged to a Roman road which traversed the parish nearly in the line of the old Glasgow and Carlisle road.

NEW-TROWS, a village in the parish of Lesmahago, Lanarkshire. Population, 61. Houses, 19.

NEWTYLE, a parish, containing a post-office village of its own name, also the village of Newbigging, and several hamlets, on the south-west border of Forfarshire. It is bounded on the north-west by Perthshire, and on other sides by the parishes of Nevay, Glammis, Auchterhouse, Lundie, and Kettins. It has a somewhat quadrangular outline, with the angles presented nearly to the cardinal points; and it measures 2½ miles by 2. Its surface runs up on the south-east, and on one-half of the adjacent sides, to a water-shedding line of the Sidlaw hills; and, declining north-westward, settles down into a part of the level ground of Strathmore. The chief heights are Kinpirnie or Kilpirnie on the north-east boundary, Newtyle hill on the south-west boundary, and Hatton hill about midway between them. All are profitable to the summit, even the least valuable parts producing good pasture, and forming fine sheep-walks. Kinpirnie is the highest, having a reputed altitude of 1,151 feet above the level of the sea. It commands a magnificent view of Strathmore and the Grampians on the one side, and of the Tay and a great extent of sea-coast on the other; and it bears aloft a turret, which belonged to an observatory, erected, in the course of last century, by the proprietor of

the estate, and which serves as a useful landmark for vessels at sea. An opening or pass through the Sidlaws, between the hills of Newtyle and Hatton, bears the name of the Glack of Newtyle, and is traversed by the turnpike from Dundee to Newtyle and Meigle, and by the Dundee and Newtyle railway. The view of Strathmore, which suddenly bursts upon a traveller on his emerging from this pass, is very grand. Whinstone occurs in abundance, and is used for road metal; a heavy grey slate, found in the hills, was formerly used for slating houses; and sandstone, of excellent quality, well adapted for masonry, is worked in several quarries. The soil, in the hilly parts of the parish, is generally of a light, sharp, productive quality, consisting of black earth or clay, with mixture of sand or gravel, on rock, mortar, or clay; and that of the level tract within Strathmore is of a similar quality, but sometimes richer, lying variously on sand, gravel, clay, and marl. About 2,631 acres are in tillage; about 1,370 are in pasture; and about 168 are under wood. About nine-tenths of the whole belong to Lord Wharncliffe, and the rest is divided between two proprietors. The value of assessed property in 1843 was £4,521; the real rental in 1855, £5,605.

Hatton-castle, now in ruins, was built in 1575, by Lawrence, Lord Oliphant, and appears to have been a very substantial fortified residence, commanding the pass of the Glack. The ruins stand on the north-west skirt of the hill of Hatton, looking out upon an extensive prospect of Strathmore. A short distance south of them stood another castle, called the castle of Balcraig, meaning 'the manor-town of the rock;' but scarcely any traces of that castle can now be seen. A short distance west of the hamlet of Hill of Keillor, is a tumulus with a large standing-stone in it, evidently of great antiquity, the stone marked with rude hieroglyphics. A field on high ground near the same hamlet bears the name of Chesterpark, and is supposed to have been the site of a Roman castrum. In the north-west of the parish are localities called Grahames-knowe and Kings-well, whose names are traditionally said to have arisen from their being on the route of Macbeth northward from his fortress on Dunsinnan hill. Near the hamlet of Auchtertyre are traces of a small square camp, which is said to have been occupied for some nights, during the civil wars, by the army of the Marquis of Montrose. The parish is well provided with facilities of communication both by road and by railway. There are two meal-mills and two saw-mills. A considerable number of the inhabitants are linen weavers. Population in 1831, 904; in 1851, 1,141. Houses, 207.

This parish is in the presbytery of Meigle, and synod of Angus and Mearns. Patron, Lord Wharncliffe. Stipend, £163 14s. 4d.; glebe, £1 10s. Schoolmaster's salary, £34 4s. 4½d., with about £50 fees, and £10 other emoluments. The parish church was built in 1769, and enlarged in 1824 and 1835, and contains 498 sittings. An United Presbyterian church was built in 1835, and contains 400 sittings. There is a Free church preaching station; and the sum raised in connexion with it in 1856 was £65 4s. 11d. The parish school is a handsome structure of recent erection. There are a non-parochial school, a public library, and a savings' bank.

The Village of Newtyle stands nearly in the centre of the parish of Newtyle, 3 miles south-east of Meigle, and 11 north-west by west of Dundee. The Dundee and Newtyle railway has here a depot, and sends off hence its branches of communication to the main trunk of the Scottish Midland railway. There is also a station of the Dundee and Newtyle railway at Hatton. The village of Newtyle was founded in 1832, in connexion with the project of the railway. An arable field of about 15 acres, the property of Lord Wharncliffe, was set apart as its site, and laid out in a regular plan, to be let in lots for building on leases for 99 years. The village, favoured by the goodness of its situation, and stimulated by the opening of the railway, sprang speedily into existence, and made such rapid progress as to have in 1842 a population of 505. Its streets were formed in the most approved method of macadamizing; and its whole appearance is neat and cleanly.

NEWTYLE, Perthshire. See Dunkeld.

NEWYEARFIELD. See Linlithgowshire.

NIBEN (Isle of), a picturesque uninhabited islet, in the parish of Northmaven, in Shetland.

NICHOLAS (St.). See Aberdeen (New).

NIDDRY, a village in the north-east corner of the parish of Liberton, Edinburghshire. It stands 1¾ mile south of Portobello, and 3½ miles by road south-east of Edinburgh. It occupies a pleasant rural site on the ascent of a gentle swell, and commands a magnificent view of some of the richest grouping of the Lothian and Forth and Fifeshire scenery. But, in itself, it consists principally of a long row of red-tiled cottages, inhabited principally by colliers. In its vicinity is Niddry-house, a very ancient baronial residence, with a large and handsome modern addition. Here also are vestiges of an ancient chapel, noticed in our article on Liberton. There is a railway station of Niddry, on the North British railway, near the points at which the branches go off to Musselburgh and to Hawick, 1 mile from Joppa, 1 mile from Glenesk, 2 miles from Musselburgh, and 5 from Edinburgh.

NIDDRY, a small village in the parish of Kirkliston, Linlithgowshire. It stands on the western border of the parish, in the vicinity of the Union canal and the Edinburgh and Glasgow railway, ¾ of a mile south of Winchburgh. Population, 111. Houses, 20.

NIDDRY-CASTLE. See Kirkliston.

NIDPA'TH. See Neidpath.

NIELSLAND. See Hamilton.

NIELSTON. See Neilston.

NIGG, a parish, forming the most southern part of the district of Easter Ross, on the east coast of Ross-shire. It contains the post-office station of Nigg, and the fishing villages of Shandwick, Balnabruach, and Balnapellin. The greater part of it is peninsulated between the Moray frith and the upper part of the Cromarty frith; and the rest is bounded by the parishes of Logie-Easter and Fearn. Its length south-south-westward is 6 miles; its breadth is from 2 to 3 miles; and its area is about 14 square miles. The hill of Nigg, anciently called the Bishop's forest, extends along the Moray frith from the farm of Shandwick on the northern boundary, to Dunskeath at the point of the peninsula, and there beetles up in what is called the North Sutor of Cromarty. This hill is about 5 miles long and 1 mile broad, varies in height from 300 to 500 feet, and commands very extensive and magnificent views of the vast expanse of the Moray frith, of its long projections into the land, and of the very diversified and occasionally rich country which forms the curiously intersected sea-board. Its coast-side breaks almost sheer down in rocky cliffs, often 300 feet in height, picturesquely torn and perforated with fissures and caves, and, in the very romance of beauty, chequered with patches of verdure and extensive escalades of ivy. The rocks have pinnacles for the eagles' eyry, points for the nests of all the different sorts of hawks, and inviting retreats for great flocks of cormorants, and other sea-fowl, on their return

from hatching-places in Caithness and the northern isles. A plantation of Scotch pines, to the extent of about 1,000 acres, was made, in modern times, on the hill of Nigg; and it partly failed, yet on the whole was a source of considerable profit from its thinnings. But it has all been cut down; and the hill now presents a bleak and dreary appearance. The surface of the hill also is rugged and uneven, while the soil is thin, cold, and sometimes wet, so that there is little inducement to cultivate it. All the wood at present in the parish covers little more than 50 acres. The western side of the hill descends with a gentle slope towards the Cromarty-frith; and the skirts of this slope widen toward the north, till they expand into a large tract of level ground, all arable, and flanked by the sands of Nigg. These sands are a bay of the Cromarty frith, projected northward along the boundary-line between Nigg and Logie-Easter, so as to belong to both parishes, measuring about 2 miles in breadth at the south end, and 1 mile at the north, and alternately forsaken and submerged by the refluxes of the tide. A thick stratum of sea-shells, about a foot from the surface, long supplied the adjacent country with large quantities of manure, and would continue to be productive, but has been superseded by the use of lime. The sands abound also in the living treasures of the deep, particularly mussels, which are a source of considerable revenue. The geology of the parish is interesting, and has been specially described by Sedgwick, Murchison, Miller, and the Andersons. The principal rocks are granitic gneiss, conglomerate, sandstones, greenish clay, passing into sandstone, fossiliferous greenstone, and a series of shales and limestones. An expensive boring was made, a few years ago, for coal, but without success. The soil of the greater part of the arable land is a very fine black loam, incumbent on red sandstone. There are six landowners; but four of them are altogether non-resident, and another is chiefly so. The real rental in 1856 was £5,058; and the estimated value of raw produce, inclusive of fisheries, about £16,000.

The principal residence is Bayfield-house, built near the end of last century. A principal antiquity is a famous monumental stone, popularly known as the Shandwick stone, and traditionally said to have been erected over the grave of a Danish prince in the times of the Danish invasions. The stone was blown down and broken into three pieces by a hurricane in the spring of 1847, but is regarded with so much veneration, that it is sure to be still preserved. It stood on the brow of an eminence immediately behind the village of Shandwick, and served to the fishermen of that place when at sea as a most convenient and attractive landmark. Its height was 8 feet, its breadth 4 feet, and its thickness 1 foot. One side of it exhibited the figure of a large cross, wrought into an involved and intricate kind of fret-work, resembling the contortions of myriads of snakes. "In the spaces of the sides of the shaft," says Miller, "there are huge, clumsy looking animals, the one resembling an elephant, the other a lion; over each of these a St. Andrew seems leaning forward from his cross; and on the reverse of the stone, the sculpture represents processions, hunting-scenes, and combats." The ground around the monument was used for ages as a burying-place. Another monument of very similar character, and ascribed by tradition to a similar origin, but not so large as the Shandwick stone, anciently stood near the gate of the parochial burying ground, but was thrown down by a tempest in 1725, and now stands fixed to the eastern gable of the parish church. This stone has a triangular top like the pediment of a portico; and its sculptures have been supposed to represent on one side the history of man's salvation, and on the other the Scandinavian heaven. The princes commemorated by these monuments are alleged to have been drowned by shipwreck on a dangerous rock which lies about half-a-mile from the adjacent shore, stretches 2 or 3 miles in almost a straight line from west to east, is not visible at high-water, has occasioned modern and very serious disasters, and bears the name of 'the King's sons.' That name, of course, is supposed to have arisen from the shipwreck of the Danish princes; and on the high precipitous coast are three objects called respectively 'the King's harbour,' 'the King's cave,' and 'the King's path.' At Easter Rarichie, near the east end of the parish, is a detached hillock, said to have been used as a Danish fort, and still bearing marks of having borne the brunt of war. On a small mont at Dunskeath, overhanging the sea, are traces of the foundation of a fort, which was built, in 1179, by William the Lion, to suppress tumults and disperse robbers, and which is mentioned by Sir David Dalrymple in his history of Scotland. The parish communicates by regular ferry with Cromarty, about 1¼ mile distant from its southern shore, and is traversed by the road from the ferry to Tain. Population in 1831, 1,404; in 1851, 1,457. Houses, 310.

This parish is in the presbytery of Tain, and synod of Ross. Patron, the Crown. Stipend, £234 8s.; glebe, £10. Unappropriated teinds, £194 19s. 7d. Schoolmaster's salary, £34 4s. 4½d., with £30 fees, and £4 other emoluments. The parish church was built in 1626, and has been frequently repaired; and it contains 425 sittings. There is a Free church; and the sum raised in connexion with it in 1856 was £95 17s. There is an United Presbyterian church, which was built in 1803, and contains 627 sittings. There is not at present any school but the parochial one. In 1756 a notable intrusion case occurred in Nigg. The parishioners, almost to a man, withstood the presentee for three years, and expended £500 in legal proceedings against him; and, when worsted, they very numerously became staunch Seceders. The bishops of Ross anciently held Nigg as a mensal church, and had a residence in the parish.

NIGG, a parish in the extreme north-east of Kincardineshire. It contains the post-office village of Cove, and the villages of Torry, Burnbank, and Charleston; and its north end is separated only by the river Dee from the city of Aberdeen. It is bounded by the parish of Banchory-Devenick, by the county of Aberdeen, and by the German ocean. Its length north-north-eastward is about 5 miles; its greatest breadth is 3 miles; and its area is about 15 square miles. In the north-east corner the land, turning into a ness or promontory, projects into the sea, and is called GIRDLENESS: which see. A bold breast of rock from 60 to 80 feet high, covered with grass and herbage, overhangs the sea along all the east coast. A bank or gently graduated ascent, higher in the south than in the north, rises behind, and is arable for some distance from its base. A heathy ridge of hill, about 200 feet above sea-level, goes off from the summit and near the middle of the bank, runs quite across the parish, and is crowned with two huge cairns, which are seen, and serve as landmarks, at several leagues' distance on the sea. A valley and hill occur north of this ridge; and two haughs extend along the Dee and the side of the height which runs out to Girdleness. A belt of land, upwards of a mile broad, extending the whole length and through the middle of the parish, is, with slight exceptions, an unarable, wild, and uninhabited tract of moss and heath, profusely strewn

and intermixed with stones. A very hard granite, now of a beautiful blue and now of a purple or party-coloured hue, abounds both as native rock and as boulder, and supplies abundant materials for enclosing and building. Large quartz veins occasionally intersect the granite. Causeway-stones are worked in several quarries, chiefly for shipment to London; but, though long a principal article of export, they have, in a great measure, ceased to be in demand.

The Dee, while in contact with the parish, forms the harbour of Aberdeen, and falls into the sea. Torry-pier, projecting into it from the Nigg side, is the resort of vessels for unloading lime and shipping stones; but is now much less frequented than in former years. Above it lie the boats of the fishermen and pilots of the village of Torry; and in its vicinity formerly stood a boiling establishment of a Greenland whaling company. A small bay or creek, called Grey Hope, close to the Girdleness lighthouse, is noted as the scene in 1813 of the shipwreck of the Greenland ship 'Oscar.' The bay of Nigg, immediately south of Girdleness, is of semi-circular form, and nearly half-a-mile in diameter. Burnbank-harbour and Alton's-harbour, farther south, are two creeks, formerly the scene of considerable fishing settlements, which have gone almost wholly into decay. Cove-harbour, situated about a mile from the southern boundary, affords accommodation to nine or ten boats belonging to fishermen in the village of Cove, and offers refuge to boats retreating before a stout north-easterly wind. Several caves and natural arches perforate the rocky coast; and one of them in this vicinity seems to have originated the name of Cove. Along the coast is a free open sea. Loirston or Lorstown-loch, on the south-west boundary, is oblong in form, and covers 27 acres. There are seven principal landowners. The average rent of the arable land is about £4 10s. per acre. The estimated value of raw produce in 1838 was £8,756. The value of assessed property in 1843 was £6,418 14s. 4d. On the haugh upon the Dee are the ruins of an edifice which belonged to the abbey of Arbroath, and retains the name of Abbots'-walls. The parish is traversed along its western border by the road from Stonehaven to Aberdeen, and along its coast by the Aberdeen railway; and it has a station on the railway at Cove, 3¼ miles from Aberdeen. "The course of the railway from Cove, along the cliffs towards Nigg-bay, where the line sweeps round towards the Dee, just in time, apparently, to escape the abrupt promontory of the Girdleness, could not be exceeded in marine romance; for the German ocean is lashing the rocks below, whilst vessels of all cuts are tacking about on the heavy sea, and the train keeps rushing on in its landward career; then sweeping round suddenly from near Girdleness, the line curves in another direction round the basin of the Dee, affording a fine view of the harbour, the shipping, the long street-lines, the islets connected by elegant bridges, and crosses the Dee on a long viaduct to the station at the western end of the granite city." Population in 1831, 1,684; in 1851, 1,841. Houses, 324.

This parish is in the presbytery and synod of Aberdeen. Patron, the Crown. Stipend, £160; glebe, £50. Schoolmaster's salary, £30, with about £20 fees, and £6 other emoluments. The parish church was built in 1829, and contains 900 sittings. It is a handsome structure of granite, surmounted by a quadrangular tower, so conspicuously situated as to be seen from a great distance; and it cost £1,800. There are three non-parochial schools. The ancient church was dedicated to St. Fittick, and belonged to the monks of Arbroath. The name Nigg signifies a peninsular nook, and is aptly descriptive both of the north-eastern extremity of this parish, where the ancient church stood, and of the southern or characteristic part of the Nigg of Ross-shire.

NINE-MAIDENS'-WELL. See AUCHINDOIR.

NINE-MILE-BURN, a village on the southern border of the parish of Penicuick, Edinburghshire. It stands on the new road from Edinburgh to Dumfries, not far from the romantic locality of Newhall, 12½ miles south by west of Edinburgh. Population, about 110.

NINEWAR. See DUNBAR.

NINEWELLS. See DUNDEE and NEWBURGH.

NINIAN'S (ST.), or RINGAN'S (ST.), a large parish in the central part of Stirlingshire. It contains a suburb of the burgh of Stirling, the post-towns of St. Ninian's and Bannockburn, the post-office village of Plean, and the villages of Cambusbarron, Whins of Milton, Newhouse, Bellfield, Torbrex, Charteris-hall, Greenyards, and Auchinbowie. It is bounded on the north by Kincardine, Lecropt, Stirling, Logie, and Alloa; on the east by Airth; on the south by Larbert, Dunipace, Denny, and Kilsyth; on the south-west by Fintry; and on the west and north-west by Gargunnock. Its greatest length, from the point where Pow-water leaves it on the east to Carlin's-linn on Burnfoot-burn on the west, is 13 miles; its greatest breadth, from the confluence of the Forth and the Teith on the north to Carronbridge at the south-east base of Dundaff-hill on the south, is 8 miles; and its area is about 55 square miles. Part of its west end belongs to the basin of the Clyde, but all the rest of it belongs to the basin of the Forth. Loch-Coulter, which lies on its southern border, near Dunipace and Denny, and which we have noticed under the word COULTER, is its only considerable lake. The head-streams of the Endrick drain about 3½ miles of the western border. Bannock-water, drawing one head-stream from the vicinity of the western border and another from Loch-Coulter, runs north-eastward, through nearly the centre of the parish, to the Forth. Carron-water runs for 5 miles eastward along the southern boundary; and receives from the interior Earl's-burn, a streamlet of about 5 miles in length of course. Pow-water drains a section of the parish by two head-streams, the one of which rises near Bannockburn-house, and runs 3¾ miles eastward to the boundary, while the other rises on the southern border at Garcaiber, and runs about the same distance, chiefly eastward, along the southern boundary, and partly northward along the eastern boundary, to a confluence with the former; and the united stream, after further describing the boundary ¾ of a mile north-eastward, passes away into Airth. The Forth—except where the small parish of Stirling projects into St. Ninian's—flows along the whole of the northern boundary; and while touching the parish, it receives on the hither side the Bannock, and 5 or 6 rills or streamlets,—on the further side, the Teith, the Allan, the Devon, and various rivulets,—and performs the greater part of those remarkable sinuosities called its links, as well as exhibits a large portion of its most characteristic scenery. Two beautiful cascades, called Auchentillin's-spout and Gilmour's-linn, occur, the former on Carron-water, the latter on Touch-burn; but they have not above 20 feet of fall, and do not show much volume of water.

The surface of the parish, like that of adjacent districts, is naturally divided, in the language of the county, into carse, dryfield, and moorland. The carse was, for many centuries, and up to the epoch

of modern agricultural improvement, a flat morassy wilderness; but now, though still comprising a few patches of moss, it is, in general, in a state of high cultivation, and produces abundant crops. It looks to the eye to be all one flat expanse of rich luxuriance; and it lies, for the most part, at an elevation of from 12 to 25 feet above the level of the sea, while some portions of its northern margin are so low as to be protected by embankments from the overflowings of the Forth. The dryfield rises suddenly, and considerably, above the level of the carse; presents, along the boundary-line, the general appearance of the banks of a river,—affording clear indication of having been land long before the carse ceased to be the bed of a frith; and has a variegated surface, chiefly undulating, but with large level tracts, and sloping aggregately to the north and to the east. It is by much the most extensive of the three sections of the parochial area; and nearly all of it is well cultivated, and adorned with hedgerows and plantations. The moorland is all situated in the west, behind the dryfield; but, the breadth of the parish being there small, it occupies the whole of that breadth, from the dryfield to the western boundary, and comprises somewhat more than one-fourth of the whole parochial area. It consists chiefly of Dundaff, Craigannet, and Earl's hills, which are the eastern extremity of the Lennox range, described in our article Lennox-hills, and have an altitude of about 1,000 feet or less above the level of the sea; but it comprises also some bold ranges of basaltic columns, which extend north-eastward from Earl's-hill in the direction of the heights of the King's-park, Stirling-castle, and the Abbey-craig, and form, with these heights, a nexus between the Lennox-hills and the Ochils. The northern part of the hills is, to a considerable extent, heathy or but poorly pastoral; but the southern part abounds in excellent pasture, and terminates, along the Carron, in a narrow strip of well-cultivated land. The basaltic ranges are very diversified in height, but rise in some places to upwards of 100 feet; and, being dissevered by deep transverse gorges, while some of them are bare and others planted to the brink, they present a very picturesque appearance.

The carse is alluvial to the depth of 20 feet; and below the alluvium lie successively a layer of moss, a stratum of drift, a layer of sand, strata of sandstone and shale, and, at the depth of 20 fathoms, a three-feet seam of coal. The dryfield is all underlaid with rocks of the coal formation, comprising coal-mines which are of great value, and have been very extensively worked. The predominant rock of the moorland is trap, of superfused and columnar character, generally of great thickness, and reposing upon beds or strata of sandstone, slate, clay, limestone, and shale. The coal-mines of Bannockburn, Greenyards, Auchenbowie, and Plean employ nearly 400 workmen, and produce about 60,000 tons a-year. Sandstone is extensively quarried at Catscraig, Blackcraig, and Craigbeg. The carse must, at two periods, have been covered with forest; first at the remote period previous to the formation of the layer of moss beneath the present alluvium, and next at the comparatively recent period, subsequent to the completion of the alluvium, and previous to the formation of the almost impassable morass which is known to have covered it at the epoch of the battle of Bannockburn. The dryfield and the moorland also must, at a recent period, have been, at least to some extent, under masses of growing wood; for the royal forest of Stirling can hardly fail to have comprehended the northern division of the dryfield, while the royal forest of Dundaff must have comprehended at least the shoulders and outskirts of the hill of Dundaff. The principal estates in the parish are Touchadam, Polmaise, Sauchie, Bannockburn, Touch, Carnock Hospital of Stirling, Craigforth, Plean, Auchenbowie, Throsk, Greenyards, and Stewart-hall; but there are about 125 landed properties,—some of them very small. Some of the principal landowners, as the Duke of Montrose, the Earl of Dunmore, and one or two more have no residence in the parish: but other principal landowners, as Mr. Murray of Touchadam and Polmaise, Mr. Ramsay of Sauchie, and several more, besides the small proprietors, are resident. The real rental in 1841 was considerably more than double the old valued rental, which was £20,860. The value of assessed property in 1843 was £49,082 2s. Extensive manufactures of carpets and tartans have long been carried on in several parts of the parish, particularly at Bannockburn, and at Cambusbarron. There are likewise in the parish three tan works, a brick and tile work, a distillery, a brewery, several malting establishments, and nail-making shops, employing about 200 nailers. There were formerly six distilleries. The parish is traversed by the roads from Stirling to Airth, Falkirk, Glasgow, and Balfron. It is traversed also by the Scottish Central railway, and by the Forth and Clyde railway; and it has a station on the former at Bannockburn, and enjoys ready access to both at Stirling. It has likewise small shipping-places for lime and coal at Fallin, and for bricks and tiles at Throsk. An annual fair of considerable importance, for milch cows, oxen, and horses, is held at the east end of Newmarket, in the neighbourhood of Bannockburn. An annual cattle fair used to be held also at Broxbrae, on the field of Bannockburn, but has sunk into insignificance. Population of the parish in 1831, 9,552; in 1851, 9,851. Houses, 1,495.

The Roman road from Camelon to Brechin traversed the parish of St. Ninian's, entering it from the Torwood, and running in a north-westerly direction to the Forth; but scarcely a trace of it now remains. There exist five places popularly called Roman camps: but all are so small that they can have been only Roman stations. The ruins of a strong ancient castle, which belonged to Sir John Graham, the companion of Sir William Wallace, and is said to have been often visited by Wallace himself, stand near the western extremity of the parish, on a very sequestered spot, which must anciently have been very difficult of access. The Dukes of Montrose spring from the same ancestral root as the Sir John Graham of this castle, and take their title of Viscount Dundaff from the lands of Dundaff in its vicinity; and some ancient earl of their house is probably commemorated in the names of Earl's-hill and Earl's-burn in the same district. The house of Sauchie, now in ruins, was anciently a fortified residence. Bruce's castle, on the lands of Carnock, is an old round tower, remarkable only for its name. An old square tower of much finer character stood not far from it, at Plean mill; but the greater part of it has been carried away for the erection of neighbouring modern buildings. The bored stone, a little to the south-west of the town of St. Ninian's, and the standing-stones in Randolph field near the village of Newhouse, are memorials of the famous battle of Bannockburn. Several cairns or tumuli occur in various parts, but cannot be identified with any particular event. Owing to the proximity of the district on the one side to the expanse of low grounds opening into the Lowlands, and on the other to some of the grandest inlets to the Highland fastnesses, it was probably the scene of many rude unrecorded skirmishes, perhaps also of some great unrecorded deeds of arms. Remains of rude fortifications, such as intrenchments and breastworks, are still traceable in

many places. A number of artificial hills of great size occur in the upper part of Craigengelt. The most notable event connected with the parish, the celebrated battle of Bannockburn, the most highly sung of all the Scottish victories, has been noticed in our article on Bannockburn. But there were also fought within the parish two other battles of great note, called respectively the battle of Stirling, and the battle of Sauchie.

The battle of Stirling was fought on the 13th September, 1297, between the Scottish troops under the patriotic Wallace, and an invading English army under Hugh Cressingham, and John, Earl of Surrey and Sussex. When the English came in sight they beheld the Scottish army posted near Cambuskenneth, on the hill now called Abbey-craig; and they for some time continued harmlessly to gaze on the confronting array, while their generals despatched two monks to attempt to buy Wallace's submission by an offer of peace, till they were stung by taunts from the patriot knight to march toward the timber bridge which then stood at Kildean, and to rush across the river. After a large portion had crossed, the Scottish advanced to the main attack, and sent off a strong detachment to take possession of the bridge. Many of the English wheeling round to retreat to the north bank, some of them were precipitated into the river, and others became squeezed into a mass upon the bridge; and, either by their aggregate weight, or in consequence of a previous stratagem of Wallace in sawing through the main beam, they brought down the whole fabric in a wild crash, and were engulphed in the waters. Those of the English who had formed, and stood to sustain the shock of the main attack, fought for a while with great bravery, under the conduct of Sir Marmaduke Twenge, an officer of noted experience and courage; they induced the Scottish to make a feint of retreating, but soon saw them stand at bay, and make a vigorous onset, and, at the same moment, were attacked in the rear by a party who had made a compass round the Abbey-craig; and they were at length entirely routed, and—in addition to those who were drowned in the river—left five thousand of their number, among whom were Cressingham and a nephew of Sir Marmaduke Twenge, slain upon the field. The defeat seems to have been effected about the place now called Corn-town, near the Forth, and to have been completed at the Torwood,—a forest, the only surviving part of which is now in the united parish of Larbert and Dunipace. The victory was the most signal which Wallace ever gained in a regularly fought field, and cost him but an inconsiderable loss in slain.

The battle of Sauchie, called also the battle of Sauchieburn and the battle of Stirling, was fought on the 11th June, 1488, between James III. and his insurgent nobles. The two armies met on a tract of ground, now called Little Canglar, on the east side of the streamlet of Sauchieburn, about 2 miles south of Stirling, and 1 from the field of Bannockburn. The malcontent army was 18,000 strong, and was ranged in three divisions, commanded respectively by Lords Home and Hailes, by Lord Gray, and by officers acting as prompters to the Prince of Scotland, a youth of 15. The King's army is variously stated in strength, and was also disposed in three divisions, commanded, we are not told under what arrangement, by the Earls of Menteith and Crawford, the Lords Erskine, Graham, Ruthven, and Maxwell, and Sir David Lindsay of the Byres. The King was armed cap-a-pie, and mounted on a stately charger, presented to him by Sir David Lindsay, with the assurance that he might at any moment trust his safety to the animal's agility and surefootedness, provided he could keep his seat; but where he was stationed, or what part he proposed to take in the impending engagement, we are not informed. The malcontents saw their first line driven back, at the onset, by the royalists; but, the second division speedily giving support, all became composed and firm; and they soon, not only recovered their ground, but pushed the first and the second lines of the royalists back to the third. James III. was not noted for courage, and rapidly lost the little he possessed; and—previous to the striking of any decisive blow—he put spurs to his horse, and galloped off, with the view, as is conjectured, of getting on board his fleet, which lay in sight at 5 miles' distance. After the King's flight, his troops continued to fight with great bravery; but, eventually finding themselves unable to stand their ground, and disheartened by a flying rumour of the King's death, they began to retreat towards Stirling, and were allowed to retire without much pursuit. The victorious army lay all night upon the field, and next day marched to Linlithgow. The number of slain on both sides must have been great, as the action was of several hours' duration, and stubbornly maintained; and, on the royalists' side, it included the Earl of Glencairn, and some other persons of high rank. As the King, in his flight, was on the point of crossing the Bannock at the village of Milton, a mile east of the field of battle, his horse started at the sight of a pitcher which a woman, in the act of drawing water, threw from her at the sight of a man riding toward her at full gallop. James was thrown violently to the ground, and sustained such damage from his fall and the weight of his armour, that he fainted away; and he was removed, by the miller and his wife, into a mill in the immediate vicinity, and treated by them, though ignorant of his rank, with every possible care. When he had somewhat recovered, he told who he was; and, supposing himself dying, called for a priest. The miller's wife flew in search of a ghostly adviser, and, meeting a party of the malcontents who had observed the King's flight, and were endeavouring to track his steps, entreated that, if there were a priest among them, he would stop and "confess his majesty." "I," said one of them, whose name is not certainly known, "I am a priest: lead me to him." Being introduced, he approached on his knees under pretence of reverence, treacherously ascertained that the King thought he would recover if he had the aid of a surgeon, and then stabbed him several times in the heart.

"'Twas in a low and lonely house, hard by old Milton moss,
Where Scotia's conquering standard floats o'er Bruce's battle cross,
And Bannockburn its classic ground spreads to the wandering eye.
'Mid circling hills, mute witnesses of blood and victory,—
E'en there, in that poor mill-house, was the King of Scotland sped,
Nor traced they e'er the secret spot wherein his bones were laid."

The parish of St. Ninian's has been the scene likewise of some later events affecting the national history of Scotland. In 1511, while a parliament was sitting in Stirling under the Earl of Lennox, the grandfather of James VI., an armed force from Edinburgh, approaching unexpectedly during the night, made a sudden attack upon them early in the morning, in the southern outskirts of the town; and in the skirmish which followed, on a spot at Newhouse, between Stirling and the town of St. Ninian's, the Regent received a mortal wound. A heap of stones was raised on the spot as a sort of monument, but was removed in 1758 at an improving of the public road. In the times of the Cove-

nanters, the parish, though not the scene of any battle, was harassed by the contending armies marching through it, or encamping in its neighbourhood. In September 1745, the Pretender, when on his march to the south, spent a night at Bannockburn-house; and in January 1746, when on his return to the north, he made that house his head-quarters. A bullet was fired at him while he was lodging there; and the mark of it is still shown in one of the rooms. On the morning of the 17th of January, he drew up his army on Plean-moor, preparatory to their march to the battle-field of Falkirk; and on the 1st of February, on the approach of the Duke of Cumberland, he blew up the church of St. Ninian's, which he had used as a powder magazine, and commenced his retreat to the north. At the blowing up of the church, several persons were killed, others were severely wounded, and the church itself was utterly destroyed. But the steeple remained entire; and as the successor to the destroyed church was built at some distance from it, the disjunction of church and steeple came to be a memorial of the rebellion.

The parish of St. Ninian's is in the presbytery of Stirling, and synod of Perth and Stirling. Patrons, the heads of families. Stipend, £345 3s.; glebe, £30. Unappropriated teinds, £2,700 13s. 8d. Schoolmaster's salary, £34 4s. 4½d., with about £65 fees. The parish church was built in 1750, and contains 1,500 sittings. There are two chapels of ease, respectively at Bannockburn and at Plean, each under the patronage of its own male communicants. There are two Free churches, respectively at St. Ninian's and at Bannockburn; and the receipts of the former in 1856 were £249 10s. 4d.,—of the latter, £279 16s. 9d. There are also two United Presbyterian churches, respectively at St. Ninian's and at Bannockburn; the former built in 1774, and containing 1,340 sittings,—the latter built in 1797, repaired in 1837, and containing 450 sittings. There are 18 non-parochial schools, several of them aided extraneously or by endowment, but the greater number on private adventure. There are several public libraries, both congregational and general. In the immediate vicinity of the Plean chapel of ease, and in some respects connected with it, is an asylum, founded by the late Francis Simpson, Esq. of East Plean, for the residence and support of indigent old men, preferentially such as have served in the army or the navy; and it usually accommodates about 30 inmates. An ancient church, called Kirk of Moor, or Kirkamuir, stood about 8 miles south-west of the present parish church, and figures in some old records as a parochial place of worship. It is said to have been one of the first churches in which the Lord's supper was dispensed by the Reformers. But it has utterly disappeared,—though its burying-ground continues still to be in use. There were anciently three other places of worship in the parish; one at St. Ninian's well, whence the present name of the parish is derived,—one at Skeok, a mile below Bannockburn, dedicated to the Virgin Mary,—and one at Cambusbarron, to which a burying-ground is believed to have been attached. In the course of last century, two notable cases of ecclesiastical intrusion occurred in St. Ninian's, and led to the present peculiar state of its ecclesiastical patronage. In March, 1734, Mr. James Mackie was inducted with the consent of the heritors, but in opposition to the will of a great proportion of the parishioners; and, during his incumbency of nearly 20 years, about one-half of the inhabitants of the parish are said to have become Seceders. In June, 1773, after almost the whole of the parishioners had opposed the settlement of a Mr. David Thomson, and had carried on a process against him during eight years before the General Assembly, he was forcibly inducted. The great body of the adherents of the Establishment now went off, and were formed into a congregation of Relief. But previous to Mr. Thomson's death in 1787, his hearers were indulged with the choice of an assistant, and began gradually to augment in number; and in 1788, they bought up from voluntary contributions, and at a cost of between £600 and £700, the rights of the patron.

The parish of St. Ninian's was originally called Eccles, a name signifying 'the church;' and it retained that name till at least the 12th century. How or when it obtained its present name is not certainly known; but at least the town of St. Ninian's was anciently called Kirkton, and continued to be so called till 1724. The saint from whom the modern name is derived is, in Ireland, called Ringan, and in Scotland, indifferently Ringan and Niuian. Monkish legend says much respecting him, but credible history very little. About the year 452, the Scottish ecclesiastics became infected with the Pelagian heresy, and, according to most historians, were visited by Palladius from Rome, with the view of recovering them from error. Ninian is mentioned among Palladius' disciples as highly distinguished by both learning and sanctity. He is said—but on very suspicious authority—to have occasionally inhabited a cave on the sea-shore of Wigtonshire, and to have founded a monastery at Candida Casa, the site of the modern Whithorn, and, in the middle ages, of the cathedral of the see of Galloway. His labours, whatever they might be, were probably confined to Galloway, or, at most, to the province of Valentia; as the country north of that province appears not to have received Christianity till a later date. Many churches and chapels, though all apparently in times succeeding the overthrow of Culdeeism, and the introduction of popery, were dedicated to his memory. Thus we have Kil Ninian in Mull; Kil St. Ninian in Colmonell; St. Ninian's in Alyth; St. Ninian's chapel, now a cemetery, in Banffshire; St. Ninian's in Inverness-shire; Nonekill or St. Ninian's chapel in Kiltearn; the chapelry of St. Ninian in the cathedral church of Ross; the chapelry of St. Ninian in the cathedral church of Elgin; St. Ninian's chapel in Castle-hill, Aberdeen; St. Ninian's chapel at the west port of Linlithgow; St. Ninian's chapel in the parish of St. Vigean's, in the vicinity of which is St. Ninian's well, once a reputed cure for many diseases; St. Ninian's chapel on Rouna-Ringan, or Ninian's Point, in Bute; and St. Ninian's chapel in Ringan's or Ronyan's isle, in Shetland. The St. Ninian's well, where the ancient chapel stood in St. Ninian's parish, is a very copious and pure spring, on the northern border of the parish, near the south port of Stirling.—Among distinguished persons who have been connected with the parish, as natives or as residents, may be mentioned Colonel John Erskine of Carnock, who was commissioner from Stirling in the famous parliament of 1707, and was also lieutenant-governor of Stirling-castle,—Dr. Henry, the historian, who was born at Muirton in the carse,—Miss Hamilton, the authoress of the Cottagers of Glenburnie, who resided at Crook while writing that work,—and Mr. Harvey, the painter, who was born in the town of St. Ninian's.

The Town of St. Ninian's stands in the part of the parish of St. Ninian's which adjoins the southern border of the parish of Stirling. It extends along the great south road from Stirling, immediately above its forking into the roads toward respectively Glasgow and Edinburgh. It is nomi-

nally 1¼ mile south of Stirling, but by means of the Stirling suburb of Melville-place, and of the conjoint villages of Newhouse and Bellfield, it is, with two brief interruptions, really continuous with Stirling; and though forming rather a far-off and straggling appendage than a suburb, it is comprehended within the parliamentary boundaries. The town consists chiefly of one long, antiquated, and not spacious street. Many of its houses are white-washed, and made, by the simple accident of colour, to wear a comparatively lively appearance; but most are old-fashioned, lumpish, and inelegant. Many bear rude but curious sculpturings,—some of considerably ancient dates, and others of the tools of the tradesmen to whom they originally belonged. On one are the principal implements of a smithy, with a horse-shoe and nails; and on another are the utensils of an old-fashioned inn or public-house. The churches of the town are conspicuous buildings. St. Ninian's has a share in the Bannockburn and Stirling staple manufacture of tartans and other woollen stuffs; it is the seat of an extensive manufacture of nails, which have the reputation of being very superior in quality; and it takes part in the tanning of leather and other departments of the parish's productive labour. Population, 1,480.

NINIAN'S (St.), Lanarkshire. See Govan.

NINIAN'S (St.) ISLE. See Dunrossness.

NIPPES (The), a hill on the south side of the valley of the Nith, in the parish of New Cumnock, Ayrshire. Its principal rock is greywacke; and several searches have been made in it for lead.

NISBET, a village in the parish of Pencaitland, Haddingtonshire. It stands on the left bank of the Tyne, 4½ miles south-west of Haddington. Population, 43. Houses, 9.

NISBET, an ancient parish, now united to Crailing, in Roxburghshire. See Crailing. There is a station for Nisbet on the Jedburgh branch of the North British railway.

NISBET, Berwickshire. See Edrom.

NITH (The), a river partly of Ayrshire, but chiefly of Dumfries-shire. Two of its three principal head-streams rise on the north side respectively of Prickeny and Benbain-hills, 2½ miles asunder, and both on the boundary between the parishes of New Cumnock and Dalmellington in Ayrshire; and they run, the one 4 miles northward, and the other 3½ miles north-eastward, to a junction at Waterhead. The united stream then runs 2¼ miles east-north-eastward, and receives on its right bank the third head-water, a streamlet 5 miles long; and thence it flows 5½ miles eastward to the boundary between Ayrshire and Dumfries-shire, passing the village of New Cumnock, and receiving in its vicinity from the south, Connal-burn and the beautiful and rapid Afton-water. Its subsidiary tributaries hitherto are not fewer than about 25; but most of them are cold tiny rills, creeping out from among moss and heath. The Nith itself, till after it gets quite away from Ayrshire, is one of the most cheerless of streams, sluggish, shallow, seldom more than 15 feet wide, deeply tinctured with moss, and rarely graced with plantation, copse, a sheet of verdure, or even a bold bank, to relieve the dreary monotony of its moorland landscape.

After entering Dumfries-shire, the Nith flows 5 miles eastward through the parish of Kirkconnel, and 8 miles south-eastward to Enterkinfoot in Durisdeer, 1½ mile of the distance being on the boundary between Kirkconnel and Sanquhar, and 4½ miles through the interior of the latter. It then assumes a southerly direction over a distance of 7 miles, through Durisdeer, along the boundary between Morton and Penpont, and across small wings of Morton and Closeburn, to the confluence with it of the Skaar. Its chief tributaries thus far, are, on its right bank, Kello-water between Kirkconnel and Sanquhar, Euchan-water and Polbroke and Elliock-burns in Sanquhar, Mar burn between Durisdeer and Penpont, and Skaar-water at the termination of the southerly course; and, on its left bank, Aymer-water in Kirkconnel, Crawick-water between Kirkconnel and Sanquhar, Minnick-water in Sanquhar, Enterkin-burn in Durisdeer, Carron-water between Durisdeer and Morton, and Cample-water in Closeburn. On its banks, within this sweep, are the village of Kirkconnel, the burgh and castle of Sanquhar, the ducal palace of Drumlanrig in Durisdeer, and, on a rising ground a little to the east in Morton, the pleasant town of Thornhill. Its banks till below Sanquhar, though quite redeemed from the dreariness which characterizes them in Ayrshire, are simply agreeable, consisting chiefly of a verdant vale overlooked by variform but not grand or bold mountain-land; and they are afterwards exquisitely rich in many varieties of landscape, now exhibiting a narrow acclivitous pass, diversified with wood, escarpment, and rock, now bursting abroad into an expanse of valley, blooming and luscious as a garden, and screened with warm-coloured and finely outlined mountain-heights, and now presenting such rapid alternations of slope, undulation, haugh, and hill, as surprise and charm a tourist by the mingled wealth and number of the transitions.

From the confluence with it of the Skaar, the Nith flows over a distance of 11½ miles south-east by southward, to a point 5 furlongs above the confluence with it of the Cluden; it then makes a bold and beautiful sweep of ⅔ of a mile westward; and thence, over a distance of 8 or 8½ miles, it runs nearly due southward to the Solway frith. Its sinuosities are numerous, and in some places constant; but, with the exception noticed, they are never bold, though always graceful, and do not impair the general or prevailing character of the direction. Over all the distance south of the Skaar—abating some trifling pendicles in the parish of Holywood—the river forms parochial boundary-lines; having on its right bank, Keir, Dunscore, and Holywood in Dumfries-shire, and Terregles, Troqueer, Newabbey, and Kirkbean in Kirkcudbrightshire, and, on its left bank, Closeburn, Kirkmahoe, Dumfries, and Caerlaverock, all in Dumfries-shire. Its chief tributaries in this division, are, on its right bank, the Cluden between Holywood and Terregles, the Cargen in Troqueer, and the Newabbey Pow in Newabbey; and, on its left bank, Duncow-burn in Kirkmahoe. On or near its banks here, are a profusion of mansions at intervals in all the parishes, the venerable ruins of Lincluden college in Terregles, the ruined but still splendid monastery of Newabbey in Newabbey, the glad and lovely burgh of Dumfries, with its less attractive Galloway suburb of Maxwelltown, and the cheerful sea-port village of Glencaple in Caerlaverock.

For 3½ miles after receiving the Skaar, the river runs between the beautiful grounds of Keir, slowly rising like a green and softly wooded gallery on the one hand, and the fine expanse of the singularly improved and now luxuriant plain of Closeburn, darkly overhung by the Queensberry heights on the other. It now becomes pent up for about 2 miles by the low and diversified terminations opposite to each other of spurs form the mountain-ranges on the back-ground; and, while traversing this space, it is decked out with mansion, park, wood, and lawn, amidst nooks and recesses, hilly abutments and diversified slopes, till picturesqueness becomes profuse and almost excessive. On its clearing the sort

of gorgeous pass—in the course of which the great Nithsdale road crosses it by the well-known "Auld Girth brig"—the hills recede from it in sweeps which respectively describe the arc of a circle; and while they form soft and finely-featured screens which terminate on the one side in the low green heights of Mousewald, and, on the other, in the bold grand form of Criffel, they enclose an oval plain of from 6 to 8 miles in breadth; and along the centre of this, the joyous and pebbly Nith runs, amidst constant verdure, multitudinous gardens, and other elements of luscious landscape, to the sea. About 2½ miles below Dumfries, it begins slowly to expand into an estuary; and between Craiglebock-rocks and the tiny headland at Caerlaverock-castle, where it fairly becomes lost in the Solway frith, 4¾ or 5 miles below the point of begun expansion, it attains a breadth of 2¼ miles. A high wier or "caul" is carried across it at Dumfries, to divert its water-power to the burgh's suite of large grain mills; and beyond this obstruction the tide does not rise.

Nowhere is the magnificence, or at least the rare and romantic character, of the famous Solway tide displayed with finer effect than in the estuary of the Nith. Owing principally to the tide's impetuosity, the navigation of the river is difficult to seamen unacquainted with its peculiarities; but it has been greatly improved, and is identified with considerable traffic. The Nith, exclusive of all minor bends and windings, has altogether a course of about 49 miles; but, if viewed in connexion either with its scenery or the agricultural wealth of the country which it drains, it possesses a degree of importance much beyond the proportion of the length of its stream, or the volume of its waters. In the bleak or upper part of its course, it is celebrated for the excellence of its trout; and, near the sea, it abounds with salmon. The valley of the river, all the way from New Cumnock to Dumfries, principally along its west side, and generally very close to the stream, is traversed by the Glasgow and South-western railway. See the article GLASGOW, DUMFRIES, and CARLISLE RAILWAY.

NITHSDALE, the western one of the three great divisions of Dumfries-shire. It takes its name from being drained and traversed by the river Nith. It anciently comprehended the whole basin of the Nith, together with some tracts exterior to that basin; and it was then, for some time at least, called Strathnith or Stranith. Its limits varied at different times, and seem never to have been exactly defined. At present, it excludes all the parts of the basin of the Nith within Ayrshire and Kirkcudbrightshire, yet is understood to include tracts in Dumfries-shire exterior to that basin, and drained by the Lochar. But it is not a political division of territory, and does not require to be precisely defined. Its chief features, from the boundary of Dumfries-shire with Ayrshire down to the influx of the Nith into the Solway frith, have already been noticed in our account of the river Nith. The soil of the greater part of its arable lands is light and dry; capable, except in frost and snow, of being ploughed at any period during the winter; and well-fitted for an early reception of the seed-furrow. But in the larger part of the other two divisions of the county the soil is wet, and, when ploughed early in winter, is so apt to run into grass, and to have corn sown upon it choked, that it cannot, without imprudence on the part of the husbandman, receive the seed-furrow till spring. One plough on a farm in Nithsdale, will, in consequence, turn up nearly as much ground as two will do in the wet parts of the other districts. Owing to so important a difference, the Nithsdale farms are, in general, much larger than those of Annandale and Eskdale.

In the reign of David I., Nithsdale, then called Stranith, was possessed by a Gaelic chief of the name of Dunegal, to whom genealogists trace up the descent of the celebrated Randolph, Earl of Moray. Four sons of Dunegal appear, after his death, to have shared among them his extensive possessions of Stranith; only two of whom—Randolph and Duvenald—can now be traced. Randolph, the eldest son, possessed a large share; and, as the head of the family, he was superior of the whole, and transmitted the designation of Lord of Stranith to his posterity. He married Bethoc, the heiress of the lands of Bedrule and Buecastle in Teviotdale, and gave his name Randolph as a surname to his descendants. Thomas Randolph, his grandson, who was lineally Lord of Stranith, and became, in 1266, sheriff of Roxburgh, and from 1269 to 1278 the chamberlain of Scotland, marrie: Isabel, the eldest daughter of Robert Bruce, the daughter of the Earl of Carrick, the sister of Robert Bruce, the restorer of the monarchy. Their son was the famous Sir Thomas Randolph of Stranith, who, for his eminent services, obtained from his uncle the earldom of Moray, the lordship of Annandale, and other estates. Duvenald, the younger son of Dunegal of Stranith, appears to have obtained the barony of Sanquhar, the lands of Morton, and some other possessions in upper Nithsdale; and he was probably the Duvenald who, along with Ulgric, led the men of Galloway at the battle of the Standard in 1138, and fell in the conflict. His descendants assumed, in the 13th century, the surname of Edgar from the name of his son; and they continued, in the 14th century, to hold various lands in Dumfries-shire. Richard Edgar, during the reign of Robert Bruce, possessed the castle and half the barony of Sanquhar, with some adjacent lands; and Donald Edgar obtained from David II. the captainship of the clan Macgowan in Nithsdale.

Other considerable families enjoyed, at an early period, some possessions in the district. Sir John Comyn possessed the manors of Dalswinton and Duncow; and the progenitors of the Lord Maxwells possessed Caerlaverock, and held out its ancient castle against many a stout siege. Under Robert II. Nithsdale obtained new superiors. Sir William Douglas, natural son of Archibald Douglas, Lord of Galloway, married Giles, the daughter of the King, received with her a grant of Nithsdale, and was constituted sheriff of Dumfries. His only child, his daughter Giles—called, in the encomiastic language of a simple age, 'the Fair Maid of Nithsdale,' and who inherited her father's lordship and sheriffdom—married, first, Henry Sinclair, the Earl of Orkney, and next, in 1418, Alexander Stewart, the son of James, who was the brother of Robert II., and had obtained from Robert Bruce the lands of Durisdeer. Her son, by her first marriage, was William, Earl of Orkney, and inherited Nithsdale and the sheriffship of Dumfries; but, in 1455, he was induced to resign the two latter to James II. for the earldom of Caithness. Sir Robert Crichton of Sanquhar is, in 1457, called Vicecomes de Nithsdale, and again, in 1459, is called sheriff of Nithsdale; and his son Robert obtained, in 1464, from James III., a confirmation of the sheriffship, and in 1468, a grant of the office of coroner of Nithsdale. The two offices of sheriff and coroner, between the Restoration and the Revolution, passed into the possession of the Douglases of Drumlanrig. This family—whose eventual identification with the Scotts of Buccleuch, has placed under the shadow of the united ducal coronets of Buccleuch and

Queensferry such magnificent portions of Nithsdale, Eskdale, Teviotdale, Ettrick-forest, and other districts in the border counties—continued to hold the offices till the abolition of all hereditary jurisdictions. In 1620, Robert, eighth Lord Maxwell, was created Earl of Nithsdale. William, the fifth Earl, took part with the Pretender in 1715, and was attainted, and condemned to be beheaded; but, through the address and courage of his Countess, the Lady Winifred Herbert, a daughter of the Marquis of Powys, he made an extraordinary escape from the Tower. The earldom is claimed by William Maxwell, Esq. of Carruchan.

NITSHILL, a village on the south-east border of the parish of Abbey-Paisley, Renfrewshire. It stands in the vale of the Levern, 4 miles south-east of Paisley; and has a station on the Glasgow and Neilston railway. A copperas work was established here in 1807, and is still carried on. Extensive mining works, in coal and other minerals, are in operation in the neighbourhood. Most of the inhabitants of the village are employed in these works; and a few find occupation in the factories of Barrhead. Population, 821.

NOBLEHOUSE, a post-office station in the parish of Newlands, Peebles-shire. It is situated on the road from Edinburgh to Dumfries, 3 miles east of Linton, and 18 south of Edinburgh.

NOCHTY (The), a rivulet, of 7 miles length of course, in the parish of Strathdon, Aberdeenshire. It rises close on the boundary with Banffshire, and runs south-eastward to the Don.

NODDESDALE, or Noddle (The). See Largs.

NOE (The). See Glennoe.

NOIR (Loch), a lake, abounding in excellent trout, in the parish of Dallas, Morayshire. It is also called Grassloch.

NOOP-BAY, a bay on the north side of the island of Westray, in Orkney. It lies fully exposed to the fury of the Atlantic; and a reef of rocks, called the Bow of Rackwick, extends quite across it, and has proved fatal to many a vessel. The west side of the bay is flanked by a bold beetling headland, called Noop-head or the stack of Noop.

NOUP. See Noss.

NORAN (The), a clear, rapid, and beautiful stream in the northern division of Forfarshire. It rises between Common Cotes and Mount Sned, on the boundary between Tannadice and Lethnot; flows 4¾ miles southward and 1 mile south-eastward, in the interior of the former parish; and then runs 3¾ miles south-eastward and ¾ mile south-south-eastward, between Tannadice on its right bank and Fearn and Caraldston on its left, to a confluence with the South Esk, between Roughmount and Wardend. The Noran is an excellent trouting stream. An elegant modern mansion, called Noranside, stands on its banks.

NORMAN'S-LAW. See Abdie.

NORRIESLAW. See Largo.

NORRIESTON, a village nearly in the centre of the detached part of the parish of Kincardine, in Perthshire. It stands continuously with the post-office village of Thornhill, on the summit of a rising ground, along the road from Stirling to Aberfoil, 2 miles north of the Forth, 6 south-south-east of Callendar, and 10 west-north-west of Stirling. A chapel-of-ease here was rebuilt in 1812, and repaired in 1833, and contains 870 sittings. The site of the chapel and a burying-ground connected with it, were granted nearly 200 years ago, by Gabriel Norris, a descendant of the ancient family of the Norrieses of Norrieston; and an endowment for the chapel, called the Norrieston fund, was obtained by collections in the congregations of the seven northern synods, consists of the rents of two farms in which the proceeds were invested, and is under the management of the presbytery of Dunblane, acting in name of the General Assembly. The minister receives from the endowment a variable stipend of from £80 to £95 a-year, and has also a manse, a garden, and a glebe of 6 acres. The patronage of the chapel is vested in three of its communicants who are male heads of families. There is likewise at Norrieston a Free church, whose receipts in 1856 amounted to £181 8s. 9d. Population, exclusive of Thornhill, 105; inclusive of Thornhill, 636.

NORTH ABERDEEN. See Aberdeen.

NORTHBAR, a recently erected village in the parish of Beith, Ayrshire. It stands 2 miles south-east of the town of Beith, on the road thence to Kilmarnock. A flax spinning-mill was erected here about 18 years ago, which employs upwards of 80 persons.

NORTHBAR, Renfrewshire. See Inchinnan.

NORTH BERWICK. See Berwick (North).

NORTH BRITISH RAILWAY, a ramified system of railway, connecting Edinburgh with the south-east coast of Scotland, with Berwick-upon-Tweed, and with various parts of the Scottish border. Its main line was authorized by act of parliament in July 1844, to extend from Edinburgh to Berwick-upon-Tweed, with a length of 58 miles, to go into junction there with the York, Newcastle, and Berwick railway, and to send off, in East Lothian, a branch of 4 miles to the town of Haddington. In 1845, the company obtained powers to purchase the Edinburgh and Dalkeith railway, to alter it, and to connect as much of it as they should determine to be workable, by a branch of two miles, with their main line. In the same year, they purchased the powers of the Edinburgh and Hawick railway, then authorized to the extent of 43½ miles. In 1846, they obtained powers to construct from their main line, branches to Tranent, Cockenzie, North Berwick, and Dunse; and from their Hawick line, branches to Selkirk, Kelso, and Jedburgh, amounting altogether to 42 miles. In 1847, they had further power to make a deviation and short extension; and then they possessed authority for a total of about 163 miles. The main line was opened on the 18th of June, 1846. The several ramifications, together with a branch to Musselburgh, have been opened at different subsequent periods; and a separate line to Peebles, authorized in 1853, going off from the Eskbank station of the Hawick fork, with a length of 18¾ miles thence to the town of Peebles, was opened in the end of June, 1855.

The Edinburgh terminus of the North British railway is conjoint with that of the Edinburgh and Glasgow railway, at the Waverley bridge; but has appurtenances of its own, extending thence eastward below the North bridge to Leith wynd. Immediately after leaving the terminus, the line plunges into a tunnel of 420 feet in length, through the southern spur of the Calton hill; and thence it proceeds on a series of viaduct and embankment to St. Margaret's, in the vicinity of Jock's lodge. Here it passes under the great east coast road from Edinburgh; and on the hither side of that road is the Queen's station, where Her Majesty always alights on her way to Holyrood, while on the further side are the railway's workshops and engine depôt. The line curves gently from St. Margaret's to Portobello, its first station from Edinburgh, distant 3 miles. A little past this, it sends off the Hawick fork; and at 6½ miles from Edinburgh it has a station for Inveresk, at 10 miles a station for Tranent and Prestonpans, at 13½ miles a station for

Longniddry; and here, on the right, it sends off its branch to the town of Haddington. At 4 miles from Longniddry, and 17½ from Edinburgh, it has a station for Drem, and sends off its branch, on the left, to North Berwick. At 21 miles is a station for East Fortune; and at 23½ a station for East Linton. The latter is a central station for a considerable tract of country; and the approach to it on the railway commands a fine view of Tynningham-bay, with the magnificent plantations around the seat of the Earl of Haddington. Over the Tyne, at Linton, is a grand viaduct of two arches, protected by embankments, one of the finest works on the line. About 2½ miles beyond Linton, the railway impinges on the sea-board of Tynningham-bay; and thence till after it passes the station at Cockburnspath in Berwickshire, it everywhere keeps near the coast, and commands many a beautiful combination of marine and terrene scenery. At 29 miles from Edinburgh is the station of Dunbar, with character and appliances suitable to that ancient seaport,—suitable also to its being very nearly a half-way station between Edinburgh and Berwick.

At 34 miles from Edinburgh is the station of Innerwick; and at the deep ravine of Dunglass, on the boundary between Haddingtonshire and Berwickshire, amid a profusion of romantic scenery, is a magnificent viaduct, one of the most elegant in the kingdom, fully noticed in our article on Dunglass. At 37 miles from Edinburgh is the station of Cockburnspath; at 41½ miles, the station of Grants' house; and at 46½ miles, the station of Reston. Over most of the distance between the two latter stations the line is continually crossing and re-crossing the little river Eye, or running along its banks amidst copsewoods and bosky heights, in so sportive a manner as to afford a rapid series of pleasant close views. At Reston, the railway is nearly 7 miles inland from St. Abb's-head, and sends off, on the right, its branch to Dunse, with stations at Chirnside and Edrom. About 2½ miles past Reston, it curves rapidly from the south-easterly direction which it had long prevailingly followed to a north-easterly direction; and it follows the latter till it again impinges on the coast in the vicinity of Burnmouth. At 50½ miles from Edinburgh is the station of Ayton; and at 52 miles, the station of Burnmouth. The line thence, over the greater part of the next 6 miles to Berwick, runs along the crown, and often near the verge, of giddy sea-cliffs, looking almost directly down upon the boiling ocean, and commanding views which, to many persons, are more exciting than agreeable. At 58 miles from Edinburgh is the Berwick terminus, on a high site, amidst the massive remains of Berwick castle, hung round, in both fore-view and perspective, with a gorgeous prospect of the basin and screens of the Lower Tweed. And we may remark here, though the fact has but little direct connexion with Scottish topography, that, from the English end of the viaduct of the York, Newcastle, and Berwick railway across the Tweed, a railway, called the English North-eastern railway, runs up the right bank of the Tweed, into junction with the Kelso branch of the Hawick fork of the North British railway at Maxwell-heugh, opposite the town of Kelso, thus connecting the two great divergent lines of the North British railway in such a manner as to form with them a continuous circuit.

The Hawick fork, as originally projected and authorized, was a separate railway, with all the scope requisite to form a system in itself; and even as it now exists, it has such brief identity with the main trunk of the North British railway as to be practically a part of that railway's system only, or at least chiefly, in mere proprietorship and working. It diverges from the right side of the main line, a little south-east of the Portobello station, or about 3½ miles from the Edinburgh terminus. It has a station for Joppa at 4 miles, and for Niddry at 5 miles; and sends off from its left side, at the latter station, its branch to Fisherrow and Musselburgh. At 6 miles is the station of Glenesk; and at 8 miles, the station of Eskbank. A little before reaching the latter station, a brief branch goes off on the left to the town of Dalkeith; but Eskbank serves also for Dalkeith, and is likewise the point whence the separate railway goes off on the right to Peebles, with stations at Bonnyrigg, Hawthornden, Roslin, Penicuick, Leadburn, and Eddleston. The scenery, for several miles southward from Glenesk, comprises a gorgeous succession of noble parks, with glades and woodlands in much variety of contour, diversified with sweeps of the Esks, and grotesquely marked with the workings and products of extensive coal-mines. At 9 miles from Edinburgh is the station of Dalhousie; and immediately beyond this, the railway goes right across the valley of the South Esk, on a viaduct of nearly ½ of a mile in length, comprising 24 arches of brick, supported on arch-pierced abutments of masonry, and rising about 100 feet above the bed of the stream. The ends of this stupendous viaduct are prolonged by high embankments, which are secured by retaining walls of vast thickness.

At 12 miles from Edinburgh is the station of Gorebridge; at 13 miles, the station of Fushiebridge; and at 16 miles, the station of Tynehead. From 1½ mile below Gorebridge to about the same distance below Fushiebridge, the line curves up the course of the Gore-water; and there it comes into view of Borthwick-castle in the near neighbourhood on the right, of Crichton-castle in the near neighbourhood on the left, and of a picturesque semicircular sweep of the Moorfoot and Lammermoor hills in the comparatively near back-ground. At Tynehead, as the name implies, it is near the sources of the Tyne; and about a mile thence it is on the course of a headstream of Gala-water; and thence, all onward to the Tweed, it closely follows the course of the Gala, necessarily shut into it by the close, hill-screened character of its vale; but it very frequently crosses the stream, being now on the right bank and now on the left, obliged often to cross and to re-cross, both by the foldings of the river and by the abutments of the hills. At 19¼ miles from Edinburgh is the station of Heriot; at 22¾, the station of Fountainhall; at 27, the station of Stow; at 30, the station of Bowland-bridge; and at 33½, the station of Galashiels. A little above the mouth of the Gala, below Galashiels, the branch to Selkirk goes off on the right, across the Gala, and up the Tweed and the Ettrick, with stations at Bolside and Lindean. The main line crosses the Tweed immediately below the mouth of the Gala, passes on to Melrose station, at 37¼ miles from Edinburgh, and sweeps round the north and east base of the Eildon-hills to Newton station, at 40½ miles from Edinburgh; commanding, from the foot of the Gala to Newton, and about a mile onward, a series of charming views in those exquisite parts of the valley of the Tweed which have been called the vales of Melrose and Dryburgh.

The branch to Kelso, 12 miles in length, goes off on the left immediately beyond Newton; passes down the right bank of the Tweed, amid a continuation of fine scenery, and generally at but a brief distance from the river; has stations at Maxton, Rutherford, and Roxburgh; crosses the Teviot, a considerable way up from the Tweed, on a viaduct

of 15 arches; and goes into junction, in a continuous line, with the English North-eastern railway, at the Kelso suburb of Maxwellheugh. The Jedburgh branch, or rather sub-branch, goes off from the Kelso branch at the Roxburgh station; ascends the left bank of the Teviot to the vicinity of Nisbet, and there crosses to the right bank, thereafter to go up the Jed; and it has stations at Old Ormiston, Nisbet, and Jedfoot-bridge. The main line of the Hawick fork, having assumed a southerly direction in going round the north-east base of the Eildons, continues to pursue that direction for about 3 miles, and then takes a direction to the south-west. It passes through a fine country, much diversified in contour, variously arable, wooded, and pastoral; it goes close to the base of the Minto-hills, and down part of the beautiful ravine of Hassendean; has stations at New Belses and Hassendean, respectively 45½ and 49 miles from Edinburgh; and then passes up the left bank of the Teviot, amid the rich, romantic, though somewhat close scenery of this part of Teviotdale, to the terminus at Hawick. Trains are run, not only from Edinburgh down all the branches, but also to Kelso in continuation through the English North-eastern to Berwick, and between Hawick and Kelso without halt by way of Newton.

NORTHMAVEN, a parish in Shetland. It contains the post-office village of Hillswick, and comprehends the northern part of Mainland, and a number of adjacent islets. It is completely surrounded by the sea, except at an isthmus of only 100 yards on the south, connecting it with Delting; and even this is nearly all submerged at spring tides. The length of the parish southward is 16 miles; and its greatest breadth is 8 miles. Its outline is proximately triangular, but has many irregularities. Its surface is broken, hilly, and generally rough. The cultivated lands bear a small proportion to the hill and pasture-grounds, and are mere scattered pendicles situated near the shore and round the bays. On each side of the isthmus, at the south end of the parish, the hills rise almost perpendicularly. Seven miles from the northern extremity rises Rona-hill, or Mons-Ronaldi, the highest ground not only in this parish but in all Shetland, stated in the Old Statistical Account to be 3,944 feet of ascertained altitude, but estimated by Dr. Edmonstone at certainly not more, though possibly less, than 2,000 feet. This hill is generally the first Scottish land seen by ships approaching from the north-west; and it commands a prospect of all Shetland. On its summit is a rude antique structure surmounted by a pyramidal tower of small stones. Islets, holms, stacks, and solitary rocky pillars, form an almost continuous cordon round the parish, and, at all times, but especially in a storm, render its coast grandly picturesque. The chief of them, for size and pasture, are Lamba, Eagleshay, Nibon, and Gunister. Among the most remarkable are a rock which rises sheer up on all sides, and, at a few miles distance, has the appearance of a ship with all her sails set; two very high and quite inaccessible pillars in its vicinity, on which the larger kind of cormorants nestle in alternate years; and a rock, called the Maiden Skerry, whose summit has never been trodden by man, and affords undisturbed nestling-ground to the largest gulls. Other islets and objects still more remarkable will be noticed in the article Shetland. The west coast of the parish consists, in several places, of stupendously high crags, which seem to have been rather rent and abraded by storm and billow than torn by volcano or upheaved by earthquake. The northern extremity is a small peninsula, called Fetheland, and enclosed by a stone fence. The principal voes which indent the coast are Hillswick and Sandwick, on the south; Hamna, Rona's, and Sand, on the west; and Burra, Colafirth, Quoyafirth, Gluss, and Sulem, on the east. The antiquities are, a chain of watch-houses, similar in structure to that on Rona's hill, and many remains of burrows, or dunes, commonly called Picts' houses, but none of them entire or of remarkable magnitude. The principal landowner is Gifford of Busta; and there are four other landowners. More attention is paid to fishing than to agriculture. The estimated yearly value of raw produce in 1841 was £3,560 for fish and £4,870 for all other kinds of produce. Assessed property in 1843, £256 5s. 8d. Population in 1831, 2,386; in 1851, 2,534. Houses, 413.

This parish is in the presbytery of Olnafirth, and synod of Shetland. Patron, the Earl of Zetland. Stipend, £158 6s. 7d.; glebe, £15. Schoolmaster's salary, £25 3s. 4d., with about £4 fees. The parish church is situated at Hillswick, in the south-west; it was built in 1733, repaired in 1764, and reseated in 1825, and it contains about 600 sittings. There is an Independent chapel at Sulem, built in 1828, and containing 160 sittings. There is a Wesleyan Methodist chapel at North Rae, built in 1828, and containing 208 sittings. There are in the parish a society's school, and three summer subscription schools. There were anciently churches at Ollaberry and North Rae. Three annual fairs are held in the parish for cattle and horses.

NORTH MEDWIN. See Medwin (The).

NORTH MORAR. See Morar.

NORTHMUIR, a village in the parish of Kirriemuir, Forfarshire. Population, 297. Houses, 65.

NORTH OF SCOTLAND RAILWAY (Great), a ramified system of railway, extending north-westward from the city of Aberdeen. The original project for it was authorized by parliament in 1846. It contemplated a line from Aberdeen to Inverness, with branches to Banff, Portsoy, and Burgh-head, having an aggregate length of 138¼ miles. This line was to have formed one undertaking with the line, afterwards called the Aberdeen railway, extending south-westward from Aberdeen to the centre of Forfarshire. There were likewise subordinate projects for extensions and ramifications, to produce a network of railway through all the lowland tracts, and even some highland ones, between the Dee and the Findhorn. But the line south-westward from Aberdeen, forming the connexion with all the main body of Scotland and with England, was soon forced to be formed as a separate undertaking. Even the contemplated levels for connecting this with the line north-westward of Aberdeen, were abandoned.

As much of the project as related to any part of the line northward of Huntly or Keith, was also relinquished. The whole question of a system of railway communication for the districts north of Aberdeen, or at least as much of that question as related to the greater portion of the sea-board districts, was thrown loose for reconsideration. The small isolated railway from Elgin to Lossiemouth, which had been comprised within the scope of the original project of the Great North of Scotland railway, and which was the first piece of railway formed anywhere north of Aberdeen, and opened for traffic in August 1852, was constructed as a separate undertaking. The railway from Nairn to Inverness, which ought to have formed a part of the original project, and was opened in November 1855, was likewise a separate undertaking. The only portions of railway hitherto actually executed in direct result of the project of the Great North of Scotland scheme, or bearing the name of the Great North of Scotland railway, are a line from Aberdeen to Huntly, commenced in November 1852, and completed in 1854; a branch thence from Inverury to Old Meldrum, opened in the summer of 1856; and a continuation from Huntly to Keith, opened in October 1856. But other branches, and also a grand continuation to Nairn, are either in progress or in near contemplation; and though the system when completed will differ both in proprietorship and in details from the system as originally projected, it will be none the less an effective one, at once for opening up the country in general, for connecting Aberdeen continuously with Inverness, and for establishing railway communication with all the principal intervening points on the coast. Measures likewise have been reconsidered for forming a nexus at Aberdeen with what is now called the Scottish North-eastern railway, comprising the Aberdeen railway and its connexions onward to Arbroath and Perth.

The Great North of Scotland railway, as executed, commences at the Waterloo-quay in Aberdeen, and proceeds by Kittybrewster and up the course of the quondam Aberdeen canal to Inverury. The canal was purchased to be superseded by the railway; and it continued open only till the railway works were ready to take its place. See ABERDEEN CANAL. The stations on the railway within this stretch are Kittybrewster, at 1¾ mile from Waterloo-quay, Buxburn at 4½ miles, Dyce at 7½ miles, Kinaldie at 10¾ miles, Kintore at 13½ miles, and Inverury at 16½ miles. A contest is at present going on between two projects for railway communication from Aberdeen to Peterhead and Fraserburgh, the one contemplating a line close to the coast, the other a line somewhat inland, to communicate by branch with Peterhead; and if the latter project should prevail, the line contemplated by it will be identical with the Great North of Scotland up to the parish of Newhills, at a point about midway between Aberdeen and Kintore. A branch, to be called the Alford Valley railway, is at present in course of formation westward from Kintore, through the parishes of Kintore, Kenmay, Monymusk, Tough, and Alford, to the village of Alford on the Don. A branch, as already noticed, has been formed from Inverury to Old Meldrum. The main line of the Great North of Scotland, after leaving Inverury, proceeds some distance north-westward up the Ury, then deflects westward through the vales and defiles of a hill-country in quest of the upper part of Strathbogie, and then proceeds northward down that strath to Huntly. Its stations, within this stretch, are Pitcaple, at 21½ miles from Aberdeen, Oyne at 24¾ miles, Buchanstone at 25¾ miles, Insch at 27¾ miles, Wardhouse at 31½ miles, Kennethmont at 33 miles, Gartly at 36 miles, and Huntly at 41 miles. The extension from Huntly to Keith describes nearly the arc of a circle, from a northerly direction round to a westerly one, down the Deveron and up the Isla. It has stations at Rothiemay and Grange; and at these stations, or between them, are the nearest and most convenient points for communications with Banff, Portsoy, and Cullen.

The project for connecting the Great North of Scotland railway at Keith with the Inverness and Nairn railway at Nairn, is in a state of forwardness. A formal report upon it from the parliamentary committee was made in June 1856, fully approving its object, and expressing satisfaction with all its main details. The line is to be called the Inverness and Aberdeen junction railway. It is to be about 40 miles long, and will have no branch. There will be no peculiar engineering difficulty. There will be only one tunnel, and that of inconsiderable length. The gradients and the curves will be generally favourable, the steepest gradient 1 in 60, and the smallest radius of a curve 4 furlongs. The viaduct across the Spey will be a tubular bridge, on a similar principle to that of the Britannia-bridge across the Menai strait, and forming a sort of miniature of that magnificent work. The total estimated cost is £325,000, which appeared to the parliamentary committee to be fully adequate. Most of the money was already subscribed for in the summer of 1856; and the company of the Great North of Scotland railway were to be interested to the amount of £40,000.

NORTHWALL, a district, anciently a chapelry or a parish, on the east side of the island of Sanday, in Orkney.

NORTH WATER, one of the head-streams of the South Esk of Edinburghshire. It issues from West-loch in the parish of Eddlestone, in Peebles-shire, and runs northward through that parish, and along the north-western boundary of the parish of Temple, in Edinburghshire, to a confluence with the other head-stream of the South Esk.

NORTH WATER, the river North Esk in Forfarshire and Kincardineshire. See ESK (THE NORTH).

NORTH-WATER-BRIDGE, a post-office station on the North-water, and under Laurencekirk, Kincardineshire.

NORTHWEST-CASTLE. See INCH, Wigtonshire.

NORTH YELL. See YELL (NORTH).

NORWICK. See UNST.

NOSS, an island in the parish of Bressay, Shetland, about 5 or 6 miles in circumference, lying east of Bressay, and separated from it by a narrow and dangerous sound. The island is reckoned one of the most fertile and pleasant in Shetland. A promontory on its east side is called Noss-head. But the most interesting object connected with it, and one of the greatest curiosities in Shetland, is a holm or islet on its south side, called the Holm of Noss. This islet, only 500 feet long, 170 broad, and 160 high, is perfectly mural, rises sheer up to its greatest altitude on all sides from the sea, and possesses

a level and richly-swarded surface. The opposite rock on Noss island is also mural, and of the same height as the Holm; and is separated from it by a channel 240 feet wide. A wooden trough or cradle suspended to ropes and made to acquire a sliding motion, and possessing sufficient capacity for conveying a man with one sheep at a time, serves to keep the Holm in command as a valuable piece of sheep pasture. A rock called the Noup towers up like a stupendous tower in the vicinity of the Noss, and attains, on one side, a precipitous and almost perpendicular height above sea-level of not much less than 500 feet. Population of Noss-island in 1841, 24; in 1851, 21. Houses, 3.

NOSS-HEAD, a bold rocky promontory on the south side of Keiss or Sinclair's bay, 3½ miles north-east of Wick, Caithness-shire. A little west of it stand the ruins of Castle-Girnigoe, the chief ancient baronial stronghold of the Earls of Caithness. From a cove or small bay, called Mursligoe, and frequented by seals, a dry passage leads through a rock into a vast cave under Noss-head. A lighthouse stands on Noss-head, with its lantern elevated 175 feet above the level of the sea. Its light was first exhibited on the night of the 18th of June, 1849; it is a revolving light, attaining its brightest state once in every half-minute; and it is visible at a distance of about 15 miles. The lighthouse is in north latitude 58° 28′ 38″, and in west longitude 3° 3′ 5″; and it bears by compass from Ackergill-tower in Sinclair's bay, east by south ¾ south, distant 2 miles; from Duncansby-head, south-south-west ¾ west, distant 10 miles; from Pentland skerries lighthouse, south-west by south ⅞ west, distant 13 miles; from Elzieness, north-north-east ½ east, distant 1½ mile; and from Sarclet-head, north-east ¼ north, distant 6¾ miles.

NOTH, a hill in the parish of Rhynie and Essie, Aberdeenshire. It is of a conical form, and rises about 600 feet from its base, and at least 1,000 above the level of the sea. Some appearances on its summit have been variously regarded as the remains of a vitrified fort, or the indications of an extinct volcano.

O

OA, a quoad sacra parish in the island of Islay, Argyleshire. It lies within the quoad civilia parish of Kildalton, and comprehends a large part of the south-eastern peninsula of Islay. Its post-town is Bowmore. A prominent feature of it is the Mull of Oa, a grand, lofty, beetling headland, flanking the south side of Laggan-bay, and overlooking the east side of the entrance of Lochindaal. Its other principal features have all been incidentally noticed in our article on Islay. The old castle or fort of Dun-Aidh crowns the rock at the extremity of the Mull of Oa; and, though now an utter ruin without any characters of architectural interest, it bears marks of having anciently been a fortalice of very remarkable strength. The name Oa or Keannoath, though belonging strictly to the Mull, belongs also, in a general way, to the whole peninsula. The parish of Oa was at first what is called a parliamentary one, having been constituted by ecclesiastical authority, and possessing a parliamentary church; but it was reconstituted by the Court of Teinds in May 1849. Its church is a modern building. Patron, the Crown. Stipend, £120; glebe, £3.

OAKFIELD, a village in the parish of Beath, Fifeshire. Population, 112. Houses, 20.

OAKLEY, a post-town and seat of iron manufacture, in the parish of Carnock, Fifeshire. It is situated on the western verge of the parish and the county, 4 miles west of Dunfermline; and it has a station on the Stirling and Dunfermline railway. It was built only a few years ago, on a tract of ground previously quite rural, and entirely for the purpose of manufacturing iron. The ironstone is found on the spot, and in the circumjacent territory, within the parishes of Carnock and Culross; but the coals and the limestone, for the reduction of the iron ore, are brought from some distance by railway. The engine-house is a grand structure, built of a very beautiful sandstone, with ornamented arched windows about 30 feet high, and with walls so deeply founded and so massive as to comprise 60,000 cubic feet of stones below the surface of the ground. The furnaces are six in number, built of large, fine firebrick, and having stalks each about 180 feet in height. The dwelling-houses are substantial, one-story, stone buildings, on an uniform plan, covered with blue slate, and disposed in rows, with intervening spaces more than double the breadth of the streets of the new town of Edinburgh. Population, about 1,680. See Forth Iron-Works and Carnock.

OAKWOOD-TOWER. See Selkirk.

OAR (The). See Orr (The).

OATHLAW, a parish, containing the post-office hamlet of Finhaven, in the centre of Forfarshire. It is bounded by Tannadice, Aberlemno, Rescobie, and Kirriemuir. Its length eastward is 6 miles; and its greatest breadth is 3 miles. Its ancient name, and the name still in use of several of its chief locali-

ties, is FINHAVEN: which see. From the summit of the hill of Finhaven, which forms a ridge along the southern boundary, the surface slopes gently into Strathmore, and stretches out toward the other boundaries in a plain. The river South Esk is connected with most of the northern district, partly on the boundary, partly beyond the boundary, and partly through the interior, flowing between very low banks, generally shallow, and about 46 yards broad, but occasionally coming down in deep wide freshets. Lemno-burn runs north-eastward through the interior, to the South Esk. A bore of upwards of 150 feet in depth having been made in an unsuccessful search for coal, a very powerful spring of excellent water wells up from it, but, being situated in the midst of a corn-field, was covered over from view, and carried off in a drain. The predominant rocks are sandstone and conglomerate. The soil, for the most part, is of a clayey retentive character, incumbent on what is called a pan. Only a very few acres are in a state of waste; about 2,850 are in tillage; and about 900 are under wood. There are six principal landowners, but only one of them is resident. The estimated yearly value of raw produce in 1835 was £10,718; assessed property in 1843, £3,056; real rental in 1855, £3,670. On the north bank of the Lemno were formerly traces of a Roman camp, called the camp of Battledykes, more than double the extent of the celebrated one at Ardoch. It measured about 2,970 feet in length, 1,850 feet in breadth, and about 80 acres in area; and now forms a good and well-worked farm. The pretorium is the only part now visible; but some small urns and other minute antiquities, which were dug up within it, are preserved in the vicinity. A grand Roman iter connected it with the camp of Ardoch; and smaller iters connected it northward with camps at Wardykes and Haerfaulds, distant respectively 11 and 19 miles. Near Finhaven-castle grew a famous chestnut-tree, 42 feet in girth a foot from the ground, 33 feet in the smallest part of the trunk, and 35 feet at the offshoot of the branches. The parish is traversed by the road from Forfar to Brechin, but has not access to any railway stations nearer than Auldbar, Forfar, and Kirriemuir. Population in 1831, 533; in 1851, 424. Houses, 76.

This parish is in the presbytery of Forfar, and synod of Angus and Mearns. Patron, Carnegy of Finhaven. Stipend, £158 5s. 2d.; glebe, £18. Schoolmaster's salary, £34 4s. 4½d., with about £18 fees. The parish church was built in 1815, is a neat edifice with a tower, and contains upwards of 200 sittings. There is a parochial library. Some vestiges exist, a little below Finhaven-castle, of an ancient church, called the church of Aikenhauld, which seems to have been the church of the barony of Finhaven, and was probably that of the original parish.

OBAN, a post-town, a seaport, a market-town, and a parliamentary burgh, in the united parish of Kilmore and Kilbride, Argyleshire. It stands on the coast of Mid-Lorn, opposite the northern part of the island of Kerrera, at the grand ferry across the southern part of the Sound of Mull, 24 miles north of the west end of the Crinan canal, 25 south-east of Tobermory, 33 north-west by west of Inverary, 35 south-south-west of Fort-William, 92 north-west by north of Glasgow, and 136 west-north-west of Edinburgh. The site of the town is singularly happy, as to at once scenic interest, burghal comfort, and commercial influence. Its command of the Western islands, both in their finest groupings into landscape, and in nearly all their facilities for communicating with their principal marts has occasioned it to be called the Charing-cross of the Hebrides; and its position midway between the Caledonian and the Crinan canals, with its consequent power of pouring the productions of the north and the south over most of Argyleshire, has rendered it the virtual capital of the Western Highlands. It stands at the head of a small bay which recedes from the sound of Kerrera, and has a boldly indented coast, backed by moderate-sized hills. The southern entrance to the sound bends so far inward from the bay as to become lost to the view; the northern entrance, though all seen from the town, is shut up, at 5 miles' distance, by the island of Lismore; so that the portion of sea which lies under the eye appears quite landlocked, and has scenically all the attributes of a large, intricate, and romantic lake. The environing lands are sufficiently high to produce repose in the landscape, and afford protection from the violence of winds; yet not so high as to confine the vision to a limited range, or prevent the grand revelation in the distance of vast alpine heights, with the play around them of vivid cloud-scenery, and the war of storms. The cliffs on the north side of the bay are lofty and bold, and are finely embellished with trees and overspreading ivy; and, from their brow, they lift the eye athwart an expanse of island and coast scenery whose combined extent and magnificence are not excelled by any kindred view in Britain. In the interior, too, the whole foreground is pleasing; and is set off with superb effect by a background of no common character, "the blue broad-shouldered and double-peaked Ben-Cruachan swelling in the distance into gigantic proportions."

Oban is of comparatively recent origin, and has risen rapidly from a trivial commencement. Its nucleus, twenty-six years before Dr. Clark visited it, consisted of but a single thatched house with five inhabitants. In 1713 arose the first house which it possessed of any consequence, a storehouse erected by a trading company of Renfrew. The sagacity which gave it this accession soon became general, and very markedly appreciated the site of the town as the best station for commanding the trade of the far west of Scotland. During the progress of last century, the place was constituted one of the ports of the custom-house; and, when it began fully to demonstrate its advantageousness of position, it drew attention from the Duke of Argyle and Mr. Campbell of Combie, the proprietors of its grounds, and won from them a willingness to grant, to a considerable extent, encouraging building leases. Two brothers of the name of Stevenson, who settled in it in 1778, introduced to it different departments of traffic, and, while they enriched themselves, greatly aided its advancement, and promoted the prosperity of the country in its neighbourhood. The opening of the Crinan and Caledonian canals, the construction of parliamentary and statute-labour roads in the interior, the introduction and improvement of steam-navigation, the general and rapid amelioration of the Highlands, the sudden and vast expansion of traffic between the western coasts and the Clyde, and the origination of trade between the Highlands and very distant parts of the empire, have all kept the prosperity of the town in steady movement, and occasioned a periodical, though safely small, addition to the number of its houses.

The first view of the town, whether approached by land or by sea, is pleasant and picturesque. The front view of it from the bay, seen in connexion with its brilliant environs, is particularly striking. The street confronting the water curves in the form of a crescent, and presents a long series of neat buildings, chiefly of two stories, slated and white-

washed, and of very cheerful appearance. The main body of the town is cut into two parts by a small stream. In the eastern division stands a chapel of ease, a neat edifice, built in 1821, at the cost of £1,143. On the face of the rising ground behind the town stands conspicuously a Free church, of light, early Gothic architecture, with a low Norman tower and pointed spire, built within the last few years, after a design by Mr. Pugin. In the town also are an United Presbyterian church, built in 1838, an Independent chapel, built in 1820, and a Scottish Episcopalian chapel of recent erection. Nearly opposite the quay is a large, lofty edifice, occupied as the Caledonian hotel, commodious and well-conducted. There are also in the town some considerable inns of secondary pretension, particularly the King's Arms, the Royal, and the Commercial. There is likewise a free-masons' hall. The dwelling-houses, in general, are substantial and look aggregately cheerful; many of them also are disposed in whole or in part to be let to summer visitors; and yet they want some of the good properties which are common in the houses of many places of much less note. "Their ground-story being chiefly occupied with shops—some of them very good—a peculiar mode of access to the upper floor prevails, namely, by a passage right through the dwelling, and then up an outside back stone staircase. Thus, and from close contiguity, the back areas are disagreeably overlooked; and in one part of the town the exposure is heightened by the back-ground being to the water side. Many of the houses are disgracefully deficient in some of the arrangements essential to the decencies of life and preservation of health." Some houses of a better character, however, have recently been built at the north end of the town.

The harbour and anchoring-ground of the port are particularly good. There are two commodious quays; one of which was improved and enlarged in 1836. The bay is semicircular, has a depth of from 12 to 24 fathoms of water, is quite sheltered from every wind, and affords at all times a safe retreat to ships of any burden. Several vessels belong to the port. The imports are principally miscellaneous goods from Glasgow and Liverpool, and the exports chiefly pig-iron, whisky, wool, fish, kelp, and Easdale slates. The port is a central point for all the shipping which visits the north-western parts of Scotland, or passes through the Caledonian canal; and it has constant and animating communication by steam-vessels with Glasgow, Greenock, Islay, Morven, Tobermory, Fort-William, Inverness, Skye, and Stornoway; and in summer daily also with Iona, Staffa, and the circuit of Mull. It ranks at present, in its custom-house relations, only as a creek of the port of Greenock; and the amount of local dues levied at it in 1852 was £76. The chief manufactures of the town are the making of whisky in two distilleries, and the making of silk and straw hats. But the produce of the ordinary departments of artisanship is required not only for the town, but for an extensive district around it; and both the iron-works of Bunawe and the slate-quarries of Easdale are, in a subordinate sense, manufactures of Oban, or at least sensibly affect its prosperity. The town derives much support also from the presence of strangers in summer, either cursorily as tourists, or more prolongedly as sea-bathers; and sometimes, particularly in July and August, it so swarms with them as to be unable to afford them all accommodation. Yet, though most conveniently situated as a key-point for tourists, it is not at all well adapted as quarters for sea-bathers. The water, indeed, is all that could be desired, and the beach is pretty good, but the ground along-shore is so confined as to afford little privacy, and there are no bathing-machines. The charges for lodgings are high; and the supplies in the butcher, fish, and vegetable markets, are neither ample, regular, nor prime. The town has offices of the City of Glasgow bank and of the National bank, a national security savings' bank, twelve insurance agencies, an Establishment school, a Free church school, an United Presbyterian school, a ladies' school, a ladies' boarding-school, two ladies' charity female schools, a reading-room and circulating library, a local horticultural society, and a district agricultural society. It is likewise lighted with gas, but has not a sufficient supply of fresh water. It is entitled by charter to have a weekly market; and a sheep and wool market is held on the Wednesday in July, after Inverness,—cattle markets are held on the Monday and Tuesday before the last Wednesday of May, and on the Friday and Saturday before the last Wednesday of October,—and horse markets are held on the Monday and Tuesday before the first Thursday of March, and on the Monday and Tuesday before the first Thursday of November.

Oban was erected into a burgh of barony in 1811, under the great seal, in favour of the Duke of Argyle. But this charter was afterwards set aside by the Court of Session; and in 1820 another charter was granted in favour jointly of the Duke of Argyle and Mr. Campbell of Combie. The territory comprised within the burgh limits consists of the lands of Oban, the lands of Glenshellich, and the lands of Upper Glencrutten, Lower Glencrutten, and Little Glencrutten. The Duke of Argyle was superior of the whole, and proprietor of Oban and Glenshellich, and Mr. Campbell of Combie was proprietor of Glencrutten; and they let out the lands in portions under leases. In 1833, under the provisions of the Reform Act, the chief portion of the burghal territory, defined as "the space on the mainland included within a circle described with a radius of one-half mile from the point as a centre, where the street leading to the old Inverary road meets the street along the shore," was constituted a parliamentary burgh. Two provisions or incidents of both the charters constituting the burgh of barony were set aside by the act constituting the parliamentary burgh,—the first, that burgesses residing within that part of the territory which lies beyond the parliamentary boundaries; and the second, that all inhabitants having a right to a house and garden-ground by feu or lease, for 19 years, whatever the value, were entitled to elect the burgh-magistrates and councillors; and now only those can take part in the municipal elections who are qualified by local position, and by paying rent, or possessing subjects of £10, to vote for a member of parliament. The municipal and parliamentary constituencies are thus identical, and amounted, in 1840, to 64; in 1855, to 74. The town is governed by two bailies, a treasurer, a dean-of-guild, and four councillors; and it unites with Inverary, Campbelton, Irvine, and Ayr, in sending a member to parliament. The jurisdiction of the magistrates extends over not only the parliamentary burgh, but the whole territory of the burgh-of-barony; but it disposes of very few civil cases, and of no other criminal ones than those of petty delinquency. A burgh court is held on the first Monday of every month; a justice-of-peace court for small debts is held on the first Friday of every month; and a sheriff's court for small debts is held once in every three months. Population of the parliamentary burgh in 1841, 1,398; in 1851, 1,742. Houses, 156.

Population of the part of the burgh of barony not included in the parliamentary burgh, in 1841, 156; in 1851, 129. Houses, 31.

Some of the most remarkable of the numerous objects of high interest, antiquarian or topographical, either in the immediate neighbourhood of Oban, or at points most readily reached from it, will be found noticed in our articles Dunolly, Dunstaffnage, Beregonium, Kerrera, Lismore, Etive (Loch), Ben-Cruachan, Awe (Loch), Easdale, Iona, and Staffa.—Oban made a very brilliant display of loyalty on occasion of the royal progress to Ardverikie, and visit to Iona, in the autumn of 1847. In the afternoon of the royal squadron's arrival, the ships in the bay and all the salient points of land made grand demonstrations; and at night the town was brightly illuminated, all round its crescent front toward the bay, "presenting a flood of light that sparkled on the warm sea, with circles of coloured lamps arranged in tasteful forms and in words of loyal welcome, while high up, two magnificent bonfires lighted the remote distance, like planets of some other sphere." A project was at one time entertained, but afterwards laid aside, for a railway from Oban eastward to Tyndrum, with branches thence to the Great glen of Scotland and to the head of Loch Lomond; and a modification of this project has been recently revived, for a railway from Oban to Tyndrum, and thence by way of Killin, Glenogle, Lochearnhead, the west side of Loch Lubnaig, and the pass of Leny, to Callendar. The only engineering difficulties are some deep cuttings along Loch-Awe and in Glenogle.

OBBE, a stream, abounding with trout, in the south-east of Harris, in the Outer Hebrides.

OBNEY-HILL, or Craig-Obney, a short lofty hill-range, in the parish of Auchtergaven, Perthshire.

OCCLENESTER. See Deerness.

OCHIL, a word of Celtic origin, signifying 'lofty.' It is used in Scottish topography as the designation of one of the most conspicuous hill-ranges of the kingdom; and as a prefix in the names of several places characterized by steep eminences or abrupt banks.

OCHIL-HILLS, a range of high hills extending from the conjunction of the counties of Stirling, Perth, and Clackmannan, in the vicinity of the town of Stirling, about 2 miles from the left bank of the Forth, in an east north-east direction, to Parton-Craigs, on the right bank of the Tay, below the city of Perth. The range runs parallel to the Grampians or mountain-rampart of the Highlands; it forms the screen on the Lowland side of Strathallan and Lower Strathearn,—component parts in the large sense of Strathmore; and it lies across the head of the whole peninsula of Fife, magnificently defending it, and the low ground of Clackmannan, Culross, and Kinross, from the scourge of the storms, which come careeringly down the glens and gorges of the Grampians. Its length is about 24 miles, and its average breadth about 12. Its south-east side, especially toward the Forth, is steep, and, in some places, almost perpendicular; and its north-west side rises with a greater abruptness than belongs to most of the Scottish ranges. Its summits are highest at its south-west end, and might, especially there, as well as in other parts of the range, be termed mountainous, but for the vicinity of the Highland alps. Three of the summits overlooking the Forth are Bencleugh, in the parish of Tillicoultry, 2,430 feet above sea-level, and the loftiest of the range; Dunmyat, in the parish of Logie, 1,345 feet above sea-level, advancing a little from the contiguous range, breaking almost sheer down in stupendous rocky cliffs into the plain, and commanding a prospect over the basin of the Forth and its tributaries, which, for united gorgeousness and extent, is probably not surpassed by any in Britain; and the King's Seat, about 4 miles from Dollar, which attains an elevation of 2,000 feet above the valley of the Devon at Dollar, or 2,160 feet above the level of the sea.

The prospect from the King's seat, while very extensive and brilliant in itself, reveals fully the relative position of the Ochils. An intelligent observer has described it as follows:—"I had now under my eye a circular space of 100 miles in diameter, comprising nearly one-third of the surface of Scotland, and probably two-thirds of its wealth. On the north were the rugged Grampians, rising in ridge behind ridge. In the outer line—which is low and uniform—the pass of Killiecrankie is distinctly seen as a great natural chasm. Below is the well-wooded plain of Perthshire, a part of which is concealed by the spurs or branches of the hills on which you stand. On the west the higher parts of the chain of the Ochils confine the view; but you easily distinguish the summits of Benmore, Benledi, Benlomond, and various hills near the Atlantic. On the south the eye roams over a vast and fertile region, extending from Campsie-hills to the Lammermoor chain, including Edinburgh, Arthur's-seat, the Bass, the Pentland-hills, and part of Stirlingshire. The Devon is seen immediately below, winding through the valley like a silver thread. Beyond it is the frith of Forth, clear, luminous, and tranquil like a mirror, and enshrined in the centre of a richly cultivated country. The windings in its upper part, with the islets, capes, and peninsulas which they form, are seen to more advantage here than from Stirling-castle. The small hills between the Ochils and Kincardine do not present the slightest inequality of surface, but seem sunk and confounded with the valley of the Devon; while the fields, that cover the whole space with their hedgerows and stripes of planting, look like the diminutive plots of a nursery. On the south-east is seen Kinross, with Loch-Leven and its two islets, and beyond these the black mural front of the Lomonds, variegated with streaks of red. On the other side of the frith is seen the undulating and well-wooded district of West Lothian, and the fertile carse of Falkirk, in the middle of which an opaque cloud marks the site of Carron. The lower part of the frith is specked with little vessels, and perhaps right before you is a steam-boat, which, when seen upon a pretty large surface of water, with its long train of smoke, forms, in my humble opinion, a picturesque object in the landscape, in spite of all the poets have said in its disparagement."

The Ochils everywhere, within their own limits, present rich groupings of scenery, and pleasing pictures of rural life; swelling hills, verdant to their tops, and thickly dotted with sheep and cattle; rivulets rushing along the gorges and the vales, or falling in hoarse murmurs from precipitous cliffs; and villages, hamlets, and farm-houses, skirted or enclosed with wood. The individual hills are generally long, round-backed, and either covered with verdure or under cultivation up to their summits; and, with some remarkable exceptions, their chief acclivities are rapid, and face the north. Defiles, glens, and valleys everywhere dissever the range into small masses and single hills, and are generally of so rich a character in soil and culture as to blend brilliantly with the landscape of the acclivities. Offshoots of the range, but so low that they rarely lift a summit more than 500 feet high, run down the whole peninsula of Fife, and, along with the beauti-

ful Lomond-hills, and some less considerable isolated hills, impart to it that undulated contour which so pleasingly characterizes its appearance. These offshoots and the main range may be viewed as enclosing the outer edge or north-east extremity of the great coal-field of Scotland, which extends, though not without marked interruptions, from the river Girvan in Ayrshire to the banks of the Eden in Fife. The main range is unusually rich in its minerals; and, besides yielding up round its base large supplies of coal and of stratification superincumbent on the coal-measures, has furnished from its interior large quantities of various valuable metals. "In those parts of it which lie in the parishes of Alva, Logie, Dollar, and Tillicoultry, veins of copper and lead have been wrought to a considerable extent: the copper-ore in particular is very rich, and generally found enclosed in a matrix of sulphate of barytes or cawk. About the year 1715, Sir John Erskine of Alva, with the assistance of some miners from Lead-hills, discovered a very rich vein of silver: it made its appearance in small threads, which, being followed, led to a rich mass of ore; some of it was so rich, that 14 ounces of ore yielded 12 ounces of silver. A sum not greater than £50 sterling had been expended on it when this discovery was made; and during the space of 13 or 14 weeks, ore was produced to the value of £4,000 per week; and it is said that Sir John drew from £40,000 to £50,000 besides what was purloined by the workmen. When this mass was exhausted, the silver-ore began to disappear, and lead and other minerals were discovered, on which all farther search was given up. Cobalt has likewise been found in different parts, equal to that imported from Saxony." Arsenic and iron have also been found; and the latter is extensively worked.

OCHILTREE, a parish, containing a post-office village of its own name, nearly in the centre of Kyle and of Ayrshire. It is bounded by Stair, Auchinleck, Old Cumnock, New Cumnock, Dalmellington, and Coylton. Its length northward is 8 miles; its greatest breadth is 5 miles; and its area is a little upwards of 24 square miles. The surface consists of ridges partly pastoral and partly arable, and of intervening dingles of moss, meadow, and arable land. The ridges generally run from east to west, are of various lengths, and toward the south have an altitude of about 1,000 feet. A thriving plantation of no great breadth, stretches nearly across the parish parallel with the Ayr road; and this, with the plantations of Barskimming, Auchinleck, and Dumfries-house, in the adjacent parishes, relieves the landscape from coldness of aspect. Moss of various depths covers a considerable area, both in the uplands and in the low grounds, and frequently expands into flow moss or wet bog. The lands in tillage comprise fully two-thirds of the whole parish. The soil, for the most part, is a clayey loam, incumbent on stiff, retentive clay. Coal and ironstone exist, but are not worked. Sandstone abounds, but no limestone has been discovered. Coal and lime, however, are within near reach by importation. There are two lochlets,—one covering about 27 acres, the other less. The Lugar—running north-westward, and not far from its confluence with the Ayr—traces, for about 2 miles, the north-eastern boundary. Burnock-water rises in the southern extremity, and runs northward to the Lugar at the village. The Coyl, running in the same direction, touches the boundary in some points in the west. The two principal landowners are the Marquis of Bute, and Sir James Boswell, Bart.; and there are fourteen others. The rent of the arable land ranges from 25s. to 50s. per acre, and averages about 33s. The estimated value of raw produce in 1837 was £21,898. Assessed property in 1857, £11,041.

The ancient barony of Ochiltree belonged from the 14th century, or earlier, till the 16th century, to the family of Colville, several of whom figure in history as knights. In 1530, it was exchanged by Sir James Colville with Sir James Hamilton of Finnart, for the barony of East Wemyss in Fife; and, in 1534, it was exchanged by its new possessor with Andrew Stewart, Lord Avondale, for the barony of Avondale in Lanarkshire. In consequence of the latter exchange, Stewart was, in 1542-3, created Lord Stewart of Ochiltree, instead of Lord Stewart of Avondale. But the peerage of Ochiltree became dormant in 1675; and the barony passed through many hands, went into the possession of the first Earl of Dundonald, was granted by him to his second son, Sir John Cochrane, was forfeited by Sir John in 1685, but re-acquired by his son from the crown in 1686, was purchased from the Cochrane family about 1737 by Governor M'Rae, who left it to Miss Macquire, afterwards Countess of Glencairn, and was re-sold about 1817 in lots to different proprietors. The old castle of Ochiltree stood on the side of the Lugar, on the brow of a high rocky bank, whence arose the name Ochiltree, signifying "the lofty dwelling-place;" but nothing of the castle now remains, the whole having been carried away piecemeal for building houses and dykes on the adjoining farms. Another old barony in the parish bears the name of Traboch, signifying "the dwelling place of the tribe," and is now the property of Sir James Boswell. A farm on this estate, called Hoodstone, has been tenanted from about the middle of the 13th century by a family of the name of Hood, who are said to be descendants of the famous English outlaw, Robin Hood. There are at Auchencloich, in the upland district, the ruins of an old castle, which is unstoried by either document or tradition. An ancient camp occupied part of the site of the village of Ochiltree; but little or nothing is known respecting it. The parish is traversed across its north end by the road from Cumnock to Ayr; and it has comparatively near access at that end to the Auchinleck and Cumnock stations of the Glasgow and South-Western railway. Population in 1831, 1,562; in 1851, 1,787. Houses, 289.

This parish is in the presbytery of Ayr, and synod of Glasgow and Ayr. Patron, the Marquis of Bute. Stipend, £261 4s. 2d.; glebe, £15. Unappropriated teinds, £166 15s. 11d. Schoolmaster's salary, £43 4s. 4½d., with £30 fees, and £11 3s. 4d. other emoluments. The parish church was built in 1789, and contains 900 sittings. There is a Free church, with an attendance of 225; and connected with it is a school with about 90 pupils. There is a private school at Sinclairston. The parish of Ochiltree, till 1653, comprehended, in addition to its present territory, what now forms the parish of Stair. In the 12th and 13th centuries it was a rectory, under the patronage of the lords of the manor; but, before 1321, it was granted by Eustace, the daughter and heiress of Sir William Colville of Ochiltree, to the monks of Melrose, and it continued to be a vicarage under the monks till the Reformation. The second Lord Ochiltree, who was a zealous reformer, and the father-in-law of John Knox, obtained a grant of most of the church lands of the parish; and his grandson, and inheritor of his title, obtained a grant of the remaining church lands and of the patronage.

The Village of Ochiltree is pleasantly situated in the north end of the parish of Ochiltree, on the left bank of the Lugar, immediately below the influx

of the Burnock. It stands on the road from Cumnock to Ayr, 4 miles west of Cumnock, 11½ east of Ayr, and 13 south-south-east of Kilmarnock. The making of reaping hooks, snuff-box making, and cotton weaving formerly employed many of its inhabitants, but now agriculture and ordinary artizanships are the principal occupations. There is a manufactory of curling-stones at Hayhill. Fairs are held in Ochiltree on the second Wednesday of May and the first Tuesday of November. Some violent scenes occurred here and in the neighbourhood, in the early part of the reign of James V. Here, also, in November 1666, occurred a general rendezvous of the Covenanters of Galloway and Ayrshire, intermediate between the rising at Dalry and the battle of Rullion Green. Those who appointed the rendezvous had previously rendezvoused at the Bridge of Doon; and they were joined at Ochiltree by three bodies under Mr. Welsh, Mr. Guthrie, and Mr. Robert Chalmers. At Ochiltree, likewise, they heard sermon by one of their preachers, marshalled their army, appointed their officers, placed guards, and held a council of war to examine their condition and prospects; and at this council they resolved that no further help might be expected from the south or the south-west, that they might expect to be joined by numerous adherents if they passed into Clydesdale, and that, therefore, they should immediately march to the east. Population of the village, 650.

OICH (Loch), a lake in Inverness-shire. It lies in the centre of the Great glen, and forms the summit level of the Caledonian canal. It is less than 4 miles in length, and varies from ⅓ a furlong to ¼ of a mile in breadth. It is fed on its north side by the Garry, running into it, nearly at right angles, from Glengarry; and it sends off its own superfluence by the river Oich toward Loch-Ness. It is a pleasant sheet of water, embellished with one or two wooded little islets, and encircled by verdant banks, with some cultivated grounds at the mouth of Glengarry. The hills on its south side rise almost direct from its edge, steeply and smoothly, to a great height, feathered in some places with birches, and covered everywhere else with verdure. The hills on its north side are cloven into two masses by Glengarry, affording a picturesque vista-view into the interior; and they exhibit a series of bold, lofty, and peaked summits, soaring above elegantly outlined acclivities. Close to the lake, near the mouth of the Garry, are the ancient castle and modern mansion of Invergarry: which see.

OICH (The), a brief river of the Great glen, Inverness-shire. It conveys the superfluent waters of Loch-Oich north-eastward, but in the line of the segment of a circle, with the concavity facing the south-east, to the head of Loch-Ness; and it has altogether a run of only 5½ miles. At its head stands the house of Aberchalder, where Prince Charles Edward concentrated his forces before commencing his march toward the low country. The part of the glen which the Oich traverses is occupied by low, rocky, and heath-clad hills; and brings down, on the left bank of the river, the public road, and, on the right bank, the Caledonian canal. The rivulet Tarff falls into Loch-Ness, about 400 yards west of the mouth of the Oich; and, on an alluvial bank, in a pleasant peninsula, between the two streams, and close upon the lake, stands Fort-Augustus.

OIKELL (The), a river of Sutherlandshire and Ross-shire. It rises in the parish of Assynt in Sutherlandshire, traverses two small lakes; and, from about 7 miles below its source, till it falls into the head of Dornoch frith, it invariably divides the two counties. Its length of course, exclusive of sinuosities, is about 32 miles; and its direction is, for one-half of its way, south-easterly,—for the next fourth, easterly,—and, for the remaining fourth, east-south-easterly. The Dornoch frith is strictly its estuary; and, if recognised in its due connection with it, would add at least 15 miles to its length. The Oikell's principal tributaries are the Cassley on its left bank,—a little more than half-way on its course; the Shin, on the same bank, 7½ miles lower down; and the Carron, on its right bank, just before it enters the Dornoch frith. Several hundred yards above the inn of Oikell-bridge, and 7 miles above the influx of the Cassley, the Oikell, tumbling over a remarkably rugged and declivitous path, makes a series of wild cataracts, which terminate in one bold and very formidable fall. The banks which overhang this multiplied linn, are quite precipitous, and exhibit from their crevices, at spots where no soil can be detected by the eye, several large fir-trees springing up from curiously twisted roots. For several miles below this point, the vale of the stream, or Strathoikell, is flanked by dreary heath-clad hills, and derives relief from the pervading irksomeness only by occasional clumps of stunted birch, and a few verdant meadows on the margins of the stream. Three miles above the influx of the Cassley, an impetuous burn tumbles headlong into the vale; and at a brief distance from its mouth rises an elevated and picturesque bank, sheeted with verdure, and crowned with a burying-ground. This part of the vale is called Tutumvarach,—a name which alludes to a fierce onslaught, early in the 15th century, upon a freebooting party of the Macleods of Lewis by a body of the men of Sutherland. From Tutumvarach to the Cassley the stream runs tortuously along a winding strath; and, while markedly Highland in its screens, has a profusion of birch and alder coppice upon its immediate banks, and, in one place, is overhung by a forest of firs. At the junction of the Cassley a fine view is obtained of Rosehall-house, embosomed in extensive woods, near the foot of Cassley-glen, and of the old walls of Castle-na-Coir, situated on a meadow on the left bank of the Oikell. The river is navigable by boats from the sea to Rosehall, and brings up the tide to a point only 1½ mile farther down. The united waters of the Oikell and the Cassley form a fine large river, and make a well-defined boundary-line between Ross and Sutherland. The strath, down to Bonar-bridge at the head of the frith, is everywhere beautiful, and forms part of the ancient district of Ferrinbusklyne or Sleischillis, which the bishops of Caithness obtained, in the 12th century, as a gift from the Earls of Sutherland. From Rosehall to about 3 miles above the influx of the Shin, it forms on the one side a craggy barrier, and on the other a low expanse of continued forest, and winds perpetually in its progress; and, lower down, it has extensive meadows along the edges of the stream, ornamental clumps of coppices on the declivities, and groups and sprinklings of neat stone-cottages, picturesquely perched on rocky heights

OISHNIE (Loch), a small lake in the parish of Dowally, Perthshire. It discharges itself by a streamlet past the Kilmorich distillery and the village of Kindallachan, into the Tay.

OLD GLENCRIEFF. See Wanlockhead.

OLD GREYFRIARS. See Edinburgh.

OLDHALL. See Gargunnock.

OLDHAMSTOCKS, a parish partly in the north of Berwickshire, but chiefly in the extreme east of Haddingtonshire. It contains within Haddingtonshire the post-office village of Oldhamstocks, and the village of Bilsdean. It consists of a detached section and a main body. The detached section lies all in Berwickshire, 1¾ mile south-east of the nearest part of the main body, drained by Eye-water, surrounded by Cockburnspath, Coldingham, and Abbey St. Bathan's, and forming nearly a square of territory 1½ mile each way. The main body is bounded on the north-east by the German ocean, and on other sides by Cockburnspath, Abbey St. Bathan's, and Innerwick. Its length north-eastward is about 6 miles; and its breadth is commonly about 1¼ mile, and nowhere exceeds 3 miles. A small part of its south-west end is in Berwickshire, and all the rest is in Haddingtonshire. Its coast has an extent of only 1½ mile, and is bold and rocky. The surface, for about 1¼ mile from the sea, is but slightly undulated; and thence it consists of heights which at first are but swells and hillocks, and afterwards form part of the slowly climbing ascent of the Lammermoors. The soil is in general sharp and dry, very fertile toward the sea, but barren and moorish toward the south-west. The lower division is highly cultivated and finely embellished with wood; but the upper division is entirely pastoral, and chiefly bleak and heathy. Numerous rills rise a little south of the centre of the parish, and flow northward, eastward, and southward, occasionally traversing defiles and glens which are not a little picturesque. The chief are Dean-burn, which runs across the parish at the village of Oldhamstocks, traces for 2 miles to the sea the boundary between the counties, and traverses, over great part of its course, a romantic wooded dell; Eye and Heriot waters, which, while they rise in the parish, speedily leave it on the east; and Whare-burn and Monnynut-water, tributaries of the Whitadder, the latter of which runs for 2¼ miles on the boundary with Innerwick. In the lower district, coal, limestone, ironstone, and freestone occur; but the coal has been worked only in the upper stratum, which lies near the surface. The principal landowners are Sir John Hall of Dunglass, Bart., Hunter of Thurston, and Balfour of Statenclough and Whittingham. The value of assessed property in 1843 was £5,774 16s. 6d. Some chief objects of interest will be found noticed in our article on Dunglass. The parish is traversed on the coast by the North British railway, but has access to it only at the neighbouring stations of Innerwick and Cockburnspath. It is traversed also on the coast by the road from Dunbar to Berwick, and about 2 miles inland by the road from Dunbar to Dunse. The village of Oldhamstocks stands on the latter road, on the left bank of the Dean-burn, 3¼ miles south by east of Innerwick, and 18¼ east-south-east of Haddington. Fairs are held here on the last Tuesday of July, and on the second Thursday of October. Population of the village, 138. Houses, 37. Population of the Haddingtonshire part of the parish in 1831, 624; in 1851, 560. Houses, 124. Population of the entire parish in 1831, 720; in 1851, 692. Houses, 144.

This parish is in the presbytery of Dunbar, and synod of Lothian and Tweeddale. Patron, Hunter of Thurston. Stipend, £297 15s. 6d.; glebe, not stated. Schoolmaster's salary, £25 15s., with £18 19s. fees, and £5 19s. other emoluments. The parish church is situated at the village of Oldhamstocks. The ancient church was a rectory, remote in origin, never subject to any monastic body, and apparently always in the patronage of the lord of the manor. The parson of it in 1296 swore fealty to Edward I. at Berwick. There are two non-parochial schools.

OLDHAVEN, a small cliff-screened bay in the parish of Gamrie, Banffshire. It is the most westerly of the sea-dens in the remarkable coast of that parish; and it is situated between the lands of Cullen and Melrose, and has sometimes been called the Old Haven of Cullen. See Gamrie.

OLD JEDBURGH. See Jedburgh.

OLD KEITH. See Keith.

OLD KILPATRICK. See Kilpatrick (West).

OLD MACHAR. See Aberdeen.

OLD MAN OF HOY. See Hoy.

OLD MELDRUM. See Meldrum (Old).

OLD MELROSE. See Melrose.

OLD MONKLAND. See Monkland (Old).

OLD MONTROSE. See Maryton.

OLD MOOR. See Keith.

OLD NEWTON. See Whitsome.

OLDNEY, or Oldeney, a small island belonging to the parish of Assynt, and lying on the west coast of Sutherlandshire. It flanks the south side of the entrance of Loch Assynt; gives the name of Oldney-bay to a piece of sea between it and the point of Store; and is distant about ¼ of a mile from the coast. Its length is supposed to be a mile, and its greatest breadth ¼ of a mile. It is swarded with excellent pasture, and belongs to a sheep-farm of its own name on the adjacent part of the continent. A little flat island called Crona lies on its south side.

OLD PLACE, a small village in the parish of Blantyre, Lanarkshire. Its population, jointly with that of Hunthill, is about 112.

OLD PRESTON. See Preston (Old).

OLD RATTRAY. See Rattray (Old).

OLD RAYNE. See Rayne.

OLD ROME, a village in the parish of Dundonald, Ayrshire. It was formerly called Rumford. Adjacent to it is a colliery, with shaft of 37 fathoms in depth, passing through 4 seams of coal. Population of the village, 257.

OLD ROSEISLE, a hamlet in the parish of Duffus, Morayshire.

OLD SCONE. See Scone.

OLD WATER, or Old Water of Cluden, a rivulet in the east of Kirkcudbrightshire. It rises on the east side of Aughenhay hill in the north of the parish of Kirkpatrick-Durham, and runs 5¾ miles eastward through that parish and into Kirkpatrick-Irongray to near the middle of the latter, receiving Shelloch-burn on its left bank, and Glenburn on its right; and it then makes a sudden bend, and runs 2½ miles northward to the Cluden, at a point 5½ miles above that stream's confluence with the Nith. See Kirkpatrick-Irongray.

OLD WICK. See Wick.

OLD WIFE'S POINT, a promontory on the north-west coast of the island of Mull, Argyleshire. The rock forming its termination has the appearance of the bust of an old woman; but this appearance is seen only from a certain point sailing out of the sound of Ulva towards Inchkenneth or Gribon.

OLIVER-CASTLE. See Tweedsmuir.

OLLABERRY, a post-office station in the parish of Northmaven, Shetland. See Northmaven.

OLLA'S VOE, a bay on the west side of the parish of Sandsting, in Shetland.

OLNAFIRTH, the seat of a presbytery, comprising the parishes of Delting, Nesting, Northmaven, Sandsting, and Walls, in Shetland.

OLRICK, a parish, containing the post-office village of Castleton, on the northern border of Caithness-shire. It is bounded on the north by Dunnet-bay, and on other sides by the parishes of Dunnet, Bower, and Thurso. Its length northward is about 5 miles; its greatest breadth is about 3½ miles; and its area is about 15½ square miles. Its surface is partly flat and partly hilly. The coast comprises some sandy links; the tracts inland thence are a continuous expanse of rich cultivated land; and the tracts in the south are principally gentle uplands, covered with verdure, and affording excellent pasturage. About 500 acres of the entire area are links and moss; about 6,000 are in tillage; and about 20 are under wood. The soil of the cultivated lands is good,—principally a deep clay, with occasional limited intermixtures of sand or till. A lake, called Lochdurran, measuring about 3 miles in circumference, was drained about 40 years ago, with the effect of being converted into good land, and at the same time affording inexhaustible pits of marl. Limestone, sandstone, and pavement flags abound; and the flags are worked into proper form for the market, and exported to the amount of about 400,000 square feet in the year. Castle-hill-bay, situated on the eastern part of the coast, in the vicinity of Castleton, has a neat, commodious harbour, which is used by vessels exporting the flags and importing coal. Another bay, and associations connected with it, have been noticed in our article Murkle. In various localities are six or seven of the antiquities popularly called Picts' houses. On the top of the hill of Olrick are evident vestiges of a watch-tower. This hill, though of inconsiderable altitude, commands a view of the southern islands of Orkney,—of great part of Caithness, backed by the Sutherland hills,—and of nearly all the Moray frith, closed up in the horizon by the county coasts of Elgin, Banff, and Aberdeen. The principal landowners are the Earl of Caithness, Sir John Gordon Sinclair, Bart., Traill of Ratter, and Smith of Olrick. The mansions are Murkle, Ratter, and Olrick. The parish reaches within 2½ miles of the town of Thurso, and is traversed by the road thence to Wick. Population in 1831, 1,146; in 1851, 1,873. Houses, 352. Assessed property in 1843, £4,122 10s.

This parish is in the presbytery of Caithness, and synod of Sutherland and Caithness. Patron, Sir J. Colquhoun, Bart. Stipend, £218 13s. 11d.; glebe, £8. Unappropriated teinds, £1 7s. 6d. Schoolmaster's salary, £34 4s. 4½d., with £9 fees, and £7 other emoluments. The parish church is an elegant edifice, situated at the east end of Castleton, and built in 1841 after a design by Mr. Cousin of Edinburgh. There is a Free church, with an attendance of about 700; and the amount of its receipts in 1856 was £196 14s. 10d. There are four non-parochial schools, a parochial library, and two or three benefit societies. The name Olrick is of Norwegian origin, signifying "the son of Erick;" and is believed to have been applied to the district from some chief of that name who settled here, after some Norwegian invasion, about the beginning of the 9th century. A church, dedicated to St. Columba, anciently stood near the eastern boundary of the parish, and has bequeathed to its site the name of St. Coomb's kirk; and it is traditionally said to have been suddenly wreathed and inhumed in sand-drift during a nocturnal storm. A nunnery anciently stood on the estate of Murkle, and has permanently imposed the name of Closters or Cloisters on a rill which runs past its site.

OMNIS TERRA. See Scone.

OMOA, a village in the parish of Shotts, Lanarkshire. It stands on the south-west verge of the parish, on the road from Airdrie to Carluke, 3 miles east of Motherwell. Here are iron-works, which were established in 1787, and which comprise four blast furnaces for pig-iron and a foundry. Population, 206. Houses, 43.

OPSAY, an islet in the sound of Harris, about 1½ mile in circumference, 2¾ miles north-north-east of North Uist, and 3½ south-east of Berneray.

OR. See Forfar.

ORANGEFIELD. See Monkton.

ORANSAY, an island in the Islay group of the Hebrides, quite connected at low water with Colonsay, and fully described in our article on that island. See Colonsay.

ORANSAY, an islet in the parish of Ardnamurchan, Argyleshire. It lies in Loch-Suinart, 3 miles east of the entrance of the sound of Mull, and forms a group with the islets of Carna and Risga, past which the tide rushes with great velocity into the smooth, land-locked, upper part of Loch-Suinart.

ORANSAY (Isle), an islet, a harbour, and a commercial establishment, in Sleat parish, in the island of Skye. The islet is small, and serves principally to cover and protect the whole entrance to the harbour, and to give name to the locality on the coast. The harbour is in the sound of Sleat, 3 miles north of Knock, and directly opposite Loch-Hourn, on the continent. It is naturally commodious, thoroughly sheltered, and, in every respect, excellent; and is much frequented by shipping. The commercial establishment at the place is small. Here also is a small inn. Isle Oransay is regularly visited by the Glasgow steamers on their way to and from Portree; and it thus maintains constant communication with the north of Skye, and the south-west of Scotland.

ORANSAY (Isle), in North Uist. See Isle-Oronsay.

ORBANSAY, a small island in the Hebrides, about ⅔ of a mile long, lying immediately east of the northerly projection of Barra, and 2½ miles west-north-west of Gigha.

ORBISTON, an estate in the vicinity of Bellshill, in the parish of Bothwell, Lanarkshire. On

this estate, in 1825, an establishment was formed on the system of Robert Owen, to serve as a model for Owenite establishments throughout the country. The land was purchased at the price of £36,000, and the buildings and appurtenances were estimated to cost £60,000. The chief feature in the project was a building in the form of a parallelogram, to contain accommodation for 1,200 persons; but scarcely a fourth of this was ever finished, and never did it contain more than about 180 persons; and so signally did the whole scheme fail that even all the buildings erected were eventually sold for the sake of their mere materials, having cost £12,000, and being sold for £2,000; and speedily all disappeared, leaving not one stone upon another. The establishment was called by its founder New Orbiston, but was universally known in the surrounding country by the name of Babylon.

ORBOST. See DUIRINISH.

ORCHARDNOOK. See RHYND.

ORCHARDTON-BAY, a small bay at the mutual boundary of the parishes of Sorbie and Kirkinner, 3½ miles south by east of Wigton, on the east coast of Wigtonshire.

ORCHILL (MOOR OF). See MONIVAIRD.

ORCHY (THE), a beautiful stream in Argyleshire, which has its head-waters in Loch-Tulla, and discharges itself into the north-eastern head of Loch-Awe. See GLENORCHY.

ORD, any isolated height with abrupt face, either inland or on the coast. The name is simply a disguised form of AIRD,—which see; and it is used in Scotland variously by itself, in apposition, and as a prefix.

ORD, the southern part of the Mullbuy, in Ross-shire. See MULLBUY. Its surface is tabular or flat, and has a sandy soil. Great cattle, sheep, and horse markets, for which it is well adapted, and which take name occasionally from Beauly, but more generally from itself, are held on this moor, on the third Wednesday of April, the second Wednesday of May and June, the third Thursday of July, September, and October, and the second Wednesday of November. On the moor are two ancient standing-stones, which are said to commemorate an ancient feat of arms connected in some way with the prophesied extinction of the clan Mackenzie; and eastward of them is a very large number of stone circles and cairns.

ORD, an abrupt hill, about 430 feet high, on the east side of the parish of Drumoak, in Aberdeenshire.

ORD-BAN. See LOCH-AN-EILEAN.

ORD-OF-BANFF. See BANFF.

ORD-OF-BRESSAY, a reclining rocky headland, about 500 feet high, and inhabited by eagles, in the south of the island of Bressay, in Shetland.

ORD-OF-CAITHNESS, a broad-based, lofty, granitic mountain on the east coast of the north of Scotland, at the boundary between Caithness and Sutherland. It rises with frightful rapidity of ascent right up from the sea, occupies about 9 or 10 miles of the coast, and forms the commencement of a long mountain-chain, which runs north-westward, and continues to divide the counties. The public road into Caithness passes over this enormous natural barrier, at an elevation of 1,200 feet above sea-level, and expends a whole stage upon it and its huge skirts. Previous to 1811, when this road was made, the only land-ingress to Caithness proceeded along the edge of a tremendous range of precipices, which so overhung the sea as to be quite appalling to both horse and rider. According to an old established superstition, no Sinclair may without fearful foreboding of evil cross the Ord on a Monday; forty Sinclairs, led by the Earl of Caithness, having on that day ventured over the barrier toward the field of Flodden, where—with the exception of the drummer, who was dismissed before the battle began—all were cut down by the sword.

ORDFUNDLIE. See KINCARDINE-O'NEIL.

ORDIE LOCH. See DOWALLY.

ORDIE (THE), a rivulet giving the name of Strathord to a large section of the parish of Auchtergaven, in Perthshire. It issues from a small lake in the hill of Tullybelton, and runs 5½ miles east-south-eastward through the heart of Auchtergaven, receiving nearly all the streams by which that large parish is drained. It then runs 2½ miles south-eastward between Monedie on the right, and Auchtergaven and Redgorton on the left, receives on the right the large tribute of the Shochie, and runs half-a-mile along an artificial cut made for it, by the Luncarty company, through a steep bank to the Tay, a little above Luncarty. It is an excellent trouting stream. The poet Nicoll celebrates it in one of his lyrics.

ORDIQUHILL, a parish in the north-east of Banffshire. It contains the post-office station of Cornhill and the village of Corncairn, and lies about midway between the market towns of Banff and Keith. It is bounded by Fordyce, Boindie, Marnoch, and Grange. Its length eastward is 3½ miles; and its greatest breadth is 2½ miles. The surface, toward the north, is, for the most part, flat; but elsewhere it is boldly tumulated; and, on the south-west boundary, it rises into a hill called the Knock, 1,640 feet above sea-level. A stratified bed of moss, from 15 to 20 feet deep, covers the summit of this hill, and, at various places, passes down the declivity in lines of communication with mosses round the base. About one-half of the parish continued till 1842 to be waste or pastoral; but the greater part of this has since then been subjected to the plough. Most of the soil of the parish is deep, but lies on a cold retentive bottom. About 400 acres have been planted with larch, ash, Scottish fir, and other trees. The larger part of the area rests on gneiss and coarse micaceous schist. The drainage is effected north-eastward by Boyne-burn. Park-house, the seat of Lauchlan Duff Gordon, Esq., the sole heritor, is a large, good-looking mansion. The yearly value of raw produce was estimated in 1836 at £6,770. Assessed property in 1856, £2,750 14s. 10d. The parish is traversed by the roads from Banff and Portsoy to Huntly, and lies within 6 miles of stations of the Keith extension of the Great North of Scotland railway. Population in 1831, 655; in 1851, 644. Houses, 135.

This parish is in the presbytery of Fordyce and synod of Aberdeen. Patron, the Earl of Seafield. Stipend, £204 12s.; glebe, £9 10s. Unappropriated teinds, £38 2s. 6d. Schoolmaster's salary, £30, with about £15 fees, a share in the Dick bequest, and some other emoluments. The parish church was built in 1805, and contains about 490 sittings. There is a Free church, with an attendance of about 280; and the amount of its receipts in 1856 was £122 6s. 9½d. There are a non-parochial school and a parochial library. Mr. Walter Goodall, author of a 'Defence of Queen Mary,' was a native of Ordiquhill.

OREVAL. See RUM.

ORINSAY. See ORANSAY.

ORKIE. See NEWBURN.

ORKNEY, the southern one of the two archipelagos of the northern isles of Scotland. The Orkney archipelago, Fair isle, and the Shetland archipelago constitute the whole of the northern isles. These isles collectively have long ranked as a county or

A. Fullarton & C.° London & Edinburgh

stewartry. But previous to the passing of the Reform bill, Orkney alone, to the exclusion of Fair isle and the Shetland archipelago, really constituted the county, or at least had possession practically of all its political privileges,—Shetland having no voice in the election of a member of parliament, and enjoying no advantage from the administrative working of the British constitution. Even after the passing of the Reform bill, Orkney seemed likely for a time to retain practically all the county rights,—for, on occasion of the first election, the Shetland poll-books, on account of the circuitousness of the mail communication, could not be brought to Kirkwall within the time specified by the act. And now, though Shetland has been made to share the county rights as diffusively and effectively as circumstances can well admit, Orkney is so different from it in general character, so distinct in social interests, so separate in mercantile communications, as well as so distant and unconnected in position, as to demand the same kind of treatment at the hands of a topographer as if it were really, and in every sense, a separate county.

The Orkney islands are divided from the north-eastern extremity of continental Scotland by the Pentland frith; they measure in extreme length, from north to south, about 57 miles, and in extreme breadth, from east to west, about 27 miles; they are, at their southern extremity, with the exception of the Pentland skerry, from 6 to 12 miles distant from the coast of Caithness; and they lie between the parallels of 54° 47′ and 59° 20′ north latitude, and between 2° 4′ and 3° 23′ longitude west of Greenwich. They are grouped with considerable compactness; being separated from one another by sounds or straits which are seldom more than 5, and very often less than 2 miles wide. About two-thirds of their whole area, comprising the mainland and several other large as well as many smaller islands, form a strictly compact ellipsoidal group on the south; the longer axis extending due north and south, and the general compactness being disturbed only, or at least chiefly, by an interior expansion of sea on the south, called Scapa flow. Along the north-east of this group lies a belt of sea, of about 5 miles in mean breadth, called, respectively at the north-west and at the south-east end, the Westray and the Stronsay friths. The other third of the aggregate area is arranged nearly in the form of three limbs of a Greek cross; ranging the two continuous limbs north-westward and south-eastward along the side of this sound, and sending off the transverse limb in a direction nearly due north-east. The number of inhabited islands is 29; of small islands, locally called holms, covered with herbage, and regularly or occasionally stocked with cattle or sheep, is 38; and of rocky islets, called skerries, which carry little or no herbage, and are altogether waste, is very considerable, but not accurately ascertained.

So full a description of each of the inhabited islands will be found in its appropriate place in our work, that we shall here only so far notice them as to indicate their relative magnitude and mutual positions. Pentland skerry, the most southerly, and about equidistant from Caithness and Orkney proper, is a barren islet, important only as the site of a lighthouse, and inhabited by but one family. South Ronaldshay forms the south-east district of the greater or ellipsoidal group, and, next to the mainland, is the seat of the greatest population. Swona lies west of the southern extremity of the former, in the middle of the southern entrance to Scapa flow; but is only about a mile long, and has few inhabitants. Hoy and Walls are considered as two islands, but are really one, sectioned into very unequal parts by the very deep indentation from the east of an elongated bay, called Long Hope; they form the south-west district of the ellipsoidal group, have a much larger area than South Ronaldshay, but contain the highest land in Orkney, and are thinly peopled. Pharay, Rasa, and Cava, are three small islands triangularly grouped immediately off the middle of the east coast of Hoy, and aggregately subsisting but few inhabitants. Flota lies immediately south-east of this little sub-group, equidistant between Hoy and South Ronaldshay, in the centre of the channel leading up to Scapa flow, and is 3 miles long and 2 broad. Graemsay, a comparatively small but productive island, lies near the north-east extremity of Hoy, in the centre of Hoy mouth, or the western entrance to Scapa flow Burray, measuring 4 miles by 1, stretches lengthwise parallel to the north end of South Ronaldshay and is separated from it by Water sound, 1 mile in breadth. Lambholm, 3 miles in circumference, lies north of Burray, in the middle of Holm sound, or the eastern entrance to Scapa flow.

Pomona, or the Mainland—the seat of considerably more than one-half of the whole Orcadian population, the site of the capital and of Stromness, and not so much a continuous continent as an aggregation of peninsulas and isthmuses, sectioned off by very deeply indenting bays, a territory which bulks very largely in the archipelago, yet has an area far beneath the proportion or ratio of its population—screens the whole north side of Scapa flow, and of its western and eastern entrances, Hoy and Holm sounds, and extends, in a broad expanse of land, to the north-west extremity of the general ellipsoidal grouping. Copinshay, 1 mile by ½ a mile, lies about 2½ miles east of the eastern extremity of the Mainland, and forms an excellent landmark for ships. Shapinshay, about 7 miles by 5, lies 2 or 3 miles north-east of the Mainland, forming the south-west screen of the Stronsay frith. Damsay, the Orcadian Tempe, small but beautiful, lies in the centre of the bay of Firth, a deep indentation of the Mainland due south-west of Shapinshay. Gairsay, 2 miles by 1, and consisting chiefly of a conical green hill, lies 2 miles north-west of Shapinshay, and 1½ east of the Mainland. Weir, or Wire, small but populous, lies 2 miles north of Gairsay. Rousay, nearly a square of about 18 or 20 square miles, forms the northern extremity of the ellipsoidal group. Eagleshay, a slender oblong of 2½ miles in length, flanks the east side of Rousay, is separated from it by a narrow marine belt, called Howa sound, and, jointly with it, forms the south-west screen of Westray frith. Enhallow, small but fertile, lies between Rousay and the Mainland.

The twenty-one islands now enumerated—excepting Pentland skerry, lying to the south—form the larger or ellipsoidal Orcadian group; and the remaining eight constitute, with their holms and skerries, the lesser group, or that lying north-east of the Stronsay and the Westray friths. Stronsay, 7 miles by 4, forms the south-eastern extremity of the group, and screens its cognominal frith. Papa-Stronsay, a beautiful islet 3 miles in circumference, lies north of Stronsay, embosomed in one of its bays. Eday, 5 miles by nearly 2, stretching north and south, screens, on the south-west, the inner extremity of Westray frith, or the part where that frith merges in the frith of Stronsay. Pharay, a small oblong, lies west of Eday, separated from it by a narrow sound. Westray, containing about 14 square miles, forms the north-west extremity of the northern group, and the north-east screen of the Westray frith. Papa-Westray, 4 miles by 1, stretching north and south, is separated from West-

ray, on the north-east, by a sound 1⅓ or 2 miles broad. Sanday, about 12 miles long by about 1½ of mean breadth, extends due north-eastward from a point about 1¾ mile north-east of Eday. North Ronaldshay, the most northerly of the Orkneys, and considerably populous, is separated, on the north-east, from Sanday by North Ronaldshay frith, a sound upwards of 2 miles broad, and of very dangerous navigation.

These islands appear to have been at one time a continuous territory, and not improbably were attached to continental Scotland. Their geognostic features, in confronting coasts, have, in general, an exact correspondence; and their intersecting and separating friths and sounds are, to a great extent, so shallow as to offer serious obstacles to navigation. Viewed as one territory, they are abruptly and boldly, though not in an alpine sense, mountainous in the extreme south-west; they speedily subside into hills as they recede from the south-western sea-board; they fall off in gentle slopes in the interior; and, with some exceptions, they stretch away toward the east and north-east in valleys or undulating plains which are rarely 100 feet above sea-level. The strictly rugged or boldest district is confined to Hoy and Walls; and occasionally exhibits some of the finest rock scenery in Scotland,—blendings of shattered cliffs and stupendous precipices, with basins of water now smooth and translucent as glass, and now whirling and maddened like the wreaths and eddies of a whirlwind of snow. With the exception of a little chasm at Rackwick, the whole coast of about 15 miles is a precipitous mass of freestone rocks, from 300 to upwards of 500 feet high, in some places perpendicular and smooth, in others, rent and broken down into huge fragments, and, in a few, overhanging the sea and frowning on its dark and stormy surges. The heights inland from this coast-line, and those of the hilly but less rugged district, or of Rousay, the western sections of Pomona and Eday, and parts of Westray and South Ronaldshay, are soft in outline, and either rounded or gently curvatured; and, in common with the cliffs, they are bleak and sterile, seldom wearing any other vegetation than heath, and extensively abandoned to the moorfowl and birds of other species. The highest ground is the hill of Hoy, which has an altitude above sea-level of about 1,600 feet. The surface of the low grounds is now heathy, now covered with coarse pasture, and now vividly green or mellow with good or even rich crops of grain; and it has not a few spots, and some entire valleys, which have been pronounced by strangers equal, in the opulence of their gramineous clothing, to some of the best lands in England.

Yet from the utter absence of trees, or even of tall shrubs, except in a few gardens principally around Kirkwall, from the great prevalence of heath, from the general want of distinctive contour along the surface, and from the constant monotonous alternation of low bleak grounds and rock-dotted belts of sea, the aggregate landscape is far from possessing attractions to one who has dwelt among the scenic beauties of either the Lowland or the Highland continent. "If, however, the tourist has the good fortune to be in Orkney during a storm," say the Messrs. Anderson, "he will cease to regret the absence of some of the softer and more common beauties of landscape, in the contemplation of the most sublime spectacle which he ever witnessed. By repairing at such a time to the weather-shore, particularly if it be the west side, he will behold waves, of the magnitude and force of which he could not have previously formed any adequate conception, tumbling across the Atlantic like monsters of the deep, their heads erect, their manes streaming in the wind, roaring and foaming as if with rage, till each discharges such a Niagara flood against the opposing precipices as makes the rocks tremble at their foundations, while the sheets of water that immediately ascend as if from artillery, hundreds of feet above their summits, deluge the surrounding country, and fall like showers on the opposite side of the island. All the springs within a mile of the weather coast are rendered brackish, for some days after such a storm. Those living ¼ a mile from the precipice, declare that the earthen floors of their cots are shaken by the concussion of the waves. Rocks that two or three men could not lift, are washed about, even on the tops of cliffs which are between 60 and 100 feet above the surface of the sea when smooth, and detached masses of rock of an enormous size are well known to have been carried a considerable distance between low and high water-mark." Or during the sleep of the tempest and the silent sailing of the moon, such a scene is presented as the poet thus beautifully describes:—

"Night walked in beauty o'er the peaceful sea,
Whose gentle waters spake tranquillity.
With dreamy lull the rolling billows broke
In hollow murmurs on the distant rock;
The sea-bird wailed along the airy steep;
The creak of distant oar was on the deep,
So still the scene, the boatswain's voice was heard,—
The listening ear could almost catch each word.
From isles remote the house-dog's fitful bay
Came floating o'er the waters far away.
And homeward wending o'er the silent hill,
The lonely shepherd's song and whistle shrill;
The lulling murmur of the mountain flood,
That sung its night-hymn to the solitude;
The curlew's wild and desolate farewell,
As slow she sailed adown the darksome dell:
The heath-cock whirring o'er the heathy vale;
The mateless plover's far forsaken wail;
The rush of tides that round the islands ran,
And danc'd like maniacs in the moonlight wan,—
All formed a scene so wild, and yet so fair,
As might have wooed the heart from dreams of care."

The coast-line of nearly all the islands, except along the stern cliffs of the south-west and west, is exceedingly curved and jagged, forming numerous recesses for bays and landlocked havens in which fleets of the largest vessels may securely ride. The harbour of Long-Hope in Hoy, and that of Widewall, directly opposite, in South Ronaldshay, in particular, afford shelter amid all winds, except a gale from the north, to vessels passing through the Pentland frith; and for safety, depth of water, great extent, and ease of access, they are inferior to few in the world. The impetuous tides of the Pentland, which have a velocity of nearly 3 miles at neap, and the careering speed of 9 at spring, are nearly if not quite equalled by those of some of the intersecting sounds and friths; yet, in common with these, they are repelled into eddies and countermotion as they approach the land, and are so much curbed and modified as to be navigable in clear weather with probably as little danger as those of any part of the coast of Scotland. Ordinary neap tides rise about 3½ feet, and ordinary spring tides about 8; maximum neap tides rise upwards of 6 feet, and maximum spring tides 14; minimum neap tides rise not above 2 feet, and minimum spring tides only 5. Within a league of the western coast, the depth of water is from 40 to 50 fathoms; but at the same distance on the east side, it does not exceed 32.

The Orkneys, owing to their peculiar situation, have a much less inequitable heat than the continent, and are strangers to the extremes both of summer heat and of winter cold. They have little

frost and less snow, and never any great continuance of either. The mean heat throughout the year is 45°; and the widest general range of the thermometer is between 25° and 75°. Rain often falls heavily, and is supposed to have a deeper aggregate than over an equal extent of country in most parts of Scotland. In 1811, a year of more than average humidity, the quantity was 29·05 inches. The heaviest rains and the prevalent and strongest winds are from the south-west and south-east. Winds between the north-west and the north-east are cold but dry and salubrious; and they prevail during spring, and sometimes till past the middle of June, checking the progress of vegetation. Calms are of short duration; and sudden changes in all the elements of weather occur oftener than in other parts of Scotland. Fogs are common even in summer; and both form and disperse with singular rapidity. Thunder-storms are most common in winter, amid high winds, and continued falls of rain or snow. The spring is cold and tardy; the summer, though of short continuance, is remarkable for rapidity of vegetation; and the winter is, in general, a continued series of high winds, heavy rains, and ever-varying storms. During about a month at mid-summer, the light, owing jointly to the highness of the latitude, and the superior reflecting power of water overland, is so strong at midnight that, when the sky is clear, a student may either read in the open air, or regale himself with the continued music of the lark, the land-rail, and other feathered songsters. The night of this halcyon season is but a mellowed balmy day, possessing the odours, the melodies, and the wakeful activities of the hours of the sun's power, without any of their over-mastering influences or their scorching and dazzling glare. Even the winter nights, notwithstanding what has been fabled about their terrible dominion, give place at the very solstice to 6 hours of day-light; and, when not lit up with the moon, have very frequently a brilliant and sublimely fitful play of the aurora borealis, such as both yields a beautiful though faint light, and invites the well-toned mind to admiring and devout contemplation.

Primitive rock occurs only in the district around Stromness, in the south-west of Pomona, and impinging upon Graemsay. It consists chiefly of gneiss, confusedly stratified and often running into granite; it is everywhere disturbed and dislocated in its imperfect strata by veins of quartz and felspar; it occasionally gives place to beds of hornblende; and, in one locality, it passes into micaceous schist, freely gemmed with garnets. The rock forms a hilly rough ridge about 6 miles in length, extending north-westward and south-eastward, behind Stromness. The gneiss of Orkney seems totally to want the metalliferousness which so generally distinguishes that rock in other regions. Around the primitive rocks lies a zone of conglomerate, whose base is variously argillaceous, calcareous, and silicious. All other parts of the islands, south-east and north, appear to lie upon schistose strata, very various in composition, and ranging from the transition series considerably up the secondary formation. The prevailing varieties are greywacke and greywacke slate; sometimes thin and black, and occasionally used for slating, and sometimes massive dark blue, and a good building material. Another variety is bituminous shale, not very plentiful, laden in one place with soft bitumen, or petroleum, and assuming in some places the appearance of glance coal. A third variety is limestone in thin beds, seldom pure, rarely more than two feet thick, nowhere abundant, yet occasionally good, and burnt as a building cement. Sandstone of the newer formations, grey, red, and brown, and sometimes, though rarely, streaked and variegated, constitutes the bold heights and fantastic cliffs and pinnacles of Hoy. Porphyry of several varieties, and trap in the forms of greenstone, basalt, and amygdaloid, break through the schists and sandstone in all the islands, sometimes forming caves and hollow swells, sometimes rising in large pinnacled nodules, sometimes shooting out into the sea in points and headlands, and everywhere disarranging and contorting the stratified masses with their veins and dykes.

Veins of iron-ore, chiefly brown hematite, traverse the sandstone of Hoy; they were ordered to be explored by the Carron company soon after the establishment of their works; but though known to yield from 40 to 60 per cent. of iron, they have not yet been found of workable breadth. Small veins of galena or lead-glance are found among the schistose rocks, particularly in Pomona. One little mine, where several veins lie contiguously near the manse of Stromness, yields a little silver, and has been occasionally worked for about a century. Veins of heavy spar, or prismatoidal barytes, traverse the same rocks, or are found associated with the veins of galena. Calcareous spar is very common; and on the east side of Shapinshay, it is so abundant that it might be burnt into manurial lime. A compound of sulphate of barytes and carbonate of strontia, which has been treated as a new species, and called Barystrontianite from its composition, and Stromnesite from its geographical position, occurs in association with the heavy spar of Stromness. The different varieties of bog-iron, yielding from 30 to 38 per cent. of iron, occur in considerable quantity, chiefly on the sides of the hills toward their base, and in the vicinity of springs.

Though sand, in some places, and clay or moss, in others, is found of great depth, the general soil of Orkney is shallow, lying upon either till or rock within two feet of the surface, and often so near as to be touched by the plough. Much the greater part of it is peat or moss, forming, from the nature and nearness of the subsoil, a wet, spongy, and irreclaimable moorland. Yet a considerable proportion of the moss is what the inhabitants call yarfa soil, consisting of bent moss, and easily improvable. Loams, of various degrees of tenacity, and, in some instances, though never to any great extent, approaching to clay, cover an area next in magnitude to that of the mosses. Sandy soils are extensive; and, in a few spots, particularly in Westray, Stronsay, and Sanday, they degenerate into beds of loose, drifting sand, entirely sterile, and superincumbent on the real soil. Had not a beneficent Providence zoned most of the islands with a belt of indurated argillaceous and silicious debris, which is so hard as strongly to resist the action of the waves, and which, when pulverized and used as a manure, enriches the predominant soils, the prevalently arenaceous character of the rocks and the alluvium of Orkney might have exposed it to fearful havoc from the ocean, in the way both of invasion and of accumulating the materials for a deluge of drifting sand. Of the arable lands, probably about one-third have sandy soils, a larger proportion have different sorts of loam, and the remainder have yarfa or dry benty moss.—Shell marl, consisting of fresh water shells in a basis of clayey chalk, is a common but much neglected production, occurring in almost every considerable meadow or marsh. Tufaceous limestone or calc-tuff, though similar in value, and though frequently seen incrusting the rocks and vegetation in the vicinity of springs, is seldom applied to any useful purpose. Moss of the depth and

composition of peat is not so abundant as to prevent scarcity of fuel in several districts of the islands, or to render its conservation and even its increase objects of little public interest. Its ingredients, besides the herbaceous plants found in every moss-soil, are birch, hazel, Scottish pine trees, and the cones of the pitch pine; a circumstance which seems to argue that the country was anciently robed to a considerable extent in forest, or, at all events, was not so cheerlessly destitute as it now is of dendritic embellishment. Peat for fuel is usually dug in the end of May or beginning of June, and carried home in July.

Nearly all the land of Orkney is freehold, but burdened with payments in kind to the Crown, or to the Earl of Zetland, as the Crown's donatory. These payments, though of various origin, all bear the name of feu-duties, and are exigible on account either of the Crown's having come in the place of the King of Norway, to whom the islands paid tribute till 1468, or of its having acquired rights by purchase and forfeiture, or of its having inherited the claims of the Bishop of Orkney. So enormous are the feu-duties, that the property is, in most instances, little more, as to actual value, than nominal, or differs from a high-rented leasehold only in the useless honour of an empty title. A considerable proportion was originally held under udal or allodial tenure,—a system which required no written right; but owing to very numerous and frequent transferences by sale, it has come, in the great majority of instances, to be held under charter and sasine, as in every other district of Scotland. Lands are occupied either by the proprietors themselves, by tacksmen who farm a part and let the remainder, or by tenants who farm all they rent. Farms are of various sizes, from 6 or 8 acres to several hundreds, or even upwards of a thousand; but they are for the most part small, averaging probably 10 or 11 acres; and when very large, they consist chiefly of extensive tracts of open grazing-grounds, or the uninhabited islets called holms. Though many of the farmers are men of considerable property and good education, the great body have but a slender capital, and rank in the social scale simply as peasants.

The cultivated portions of farms are arranged in clusters called towns. An Orcadian town is a portion of ground, partly arable and partly in pasture, always—except where there is a marine or some other natural boundary—separated from what is called 'the hill,' or the common moor, by a massive encincturing turf-dyke; it is provided with a number of houses corresponding to the number of farms, and severally occupied by the different farmers, whether proprietors or tenants; it was all originally, and in general still is, in runrig, belonging mixedly to the farmers, but apportioned to them in their respective shares; and it has patches of grass-land and sometimes separate pieces of ground near the houses called 'tumails,' or little enclosures called 'quags.' The lands composing the town are of very various dimensions; and, whether penny-lands, merk-lands, farthing-lands, cowsworths, or wearing particular modifications of these uncouth and quite indeterminate denominations, those of any name in the same town are of equal extent; and when they are 'planked,' as the local phrase is, or thrown into severalty, by processes for separating the runrig, and erecting marches among the several proprietors, they are, after due measurement, divided, in both their arable and their grass-grounds, in the proportion of the number of penny-lands, and lands of various other denominations, legally belonging to the several claimants. Each resident in a 'town,' besides his possessions within the dyke, has the privilege of sending his live stock to 'the hill,' or common moor, and liberty, according to the nature of his rights, to cut turf in the mosses, and gather manurial sea-weed on the shore.

Though the continuance to a great extent of the mischievous system of runrig impedes improvement, the arts of husbandry have, during the last 45 years, made great progress, and arrayed themselves in a modern dress. The old Orkney plough, which continued to be 'still too much used' in 1814, the date of the Agricultural Report of Orkney, and which had only one stilt, without either ground-wrist or earth-board, and, when at work, received against one side the pressure of the ploughman's weight, and was drawn by three or four oxen or small horses yoked abreast, and which only scratched some soils, and slided along others;—this antique but absurd instrument has now for many years been completely discarded, and can be met with only in the museum of the antiquary. The old mode of portage, by means of 'the clibber and maizy,' balanced across the backs of horses, and bearing from the ends or at the horses' sides strange-looking heath-baskets, called creels, or quite as strange straw ones, called 'cubbies' and 'cazies;' this mode of portage, which was used in transporting all sorts of heavy or bulky articles, and which made the largest part of horses' labour consist in carrying home peats from the mosses, and which is still practised to a sufficient extent to treat a visitor to the islands with the sight of an antiquated custom highly illustrative of the semi-barbarous social order of bygone times, has for a long time been very generally superseded by the use of the simple two-wheeled vehicle, whose introduction contributed so large a share in revolutionizing the Highlands. Some gentlemen farmers and large proprietors began long ago to put their arable grounds under a regular rotation of crops, to make a free use of turnip-husbandry, to cultivate the artificial grasses, and, in general, to set an enlightened and enterprising example of improved methods of agriculture; and many of the ordinary farmers at once admired their practices, and commenced to imitate them; though the great bulk of the small cultivators, with that pertinacious adherence to old usages which has, in all things, so generally characterized the multitude, continued long, and in many instances still continue, to torture their arable land out of heart by an alternate cropping of oats and bere, with little or no other aid than doses of sea-weed so long as they can obtain returns for their seed-corn, and then leave the land to recover its tone by the slow means of a long natural fallow.

According to the statistics of agriculture, obtained in 1855 for the Board of Trade, by the Highland and Agricultural Society of Scotland, the number of occupiers of land paying a yearly rent of £10 and upwards, exclusive of owners of villas, feuars, householders, and the like, was 262; and the aggregate number of imperial acres cultivated by them was 23,989$\frac{3}{4}$. The distribution of the lands, with reference to crops, was 15 acres under wheat, 82$\frac{3}{4}$ under barley, 7,962$\frac{3}{4}$ under oats, 11$\frac{1}{2}$ under rye, 2,931$\frac{1}{4}$ under bere, 5 under beans, 7$\frac{1}{2}$ under pease, 34$\frac{1}{4}$ under vetches, 3,016$\frac{3}{4}$ under turnips, 1,301 under potatoes, 1$\frac{3}{4}$ under mangel wurzel, 4 under carrots, 34$\frac{1}{2}$ under cabbage, $\frac{1}{4}$ under flax, 46 under turnip-seed, 6 under other kinds of crops, 232 in bare fallow, and 8,297$\frac{1}{2}$ in grass and hay in the course of the rotation of the farm. The estimated gross produce of the chief crops was 393 bushels of wheat, 2,746 bushels of barley, 258,789 bushels of oats, 105,525 bushels of bere, 42,536 tons of turnips, and 6,261 tons of potatoes. The estimated average produce per imperial acre was 26 bushels and $\frac{3}{4}$ of a peck of wheat, 33

bushels and ⅔ of a peck of barley, 32 bushels and 2 pecks of oats, 36 bushels of bere, 14 tons and 2 cwt. of turnips, and 4 tons and 16¼ cwt. of potatoes. The numbers of live stock comprised 1,314 farm-horses above three years of age, 400 farm-horses under three years of age, 185 other horses, 2,538 milch cows, 2,173 calves, 3,417 other bovine cattle, 5,083 sheep of all ages for breeding, 1,414 sheep of all ages for feeding, 4,318 lambs, and 1,337 swine.

On account of the damage to crops by the frequent gales of autumn, by blights from the sea-spray, and by the general humidity of the climate, and on account also of the comparatively great equableness of the temperature, and the short continuance in winter of snows or frost, circumstances so favourable for the rearing of black cattle and sheep, pasturing seems much more suitable than husbandry for most of the land in Orkney; and, it is said, would long ago have become general but for the peculiar nature of the tenure; and, even under the present system, is so far an object of attention with tenants as to be made more than tillage to contribute to the paying of their rents. The cattle of the islands do not seem to be of a breed materially different from those of Caithness and Sutherland; but are larger in size, and, as to colour, are black, white, and brown, and, in a few instances, are party-coloured, mottled, or brindled. The only breed of native sheep seems to be the short-tailed sheep of Iceland, Shetland, the Hebrides, the interior of the Highlands of Scotland, and, in general, the far or mountainous north of Europe. Sheep of this breed, confusedly, and to the most untraceable extent mixed with other breeds, run wild in the hills and common moors, so little tended and so abandoned to a state of nature, as at once to escape improvement in themselves, and to yield but trivial advantage to their owners. But on holms or separate grazing islands, and on some peninsulas artificially shut out from the adjacent commons, there are some thriving flocks of Swedish merinos, Southdowns, Cheviots, and approved cross-breeds. The first horses of Orkney were probably imported from Norway, and, for many ages, were not much different from those of that country in size and shape. But those now generally used appear to be descended from the breed of the northern counties of Scotland; and they are reared in such numbers as to be sent back in considerable annual supplies to the land of their origin. The swine—though somewhat resembling the native breed of the Highlands—are very different from that which prevails in the lower districts of Scotland. They are of a middle size, generally black or dark-red in colour, flat-bodied, with backs highly arched, carrying a quantity of long stiff bristles over a fleece of coarse wool, their ears erect and sharp-pointed, their nose amazingly strong, and their whole figure and appearance—as well as their habits, while they range at will over hill or common, or are allowed possession of an entire island—bearing a closer resemblance than is found in any other of our domesticated breeds to the wild boar. Rabbits are found in most of the islands; they occupy an extensive warren in Burray; and in one year 36,000 rabbit-skins were shipped from Stromness. Poultry of all sorts are reared; the common sorts everywhere, particularly geese.

The manufacture of linen-yarn and cloth, for a considerable period previous to the commencement of the present century, was somewhat extensively conducted; but it received a severe check from the difficulty and uncertainty of obtaining flax during the war with the continent; and it has since dwindled away into a state approaching extinction. The manufacture of kelp, during the halcyon days of that rude and congenial, employment was pursued with such avidity, and so fondly clung to as a staple, that perspicacious economists were at no loss, even so early as 1806, to foretell that it would be 'the ruin of Orkney.' The greatest annual export occurred in 1826, and amounted to 3,500 tons, bringing into the country, at the rate of £7 per ton, the sum of £24,500. The events which have destroyed the manufacture elsewhere have destroyed it here, and, by rendering its recovery hopeless, have damaged all and completely ruined some of the principal landed proprietors. Straw-plaiting, for ladies' bonnets and gentlemen's hats, has been a large but fluctuating manufacture. It was introduced about the beginning of the century, and, about 10 or 15 years after its introduction, employed 6,000 or 7,000 females, and annually brought into the country about £20,000. The material then employed was split ripened wheat straw; and the produce could be worked into only a flimsy, colourless, brittle piece of head-gear, which soon and deservedly lost the favour of fickle fashion. When a successful imitation, by the Messrs. Muir of Greenock, was made of the Leghorn plait, and found, under the name of Tuscan, a speedy promise of general patronage, the Orcadian damsels were easily instructed to substitute the unripened, unsplit, boiled, and bleached straw of rye, for the former material, and to employ themselves upon the new fabric. But they never could work as numerously or as remuneratingly with it as with the slender split wheat-straw; they, more than once, came into rude collision with the wayward caprices of that viewless, subtle, controlling power called fashion, which had them entirely at its mercy; and after the reduction of duty on foreign straw-plait from 17s. to 5s. per pound, they had to encounter the severe competition of a copious importation of that straw-plait, and were speedily almost altogether obliged to renounce their employment. The only other noticeable manufacture is that of whisky, which is produced to the amount of about 14,000 gallons in the year, and is not more than enough to meet the demand for local consumpt.

The fisheries were long shamefully neglected, or seemed to be all but forgotten amid the absorbing attention which was given to the manufacture of kelp. Lobster-fishing is the only department of some standing; it was introduced by an English company; and, for several years preceding 1814, it annually produced for the London market about 120,000 lobsters, and brought into the country about £1,500. It is still vigorously conducted, and sends off its produce in welled smacks, which make regular weekly calls at appointed stations; but it now produces only about 100,000 in the year, and may be considered as seriously on the decline. The cod-fishery was carried on about seventy years ago, in the neighbourhood of Stronsay, and afterwards was, for many years, neglected; it was revived and extended generally among the islands during the latter period of the war with continental Europe, the fishing-ground being less exposed than the Dogger bank to annoyance by the enemies' privateers; but it again fell into neglect, and was revived again to be conducted, with promising appearance, in well-appointed sloops. The herring fishery had scarcely an existence till about 40 years ago, and has undergone great fluctuations. In 1820, the number of barrels of herrings cured for exportation was 17,989; in 1832, it was about 65,000; and in 1854, it was 20,394. In the last of these years the number of boats employed in the fisheries was 606, the number of persons was 3,695, and the value of the boats, nets, and lines was £23,380. When the whaling-ships of Scotland and England used to

resort to Davis'-straits, so many as 60 of them would have called in one season at Orkney and Shetland, taking on board about 1,400 men, and leaving about £18,000; but after they began to resort to Baffin's-bay, and required men to continue away from home during the harvest months, when their domestic services were most wanted, they had less connexion with this country, and allowed the quondam harpooners of the king of the arctic seas to employ themselves, more benignly for their morals, in catching the edible tribes of the seas which gird their own islands.

The commerce of Orkney, both outward and inward, shows a motleyness, a width of range, and the occasional prominence of curious articles, which at once amuse the observer and illustrate the social condition of the people. The exports of 1806, for example, consisted of kelp, bere, beef, pork, pork-hams, calf-skins, cow-hides, tanned-leather, seal-skins, cow-hair, feathers, tallow, butter, fish-oil, linen-cloth, linen-yarn, rabbit-skins, otter-skins, quills, malt, dried podlies, small fish, eggs, woollen stuff, oatmeal, dried cod and ling, wool, slates, ale, and live cows and oxen; and the imports of the same year, as exhibited in a table before us, consisted of no fewer than 100 items, some of them curious for their littleness and simplicity, such as '1 bottle turpentine,' '2 carts complete,' '3 bundles spades,' and '6 casks whitening;' and some remarkable for their multifariousness and intrinsic variety, such as 'haberdashery,' 'apothecaries' ware,' 'confections,' and 'groceries,'—'ginger-bread' and 'candy-sugar' being allowed to form separate items. The imports of late years, say the Messrs. Anderson in their excellent 'Guide to the Highlands,' "may be stated to be annually a few thousand pounds less" than the exports. "They consist of a great variety of articles, which would be best understood by an inspection of an Orkney shop, which is a sort of bazaar, the keeper of which is grocer, clothier, haberdasher, hosier, hatter, silk-mercer, ironmonger, tobacconist, &c., &c. A considerable annual quantity of wood from various places, and coals from Newcastle, are also imported." All Orkney is included in the custom-house port of Kirkwall; and a summary of its commerce will be found given in our article on that place.

One or two elegant mansions, a small number of neat villas, and the manses of the parish-ministers, are the only Orcadian dwelling-houses of note out of Kirkwall. The farm-buildings are, in many instances, substantial and convenient, and occasionally they are expensive and aim at consideration; but they consist, at best, of a dwelling-house and a detached barn and cow-house, with inferior offices; and, in the case of nearly all the small farmers, whether proprietors or tenants, or the retainers of gentlemen-farmers, they are single buildings, poor primitive cottages, with an exterior blotched round by peat-stack, kiln, and dunghill, and an interior laid out for the accommodation of man, beast, and fowl. These cottages are generally built with stones and clay, or with stones and clod, and are slenderly and clumsily covered, almost every year, with a little fresh straw. The door is sometimes less than 5 feet high, and affords ingress and egress to every inmate, whether biped or quadruped, plumeless or feathered. While many cottages, like the abodes of the better sort of farmers, have detached out-houses, they are, as a class of buildings, characteristically at once dwelling-house, cow-house, and hen-roost. The cows, for the most part, occupy their own end of the building, though a few calves, or a favourite cow, may be seen in 'the butt,' or end of honour, in company with the family; and fowls and geese, while assigned an appropriate place, are fully admitted to the comforts of the central fire, blazing on the middle of the earthen floor, and maintaining overhead a constant canopy of smoke. Around the fire, during the long winter nights, sit the family, the men making or mending some utensils of husbandry, the women plying the needle, and both seemingly more contented and free from sensible discomfort than the trim refined peasants and farmers of Lowland Scotland and merry England. The cottages, besides the main apartment, have generally an interior one, or 'ben,' which is used, on great occasions, as a bed-room; they sometimes have, between the two apartments, a space for lumber; and, in their general character and accommodations, even in spite of their broad and dark faults, they are superior to houses of the same rank in some of the northern districts of the mainland of Scotland. Attached to each cottage, and connected with the barn, is a small round antique-looking tower, used as a kiln,—an appurtenance rendered necessary by the absence of any public or purchasable means of drying corn. There have long been good public roads between Kirkwall and Stromness and on other main lines of interior communication; and now, in the latter part of 1856, measures are in progress for constructing new roads, and for improving the old ones, at an aggregate estimated cost of £16,000. The amount is intended to be raised by mortgage on the credit of the county assessment; and a sinking fund is to be formed for the ultimate redemption of the debt.

The Orcadians, though of the same parental stock as the Shetlanders, have fewer and less marked peculiarities of manner, and, maintaining a far freer and more frequent intercourse with the Scottish Lowlanders than with them, experience toward them the same feelings of strangeness which are entertained in the far south. The better classes are noted for their politeness; and even the middle and lower orders assume to be so much superior in good breeding to the corresponding orders on the continent, that, come from what quarter emigrants may, they are able to impart a polish to their manners. The language spoken is a dialect of the English, considerably purer in vocables and pronunciation than that spoken in almost any part of the Lowlands of Scotland, but marked in the utterance by the sibilant and guttural softness which belongs more to the Celtic than the Saxon tongues. Funerals, as in England and Ireland, are attended promiscuously by men and women. The dress, the customs, and all characteristic properties, have little or nothing in common with those of the Celtic Highlanders. The food of the peasantry in summer, is porridge for breakfast, bread and milk for dinner, and either of these for supper; and, in winter, it consists of the same fare, variegated with potatoes, which are enriched occasionally with butter or fish, or very rarely with butcher-meat; and in both seasons of the year, it frequently gives place, for both dinner and supper, to a meal of cabbages furnished from the well-stocked kail-yard which every cottage has as an appendage. All classes are, in the aggregate, as intelligent and as distinguished for attendance on the ordinances of Christianity as those of almost any part of Scotland. Superstitions of the same idle and wild character as those which prevailed till a comparatively late period in even the Lowlands of Scotland, and which still unqualifiedly inthral nine-tenths of the peasantry of Ireland, have, during the last sixty years, been in the progress of expulsion from Orkney, and have, to a chief degree, disappeared. Yet a considerable number of natives still tell stories of fairies

and their elfish pranks, and tremble to turn a boat at the commencement of a voyage contrary to the course of the sun, and apply pet names to the elements to propitiate their favourable influences in culinary or agricultural operations. The common people are inured to great fatigue, and are very adventurous both in fishing during rough weather and in climbing the rocks for sea-fowl and their eggs. In some parts they sweep the faces of bold cliffs and perpendicular or overhanging sea-coast in the same manner as the Norwegians, the Icelanders, and the people of St. Kilda,—one person being lowered down at a rope's end by others to the place where the birds nestle; but, in general, they practise a method of their own, one party rowing, under the rocks where the fowls build, a boat provided with a large net, and fastening to the upper corners of the net two ropes lowered down from the top of the rocks, and another party, stationed at the top, and who had let down the ropes, hoisting up the net till it is spread opposite the cliffs where the birds are sitting, holding it there while the boatmen below suddenly affright the birds, and make them fly out in disorder, with the sound of a rattle, and then immediately enclosing them in the bosom of the net, and lowering the prize into the boat.

Orkney is politically divided into the districts of South Isles, Mainland, and North Isles. The district of South Isles comprehends the inhabited islands of South Ronaldshay, Pentland skerries, Swona, Burray, Hunda, Hoy, Flota, South Pharay, and Graemsay; and is distributed into the parish of South Ronaldshay or united parish of St. Mary and St. Peter, the united parish of Walls and Flota, and the united parish of Hoy and Graemsay. The district of Mainland comprehends the inhabited islands of Pomona, Cava, Lambholm, Copinshay, and Gairsay; and is distributed into the parish of Orphir, the united parish of Holm and Paplay, the united parish of Deerness and St Andrews, the parish of Kirkwall and St. Ola, the united parish of Firth and Stenness, the parish of Stromness, the parish of Sandwick, the united parish of Birsay and Harray, and the united parish of Evie and Rendal. The district of North Isles comprehends the islands of Shapinshay, Wire, Enhallow, Rousay, Egilshay, Stronsay, Papa-Stronsay, Holm of Midgarth, Eday, North Pharay, Sanday, North Ronaldshay, Westray, and Papa-Westray; and is distributed into the parish of Shapinshay, the united parish of Rousay and Egilshay, the united parish of Stronsay and Eday, the united parish of Cross and Burness, the parish of Lady, and the united parish of Westray and Papa-Westray. Population of the South Isles district in 1831, 4,693; in 1851, 5,368. Houses, 1,002. Population of the Mainland district in 1831, 15,863; in 1851, 16,757. Houses, 3,266. Population of the North Isles district in 1831, 8,291; in 1851, 9,330. Houses, 1,817.

The Orkney islands seem to be the Cape Orcas of Diodorus Siculus, which, in the year 57, he notices as an extremity of Britain; and they were, if not subdued, at least surveyed, by the Roman fleet which sailed round the north of Scotland in Agricola's memorable campaign of the year 84. Under their classical or Romanized name of Orcades, they became familiar to the Romans, from their communications with the Celtic inhabitants of Britain, before the Scandinavian rovers appeared in the British seas. *Orc* is one of the three principal isles of Britain mentioned by the Welsh Triads; and it stands as the Welsh name of the Orkneys in Davis' and Richards' Dictionaries. *Orch*, in the British language, signifies what is outward, extreme, or bordering; and aptly designates the relative position of the islands during the British period; and joined to *ynys*, *enys*, or *inis*, the words respectively in British, Cornish, and Gaelic, for an island, it occasioned the group, as Romanizing or purely Celtic influence prevailed, to be variously denominated Orcades, Orcadia, Orchadia, Orchades, Orkenies, and Orkneys. Such is the apparently clear and natural origin of the name, as traced by that astute etymologist, the author of 'Caledonia.' Yet a writer in the Edinburgh Encyclopedia, speaking "undoubtedly," but assigning a reason only "probably," and substituting "a large marine animal" for a word, says, "The origin of the name is undoubtedly Teutonic, and is probably derived from Orkin, a large marine animal which has been applied both to whales and seals. Orkney, therefore, means 'land of whales or of seals.'"

The stone monuments which still remain, appear to indicate that the Orkney islands were colonized during an early period, by the posterity of the same people who settled Western Europe. Druid monuments abound, and, in one instance, [see STENNESS,] are so magnificent as to be inferior, in the estimation of antiquaries, only to those in Salisbury plain; and celts, flint arrow-heads, flint axes, and swords made of the bone of a whale, have numerously been found; yet such monuments, so characteristic of the Celtic tribes, and so common throughout the territories which were possessed by the Celtic Britons, are altogether unknown, and have been untraceable, in Shetland. Not the Scandinavians, then, who colonized alike the archipelago of Orkney and the archipelago of Shetland, but the same Celtic people who colonized South and North Britain, seem to have been the original or earliest inhabitants of the Orkneys. A tradition accordingly came down to the 15th century that two nations, denominated Peti or Papé, possessed these islands during ages before the more recent arrival of the Scandinavians. Yet, owing probably to some physical cause, the original people seem to have disappeared at some period prior to the Roman discovery of the country. The names of places in Orkney are almost as universally Teutonic as in Shetland; and exhibit such slender and doubtful traces of Celtic influence as would seem to prove that this had substantially ceased long before the epoch of the new colonization by the Scandinavian rovers. Celts paved the way for the Teutonic race even in Scandinavia itself, and, as settled there, were the giants of Rudbeck; and, in that country as in Orkney, they ceased to have any decided monuments in the topographical nomenclature. Tacitus asserts the Orcades to have been subdued by Agricola, but uses language too general to throw light on their condition. Pomponius Mela mentions them about the middle of the second century, and states their number at 30. Pliny numbers them at 40. Ptolemy brings them back to 30. Solinus, writing in 240, and looking possibly at only the considerable southern islands, reduces them to 3, and pronounces them uninhabited by men, and "only," according to Richard, "the haunt of seals, and orcs, and sea-mews clang." Chalmers, contemplating their desolation at this period, and not flinging away his former etymology of their name, which is necessary in order to account for at once the "Orcades of the Romans, "the Orc" of the Welsh, and the "Inis-Ork" of the Gaelic people of the neighbouring coast, thinks it not improbable, "if we may believe Wolf," as to *Ork* or *Oerck*, meaning in Danish, "a desert or uninhabited place," that the Danes, on visiting the islands, and seeing their wilderness appearance, gave them, from that word and *oee* or *ey*, "an isle," the name Ork-ees, "the uninhabited isles;" or, contemplating the abandonment of the islands to "seals, orcs, and sea-

mews," and, observing that in ichthyology *orc* or *orca*, signifies a monstrous sea-fish, he even thinks it possible that the Scandinavians derived or formed the name Ork-ey out of that word, and their own *ey*, "an isle." Truth, we would conjecture, lies between, and points to the British derivation as that of the original name, or the name as it became known to the Romans,—and at one or other of the Teutonic derivations as that which, suggesting itself and seeming graphic to the Scandinavians, recommended the original name to their adoption.

The Orkneys appear to have become, toward the close of the third century, or early in the fourth, the harbours of the ferocious seamen of northern Europe; and, in the time of Constantine, they loomed so bulkily in the distant view, as, at the division of the empire, to be specially mentioned along with Gaul and Britain as the patrimony of the Emperor's youngest son. In 366, the great Theodosius pursued the fleet of the northern pirates into their usual haunts, and, in a panegyric by Claudian on his victory, is said to have stained the Orkneys with the effusion of Saxon blood:—

> "——— Maduerunt Saxone fusio
> Orcades; incaluit Pictorum sanguine Thule,
> Scotorum cumulus flevit glacialis Ierne."

In 570, Columba found one of the Orcadian chiefs at the court of the Pictish king Bridei II., and arranged with him a mission of his disciple Cormac to the Orkneys. Cormac was possibly less successful than most of his fellow-Culdees, and either did not remain long in his adopted field of labour, or was not succeeded in it, as other Culdee missionaries were in theirs, by a college of preaching brethren; for he figures no further in the known history of the islands, and did not prevent them from being, for generations afterwards, an adopted home of Scandinavian heathenism. The islands, in an age rather of naval enterprise than of domestic industry, must have been but thinly inhabited and little cultivated. Yet their inhabitants, living chiefly by adventure, and signalized by reckless daring, seem frequently to have invaded the coasts of Pictavia; and, somewhere between 674 and 695, they were vigorously repulsed from one of their attacks by Bridei IV., and pursued by him into their usual retreats, amidst their shoals and isles. For two centuries afterwards they appear very dimly in history. Yet, during that period, many congenial colonists were very probably driven to share their bleak retreat and common exile from the frequent perturbations of their parent country; and, as well as the older settlers, they most likely yielded little subjection to any sovereign, and still less obedience to any government, but looked with stirring interest on the wild sea-kings wielding the dominion of the German main, and coming down with the swoop of an eagle, at intervals of their own choosing, upon whatever points they pleased of the Hebridean, the Pictavian, and the Scottish coasts.

In 870, Harold Harfager, or the Fair-haired, one of the chiefs of Norway, who had been dissatisfied with the territories he possessed, and had introduced discord and civil war among the little states around him, achieved by a naval victory the union and consolidation of the Norwegian provinces in subjection to his sway. Many of the princes and people, disgusted with his usurpations, or compelled to flee from his anger, left their native land, made a lodgment on Iceland, the Faroes, and the Hebrides, but especially on Orkney and Shetland, and thence sailed out in piratical or retaliative expeditions to intercept the trade and ravage the coasts of his kingdom. In 876, Harold, having equipped a fleet of invasion, made a descent on both the Orkney and the Hebridean islands, and subdued both, and established them under the authority of his vigorous government. On his return to Norway, he conferred the administration of Orkney on Ronald or Rognovald, Count of Merca, and the father of Rollo, the famous invader of Normandy, and the great-great-grandfather of William the Conqueror. In 920, Sigurd, the brother of Ronald, received by peaceful cession from him the Orcadian dominion; and he afterwards added to it Caithness, Sutherland, Easter Ross, and Moray; and he eventually fell on the battle-field in the last of these districts, attempting to fight his way to further conquest. The two brothers are jointly—and sometimes the one, sometimes the other, singly—reckoned the founders of the Orcadian dynasty. A long line of Scandinavian earls or jarls who succeeded them, affected the style of independent princes in Orkney; maintained possession of Caithness and Sutherland, and made their power to be felt in various parts of both the eastern and the Hebridean coasts of northern Scotland; wore the attributes and wielded the influence of enterprising and dauntless reguli; and, amid the dissensions of Norway, and their own plundering and piratical excursions, probably yielded but slight obedience to the Norwegian kings. Gottorm, the nephew of Ronald, and afterwards Halled his son, succeeded to the Orcadian earldom; but both were stupid and incompetent, and were allowed but a hasty quaff of the luxuries of power. Rollo and Einar, brothers of Halled, competing for the succession, the former "gained a loss" by defeat, marched off to try his fortune in France, and became Duke of Normandy, leaving to Einar the icicled little throne of Orkney, and opportunity to earn the curious fame of being the first to teach the Orcadians to use turf for fuel,—a fame which shows how primitive was their condition, and which has occasioned him to be known in history under the name of Torf-Einar. At or toward the close of the tenth century, Christianity, in the corrupted form in which it had been set up in the north-west of continental Europe, was forcibly introduced to Orkney, and made to supersede any slender remains, if indeed any remains there were, of its Culdee form, under the influence of Olaus, the first nominally Christian king of Norway.

In 996, Sigurd, the fourteenth Earl, succeeded to the dominion; he enjoyed the Orkneys, Caithness, and Sutherland, with a tribute from the Hebrides, and also, for a time, established his power on the coasts of Ross and Moray; he was of the blood of the Vikingr, and did not disparage the race by his adventures; and he, for years, made the eastern shores of Scotland writhe under the torture of his frequent piracies and forays, but, in 1006, bound himself up from further harassing his neighbours by marrying, as his second wife, a daughter of Malcolm II., the Scottish king. Yielding himself fully to the rough blandishments of those motives which were most seductive among the Vikingr, and, wearied with the dull amenities of repose around his own shores, he sailed away to the aid of Sigtrig, the sea-king of Dublin, and, in April 1014, fell in the bloody field of Clontarf, fighting against the renowned Brian Boramh, the King of all Ireland. A wild ode was composed in celebration of his fate, and has been translated by Gray, under the title of "the Fatal Sisters." The fabled singers of it were the Volkers, in northern mythology, whom Odin employed to choose in battle those who should be slain, to conduct them to his hall, and to furnish them with every luxury; and in six of the least ghastly stanzas, they are represented as saying:—

"Glitt'ring lances are the loom,
Where the dusky warp we strain,
Weaving many a soldier's doom,
Orkney's woe, and Randver's bane.

Shafts for shuttles, dipt in gore,
Shoot the trembling chords along,
Sword, that once a monarch bore,
Keep the tissue close and strong.

Mista black, terrific maid,
Sangrida and Hilda see,
Join the wayward work to aid;
'Tis the woof of victory.

Ere the ruddy sun be set,
Pikes must shiver, javelins sing,
Blade with clattering buckler meet,
Hauberk crash, and helmet ring.

Low the dauntless Earl is laid,
Gor'd with many a gaping wound:
Fate demands a nobler head;
Soon a King shall bite the ground.

Long his loss shall Erin weep,
Ne'er again his likeness see;
Long her strains in sorrow steep,
Strains of immortality!"

Einar, the eldest of four sons, whom Sigurd left by his first wife, succeeded to his earldom. But Torfin, his son by his second wife, the grandson of Malcolm II. of Scotland, only five years old at his father's death, and left in the Scottish king's care, was immediately put by Malcolm into military and tutorial possession of Caithness, and such other territories as had still, after his many conflicts, remained to Sigurd on the Scottish shore. Torfin resembled his father in stature of body, vigour of mind, and ambition of enterprise; he commenced, at the age of fourteen, his career as a Vikingr; he often, during his grandfather's reign, disquieted the coasts of Scotland by his ruthless and piratical exploits; he refused the usual tribute to the good Duncan, and necessitated him to march into Moray to enforce its payment; and he, at last, engaged in avowed warfare against Scotland, and held in scorn the favours it had bestowed. While, in an attitude of revolt, he rushed into hardy conflicts with "brave Macbeth, who well deserved that name;" and, though represented in a doubtful tone by Torfæus as the successful party in the strife, is poetically, and perhaps truly, sung by Shakspeare as defeated and overawed by the "peerless Macbeth." Yet he was neither crushed in power, nor sobered in ambition; he engaged in hostilities with his half-brothers in Orkney, slew one in battle, compelled another to flee, and wrested from the eldest several islands; he forced the Hebrides to purchase his forbearance by payment of tribute; he emulated the Scottish kings in splendour, and possibly equalled them in power; and at length, wearied with savage grandeur, and feeling "the compunctious visitings of nature," he went to Rome in search of remission of his crimes, and returning with mitigated emotions from the seat of priestly delusion and pretended pardon, he died about the year 1074, at the age of 65.

Torfin's successors, as vigorously as some of his predecessors, maintained the peculiar dominion, and exhibited the characteristic properties of the Vikingr. The whole race of Scandinavian earls, jarls, or sea-kings, were considered high in rank, skilful in peace, and almost redoubtable in war. They intermarried with the noble families of neighbouring countries, with the daughters of the petty kings of Ireland, and with the powerful royal families of Norway and Scotland. Commanding fleets to which antagonist powers had little or nothing to oppose, and roving from point to point of attack with a swiftness and a caprice which continually put vigilance to fault, they were known and feared along the sea-board of every territory within their reach; and sharing in the Norwegian expeditions against Scotland and England, or occasionally exhibiting, in expeditions of their own, the colours of the predatory hosts from the European continent, they were confounded with other assailants of the British shores under the general name of Danes, and figure in masques along the pages of English and Scottish historians as the constant and hereditary scourges of their countries. Their followers probably comprehended, not only the subjects of their proper dominions, but many independent adventurers, who only served with them for a time, or were periodically, or at intervals, attracted to their standard by the news of an intended expedition, or the prospect of war and plunder. They nursed their people for conflict by encouraging them to reap the fruits of the earth during the mellowness of autumn, and treating them to festivity during the gloom of winter; and then, in summer, they bounded away to the Western Islands or the Scottish shores, to England or to Ireland, to conduct "predatory excursions against their fellow-men, much in the same manner as their descendants of the present day join in expeditions against the fish of the neighbouring seas, or the levinthans of Greenland. These were the men,

'Who for itself could woo the approaching fight,
And turn what some deem danger to delight.'"

From the year 1098, when Magnus Barefoot, the powerful king of Norway, castigated the Orcadians, and made them smartingly feel his superiority, the Earls acknowledged their dependence on the Norwegian crown, and formally declared their allegiance; and, at a later date, when refinements began to be observed in the courts of the northern princes, they even received from the kings of Norway regular investiture. At length, about the year 1325, the male line of the ancient Earls, the descendants of Ronald, failed in the person of Magnus V., leaving the earldom to pass into an entirely new current of both possessors and events. The succession of the Scandinavian Earls is carried down to its close, and the exploits of each stirring individual of the series are fully exhibited in the Orcades of Torfæus, a work which he compiled from the ancient sagas and the Danish records, and are shown with sufficient amplitude in the abridgment of Torfæus' work in Dr. Barry's History of Orkney.

On the failure of the Scandinavian dynasty, the earldom passed to Malis, Earl of Strathearn, who was married to the only daughter of the last Earl, Magnus V.; and afterwards, in 1379, it passed to "the lordly line of high St. Clair" or Sinclair. While William Sinclair, the third of his name, held the earldom, the young king of Scotland—James III.—pressed with the difficulty of Christian I., king of Denmark, Norway, and Sweden, having demanded payment of a long arrear of "the annual of Norway"—married Margaret, the princess of Denmark; and, in 1468, obtained as her dowry 2,000 florins in money, and the impignoration of Orkney for 50,000 florins, and of Shetland for 8,000 more. As the islands were never ransomed from the pledge, they thenceforth became politically and entirely attached to Scotland. In 1470–1, the earldom of Orkney and the lordship of Shetland were, as to their "haill richt," purchased by James III. from the Sinclairs, and annexed by acts of parliament to the Crown, not to be alienated, except in favour of a lawful son of the King. The power of the Orcadian bishop, however, which had grown up

from littleness to grandeur under the administration of the later Earls, was, to a certain extent, co-ordinate with that of the King as lord of the islands. "The old bishopric of Orkney was a greate thing, and lay sparsim throughout the haill parochines of Orknay and Zetland. Beside his lands, he had ye teinds of auchteen kirks: his lands grew daily, as delinquencies increased in the countray." Many small proprietors, too—the udallers—had heritages intermingled all over both archipelagos, with the lands of the King or the quondam Earls, and with those of the bishop; and, while they paid scats and other articles to the regnant superior of the soil, they claimed to retain Norwegian customs, and to be governed by Norwegian laws. In 1474, and at two subsequent dates, leases for various periods of years were given of the earldom to the bishop, and occasioned the country, till the death of James III. in 1488, to be almost entirely, in its civil matters, under prelatic administration.

In 1489 and 1501, Henry Lord Sinclair, a descendant of the quondam Earls, obtained from James IV. leases of the earldom, at the low rate of £336 13s. 4d. Scottish, at which it had been leased to the bishops; and though he fell in 1513 at Flodden, the property was, at the same rent, continued, by successive leases, to Lady Margaret, his widow. In 1529, the Earl of Caithness and Lord Sinclair, either to usurp the renewed lordship of the whole purchased earldom, or to take forcible possession of Lady Margaret's lease, or to adjust some question arising out of intermixture of rights, or to extinguish the udal holdings of the ancient inhabitants, and to subject them to feudal grantees of the Scottish crown—for all these reasons have been, by turns, assigned—invaded Orkney with an armed force, and were encountered by the governor of Kirkwall castle, heading the Orkney-men and others at Summerdale or Bigswell in Stenness; and there they sustained a disastrous and extinguishing defeat, the Earl of Caithness and 500 of his followers being slain, and Lord Sinclair and all the survivors of the force made prisoners. In 1530, a grant of the islands, in form of a feu, was—in defiance both of the settlement by parliamentary acts under James III., and of Lady Margaret Sinclair's lease—given to the Earl of Moray, the natural brother of James V.; but it proved nugatory, and never brought any proceeds of the islands into the grantee's possession. About 1535, James V. made a personal visit to Orkney,—the only royal visit which was ever made to it by either the Stuarts, or the present dynasty, both descendants of Ronald, the founder of the Scandinavian earldom; and during his stay at Kirkwall, he was hospitably entertained in the bishop's palace, and received the homage of the loyal among the natives, and directed maritime surveys to be made of the intricate navigation of the surrounding and intersecting seas; and, at his departure, he carried off to the seat of justice the more turbulent and dangerous of the inhabitants. In 1540, the favourable leases to Lady Margaret Sinclair terminated by a general act of annexation and revocation. Oliver Sinclair of Pitcairns was the last lessee of his family; and he obtained, for an advanced annual rent of £2,000, two successive leases, the latter of which expired in 1548. His name is associated with one of the most humiliating transactions recorded in the history of our country,—the disloyalty of the Scottish nobles, and the dishonour of the Scottish arms at Solway moss. The family of Sinclair in Orkney may be regarded as having been extinguished at the premature death of James V.; and they have now, on the scene of their ancient greatness, and the seat of their ancient residence and power, no memorial except the rubbish of their castle,

> "—— Where restless seas
> Howl round the storm-swept Orcades,—
> Where erst St. Clair bore princely sway
> O'er isle and islet, strait and bay;"
> —"Still nods their palace to its fall,
> Thy pride and sorrow, fair Kirkwall."

The earldom of Orkney became part of the jointure of the widow of James V. immediately after his death, and remained with her till her own death in 1560, and, when she was called to the regency, it was placed by her under the administration of Bonot, a Frenchman, whose appointment was extremely unpopular. How it was disposed of during 15 years following her death, is not known. At the accession of Mary the country began to be subjected to a series of changes and oppressions, in its masters and their tyrannies, which to a great extent revolutionized its condition, and continue to the present day to affect very deeply in many points the most important interests of individuals and of the whole community. In 1564, Lord Robert Stuart, the natural brother of the Queen, received by written charter, for an annual rent of £2,000 13s. 4d. Scottish, "all and whole the lands of Orkney and Zetland, with all and sundry the isles belonging and pertaining thereto, with all and each of the castles, towers, fortalices, woods, mills, multures, fishings, tenants, service of free tenants, with the whole superiority of free tenants, advocation, donation of churches, and with the office of sheriff of Orkney, and sheriff of the Fouldrie of Zetland." James, Earl of Bothwell, for a brief moment, in 1567, enjoyed an annulment in his favour of this grant to Lord Robert, and was plumed with the high designation of Duke of Orkney; but, if ever he at all obtained infeftment, he had but momentary possession, for, exactly a month after the date of the marriage-deed, which assigned him Orkney with its new title, he fled from Carberry-hill, and for ever lost sight of his phantasmagorial dukedom. At the close of the same year a question was agitated in parliament "quhider Orknay and Zetland sal be subiect to the commone law of this realme, or gif thai sal bruike thair awne lawis?—when it was found that thai aught to be subiect to thair awne lawis."

Lord Robert Stuart, on obtaining possession of the earldom, had as commendator or abbot of Holyrood, exchanged his temporalities with the bishop of Orkney for those of the bishopric, thus uniting in himself the rights both of the Earl or the Crown and the bishop; and, a little before the Queen's marriage, he got a right to her third of the revenues of Holyrood abbey, or a pension of £990 of money, besides a large quantity of every sort of grain, and was in consequence prevented from clamouring at the change which was made in favour of Bothwell. The earldom or crown estate of Orkney, is said by some authorities to have been resumed by him on Bothwell's disgrace; but from an extant act of parliament it appears to have, for 14 years, or till 1581, regularly yielded up its revenues for behoof of the Crown. In 1581 it was restored to him by act of parliament, with the same latitude of possession and loftiness of jurisdiction as when originally granted by Mary; in 1587 it was revoked by another act of parliament, and for two years afterwards was let out for £4,000 Scottish a-year, to Sir John Maitland of Thirlstane and Sir Ludovick Ballantine, who were respectively Lord-chancellor and Justice-clerk; in 1589 it was re-granted to Lord Robert Stuart for an annual rent of £2,073 6s. 8d. Scottish; and in 1591 it was infefted to his lordship

in life-rent, and his son Patrick in fee. After Lord Robert's death, which occurred in 1592, and another resumption made by the Crown, Patrick got charters, in 1600, of both the earldom and the bishopric, so that their joint rights were concentrated in his person; yet he obtained not, as Mary's grant gave to his father a right either to "the whole" lands and isles of Orkney and Shetland, or to the feudal superiority over the landholders, but, on the other hand, was bound to administer justice according to the peculiar laws of the region before it belonged to the Scottish crown. Both his father and he, however, were proud, avaricious, cruel, and dissipated; and, whether they possessed power legally, or could wield it by extortion and usurpation, they cared not, provided they could so work it as to demolish the rights and liberties of their people, and amass for themselves the influences, the monopolies, and the possessions of tyranny.

Udal lands and tenements were free from taxation to the Crown, or vassalage to a lord superior; they could not be alienated, except by what was called "a shynde bill," obtained with the consent of all heirs in the Fouldry court; and, at the death of a possessor, they were divided, without fine and in equal portions, among all their children. Earls Robert and Patrick aimed with their whole energy to destroy the system, and to introduce feudal tenures; they so summoned and adjourned the great Fouldry court, as to possess a master-key to its movements; they perverted both this court and every other by the introduction of their creatures; they silenced and overawed the refractory udallers by means of a licentious soldiery; and they employed their rights over the temporalities of the bishopric as a pretext for levying fines from such landholders as incurred any censure of the church. They, in consequence, wrested much landed property from the rightful owners, and terrified not a few of the udal proprietors into a surrender of their peculiar privileges, an acknowledgment of feudal vassalage, and an acceptance of tenure by charter. The rents of the earldom being paid chiefly in kind, too, they, in order to increase the amount of proceeds without changing the nominal bulk, twice arbitrarily increased in value the weights used in the country; raising the mark, which was originally 8 ounces, first to 10 and next to 12, and the lispund, which was originally 12 pounds, first to 15 and next to 18. Earl Patrick even excelled his father in outrageous despotism; he compelled the people to work like slaves in carrying on his buildings and other works; he confiscated the lands of the inhabitants on the most trivial pretences; he summarily distrained the moveable goods of any man who dared to leave the islands without his own or his deputies' special licence; and—in crowning display of at once his savageness and his avarice—he ordained that "if any man tried to supply or give relief to ships, or any vessel distressed by tempest, the same shall be punished in his person, and fined at the Earl's pleasure." Such lugubrious wailings and indignant complaints were eventually and increasingly addressed to the throne, in appeal from his multiplied oppressions, that he was at length recalled, shut up in prison, and accused of high treason. His natural son, the bastard of Orkney, aided by about 500 persons—probably military retainers who identified their own interests with the family's illegal greatness—made an ineffectual attempt to achieve some feat in his favour. The miserable Earl was abhorred over the scene of his despotisms; he was violently suspected at court; he was vigilantly prosecuted by Law, the bishop of Orkney; he probably suffered from contorted and exaggerated because interested accusation; and, in 1612, by really a judicial murder, however foul were his crimes, he was ignominiously hanged at Edinburgh. His name, particularly in Shetland, continues to the present day to be mentioned with antipathy and disgust.

The lands of the earldom, under the pretext that a forfeiture might injure those proprietors who had resigned their udal tenures and taken out charters, were not, according to the usual course, declared forfeited immediately upon Earl Patrick's attainder. Many of the proprietors were instantly alarmed into the measure of asking and accepting charters from the Crown in the usual feudal form; and all, under apprehension that another taskmaster might be set over them akin in character to the two last, importuned the King to annex the islands inalienably to the Crown. James VI. thus all but completed the ruin of the feudal tenures; and he, at the same time, mocked the distracted islands with a most unkingly double-tonguedness of treatment. He formally annexed "the lands and earldom of Orkney and Zetland to the Crown to remain in time coming," and he admonished the people by proclamation against all fear of the islands reverting "to their former condition of misrule, trouble, and oppression;" yet he made no restoration of the lands which had been unlawfully seized by the last Earls, he set up the rental of Earl Patrick as the rule for future guidance, and, to complete his tantalizing conduct, he immediately began to let them out on high terms to a series of farmers-general. Sir James Stewart of Kilsyth held them for a brief period. Sir George Hay of Kinfauns, the Lord-chancellor, next rented them for 40,000 merks Scottish a-year; but, probably finding them no great bargain, after they had been so long plundered by the two Earls, he resigned them at the end of three years. The inhabitants, after being for a short period oppressed without mercy by some other farmers-general, petitioned the King that no man might "be interponed between his Majesty and them, but that they might remain his Majesty's immediate vassals." In response to this appeal, the islands were, for a few years, closely annexed to the Crown; but they again began to be leased out for rents, high or low according to the interest the lessees had with the court or the ministry, and to be subjected as before to such ceaseless maltreatment as was utterly incompatible with social prosperity, or with advance in the arts. In fact, for two centuries after their cession by Norway to the Crown of Scotland, Orkney and Shetland seem to have been much in the condition of a Turkish province undergoing the rival and emulating scourgings of a quick succession of rapacious pashas.

In 1643, they were, with all the regalities belonging to them, granted by Charles I. in mortgage to William, Earl of Morton, but were redeemable by the Crown in payment of an alleged debt of £30,000. They were, however, mortgaged by the next Earl to assist Charles, and were afterwards confiscated by Cromwell. At the Restoration in 1662, they were given back to the Earl of Morton; and under his arbitrary control, the Fouldry court was abolished. In 1669, they were again, by act of parliament, annexed 'for ever' to the Crown; and, during upwards of 30 years, they were anew leased out to various farmers-general. In 1707, they were restored in the old form of a mortgage—redeemable by the Crown for £30,000, but subject to an annual feuduty of £500—to James, Earl of Morton, and were placed under his jurisdiction as their admiral and hereditary steward and justiciary. In 1742, Lord Morton, though his revenues from the islands were computed to amount to £3,000 sterling a-year, pretended that they did not yield a rental equal to the interest of the alleged mortgage, and contrived, on

this pretext, to get an act of parliament declaring them irredeemable. In 1747, at the abolition of hereditary jurisdictions, he was compensated for those of Orkney and Shetland with £7,500; and, in 1766, after being harassed with complaints, quarrels, and lawsuits, he sold the estate for £60,000 to Sir Lawrence Dundas, the grandfather of the present Earl of Zetland. One of the lawsuits, and the chief one which annoyed the Earl of Morton, was a judicial attempt on the part of the proprietors to get the weights which regulated their rental in kind restored to their original value; but it proved unsuccessful. Sir Lawrence Dundas, in his turn, met a similar defeat; for, conceiving soon after he made his purchase, that he was entitled to higher powers than had been wielded by his predecessor, he made an expensive but vain effort to get them recognised by the law-courts. In later times the Dundas family, who continue to enjoy the great estate, have flung many amenities over islands which were so long desolated by oppression, and have erected so many monuments in the hearts of the people, and sprinkled so many improvements over the surface of the soil, as furnish materials for an altogether new era in their history.

The lands which belonged to the bishops of Orkney, and which lay intermixed on every island, parish, and even township, with those of the earldom, were, about the close of the 16th century, so exchanged and compacted as to be substituted by continuous and unique lands in Pomona and other islands. The jurisdiction of the bishopric and of the earldom were, at the same time, rendered distinct, and instead of perpetuating the contentions which arose out of their union, began to be exercised with concord to the country. Bishop Law, by whose influence these changes were effected, and who interested himself much in the civil welfare of Orkney, was, in 1615, translated to Glasgow. His successor, threatened with excommunication by the General Assembly which met at Glasgow in 1638, and awed by its proceedings in pronouncing the abolition of episcopacy, quietly resigned his see. The bishopric was afterwards, for a short time, revived; nor, till about the year 1700, did it wholly yield to the ascendancy and final establishment of Presbyterianism. The revenues of the see have, since that period, been either held by the Crown, and managed by an agent, or leased out to the holders of the earldom, or to farmers-general; and at present they are under the control of the commissioners of the Queen's woods, forests, and land-revenues, to be expended, as is believed, for the benefit of the Crown.

ORKNEY AND SHETLAND, a maritime county, comprising the northern islands of Scotland. In its topography, agriculture, trade, and all other matters, except its collective statistics, it will be found fully noticed in the two articles Orkney and Shetland. Its area has been variously estimated at 936 square miles or 598,726 acres, and 1,325 square miles or 848,000 acres; and according to the latter estimate, 220,000 acres are cultivated, 112,000 are pastoral, and 516,000 are unprofitable. In 1854 there were 329 landowners; of whom 266 had a Scotch valuation not exceeding £50,—25 not exceeding £100,—12 not exceeding £200,—10 not exceeding £500,—6 not exceeding £1,000,—6 not exceeding £2,000,—2 not exceeding £5,000,—1 not exceeding £10,000,—and 1 upwards of £10,000. In the same year there were 6,541 occupiers of land, each paying a rental of less than £20, and aggregately holding 44,961 acres of arable land, and possessing 9,219 horses, 36,789 cattle, 38,758 sheep, and 8,915 swine. The valued rent in 1674 was £57,786 Scotch; the annual value of real property, as assessed in 1815, was £20,938,—in 1849, £40,054; and the real rental, as ascertained under the new valuation act in 1855, was in Orkney, £40,900 14s. 10d.,—and in Shetland upwards of £22,000. The average fiars prices from 1848 to 1854, both inclusive, were 16s. 8$\frac{6}{12}$d. for bere, 12s. 3$\frac{1}{12}$d. for oatmeal, and 15s. 3$\frac{8}{12}$d. for malt.

The parliamentary constituency of the county in 1855 was 664; of whom 472 were in Orkney, and 192 in Shetland. The sheriff, commissary, and admiralty courts are held at Kirkwall and at Lerwick on Thursdays during session. Sheriff small debt courts are held at Stromness four times a-year; at St. Margaret's Hope, in South Ronaldshay, three times a-year; and at Burravoa in Shetland, twice a-year. Justice of peace small debt courts are held at Kirkwall on the first Wednesday of every month, at Stromness on the last Tuesday of every month, and at Lerwick on the first Tuesday of May, and on the first Wednesday of every other month. The number of committals for crime, in the year, within the county, was 27 in the average of 1836—1840, 52 in the average of 1841—1845, 37 in the average of 1846—1850, 31 in 1852, 44 in 1853, and 45 in 1854. The sums paid yearly for expenses of criminal prosecutions, in the years 1846—1852, ranged from £285 to £752. The total number of persons confined, within the year ending 30th June 1854, in the jail at Kirkwall, was 40, and in the jail at Fort Charlotte in Shetland, 52; and the average duration of the confinement of the former was 18 days,—of the latter 28 days. Nine parishes in the county are assessed, and 23 unassessed, for the poor. The number of registered poor in the year 1852-3 was 1,682; in the year 1853-4, 1,708. The number of casual poor in 1852-3 was 360; in 1853-4, 386. The sum expended on the registered poor in 1852-3 was £2,377; in 1853-4, £2,490. The sum expended on the casual poor in 1852-3, was £286; in 1853-4, £236. The assessment in 1855, in Orkney, for prisons, was 2s. 10$\frac{1}{2}$d., and for rogue-money, 8s. 5$\frac{1}{2}$d. per £100 Scots of valued rent; in Shetland, for prisons and rogue-money, 7$\frac{3}{4}$d. per merk land. Population of the county in 1801, 46,824; in 1811, 46,153; in 1821, 53,124; in 1831, 58,239; in 1841, 61,065; in 1851, 62,533. Males in 1851, 27,495; females, 35,038. Inhabited houses in 1851, 11,334; uninhabited, 321; building, 23.

The county is ecclesiastically divided into the synod of Orkney, with the three presbyteries of Kirkwall, Cairston, and North Isles, and the synod of Shetland, with the three presbyteries of Lerwick, Burravoe, and Olnafirth. The number of original parishes is much greater than the extent of the territory requires, and is variously estimated; but many of the parishes are clustered into unions, and two or three are subdivided, so that the number of ministerial charges, within the Established church, is 31 quoad civilia, 4 quoad sacra, and 2 of a mere chapel character. The patronage of all the quoad civilia parishes, excepting those of Kirkwall and St. Ola, is in the hands of the Earl of Zetland. The Free church also has a synod of Orkney, and a synod of Shetland; each, however, comprising only one presbytery, the synod being a presbytery, and the presbytery a synod. The United Presbyterian church likewise has a presbytery of Orkney, comprising 15 congregations, 12 of which are in the Orkney islands, 2 in Shetland, and 1 in Caithness. In 1851, the number of places of worship within the county of Orkney and Shetland was 151; of which 55 belonged to the Established church, 26 to the Free church, 17 to the United Presbyterian church, 2 to the Original Secession church, 18 to

the Independents, 9 to the Baptists, and 24 to the Original Connexion Methodists. The number of sittings in 39 of the Established places of worship was 16,538; in 22 of the Free church places of worship, 8,570; in 14 of the United Presbyterian places of worship, 6,819; in the 2 Original Secession places of worship, 950; in 14 of the Independent chapels, 2,935; in 5 of the Baptist chapels, 685; and in 18 of the Original Connexion Methodist chapels, 3,264. The maximum attendance on the Census Sabbath at 34 of the Establishment places of worship was 7,192; at 21 of the Free church places of worship, 4,624; at 14 of the United Presbyterian places of worship, 5,347; at the 2 Original Secession places of worship, 386; at 13 of the Independent chapels, 1,300; at the 9 Baptist chapels, 764; and at 15 of the Original Connexion Methodist chapels, 1,327. There were in 1851, in the county, 111 public day schools, attended by 3,653 males and 1,954 females,—31 private day-schools, attended by 396 males and 498 females.—and 130 Sabbath-schools, attended by 2,821 males and 3,706 females.

ORMIDALE. See Kilmadan.

ORMISTON, a parish, containing the post-office village of Ormiston, and the village of House of Muir, in the middle of the western verge of Haddingtonshire. It is bounded on the west by Edinburghshire, and on other sides by the parishes of Tranent, Pencaitland, and Humbie. Its length, from north to south, is 4½ miles; its breadth, owing to deep indentations and projections on its east side, is exceedingly changeful, and varies from 3 furlongs to 3½ miles; and its area is 3,245 acres. The surface, along the southern frontier, is somewhat upland and bare; but everywhere else it is low, beautifully cultivated, and well embellished. About 30 parts in 33 of the whole area are in tillage; and between 160 and 180 acres are under plantation. The soil is very variable, ranging from a light loam on a gravelly bottom to a stiff clay upon a bottom of till. A considerable aggregate is disposed in gardens, yielding marketable produce to the value of about £900 in the year. The arable lands, exclusive of the gardens, were estimated in 1835 to yield an annual produce to the value of £12,865, and the pastures to the value of £1,333. The Tyne, here a mere streamlet, about 8 miles from its source, runs ¼ a mile north-eastward within the parish, and ⅔ of a mile eastward along the southern margin of one of its projections; and the light loamy land, with gravelly subsoil, lies along both sides of this stream. Coal exists in at least three workable seams; but, south of the Tyne, appears to have been worked at a date beyond record, and is nearly exhausted. Limestone abounds in the south, and has long been extensively worked. Freestone is plentiful, and in several places has been quarried, but is not of good quality for building. Ironstone seems also to exist. The Earl of Hopetoun is the sole heritor of the parish, and has a seat, called Ormiston Hall, nearly in its centre. Part of the old mansion-house of the manor stands about 200 yards to the west, and is consolidated with buildings which form the suite of offices and servants' houses. The modern mansion consists of four parts, three of them built at various periods since 1747, when the estate was purchased by the Earl of Hopetoun, and one by the former proprietor in 1745. In the old house George Wishart the Reformer, then under the protection of Cockburn, its proprietor, was, in January 1545, made prisoner by the Earl of Bothwell, and thence led away to martyrdom, under the infamous Cardinal Beaton, at St. Andrews. In the garden flourishes a remarkable yew-tree, under which the venerable martyr is said to have occasionally preached. The tree is probably upwards of 3½ centuries in growth, having been considered old in 1561; it measures 18 feet in girth, 58 feet in height, and 180 feet in the circumference of its branches, or the area which they overlie. In the south corner of the parish are vestiges of a circular camp, British or Danish. On the lands of Paiston anciently stood a village of about ½ a mile in length; and between that village and Templehall there were anciently a burying-ground and probably a church. The parish is well provided with roads; but the nearest railway station is at Tranent. Population in 1831, 838; in 1851, 811. Houses, 161. Assessed property in 1843, £5,523 18s. 6d.

This parish is in the presbytery of Dalkeith, and synod of Lothian and Tweeddale. Patron, the Earl of Hopetoun. Stipend, £250 4s. 7d.; glebe, £20. Unappropriated teinds, £190 13s. 7d. Schoolmaster's salary, £29 18s. 9d., with about £30 fees, and some other emoluments. The parish church was built in 1856, and contains 420 sittings. It is an elegant structure, in the Old English Gothic style of architecture. There is a Free church, with an attendance of 110; and the amount of its receipts in 1856 was £48 5s. 11½d. There are non-parochial schools at Paiston and House-of-Muir. The ancient church was dedicated to St. Giles; and was granted, with its pertinents, to the hospital of Soutra. When the possessions of that hospital were annexed by the widowed queen of James II. to her collegiate church of Trinity in Edinburgh, the ecclesiastical revenues of Ormiston were distributed in equal shares among the four prebendaries of Ormiston, Gileston, Hill, and Newlands, belonging to her college. The estate of Paiston, which now forms the south end of the parish, was annexed to it after the Reformation; and previously belonged to Pencaitland. The descendants of the Orme, whoever he was, who gave name to the original parish, possessed it during the 12th and 13th centuries. In 1368 it passed by marriage to the family of Cockburn, and remained with them till the middle of last century. The Cockburns were, for several generations, distinguished as lawyers and statesmen, figuring illustriously both in the college-of-justice and in parliament. John, the last but one of the family, acted a prominent part in the negotiation of the national union, and represented Haddingtonshire in successive parliaments of the United Kingdom from 1707 to 1741. But his chief fame is, that he was the grand promoter of modern agricultural improvement in East Lothian, the originator at Ormiston of the first bleachfield in the kingdom, and the introducer of various other though less signally useful arts and establishments.

The Village of Ormiston stands at the intersection of the road from Tranent to Pathhead with the road from Pencaitland to Dalkeith, on the left bank of the Tyne, on a site 276 feet above the level of the sea, 1⅔ mile west of Pencaitland, 2½ miles south of Tranent, 6 east by north of Dalkeith, 8 west-south-west of Haddington, and 12 east-south-east of Edinburgh. It consists principally of one broad street, extending east and west. Some of the houses are of two stories; and these, as well as some cottages, are occasionally let to genteel families as summer retreats. Gardens are attached to all the principal houses, stocked with fruit-trees and shrubs, and, in some instances, well-enclosed with stone walls. The village is shaded with wood, stands in the vicinity of the Earl of Hopetoun's beautiful demesne, and presents soft but powerful attractions to lovers of quiet, balmy, rural landscape. Toward the end of last century it had a bleachfield, a starch-work, a distillery, and a brewery; but it is now bereft of

them all, and has become the home chiefly of an agricultural people. In the centre of it stands an old cross, on the site of an ancient Roman Catholic chapel, which remained entire at the end of last century, and was then used as the parish schoolhouse, but has since been removed. Population, about 340.

ORMISTON, Roxburghshire. See ECKFORD.

ORMISTON-HILL. See KIRKNEWTON.

ORMISTON (OLD). See NORTH BRITISH RAILWAY.

ORMSARY. See KNAPDALE (SOUTH).

ORNOCHIE. See MONIFIETH.

ORONSAY. See ORANSAY.

ORPHIR, a parish, containing a post-office station of its own name, in the south of the Mainland district of Orkney. It comprises the island of Cava and a district, constituting its main body, in Pomona. Cava has been noticed in its own alphabetical place. The Pomona district, or main body of the parish, is bounded on the north-west and north by Stenness and Firth, on the east by Kirkwall, and on the south and west by Scalpa flow. It is nearly a parallelogram extending from east-north-east to west-south-west, and measures 7 miles by about 3½. A range of hills runs along the north-western and northern boundary, lifting the highest summit 700 feet above sea-level; and the surface thence to the sea is a tumulated descent, giving, amidst a continued series of hills and dales, a prevailing southerly exposure. The eastern district is characterized by heathy rising grounds and large peat-mosses, whence fuel is supplied to both Orphir and Kirkwall. The soil of the other districts is predominantly clay or moss, separate or in mixture; and, when well-manured, it yields, even under indifferent culture, more than sufficient produce for local use. A few places near the coast have a rich loam mixed with stones. The Loch of Kirbister, a little south-east of the centre of the parish, is between 2 and 3 miles in circumference, abounds with excellent sea-trout, and sends off a streamlet of sufficient water-power to drive extensive machinery. The sea-coast, including sinuosities, extends to 12 miles; it has, in general, a bold rocky shore of from 40 to 50 feet high; and it is finely indented with bays and creeks, one of which, called the bay of Houton, is protected by an islet at the entrance, and forms a safe harbour for small vessels. Mineral springs occur in every district; and one at Scoridale has long been noted for its tonic, diuretic, and antiscorbutic properties. Sandstone abounds; trap, of a kind suitable for building, is frequent; some excellent flagstones are quarried; fine white and blue clay, such as serves for colouring hearth-stones, is dug up in Staugro-bay; and bog iron-ore is comparatively plentiful. The principal landed proprietors have neat comfortable dwellings and large gardens. The late Lord Armadale, a judge in the Court of Session, was the most extensive landowner of the parish in his time; and his mansion, called the Hall of Clairstran, is a double house of modern construction, at present occupied by a tenant. Belonging to the parish, about a mile east of Cava, is a curiously formed rock or skerry, well-known to seamen, and fantastically called the Barrel of Butter. In the parish churchyard are the remains of a very ancient building, rudely resembling the Pantheon at Rome, a rotundo, open at top, 20 feet high, 18 feet in diameter, and sending out, on the east side, a vaulted recess, the site probably of an ancient altar. Remains of Romish chapels—of which this seems to have been one—occur in every district. Barrows or tumuli are numerous. An ancient circular tower about 180 feet in circumference, stands in the district of Swanbister, and probably was the residence of Sueno Boerstrop, who was killed at the house of Paul, one of the Norwegian Counts of Orkney. The parish is advantageously situated for commerce; and is traversed by the road from Kirkwall to Stromness. Population in 1831, 996; in 1851, 1,157. Houses, 248. Assessed property in 1815, £1,166.

This parish is in the presbytery of Cairston, and synod of Orkney. Patron, the Earl of Zetland. Stipend, £158 6s. 7d.; glebe, £12. Schoolmaster's salary, £26, with about £6 fees. The parish church was built in 1829, and contains 574 sittings. There is a Free church; and the sum raised in connexion with it in 1856 was £83 1s. 4½d. There are two schools maintained by mortifications. A hill behind the manse commands a view of twenty-five islands and twenty-three parishes, or of most of Orkney and much of Caithness and Sutherland, with a large expanse of the eastern and western oceans. Orphir is supposed to have its name from *yarfo* or 'fireland,' a species of fuel-earth with which its eastern district supplies the circumjacent country.

ORR, Kirkcudbrightshire. See URR.

ORR (LOCH). See BALLINGRAY.

ORR (THE), a rivulet of the south-west of Fifeshire. It rises on the eastern skirts of the Saline hills, and runs in an easterly direction, through the parishes of Dunfermline, Beath, Ballingray, Auchterderran, and Dysart, to a junction with the Lochty at the boundary between the last of these parishes and Markinch; and the united stream flows 1½ mile further, through Markinch, to a confluence with the Leven, at a point about 3 miles above the latter's influx to Largo bay. The Orr's entire length of course, to its confluence with the Leven, is, exclusive of windings, about 15 miles. It traverses Loch Fitty on the mutual border of Dunfermline and Beath, and receives the Kelty on its left bank on the western border of Auchterderran, and the stream coming from Loch Gelly on its right bank near the church of Auchterderran. It has everywhere a flat course, and is a muddy stream of no great depth.

ORREA. See REDGORTON and FORFAR.

ORRIN (THE), a river of the south-east of Rossshire. It rises on the north side of Craig-Mon, 5 miles north of Loch-Monar, and has an easterly course of about 27 miles to the Conan, below Brahan-castle in Urray. A little below its source it expands into the lochlets Negin and Neriech. The Orrin is a very irregular stream; now very generally fordable, and now rolling along in sudden and vast floods which spread terror and devastation over lands adjacent to its banks. A wooden bridge thrown across it behind the manse of Urray, at the expense of Mr. M'Kenzie of Seaforth, was swept away by a flood in 1839, but was replaced by a stronger erection at the expense of the county.

ORROCK, a high basaltic hill in the parish of Burntisland, Fifeshire. Part of it displays a beautiful basaltic colonnade; and its west side is bare and steep, and has its skirts covered with debris.

ORSAY (ISLE), or OVERSAY, an islet at the point of the Rhinns of Islay in Argyleshire. Here stands a lighthouse, erected in 1824, showing a light which flashes once in every five seconds, and is visible at the distance of 17 nautical miles.

ORTON, a post-office station in the parish of Rothes, Morayshire.

ORWELL, a parish, containing the post-town of Milnathort and the village of Middleton, in the north of Kinross-shire. It is bounded on the eastern part of the south by Loch-Leven, and elsewhere by the parishes of Kinross, Fossoway, Dunning, Forgandenny, Forteviot, Arngask, Strathmiglo, and Port-

moak. Its length eastward is 9½ miles; its greatest breadth is about 3½ miles; and its area is about 21 square miles. The surface, in all the southern and south-eastern districts, is low, prevailingly level, and diversified with gentle swells and rising-grounds; and thence it gradually rises into hilly heights, called the braes of Orwell, and then, toward the northern boundary, shoots suddenly up into a frontier range of the Ochils, with summits of about 1,000 or 1,100 feet above sea-level. The soil in the low districts is partly loam, but principally a sandy clay, occasionally mixed with till or gravel; and that of the arable parts of the braes is generally a sharp good gravel, well adapted to potatoes and turnips. The prevailing rock is the old red sandstone, extensively dislodged and not a little contorted by trap. A mass of clay porphyry, unusually hard and compact, occupies several miles in the west; and a smaller, though still vast, mass of greenstone occurs in the east. The South Quiech begins to touch the north-west extremity of the parish a little below its source; and, before passing into Kinross, runs nearly 5 miles along the western and southern boundary. The North Quiech rises very near the north-west extremity; makes some beautiful little cascades among the hills; and, over a course of about 6 miles south-eastward to Loch-Leven, drains the greater part of the parish. Pure water wells up in many a spring, and may anywhere be obtained by a brief boring. The margin of Loch-Leven touches the parish over an extent of 1½ mile. About 8,000 acres of the parochial area are in tillage; about 4,300 are in pasture; about 700 are under wood and in gardens; and about 500 are waste. There are nine or ten considerable proprietors, and about fifty-two smaller ones; and most of them farm part or whole of their own lands. A principal antiquity is noticed in our article Burleigh-castle. On the farm of Orwell, and near Loch-Leven, are two standing-stones, respectively 6½ and 8 feet high. Among the Ochils stands Carn-a-vain, formerly a prodigious collection of loose stones, but now much reduced by the loss of many hundreds of cart-loads which were carried away for dike-building. The parish is traversed northward by the public road from Edinburgh to Perth, and eastward by that from Stirling to Cupar. Population in 1831, 3,005; in 1851, 2,569. Houses, 464. Assessed property in 1843, £12,533 2s. 9d.

This parish is in the presbytery of Kinross, and synod of Fife. Patron, Sir Graham Montgomery, Bart. Stipend, £155 19s. 11d.; glebe, £20. Schoolmaster's salary, £34 4s. 4½d., with about £50 fees. The parish church was built about 1729, and contains 646 sittings. There is a Free church, with an attendance of about 360; and the amount of its receipts in 1856 was £213 9s. 9½d. There is an United Presbyterian church, built in 1764, and containing 756 sittings. There are five private schools and a public library. In the reign of Robert Bruce, Orwell was only a chapelry; and, in its ecclesiastical interests, was given by that king to the monks of Dunfermline.

OSCAR'S-BAY, a small bay, forming a natural harbour, on the west side of the island of Lismore, in Loch-Linnhe, Argyleshire. It is also called Loch-Oscar; and the landing-place within it is called Portnamurloch. A group of islets lies in its mouth, protecting it from the sea; and the chief one of them is called the island of Oscar's-bay. The entrance on the north side of the islets is dangerous, but that on the south side is clear; and the interior of the bay affords anchorage and shelter to vessels of any burden.

OSNABURGH, a post-office village in the parish of Dairsie, Fifeshire. It stands 3 miles north-east of Cupar, on the road thence to Tayport. It is also called Dairsie-moor. Population, 205. Houses, 55.

OTTER. See Kilfinan.

OTTERBURN. See Longformacus.

OTTERSTON. See Dalgetty.

OTTERSWICK-BAY, a bay on the north-east side of the island of Sanday, in Orkney. The name Otterswick is a corruption of Odinswick. The bay penetrates the land, or rather runs up between two peninsulas, to the extent of 3½ miles, with a mean breadth of 1½ or 1½ mile; and it is traditionally believed to occupy the site of a wooded plain which was overwhelmed by the sea. The head of it is separated from the head of Kettleloft-bay on the opposite side of the island only by a low isthmus; and the action of high tides at times looks as if, at no distant period, it would sweep through this isthmus, and cut the island in two. The adjacent shores on the east, likewise, are low, and subject to inundation in an easterly gale at spring-tide; and, previous to the erection of the lighthouse on Start-point, at the most easterly extremity of the eastern peninsula, shipwrecks were frequent on this coast. Otterswick-bay affords safe anchorage for vessels of any size; and a little within its entrance, on the west side, is a sort of inner harbour, with a soft sandy beach on which small vessels may, at any time, be safely beached. The bay has a vast abundance of shell-fish.

OTTERVORE, a piece of sea, 4½ miles by 2, at the north end of the Barra group of Outer Hebrides. It extends westward between Gigha and a vast powdering of islets on the south, and Fuday on the north, to the isthmus between the main body and the northerly peninsula of Barra. The name is sometimes applied more largely to the whole sound between Barra and South Uist.

OUAN (Loch), a small lake, about a mile north of Loch-Turret, in the parish of Monivaird, Perthshire. Only a small space in the middle of it is free from aquatic vegetation; and that space is remarkably abundant in trout.

OUDE (The), a rivulet of Nether Lorn, Argyleshire. It rises among the braes of Lorn, and has a run of between 7 and 8 miles eastward to the head of Loch-Melfort, in the parish of Kilninver. About 2 miles below its source it expands, for 1½ mile, into Loch-Tralig.

OUSIE. See Dingwall.

OUT-SKERRIES. See Nesting and Skerries (Out).

OUTTERWARDS. See Largs.

OVERBERVIE. See Glenbervie.

OVERBIE. See Eskdalemuir.

OVERBRAE, a hill, affording an inexhaustible supply of peat fuel to the surrounding country, in the parish of King-Edward, Aberdeenshire.

OVERSAY. See Orsay (Isle).

OVERTON, a village in the parish of Cambusnethan, Lanarkshire. It has a station on the Caledonian railway, 1 mile south-east of the Wishaw station, and 3½ north-west of Carluke. This station has hitherto been of use chiefly as a depôt for the Lesmahago coal; and in its vicinity, on the north, the mineral branch railway goes off toward Morningside.

OVERTON, a village in the west of the Abbey parish of Paisley, Renfrewshire. It is inhabited principally by colliers and weavers.

OVERTON, one of three divisions of the village of Smalholm, in the parish of Smalholm, on the turnpike between Kelso and Edinburgh, 5½ miles north-west of the former, Roxburghshire. Jointly

with the other divisions, West Third and East Third, its population is 360.

OXCLEUGH. See Lowes (Loch of the).

OXENFORD-CASTLE. See Cranston.

OXGANG. See Kirkintilloch.

OXHILL-BURN, a brook of the parish of Rathven, Banffshire. Here is a medicinal spring of provincial repute for hooping-cough, but really possessing little, if any, intrinsic value.

OXNA, an inhabited island in the parish of Tingwall, Shetland. It measures about 3 miles in circumference, and lies about 4 miles south-west of Scalloway.

OXNAM, a parish near the middle of the eastern border of Roxburghshire. Its post-town is Jedburgh, 4 miles west-north-west of its church. It is bounded by England, and by the parishes of Jedburgh, Southdean, Crailing, and Hounam. Its length north-north-westward is 10 miles; its greatest breadth is 5 miles; and its area is about 33 square miles. The southern, and part of the eastern boundary, except for a brief way where it is touched by the English river Coquet, near the source of that stream, is formed by the water-shed of the Cheviots, between Blackhall-hill and Fairwood-fell, a distance of 7 miles. The swells or summits of the ridge have an altitude of less than 2,000 feet; but they lift the eye away to the German ocean, and command a magnificent view of the country enclosed between the screens of the Cheviot, the Hartfell, and the Lammermoor mountain-ranges. The interior, generally viewed, is a sea of dome-like hills, smooth and green, and gracefully curved in their outline, diminishing in altitude as they recede from the monarch heights of the frontier, and eventually admitting tillage up their soft ascents. One valley, the basin of the Oxnam rivulet, lies along the centre of nearly two-thirds of the parish, and is beautifully undulated and otherwise diversified in its surface. Ravines, picturesque defiles, and romantic dells, ploughed up by the long action of the mountain streams, run in various directions among the hills, adorned, over much of their extent, with natural wood. Belts and clumps of plantation, amounting in all to 600 acres, and consisting chiefly of the Scottish pine and the larch, climb the upland ascents, or crown the summits of the gentler eminences. The Oxnam rivulet, as already hinted, drains the greater part of the parish. A tributary of the Jed runs for 1½ mile along the western boundary; and the Jed itself, after receiving that tributary, runs nearly two miles on the same boundary. The Kail rises in several head-streams in the extreme south, and runs 4 miles northward into Hounam, at the distance all the way of about 1½ mile from the water-shed of the Cheviots. Limestone exists near the Jed; but being under a deep cover, and at a great distance from coal, cannot be worked. Sandstone, of firm texture and a beautiful whiteness, and believed to belong to the coal measures, abounds in the south, intersected by a thick dyke of trap. The transition rocks prevail in the north. A weak chalybeate spring, near Fairloans, was formerly of some medicinal repute, but has fallen into disuse. The soil of the arable lands has great diversity of character, exhibiting loam, clay, and gravel by turns, with every intermediate variety of kind and combination. About 3,500 acres are in tillage; and about 16,970 are pastoral or waste. The landowners are the Duke of Roxburgh, the Marquis of Lothian, Scott of Fala, Rutherfurd of Edgerston, and four others. The estimated value of raw produce in 1837 was £20,297; the value of assessed property in 1843, £7,653 15s. 11d.; and the amount of the real rental in 1856, £9,252 5s. 5d. A Roman causeway—that which has been traced from Boroughbridge in Yorkshire to the Lothians by way of St. Boswells—forms the whole east boundary, and is a favourite resort and squatting ground of the border 'muggers' or gypsies. Three old forts—survivors of the numerous strengths which studded this battle-territory of a thousand border raids, and places so strong in masonry that building materials may be taken more easily from a natural quarry than from their walls—exist in partial preservation respectively at Dolphiston, at Mossburnford, and on an eminence on the east side of Oxnam-water, about 500 yards west of the church. There were formerly two villages, Oxnam and Newbigging, both of some local note; but they have entirely disappeared. Fairs for sheep and lands are held in August and October at Pennymuir. The parish is traversed by a road from Jedburgh and Ancrum, by Oxnam water, to a pass through the Cheviots. Population in 1831, 676; in 1851, 669. Houses, 117.

This parish is in the presbytery of Jedburgh, and synod of Merse and Teviotdale. Patron, the Crown. Stipend, £248 15s. 3d.; glebe, £16. Unappropriated teinds, £1,185 12s. 10d. Schoolmaster's salary, £30, with about £28 fees, and upwards of £14 other emoluments. The parish church was built in 1758, and contains 258 sittings. The ancient church belonged to the abbey of Jedburgh, and was served by a vicar. A chapel, the ruins and cemetery of which still exist, stood at Plenderleith. The barony of Oxnam was given by David II. to Sir Duncan Wallace, and his consort the Countess of Carrick. Part of Oxnam parish is included in the new quoad sacra parish of Edgerston. See Jedburgh.

OXNAM (The), a rivulet of Roxburghshire. It rises in the parish of Oxnam, 2½ miles from the English border, runs 5½ miles north-north-westward to Oxnam church, and then moves northward another mile through Oxnam parish, a mile on the boundary between it and Jedburgh, 1¼ mile across the neck of territory which connects the main body of the northern division of Jedburgh with its eastern wing, and 2 miles through Crailing, past the village of that name, to the Teviot, ⅔ of a mile above the village of Eckford. For 5 miles it flows amid the glens and gorges of pastoral uplands; and afterwards it moves along in many serpentine windings between generally steep and romantic banks. Its tributaries are numerous, but all inconsiderable, and chiefly mountain rills in the parish of Oxnam. It abounds in excellent trout.

OXNOR, an islet belonging to the parish of Tingwall, in Shetland.

OXTON, a post-office village in the parish of Channelkirk, Berwickshire. It stands on the right bank of the Leader, a little west of the road from Edinburgh to Kelso, 4½ miles north-north-west of Lauder. Population, about 240.

OYKELL. See Oikell.

OYNE, a parish, containing a post-office station of its own name, in the Garioch district of Aberdeenshire. It is bounded by Insch, Culsalmond, Rayne, Chapel-of-Garioch, Monymusk, Keig, and Premnay. Its length southward is nearly 6 miles; its greatest breadth is 3½ miles; and its area is about 17 square miles. The Shevock runs on its northern boundary, dividing it from Insch and Culsalmond; the Ury immediately after receiving the Shevock, runs along the north-eastern boundary, dividing the parish from Rayne; the Gadie runs eastward, through the northern district of the parish, to the Ury; and the Don runs on the greater part of the southern boundary, forming the division with Monymusk. The mountain Bennochie, whose entire extent from west to east is about 5 miles, and from north to south

about 3½ miles, has about three-fourths of its whole mass within Oyne, standing across it between the Gadie and the Don, and forming a stupendous natural barrier between its northern and southern districts. This mountain is conspicuous throughout the surrounding country by at once its magnitude, its elevation, and its series of six round summits,—the loftiest of which, called Mother-Top, has an altitude of 1,677 feet above the level of the sea. The district of the parish north of Bennochie is the richest in soil, and contains about four-fifths of the population. The predominant rock everywhere is granite. About 3,200 imperial acres in the parish are in tillage; about 2,000 are under wood; about 450 are good natural pasture; and about 5,350 are moor, moss, and bare rock on Bennochie. The principal landowners are G. E. Dalrymple, Esq., of Westhall, and Sir G. D. H. Elphinstone, Bart., of Logie, and four others. Westhall-house, a mile north of Bennochie, is an ancient mansion of unascertained date, so repaired and enlarged in recent times as to be still a good baronial residence. Westhall is mentioned by Buchanan as a seat belonging to the diocesan church of Aberdeen so early as the 13th century, and it probably remained in the possession of the church till after the Reformation. Pittodrie-house, situated on the eastern slope of Bennochie, at an elevation of fully 500 feet above the level of the sea, is a pleasant mansion surrounded with wood, and commanding a fine prospect. Tillyfour-house, situated in the southern district of the parish, is an old building not now inhabited by its proprietor, and notable for having once belonged to the Earl of Mar. Harthill-castle, on the north skirt of Bennochie, is the ruin of an old fortalice which belonged to a branch of the family of Leith, and whose last possessor was a noted freebooter. Three ancient stones, with Runic sculptures, formerly lay flat on the moor of Carden, but were set upright in the dyke of that moor, overlooking the road from Inverury to Huntly. The parish is traversed, across its northern district, by the Great North of Scotland railway, and has a station on it 24¾ miles from Aberdeen. Population in 1831, 796; in 1851, 919. Houses, 182. Assessed property in 1843, £3,113.

This parish is in the presbytery of Garioch, and synod of Aberdeen. Patron, Erskine of Pittodrie. Stipend, £161 1s.; glebe, £15. Schoolmaster's salary, £30, with £32 10s. fees, a share in the Dick bequest, and £4 5s. other emoluments. The parish church was built in 1807, and contains about 475 sittings. There is a Free church, with an attendance of 280; and the amount of its receipts in 1856 was £159 0s. 2d. The name Oyne is supposed to have been derived from the same Celtic word as Insch, so as to signify a peninsulated or isolated piece of land; and it is popularly pronounced Een. John Leslie, who became bishop of Ross, and special councillor of Queen Mary, was incumbent of Oyne. Hiring fairs are held, in May and November, at Pitmachie. Extensive flax-mills and a village have just been erected at WESTHALL: which see.

P

PABBA, a small island of the Barra group of the Outer Hebrides, belonging to the parish of Barra, Inverness-shire. It lies 6½ miles south of the mainland of Barra, 2½ south-south-west of Sandera, and 1¾ north-north-east of Mingala. Its length is nearly 1½ mile; and its breadth is about 1 mile. It consists of a single hill, all of gneiss, rising about 800 feet above sea-level, and presenting a somewhat precipitous face to the west. Population in 1841, 25; in 1851, 10. Houses, 2. The belt of water between this island and Sandera is called the sound of Pabba, and contains the islets of Lingay and Grianimull.

PABBA, a small island, belonging to the parish of Strath, in the Skye district of Inverness-shire. It lies across the entrance of Broadford-bay, in the island of Skye; and is 2½ miles south-east of Scalpa. Its figure is nearly a circle of about a mile in diameter. It forms a flat tableau scarcely 60 feet high; is abrupt and precipitous on the south-east side, but on the opposite side declines to the water's edge; and is surrounded with low reefs, which cause a foul shore. Its rocks are predominantly limestone, corresponding with those of the opposite coast of Skye; but toward the south-east they become micaceous shale, with numerous interspersions of rounded nodules of trap. At the north end of the island are remains of a small chapel. Population in 1841, 21; in 1851, 14. Houses, 2.

PABBA, an island at the north-west end of the sound of Harris, in the Outer Hebrides, belonging to the parish of Harris in Inverness-shire. It lies 3¼ miles north of Bernera, and 2¼ west of Cape Difficulty, in the mainland of Harris. It measures 2½ miles from east to west, and 1½ from north to south. Seen from sea, it has a conical appearance; and it sends up a peak to probably 1,000 feet above sea-level. It formerly was, to a noticeable extent, productive in corn; but it has, in a great degree, been rendered infertile and desolate. Sand-drift has overwhelmed its south-east side; the spray from the Atlantic almost totally prevents vegetation in the north-west; and only on the south-west, where it is sheltered by Bernera, does the island retain anything like its former noted fertility. Population in 1841, 338; in 1851, 25. Houses, 6.

PABBA, an islet belonging to the parish of Uig, in the Lewis district of Ross-shire. It is of small extent, and lies near the shore of the south side of the entrance of Little Loch-Roag.

PACKMAN-ISLE or BUCK-INCH, a quondam island in the river Clyde, now forming part of the lands of Scotstown, in the parish of Renfrew.

PAD (THE). See NEILSTON.

PADANARAM, a village in the parish of Kirriemuir, Forfarshire. Population, 155.

PAISLEY, a cluster of parishes near the centre of the upper ward of Renfrewshire. It was anciently all one parish, with a single charge. But, in 1641, it was made a collegiate charge; and respectively in 1736, in 1756, and in 1781, the part of it lying

within the burgh limits of Paisley was constituted into three separate parishes. The original parish, in allusion to the old abbey of Paisley being its parish church, was now called the Abbey parish of Paisley, or abbreviatedly Abbey-Paisley; and the three new parishes, in allusion to comparative position of their parish churches, were called the High church parish, the Low or Laigh church parish, and the Middle church parish. There is likewise within the burgh a quoad sacra Gaelic parish church, but it has no special parochial territory; and there were for some time, both in the landward districts and within the burgh, quoad sacra parish churches, called in the one case Johnstone church, Levern church, and Elderslie church, and in the other case Martyrs' church, North church, and South church, but they all had mere ecclesiastical sanction, losing their parochial status at the disruption, and have not been reconstituted by the Court of Teinds.

The Paisley parishes, together with eight others in Renfrewshire, constitute the presbytery of Paisley, in the synod of Glasgow and Ayr. At the constituting of the Reformed church in Scotland, the parishes in the eastern part of Renfrewshire were included in the presbytery of Glasgow, and those in the western part were included in the presbytery of Dumbarton. But in 1590, all the parishes of Renfrewshire, excepting Eaglesham and Cathcart, were formed into a presbytery, whose seat was fixed at Paisley; and they continued to be thus arranged till May 1834, when seven of those in the lower part of the county, together with Large in Ayrshire and Cumbrae in Buteshire, were formed into the presbytery of Greenock. There are likewise a Free church presbytery of Paisley, with 15 congregations; an United Presbyterian presbytery of Paisley and Greenock, with 28 congregations; and a Reformed Presbyterian presbytery of Paisley, with 8 congregations.

The Abbey parish of Paisley comprehends part of the town of Paisley, and all the landward parts of the original parish of Paisley. It contains the town of Johnstone, the villages of Elderslie, Thorn, Overton, Quarrelton, Nitshill, Hurlet, Crossmill, Dovecothall, and Millerston. It is bounded by the parishes of Renfrew, Govan, Eastwood, Neilston, Lochwinnoch, and Kilbarchan; and it completely surrounds the burgh parishes of Paisley. Its outline is very irregular, being indented on all sides by the adjoining parishes. Its length from north-east to south-west is nearly 9 miles; and its breadth varies from ½ a mile to about 5½ miles. Many of its most interesting features will be found noticed in the articles on its villages, and in the articles Gleniffer Braes, Glenkillock, Hawkhead, Househill, Crookston Castle, Johnstone, Cart, Levern, and Glasgow Canal. Its surface, for the most part, waves gently, and frequently swells into beautiful little eminences. A considerable portion to the north of the town of Paisley is a perfect level, having been anciently moss, which extended in 1719 to 300 acres, but has since been reclaimed. The southern border of the parish rises into a range of hills, called Paisley or Stanley braes, known also, at least in one part, as 'the Braes of Gleniffer.' Their highest point is 760 feet above the surface of the river Cart at high-water mark at Paisley. Though interspersed with moss and heath, they afford good sheep-pasture; and where they decline into lower ground, a considerable part is in cultivation. The view from Duchal-law, the eastern summit, is varied, beautiful, and extensive, comprising the towns of Glasgow and Paisley, with villages, mansions, and hamlets, thickly scattered. The total extent of arable land within the parish is about 12,500 imperial acres; of natural pastures and meadows, about 1,500; of lands under wood, about 1,000; and of moss, sites of towns and villages, sites of houses, roads, and waters, about 1,153.

The White Cart runs 5 miles westward to the town of Paisley, partly on the boundary of the parish, and partly through its interior; it flows through the centre of the town, chiefly dividing the old town from the new, forming at one place a picturesque waterfall, and at another the town's harbour; and it then curves to the north, and, after a further run of about 1½ mile, passes into the parish of Renfrew The Black Cart runs about 4½ miles north-eastward on the boundary with Kilbarchan. The Levern runs about 4 miles, chiefly in a northerly direction, on the boundaries with Neilston and Eastwood, to its confluence with the White Cart. Several streamlets issue from the Stanley braes, and run to the larger streams. One of these, called the Espedair, has an impetuous course, amid fine close scenery, and falls into the White Cart above the Abbey bridge of Paisley. The Candren and the Altpatrick burns run northward in the west to the Black Cart. Near the Candren is a saline spring, called Candren well, which was strongly recommended for its medicinal qualities in a pamphlet by the late Dr. Lyall. Within the town of Paisley is a slightly mineralized spring, called Seedhill well, whose water was formerly in repute as a tonic. Two fine artificial collections of water were formed in 1837, on the north-east side of the Stanley braes, to serve as reservoirs for the supply of the town of Paisley with water. One of them has a maximum depth of 32 feet, the other of 49 feet, over an area of nearly 100 acres; they are capable of containing about 91 millions of cubic feet of water; and that nearest the town is formed with two divisions, to allow the water in one or other of the two to have time to settle, so as to avoid the expense of filtration. These reservoirs, besides their high purposes of direct utility, serve to heighten the picturesqueness of the fine grounds amidst which they lie. There are likewise some smaller reservoirs connected with bleachfields and printfields. The Glasgow, Paisley, and Johnstone canal, right through the centre of the parish, from a point within 3 miles of Glasgow, past the town of Paisley, to the town of Johnstone, is also a prominent hydrographical feature. The rocks of the hilly parts of the parish are various kinds of traps; and those of the low tracts all belong to the coal formation, generally covered to a considerable depth with a diluvium containing many boulders of primitive and transition rocks. Greenstone is quarried in several places in the hills. Sandstone of very fine building quality is extensively quarried at Nitshill, and of various quality in other places. Limestone is very generally diffused through the low country, but is quarried principally at Hurlet and Blackhall. Coal is very abundant, and is worked extensively at Quarrelton, Hurlet, Househill, Nitshill, and other places. Iron ore also is abundant, in various forms, principally in those of clay-ironstone, lenticular iron ore, and sulphurets of iron; and it used to be sent in large quantities to the Clyde iron works in the parish of Old Monkland, but is now in the way of being extensively worked on the spot. In connexion with ironstone mines, a large village, popularly called Balaklava, has just (December 1856) been erected at Clippens, near Johnstone, but within the borders of Kilbarchan parish; and another, to be called Inkermann, is projected between Johnstone and the town of Paisley. Aluminous schist abounds at Hurlet, and is employed there in the manufacture of the sulphate of alumina and iron. Fire-clay and blue-clay are prevalent in the low district of the parish; an

potter's-clay occurs about a mile south-west of the town of Paisley, on the estate of Brediland, where it is used for the manufacture of coarse pottery. The soil on the arable lands has much diversity of character, being in some places a vegetable mould derived from moss,—in others, especially by the sides of the streams, a rich, fertile, alluvial loam,—but, in most places a shallow soil, variously clayey and sandy, on a bottom of gravel or till, naturally retentive of moisture, but in the course of being subjected more and more to artificial improvement. There are 17 landowners with each an old Scotch valuation of £100 or upwards; and there are about 80 with a less valuation. Not many of the chief landowners are resident; but a considerable number of wealthy families, though not landowners, have business connexion with the parish, and are resident. The real rental of the landward parts in 1837 was £22,415 17s. 8d.; and the estimated yearly value of farm produce, on the average of five years terminating in that year, was £71,652. The value of assessed property in the Abbey parish of Paisley in 1843 was £66,941 5s.; in the rest of the original parish of Paisley, £65,888.

The estates and mansions of Hawkhead, Househill, Elderslie, Crookston, and Johnstone have already been noticed in their own alphabetical place. About a mile east of the town of Paisley lies the estate of Ralston, long possessed by the respectable family of Ralston "of that ilk," by whom it was sold about the beginning of the 18th century. In 1800, nearly the whole of it was acquired by the late William Orr, Esq., who built a handsome mansion, called Ralston-house, on part of the adjacent lands of Ingliston, which he had, three years previously, bought from the Earl of Glasgow. Adjacent to the south-east of the town of Paisley lies the barony of Blackhall, belonging to the Shaw Stewart family, and granted to their ancestor, Sir John Stewart, by King Robert III. The house is a strongly built plain old pile, and affords a specimen of the confined and homely accommodation enjoyed by families of consequence so recently as 1710, when Craufurd mentions it as "one of the seats" of the Blackhall family. Latterly it was occupied by a farmer, but now it is unroofed and deserted, and presents a very dismal appearance. Of the "beautiful planting" with which it was adorned in Craufurd's time, not a shrub remains. On the western side of the parish lay the barony of Cochrane, the original seat, and for five centuries the property of the family bearing that surname, ennobled as Lords Cochrane and Earls of Dundonald. About the year 1750, it was sold by Thomas, eighth Earl of Dundonald; and as his lordship, 16 years afterwards, sold the abbey lands of Paisley, the family ceased to have any connection with a county where they had long been of great consideration. The greater part of the estate of Cochrane now belongs to Mr. Houston of Johnstone. The ruins of the manor-place have been completely swept away since 1810, and the plough now passes over their site. In the hilly district of the parish, giving the name of Stanley-braes to great part of that district, lies the ancient barony of Stanley, with a baronial fortalice, called Stanley-castle, of unknown date. This barony is first mentioned in the 14th century, as belonging to the Dennistons, from whom it passed to the Maxwells, and from them, in the 17th century, to the Lords Ross of Hawkhead, to whose descendant and representative, the Earl of Glasgow, it now belongs. The fortalice has a quadrangular body, with a projecting rectangular tower to protect the entrance,—contained four stories,—and is about 40 feet in height; and it has a cornice at the top, the corbels of which project considerably, and give an agreeable finish to the pile. It was unroofed in 1714, and has since remained in a ruinous condition. It stands at the south-western extremity of the reservoir formed for supplying Paisley with water, and is surrounded by it. The reservoir has swallowed up the "Stanley green shaw" sung by the poet Tannahill, yet it has improved the adjunct scenery of the castle, and it borrows picturesqueness and much interest from the castle in return. Gleniffer-braes and Stanley-castle repeatedly figure together in the poems of Tannahill, as in the well-known lines,—

> "Keen blaws the wind o'er the braes o' Gleniffer,
> The auld castle turrets are covered wi' snaw;
> How changed frae the time when I met wi' my lover
> Amang the broom bushes by Stanley green shaw!"
